Freshwater Fish and Wildlife

RULE NO.: 68A-15.062
RULE TITLE: Specific Regulations for Wildlife
Management Areas - North Central Region

PURPOSE AND EFFECT: The purpose of the proposed rule amendment is to revise specific area regulations on wildlife management areas (WMAs) in the North Central Region and conform to calendar year date changes. The effect of the proposed rule amendment will be to enable the agency to better manage fish and wildlife resources and public use on WMAs.

SUMMARY: The proposed rule amendments would adjust season dates to conform to calendar year changes and revise specific area regulations on wildlife management areas (WMAs) in the North Central Region as follows:

Andrews WMA – shift family hunts 7 weeks later (in January); and establish two 3-day wild hog-still hunts in May (25 quota permits issued daily at the check station, no exemptions).

Big Bend WMA, Hickory Mound Unit – change the quota permit requirement during general gun season from the first 16 to the first 9 days of the season.

Big Bend WMA, Snipe Island Unit – remove the quota permit requirement during the youth spring turkey hunt; and during small game season, allow any dog for hunting small game (quail, rabbit, squirrel and migratory birds).

Cary WMA – expand archery, general gun and wild hog-still seasons from 2 to 3 quota hunts each; and change the quota for archery, muzzleloading gun, general gun and wild hog-still seasons from 100 to 70 permits per hunt (no exemptions, except during archery season).

Cedar Key Scrub WMA – allow fishing.

Citrus WMA – change the archery season from 1 quota hunt (first 4 days, 1000 quota permits, exemptions allowed) and 19 days (no quota permit required) to 3 quota hunts (9, 7 and 7-days each, 500 quota permits per hunt, exemptions allowed); change the quota for muzzleloading gun and general gun seasons from 850 to 500 quota permits per hunt (exemptions allowed); and during small game season, allow any dog for hunting small game (quail, rabbit, squirrel and migratory birds).

Flying Eagle WMA – allow hunting with rimfire rifles during general gun and small game seasons.

Lochloosa WMA – during the 3rd general gun season quota hunt, allow the use of dogs to hunt wild hog.

Log Landing WMA – establish a 9-day wild hog-still season in May (Saturday through Sunday, no quota permit required).

Osceola WMA – to resolve dog hunting related conflicts, revise the dog hunt area to remove the area created by traversing from County Road 250 west along Forest Service Road 200, north and east on Forest Road 4 to Forest Road 26, north on Forest Road 26 to Forest Road 3, then east on Forest Road 3 to Eddy Grade (move 5,065 acres from the 96,616-acre dog hunt area into the still hunt area); and to avoid overlap with muzzleloading gun season, shift dog training season 1 day later.

Additionally, the proposed rule amendments would provide non-substantive technical changes, such as grammatical corrections, language standardization, or clarification of an existing rule.

SUMMARY OF STATEMENT OF ESTIMATED REGULATORY COSTS AND LEGISLATIVE RATIFICATION:

The Agency has determined that this will not have an adverse impact on small business or likely increase directly or indirectly regulatory costs in excess of \$200,000 in the aggregate within one year after the implementation of the rule. A SERC has not been prepared by the Agency.

The Agency has determined that the proposed rule is not expected to require legislative ratification based on the statement of estimated regulatory costs or if no SERC is required, the information expressly relied upon and described herein: The nature of the rule and the preliminary analysis conducted to determine whether a SERC was required

	NOTICE OF CHANGE

Notice is hereby given that the following changes have been made to the proposed rule in accordance with subparagraph 120.54(3)(d)1., F.S., published in the November 4, 2015 issue of the Florida Administrative Register, Volume 41, Number 215, pages 5261 – 5274. The changes are made in response to written and oral comments from the Joint Administrative Procedures Committee or as the result of staff recommendations that were discussed at an adoption hearing held on December 9, 2015. Rule 62-302.200, F.A.C., has been revised to provide a link to a referenced document. Rule 62-302.300, F.A.C., has been clarified to provide an address from which all incorporated documents in the rule could be requested by the public. Rule 62-302.400, F.A.C., incorporates by reference thirteen maps showing Class II areas. The maps were revised to provide more clarity and are consequently re-dated. Rule 62-302.530, F.A.C., was revised to delete a proposed alternative criteria process for total ammonia nitrogen because the documents that were proposed to be incorporated by reference were not sufficiently clear to constitute self-implementing criteria. Instead, site specific alternative criteria may be established using the methodology under existing Rule 62-302.800, F.A.C., which provides for site specific review. The proposed rule has changed so that when it is adopted it will read:

62-302.530 Table: Surface Water Quality Criteria.

The following table contains both numeric and narrative surface water quality criteria to be applied except within zones of mixing. The left-hand column of the Table is a list of constituents for which a surface water criterion exists. The headings for the water quality classifications are found at the top of the Table, and the classification descriptions for the headings are specified in subsection 62-302.400(1), F.A.C. Applicable criteria lie within the Table. The individual criteria should be read in conjunction with other provisions in water quality standards, including Rule 62-302.500, F.A.C. The criteria contained in Rule 62-302.500, F.A.C., also apply to all waters unless alternative or more stringent criteria are specified in Rule 62-302.530, F.A.C. Unless otherwise stated, all criteria express the maximum not to be exceeded at any time except within established mixing zones or in accordance with site-specific effluent limitations developed pursuant to Rule 62-620.620, F.A.C. In some cases, there are separate or additional limits, which apply independently of the maximum not to be exceeded at any time. For example, the criteria for carcinogens, which are expressed as an annual average (denoted as “annual avg.” in the Table), are applied as the maximum allowable annual average concentration at the long-term harmonic mean flow (see subsection 62-302.200(2), F.A.C.). Numeric interpretations of the narrative nutrient criterion in paragraph 62-302.530(47)(b), F.A.C., shall be expressed as spatial averages and applied over a spatial area consistent with their derivation. In applying the water quality standards, the Department shall take into account the variability occurring in nature and shall recognize the statistical variability inherent in sampling and testing procedures. The Department’s assessment methodology, set forth in Chapter 62-303, F.A.C., accounts for such natural and statistical variability when used to assess ambient waters pursuant to sections 305(b) and 303(d) of the Federal Clean Water Act.

Editor’s note: Tables published as part of this notice can be viewed online in Vol 41/251 of the Florida Administrative Register, available at flrules.org.

Causes of nonattainment can include excess pollutant loading or concentrations, habitat or hydrologic alterations, or natural conditions. Waters that do not attain water quality standards due to natural conditions pursuant to Rule 62-303.420, F.A.C., shall not be added to the Study List. To conform to the
