Trust Examination Manual

Section 1 - Management

Table of Contents

This section of the Manual is organized into the following parts:

A. Introduction

B. Statement of principles of trust department management

C. Duties and responsibilities of directors

1. Supervisory Responsibilities

   a. Acceptance of New Accounts

   b. Approval of Closed Accounts

   c. Discretionary Distributions, Extraordinary Expenditures, and Other Matters

   d. Supervision of Investments

   e. Account Reviews

   f. Audit and Regulatory Reporting

   g. Retention of Legal Counsel

   h. Adequacy of Insurance Coverage

2. Organizational Structure

3. Committee Structure

   a. Trust Committee

   b. Management Committees

D. Management appraisal

1. Trust Officer Duties and Management Skills

2. Assessment Factors

3. Personnel, Staffing Levels, and Authority Lines

4. Personnel Policy

5. Management Succession

E. Risk management

F. Watch lists

G. Account review program

1. New Account Reviews
2. Scope of Annual Account Reviews
3. Frequency and Authority Level of Account Reviews
4. Content of Account Reviews
5. Records of Account Reviews
    a. Reviewing Authority Level
    b. Account Level

H. Trust policies

1. Other Trust Policies
2. Compliance with USA PATRIOT Act

I. Fee Concessions to insiders

J. Meeting with department management

K. Meeting with directors and committees

1. Disclosure of Ratings
2. Departments Assigned or Likely to be Assigned a Composite "1" or "2" Rating
3. Departments Assigned or Likely to be Assigned a Composite "3" Rating
4. Departments Assigned or Likely to be Assigned a Composite "4" or "5" Rating

A. Introduction

As a fiduciary, the bank's primary duty is the management and care of property for others. This responsibility requires the duty of loyalty, the duty to keep clear and accurate accounts, the duty to preserve and make productive trust property, as well as a myriad of other responsibilities. Refer to Section 4, Common Law duties. With these responsibilities comes risk, and management's ability to monitor and control these risks is of paramount importance. The Board of Directors and senior management must be able to identify, measure, monitor and control the risks inherent in fiduciary activities, and respond appropriately to changing business conditions. Increasingly, management is faced with operating or transaction, strategic, legal, compliance, credit, settlement, market, liquidity, and reputation risks. Appropriate internal policies, practices and controls should address these risks. The size and complexity of the trust department will dictate the depth of such policies.

Increasing competition from non-bank entities and the enactment of the Gramm-Leach-Bliley Act (GLBA) and USA PATRIOT Act will continue to bring changes to the fiduciary business. New affiliations with the mutual fund and insurance industries will increase business opportunities, but will also increase risk and potential conflicts of interest if not properly managed. The duty of loyalty must remain foremost in management's quest for new activities and affiliations.

B. Statement of Principles of Trust Department Management

The FDIC, in recognition of the necessity of establishing guidelines for the sound operation of a trust department, has issued a Statement of Principles of Trust Department Management (Statement) as revised and set forth below. Banks applying for the FDIC's consent to exercise trust powers must adopt the Statement before approval will be granted. In situations where a bank or trust department was not required to adopt the Statement pursuant to Part 303 of the FDIC Rules and Regulations, examiners should strongly recommend that the Board of Directors do so. Periodic or routine re-adoption of the Statement is not required. Examiners should make certain that trust management is operating the department in a manner consistent with the Statement, even when the Board has not adopted the Statement. Examiners must use judgment in ascertaining the conformance with these minimum standards. The Statement is general in scope and permits flexibility in implementation. However, examiners must determine whether the bank conforms to the spirit of the principles. Where deficiencies

are noted, trust management should be informed of the areas needing correction. Management's willingness to take corrective action should be reflected in the Report of Examination.

B.1. Statement

The minimum requirements to provide for sound banking practices in the operation of a trust department and to provide safeguards for the protection of depositors, fiduciary beneficiaries, creditors, stockholders, and the public, should include:

- Involvement by the Board of Directors in providing for the establishment and continuing operation of a trust department;
- Operation of the trust department separate and apart from every other department of the bank, with trust assets separated from other assets owned by the bank, and the assets of each trust account separated from the assets of every other trust account; and
- Maintenance of separate books and records for the trust department in sufficient detail to properly reflect all trust department activities.

The Board of Directors may act as the trust committee, and/or appoint additional committees and officers to administer the operations of the trust department. When delegating duties to subcommittees and/or officers, the Board and the trust committee continue to be responsible for the oversight of all trust activities. Sufficient reporting and monitoring procedures should be established to fulfill this responsibility.

The Board of Directors, by proper resolution included in its minutes, should:

1. Designate an officer, qualified and competent, to be responsible for and administer the activities of the trust department. In addition, the Board should define the officer's duties.

- Name a trust committee consisting of at least three directors to be responsible for and supervise the activities of the trust department. The committee should include, where possible, one or more directors who are not active officers of the bank.

  The trust committee should:

  a. Meet at least quarterly, and more frequently if necessary and prudent to fulfill its supervisory responsibilities;

  b. Approve and document the opening of all new trust department accounts; all purchases and sales of, and changes in, trust assets; and the closing of trust accounts;

  c. Provide for a comprehensive review of all new accounts for which the bank has investment responsibility promptly following acceptance;

  d. Provide for a review of each trust department account, including collective investment funds, at least once during each calendar year. Written policies should address the scope, frequency, and level of review (trust committee, subcommittee, or disinterested account officer) considering the department's fiduciary responsibilities, type and size of account, and other relevant factors.

     Generally, discretionary account reviews should cover administration of the account and suitability of the account's investments, and non-discretionary account reviews should address account administration;

  e. Keep comprehensive minutes of meetings held and actions taken; and

  f. Make periodic reports to the Board of its actions.

3. Provide comprehensive written policies which address all important areas of trust department activities.

Provide competent legal counsel to advise trust officers and the trust committee on legal matters pertaining to fiduciary activities.

- Provide for adequate internal controls including appropriate controls over trust assets.
- Provide for an adequate audit (by internal or external auditors or a combination thereof) of all fiduciary activities, annually. Trust committee minutes should record the findings of the audit, including actions taken as a result of the audit.

  If a bank adopts a continuous audit process instead of an annual audit process, the audit may be performed on an activity-by-activity basis, at intervals commensurate with the level of risk associated with that activity. Audit intervals must be supported and reassessed regularly to ensure appropriateness, given the current risk and volume of the activity.

- Receive reports from the trust committee and record actions taken in its minutes.
- Review the examination reports of the trust department by supervisory agencies and record actions taken in its minutes.

C. Duties and Responsibilities of Directors

The Board of Directors has the overall authority and responsibility for operating the trust department and administering fiduciary accounts. This administrative responsibility begins with the acceptance of an account and continues until the closing of the account. In discharging its authority, the Board of Directors may delegate duties and responsibilities to such committee(s), director(s), officer(s), employee(s), or legal counsel as it deems appropriate. However, the Board retains ultimate responsibility for delegated matters and must maintain the proper degree of control and supervision.

Only through its written records can the Board demonstrate that it has satisfactorily exercised its authority and responsibility. Consequently, the minutes of the Board should reflect discussions and decisions reached regarding significant trust related matters. Although the Board should review information regarding significant trust department activities, summaries of such information are acceptable. However, detailed reports or committee minutes should be available to the Board upon request.

The examiner may encounter instances where records of Board actions or information received are deficient or even completely lacking. In such situations, the examiner should inform the directors of the importance of correcting these deficiencies. The Report of Examination should outline the weaknesses and indicate management's response and planned corrective measures.

C.1. Supervisory Responsibilities

The Board of Directors is responsible for supervising and administering the activities of the trust department. The following are certain administrative responsibilities charged to the Board of Directors which may be delegated to duly appointed committees.

C.1.a. Acceptance of New Accounts

Formal acknowledgment of new accounts should be noted in Board or committee minutes. The Board has the authority to delegate approval of accounts to a junior committee. However, this practice should be used judiciously as the Board continues to remain responsible for all accounts accepted.

Management should delineate standards for the acceptance of new business to control potential risks. The standards should define criteria for accepting or declining new business, given management's administrative capabilities. The ability of the trust institution's staff, systems, and facilities to handle the proposed duties must be considered, when accepting new accounts. Other areas for consideration include, but are not limited to:

- Purpose of the account,
- Identity of principals and beneficiaries,
- Existence of, or potential for, conflicts of interest,

- Complexity of provisions,
- Composition and nature of assets,
- Existence of administrative problems, and
- Profitability.

Examiners should note that the acceptance of an unprofitable account should not be necessarily viewed as unfavorable. Unprofitable accounts may be accepted for a number of reasons including, but not limited to: other related accounts which, when viewed as a whole, are profitable; major commercial bank relationships; pro-bono appointments for charitable or other worthy causes, etc. Fee concessions for director, officer, and employee accounts may be acceptable, if offered on a non-discriminatory basis and under well-defined policies.

C.1.b. Approval of Closed Accounts

Closed accounts should be reviewed to determine if the responsibilities under the instrument have been properly discharged and account administration was in accordance with the department's policies and procedures. The improper administration of an account can potentially expose the bank to reputation risk and financial liability. A significant increase in the number of closed accounts may be indicative of other underlying operational or administrative issues. Formal acknowledgement of closed accounts should be noted in the Board or committee minutes, along with the reason the account was closed. Furthermore, trust department records must contain receipt for assets transferred from the successor trustee, administrator or beneficiaries.

C.1.c. Discretionary Distributions, Reallocation of Principal and Income, Extraordinary Expenditures, and Other Matters

The authority to grant discretionary distributions or reallocate principal and income (depending upon state law) is one of the most important powers vested in a fiduciary. The exercise of the power should be vested in the Board of Directors or a duly appointed committee (i.e., the trust committee or a subcommittee thereof) and approval or ratification of significant discretionary or reallocation actions should be noted in Board or committee minutes. Documentation of the approval of discretionary distributions or principal and income reallocations and denials should be retained in the individual account file to support ongoing administrative responsibilities. In the same manner, extraordinary expenditures should be approved by the Board or a delegated committee. The reasons for the expenditures and any communication with interested parties should be documented in the trust files.

The Uniform Principal and Income Act (UPIA) was most recently revised in 1997 to be consistent with the Prudent Investor Act, which looks to total return, rather than just interest or dividend income. As a result, investments may be made in products that do not provide a current income stream, but have considerable capital appreciation. Under the UPIA, specific assets and the uniform allocation is detailed. A copy of the UPIA is included in Appendix C and a listing of the more common assets and their related allocations between principal and income are included in Chapter 2.

The authority to grant discretionary distributions or reallocate principal and income are two of the most important powers vested in a fiduciary. The exercise of power should be vested in the Board of Directors or a duly appointed committee and approval or ratification of significant discretionary or reallocation actions should be noted in the Board or committee minutes. Documentation of the approval of discretionary distributions or principal and income reallocations, and denials should be retained in the individual account file to support on-going administrative responsibilities. In the same manner, extraordinary expenditures should be approved by the Board or a committee that reports directly to the Board. The reasons for the expenditures and any

communication with interested parties should be documented in the trust files.

C.1.d. Supervision of Investments

< To the extent the bank has investment discretion, management has several important responsibilities, including:

- Conservation of the value of the assets entrusted to its care of trust corpus;
- Optimization of income or growth in value consistent with prudent practices, the terms of the agreement, and the needs of the beneficiaries; and

The Board of Directors or its trust committee is responsible for the approval of all purchases and sales of assets, and for the retention or disposition of investments. However, in larger departments, senior management or the trust investment committee often reviews purchases and sales. The frequency (weekly or monthly) and method of review will vary depending upon management preferences, the volume of trades, and the trust accounting system utilized. Some departments may use an exception-based review process. Each review method provides management the opportunity to monitor compliance with internal policies and/or approved investment lists. Regardless of the method chosen, the review of purchases and sales is essential for a strong risk management program. Additional information on investments can be found in the Asset Management section. The suitability of assets held by each individual account should be incorporated into the account's annual investment review. Refer to the Account Review program for items to consider in an investment review.

C.1.e. Account Reviews

As discussed in the Statement, the trust committee should review each trust account initially upon acceptance and at least annually thereafter. Frequently, large trust departments delegate this responsibility to another committee or a disinterested trust officer. The annual review should incorporate an administrative review, and a review of investments, when the department exercises investment discretion. The scope of the annual review should be addressed in appropriate written policies which give consideration to the department's fiduciary responsibilities, the type and size of accounts, and other relevant factors. Refer to Account Review Program in this section.

C.1.f. Audit and Regulatory Reporting

The Board must ensure that appropriate internal and/or external audits of fiduciary activities are conducted. The adoption of a thorough audit program allows the Board to identify practices that contravene policies or violate fiduciary laws and regulations. It is essential for the Board or its designee to review the findings of the audit(s) and document the actions taken to respond to the findings. Additionally, the Board should review all examination reports by supervisory agencies and note corrective actions taken in the minutes. Refer to audits and accounting issues .

C.1.g. Retention of Legal Counsel

Management must effectively identify, measure, monitor, and control the legal risks inherent in the trust business. Therefore, informal or formal policies should be developed to assist management in the selection and retention of competent legal counsel, either in-house or external. Accounts considered for acceptance that involve pending or threatened litigation, complex or unusual documentation, or ambiguous language should be reviewed by counsel.

C.1.h. Adequacy of Insurance Coverage

An effective risk management program includes adequate insurance coverage. The Board has a responsibility to maintain sufficient coverage for the risks inherent in the fiduciary business. Furthermore, management must periodically review the policies for continued suitability. However, the Board and management should not rely on insurance coverage to compensate for

poor operational controls or the absence of proper oversight.

C.2. Organizational Structure

A Board resolution or the bank's bylaws should prescribe the structure and function of the trust department. Any workable system of organization of the trust department is acceptable, as long as it enables the directors, management and staff of the trust department to fulfill their respective responsibilities.

The Board of Directors may fulfill its fiduciary responsibilities by adopting an organizational plan that effectively accommodates the volume and type of fiduciary services offered, the competitive environment and future growth. The organizational plan should include effective communication processes that facilitate the exchange of all information necessary to inform all levels of trust department personnel of the institution's policies and directives, and allow senior management to verify that the trust department's operations comply with such policies and directives.

C.3. Committee Structure

Although the Board may elect to attend to all fiduciary matters, the handling of routine administrative and operational details is usually delegated to others. If the Board chooses to assign functions to a committee(s), all committee actions pertaining to the oversight of fiduciary functions should be recorded in minutes or similar records. Trust department committees should be structured to be flexible and workable. Functions and objectives should be clearly defined and effectively executed. Regular attendance and active participation by committee members are essential for effective oversight. Utilization of the committee process does not relieve the Board of its responsibilities for the actions taken by those groups.

C.3.a. Trust Committee

Normally, the Board of Directors does not directly supervise trust department activities. Depending on the size of the institution, the Board may establish a trust committee. In such cases, the committee should include at least three directors of the Board, and in institutions with outside directors, the committee should include at least one director who is not a bank officer. If the bank has no outside directors, the committee should not include any officers who participate significantly in the administration of the bank's fiduciary responsibilities. Examiners should assess trust committee independence and make recommendations where appropriate.

According to the Statement, the trust committee should meet at least quarterly. The trust committee should meet more frequently when necessary and prudent to fulfill its responsibilities.

C.3.b. Management Committees

Although not required, it is common practice to have management committees in both large and small departments. These committees typically review items requiring immediate attention or routine department activities. The two most frequently encountered committees are the trust administration committee and the trust investment committee. Larger departments may employ additional sub-committees (proxy, fee deviation, etc.) of the management committees. Management committees should maintain adequate minutes of meetings held and actions taken, which subsequently should be reviewed by the trust committee or its designee.

D. Management Appraisal

Examiners must assess management's ability to serve those fiduciary accounts presently under administration and those to which the bank has made a commitment. Although a primary measure of management's ability is the condition of the trust department and the quality of fiduciary services rendered, its potential to handle anticipated business is also significant, and therefore, examiners must evaluate the level of strategic planning by executive officers.

D.1. Trust Officer Duties and Management Skills

The Board of Directors should designate a qualified and competent officer to administer the activities of the trust department. In assessing competence, the qualifications of

management should be evaluated in relation to the duties assigned. Administrative duties of the trust officer include at a minimum, the following:

- Represent the institution in all fiduciary matters;
- Oversee administration of trust department accounts;
- Report all matters requiring its attention to the trust committee;
- Execute policies and instructions of the directors and the trust committee;
- Maintain adequate records such as entries, settlement sheets, and follow-up systems;
- Maintain adequate documentation to ensure all assets are properly safeguarded.

The senior trust officer/trust department manager may have limited knowledge of fiduciary matters, yet possess the managerial skills necessary to effectively guide the affairs of a particular trust department. In such cases, the examiner should emphasize the need for fiduciary expertise at middle management levels. The managerial skills of the senior trust officer/trust department manager should be evaluated in consideration of the following areas:

- Planning - A trust officer should establish a predetermined course of action. This includes setting both short-term and long-term objectives and establishing policies, procedures, and programs to reach these objectives.
- Organizing - A manager, along with the directorate, should establish an organizational structure designed to achieve the department's goals. The grouping of these activities, delegating of authority to perform these activities, and providing for coordination of relationships in the organizational structure should be analyzed.
- Staffing - Management should employ a sufficient number of qualified employees. This involves effectively recruiting, training, and retaining employees.
- Directing - Management should provide ongoing guidance and supervision of trust personnel to achieve the trust department's stated objectives.
- Controlling - Management should review, evaluate, and regulate the work in progress to ensure the activities meet established plans.

The examiner should analyze the type and depth of training offered to all trust personnel and evaluate the adequacy of the training program. Training may include in-house development programs, on-the-job training, correspondence courses, banking schools and seminars, training facilities of larger banks, and tuition aid programs.

The examiner should consider expertise available from sources outside the bank. Management may compensate for "in-house" weaknesses in such areas as investments, tax law, or accounting by employing outside professional services if permitted under state law. The examiner should determine whether management understands and can effectively evaluate the information and recommendations made by these services. Management should be able to use such services effectively. Before contracting with an outside servicer, a due diligence review of the counterparty and the contract should be performed. Refer to outside contracting for fiduciary services for additional information on due diligence reviews.

The competence of management should be questioned, if serious shortcomings or criticisms exist. When deficiencies are of short duration, middle management may often be responsible. However, senior management must be held responsible for any long-standing or widespread deficiencies. The examiner-in-charge must describe management deficiencies and make appropriate recommendations to correct them.

D.2. Assessment Factors

Examiners should look at the following factors when evaluating the competence and expertise of management, such as:

- Experience - What is the experience level of trust department management and does

this experience correspond to the individual duties and responsibilities assigned?

- Training - What kind of professional training, such as schools and seminars, is provided to management personnel, and has it been effective?
- Education - What is the level of academic achievement within the department and the relationship to managerial positions?
- Character - Are the personality, disposition, and reputation of trust department management consistent with the requirements imposed by their individual duties and responsibilities? Are there any other influences or factors that could cause a person's integrity, reliability, or ethics to be suspect?

In small trust departments, management must generally be well versed in all facets of the fiduciary services offered by the department. In moderate or larger departments, middle-level personnel may specialize (i.e., investment officers, account administrators, operations officers, taxation specialists, or new business development officers). Each should have a level of competence commensurate with the size and complexity of the department's activity.

D.3. Personnel, Staffing Levels, and Authority Lines

A plan of personnel organization should provide for continuity and include procedures for recruiting, training, and evaluating personnel. The staff should be adequate to handle the volume of work. Lines of authority, duties, and responsibilities should be clearly defined and effectively communicated to all personnel in order to promote the efficient, productive, and orderly execution of the department's functions. The lines of authority can be structured on a legal entity, business line, or functional basis. Reviewing lines of authority allows the examiner to assess the department's ability to identify, communicate and manage risks. An organizational chart is helpful as a starting point. The functional organizational structure should be designed to promote an orderly flow of the trust department's daily work and be sufficiently flexible to accommodate peak workloads without sacrificing efficiency or accuracy.

D.4. Personnel Policy

A personnel policy should cover the size of the trust department staff, qualifications of personnel, organizational structure, employee ethics, salary administration, and employee benefits. A code of ethical standards should deal with such matters as: acceptance of gratuities, gifts, favors, and bequests; acceptance of loans from fiduciaries, beneficiaries, customers, or agents; disposition of fees earned by employees for personal services rendered in the performance of fiduciary duties; employees accepting benefits for serving as co-fiduciary with the bank; employees exerting influence on fiduciary customers for personal gain; and employees maintaining confidentiality of the bank's fiduciary relationships.

D.5. Management Succession

The retention of qualified employees is essential in discharging the bank's fiduciary obligations. Undue reliance on one individual or several key individuals should be avoided where possible. The Board and management must ensure, through appropriate planning, that minimal disruption will occur should there be an unexpected departure of a key individual(s).

E. Risk Management

A formal risk management program should be established to identify and control fiduciary risk. An effective risk management program guards against liability that can result from lawsuits or poor administrative practices, and identifies those areas where there is potential for exposure. Strong internal controls, sound policies and practices, and appropriate management information systems provide the basis for an effective risk management program. The sophistication of the department's risk management program should be developed according to the complexity of its business products and services. Risk tolerance levels should be clearly set and monitored by both senior management and the Board of Directors. The program should be reviewed continuously and revised to capture current and anticipated business risks. At a minimum, an effective risk management program should:

- Establish the level of risk that management is willing to assume. Examiner emphasis should be placed on reviewing the planning process, policies related to the process, and underwriting

standards of accounts and new products.

- Identify the various risks associated with the institution's key products and services, as well as its operating environment. This includes an analysis of methods employed in determining fiduciary insurance coverage, loss reserves, and the impact of fiduciary risk on capital adequacy. Litigation concerns should also be analyzed.
- Implement adequate controls and monitoring systems. This includes establishing a system of checks and balances, reviewing audit coverage, the compliance management system, and the overall scope and reliability of existing management information systems.
- Supervise operations and the implementation of procedures when new accounts are obtained. Guidelines should provide information as to day-to-day management of fiduciary activities, operating systems, and internal controls.

Trust activities expose the bank to many of the same risks encountered in bank operations. Operating or transaction, strategic, legal, compliance, credit, settlement, market, liquidity, and reputational risks are found in varying degrees within many departments. While some risks may directly affect the department and the bank, others may be inherent in the products purchased or held in client accounts. Ultimately, if management is unable to identify and/or properly manage these risks, the bank's reputation may be damaged.

F. Watch Lists

A written watch list of accounts and assets meriting special attention provides a measure of control that can assist the department in limiting contingent liability and mitigating loss. To be effective, the watch list should be comprehensive, well documented, and periodically reviewed by the trust committee. Management actions, including decisions made, contacts with interested parties, and legal discussions should also be noted and documented in writing. The level of detail provided by the watch list and the depth of the follow-up procedures will vary with the size and complexity of the trust department. However, at a minimum, the watch list should:

- Identify trust accounts, groups of trust accounts, or assets that warrant the special attention of management; and
- Provide a summary of each account or asset identified, indicating the reason(s) why the particular account or asset merits special attention, and to the extent feasible, quantify the amount of risk.

Accounts or assets that involve pending or threatened litigation, customer complaints, waived fees, criticisms by regulatory authorities at prior examinations, large overdrafts, default or bankruptcy, or other situations may warrant inclusion on the department's watch list.

Finally, watch lists also serve as a valuable reference point for examiners, who can compare the findings of their own account review with the accounts identified by management as warranting special attention. This should assist examiners in assessing the adequacy of the risk management program. Finally, reliable watch lists can be used by examiners to determine the scope of account review.

G. Account Review Program

G.1. New Account Reviews

The initial review of new accounts for which the bank has investment responsibility should be conducted promptly following acceptance. Industry practice is to complete the review within 60-90 days of opening. The initial review should establish an investment program consistent with the needs and objectives of the account, and ensure that the synoptic record is complete and accurate.

G.2. Scope of Annual Account Reviews

The scope of the account review primarily depends on the department's fiduciary responsibilities and the type of account under review. An account review should generally cover the administration of the account (administrative review) and the suitability of the account's assets (investment review). Refer to Content of Account Reviews in this section for additional information on administrative and investment reviews. Departments that provide services to third parties, or who obtain services from third parties, should ensure that all affected accounts are reviewed by the appropriate party as outlined in the written agreements. The scope of an account review is dependent upon the nature of fiduciary

responsibilities and types of account, as outlined below.

- Collective Investment Funds - The review of collective investment funds should include both an administrative and an investment review. The administrative review should ensure that the operation of each collective investment fund complies with applicable laws, and regulations (e.g. OCC Regulation 9, SEC regulations, ERISA and DOL regulations, the Internal Revenue Code and IRS regulations, etc.) and standard industry practice. The investment review should ensure that investments are consistent with the stated investment purpose of each fund. Fund performance for each collective investment fund should also be included in the annual review.

- Discretionary Personal and Employee Benefit Accounts - In personal and employee benefit accounts where the institution has investment discretion, an account review generally should consist of both an administrative and investment review. The administrative review will differ according to the type and purpose of a given account.

- Nondiscretionary Personal Accounts - The account review should primarily focus on the appropriateness of account administration, which will differ according to the type and purpose of a given account. There may be no requirement or responsibility to review investments, but as in all nondiscretionary accounts, a corporate fiduciary may be held accountable for the actions of a co-fiduciary, due to bank's professional corporate trust status.

- Nondiscretionary ERISA Employee Benefit Accounts - Review of self-directed employee benefit accounts is normally limited to coverage of administrative matters. These will differ according to the type of responsibilities (such as participant record keeping, participant loan programs, etc.) administered by the bank. In these accounts, a cursory review of the investments is also in order to avoid flagrant violation of the insider and prohibited transaction provisions of ERISA. Trustees directed by named fiduciaries have liability to determine whether directions are proper, meaning that they are in accordance with the plan, and not contrary to ERISA and/or applicable regulations. See ERISA Section 403(a)(1). A corporate fiduciary is held to a higher standard because of its purported knowledge and expertise in fiduciary matters.

- Nondiscretionary non-ERISA Employee Benefit Accounts - These accounts are generally sponsored by church organizations or state, county, or municipal governments and their agencies. Only the administrative reviews, as covered above for nondiscretionary ERISA employee benefit accounts, need to be performed.

- Self-Directed IRAs and Keoghs - Self-directed IRA and Keogh accounts are considered trust accounts under Internal Revenue Code Section 408(h). Therefore, examiners should ensure that an administrative review is performed and that proper controls are in place to limit liability. For a discussion of the proper controls, refer to the Operations, Internal Controls and Auditing section regarding Self-Directed IRAs and Keoghs.

- Custodial Accounts - Although custodial accounts are not always considered fiduciary accounts (the classification depends on state law), administrative reviews should be performed on all custodial accounts. This also applies to custodial accounts for ERISA employee benefit plans. Management has the responsibility of ensuring that custodial relationships are being administered in accordance with signed agreements.

- Discretionary Corporate Bond Trusteeships - Bond indentures for corporate and municipal debt issues (bonds, debentures, notes, etc.) usually delineate how available funds are to be invested. Nonetheless, the bank may have discretion in selecting the actual investments. In such cases, the investments held for the account should be reviewed, as well as the administration of the account.

- Nondiscretionary Corporate Bond Trusteeships and Agencies - These accounts generally involve corporate and municipal debt issues, securities transfer agencies, paying agencies, etc. Since there are either no assets on hand or the bank has no discretion over their investment, only administrative reviews need to be conducted.

G.3. Frequency and Authority Level of Account Reviews

The Statement of Principles of Trust Department Management requires that all trust accounts be reviewed during each calendar year. The Board of Directors is responsible for conducting account reviews and outlining the frequency and authority level of account reviews in a departmental policy. The Board can establish an organizational structure of its choice, including the delegation of account reviews to subcommittees or disinterested account officers.

Certain accounts may warrant a more frequent review or a review at a higher level in the organization than other accounts. For example, those accounts where the bank has investment discretion may require a more frequent review than accounts where no investment discretion is exercised. The reviews should be conducted by a committee in order to obtain group experience and knowledge. In addition, accounts which should receive more frequent and senior-level reviews include accounts that: possess unique or unusual characteristics or circumstances, involve substantive complaints from grantors or beneficiaries, involve substantive or repeated criticism by regulatory authorities, involve pending litigation, or invest in complex and/or high risk investments.

In turn, certain accounts may be of a size or complexity that they can be, at the judgment of the Board, collectively reviewed. Collective review procedures would normally be performed on the smallest and least complex of trust department accounts. However, collective reviews may also include some larger, self-directed IRA or 401(k) employee benefit plans. In addition, de minimus accounts may qualify for "non-review" if Board approved procedures establish criteria for including or excluding these accounts from the non-review category. The examiner should ensure that collective and de minimus review procedures are reasonable.

Accounts where the bank does not have investment discretion, other than those discussed previously as deserving of a higher level of review, may, at the discretion of the Board, be reviewed by a disinterested account officer, that is, an officer who is not responsible for the account's administration.

Examiners should strongly encourage management to adopt account review procedures and should criticize failure to review accounts in accordance with the Statement of Principles of Trust Department Management or departmental policies in the Report of Examination.

G.4. Content of Account Reviews

A comprehensive account review includes both an administrative and an investment review. Management may choose to address both aspects in one review or perform two separate and distinct reviews. Both methods are acceptable as long as each review, by itself, is complete in nature. Whether performed separately or together, the reviewing authority (trust committee, subcommittee, or disinterested account officer) should perform the review in light of the governing instruments, applicable laws and regulations, fiduciary responsibilities, and needs of the beneficiaries.

No listing can appropriately denote every item which should be considered in an account review since the reviews vary based on the department's fiduciary responsibilities, type of account, assets held, and other circumstances. Nonetheless, the general areas noted below are illustrative of the areas that should receive coverage in either an administrative or investment account review.

Administrative Review

An administrative review may include, but is not limited to, the following items:

1. Governing instrument (trust, will, plan, indenture, etc.) - Is a copy on file?

- Synoptic record - Is the record complete, accurate, current, and reliable?
- Tickler system - Is the system up-to-date and accurate?
- Cash transactions - Are remittances, disbursements, and overdrafts posted correctly to income and principal? Is there any evidence of unusual cash flow activity, such as free riding? Is there any suspicion of money laundering? If so, has management

filed, or considered filing, a Suspicious Activity Report (SAR) as per FDIC Part 353.

- Securities transactions - Were appropriate approvals and authorizations obtained for non-discretionary and discretionary transactions? As applicable, were confirmations sent within the prescribed time frames? Did the confirmations or account statements contain the appropriate disclosure documentation? Refer to the full text of Part 344 of the FDIC Rules and Regulations for specifics.
- Own-bank and affiliate obligations - Are purchases properly authorized?
- Accountings and statements - Are they accurate and timely?
- Commissions and fees - Are they accurate, consistent with the established fee schedule, and being collected?
- Co-fiduciary approvals/denials - Are approvals/denials documented?
- Committee approvals/denials - Are approvals/denials documented?
- Internal policies and procedures - Is the account in compliance?
- Complaints - Are complaints by grantors, beneficiaries, plan administrators, etc. being reviewed? Have previous complaints been resolved?
- Criticisms - Is corrective action being taken with regard to criticisms noted by internal and/or external auditors and regulatory authorities?

Note: Examiners should be flexible in assessing the adequacy of the administrative review process. An evaluation of an institution's administrative review process should focus on the effectiveness of the process, rather than the manner in which the review process is conducted. While a formal review session approach (one in which those performing the administrative review meet formally at specific intervals to review the administration of some or all accounts) may work well in small and medium size trust departments, such an approach may be both impractical and inefficient in large departments that administer thousands of accounts. Such institutions may adopt administrative review methods that employ a "due diligence" approach to account review. In lieu of a "sit down and checklist" methodology, the "due diligence" approach uses a combination of internal audits, tickler systems, checks and balances and other procedures to verify that, over the course of the year, all accounts are properly administered. Examiners should not automatically criticize the absence of formal account review sessions, but instead should evaluate the effectiveness of the "due diligence" process in providing assurance that all accounts are administered properly. The "due diligence" process should promptly identify administrative deficiencies and promote the timely correction of identified weaknesses. The results of the administrative review process should be periodically reported to the Board, or a Board committee thereof, and senior management.

Investment Review

If the bank has discretion over the account's assets, sufficient information should be provided to the reviewing authority to enable it to make informed and intelligent decisions. At a minimum, information considered necessary to perform an investment review includes:

- Investment powers authorized by the trust instrument and/or governing law,
- Investment objective of the account (income, growth, etc.),
- Listing of account assets, reflecting cost and market values,
- Projected yields on individual assets,
- Projected income of the overall account, and
- Amount of principal and income cash on hand.

An investment review may include, but is not limited to, the following items:

1. Investment objectives - Are they consistent with the objectives of the trust? Are assets held consistent with the chosen investment objectives and/or asset allocation models?

- Diversification of discretionary investments - Is the account properly diversified consistent with either the Prudent Investor Act or Prudent Man Rule, as applicable?
- Concentrations - Are there any undue concentrations, either within a type of security, industry, or specific obligation?
- Own-bank or affiliate obligations - Is the purchase appropriate, yield adequate, and authorization documented?
- Investments in companies related to, or loans made to, bank insiders - Are there any conflict of interest or self-dealing concerns?
- Approved hold, buy, and sell lists - Is the account in compliance?
- Maturity of assets - Are there excess funds invested in short-term (lower yielding) investments? Is there adequate liquidity?
- Asset valuations - Are assets including real estate, limited partnerships, closely held businesses, real estate syndications, and derivatives valued accurately?
- Insurance coverage - Is it adequate?
- Environmental risk factors - Are there any environmental risk concerns?
- Complaints - Are complaints by grantors, beneficiaries, plan administrators, etc. being reviewed? Have previous complaints been resolved?
- Criticisms - Is corrective action being taken in regards to criticisms noted by internal and external auditors and regulatory authorities?

All of the items listed above will not necessarily be included in every trust department's account review program. Therefore, examiners must exercise discretion in assessing the adequacy of account reviews. An assessment should be made after giving consideration to the department's overall account review program, fiduciary responsibilities, committee minutes, file documentation, account officer expertise, and account sampling. Some trust departments may believe that completion of an investment review satisfies the account review requirement for discretionary accounts. Examiners should remind management that fulfilling account administrative duties (i.e., timely mailing of customer statements, income distributions, fee calculations, etc.) is also a fiduciary responsibility that should be reviewed to reduce exposure to liability.

If the account review program is materially deficient, the Report of Examination should contain criticisms of management . The examiner-in-charge should obtain management's response and plan for corrective action.

G.5. Records of Account Reviews

The bank should be able to satisfactorily demonstrate that account reviews are accomplished according to the standard set by the Statement of Principles of Trust Department Management and departmental policy. Normally, two types of records of account reviews are maintained: one at the reviewing authority level (i.e., trust committee, subcommittee, or disinterested account officer), and the other at the trust account level.

G.5.a Reviewing Authority Level

The purpose of a record at this level is to document the fact that the institution has accorded proper reviews of its trust department accounts. An appropriate record should be maintained at the reviewing authority level (committee or disinterested account officer) substantiating that a review was conducted. The record should list individual accounts reviewed and provide details of any decisions made concerning the accounts. Examiners should review management's methodology for conducting reviews and determine if adequate exception reporting has been implemented and is being monitored.

A summary report of these reviews should be submitted to the next highest committee (or subcommittee) level for ratification. Copies of the actual review documents or material(s) on which the review was conducted do not need to be routinely provided to the next highest committee, however, such documentation should be made available for review if requested.

G.5.b. Account Level

The purpose of a record at this level is to document the fact that the individual trust account received an appropriate review. A record of the review should appear in the individual account file, as it is management's duty to keep clear and accurate accounts. The actual review documents or materials on which the review was based should be kept at this level. Any noted exceptions to the governing instrument or department policies should be retained in the file along with sufficient documentation outlining corrective action. Objections, complaints, and lawsuits over trust accounts often occur years after a transaction occurs. The information provided in this record can be an important defense in explaining the rationale for actions taken in prior years. Account review information should be more easily assembled from this source than from information recorded in committee minutes .

H. Trust Policies

Directors need not be actively involved in day-to-day operations; however, they must provide clear guidance regarding acceptable risk exposure levels and ensure that appropriate policies, procedures, and practices have been established. Senior management is responsible for developing and implementing policies, procedures, and practices that translate the Board's goals, objectives, and risk limits into prudent operating standards. Compliance with internally developed policies and procedures is a fundamental element in a sound risk management program. When properly monitored and enforced by directors, well-developed policies, procedures, and controls promote operating efficiency, compliance with laws and fiduciary principles, and minimize losses.

In smaller banks, policies may be brief, yet adequately serve the needs of the department given the services offered and nature of accounts administered. In larger departments, however, or in those administering more complex accounts, policies will likely be more detailed. Nonetheless, the FDIC recommends that all policies be written. The Board should periodically review and revise the policies to ensure that they remain adequate for the bank's fiduciary activities. Depending upon the complexity of fiduciary operations, trust department policies typically, address the areas listed below.

Trust Department Policies

- Investment Policy
- Overdraft and Cash Balance Requirements
- Guidelines for Account Administration
- Fee Concessions
- Conflicts of Interest and Self-Dealing Policies
- Securities Trading
- Operations and Controls Guidelines
- Business Development Guidelines
- Selection and Retention of Legal Counsel
- Policy Exception Reporting and Approval Guidelines

In addition to trust specific policies, many banks incorporate fiduciary activities within broader bank policies. As appropriate, examiners should review bank policies that are applicable to the trust function or cover trust employees. Detailed below are some of the more common bank policies that may cover fiduciary activities.

Bank Policies

- Ethics/Code of Conduct including a Bribery Policy
- Personnel
- Bank Secrecy Act
- Customer Due Diligence
- Electronic Banking
- Privacy
- Electronic Funds Transfer

H.1. Other Trust Policies

Other trust policies may include, but are not necessarily limited to, brokerage placement policies; acceptance of accounts; acceptance of co-fiduciary appointments and division of compensation with co-fiduciaries; operations and administration; scope, frequency, and level of account reviews; loans to trust accounts; and proxy voting.

H.2. Compliance with USA PATRIOT Act

In October, 2001, Congress passed the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act, known as USA PATRIOT Act. The purpose of the Act is "To deter and punish terrorist acts in the United States and around the world, to enhance law enforcement investigatory tools, and for other purposes." The Act is far-reaching, and places numerous requirements on banks, including their trust departments. Banks must develop policies and procedures to ensure trust departments comply with provisions of the USA PATRIOT Act and other anti-money laundering (AML) regulations.

New provisions of the Bank Secrecy Act are intended to facilitate the prevention, detection, and prosecution of money laundering and the financing of terrorism. Financial institutions are required to implement a Customer Identification Program (CIP) and establish reasonable procedures to:

- Verify the identity of persons seeking to open an account.
- Maintain records of information used to establish the identities of customers.
- Determine whether any persons seeking to open an account appear on lists of known or suspected terrorists or terrorist organizations. As of the date of the most recent Trust Manual revision, there is no officially approved list of known or suspected terrorists or terrorist organizations.

Note: for purposes of the law, a customer includes all persons that open accounts. It does not include existing customers if bank management is satisfied of the identification of the account holder. Furthermore, a person includes a trust, but does not include the beneficiary of the trust.

The definition of an account specifically includes asset accounts, and accounts established to provide cash management, custodian, or trust services. However, the definition does not include accounts opened for the purpose of participating in employee benefit plans established under ERISA.

This is the minimum required identification information for the CIP when opening an account:

- Name
- TIN (tax identification number or social security number). There is a TIN exception for a business that has recently applied for, but has not received a TIN. The bank can open the account without the TIN for a reasonable time period; however, the bank must follow up to obtain the TIN.
- for individual - date of birth

- for individual - residence, if different, mailing address; or
- for corporations, partnerships, and trusts - principal place of business and, if different, mailing address.

In order to verify the identity of a person other than an individual opening an account, various documents could be used to show the existence of the entity, including articles of incorporation, government-issued business licenses, partnership agreements, or trust instruments.

Reliance on Other Financial Institutions

The CIP may include procedures specifying when a bank will rely on the performance by another financial institution, including an affiliate, of CIP procedures for customers with or opening accounts at the other institution. The PATRIOT Act states, "In order for a bank to rely on the other financial institution, such reliance must be reasonable under the circumstances, and the other financial institution must be subject to a rule implementing the anti-money laundering compliance program of 31 USC 5318(h) and be regulated by a Federal functional regulator. The other financial institution must enter into a contract requiring it to certify annually to the bank that it has implemented its anti-money laundering program and that it will perform (or its agent will perform) the specified requirements of the bank's CIP. The contract will provide a standard means for a bank to demonstrate the extent to which it is relying on another institution to perform its CIP, and that the institution has in fact agreed to perform those functions. If it is not clear from these documents, a bank must be able to otherwise demonstrate when it is relying on another institution to perform its CIP with respect to a particular customer."

Foreign Correspondent Accounts

Section 312 of the PATRIOT Act requires that "Each financial institution that establishes, maintains, administers, or manages a private banking account or a correspondent account in the United States for a non-United States person, including a foreign individual visiting the United States, or a representative of a non-United States person shall establish appropriate, specific, and, where necessary, enhanced, due diligence policies, procedures, and controls that are reasonably designed to detect and report instances of money laundering through these accounts." Additionally, enhanced due diligence procedures are required for correspondent accounts with foreign banks operating:

- under an offshore banking license; or
- under a banking license issued by a foreign country that has been designated as non-cooperative with international anti-money laundering principles by an intergovernmental group or organization of which the United States is a member, with which designation the United States representative to the group or organization concurs; or designated by the Secretary of the Treasury as warranting special measures due to money laundering concerns.

The enhanced procedures include identifying the owners of any foreign bank not publicly traded and the nature and extent of the ownership interest of each owner, conducting enhanced scrutiny of such account to guard against money laundering and report any suspicious activity, and ascertaining whether the foreign banks provide correspondent accounts to other foreign banks, and, if so, the identity of those foreign banks and appropriate due diligence.

Private Banking

Enhanced procedures for private banking accounts include ascertaining the identity of the nominal and beneficial owners of, and the source of funds deposited into the account, and reporting any suspicious activity in the account. Additionally, an account maintained by, or on behalf of, a senior foreign political figure, his/her immediate family, or close associate must receive enhanced scrutiny to detect and report foreign transactions that may involve the proceeds of foreign corruption. Private banking accounts include those with assets exceeding $1 million which are assigned to an individual acting as an employee or agent of a financial institution and as a liaison between the financial institution and the direct or

beneficial owner of the account.

Mutual Funds

The USA PATRIOT Act also requires mutual fund management to adopt formal anti-money laundering programs which include at a minimum:

- The development of internal policies, procedures and controls;
- The designation of a compliance officer;
- An ongoing employee development program; and
- An independent audit function to test programs.

I. Fee Concessions to Insiders

It is a common fiduciary practice for management to grant fee discounts to fiduciary clients. Such discounts are usually offered as either fee concessions or compensating balance arrangements. The trust department's policy should clearly describe to whom and for what purpose discounts will be allowed, the types of services which may be involved, and the method by which the trust department may be compensated by the bank for such discounts.

If the practice is to charge reduced fees to directors, officers, employees, shareholders, or their interests, that practice should be in writing and approved by the Board. Fee concessions are acceptable provided:

- They are consistent with the marketing and profitability objectives;
- The trust department will operate at a profit after the fee concessions are granted;
- The fee concessions are awarded under a uniform and nondiscriminatory policy to all directors, officers, and employees of the bank; and
- The fee concession policy is approved by the Board of Directors.

Affiliate Accounts and Fees

ERISA establishes limitations on fees that may be assessed by the trust department against affiliated employee benefit accounts. Pursuant to ERISA, trust departments may be reimbursed only for specific costs associated with the employee benefit accounts and are limited to the extent that direct costs vary and are passed-through to the account in the form of fees.

Section 23B of the Federal Reserve Act prohibits the preferential waiver of fees for the benefit of an affiliate (and to the detriment of the bank/trust department). Section 23B targets fees that are negotiated or based on a fee schedule since such fees generate income or profit for the trust department. When these scheduled fees are reduced or waived for affiliated accounts, employee benefit or otherwise, an apparent violation of Section 23B may occur.

Note that ERISA establishes limits that trust departments may charge employee benefit accounts while Section 23B limits preferential treatment to affiliates. If a given trust department is assessing employee benefits accounts fees in accordance with the ERISA schedule, Section 23B will likely not apply as there is no preferential treatment to the employee benefit account, even if affiliated, since the trust department is only following proscribed law. However, when fees assessed are actually less than direct costs associated with the servicing of an affiliated employee benefit account, an apparent violation of Section 23B may exist.

J. Meeting With Department Management

Ongoing communication between the examination staff and trust department management is critical for effective supervision. Open communication ensures that examination requests are met and that disruptions to the department's normal business are minimized. Informal meetings should be held before and throughout the examination to discuss any significant changes since the last examination or any planned changes. Some of the items to discuss with management include:

- Policies

Organizational structure

- Operations
- Marketing strategies
- New products and services

At the conclusion of the examination, the examiner-in-charge should meet with the trust department manager and another senior level bank manager to discuss the examination findings. In addition to presenting the findings and recommendations, the examiner-in-charge should obtain management's response. No significant recommendations or criticisms should be presented in the report of examination that have not first been presented to management.

K. Meeting With Directors and Committees

Although review of trust committee minutes and supplemental reports should indicate the degree of involvement and interest of committee members in their assigned duties and responsibilities, it may not provide sufficient basis for analyzing committee effectiveness. Therefore, examiners may consider attending committee meetings held during the examination, not only to observe, but also to share examination findings and offer recommendations to the committee. The examiner may use this opportunity to discuss committee members' collective views on the department, its direction and potential.

At or near the conclusion of the examination a meeting with the Board of Directors, trust committee or other Board committee should be held. When it is concluded that a meeting with a Board committee rather than the full Board is appropriate, selection of the committee must be based on the group's actual responsibilities and functions rather than its title. In all cases, the committee chosen should include an acceptable representation of Board members who are not full time officers. Additionally, the committee chosen should be influential as to policy, meet regularly, and report to the entire Board.

The purpose of such Board or committee meetings is to acquaint directors and/or committee members with the condition of the trust department, present recommendations for correcting deficiencies or weaknesses, and seek the institution's commitment to correct the deficiencies. The examiner should note in the Report of Examination with whom the findings of the examination were discussed and the corrective commitments and/or reactions.

K.1.Disclosure of Ratings

At the conclusion of the examination, it is appropriate for the examiner to disclose to senior management and/or the Board of Directors the Uniform Interagency Trust Rating System (UITRS) component and composite ratings. Disclosure of the component and composite ratings encourages a more complete and open discussion of examination findings and recommendations, and therefore provides management with useful information to assist in making risk management procedures more effective. Examiners should clearly explain that the ratings are tentative and subject to final approval by the Regional Director.

K.2. Departments Assigned or Likely to be Assigned a Composite "1" or "2" Rating

I f the trust department is assigned or likely to be assigned a composite "1" or "2" rating under the UITRS, a meeting with the Board or a Board committee is not required.

K.3. Departments Assigned or Likely to be Assigned a Composite "3" Rating

If the trust department is assigned or likely to be assigned a composite "3" rating under the UITRS, the examiner-in-charge should meet with the Board of Directors or an appropriate committee during or subsequent to the examination. Regional Office representation is at the discretion of the Regional Director. Additional meetings or other contacts with the Board of Directors or appropriate Board committee may be scheduled at the discretion of the Regional Director or designee.

K.4. Departments Assigned or Likely to be Assigned a Composite "4" or "5" Rating

If the trust department is assigned or likely to be assigned a composite "4" or "5" rating under the UITRS, the examiner-in-charge should meet with the Board of Directors. In such instances, the Regional Office should be informed so that the Regional Director or a designee of the Regional Director can attend the meeting if necessary. Consultation with the Regional Office can take place during or subsequent to the examination. If the trust and commercial departments of the bank are examined concurrently, the meetings may be held

jointly. There should be close coordination between the examiners-in-charge of the commercial and trust examinations.

supervision@fdic.gov

Trust Examination Manual

Section 2 - Operations, Controls and Auditing

Table of Contents

The operations section of a trust department provides support to the administrative arm in much the same way as the operations division of a bank supports its other functions. As such, it is the focal point for all actions affecting customer accounts and the department itself. To be effective it must provide management with accurate and reliable systems for documentation, accounting and control. While the sophistication of the operational systems employed is likely to vary with the size and complexity of the department, the underlying principles involved are universal.

The trust function must have adequate facilities and equipment, as well as a sufficient number of knowledgeable, trained and experienced staff, to accomplish its tasks. Documentation substantiating appointments and actions taken throughout the life of an account must be obtained, maintained and preserved. Record keeping systems must provide a detailed picture of all funds and other assets under the control of the fiduciary from an account's inception to its closing. Procedures must be developed to process work in a uniform and orderly manner and a practical system of checks and balances must be developed to ensure the integrity of the work performed.

This section of the Manual is organized into the following parts:

A. Trust accounting

B. Property ownership

C. Principal and income

D. Carrying values

E. Accounting records

  1. General Ledger
  2. Asset Control Accounts
  3. Subsidiary Asset Controls
  4. Subsidiary Liability Controls

F. Trust records

  1. Administrative File
     a. Legal File
     b. Digest or Synopsis
     c. Correspondence File
     d. Investment Review File

e. Securities Transaction File

f. Tax File

2. Tickler System

3. Other Records

a. Securities Transaction Register

b. Vault Control Log

c. Broker Statements

G. Account documentation

1. Evidence of Appointment

2. Supporting Documentation

a. Trust Committee Minutes

b. Approvals

c. Indemnification

d. Accountings and Customers' Statements

e. Account Reviews

f. Receipt and Release

g. Other Documents

H. Internal Controls

1. Segregation of Duties

2. Vacation Policy

3. Reconcilements

4. Other Elements of Control

5. Fraudulent Acts

I. Nominees

J. Use of broker-dealers for securities safekeeping/securities investor protection corporation (SIPC)

K. Free riding and daylight overdrafts

L. Facilities

M. Information Technology

N. Business Continuity Planning

O. Self-directed IRA'S and keogh accounts

1. Direct Arrangements

2. Arrangements with Third Parties

P. Custodial holdings of government securities: compliance with government securities act of 1986

1. Background

2. Applicability

a. To broker-dealer activities

b. To government securities repurchase transactions

c. To custodial holdings of government securities for customers:

Q. Shareholder Communications Act of 1985

1. Background and Requirements

2. Applicability to Trust Accounts

R. State escheat laws

S. Audit and accounting issues

1. Audit Objectives

2. Audit Program

3. Audit Activities

4. Evaluation of the Audit Function

5. Statement on Accounting Standards (SAS #70)

6. FAS 87

A. Trust accounting

While general accounting principles apply to trust recordkeeping, significant differences exist between the accounting systems employed by the trust department and the commercial department. Trust departments are called upon to serve in various capacities. Aside from personal and employee benefit trusts, the department may serve as corporate trustee for bond issues or as a paying or escrow agent. Since each account must be treated as an individual entity, the accounting system adopted will be required to reflect individualized statements of holdings (or accountability), as well as aggregate controls for the department. The specialization required by this type of system, and the legal ramifications involved in handling fiduciary matters, necessitate the adoption of a completely separate set of books and records.

The fundamental principle behind general accounting theory is expressed in the equation:

Assets = Liabilities + Capital

This principle does not apply to trust accounting, since the fiduciary does not account for its own assets, but for the property of others. As such, the fundamental principle behind trust accounting is expressed as follows:

Assets = Accountability (or Liabilities)

In this equation, assets such as securities, deposits, or real property are liabilities for which the department is accountable, or liable, to others. Expressed differently, the assets of trust accounts are also the liabilities of the fiduciary. Normally, the only accounts holding cash or assets not owed to fiduciary customers are "house accounts," which may include undistributed profits and suspense items.

Note that the Call Report Instructions and Glossary describing accounting standards and practices, and generally accepted accounting principles, do not apply to trust accounting.

B. Property Ownership

The laws governing the ownership of property differ from state to state. Therefore, examiners need some basic knowledge of the property laws applicable within individual states. Trusts, in some form, are permissible in all states. A trust occurs when the ownership of property is separated as to title and equity. A trustee retains title to trust property (corpus or principal), but has no beneficial or equitable interest in

the property. A trust cannot exist when the legal owner, or party holding title, also holds the only beneficial interest in the property. Nevertheless, a fiduciary does not necessarily have to hold title to property, such as in a guardianship. Beneficiaries are divided into two classes: those holding a current interest in the property of a trust, and those holding a remainder (or future) interest. Since the first class of beneficiaries is entitled to the current return generated from the property, while the latter is entitled to the future value of the property at some specified future time, trustees must maintain separate records to account for, and distinguish between, income and principal.

In an agency capacity, ownership and, in general, title to the assets, does not pass to the fiduciary, but remains with the principal. The trust department's obligation is to act as the principal's agent and follow the instructions stipulated in an agency agreement.

C. Principal and Income Allocations

The trustee is under a duty to deal impartially (remain neutral) with beneficiaries, when there are at least two beneficiaries. This rule applies when the beneficiaries' interests are concurrent or successive. In personal fiduciary accounts, it is common for one set of beneficiaries to be entitled to the income ("income beneficiaries"), while a second set of beneficiaries is entitled to the principal ("remaindermen"). These classes of beneficiaries often have different, sometimes opposing, needs and interests. While serving both classes of beneficiaries can often prove difficult, the trustee must balance objectives and investments, so that one class of beneficiary is not favored over the other.

While account agreements may outline permissible investment products, the documents may not indicate treatment for allocations between principal and income. For those circumstances where principal and income are not defined, default allocations have been established under the Uniform Principal and Income Act, with most states adopting the 1931 and the 1962 Revised Uniform Principal and Income Act. The Act was again revised in 1997 to incorporate and be consistent with the concept of Prudent Investor Act (modern portfolio theory and total return) and allow for investment products not previously developed. A copy of the Act and commentary are provided in Appendix C Uniform Principal and Income Act of 1997. Nearly all states have adopted the Act in some form; however, examiners are reminded that states may modify "uniform" Acts during the legislative process. According to the National Conference of Commissioners on Uniform State Laws, the primary difference is the ability to delegate investment decisions. Consequently, the law of any state may depart in small or large measure from the "uniform" Act presented in this manual. The text of these and other uniform acts is also available at the Internet site of the National Conference of Commissioners of Uniform State Laws, http://www.nccusl.org .

Although distinguishing between "principal" and "income" appears relatively straightforward, there are many situations where it is much more complicated. The following list summarizes allocations for various issues:

- Discount Obligations - The entire increase in value of these obligations is principal when the trustee receives the proceeds from the disposition, unless the obligation, when acquired, has a maturity of less than one year.
- Capital Gains - Capital gain dividend does not include any net short-term capital gain, and cash received by a trust because of a net short-term capital gain is considered to be income.
- Reinvested Dividends - If a trustee elects or continues a course of action to reinvest dividends in shares of stock of a distributing corporation or fund, the new shares would be principal. However, if the trustee makes a decision, for example, to make an investment without incurring brokerage fees, the trustee should transfer cash from principal to income in an amount equal to the reinvested dividends.
- Mineral rights - 90 percent of oil and gas receipts are considered principal, while the remaining 10 percent are income.
- Timber, Christmas trees, and Plywood for Commercial Sale or Use - If the timber cut and removed does not exceed the growth rate of timber during the accounting periods in which a beneficiary has a mandatory income interest, then net receipts are allocated to income. Any amount removed in excess of the growth rate is considered principal. If the net receipts are from the lease of timberland or from a contract to cut timber from land owned by a trust, then net receipts may be allocated between income or principal. In determining net receipts to be allocated, a trustee should deduct and transfer to principal a reasonable amount for depletion.

- Liquidating Assets, Such As Leaseholds, Patents, Copyrights, And Royalty Rights - Property subject to depletion was revised to allocate 90 percent of the amounts received to principal and the remainder to income.

- Decedent's Estate Or Terminating Income Interest - An income beneficiary's estate will be entitled only to the net income actually received by a trust prior to the beneficiary's death and not the accrued income.

- Derivatives (such as interest rate swaps) and Options (not embedded) - If the department does not maintain separate accounting records for these transactions, then the trustee shall allocate to principal, receipts from and disbursements made in connection with such transactions. A gain or loss that occurs because the trustee marks securities to market or to another value during an accounting period is not a transaction in a derivative financial instrument that is income or principal under the Act. Only cash receipts and disbursements are included. Options include an option to purchase real estate owned by the trustee and a put option purchased by a trustee to guard against a drop in value of marketable stock that must be liquidated to pay estate taxes. The practice of selling call options on securities owned by the trust, if the terms of the option require delivery of securities, is also included in this definition. However, this does not apply if the consideration received or given for an option is something other than cash or property, such as cross-options granted in a buy-sell agreement between owners of an entity.

- Asset-Backed Securities, Including Real Estate Mortgages, Credit Card Receivables, and Auto Loans - If a trust receives a payment, the trustee shall allocate to income the portion of the payment which the payer identifies as being from interest and the balance to principal. If a trust receives one or more payments in exchange for the trust's entire interest in an asset-backed security in one accounting period (defined as a calendar year or can be a 12-month period if selected by a fiduciary), the trustee shall allocate the payments to principal. If a payment is one in a series of payments that will result in the liquidation of the trust's interest in the security over more than one accounting period, the trustee shall allocate 10 percent of the payments to income, and 90 percent to principal. An example of the final point is a busted PAC tranche, where the class protection has been eliminated.

- Inflation-Indexed Bonds - Any increase in principal due to inflation after issuance is principal upon redemption, if the bond matures more than one year after the trustee acquires it; if it matures within one year, all of the increase is considered income.

- Deferred Compensation, Annuities, and Similar Payments - If no part of a payment is characterized as interest, dividend, or equivalent, and all or part of the payment is required to be made, the trustee should allocate to income 10 percent of the part that is required to be made during the accounting period and the balance to principal. Payment is defined to include a payment made in money or property from the payer's general assets or from a separate fund created by the payer, including a private or commercial annuity, an IRA, and a pension, profit-sharing, stock-bonus, or stock-ownership plan. If no part of the payment is required to be made or the payment received is the entire amount to which the trust is entitled, the trustee shall allocate the entire payment to principal. A payment is not "required to be made" is defined as to the extent that it is made because the trustee exercises a right of withdrawal. To obtain an estate tax marital deduction for a trust, the trustee should allocate more to income to obtain the deduction.

- Disbursements From Income Are Based On Recurring Items That Are Not Specifically Tied "To An" Asset. For example, trustees' fees can be charged against either principal or income or both, while title insurance and real estate taxes must be assessed against principal.

- Generation-Skipping Transfer Taxes are payable from principal.

- Disbursements Made For Environmental Matters - Includes reclamation, environmental assessments, remedy and removal of environmental contamination, monitoring of remedial activities and the release of substances, preventing future release of substances, collecting amounts from persons liable or potentially liable, penalties imposed by law or regulation, and defending claims based on environmental matters. All environmental expenses are payable from principal, based on the assumption that the expenses will be extraordinary in nature. However, if the trustee is carrying on a business that uses or sells toxic substances, and cleanup costs would be a normal cost of doing business, then the expenses could be allocated to income.

- Income Tax Obligations Resulting From The Ownership Of Subchapter S Corporation Stock And

Interests In Partnerships - Income from a partnership is based on actual distributions from the partnership, in the same manner as corporate distributions. Distributions from corporations and partnerships that exceed 20 percent of the entity's gross assets will be principal whether or not intended by the entity to be a partial liquidation.

- Income Tax Obligations Are Allocated Based On The Source. If the tax is based on receipts allocated to income, the tax is paid from income. If the tax is based on receipts allocated to principal, then the tax is paid from principal.
- The Power To Make Adjustments Between Principal And Income To Correct Inequities Caused By Tax Elections Or Peculiarities In The Way The Fiduciary Income Tax Rules Apply. This allows fiduciaries to make adjustments as necessary to re-allocate principal and income to make taxes equitable, based on prior tax elections. For example, individuals may elect to have taxes paid annually or at maturity on the income from savings bonds, although the income is not distributed, but added back to principal. In this situation, if the tax election was to pay taxes annually, the income beneficiary may be responsible for income tax on cash flows that the principal beneficiary may enjoy in the future.

When dealing with principal and income, however, examiners should be aware that the distinction between principal and income is not important for personal agency and employee benefit trusts. As previously stated, the trustee is under a duty to deal impartially with beneficiaries, when there are at least two beneficiaries. For agency or employee benefit accounts, there is one class of beneficiaries.

D. Carrying Values

Unlike commercial bank accounting, where assets and liabilities are carried at cost or book value, there is no generally accepted system for assigning carrying values to assets held by trust institutions. The examiner may find that the assignment of carrying values will vary not only from institution to institution, but also from one account to another within the same trust department. This makes a meaningful analysis of trust department statements of condition difficult, if not impossible, without knowing which valuation methods are used to prepare the statements. One or several of the following methods are generally used as asset carrying values in any given institution:

- Book or cost of the asset;
- Tax cost or date of death valuation when acquired from a decedent's estate;
- Par value, the face value of property; or
- Nominal value, assigning a nominal value to each item or interest of ownership in an asset, or miscellaneous items such as insurance policies and indentures. Stocks may also be carried at a nominal value for the number of shares held, particularly in custody or safekeeping accounts.

For Call Report, Schedule T purposes, trust assets should be reported at market value, where asset values can be determined by a market or trading, or by other sources, such as appraisals. Nominal values are permitted as described above.

E. Accounting Records

As mentioned earlier, the level of sophistication of trust departments varies from institution to institution. Records will also vary since, in addition to the differences relating to the size and character of the accounts administered, trust accounting systems are not standardized. However, the reporting requirements imposed on fiduciaries and the concepts involved remain the same. Therefore, the overall framework of each accounting system consists of the following:

E.1. General Ledger

The general ledger will comprise all control accounts of the department. It includes both customer and internal accounts used by the department to facilitate its operation. Many automated systems have subsidiary control records but do not have the traditional "general ledger". The examiner must exercise judgment in determining the sufficiency of the records encountered.

E.2. Asset Control Accounts

These accounts should reflect the total holdings of the major asset categories, such as stocks, bonds, or deposits.

E.3. Subsidiary Asset Controls

These accounts will reflect the total investments in specific issues of stocks, bonds, etc.

E.4. Subsidiary Liability Controls

These records will reflect the total of cash and investment holdings of each type of account administered. This category should be further subdivided to allow for transactions to be posted to individual accounts. The cash ledger should detail income and principal cash, and reflect transactions in chronological sequence. The investment ledger should reflect each asset held by a trust account. Purchases, sales, stock dividends and splits should be recorded in chronological order. The examiner must bear in mind that some indentures provide for the reinvestment of income cash, and that it is common practice to invest "income" until it is distributed. In these situations, it will be necessary to maintain separate ledgers to account for those assets consisting of "invested income".

F. Trust Records

In addition to maintaining a reliable system of accounting, a trust department needs other records to administer accounts in a timely and cost-effective manner. The design and control of these support records can mean the difference between a smoothly functioning department and one that may have to search through unorganized records when an administrative action needs to be taken. Moreover, departments with detailed and accurate records are less likely to be adversely affected by personnel turnover, errors in judgment, or contingent liabilities.

While some smaller, noncomplex trust departments may continue to maintain trust records manually, most institutions now maintain trust records electronically. Electronic recordkeeping systems are acceptable, provided that the institution has implemented adequate internal controls and procedures to ensure the integrity of trust department records. Two important records are the Administrative File and the Tickler System.

F.1. Administrative File

The administrative file consists of interrelated records, which, as a whole, represent the history of an account. The records of the administrative file may be contained in a single file or in several files within the department. These records consist of:

F.1.a. Legal File

Contains copies of all legal documents relevant to the account, including the document creating the account, such as a will, a trust agreement, or a court order.

F.1.b. Digest or Synopsis

Synoptic records provide a concise summary of the principal duties and provisions of the legal documents governing the account, and may also provide other important information, such as beneficiaries, remaindermen, remittance instructions, and reporting requirements. Synoptic records are especially valuable to trust department management and administrative officers. This document may be a paper document maintained in the account file or in an electronic format.

F.1.c. Correspondence File

Contains all correspondence related to the account.

F.1.d. Investment Review File

Contains asset reviews, which enable management to evaluate investment performance.

F.1.e. Securities Transaction File

Contains broker confirmations and other data related to changes in securities holdings during the life of the account.

F.1.f. Tax File

Contains tax-related documents and copies of tax returns filed for the account.

F.2. Tickler System

A tickler system is a chronologically arranged system of records, which reminds

department employees to collect income, distribute funds, calculate trust fees, etc. A tickler system can be maintained in electronic or paper format. Though simple in design and concept, the effective use of tickler systems can be critical for account administration.

F.3. Other Records

Other records which affect the operation of a department to a significant degree and which an examiner will find useful in the examination process are:

F.3.a. Securities Transaction Register

This record should list in chronological order all the securities transactions effected by the department. This record will most likely be in electronic format. The preparation and content of this document, as well as other records pertaining to securities transactions, are subject to Part 344 of the Corporation's Rules and Regulations.

F.3.b. Vault Control Log

This log is used to record the dates and identities of individuals who access the department's vault. Records should also be maintained indicating the items accessed and the reasons therefore.

F.3.c. Broker Statements

The statements reflect all transactions effected for the department by brokers. These statements should be reviewed carefully by the staff and reconciled to broker confirmations and the Securities Transaction Register.

G. Account Documentation

Documentation is as important as the administration itself, as fiduciaries must account for their actions to others. Challenges to account administration, resulting in complaints or litigation, may occur years after a particular transaction has occurred. The failure to maintain documentation that adequately supports the actions taken, including the rationale for such actions, may result in court-imposed surcharges or negotiated loss settlements. Examiners will encounter two basic types of documentation: documents evidencing the fiduciary's appointment and the creation of the account, and documents supporting the actions taken by the fiduciary during the term of the account.

G.1. Evidence of Appointment

In general, a fiduciary should refrain from taking any action until it receives proper evidence of appointment and an original or authenticated copy of the instrument creating the account. Valid evidences of appointment depend upon the type of appointment. In the most basic appointment, such as a personal agency, the department need only execute an agreement with its customer. The same is true for a living trust. In accounts operating under court jurisdiction, such as estates, trusts under will, and court-appointed guardianships, the fiduciary will need to obtain a court order of appointment in addition to the instrument creating the account. In estates where the executor has been named in the will, the court appointment is called Letters Testamentary. In estates where named executors cannot or do not accept the appointment, a court will appoint an administrator for the estate under Letters of Administration. Letters of Administration are also used to appoint an administrator where no valid will exists or where the will does not nominate an executor. Trustees named in a will serve under Letters of Trusteeship. Guardians serving under court appointment are issued Letters of Guardianship. In corporate appointments, the fiduciary should obtain a resolution for appointment, as well as a copy of the instrument it will be serving under. In accepting appointments to serve as successor to a prior trustee or executor, the fiduciary should obtain:

- Copies of the original court appointments (if applicable),
- An authenticated copy of the instrument it will serve under,
- An accounting of the estate, trust, or agency from inception to its appointment, and
- Any other documents substantiating its appointment, or indemnifying it against the actions of others.

G.2. Supporting Documentation

During the term of an appointment, numerous actions may be taken to serve the needs of the account and its beneficiaries. At times these actions involve nothing more than processing an address change for an income beneficiary. Others may involve actions

having serious consequences for the account, such as principal invasions or selling assets at a capital loss. A fiduciary must be able to support its actions by demonstrating it had the necessary legal authority and that it exercised sound judgment. The fiduciary's legal authority will be found in common law, statutory law, and the underlying indenture. The rationale for its actions may be more difficult to demonstrate; therefore, it is essential that the fiduciary be able to justify its actions, which requires adequate documentation. The types of documentation the fiduciary should maintain are:

G.2.a. Trust Committee Minutes

Deliberation and action over matters affecting the account.

G.2.b. Approvals

Written approvals of discretionary actions are sometimes required by indentures and, at other times, are merely prudent. Written approvals should always be sought from co-fiduciaries. When extraordinary actions affect individuals having a future interest in an account, the fiduciary should seek written approvals from all remaindermen.

G.2.c. Indemnification

Certain discretionary actions may involve controversial matters, such as purchasing own-bank or parent securities or performing duties not specified in trust indentures, but requested by others, such as co-fiduciaries or remaindermen. These actions require more formalized written approvals in the form of agreements or court rulings indemnifying the fiduciary against loss.

G.2.d. Accountings and Customers' Statements

These are required for court-appointed accounts, but may be prepared for other types of accounts. Essentially, the listing or statements reflect all account transactions occurring during a specific period of time. Either the court having jurisdiction, all interested parties, or both should approve accountings.

Customer statements should be provided in compliance with the governing agreement or at least annually. Most trust departments provide at least quarterly statements.

G.2.e. Account Reviews

Periodic reviews performed by the trust committee.

G.2.f. Receipt and Release

This is a formal document acknowledging the receipt of cash or assets. It is given by the recipient to the fiduciary, and releases the fiduciary from any further obligation with respect to a bequest or other distribution. This section applies to the physical transfer of assets and not to book-entry transfers.

G.2.g. Other Documents

There are numerous documents a fiduciary will obtain during the administration of an account. These might include property appraisals, lease agreements, broker confirmations, receipts for contracted work, or investment research. Each has its own significance, and depending on the nature of the appointment, may serve to support and indemnify fiduciary actions.

H. Internal Controls

H.1. Segregation of Duties

One of the most fundamental methods of internal control is the segregation of duties. One individual should not be capable of initiating, authorizing, executing, and subsequently reviewing a transaction for appropriateness. In a trust department, this concept begins by segregating administrative from operational functions and continues by segregating duties within the operating system itself.

Many FDIC-supervised trust departments are relatively small in size and the segregation of

duties is often not economically practical. In these cases, an institution should develop compensating controls. One compensating control easily employed by smaller institutions is the requirement that a second person be involved in executing a transaction. This can be implemented by having a second individual approve a transaction in writing. But it is effective only if the second person reviews the supporting documentation and understands the transaction being approved.

Management is responsible for assessing the specific requirements of the department and adopting an overall system of policies and procedures. Examiners should evaluate the adequacy of these policies and procedures, and determine compliance therewith.

H.2. Vacation Policy

Supervisory agencies and auditors have long recommended the practice whereby personnel are required to be continuously absent from their jobs or duties for a given amount of time and their duties assumed by another employee. During such an absence, the possibility of detecting irregularities is much greater, as the employee who is absent is unable to effectively control the situation. The FDIC has encouraged an uninterrupted absence of at least two weeks. However, compensating controls, such as the rotation of personnel among different jobs and duties, can constitute an acceptable alternative to a policy requiring a continuous two week absence.

H.3. Reconcilements

The reconcilement of deposit accounts, suspense accounts, and securities depository statements should be performed regularly by individuals who are independent of these functions, i.e. individuals who do not initiate, authorize or post such transactions to the recordkeeping system. It is acceptable to have personnel in the commercial department reconcile he aforementioned trust accounts to maintain the separation of duties.

H.4. Other Elements of Control

The organizational structure of a trust department is another component of overall control. Management must define functional lines of responsibility and establish an organizational framework along those lines. Work should flow in a logical manner. The organizational structure should take into account the need for checks and balances, as well as the need for an efficient, practical system. Control systems should be reviewed regularly and updated as necessary.

Examiners should consider the extent to which the Board and management have provided for the following:

- Adequate staffing to provide for efficient and timely processing and appropriate separation of duties;
- Compensating controls where limited staff precludes separation of duties;
- Clearly defined responsibilities, duties, and lines of authority;
- Prompt reporting and correction of internal control deficiencies;
- Adoption of a comprehensive operations manual, which is updated to reflect changes as needed.

Examiners should assess the effectiveness of the department's internal control practices in protecting and controlling trust assets. Controls may include the following:

- Trust assets are required to be separated from the assets owned by the institution;
- More than one employee should be present when assets are received;
- Written confirmations signed by beneficiaries or accountholders should be maintained for all items distributed;
- Assets held in the vault should be under dual control and verified periodically;
- The value of worthless assets should be determined and those assets maintained on the department's books at nominal value;
- Hold and return mail procedures should be established;
- Appropriate controls should be maintained over unissued checks (or pre-printed check paper), including the use of sequentially numbered documents;
- Signature controls should be established for the disbursement of trust funds.

Examiners should consider the extent to which the department's recordkeeping systems provide for accurate and reliable recordkeeping and reporting:

- Maintain records in sufficient detail to properly reflect all trust department activities;
- Report the assets of each trust account separately from the assets of other accounts;
- Account separately for principal and income according to the governing agreement, or if the document is silent, the state principal and income act;
- Process trust department transactions in a timely and accurate manner. This should include processing for securities income and maturity through automated systems; securities pricing and rating services; mutual fund and cash sweep transactions, and, corporate actions that affect securities holdings.

Other Internal Routine and Control Issues:

- Reconciliation of statements from securities depositories, brokerage accounts, internal accounts (suspense and own-bank), deposits at other institutions, mutual funds, and cash management services should be performed by a person independent of those preparing or authorizing entries or disbursements;
- Audit trails for all accounting transactions should be maintained;
- The effectiveness of internal controls should be assessed to ensure compliance with applicable laws and regulations;
- Vault control procedures should be established and include recording access to the vault and transferring of assets to/from the vault;
- All assets should be verified periodically;
- Daily proof of transactions (balancing and closing routines) should be performed;
- Administrators should review and sign transaction journals ;
- Management should provide for internal and/or external audits;
- Accounting records should be maintained on a current basis;
- Dual signatures should be required for checks above a specified amount;
- Documentation should be required for asset changes, cash distributions, and/or large overdrafts;
- Pre-numbered checks, in either manual or electronic format, should be used in sequential order;
- Records should be proofed by individuals not authorized to post them;
- Account reviews should be performed by individuals other than the administrator assigned to them;
- Investigation and resolution of stale accounting items and out-of-proof conditions should be made in a timely manner;
- Prompt investigation and reporting of suspicious transactions and activities, including the filing of suspicious activity reports, should be made;
- Separate control over checks returned undelivered should be established;
- Procedures for the reissuance of returned checks should be established;
- An adequate record retention policy should be established.

Examiners should realize that an effective system of internal controls designed to establish dual control, separation of duties, and the rotation of employees may be costly. Many trust departments are unprofitable measured by any standard, and trust officers may resist implementation of expensive control measures. Examiners need to exercise judgment in assessing a department's control systems. One or more basic points may have deficiencies, but the system may be strengthened by bolstering others. Often this is accomplished by reliance upon a strong audit, whether by an internal or external auditor.

H.5. Fraudulent Acts

While the discovery of fraudulent acts is not the primary objective of a trust examination, the examiner should be alert to a culture that permits such acts. The Board and senior management should establish a corporate culture that encourages ethical behavior, and that belief should be reflected in their own practices, as well as in the corporate policies and procedures. However, fraudulent acts occur, when there is a perception that management does not practice what it preaches or when management is unconcerned with deterrence. The Board and management can change this perception by appointing a member of senior management to oversee a fraud prevention program and that officer being accessible to and having open, two-way communication with staff. One of the most common methods of fraud detection is other employees telling a member of management

of activities witnessed.

However, deterrents are the major factor in fraud prevention. Strong internal controls and monitoring compliance with those controls is a major deterrent to fraud. Therefore, management should establish procedures for testing compliance with the department's policies and procedures, in addition to implementing a reasonably designed audit program. Employees are less likely to attempt to defraud an entity, when deterrents are visible to the employee.

The following are areas that are particularly susceptible to manipulation and abuse:

- Failure to record the receipt of assets when accounts are opened. The unwitnessed assembling of assets, particularly those of a decedent's estate, is a dangerous practice. In such cases, the detection of theft may be impossible since no record of a missing asset exists.
- Unauthorized and forged withdrawals of cash and securities from accounts. The absence of effective dual control makes such actions easy for the manipulator. One method is to transfer assets to an account under an embezzler's control. Once the assets are in this account, the individual is free to sell the assets for personal gain, use them in market speculation, or pledge them for personal loans.
- Diversion of stale outstanding checks, inactive trust deposits, and assets of dormant trust accounts for personal gain. A combination of independent and timely reconcilement procedures, together with the periodic tracing of transactions from initiation to conclusion can greatly reduce the likelihood of such diversions.
- Conversion of payments received on securities believed to be worthless. A trust department's policy guidelines on worthless securities should include procedures to be followed when determining an asset's worth. Requirements that all assets deemed worthless be reported to the trust auditor or an appropriate committee prior to being written off and the carrying of worthless assets at a nominal value either in the respective accounts or in controlled suspense accounts decrease the susceptibility to manipulation. This also supports a continuous audit trail of the asset from start to finish.
- Diversion of income on assets received in either irregular amounts or at irregular intervals. Such income is usually derived from royalties, oil wells, and the like. Income from all investments should be internally controlled and audited, with added attention given to those situations where investments fail to produce income. In this connection, several defalcations have occurred by the diversion of payments of interest and principal on debt obligations previously in default.
- Falsification of expenses and misapplication of trust commissions and fees. Expenses and recurring fees present possibilities for manipulation. The adopted policy should require that expenses be accompanied by appropriate documentation. The trust administrator should not have control or access to expense checks. Similarly, adequate internal safeguards should exist to assure the crediting of trust commissions and fees to the appropriate income accounts.
- Manipulation of payments received on rental properties, real estate, and real estate mortgages. The administration of these trust properties frequently involves handling cash payments received in the department by personal deposit or through the mails. Unless strong internal controls are in effect, defalcations through overlapping or withholding of payments could occur.
- Improper use of suspense accounts. Frequently, trust department suspense accounts are not governed by good internal control procedures, and unauthorized settlements or disbursements may easily occur.
- Improper securities trading practices:
    - Placing personal trades through bank accounts, thereby obtaining the advantage of the bank's volume discounts on commissions;
    - Purchasing or selling an issue of securities prior to executing bank or trust account trades which could be expected to change the price of the security, thereby obtaining a personal price advantage ("front-running");
    - Purchasing and selling the same securities issue on the same day, with the trader pocketing any price increases and assigning transactions to trust accounts in the event of any price decreases; and

- Buying or selling based on nonpublic material inside information, which might affect the price of securities, thereby enabling the trader to benefit personally from the transaction.

- Misuse of corporate bonds, notes, and stock certificates in the bank's possession as corporate trustee or agent under indenture. Inventories of unissued securities not under effective control could be stolen and used as collateral for loans. Securities remitted for payment or transfer not properly controlled could be used for the same purpose.

I. Nominees

Most trust departments register securities in a "nominee" name. Nominee registration simplifies the transfer of stocks and bonds, and facilitates the collection of dividends and interest. When a securities issuer pays interest or declares a dividend, the bank receives a single dividend or interest payment in the nominee name in which the security is registered. The department subsequently credits the accounts holding the particular security, typically using an automated report called a "dividend map." Without the use of nominee registration, separate dividend or interest payments would be received for each account holding the security.

Nearly all states provide by statute that securities may be registered in nominee form. Most governing trust instruments also authorize the use of nominee registrations. "Nominees" are legal partnerships comprising designated officers and/or employees of the bank. The bank's board of directors should approve the execution of the partnership agreement and, in most jurisdictions, register the partnership with the state.

Examiners should determine that the bank's nominee partnership agreements are reviewed periodically to ensure they are current, and include only current authorized officers and/or employees in the partnership agreement.

J. Use of Broker-Dealers For Securities Safekeeping/Securities Investor Protection Corporation (SIPC)

Financial institution letter FIL-38-2002 was issued on April 25, 2002, and discusses credit risks arising from securities held at broker-dealers and Securities Investor Protection Corporation (SIPC) coverage. A copy of the financial institution letter may be found in Appendix C. SIPC covers most types of securities, such as stock, bonds, and mutual funds. However SIPC does not protect against declines in market value. Also, SIPC does not provide protection for investment contracts that are not registered with the SEC.

Another coverage problem may occur when investors place cash or securities in the possession of non-SIPC members. The trust department may do business with a company that doesn't actually execute buy and sell orders, but instead uses another firm, known as a clearing firm, to process trades. Therefore, trust management should make sure that the brokerage firm and its clearing firm are both members of the SIPC.

In general, during a liquidation of a broker-dealer, SIPC will request the court to appoint a trustee which will (1) return property that is registered in a specific customer name, (2) pay those customers their pro rata share of "customer property", and (3) provide customers (other than banks and broker-dealers for their own accounts) SIPC advances up to the $500,000 limit. Customers not subject to SIPC protection, such as banks, will receive a pro rata distribution of "customer property." Therefore, banks and trust departments must be able to differentiate between bank-owned and bank customer-owned accounts and securities. Furthermore, trust department management should exercise due diligence when selecting broker-dealers and establishing a custodial relationship. Thereafter, relationships with broker-dealers selected should be periodically reviewed.

K. Free Riding and Daylight Overdrafts

"Free riding" occurs when customers buy and sell securities, usually on the same day, in amounts greatly exceeding the amount allowed under margin collateral requirements. The purchaser intends to pay for the purchased securities with proceeds from the sale of the same securities. The concept is similar to a check kiting scheme. Since funds are not made available by the purchaser prior to the purchase, it is a

means whereby a bank, typically through its trust department, may suffer losses. The Securities and Exchange Commission has investigated and brought enforcement against a number of firms or individuals for securities free riding.

Free riding often begins when a custodial account is opened with a trust department. The customer also establishes brokerage accounts through which the customer directs securities trades. The customer then advises the broker-dealer that payment for such trades will be made through the custodial account.

The customer attempts to profit from short-term changes in market prices of securities, without placing significant personal funds at risk. Free-riders, anticipating a near-term price increase, frequently place a buy order for securities with the intention of paying for the securities with the proceeds from the sale of the same securities.

Banks permitting such transactions without requiring adequate margin collateral face significant risks when customer accounts do not contain sufficient funds to cover purchase orders or enough securities to complete sell orders. These risks include: (1) enforcement actions for violation of the Federal Reserve Board's Regulation U (12 CFR 221) margin lending standards, or for aiding and abetting violations of Regulation X (12 CFR 224), or Regulation T (12 CFR 220); and (2) losses caused by the need to complete failed customer trades.

The Federal Reserve has also taken the position that intraday or "daylight overdrafts" relating to the purchase or sale of margin stock is considered an extension of credit subject to Regulation U. Violations of Regulation U may therefore be cited in situations where intraday overdrafts occur due to the purchase or sale of margin stock.

Policies and procedures for accepting custodial accounts and for clearing securities transactions should include measures to prevent free riding. Such policies and procedures should:

- Set standards for the acceptance of new custodial accounts, including customer background and credit information.
- Determine whether the new customer intends to use the account to obtain bank credit for transactions as if it were a margin account at a broker-dealer, and if so, ensure that a FR U-1 form is completed for compliance with Regulation U.
- Require identification of broker-dealers sending securities to, and receiving funds from, customer accounts, and establish systems to track accounts involving numerous broker-dealers;
- Disaffirm customer trades where acceptance would result in a violation of Regulation U; and
- Determine that each account has sufficient funds to cover any trade or, if margin credit is extended, that collateral requirements are met.

Financial Institutions Letter FIL 76-93 , dated November 4, 1993, provided material on this subject, and may be found in Appendix C. Also, the Federal Reserve Board issued a supervisory letter discussing the Federal Reserve's margin lending requirements as they apply to free riding (SR 93-13, dated March 16, 1993).

L. Facilities

A trust department must have sufficient space and the necessary equipment to accomplish its duties. It is desirable that the department be able to conduct its activities in a segregated, or at least clearly delineated, work space. The size and complexity of the assets under management and the department's prospects for future growth form much of the basis for determining premises and equipment needs. In reviewing this factor, examiners should consider the department's work flow, the appropriateness of safeguards over records, the presence of negotiable assets and the ability to maintain effective internal controls and segregation of duties.

M. Information Technology

Most trust departments use automated trust accounting systems, with processing performed either in-house or provided by a third-party servicer. A review of Information Technology should be performed by the Information Technology (IT) examiner, who will determine the risk profile type and procedures to be performed by completing the Technology Profile Script. The IT examiner will review the agreements and disaster recovery program for content at **each** IT examination. Therefore, communication between the trust and IT examiners is essential for coordinating the examination process and avoiding the duplication of work. Significant deficiencies would normally be fully presented in the IT examination report, with less detailed comments in the trust examination report.

However, the IT examination may not be performed during the same examination cycle as the trust examination. Also, banks which have trust subsidiaries may not have IT examinations of those subsidiaries. In either circumstance, the trust examiner should review the prior IT examination report for comments pertaining to trust technology, if available. Once onsite, the trust examiner should confirm that appropriate routine and controls are in place. The following are examples of appropriate routine and controls in an automated environment:

- System access should be password restricted and passwords should be changed frequently.
- Passwords should be set to a reasonable minimum number of characters, symbols, and numbers. However, words, proper names, or social security numbers should not be used as passwords.
- Access to records should be limited by the employees' position or duties.
- Automated records should be reconciled and any exceptions should be cleared in a timely manner.
- Suspense accounts should be monitored closely and the individual who reconciles and monitors suspense accounts and other automated records should not be the same person who enters the data.
- Exception reports should be reviewed by trust management.
- The GLBA workprogram should be completed for the trust department.

Trust examiners should be aware that Section 7(c)(2) of the Bank Service Corporation Act and FDIC Section 304.3(d) require that the FDIC Regional Office be notified of the existence of the servicing arrangement within 30 days of the contract or start of service (Form 6120/06: Notification of Performance of Bank Service, may be used). It may be possible for banks to submit this information over FDICconnect webpage.

Trust examiners should recommend that management obtain and review a copy of the third party servicer's independent audit, known as the Statement of Auditing Standards #70, or SAS 70 . This report should be reviewed by the trust, technology, and/or audit committees prior to entering into a servicing contract and periodically thereafter.

Electronic Banking

Electronic banking applications have increased in the trust area, although the level and sophistication of these applications vary widely. Informational websites which advertise trust and other bank services are the most basic. Transactional applications, which allow customers to make changes to 401(k) plans and obtain current portfolio valuations, are much more complex. While this aspect should be incorporated into the IT examination, trust examiners need to be aware of electronic banking applications and their potential risks. Primary examination guidance and information may be found in the FFIEC IT Examination Handbook and Electronic Banking Workprogram.

The trust examiner should notify the IT examiner when e-banking applications are more than basic. The following is an overview of strategic planning and goals, administrative controls, and information security program assessments.

The Board and senior management are responsible for developing the institution's e-banking business strategy, which should include the following:

- The rationale and strategy for offering e-banking services, including informational, transactional, or e-commerce support;
- A cost-benefit analysis, risk assessment, and due diligence process for evaluating e-banking processing alternatives, including third party providers;
- Goals and expectations that management can use to measure the e-banking strategy's effectiveness; and,
- Accountability for the development and maintenance of risk management policies and controls to manage e-banking risks and for the audit of e-banking activities.

The Board and senior management must provide effective oversight of third-party vendors providing e-banking services and support. Effective oversight requires that institutions ensure the following practices are in place:

- Effective due diligence in the selection of new service providers that considers financial condition, experience, expertise, technological compatibility, and customer satisfaction.
- Written contracts with specific provisions protecting the privacy and security of an institution's data,

the institution's ownership of data, the right to audit security and controls, and the ability to monitor the quality of service, limit the institution's potential liability for acts of the service provider, and terminate the contract;
- Appropriate processes to monitor vendor's ongoing performance, service quality, security controls, financial condition, and contract compliance; and
- Monitoring reports and expectations including incidence response and notification.

The Board and senior management should ensure that the information security program addresses these challenges and takes the appropriate actions:

- Ensure compliance with the "Guidelines Establishing Standards for Safeguarding Customer Information" pursuant to section 501(b) of the Gramm-Leach-Bliley Act of 1999 (GLBA).
- Ensure the institution has the appropriate security expertise for its e-banking platform.
- Implement security controls sufficient to manage the unique security risks confronting the institution. Control considerations should include the following:
    - On-going awareness of attack sources, scenarios, and techniques;
    - Up-to-date equipment inventories and network maps;
    - Rapid identification and mitigation of vulnerabilities;
    - Network access controls over external connections
    - Hardened systems with unnecessary or vulnerable services or files disabled or removed;
    - Use of intrusion detection tools and intrusion response procedures;
    - Physical security of all e-banking computer equipment and media; and
    - Baseline security settings and usage policies for employees accessing the e-banking system or communicating with customers.
    - Use verification procedures sufficient to adequately identify the individual asking to conduct business with the institution.
    - Use authentication methods sufficient to verify individuals are authorized to use the institution's systems based on the sensitivity of the data or connected systems.
    - Develop policies for notifying customers in the event of a security breach effecting their confidential information.
    - Monitor and independently test the effectiveness of the institutions security program.

N. Business Continuity Planning

As part of the Information Technology examination process, the entire bank, not just the Information Technology of the Commercial Department, should be reviewed. However, trust examiners need to be aware of the general concepts of business continuity planning.

Business continuity planning, also referred to as contingency planning, encompasses various aspects of the continuation of the trust business. In general, the planning process should incorporate establishing strategies for alternate facilities, employee work space, office equipment, files, etc. The goal is provide at least a minimal level of service to maintain business operations and retain customers. Therefore, the Board and senior management should establish policies, procedures, and responsibilities for the entire institution's continuity planning. The written plan should address administrative procedures, recovery items, list of contacts and locations for each aspect of the trust department's business profile. However, management should address the following:

- Backing up all software and data files not covered by the IT Department.
- Maintaining adequate supply of pre-printed forms and checks off-site
- Providing for duplicate corporate and notary seals to be stored at a secure, off-site location
- A plan to contact customers individually requires a list, which should include customer names, addresses, and phone numbers.
- A plan to contact customers via electronic means will require email addresses or use of the bank's website.

Disaster recovery is a subset of business continuity planning and is primarily concerned with recovering critical data and item processing, and communication networks. The three general types of disasters are the following:

- Natural - Weather-related, earthquakes, volcanic, wildfires
- Technical - Hardware or software failures or crashes, explosions, hazardous material spills, fire, nuclear power plant accidents, loss of electricity for extended periods of time

- Civil - Bomb threats, strikes, riots, criminal acts, sabotage, terrorism,

O. Self-Directed IRA'S and KEOGH Accounts

O.1. Directed Arrangements

Section 333.101(b) of the FDIC Rules and Regulations permits banks to offer self-directed IRA and Keogh accounts to customers without first obtaining FDIC consent to exercise trust powers. Although banks are permitted to offer these products without consent, the bank is considered as trustee of the accounts, whether or not the bank serves as custodian or trustee. The administration of IRA's and Keogh accounts must comply with the requirements of the Internal Revenue Code and applicable state laws.

When self-directed accounts are offered and booked as trust accounts, the accounts and related practices should be reviewed during trust examinations. Regional Director Memorandum 98-058, issued June 23, 1998, outlines trust accounts subject to the Interagency Statement of Policy on Nondeposit Investment Products. Those types of accounts and applicable sections are summarized as:

- Self-Directed IRA and KEOGH Plans - Three minimum disclosures from the Interagency Statement apply.
- Agency accounts where the customer has sole investment discretion - Interagency Statement applies in its entirety.

The three minimum disclosures are the following: (a) Not insured by the FDIC; (b) Not a deposit or other obligation of, or guaranteed by, the depository institution, and (c) Subject to investment risks, including possible loss of the principal amount invested.

If the accounts are not trust accounts, then practices should be reviewed as part of the Nondeposit Products review segment of the compliance examination. Examination responsibility is discussed in an Regional Director Memorandum 01-035 dated September 5, 2001. The memorandum can be located on the Intranet. Additional information and guidance are provided in the examination procedures for Nondeposit Products.

The following is a summary review of examination concerns in this area:

- Account Documentation - The bank must have sufficient documentation to adequately identify and support each account.
- Assets and Asset Valuations - Appropriate methodology to determine the market value of assets held in IRA and Keogh accounts should be used. The valuation of unique and specialized assets such as the securities of closely held businesses, mineral interests and limited partnerships is difficult and often requires special expertise. The assets of self-directed IRA and Keogh accounts should be segregated from the bank's own assets, whether kept in the bank's vault or at a correspondent bank.
- Accounting Records - These should be separate from the bank's own records, to properly reflect which assets belong to the bank's customers.
- Investment Advice - Investment advice must not be given to self-directed accounts.
- Illegal Investments - Although the customer directs the investments in a self-directed account, the bank has a duty (whether it is acting as trustee or custodian) to refuse to accept illegal directions, either as to the type of asset held or as to a prohibited transactions. For example, investments in Subchapter S Corporations are prohibited, as are investments in art, rugs, antiques, metals, gems, stamps, coins, or other items of tangible personal property specified by the IRS. (Note that certain coins, such as the American Gold and Silver Eagles, are permissible IRA investments.) While detailed analysis of each transaction is not required, the bank does have a duty to refuse to execute illegal transactions. Section 408(h) of the Internal Revenue Code treats custodians of these accounts as trustees for tax purposes. Consequently, the bank may incur liability for illegal acts within these accounts, even though the accounts are self-directed.
- Recordkeeping - All investment transactions for these types of accounts are subject to Part 344 of the FDIC Rules and Regulations.
- Audits/Independent Review - An audit or independent review should be performed for this activity. Coverage should include, at a minimum, a proof of records,

verification of assets, reconciliation of any deposit and suspense accounts, a review of the adequacy of internal controls, and compliance with law.

- Insurance - The blanket bond insurance carrier should be notified.
- Assets and Asset Valuations - Appropriate methodology to determine the market value of assets held in IRA and Keogh accounts should be used. The valuation of unique and specialized assets such as the securities of closely held businesses, mineral interests and limited partnerships is difficult and often requires special expertise. The assets of self-directed IRA and Keogh accounts should be segregated from the bank's own assets, whether kept in the bank's vault or at a correspondent bank.

O.2. Arrangements with Third Parties

The popularity of self-directed IRA and Keogh accounts has prompted nonbank financial service providers to offer these types of accounts. The bank may act as agent between the nonbank financial service provider and customers. When the bank or trust department acts as agent only (the account is not accounted for as a trust account or a commercial department account), these accounts will be reviewed by Compliance Examiners, who will assess compliance with the Interagency Statement of Policy governing the sale of Nondeposit Investment Products.

P. Custodial Holdings of Government Securities: Compliance With Government Securities Act of 1986

P.1. Background

As a result of several highly publicized failures of government securities brokers and dealers and other improper practices, Congress passed the Government Securities Act of 1986 (GSA). The stated purpose of the GSA and its implementing Treasury regulations is to enhance the protection of investors in government securities by establishing and enforcing appropriate financial responsibility and custodial standards. The GSA applies to (a) a bank which is a government securities broker or dealer, (b) any bank which retains custody of securities that are the subject of repurchase transactions with its customers (hold-in-custody repurchase transactions) and (c) any bank which holds government securities for its customer. A customer, by definition, includes the counterparty to a hold-in-custody repurchase transaction, but does not include a broker or dealer that is registered as, or that has filed notice of, its status as a government securities broker or dealer (§ 450.2(b)).

P.2. Applicability

On September 5, 2001, a Regional Director Memorandum was issued to transfer supervisory responsibility from DOS to DCA for Nondeposit Products, including insurance, retail sales of NDP, and Government Securities Act of 1986. Review of the applicability of and adherence to the Government Securities Act (GSA) should generally occur during compliance examinations. The primary exception to this transfer concerning GSA involves custodial holdings of government securities in a trust department. That specific activity should be reviewed during trust examinations.

Procedures for conducting such examinations are contained in Regional Director Memorandum 89-030, dated February 27, 1989. Treasury regulations implementing the GSA are contained under the Miscellaneous Statutes tab of the Prentice Hall service. In addition, several staff interpretations by the Department of Treasury are included in the Miscellaneous Statute tab of the FDIC Rules and Regulations.

P.2.a. With respect to broker-dealer activities

If the bank engages in broker-dealer activities related to government securities, a separate examination report for such activities is required. Pursuant to GSA Section 401.3(a)(2), the financial institution must conduct at least 500 government securities transactions, or does not have an arrangement with a registered dealer to effect transactions in order to be subject to this section.

P.2.b. With respect to government securities repurchase transactions

Government Securities are defined to include securities which are issued or

guaranteed by corporations in which the United States has a direct or indirect interest and which are designated by the Secretary of Treasury for exemption as necessary or appropriate in the public interest or for the protection of investors. The following is a list of securities that are considered to be government securities:

Commodity Credit Corporation

Export-Import Bank

Farm Credit Services including banks for cooperatives, intermediate credit banks, and land banks

Federal Home Loan Banks and Federal Home Loan Bank Board

Federal Home Loan Mortgage Corp.

Federal National Mortgage Association

Tennessee Valley Authority

U. S. Postal Service

Student Loan Marketing Association

Federal Housing Administration

General Services Administration

Government National Mortgage Association

Maritime Administration

Washington Metropolitan Area Transit Authority

Note: In general, if the title has the word "development" or "development bank," it is not considered a government security for this act.

- Where the bank is the seller of the securities, i.e., borrower of funds, and a trust account within the trust department of the same bank is the purchaser of the securities, counterparty, or creditor, a review of compliance with the GSA should generally occur at the trust examination. In such situations, the buying of repurchase agreements from the commercial side of the bank for trust accounts will generally be regarded as a conflict of interest (refer also to Section 3, Asset Administration). Where employee benefit plan monies are invested in own-bank repurchase agreements, Prohibited Transaction Exemption (PTE) 81-8 applies. PTEs are located in the Appendix E.

- Where an account administered by the trust department is the seller of the security (i.e., borrower of funds), trust examiners should review the administration as with any other account. In particular, the circumstances leading to the transaction and the borrowing (liability of the trust account to repurchase the security) should be evaluated. If the counterparty is the commercial department, consideration should be given as to whether a conflict of interest is present. However, where the repurchase agreement is between a trust account (i.e., the bank in its fiduciary capacity) and an unrelated non-bank counterparty, there is no need to review compliance with the GSA and implementing regulations since Section 403.5(d) pertains only to repurchase agreements between financial institutions (not financial institutions as fiduciaries) and counterparties.

P.2.c. With regard to custodial holdings of government securities for

customers:

- A complete exemption from the GSA Section 450 is provided for government securities held for customers by nonmember banks in a fiduciary capacity. Fiduciary capacity, as defined in Section 450.2(d), includes: trustee, executor, administrator, registrar, transfer agent, guardian, assignee, receiver, managing agent, and any other similar capacity involving the sole or shared exercise of discretion by a depository institution having fiduciary powers that is supervised by a Federal or State financial institution regulatory agency. This would normally exempt all activities traditionally conducted in a trust department.

- Where the bank is holding government securities for its customers (a typical custodial arrangement) the activity is usually conducted in conjunction with commercial bank customer services outside the trust department. However, in some instances this activity may be organized within the trust department. If so, trust examiners should ensure that the provisions of the GSA are followed. Examiners need to distinguish between the fiduciary capacities described above, custodial arrangements involving only the safekeeping of securities, and the performance of purely ministerial acts as directed by the principal, but where no sole or shared exercise of discretion exists. An exemption from Section 450 may also be available when customer securities are held in a custodial capacity, if the nonmember bank adopts policies and procedures that include all FDIC requirements applicable to government securities held in a fiduciary capacity. These are enumerated in the Regional Director Memorandum dated February 27, 1989, on the GSA, and set forth as follows:

    - The nonmember bank adopts policies and procedures that apply all the requirements of the FDIC that are applicable to government securities held in a fiduciary capacity (listed in the following section) to its custodial holdings, and

    - These custodial holdings are subject to examination by the FDIC for compliance with FDIC fiduciary requirements. (All insured nonmember banks would meet this requirement.)

    FDIC Fiduciary Requirements

    - State law regarding government securities held in a fiduciary capacity must be followed.

    - Government securities held in a fiduciary capacity must be segregated from the bank's securities. Where customer securities are held by a correspondent bank or outside depository, such securities must be segregated in a separate (separately identifiable) safekeeping account.

    - No liens, pledges, or any charges may be placed against government securities held in a fiduciary capacity unless permitted by written fiduciary contract or agreement. Customer government securities may not be sold under agreement to repurchase, or loaned to any party, unless specifically permitted by a written agreement that is signed by the customer. No sales under repurchase agreement or lending may be permitted unless customers are adequately compensated monetarily, under written agreement, nor

shall they be permitted unless the securities are adequately collateralized, preferably with securities of equal quality, marketability, maturity, and interest rate. Customer security interests in the collateral shall be perfected and held by the bank or an independent third party.

- Records must clearly describe the fiduciary capacity of the trustee and agreement with the customer.
- Records must clearly describe the government securities, the customer's interests, all movements of securities, and all transactions such as interest payments.
- A safekeeping receipt or confirmation must be provided to the customer.
- Adequate internal controls, such as separation of duties, rotation of duties, dual control or joint custody, must be in place.
- Adequate controls against external crime must be in place.
- An independent audit of assets and procedures must be conducted yearly. In addition, safekeeping accounts shall be reconciled by the bank at least monthly. Reconcilements shall be in written form and available for review by Corporation examiners.
- The fiduciary capacity must be adequately supervised.

Custodial Requirements

If a nonmember bank holds customer government securities in a custodial capacity, and it does not qualify for the Section 450 exemption described above, then the bank must comply with certain requirements (largely paralleling the exemption provisions) set forth in the regulation. Examiners should refer to the above-mentioned Regional Director memorandum and the Department of Treasury regulations for these requirements.

Q. Shareholder Communications Act of 1985

Q.1. Background and Requirements

The Shareholders Communications Act of 1985 applies to all entities exercising fiduciary powers. This includes trust departments holding securities in nominee name or otherwise on behalf of beneficial owners. The Act is implemented primarily by SEC Rule 14b-2. Essentially, the Rule stipulates that banks must comply with certain requirements to facilitate business communications between issuers of registered securities ("registrants") and the holders of those securities ("beneficial owners"). The requirements address:

- Responding to inquiries for lists of "beneficial owners,"
- Providing "beneficial owners" with proxy materials (or requesting voting instructions), and
- Providing "beneficial owners" with annual reports.

A beneficial owner is any person who has, or shares the power to vote pursuant to an agreement or otherwise, or directs the voting of, a security. [SEC Rule 14b-2(a)(2)]

While SEC Rule 14b-2 is the primary focus of this material, the Rule makes numerous cross references to other SEC regulations. SEC Rules 14a-1 and 14c-1 define relevant terms. Rules also designate when and how materials are to be provided by the securities issuer (SEC Rule 14a-13) and by broker-dealers (SEC Rule 14b-1). SEC Rule 14c-7

defines how materials are to be provided to investors. The text of these rules appears in Appendix D.

Q.2. Applicability to Trust Accounts

In general, all personal, employee benefit, and corporate trusts which have investments in registered stock are affected by these requirements.

- The requirements apply to all trust accounts opened December 29, 1986 or later.
- The requirements do not apply to any trust account opened on or before December 28, 1986 if either: (a) the bank has a written affirmative request from "beneficial owners" that information not be disclosed, or (b) the bank has made a "good faith effort" [as defined by SEC Rule 14b-2(b)(5)] to obtain from beneficial owners their consent to disclose such information.

R. State Escheat Laws

Escheat is defined as a reversion of property to the state in consequence of the lack of any individual qualified to inherit the property. For trust departments, the issue will generally arise concerning funds on deposit to pay unclaimed dividends, bond coupons not presented for payment, bonds not presented for payment and certain suspense accounts. Escheatment laws primarily involve deposits. However, banks acting as bond trustees, securities transfer agents, and paying agents must comply with state abandoned property laws for: (1) checks and securities certificates which are undeliverable, and (2) book-entry accounts for which the owner cannot be located. Escheat laws vary from one state to another. They will normally be found in state statutes under titles such as "unclaimed property" or "abandoned property". In some instances, one state may claim its escheat laws apply to dormant funds also claimed by another state.

The trust operations area should have procedures in place to ensure compliance with escheat laws. Examiners should familiarize themselves with applicable state escheat laws and be alert during examinations to stale items and other instances where escheat laws might be applicable. Relevant aspects of the escheat process are also discussed in Section 5 (Employee Benefit Accounts), and Section 6 (Corporate Trust Accounts) .

S. Audits and Accounting Issues

The FDIC Statement of Principles of Trust Department Management requires an audit of fiduciary activities (by internal or external auditors or a combination of the two) at least annually. The external audit function consists of agreed-upon procedures; therefore, an audit opinion is not rendered. Audit findings, including actions taken as a result of the audit, should be reported to the Audit Committee or the Board, and to the Trust Committee, recorded in the appropriate minutes.

The Statement allows institutions to conduct a continuous audit process on an activity-by-activity basis, at "intervals commensurate with the risk associated with that activity." Audit intervals must be appropriate and should be reassessed regularly to ensure appropriateness, given the current risk and volume of trust department activity.

Note: Trust department audits are not subject to Sarbanes-Oxley Act of 2002.

Note: Part 363 of FDIC's Rules and Regulations, Annual Independent Audits and Reporting Requirements, does not apply to trust departments. While portions of the pronouncement apply to bank auditing programs, the actual requirements apply only to the financial condition and related records, and not to off-book activities such as trust departments.

S.1. Audit Objectives

The objectives of trust audits are to determine the extent to which:

- Assets transferred to the department are properly recorded and controlled.
- Records are sufficient to permit an accurate accounting.
- Internal control procedures are adequate.
- Duties of the department, whether established by law or contract, are properly executed in a timely manner. Included among these responsibilities are investing trust assets, collecting income and principal, paying expenses, filing tax returns in

the appropriate location, and distributing income and principal.
- Proper fees have been collected and recorded in a timely fashion.

S.2. Audit Program

The most effective audit programs consist of full-time, continuous internal audit procedures, combined with agreed-upon procedures performed annually by an external auditor. Where both are used, the internal auditor tends to focus on control elements and recordkeeping. This allows the external auditor to evaluate fiduciary risk factors and perform sufficient testing to determine compliance with applicable laws, regulations, agreements, and internal policies. The trust department's size and complexity influence the extent to which the audit program has both internal and external components, as does State statutory requirements.

Every institution should develop a written audit program approved by the audit committee or Board. The audit program should be commensurate with the size and complexity of trust department activities. It should consider (a) the experience level of those required to implement it and (b) the frequency with which audit procedures are conducted. Vague references to the conduct of various phases of the audit should be avoided in favor of a step-by-step approach. In addition, management should be encouraged to consider coordinating or integrating internal audit procedures with those of external auditors. Careful planning can result in both better audits and increased efficiency.

In those departments where a continuous audit approach is used, different portions of the department may be under audit year round. Various areas or functions within the department are usually reviewed individually in separate audit activities. A continuous audit should cover all areas of the trust department within a three to five year time frame. Certain risk-based approaches to the continuous audit technique result in variable audit frequencies for particular activities - more frequently for higher risk areas, less often for functions of reduced risk. Management should be able to justify the assessment that particular areas present little risk to the department. Reports for the various phases, or functional components, of a continuous audit should be presented to the audit committee or Board of Directors in a timely manner.

S.3. Audit Activities

In reviewing the audit program, the examiner should find the following minimum functions being performed:

- Review of trust committee minutes
- Balance and proof of subsidiary ledgers to general controls
- Asset confirmations
- Spot-check and tracing of transactions for accuracy and validity
- Verification of commission and fee calculations
- Assessment of compliance with applicable regulations and the Statement of Principles of Trust Department Management
- Evaluation of internal routine and controls, and
- An administrative review of selected accounts comprising the following:
    - Trust agreements and court orders
    - Administrative actions (in compliance with above)
    - Income receipts and distributions
    - Principal invasions (including approvals) and trust department authority to invade
    - Asset composition and conformity with indenture, beneficiary needs,

and account investment objectives

- Consultation with, and approvals by, co-fiduciaries.

S.4. Evaluation of the Audit Function

The examiner's review of the audit process for the trust department should determine whether:

- All major activities are subject to audit,
- The scope of audit procedures is sufficient,
- Personnel involved in the audit function are sufficient in number and trust expertise to perform the prescribed duties,
- Audit personnel are sufficiently independent, both from operational responsibilities and management influences, to objectively execute their oversight role, and,
- Audit findings are accurately, completely, and promptly reported to management, from which appropriate response and follow-up action is required.

Audits of trust departments conducted by bank holding companies should be evaluated on their own merits and should be regarded as internal audits. Such audits can constitute an acceptable audit program, when the scope is suitable and the quality is satisfactory.

One source of audit information is the AICPA Audit and Accounting Guide, Banks and Savings Institutions, 1996. Chapter 17 of the book covers trust activities.

S.5. Statement on Accounting Standards

Statement on Auditing Standards Number 70 (SAS #70)

Overview

SAS #70, issued by the Auditing Standards Board, became effective after March 31, 1993, and provides guidance on the factors an independent auditor should consider when auditing the financial statements of an entity that uses a service organization. Such organizations may include data service centers, trust departments, and custodians, which provide services for the department. The statement also provides guidance for independent auditors who issue reports on the processing of transactions by a service organization for use by other auditors.

SAS #70 also includes provisions of SAS #55, as amended by SAS #78, both concerning internal control, and SAS #94. The latter concerns the effect of Information Technology on the auditor's consideration of internal control in a financial statement audit.

Auditor

The audit may be conducted by either an auditor for the user organization (such as a trust department hiring an auditor) or by a service auditor for the benefit of the user auditors (an auditor hired by the servicer on behalf of the trust department(s) .) In the latter instance, the service auditor may perform procedures agreed-upon by the user organization and its auditor, or a group of user organizations and their auditors, and by the service organization and its auditor.

The service auditor's work should be performed in accordance with the general standards and with the relevant field work and reporting standards. Although the service auditor should be independent from the service organization, it is not necessary for the service auditor to be independent from each user organization. Furthermore, as the report may be intended for several different user auditors, a user auditor should determine that specific tests of controls in the service auditor's report are relevant to the user organization's financial statements.

When planning the audit, the auditor should obtain a sufficient understanding of the entity's internal controls. As part of that planning, knowledge about the design of relevant policies,

procedures, and records should be used to:

- Identify the types of potential misstatements
- Consider factors that affect the risk of material misstatement
- Design substantive tests

For the service auditor to express an opinion on whether the policies and procedures were suitably designed to achieve the specified control objectives, it is necessary that:

- The service organization identify and appropriately describe such control objectives and the relevant policies and procedures.
- The service auditor consider the linkage of the policies and procedures to the stated control objectives.
- The service auditor obtain sufficient evidence to reach an opinion.

The control objectives may be designated by the service organization or by outside parties such as regulatory authorities, a user group, or others. When the control objectives are not established by outside parties, the service auditor should be satisfied that the control objectives, as set forth by the service organization, are reasonable in the circumstances and consistent with the service organization's contractual obligations.

Types of Reports

The results of the audit will be included in a written report. The type of report may be agreed to by the service and user organizations, to permit a type of report that will be most suitable for the user organizations' needs. There are two general types of reports that may be issued:

- Reports on policies and procedures placed in operation ---

  A service auditor's report on a service organization's description of the policies and procedures that may be relevant to a user organization's internal control structure, on whether such policies and procedures were suitably designed to achieve specified control objectives, and on whether they had been in place in as of a specific date.

  This type of report may be useful in providing a user auditor with an understanding of the policies and procedures necessary to plan the audit and to design effective tests of controls and substantive tests at the user organization, but not intended to provide the user auditor with a basis for reducing his assessments of control risk below the maximum.

- Reports on policies and procedures placed in operation and tests of operating effectiveness ---

  A service auditor's report on a service organization's description of the policies and procedures that may be relevant to a user organization's internal control structure, on whether such policies and procedures were suitably designed to achieve specified control objectives, on whether they had been placed in operation as of a specific date, and on whether the policies and procedures that were tested were operating with sufficient effectiveness to provide reasonable, but not absolute, assurance that the related control objectives were achieved during the period specified.

  This report may be useful in providing the user auditor with an understanding of the policies and procedures necessary to plan the audit and may also provide the user auditor with a basis for reducing his assessments of control risk below the maximum.

Content of Service Auditor's Report

The service auditor's report should state whether the policies and procedures were suitably designed to achieve the specified control objectives. The report should not state whether they were suitably designed to achieve objectives beyond the specifically identified control

objectives.

A service auditor's report expressing an opinion on a description of policies and procedures placed in operation at a service organization should contain the following:

- A specific reference to the applications, services, products, or other aspects of the service organization covered.
- A description of the scope and nature of the service auditor's procedures.
- Identification of the party specifying the control objectives.
- An indication that the purpose of the service auditor's engagement was to obtain reasonable assurance about whether (1) the service organization's description presents fairly, in all material respects, the aspects of the service organization's policies and procedures that may be relevant to a user organization's internal control structure, (2) the policies and procedures were suitably designed to achieve specified control objectives, and (3) such policies and procedures had been placed in operation as of a specific date.
- A disclaimer of opinion on the operating effectiveness of the policies and procedures.
- The service auditor's opinion on whether the description presents fairly, in all material respects, the relevant aspects of the service organization's policies and procedure that had been placed in operation as of a specific date and whether, in the service auditor's opinion, the policies and procedures were suitably designed to provide reasonable assurance that the specified control objectives would be achieved if those policies and procedures were complied with satisfactorily.
- A statement of the inherent limitations of the potential effectiveness of policies and procedures at the service organization and of the risk of projecting to future periods any evaluation of the description.
- Identification of the parties for whom the report is intended.

S.6. FAS 87

FAS 87 discusses employer's accounting for defined benefit pensions and became effective for fiscal years beginning after December 15, 1986. This statement does not affect the assets or liabilities reported in the trust department, but in the commercial department. As a result, safety and soundness examiners may ask questions of the trust examiner concerning this statement. In very general terms, FAS 87 requires the use of one standardized method for measuring annual pension expenses and requires spreading the income effect over the employees' remaining service periods, with some exceptions. In addition, the employer must record a liability equal to the excess of the accumulated benefit obligation over plan asses for each plan that has such an excess. If questions concerning this statement arise, contact your accounting subject matter expert or regional office accountant.

15. Securities Lending

A. Trust Investment Principles

The management of property for others is one of the principal functions of a fiduciary. Fiduciaries administering personal or corporate accounts, either as trustee or agent, are guided by state statutes and the principles embodied in common law. For employee benefit accounts, ERISA, with its implementing Department of Labor (DOL) regulations and opinions, provides statutory and regulatory guidance.

The primary investment guidance given to fiduciaries is found in the terms of each account's governing instrument. There are major differences in the fiduciary's responsibilities under different types of accounts.

- When the fiduciary has discretion to select investments for an account, or makes recommendations for the selection of investments, the investments selected must both follow the terms of the governing instrument and be suitable investments given the needs of the beneficiaries or the purpose of the trust.
- When the trust department has no discretion in choosing investments (such as for self-directed or custodial accounts), the institution's sole responsibility is to follow the provisions of the governing account instrument.

Accounts subject to ERISA, diversification standards, parties in interest, and co-fiduciaries and investment managers are presented in Sections 404 through 406. Refer to specific sections of ERISA in Appendix E - Statute 404 through 406 and Section 5 of this Manual for further discussion.

B. Suitability

In enacting the Prudent Investor Act, states should have repealed legal list statutes, which specified permissible investments types. (However, guardianship and conservatorship accounts generally remain limited by specific state law.) In those states which adopted part or all of the Prudent Investor Act, investments must be chosen based on their suitability for each account's beneficiaries or, as appropriate, the customer. Although specific criteria for determining "suitability" does not exist, it is generally acknowledged, that the following items should be considered as they pertain to account beneficiaries:

- financial situation;
- current investment portfolio;
- need for income;
- tax status and bracket;
- investment objective; and
- risk tolerance.

C. Prudent Investments

T here are two fiduciary standards governing the prudence of the individual investments selected by a fiduciary: the Prudent Investor Act and the Prudent Man Rule. The Prudent Investor Act , which was adopted in 1990 by the American Law Institute's Third Restatement of the Law of Trusts ("Restatement of Trust 3d"), reflects a "modern portfolio theory" and "total return" approach to the exercise of fiduciary investment discretion. This approach allows fiduciaries to utilize modern portfolio theory to guide investment decisions and requires risk versus return analysis. Therefore, a fiduciary's performance is measured on the performance of the entire portfolio, rather than individual investments. As of May 2004, the Prudent Investor Act has been adopted in 41 States and the District of Columbia. Other states may have adopted parts of the Act, but not the entire Act. According to the National Conference of Commissioners on Uniform State Laws, the most common portion of the Act excluded by states concerns the delegation of investment decisions to qualified and supervised agents.

The Prudent Investor Act differs from the Prudent Man Rule in four major ways:

- A trust account's entire investment portfolio is considered when determining the prudence of an individual investment. Under the Prudent Investor Act standard, a fiduciary would not be held liable for individual investment losses, so long as the investment, at the time of acquisition, is consistent with the overall portfolio objectives of the account.
- Diversification is explicitly required as a duty for prudent fiduciary investing.
- No category or type of investment is deemed inherently imprudent. Instead, suitability to the trust account's purposes and beneficiaries' needs is considered the determinant. As a result, junior lien loans, investments in limited partnerships, derivatives, futures, and similar investment vehicles, are not per se considered imprudent. However, while the fiduciary is now permitted, even encouraged, to develop greater flexibility in overall portfolio management, speculation and outright risk taking is not sanctioned by the rule either, and they remain subject to criticism and possible liability.
- A fiduciary is permitted to delegate investment management and other functions to third parties.

A copy of the model Uniform Prudent Investor Act, together with explanatory notes, is included in Appendix C. A list of states adopting the Uniform Prudent Investor Act is also included. States, however, may and often do, modify uniform model laws when enacting legislation. For states that have adopted a version of the Prudent Investor Rule, this portfolio management approach supersedes the Prudent Man

Rule.

The Prudent Man Rule is based on common law, stemming from the 1830 Massachusetts court decision -- *Harvard College v. Armory*, 9 Pick. (26 Mass.)446, 461 (1830). The Prudent Man Rule directs trustees "to observe how men of prudence, discretion and intelligence manage their own affairs, not in regard to speculation, but in regard to the permanent disposition of their funds, considering the probable income, as well as the probable safety of the capital to be invested." Id. A copy of the Prudent Man Rule, also known as the Restatement of Trusts 2d, together with explanatory notes, is included in Appendix C.

Under the Prudent Man Rule, w hen the governing trust instrument or state law is silent concerning the types of investments permitted, the fiduciary is required to invest trust assets as a "prudent man" would invest his own property, keeping in mind: the needs of the beneficiaries, the need to preserve the estate (or corpus of the trust) and the amount and regularity of income. The application of these general principles depends on the type of account administered. This continues to be the prevailing statute in a small number of states.

The Prudent Man Rule requires that each investment be judged on its own merits. Thus, a fiduciary could be held liable for a loss in one investment, which when viewed in isolation may have been imprudent at the time it was acquired, but as a part of a total investment strategy, was a prudent investment in the context of the investment portfolio taken as a whole. Under the Prudent Man Rule, speculative or risky investments must be avoided. Certain types of investments, such as second mortgages or new business ventures, are viewed as intrinsically speculative, and, therefore, prohibited as fiduciary investments.

Since the Prudent Man Rule was last revised in 1959, numerous investment products have been introduced or have come into the mainstream. For example, in 1959, there were 155 mutual funds with nearly $16 billion in assets. By year-end 2000, mutual funds had grown to 10,725, with $6.9 trillion in assets (as reported by CDA/Wiesenberger). In addition, investors have become more sophisticated is more attuned to investments, since the last revision. As these two concepts converged, the Prudent Man Rule became less relevant.

Prudent Investments in Court-appointed Accounts

State statutes may outline specific permissible investments for certain types of accounts, such as guardianships f or minor children or incompetents. Under some state statutes, prudence is more narrowly defined for guardianship accounts, than under the Prudent Man Rule.

Trust departments can be appointed as a conservator for veterans . In general, prudent investments for veteran accounts are defined as an interest or dividend paying account at a Federally-insured institution, or in court-appointed cases, in securities issued or guaranteed by the United States. Under 38 CFR13.103, veteran benefits paid to legal custodians on behalf of a beneficiary may only be invested in U.S. savings bonds, pre-need burials trusts, or interest or dividend paying accounts, which are Federally insured. Department of Veterans Affairs benefits that are paid on behalf of an incompetent veteran to an institution via an institutional award payment arrangement may not be invested in any asset. Pursuant to 38 USC 501, Section 13.106 states that court-appointed fiduciaries must invest income or an estate derived from the Department of Veterans Affairs benefits only in legal investments which have safety, assured income, stability of principal, and ready convertibility for the requirements of the beneficiary and his or her dependents.

Prudent Investments in Employee Benefit Accounts

Employee benefit accounts subject to ERISA are governed by the prudence requirement of ERISA Section 404(a)(1)(B) , as well as by DOL Regulation 2550.404a-1 . Also see recap of ERISA prudence interpretations and opinions . In implementing ERISA requirements, the Labor Department has generally followed the Prudent Investor approach outlined above.

D. Principal and Income

As discussed more fully in Section 2 - Operations and Internal Controls, there may exist different classes of beneficiaries in a personal trust account that may only be entitled to a trust's principal, or income, but not both. In these situations, it is important that fiduciaries maintain accounting records that clearly distinguish assets as either principal or income.

Principal (corpus) consists of cash and other property transferred to the fiduciary. Income is the return derived from the investment of principal. Income must also be distinguished from capital gains, which are

not investment yields or returns on principal, but gains or appreciation of the value of the principal itself. Capital gains are added to the value of principal (capital losses reduce the value of principal), and inure to the benefit of principal beneficiaries. Depending on the terms of the trust, and a variety of other factors including the needs of the beneficiaries, income may be distributed as cash, or reinvested and held (for the benefit of income beneficiaries) as invested income. Unless clearly distinguished from other investments, invested income may appear to the observer to be principal. Consequently, it is imperative that fiduciary records distinguish between the two, as failure to do so could result in giving one set of beneficiaries funds that belong to another set of beneficiaries, creating a Contingent Liability. Separate records of principal and income are customary, and can be used for the preparation of accountings and tax returns. A further discussion of principal and income may be found in Principal and Income, located in Section 2.

E. Trust Investment Policies

The ultimate responsibility for establishing an overall investment policy remains with the board of directors or a trust committee appointed by the board. The basis of any investment policy should be sound fiduciary principles, including "prudence", the preservation of capital, diversification, and a rate of return commensurate with the level of risk assumed. The review of the department's investment policies and practices are of major importance in the trust examination.

Many trust departments have a separate trust investment committee which develops and administers investment policy, although smaller departments may utilize the board of directors or the trust committee for this purpose. The committee reviews and either approves or rejects recommendations made by a research division, an outside investment advisor, or the department's investment officer. Often the committee has the responsibility of reviewing individual account portfolios and determining whether assets are invested in compliance with the trust department's overall investment policy.

Accounts for which the department exercises investment discretion should receive an investment review in accordance with the Statement of Principles of Trust Department Management. An initial asset review should, in most cases, be conducted promptly following acceptance, and should establish an investment program for the account. Reviews should include securities and other types of assets received with the account. The initial review is of great importance, as the fiduciary may be required to act quickly to protect assets from loss or erosion of principal, or to take immediate action to protect tangible assets from creditors, insurable losses or physical damage. A fiduciary may have to compensate accounts that sustain investment losses due to the fiduciary's negligence such as a failure on the part of the fiduciary to act in a timely manner.

The department's overall investment policy should be flexible enough to accommodate the types of fiduciary appointments accepted. For example, individual trusts under will or agreement are usually established for the purpose of providing income to the income beneficiary and leaving principal (corpus) to the remainderman at the termination of the trust. By contrast, employee benefit trusts need to generate sufficient growth and income to provide the promised retirement benefits to participants and their beneficiaries. Conversely, investment management agency accounts normally desire capital growth rather than income.

When the governing instrument is silent, investment authority or directions default to state law, which must be followed. When the governing instrument's language concerning investments is unclear, court approval should be obtained.

E.1. Investment Policy Components

Investment policies should clearly set forth a framework for the selection, retention, review, and management of assets over which the department holds investment discretion. The policies should discuss the overall structure of the department's investment management responsibilities. They should provide for: appointing qualified officers to supervise daily investment activities; the monitoring of discretionary transactions, including the reporting of such transactions to the appropriate supervisory officers and committees; procedures for handling exceptions; and, formal procedures for reviewing and revising investment policies and practices. Depending on a department's size, complexity, and the types of appointments accepted, the following elements may also need to be addressed:

- Management's investment philosophy and standards of practice.
- A code of conduct for employees, officers, and directors who by their duties or supervisory roles have knowledge of, or access to: (1) discretionary investment

transactions; or (2) the department's approved list of securities, or changes to the approved list of securities. FDIC Part 344 requires that bank officers and employees who make investment recommendations or decisions for accounts of customers file a report with the bank on a quarterly basis.

- Investments and investment practices deemed appropriate, or inappropriate, with regard to the management of discretionary accounts.
- The nature and size of accounts the department is qualified to administer, and the minimum standards required for the acceptance of new accounts.
- Pre-acceptance review of the transferred assets for new accounts.
- The initial review of newly accepted accounts.
- Investment reviews of existing accounts.
- Procedures for documenting investment reviews.
- Whether the department will prepare its own research in-house, or purchase investment research from outside investment advisors.
- Guidelines governing the use of outside investment advisor r efer to Section 10.G.6) including:
    - Procedures for adopting and/or amending an approved list of investments recommended by outside advisors, if appropriate,
    - Procedures for diverging from outside advisor recommendations when appropriate, and
    - Procedures for monitoring purchases and sales to ensure compliance with the approved lists.
- Procedures for adopting and amending an approved list of equity investments based on in-house research, including:
    - Criteria for selecting the investments to be included on approved lists,
    - Criteria for monitoring the investments included on approved lists,
    - Description of the approval process for adding or deleting investments from approved lists, including specifying the person(s) having authority to make such additions or deletions, and
    - Monitoring purchases and sales to ensure compliance with the approved lists.
    - Procedures for making exceptions to the approved lists.
- Procedures for adopting and amending an approved list of mutual fund investments (inclusive of proprietary mutual funds, refer to subsection F.4.a, if appropriate) including:
    - Justification for the selection of a load fund over a no-load fund.
    - Criteria for the selection of the mutual funds to be included on approved lists,
    - Criteria for monitoring the mutual funds on the approved lists, and
    - Description of the approval process for adding or deleting mutual funds from the approved lists.
    - Criteria for diverging from the approved lists.
- Establishment of procedures for adopting and amending an approved list of obligors (corporate and municipal) of fixed income debt investments, if applicable, including:
    - Criteria for evaluating the credit risk of the obligors to be included on the approved lists,
    - Criteria for monitoring the credit risk of the obligors on the approved lists,
    - Description of the approval process for adding or deleting obligors from the approved lists, and
    - Monitoring purchases and sales to ensure compliance with the approved lists.
    - Criteria for making exceptions to the approved list.
- Guidelines for the development and use of asset allocation models, including:
    - Criteria or methodology for creating and modifying asset allocation models, and
    - Description of the process for supervisory review and approval of the models.
- Guidelines for the holding, purchasing, and managing of real property, including:
    - The evaluation of environmental risk, initially, and on an ongoing basis, and
    - Initial and periodic reappraisals/inspections of real property.
- Guidelines and procedures for holding closely held businesses, including:
    - Identification of conditions under which the department would administer such assets.
    - Criteria for contracting with a third party to run a closely-held business.
    - Methods and procedures for the initial and periodic evaluation of such assets
    - Whether the trust officer should serve on the board .

- Guidelines and procedures employed in the selection and use of money market mutual funds, including:
    - Periodic reviews of fund performance,
    - Methods for monitoring the use of and reliance on derivative products by such funds, and
    - Guidelines for the selection and use of funds paying 12b-1 fees, including: the appropriateness of such funds for each type of account administered, notification to customers of such fees, the solicitation of customer approvals when appropriate, and the routine disclosure to customers of such fees earned by investment of their accounts in such funds.
- Guidelines governing the use and monitoring of derivative investment products, as outlined in the FDIC Office of Capital Markets Examination Handbook and the FDIC Statement of Policy on Investment Securities and End-User Derivative Activities.
- Guidelines for the evaluation and management of assets deemed worthless.
- Guidelines and procedures for evaluating and monitoring exceptions, such as non-rated, or non-approved list, securities held in accounts. Refer to the following section.
- Guidelines and practices for securities lending. Refer to F.15.
- Guidelines and procedures governing loans from trust accounts (real estate, unsecured promissory notes, etc.).
- Guidelines and procedures regarding lending to, and permitted indebtedness of, managed accounts.
- Guidelines providing for the prompt investment of income and principal cash, unless the governing instrument, local law, or parties properly authorized to direct investments provide otherwise.

E.2. Discretionary Asset Review Policies

It is generally acknowledged that trust departments are liable, to varying degrees, for all assets held, whether or not they possess investment authority. It also follows that greater authority imparts greater risk. Trust departments which are otherwise well managed may sometimes lack appropriate policies with respect to periodic reviews of assets not contained on the approved list. Many departments hold at least some assets in discretionary accounts that were not acquired through the exercise of discretionary authority. These include directed purchases, assets acquired "in-kind," and assets acquired through distributions, corporate re-organizations or liquidations. This is especially true with respect to assets acquired as executor, trustee under will, successor to previous fiduciaries, and through guardianship or conservatorship appointments. The value of these assets may represent a significant percentage of the market value of an individual account.

Trust management should institute written policies which affirmatively address the routine evaluation of all discretionary assets (refer to subsection G, Account Review Program, of Section 1. This is true whether or not the assets were acquired by virtue of management's fiduciary authority. At least once during the calendar year, all assets held in discretionary accounts should be reviewed and evaluated in light of governing instruments and individual account circumstances. Departments that adopt a "passive" stance over assets received in-kind increase their exposure to fiduciary risk. Trust management may believe it can eliminate this risk by obtaining "direction letters." Although prudent and necessary, at best, this reduces, but cannot eliminate, fiduciary risk. The beneficiaries may change or may lack the legal capacity to release the fiduciary from liability, as in the case of minors or the unborn. Likewise, account circumstances change and economic factors vary over time, sometimes dramatically and with little or no advance warning.

Also, asset management policies should address the retention process for all discretionary holdings. Investment policies should address minimally acceptable sources for outside research. They should also outline the minimum acceptable standards for documenting and approving the retention of assets and provide guidance for the sale of underperforming assets. Trust departments may fail to include all discretionary assets in their annual review function, thereby increasing fiduciary risk. Trust departments that have adopted an "approved list" approach may be at increased risk if they do not review discretionary assets that are not on their approved list.

Trust departments may hold assets for which they cannot obtain reliable valuations. Such assets may include limited partnership interests, investments in closely held businesses, the

common stock of thinly traded or unlisted companies, partnership agreements, hedge funds, royalties, patents and copyrights, oil and mineral interests, etc. Asset pricing is an integral component of an annual portfolio analysis. It is also necessary for the preparation of estate tax returns (IRS Form 706), gift tax returns (IRS Form 709) and annual IRA account filings (refer to Section 5, F.1.) . It is a key factor in the proper calculation of account fees and commissions (department earnings). In these situations, and in situations where management does not have the resources to adequately evaluate certain types of assets, it should seek outside expertise. Management may not, however, be able to pass the cost of these outside services through to the account, particularly when the assets in question were purchased by the department under its discretionary authority. Consequently, examiners should review accounts for inappropriate charges in this context.

F. Types of Investments

Various investment vehicles are available for the investment of trust funds. The more common types of investments and some newer products are discussed below, along with applicable regulations, examination procedures and other related matters.

The Capital Markets Handbook defines products not outlined on the following pages and provides examination guidance. The Capital Markets Branch in the Washington Office can readily provide information concerning most investment products.

F.1. Cash Management

F.1.a. Money Market Funds

Various money market funds are offered for the short-term investment of idle cash. These funds are mutual funds and have differing portfolios depending on the particular fund. Investments in domestic or foreign certificates of deposits, repurchase agreements, commercial paper, and short-term U.S. Government or agency obligations are some of the more common portfolio components. Although the trustee may have full investment discretion, it should be satisfied that the investment of trust funds in money market funds is permissible under state statutes. When trustees do not have full discretion, sufficient authority should be sought in state statutes or court decisions, the language of the account's governing instrument, or by obtaining binding consents from all beneficiaries or written instructions from the parties authorized to direct investment selection, before utilizing these funds. In general, it would not be considered appropriate to permanently place funds in this type of investment vehicle, as money market funds are considered short-term investments.

Money market funds are registered under the Investment Company Act of 1940 and as such, are regulated by the Securities and Exchange Commission. Fund companies are required to provide a prospectus to the investor prior to purchase. The funds are required to have external audits. Prior to investing in a money market fund, the prospectus of the fund and portfolio composition should be reviewed to determine that the fund meets the objectives of the trust account. Thereafter, the fund should be reviewed periodically to ensure that the investment objectives continue to be met. In addition, there have been instances where money market funds have "broken the buck", referring to situations where the fund's net asset value falls below $1 per share. This issue has recently resurfaced and concerns may be found at in Appendix G, Interagency Policy on Banks/Thrifts Providing Financial Support to Funds Advised by the Banking Organization or its Affiliates . Therefore, various risks such as credit, liquidity, concentration, operational, and reputation risks should be assessed by trust department management. Examiners should determine that money market funds have been properly analyzed prior to investment and that the funds are periodically reviewed. Appropriate comments should be included in the Report of Examination if such funds have not been properly analyzed or if such investments are inappropriate for the accounts involved.

F.1.b. External Sweep Arrangements

Money market funds generally accrue interest daily and pay interest at the end of the month. Many trust departments now have services which automatically invest available cash exceeding predetermined dollar limits in a money market fund. These are commonly called "sweep" arrangements.

Fiduciaries are obligated to keep funds productive. Uninvested cash of discretionary appointments should be invested "temporarily" until "permanent" investments are chosen, or pending the implementation of an investment program or distribution to beneficiaries. Uninvested principal cash, including cash not awaiting immediate distribution or payment against a draft, are often "swept" at the close of each business day into some form of interest-bearing investment vehicle. Income cash should be treated in a similar manner. Current technology makes possible, and prudent fiduciary investment philosophies advocate, the full employment of all cash in some form of productive investment. Management's failure to invest cash when appropriate and practicable should be considered imprudent and a breach of fiduciary duty subject to criticism. In those cases where the fiduciary is responsible for the investment of cash, it is difficult for a fiduciary to justify permitting cash to remain idle when it is possible to make it productive. It would be unusual, given the current state of investor awareness, for customers to be indifferent to a fiduciary's intentional failure to invest large cash balances.

The investment of nondiscretionary cash is largely governed by the terms of the account agreement. There may be instances, however, when the account agreement lacks specific directions concerning how cash is to be invested and the customer has not provided any specific instructions. Examiners, in such cases, should be careful when "interpreting" a trust department's investment authority with respect to the investment of cash balances. In such cases, management should be encouraged to modify the governing account agreements in a manner to resolve any ambiguity concerning the department's responsibility to invest cash. In addition, faced with such uncertainty, the fiduciary should contact the account principal and request direction concerning the investment of the cash.

Examiners may encounter situations in which the trust department charges an additional fee ("sweep fee") for performing cash management services. The taking of such fees is customarily governed by state law and examiners should determine the permissibility of assessing additional fees under local statutes. If permissible under state law and not prohibited by the account agreement, the fee charged should be reasonable for the service performed. Additionally, the department should fully disclose the imposition of the fee to interested parties. The amount of fees charged relative to the sweep arrangement should be disclosed periodically in the account statements sent to customers. The charging of sweep fees in **ERISA accounts is not strictly prohibited.** Refer to Section 5, subsection H.7.f.(20). Sweep Fees for additional guidance for ERISA accounts.

F.1.c. Deposits

Deposits, whether time, savings, or demand, are another common form of investment. The deposits could be in another institution or in the commercial department of the bank under examination. Oftentimes, such investments provide the safety and liquidity needed by the account. However, given the availability of numerous other investment vehicles providing similar safety and liquidity, examiners should determine whether deposit holdings result from a lack of management initiative to seek other investment opportunities. Large holdings of non-interest bearing deposits should be scrutinized, since it is a fiduciary's duty to make trust assets productive. Discretionary deposits with the commercial bank should also be reviewed, given the conflict of interest and self-dealing aspects of such investments.

Some trust departments sweep cash to the commercial department's deposit accounts on an overnight basis, rather than sweep to an external investment vehicle. In those situations, bank management should have a strategic plan

for the activity. Within that plan, management should not view overnight trust funds as a long-term funding source for the commercial department. Management should have calculated the costs, including interest on deposits and the FDIC deposit insurance assessment. More importantly, trust management should be able to demonstrate that the customer is at least as well compensated, as he would have been with an external sweep, usually a money market fund. Care should also be taken to assure the deposit account is appropriated titled in the commercial department's records to insure pass-through deposit insurance coverage. Examiners should be aware that Section 24 of the FDI Act prohibits the pledging of bank securities to secure deposits of trust accounts. However, an irrevocable letter of credit issued by an agency of the U. S. Government or a surety bond, issued on behalf of the bank or trust department, is allowable under the regulation .

Refer to Section 8. E.3. Use of Own Bank or Affiliate Deposits, of this Manual for additional guidance in this area.

Federal deposit insurance coverage of trust account deposits is discussed in Section 10, subsection L. Deposit Insurance of Trust Funds

F.1.d. Overdrafts

Overdrafts occur for numerous reasons, including timing differences related to cash receipts and disbursements. Overdrafts should be short-term in nature, and rare in occurrence. The department should not be funding securities purchases with overdrafts. Such a practice reflects poor cash management of an account. Likewise, the failure of the department to properly plan for recurring or expected disbursements, resulting in a lack of liquid assets to fund disbursements, reflects poor cash management. These and similar events, if prevalent, should be criticized. The department should have a policy governing overdrafts. The policy should include review procedures, methods for curing overdrafts, and the action(s) that will be taken if an overdraft cannot be cured within a reasonable time period. Overdrafts outstanding for long periods of time should be treated as a loan to the account.

F.2. Fixed Income Products

In those states where the Prudent Investor Act has been adopted, the suitability of the entire portfolio should be reviewed as a whole, and individual investments are not considered inherently good or bad based solely on investment type or credit rating.

In states which operate under the Prudent Man Rule, investments are considered prudent or imprudent on an individual basis. Therefore, investments can be considered inherently prudent or imprudent based solely on investment type or credit rating.

The following is a brief overview of the more common investments and some newer products found in trust departments. For particular products and their risks not included on the following pages, examiners should refer to the Capital Markets Examination Handbook and the Manual of Examination Policies, used for safety and soundness examinations.

F.2.a. Corporate Debt Issues

Marketable debt securities (bonds, debentures, etc.) generally comprise a significant portion of a trust department's assets. The selection of acceptable debt instruments for discretionary accounts should be based on research performed in-house, acquired from outside sources, or a combination of the two. The department may also rely on ratings provided by the nationally recognized rating agencies. The rating bands for three of the rating services are outlined in this section. As seen in recent events, highly rated debt issues can decline into subinvestment quality rating bands or go into default. Therefore, management should monitor investments on an on-going basis to determine that the issue remains suitable for the account. As previously stated, the Prudent Investor Act does not preclude the investment in or continued holdings of subinvestment quality securities. However, speculation is inappropriate for trust accounts.

InterNotes are investment grade, medium-term notes, offered in minimum denominations of $1,000 to retail investors. InterNotes represent the debt of each respective issuer and are subject to credit and secondary market risk. The notes are offered via a prospectus and issues are sold at par value. Each week, new offerings from various corporations are made, and include issues with varying maturities, coupons, and interest payment schedules (monthly, quarterly, semi-annually.) InterNotes appear to have a shelf registration, meaning that the amount offered in the prospectus is registered once, and the issuer can offer amounts under that prospectus as needed.

An example of an InterNote may be the following:

- $6 billion issue from a corporation under a prospectus dated August 2002.
- Separate CUSIP numbers are assigned to specific terms, such as maturities, coupons, and call provisions, which represent amounts used under the registration.
- The offer as stated is valid for a week, and the minimum investment (denomination) and increments are $1,000.
- The products are rated by nationally recognized rating agencies and the ratings are posted on the InterNotes' website, along with other information concerning terms.
- Some InterNotes are based on floating rates, indexed to short-term rates.
- The products are directed at small, retail investors, in lieu of certificates of deposits and may be received in-kind.

F.2.b. Municipal Bond Issues

The department may invest in debt obligations issued for the benefit of local municipalities, school districts or other small governing authorities. Industrial revenue bonds may be issued for the benefit of corporate entities. Frequently, municipal bonds will be received in-kind rather than purchased by the department. The issues may or may not be rated. The lack of a rating may result from the expectation that the issue will be sold to a limited number of investors in the local community, or, the cost of acquiring a rating may be expensive in relation to the size of the issue. However, non-rated, does not necessarily equate with investment quality. Trust management should analyze prior to purchase and periodically thereafter to determine that the issuer is creditworthy. Management should establish policies and procedures including selection criteria and investment review procedures when non-rated investments are purchased for discretionary accounts.

Municipal bond issues may be appropriate for managing the customer's tax position, but normally the investment should not be placed in tax-deferred accounts, such as employee benefit accounts, as the accountholder does not gain any additional tax benefit from the exemption. Private activity bonds used for funding football stadiums, basketball arenas, etc., are subject to the Alternative Minimum Tax and may affect the customer's income tax liability. In either of these or other scenarios, management should determine and document the suitability for the accountholder.

CORPORATE & MUNICIPAL BOND RATINGS

Description	Moody's*	Standard & Poor's**	Fitch**
Highest quality, "gilt-edged"	AAA	AAA	AAA
High quality	Aa	AA	AA

Upper medium grade	A	A	A
Medium grade	Baa	BBB	BBB
Predominantly speculative	Ba	BB	BB
Speculative, low grade	B	B	B
Poor to default	Caa	CCC	CCC
Highest speculation	Ca	CC	CC
Lowest quality, no interest	C	C	C
In default, in arrears, questionable value		DDD DD D	DDD DD D

* Moody's uses numerical modifiers 1 (highest), 2 and 3 in the range Aa1 through Ca3.

** Standard & Poor's and Fitch may use + or - to modify some ratings.

F.2.c. Collateralized Mortgage Obligations (CMO)/ Real Estate Investment Conduits (REMIC)

CMOs are a mortgage derivative security consisting of several classes secured by mortgage pass-through securities or whole mortgage loans. Principal and interest payments from the underlying collateral are divided into separate payment streams that repay investors in the various classes at different rates. All collateralized mortgage obligations now issued are in Real Estate Mortgage Investment Conduit (REMIC) form. REMIC classes include sequential pay tranches, planned amortization classes (PAC), and targeted amortization classes (TAC). These tranches are generally more stable than some of the tranches outlined below.

The following tranches are generally more sensitive to changes in interest rates :

- Stripped Mortgage-Backed Securities - The separation of interest or principal cash flows from the underlying mortgage assets give I/Os and P/Os vastly different risk profiles. These products are highly sensitive to changes in interest rates.

- Interest-Only Stripped Mortgage-Backed Securities- A pure I/O consists entirely of a premium. The value of the I/O is the present value of the future interest payments based on the underlying collateral.

- Principal-Only Stripped Mortgage-Backed Securities- P/Os are generally sold at a discount, and the investor realizes a return on investment, as principal is returned at par and the discount is returned as income. (Refer to the Uniform Principal and Income Act for a discussion on determining income.)

- Inverse Floaters- The coupon varies inversely to an index. As the floating rate class of securities within the issue is larger than the

inverse floating rate tranche, leverage factors or multipliers are used to balance the inverse tranche with the floating rate tranches. Leverage factors or multipliers can magnify the effect of minor interest rate movements.

Prior to investing in any product, management should perform the appropriate due diligence. A copy of the prospectus and pre-purchase analysis should be retained in the trust files. Subsequent evaluations consisting of total return screens, stress tests, or volatility analyses performed by management should be retained for REMICs. This documentation should support the continued investment in the product.

The trust investment officer should have expertise in managing these instruments. Management should be fully aware of all derivative holdings and be able to explain how these instruments benefit the individual account. During account and investment reviews, management's knowledge of the products should be documented and the use in a particular account should be demonstrated through written comments or exhibits retained in file. Trust departments that cannot adequately demonstrate a reasonable level of knowledge of a derivative investment and its associated risks should be criticized.

For employee benefit accounts, an apparent violation of ERISA Section 404(a)(1)(B) (prudence), which can be found in Section 5.H.5.c r) should be cited. The basis for the apparent violation is detailed in the DOL advisory opinion letter issued to the OCC on March 21, 1996, entitled "Investments in Derivatives." Derivatives are defined in the letter as a financial instrument whose performance is derived in whole or in part from the performance of an underlying asset. Examples include futures, options, options on futures, forward contracts, swaps, structured notes, and collateralized mortgage obligations. In that letter, the DOL opined that the products are permissible. However, trust management is responsible for assessing the inherent risks of derivatives by "securing sufficient information to understand the investment prior to making the investment." The letter discusses the importance of performing stress simulations under normal and abnormal market conditions, the effect of volatility on the plan's portfolio, and the ability to properly analyze the investment. A copy of this letter is contained in Appendix E .

The trust policy should provide guidance, as to when investments in derivatives are appropriate and how investment risks will be managed. Parameters should be established for the dollar volume and interest rate risk that is acceptable for accounts, and formal monitoring and reporting mechanisms should be established. Furthermore, management should understand the types of risks involved in each derivative investment and should not rely solely on the statements of the selling broker, as an impartial analysis of such risks. A broker's job is to sell a product, and often the riskier the product being sold, the greater the broker's commission.

Potential risks associated with such derivative investments consist of the following:

- The investment is bought in a large block and several accounts hold the investment. An individual account's investment may not be liquid. For example, when an individual account needs to liquidate the asset, the question becomes how liquid is that individual account's investment. Also, is the holding in a saleable lot and at what price for a relatively small holding rather than a block transaction? Management may determine that the particular account's portion is not liquid and may sell the asset to another account. When inter-account transactions occur, self-dealing or conflicts of interest are a major concern. Also, management should have documentation supporting the transaction price. However, the pricing used may be matrix pricing, which is a

calculated price. While matrix pricing should be reliable under normal circumstances, the pricing does not incorporate every conceivable outside factor which may influence pricing.

- Trust accounting systems should provide for adequate, timely and accurate pricing of derivative investments. Many pricing services do not have sufficient capability in this area. In such cases, trust accounting systems often default to the purchase price or face value of the investment. As products return principal and income, the purchase price may greatly overstate to the value, if the trust accounting system does not accept paydowns. Each CMO tranche has a factor, indicating the amount outstanding as a percent of the original face amount. Normally, these factors are available on the payment of principal and interest ticket or for FNMA issued REMICs, on the agency's website. The Capital Markets Branch in the Washington Office can provide factors and other information regarding these and other products.

F.2.d. Asset-Backed Securities (ABS)

Asset-backed securities are debt instruments secured by installment loans or leases or revolving lines of credit. Common ABS collateral includes credit card receivables, automobile loans, automobile lease, mobile homes, and home equity loans. The ABS can be in the form of a pass-through or in a REMIC. Depending upon the structure, the investor either receives a pro rata share of the principal and interest payment or a structured payment.

F.2.e. Structured Notes

T hese are hybrid securities that combine fixed term, fixed or variable rate instruments, and derivative products. Structured notes are debt securities issued by corporations or government-sponsored enterprises, including the Federal Home Loan Bank, the Federal National Mortgage Association, and the Federal Home Loan Mortgage Corporation. Most corporate structured notes are issued through shelf-registered medium-term note programs. The shelf-registration allows the issuer to issue up to $1billion in debt over a two year period, without re-registering with the SEC. Structured notes generally contain embedded options and have cash flows that are linked to the indices of various financial variables, such as interest rates, foreign exchange rates, commodity prices, prepayment rates, and other financial variables. Structured notes can be linked to different market sectors or interest rate scenarios, such as the shape of the yield curve, the relationship between two different yield curves, or foreign exchange rates.

F.2.f. Trust Preferred Securities (TPS)

Overview

Trust Preferred Securities originated in 1993, with industrial and utility companies being the primary issuers. Since then, both large and small bank holding companies have issued the hybrid investment product: The securities have characteristics that resemble both corporate debt and preferred stock. The debt-like characteristics include the tax deductibility of distributions, a fixed maturity date, a stated coupon or formula for the calculation of the coupon, and the ability of investors to accelerate claims against the company in the event of default. The securities rank behind both senior and subordinated debt in terms of repayment priority. The equity-like characteristics include resembling cumulative preferred stock, subordinating to other obligations, and representing a minority interest in a wholly-owned subsidiary. Currently, TPS issued by bank holding companies are limited to 25 percent of Tier 1 capital. All TPS have an interest deferral feature of up to 5 years. In general, TPS have a 30 year maturity, although TPS can be issued with a maturity of up to 50 years. The securities generally have a par value of $25 for retail investors, a $1,000 for institutional investor is the norm. A call provision of 5 or 10 years is common for the institutional class investor.

TPS Structure and Flow of Funds

Underlying Structure

First, the parent company establishes a wholly-owned special purpose subsidiary (a grantor trust), whose sole purpose is to issue the securities. The holding company then acquires all of the special purpose trust's common stock. Next, the trust issues preferred stock to the public, representing an undivided interest in the trust's assets. The holding company guarantees, on a subordinated basis, that the trust preferred securities holders will receive interest payments. The trust then lends the proceeds back to the parent company to purchase junior subordinated deferral debenture with identical terms. The interest that the trust receives from the funds lent to the parent company is used to pay the dividend on the trust preferred securities. In general, TPS are considered a variable interest entity and subject to FIN 46 - Special Purpose Entity accounting..

Common structures:

Monthly income preferred securities (MIPS)

Quarterly income preferred securities (QUIPS)

Pooled Trust Preferred Securitization -

I n a pooled trust preferred offering, an additional trust is added to the structure and is referred to as a business trust. The business trust issues securities to investors and uses the proceeds to purchase all of the trust preferred securities from the grantor trust, as described above. The trust preferred securities are then securitized, as the business trust is the sole investor of the securities. A pooled trust preferred security is a form of a collateralized debt obligation backed by various trust preferred securities. The pooling crosses geographical lines and therefore, limits concentration risk.

Eligible trust preferred securities are issued by bank or financial holding companies, whose subsidiaries' deposits are FDIC insured. The individual holding company must have assets of at least $200MM or deposits of $100MM. The entity must have been in operation for at least 5 years, and have a Tier 1 risk-based capital ratio of 10 percent or more.

Deferral Period

TPS can defer interest payments for 20 consecutive quarters, unless the deferral would extend beyond the stated maturity. While the deferral period is not considered a default, the reputation of the issuer is harmed. Further, while the interest may be deferred, it still must be paid. Therefore, the deferral period is also an accumulation period for interest. The issuer can enter into a deferral period, pay investors income due, and enter back into another deferral period. As long as there is a clean-up period, successive deferral periods are allowable.

Investment Considerations

TPS with fixed rate coupons and lives of 30 to 50 years are sensitive to interest-rate fluctuations. Coupons for these products are normally high in relation to market rates for long-term Treasury securities and generally yields are higher than those of corporate bonds or preferred stock issued by the same corporation. While the products contain call provisions, there is usually a lock-out period on the call.

An alternative to the fixed rate TPS is the floating rate TPS. The coupon for the floating rate issues may be based on a short-term rate, such as three-month LIBOR plus a spread. By reducing the interest-rate risk, these products have significantly less attractive coupons than the fixed rate products.

Trust preferred securities are rated by nationally recognized rating firms. For the pooled trust preferred issuance, only the senior notes and mezzanine notes are rated, with the senior notes carrying a higher rating. The income notes are not rated and are similar in concept to a residual.

Payments may be deferred for up to five years, but that action is not considered a default. However, TPS are not immune to default. For example, Enron issued TPS that have since defaulted. In the event of bankruptcy, the TPS are below all senior and subordinated debt, but above equity securities in priority.

While the previously mentioned deferral period may harm the issuer's reputation, from an investor's point of view, the deferral period can be significant, also. During the deferral period, the investor is liable for including the deferred income in gross income for federal income tax purposes, where it is considered original-issue discount. To collect the accrued but unpaid income, the investor must own the security on the date dividends are finally paid.

Employee Benefit Account Considerations

Investments in affiliated holding company trust preferred securities should be carefully reviewed. The transactions may be considered a "party in interest" under ERISA or a "disqualified person" within the meaning of Section 4975 of the Internal Revenue Code with respect to employee benefit plans and individual retirement accounts. The purchase of trust preferred securities by an employee benefit plan or IRA that is subject to the fiduciary responsibility provisions under ERISA or prohibited transaction provisions under Section 4975(e)(1) of the Internal Revenue Code may constitute a prohibited transaction. Prior to investing in trust preferred securities issued by the parent company, management should consult with legal counsel knowledgeable of ERISA and the Internal Revenue Code.

A prohibited transaction may occur when employee benefit accounts or IRAs are transferred from one institution to another. If the account held a TPS of the second holding company and transferred the asset into an account at a subsidiary of the second holding company, a prohibited transaction may occur.

F.2.g. Church Bonds

Church bonds are certificates of indebtedness issued by churches, and proceeds from the sale are used primarily to fund acquisition or expansion of the church property. Churches use the funding when conventional borrowing is not available; the bonds are secured by mortgages. In general, the bonds are held by members of a particular church. Maturities range from 6 months to 15 years, with interest paid or compounded every 6 months. The bonds are promoted as acceptable investments for Individual Retirement Accounts, although the ability to accurately value the bonds is questioned. Furthermore, the bonds most likely will not be rated, due to the nationally recognized rating agencies not analyzing this type of investment, nor are the churches willing to pay for a rating, especially when the rating may be less than investment quality.

F.3. Equity Securities

Marketable equity securities may comprise a significant portion of a trust department's assets. Equity investments selected for accounts where the trust department exercises investment discretion should be based on research that is either performed in-house, acquired from outside sources, or a combination of the two.

The department may also consider equity ratings assigned by rating agencies and services. In recent months, various financial service organizations, such as Charles Schwab, have established proprietary equity ratings, in addition to those established by the better known national rating agencies. While the rating scales used by either the rating agencies or the financial service organizations appear similar to the bond rating scales,

equity ratings do not have the same purpose as bond ratings. The stock rating represents the expected performance of the stock and/or its risk level, while a bond's rating is based on perceived creditworthiness. Therefore, a "C" rated equity may be considered as a hold, whereas a debt rated "C" is indicative of a security at or nearing default. Given the numerous entities issuing equity ratings, trust management should maintain a copy (paper or electronic) of the rating criteria and definitions used by the particular rating service.

The department may develop its own "approved list" based on in-house research; it may adopt the approved list of an outside investment research firm; or it may modify the "approved list" provided by an outside research firm. If the department uses in-house research or adopts its own version of an outside research firm's "approved list," there should be policies describing the criteria used to include investments on the "approved list," as well as procedures for reviewing such selections. Investments in equity securities should be suitable for the purpose and investment objectives of the account.

Restricted equity securities are not subject to registration under Federal securities laws. The securities certificates usually contain a "legend" stating that they are transferable only upon certain conditions, such as after a certain date or after "x" years. The securities must have been obtained in a transaction not involving a public offering. Normally a trust department acquires such securities in-kind rather than by purchase. To sell such securities, the trust department must comply with the requirements of SEC Rule 144, issued under the Securities Act of 1933 (refer to SEC regulations at 17 C.F.R. Section 230.144). For additional information, refer to Section 3.k.2. Restricted Equity Securities

F.3.a. Financial Derivatives

The following are the four types of Interest Rate Derivative Instruments: interest rate options; interest rate futures and forwards; interest rate swaps; and, interest rate caps, floors, and collars. These instruments are principally designed to transfer price, interest rate, and other market risks without involving the actual holding or conveyance of balance sheet assets or liabilities. Examiners are unlikely to find these types of instruments in a trust department unless the investment portfolio is exposed to some risk that can be mitigated by the use of one of these instruments. Some examples of how these vehicles could be used include: using foreign currency swaps to reduce foreign exchange risk, purchasing a call option to lock in the price of a security which the department expects to purchase in the future, purchasing a put option to establish a future selling price, and writing covered call options to enhance the yield of a portfolio.

Some trust departments use over-the-counter put and call options for accounts as a means of increasing trust account revenue. The writer of put and call options is paid a fee for selling these contracts. The purpose of using exchange traded options would be to take advantage of price fluctuations. Whether engaging in options transactions is legally permissible for trust accounts depends upon the terms of the agreement, and the applicable state law governing the investments permitted for specific types of accounts. Employee benefit trusts are governed by the prudent investment standards in Section 404(a)(1)(B) of ERISA and in DOL regulations at 20 C.F.R. Section 2550.404a-1 .

Many departments have restricted option writing activity to covered call options. However, it is recognized that under certain conditions, the writing of put options, within clearly defined policy parameters, may be an acceptable and appropriate investment strategy for some accounts. Prior to approving the utilization of options as an investment strategy, the board of directors, or an appropriately designated committee thereof, should ensure that adequate policies and procedures are established to measure, monitor and control the risks involved. The policies should: address the propriety of option writing for different types of fiduciary accounts; define the permissible option strategies that may be employed; define the dollar volume of options that may be written by individual accounts; establish procedures for reporting and approving such transactions; and prescribe control and record keeping practices. The policies should be reviewed on a regular basis, no less frequently than annually. The

trust department should also obtain an opinion from bank counsel as to the legality of these activities.

When a department writes a covered call option on stock held in its trust accounts, it sells to a third party the right (option) to purchase that stock (call) at a specified price until a specific date. Possession of the stock by the trust account makes the written option "covered."

Receipt of cash (fee) paid by the third party for the option provides an additional return on the stock if the market price remains the same, and cushions the potential loss if the market value declines. An element of risk is involved if the market value of the stock rises above the strike price, in which case the holder of the option will exercise the right to purchase the stock at the previously agreed upon price. In such instances, by granting of the option, the trust account foregoes any price appreciation over the strike price of the option. If the option contract is written and exercised on a bond, the trust account will receive the cash proceeds resulting from the sale, but reinvestment of these funds in a rising market will likely result in a reduced yield (income) to the account.

The following guidelines should be followed by examiners in reviewing investments in call options: (1) Sufficient authority must exist to make such investments. Such authority might consist of specific authority in the governing instrument, specific or express authority in applicable state law, the written and binding consent of all account beneficiaries, an order from a court of competent jurisdiction, or in those cases where the governing instruments and state law are silent, applicable Prudent Man or Prudent Investor Rules; (2) Such an investment must be prudent for each trust account involved, coupled with a determination that employment of an option writing strategy is consistent with the needs and investment objectives of the account; and (3) The trust department should have the necessary technical expertise to monitor and execute such transactions, which should be documented in accordance with approved policy by appropriate records, reviews and approvals.

F.3.b. Variable Annuities

Overview

The Securities and Exchange Commission (SEC) and National Association of Securities Dealers (NASD) regulate the sale of variable annuities, as the products are registered with the SEC as securities. The variable annuity is a contract between a purchaser and an insurance company, where the latter makes periodic payments to the purchaser beginning either immediately or at some future time. The purchase can be made by a single, lump-sum payment, or by multiple payments. All investments in variable annuities should be viewed as a long-term investment.

A range of investment options are offered, although investments in mutual funds are the most common. The underlying assets are generally invested in stocks, bonds, or money market funds. The rate of return varies with the investments selected. While the investment options may consist of mutual funds, variable annuities differ significantly from mutual funds, by the following:

- Variable annuities provide periodic payments and protect the owner from outliving his assets.
- The beneficiary is guaranteed a specified amount, if the purchaser dies before receiving payments.
- The income and gains are tax-deferred until withdrawn.
- When withdrawing funds, income is taxed at the ordinary rate, and not the lower capital gains rate.

Variable annuities should not be used in lieu of 401(k)s or other similar plans, as the contributions are not excluded from current income. Once a 401(k) or similar plan is funded to the legal maximum contribution, variable annuities may be an investment option. Generally, variable annuities should not be held in retirement accounts, such as 401(k) or IRA, as those accounts are already tax deferred. There is no additional advantage to owning tax deferred products in such accounts (this would be the same for municipal bonds.) However, examiners should determine if there are any other reasons to hold such products.

Phases

The product has two phases. The first phase is the accumulation phase. During that time, the purchaser allocates investments amongst various investment options. Just like a mutual fund, the investment selected will increase or decrease in value based on the fund's performance. During this phase, funds can be transferred between investment options, without a tax consequence. However, withdrawing funds during this time may result in "surrender charges." Withdrawals prior to age 59 ½ are also subject to a 10 percent federal tax penalty.

The second phase is the payout phase. The payout may be a lump-sum payment or multiple payments, usually monthly. The purchaser, not the insurance company, selects the number of payments under the multiple payment option. Some annuity contracts are structured as immediate annuities, which provide protection against market downturn, and, which, upon purchase, provide payments that are guaranteed for life. In this form, there is no accumulation. Since 2001, sales of the immediate annuities have experienced substantial growth, while variable annuities in general were on the decline. Several financial service providers have entered the immediate annuity market. Finally, the payout phase may be structured as a deferred annuity, where payments are delayed into the future.

Cost and Fee Structure

The cost and fee structure of variable annuities can be high. First, a surrender charge is assessed when funds are withdrawn (surrendered) prior to the end of a set period of time. This period may be as long as ten years. The sales charge is used to pay a commission to the representative who sold the product. Each year the surrender charge percent decreases. In addition, a mortality and expense risk charge is assessed annually. This charge covers the guaranteed death benefit, payout options that are guaranteed for life, or administrative charges. Administrative fees are charged to cover recordkeeping and other expenses. Other fees, known as underlying fund expenses, such as an initial sales load, transfer fees, and fees for stepped-up death benefits, may also be charged. Fees should be fully disclosed in the prospectus. The annual fees can reach two percent of the annuity's value.

Individuals can exchange their current variable annuity for a different variable annuity without paying tax on the income or gains under Section 1035 of the US Tax Code. While this allows a tax-free exchange, other fees such as surrender charges may still apply .

F.3.c. Insurance Company Ratings

The guarantee provided by the insurance company is only as good as the insurance company that offers the product. Insurance companies are rated by nationally recognized rating services, such as A. M. Best Company, Moody's Investor Service, Fitch Ratings, Standard & Poor's Insurance Rating Services, and Weiss Ratings. Each service provides ratings, but ratings from one rating service to another are not comparable, without knowing the rating agency's definitions. The following are the ratings and definitions from A. M. Best Company.

Definitions of Best's Ratings and Not Rated Categories (NR)

Secure Best's Ratings

A++ and A+ (Superior)
Assigned to companies that have, in our opinion, a superior ability to meet their ongoing obligations to policyholders.

A and A- (Excellent)
Assigned to companies that have, in our opinion, an excellent ability to meet their ongoing obligations to policyholders.

B++ and B+ (Very Good)
Assigned to companies that have, in our opinion, a good ability to meet their ongoing obligations to policyholders.

Vulnerable Best's Ratings

B and B- (Fair)
Assigned to companies that have, in our opinion, a fair ability to meet their current obligations to policyholders, but are financially vulnerable to adverse changes in underwriting and economic conditions.

C++ and C+ (Marginal)
Assigned to companies that have, in our opinion, a marginal ability to meet their current obligations to policyholders, but are financially vulnerable to adverse changes in underwriting and economic conditions.

C and C- (Weak)
Assigned to companies that have, in our opinion, a weak ability to meet their current obligations to policyholders, but are financially very vulnerable to adverse changes in underwriting and economic conditions.

D (Poor)
Assigned to companies that, in our opinion, may not have an ability to meet their current obligations to policyholders and are financially extremely vulnerable to adverse changes in underwriting and economic conditions.

E (Under Regulatory Supervision)
Assigned to companies (and possibly their subsidiaries/affiliates) that have been placed by an insurance regulatory authority under a significant form of supervision, control or restraint, whereby they are no longer allowed to conduct normal ongoing insurance operations. This would include conservatorship or rehabilitation, but does not include liquidation. It may also be assigned to companies issued cease and desist orders by regulators outside their home state or country.

F (In Liquidation)
Assigned to companies that have been placed under an order of liquidation by a court of law or whose owners have voluntarily agreed to liquidate the company. Note: Companies that voluntarily liquidate or dissolve their charters are generally not insolvent.

S (Rating Suspended)
Assigned to rated companies that have experienced sudden and significant events affecting their balance sheet strength or operating performance whose rating implications cannot be evaluated due to a lack of timely or adequate information.

Not Rated Categories (NR)

NR-1 (Insufficient Data)
Assigned predominately to small companies for which A.M. Best does not have sufficient financial information required to assign rating opinions. The

information contained in these limited reports is obtained from the several sources, which include the individual companies, the National Association of Insurance Commissioners (NAIC) and other data providers. Data received from the NAIC, in some cases, is prior to the completion of the cross-checking and validation process.

NR-2 (Insufficient Size and/or Operating Experience)
Assigned to companies that do not meet A.M. Best's minimum size and/or operating experience requirements. To be eligible for a letter rating, a company must generally have a minimum of $2 million in policyholder's surplus to assure reasonable financial stability and have sufficient operating experience to adequately evaluate its financial performance, usually two to five years. General exceptions to these requirements include: companies that have financial or strategic affiliations with Best's rated companies; companies that have demonstrated long histories of financial performance; companies that have achieved significant market positions; and newly formed companies with experienced management that have acquired seasoned books of business and/or developed credible business plans.

NR-3 (Rating Procedure Inapplicable)
Assigned to companies that are not rated by A.M. Best, because our normal rating procedures do not apply due to a company's unique or unusual business features. This category includes companies that are in run-off with no active business writings, are effectively dormant, underwrite financial or mortgage guaranty insurance, or retain only a small portion of their gross premiums written. Exceptions to the assignment of the NR-3 category to run-off companies relate to those that commenced runoff plans in the current year or are inactive companies that have been structurally separated from active affiliates within group structures that pose potential credit, legal or market risks to the group's active companies.

NR-4 (Company Request)
Assigned to companies that were assigned a Best's Rating but request that their ratings not be published because the companies disagree with Best's rating conclusion. The NR-4 will be assigned at the request of the company following the dissemination by A.M. Best of the latest letter rating assignment.

NR-5 (Not Formally Followed)
Assigned to insurers that request not to be formally evaluated for the purposes of assigning a rating opinion. It is also assigned retroactively to the rating history of traditional U.S. insurers when they provide prior year(s) financial information to A.M. Best and receive a Best's Rating or another NR designation in more recent years. Finally, it is assigned currently to those companies that historically had been rated, but no longer provide financial information to A.M. Best because they have been liquidated, dissolved, or merged out of existence.

Rating Modifiers and Affiliation Codes
Under Review (u) Rating Modifiers are assigned to Best's Ratings to identify companies whose rating opinions are Under Review and may be subject to near-term change. Best's Public Data (pd) Rating Modifiers may be assigned to Health Maintenance Organizations (HMOs), Canadian, UK and other European insurers that do not subscribe to our interactive rating process. Best's Public Data Ratings reflect both qualitative and quantitative analysis using publicly available data and other public information. Syndicate (s) Rating Modifiers are assigned to syndicates operating at Lloyd's. Affiliation Codes are based on a Group (g), Pooling (p) or Reinsurance (r) affiliation with other insurers.

Rating Modifiers   Affiliation Codes

u - Under Review	g - Group
s - Syndicate	p - Pooled
pd - Public Data	r - Reinsured

For a complete definition of Best's Ratings, please refer to the Preface of Best's Insurance Reports or Best's Key Rating Guide. Best's Ratings reflect our independent opinion, but are not a warranty of a company's financial strength and ability to meet obligations to policyholders.

For the latest Best's Ratings, visit http://www.ambest.com

Financial Size Categories (FSC)

Assigned to all companies and reflects their size based on their capital, surplus and conditional reserve funds in millions of U.S. dollars, using the scale below.

To enhance the usefulness of our ratings, A.M. Best assigns each company a Financial Size Category (FSC). The FSC is designed to provide the subscriber with a convenient indicator of the size of a company in terms of its statutory surplus and related accounts. Many insurance buyers only want to consider buying insurance coverage from companies that they believe have sufficient financial capacity to provide the necessary policy limits to insure their risks. Although companies utilize reinsurance to reduce their net retention on the policy limits they underwrite, many buyers still feel more comfortable buying from companies perceived to have greater financial capacity.

FSC I	less	than	1
FSC II	1	to	2
FSC III	2	to	5
FSC IV	5	to	10
FSC V	10	to	25
FSC VI	25	to	50
FSC VII	50	to	100
FSC VIII	100	to	250
FSC IX	250	to	500
FSC X	500	to	750

FSC XI	750	to	1,000
FSC XII	1,000	to	1,250
FSC XIII	1,250	to	1,500
FSC XIV	1,500	to	2,000
FSC XV	greater	than	2,000

F.3.d. Exchange Traded Funds

An Exchange Traded Fund (ETF) is an index-linked portfolio of securities. ETF portfolios are purposely structured to replicate as nearly as possible the performance of a specific index. Precise replication is not possible due to expense factors in operating the trusts which hold the securities and other factors. This form of investing is sometimes referred to as "passive," since the portfolio of an EFT is not actively managed by any investment manager. Their composition is dictated by securities comprising the index itself, and they typically do not change unless the composition of the index changes. As with all investments, the inclusion of ETFs in any portfolio should conform with the requirements of local law, the governing instruments, the needs and requirements of both current beneficiaries and remainder interests, and the overall investment strategy and investment objectives of the particular accounts. Individual account records and trust management's investment records should document the basis for investing in an ETF, both initially, and on a continuing basis.

Most ETFs are structured as unit investment trusts and listed on the American Stock Exchange. ETFs can be purchased and sold like stocks. They are similar to mutual funds in that they consist of a diversified portfolio of stocks, but are dissimilar in that they are typically concentrated in a single industry, market, or based on some economic benchmark. Consequently, the performance of some ETFs may be more volatile than those which are based on broader indices. They are also dissimilar to mutual fund operated index funds in that they can be traded throughout the day. ETFs are traded on an exchange, and prices are available continuously throughout the trading day. Investors must also pay broker commissions on ETF purchases and sales. Most mutual funds can only be purchased and sold at the end of a trading day at the fund's Net Asset Value.

The more common of the Exchange Traded Funds are:

The NASDAQ-100 Index Tracking Stock (ticker symbol QQQ) is designed to track the performance of the 100 largest non-financial U.S. and non-U.S. companies listed on the National Market tier of NASDAQ. It was created March 10, 1999. NASDAQ-100 Index Tracking Stock Options are standardized put and call options on the underlying index. These options are also available for covered call writing.

The NASDAQ-100 Index Tracking Stock is structured as a regulated investment company trust. It is an index based unit investment trust and is sponsored by NASDAQ Investment Product Services, Inc., a wholly owned subsidiary of The NASDAQ Stock Market, Inc. ALPS Mutual Funds Services, Inc. is the Distributor of the trust. The Bank of New York is its Trustee.

The Standard & Poors Depositary Receipts (referred to as SPDRs, with a ticker symbol of SPY) is designed to track the performance of the Standard & Poors 500 Index. SPDRs are listed and traded on the American Stock Exchange. Trading began on January 29, 1993.

The Standard & Poors MidCap 400 Depositary Receipts (referred to as MidCap SPDRs, with a ticker symbol of MDY) is designed to track the performance of the Standard & Poors MidCap 400 Index. MidCap SPDRs are listed and traded on the American Stock Exchange. Trading began on May 4, 1995.

SPDRs and MidCap SPDRs are structured as regulated investment company trusts. They are index based unit investment trusts. PDR Services Corporation, a wholly owned subsidiary of the American Stock Exchange, sponsors these trusts. ALPS Mutual Funds Services, Inc. is the Distributor of the trusts. State Street Bank and Trust Company is Trustee of the SPDR trust, and The Bank of New York is Trustee of the MidCap SPDR trust.

Select Sector SPDRs are nine individual sector SPDR funds which comprise all of the companies in the Standard & Poors 500 Index. They are listed on the American Stock Exchange and began trading on December 22, 1998. Their trading symbols are:

XLB Basic Industries Sector XLF Financial Sector XLV Consumer Services Sector

XLI Industrial Sector XLP Consumer Staples Sector XLK Technology Sector

XLY Cyclicals/Transportation Sector XLU Utilities Sector XLE Energy Sector

Select SPDR Funds are structured as a regulated investment company trust. The funds are index based unit investment trusts. State Street Bank and Trust Company is Adviser, Administrator, and Custodian of the Select SPDR Trust. ALPS Mutual Funds Services, Inc. is its Distributor.

DIAMONDS (ticker symbol DIA) tracks the performance of the 30 stocks comprising the Dow Jones Industrial Average. The DIAMONDS trust is listed on the American Stock Exchange and began trading on January 20, 1998.

DIAMONDS is structured as a regulated investment company trust. It is an index based unit investment trust. Its Sponsor is PDR Services LLC, a Delaware limited liability company whose sole member is the American Stock Exchange, LLC. ALPS Mutual Funds Services, Inc. is the Distributor of the trust.

Most investors who purchase and sell ETFs do so in the secondary market. Purchasers of ETFs acquire an investment in a unit investment trust holding shares of the companies comprising a specific index. Initial units in the investment trust are generated by large or institutional investors through "creation units." These "creation units" consist of large blocks (generally 50,000 shares) of securities of the companies comprising the index. Each "creation unit" can only be created and redeemed in aggregates of these blocks of securities. Only investors who have executed a participating agreement with the trust's distributor and trustee, and who deposit the requisite number of shares of the securities making up the index, plus cash for accumulated dividends and transaction costs, are eligible to create "creation units." These investors act as arbitrageurs who trade "creation units," keep the trust's net asset value close to index target levels, and attempt to profit from differences between "creation unit" prices and index levels.

WEBS Index Fund, Inc . consists of funds trading on the American Stock Exchange. WEBS index funds consist of 17 country-specific stock portfolios structured to replicate as closely as possible the performance a specific

Morgan Stanley Capital International index. Trading began in March, 1996. The trading symbols are:

EWA Australia EWQ France EWJ Japan EWS Singapore EWO Austria EWG Germany

EWM Malaysia EWP Spain EWK Belgium EWH Hong Kong EWW Mexico EWD Sweden

EWC Canada EWI Italy EWN Netherlands EWL Switzerland EWU United Kingdom

WEBS Index Fund, Inc. is an investment company registered under the Investment Company Act of 1940 and is organized as a series fund. Barclays Global Fund Advisors is the investment manager of each WEBS Index series. Morgan Stanley Trust Company is the fund's global custodian. Portfolio securities are held by various sub-custodians throughout the world.

Most investors who purchase and sell WEBS do so in the secondary market. These index based funds hold shares of the companies comprising one of the 17 foreign equity securities sectors tracked by the Morgan Stanley Capital International indices. Initial units in the funds are generated by certain investors through "creation units." These "creation units" consist of a large number of shares of the companies comprising each WEBS sector. Only investors who deposit the requisite number of shares of the securities of the companies that make up a sector, plus cash for accumulated dividends and transaction costs, are eligible to create "creation units."

F.3.e. Economically Targeted Investments (referred to as ETIs or Social/Ethical Investing)

Social investing is an investment approach whereby the investor considers non-investment criteria in the investment decision making process. Normally, the investment manager desires to either promote or endorse a non-investment criterion, or attempts to avoid investing in companies with certain negative criteria. The screening process may deal with individual companies or entire countries or industries. A potential investment may be reviewed through multiple criteria to determine whether the non-investment goals can be achieved.

Social investing is known by any number of other terms. Sometimes it is referred to as ethical investing. The Labor Department's term is "Economically Targeted Investments", or ETIs.

Examples of such criteria are:

Positive Criteria	Negative Criteria
Energy producers	Oil companies or large users of energy
Environmentally friendly	Polluters
Food production	Tobacco firms
Unionized companies or industries	Non-unionized companies

Companies providing employees with certain types of desirable benefits (company-paid health benefits, non-contributing pension plans, day care facilities, etc.)	Companies with records of repeated labor strife, those with large amounts of unfunded pension liabilities, etc.
Health/pharmaceutical firms	Nuclear energy
Companies with high quality products	Companies whose products are shoddy, subject to forced recalls, lawsuits
US-owned companies, those which manufacture and/or sell products made locally or in certain countries	Companies which do business in countries engaging in human-rights abuses, or sell products made by forced-labor or prison inmates
Multiple-Family (or Low Cost) Housing	Luxury Hotels or Resorts

The concept behind ETI investing is that the investment manager can identify investments that meet the desirable attributes (or screen out the undesirable investments) without sacrificing investment quality or returns. This is often difficult. Companies that meet one or more desirable criteria may also contain negative criteria.

The social investing approach became fairly well-known in the early 1980's. There are now several mutual funds which have as their basic premise social investing. Results of social investing portfolios have been mixed to date. Refer to Section 5.H.5.c.(3) I for additional information on this form of investment philosophy with respect to ERISA accounts.

F.4. Mutual Funds

Mutual funds are open-end funds registered under the Investment Company Act of 1940 and regulated by the Securities and Exchange Commission. (A closed-end fund is often referred to as a mutual fund, but is an investment trust.) The mutual fund raises money from investors, and, in return, investors receive an equity position in the fund. The proceeds from the shareholders are invested in a group of assets. The primary benefit of investing in mutual funds is diversification. Funds offer choice, liquidity, and convenience, but for a fee and for a minimum investment. The price of a share of an open-end fund is determined by the net asset value (NAV), which is the total value of the securities owned divided by the number of shares outstanding. The NAV is the price at which you buy or sell shares when commissions and loads are not involved.

There are many types of mutual funds, but most are a variation on the following general types:

Bond Funds

U. S. Government and Agency issued bonds - These funds primarily invest in notes and bonds issued by the U. S. Treasury or Federal Government or Government Sponsored Agencies. Credit risk is not an issue, although returns are usually below those of other bond funds. These funds do have interest rate risk, especially those investing in long-term bonds.

Corporate bonds - Most corporate bond funds invest in highly rated bonds issued by corporations.

High-yield or junk bonds - These funds invest in the debt of corporations which are in weakened financial condition or in unproven small firms. The potential that any individual corporation will default is much higher compared to corporate bond funds, but due to a large number of bonds held, the fund does not have a concentration that would impact the overall fund.

Municipal bonds - These funds invest in tax-exempt bond issued by state, county, or municipal governments. The advantage of these funds is the income earned is exempt from Federal taxation and, in some instances, state and local taxation.

Trust management should consider the expense ratios based on the type of fund, the length of maturities, and yields. However, management should not be solely focused on the yield, but the composition of the fund. To boost yields, many funds invest in bonds other than those expected in the fund.

Stock funds

Value funds - These funds invest in stock, that the fund manager believes are undervalued based on their low price/earnings ratios or the value of the underlying assets. The large-cap versions look toward corporations whose stocks are selling at discounted prices, while small-cap fund managers look for stocks which have the potential to increase in value.

Growth Funds - The managers of these funds may have vastly different approaches to managing the funds. Some are rather conservative, while others are aggressive. In general, growth funds do not generate the highest returns in bull markets, but maintain their position better in a downturn. This type of fund generally focuses on appreciation rather than income.

Growth and income, Equity-Income, and Balanced Funds - These funds provide steady long-term growth while generating an income stream. All invest in dividend or income-producing securities, such as bonds or convertible securities. Growth and income funds normally have lower yields, as the funds are more focused on growth. Each fund maintains its NAV better during a downturn, but lag the market in a bull market. These funds are suitable for investors who are risk-averse or need a constant level of income.

Specialty or Sector Funds - These funds invest in particular market segments. By diversifying with the numerous stocks held in the funds, the investor reduces the risk of holding an individual stock, but still subject to the sector risk.

Before investing in any mutual fund, trust management should consider the expense ratios for the type of fund, the investment style and consistency therewith, risk profile, past performance, and, tax consequences for the account. To generate higher returns, some fund managers will make trades in fund assets, especially at year-end. If the asset is sold at a sizeable gain, that may affect the trust account's tax position.

F.4.a. Investing in Proprietary Mutual Funds

Banks and their holding companies have increasingly become more involved in sponsoring their own mutual funds, known as p roprietary mutual funds. Characteristically, the funds' names include the name of the institution. In general, trust department investment in proprietary mutual funds is permitted only when certain requirements are met. The applicable requirements depend on the type of trust account and whether the trust department holds investment discretion. As with all trust investing, the use of a proprietary mutual fund must be: (1) authorized by the governing instrument, (2) suitable for an account's investment objectives, and (3) authorized under state law.

Banks engage in a prohibited transaction in violation of ERISA Section 406 if they invest employee benefit accounts in proprietary mutual funds at their discretion. The prohibited transaction may be avoided, however, if the conditions of the Labor Department's ERISA Prohibited Transaction Class Exemption (PTE) 77-4 are followed. Refer to Section 5, H.7.f(11) Mutual Funds, Investment in Proprietary (Own-Bank or Affiliated) and Advised, for additional guidance for ERISA accounts.

Although investments in proprietary mutual funds are permissible, such investments pose conflict of interest and self-dealing issues. Therefore, these investments should also be reviewed with these concerns in mind. Refer to Section 8, Investment in Proprietary Mutual Funds for additional discussion of this topic.

Investments in proprietary mutual funds by nondiscretionary accounts are not restricted by the above requirements.

F.4.b. Due Diligence Standards

Prior to investing trust account assets in proprietary or affiliated mutual funds, or mutual funds which are advised by the bank or its affiliates, trust management should:

- Conduct and document a due diligence review of the legality of investing fiduciary accounts under Federal and state law.
- Establish written investment policies outlining acceptable standards for investments in such funds. These standards should be consistent with the minimum acceptable standards adopted by management for the investment of trust account assets in non-proprietary funds.
- Establish procedures for the periodic review, including the documentation thereof, of the fund's performance in comparison to indexes or other available funds. The analysis should employ performance criteria published by independent companies and include a comparison of mutual fund expense ratios.
- Establish an arms-length process for evaluating the prudence of investing trust accounts in proprietary or bank advised mutual funds rather than in non-proprietary alternative investments.

Minimum acceptable criteria for investment in mutual funds (whether proprietary, affiliated, advised, or non-proprietary) should be adopted by the Board of Directors. Acceptable performance criteria may include provisions addressing the following:

- An investment record with well-defined and discipline investment styles
- A comparison of the fund to peer group performance and peer group fees
- An investment performance which tracks the peer group; the peer group used should be adequately defined, since there are different performance measurements for the same class of funds. For example, the performance of a small-cap fund may be compared to the Russell 2000, the S & P Small Cap 600 index, or to the Morgan Stanley U. S. Small Cap 1750. Depending on which benchmark is used, the small cap fund performance may be above one benchmark and below another, since each were designed differently.
- An expense ratio which is consistent with the peer group

All funds appearing on the approved list should also be periodically reviewed for the following criteria:

- Investment performance
- Investment objective changes
- Investment drift
- Fund management
- Fund structure

The inclusion of any mutual fund in the trust department's investment mix should be documented by the trust investment, or similar, committee. The performance of proprietary, affiliated, or bank advised mutual funds should be reasonable in comparison to other available funds. If the proprietary funds' performance is significantly below benchmark indicators (poorly performing funds), management's decision to retain the investments should be reviewed regularly and supported by appropriate documentation. The Board of

Directors or a committee thereof, which reports to the Board of Directors, should review and approve the decision to retain poorly performing proprietary funds.

F.4.c. Other Mutual Fund Considerations

In addition to typical investment considerations, including the needs of beneficiaries, the account's investment objectives, and the potential for capital appreciation, etc., trust management should consider other investment criteria that are unique to mutual fund investing.

- Mutual Fund Fees

The fees associated with all mutual fund operations pose fiduciary concerns for both overall investment performance and potential conflict of interest, with respect to proprietary funds. Investment in proprietary mutual funds poses a conflict of interest, since investment in these funds is linked to increased bank fees and profitability through fund fees. Nevertheless, investment in any mutual fund imposes additional fees on trust accounts, unless trust management reduces trust fees for assets invested in mutual funds on a dollar for dollar basis. The resolution of these issues, and justification for passive investment management (mutual fund investing) vs. active investment management, should be articulated in trust policies and at the account level itself.

All mutual funds charge fees in one form or another. Mutual fund fees affect a shareholder's overall investment performance, because they are deducted from the investor's return. Some of the fees represent investment management fees, while others represent marketing expenses. Mutual funds are required to disclose fees in a standardized fee table, which is divided into two sections: (1) shareholder fees and (2) annual operating expenses. The table is required to be placed in the front of the fund prospectus. Transaction commissions are not included in the disclosed expense ratio, but can materially impact the investor.

According to http://www.fundexpenses.com for the year 2002, investors paid $35.2 billion in mutual fund fees. Of that amount, $9.2 billion or 26.1 percent represents 12b-1 fees; $6.1 billion or 17.3 percent represents administrative fees; and, $19.9 billion or 56.5 percent represents advisory/management fees.

- Shareholder Fees

Approximately 38 percent of all funds, excluding money market funds, are "no load" funds sold directly to the investor. The remaining 62 percent are sold through financial advisors, brokers, or insurance agents, who may have a vested interest in generating fee income for themselves. Shareholder fees may consist of purchase charges (front-end load fees), sales charges (back-end load fees), redemption fees, exchange fees, etc. Shareholder fees may also include "class" fees, depending on which "class" of shares the investor buys. For example, Class A shares may include front-end sales or "load" charges and may include 12b-1 fees, but at a lower rate than those of Class B and C shares. The front-end load potentially can be reduced or eliminated by breakpoint discounts, which are based on the size of the investment. The larger the investment, the lower the sale load. Class B shares may include an annual 12b-1 fee and/or deferred "back-end load" sales charges. Usually, contingent deferred sales charges decline each year the investor remains in the fund. Furthermore, most Class B shares convert into Class A shares after a certain number of years. At that point, the fund begins charging the same annual fund operating expenses as Class A shares. Class C shares may charge higher 12b-1 fees, but no front-end or back-end sales charges. Class C shares may be less expensive than either Class A or Class B shares, if the investment time horizon is short-term. However, if the investment is long-term, Class C shares can be more expensive. Purchasing different classes of

a mutual fund may be optional for the buyer, or dependent on the "class" the buyer falls into as defined by the mutual fund's plan of operation (such as institutional, individual, etc.).

In June 2003, the NASD censured a brokerage firm, suspended its chairman, and directed restitution be paid to customers for recommending the purchase of large positions in Class B shares, when the customers would have qualified for lower sales charges through the Class A shares.

Short-term redemption fees are assessed against those who move in and out of funds in under 90 days. These fees are intended to hinder those who attempt to time the market, resulting in increasing investor costs and decreasing returns. Short-term redemption fees can represent up to 2 percent of assets.

- Annual Operating Expenses

Annual operating expenses include all on-going fees paid by shareholders as long as they hold shares in the fund, including: investment management fees, 12b-1 fees, oversight fees paid to a fund's board of directors, custodial fees, transfer agent fees, and other administrative expenses. "Distribution expenses" up to 0.75 percent of a fund's net average assets per year may be paid in the form of 12b-1 fees. Even "no-load" mutual funds may pay up to (but no more than) 0.25 percent of average net assets each year in 12b-1 fees.

In general, the annual operating expenses increase with the funds risk profile. For example, funds consisting of investment-grade bonds or large or mid-size U. S. stocks will have lower expense than funds invested in small-cap stocks or foreign stocks. Index funds will have lower annual operating expense than managed funds. However, some managed funds fairly closely tract index funds, yet assess much higher fees. [The degree of mirroring the index funds is called "R-squared". Funds with an R-squared over 90 fairly closely track an index fund.]

- Other Considerations

During 2003 and 2004, mutual funds came under scrutiny for a variety of potential abuses, including hidden fees. The following are three major types of hidden fees that may be used by a mutual fund:

Directed Brokerage - Fund advisers direct brokerage commissions from fund portfolio securities transactions to selling brokers. A mutual fund company agrees to do a certain volume of trades with a brokerage firm, if that firm agrees to distribute the funds. In essence, the mutual fund company pays commissions to brokers to distribute the funds. This should have been accounted for in the 12b-1 fee, but may not be included. At the August 18, 2004, Commission meeting, the SEC unanimously agreed to end the practice of directed brokerage, as the arrangements create conflicts of interest, and potentially increase fees mutual fund investors pay.

Revenue Sharing - A mutual fund company pays brokers part of its own profits to push the funds, usually to smaller, non-institutional investors. Currently, this is not disclosed in the prospectus or by the broker.

Soft-Dollars Embedded in Commissions - A mutual fund company pays a brokerage firm, reportedly for research, but may also cover costs such as subscriptions to magazines, compute software and hardware, and attorney fees. The commissions are not included in the disclosed expense ratio (discussed below), but are deducted from the fund's assets. Commissions are higher, as significantly lower cost trades may be done on electronic trading exchanges. The research provided may be very little or useless, but can be maintained to justify their usage. As long as the mutual fund achieves "best execution," the practice is allowable.

- Mutual Fund Expense Ratio

A mutual fund's "expense ratio" is its total annual operating expenses as a percentage of the fund's assets. The expense ratio must be disclosed in the mutual fund prospectus. Although it is a good gauge of a mutual fund's ongoing fees, there is no link between high or low expense ratios and a mutual fund's performance. Consequently, neither trust management nor examiners should evaluate the "prudence" of investing in one mutual fund versus another upon a fund's expense ratio alone.

- Mutual Fund Tax Considerations

Mutual funds generally make both ordinary dividends and capital gains distributions each year. Ordinary dividends are reported as dividend income. Capital gains distributions are reported as capital gains, regardless of how long the investor owns shares in a mutual fund. Both dividend and capital gains distributions affect a fund's net asset value (NAV), which declines by the amount distributed. Despite any lower post-distribution NAV to the investor, the investor's investment basis remains unchanged. (NAV is the per share value of a mutual fund. It is equal to fund assets less liabilities, divided by the number of shares outstanding. The NAV calculation is a daily regulatory requirement.) Investors are also liable for any taxable capital gains on the sale of mutual fund shares. An investor's gain or loss on the sale of mutual fund shares is computed as the difference between a share's "cost basis" and its sales price.

Although mutual funds generally make capital gains distributions during the last calendar quarter, attempting to "time" purchases to avoid capital gains treatment, or capture a lower NAV after capital gains distributions, also subjects the investor to the uncertainties of market. Increases in a fund's NAV may be greater than the potential tax liability incurred by purchasing a fund before its capital gains distribution.

While the tax-efficiency of a mutual fund is not relevant to investors in tax-deferred accounts, the tax consequences may be significant to the investor in a taxable account. Effective April 16, 2001, the SEC adopted rules and amendments under the Securities Act of 1933 and the Investment Company Act of 1940 requiring the disclosure to investors of the effect of taxes on the performance of mutual funds. The rules and amendments require mutual funds to disclose in the prospectus after-tax returns based on standardized formulas comparable to the formula used to calculate before-tax average annual total returns. The standardized presentation requires after-tax returns for the 1-, 5-, and 10-year periods, and will accompany before-tax returns in fund prospectuses. The disclosure must be presented in two formats: (1) after taxes on fund distributions only and (2) after taxes on fund distributions and a redemption of fund shares. While the after-tax returns generally will not be required in fund advertisements and sales literature, any fund that either includes after-tax returns in these materials or include other performance information or that represents that the fund is managed to limit taxes, is required to include after-tax returns in the literature. Money market funds are exempt from this disclosure, as are fund shares used exclusively by defined contribution plans (i.e., qualified under Section 401(k), 403(b), 457 of the IRC) or similar arrangements (i.e., Section 817(d) of the IRC concerning variable contracts; entities that are not subject to the individual federal income tax , such as tax-exempt foundations, colleges, and corporations; or, a similar plan or arrangement for which an investor does not pay tax on the investment until sold.)

F.4.d. Mutual Funds: Receipt of 12b-1 Fees

SEC Rule 12b-1, promulgated under the Investment Company Act of 1940, permits mutual funds to adopt a plan which uses fund assets to finance, or promote, a fund's sales. The expenses associated with this plan are referred

to as "distribution costs." These costs may take the form of commission-like payments (termed "12b-1 fees") to organizations which generate a high volume of transactions in the mutual fund. Distribution activities include: advertising; the compensation of underwriters, dealers, and sales personnel; the printing and mailing of prospectuses to other than current shareholders; and the printing and mailing of sales literature. The rule is contained in 17 C.F.R. Section 270.12b-1(a)(2).

Approximately ⅔ of all funds assess 12b-1 fees, including some funds that are closed to new customers. According to an industry survey, approximately 63 percent of the fees go to brokers, while 32 percent covers administrative costs, and 5 percent is used for advertising. Another recent survey found that 19 percent of no-load funds charge 12b-1 fees, compared with 92 percent of load funds.

Whether a fiduciary may accept and retain 12b-1 fees for its own benefit depends upon the type of account, together with certain characteristics of the account, such as the fiduciary's investment authority, and the nature of customer disclosures. The following provides general guidance regarding the retention of 12b-1 fees for ERISA covered employee benefit accounts, non-ERISA employee benefit accounts, and personal accounts .

F.4.d.1. ERISA Accounts

Retention by an ERISA fiduciary of 12b-1 fees paid by mutual funds may be a form of a prohibited transaction, in violation of ERISA Section 406(b). Different treatment is appropriate for discretionary accounts, as opposed to nondiscretionary or custodial accounts. Refer to Section 5.H.7.f.13 Mutual Funds, Receipt of 12b-1 Fees for further guidance.

F.4.d.2. Personal and non-ERISA Employee Benefit Accounts (EBs)

Guidelines governing the receipt and retention of 12b-1 fees associated with the administration of personal and employee benefit accounts depend on the level of discretionary investment authority exercised by the fiduciary, together with the nature of the disclosures provided to the customer.

Discretionary Accounts

A standard fiduciary principle under state law and ERISA is that all decisions to place fiduciary assets in particular investments must be in the best interest of the trust beneficiaries. This fiduciary principle reflects the trustee's duty of loyalty under state law. All such investments must also be consistent with the provisions of an account's governing documents. An institution may fail to act in the best interests of its beneficiaries in certain situations in which it receives duplicate fees for identical investment management services from a trust account and from the mutual fund provider in which it invests on behalf of the trust account. As a result, an institution may face increased legal risk due to potential litigation on behalf of account beneficiaries claiming that the institution placed its interest ahead of the interest of beneficiaries.

In certain situations, the receipt by a fiduciary of 12b-1 fees from a mutual fund provider for distribution services regarding trust accounts may be a potential violation of state law or regulation. However, nearly every state legislature has now modified its laws to explicitly permit fiduciaries, under certain conditions, to accept such fees. The conditions imposed typically require investments to be prudent and permitted by the governing documents. The fees that the institution receives must also be

"reasonable".

Even when permitted by state law and the governing trust documents, institutions are still expected to identify measure and control the additional legal and compliance risk that such conflicts of interest present. In particular, institutions must continue to adhere to proper fiduciary standards when exercising investment discretion, including adequate documentation supporting the institution's decisions. Therefore, prior to entering into fee arrangements, senior management and the board, or a duly appointed committee thereof, should conduct and document an appropriate due diligence process. The due diligence process should include the following procedures (These procedures also are contained in Board of Governors of the Federal Reserve System, Division of Banking Supervision and Regulation SR99-7, "Supervisory Guidance Regarding the Investment of Fiduciary Assets in Mutual Funds and Potential Conflicts of Interest" , March 26, 1999.)

- Reasoned Legal Opinion - The institution should obtain a reasoned legal opinion of counsel that addresses the conflict of interest in the receipt of fees or other forms of compensation from mutual fund providers in connection with the investment of fiduciary assets. The opinion should address the permissibility of the investment and compensation under applicable state or federal laws, trust instrument, or court order, as well as any applicable disclosure requirements or "reasonableness" standard for fees set forth in the law.
- Establishment of Policies and Procedures - The institution should establish written policies and procedures governing the acceptance of fees or other compensation from mutual fund providers, as well as the use of proprietary mutual funds. The policies must be reviewed and approved by the institution's board of directors or its designated committee. Policies and procedures should, at a minimum, address the following issues: (1) designation of decision-making authority; (2) analysis and documentation of investment decisions; (3) compliance with applicable laws, regulations and sound fiduciary principles, including any disclosure requirements or "reasonableness" standards for fees; and (4) staff training and methods for monitoring compliance with policies and procedures by internal or external audit staff.
- Analysis and Documentation of Investment Decisions - Where fees or other compensation are received in connection with fiduciary account investments over which the institution has investment discretion or where such investments are made in the institution's proprietary mutual funds, the institution should fully document its analysis supporting the investment decision. This analysis should be performed on a regular, ongoing basis and would typically include factors such as historical performance comparisons to similar mutual funds, management fees and expense ratios, and ratings by recognized mutual fund rating services. The institution should also document its assessment that the investment is, and continues to be, appropriate for the individual account, in the best interest of account beneficiaries, and in compliance with the provisions of the Prudent Investor or Prudent Man Rules, as

appropriate.

Agency and Non-discretionary Accounts

Even in the case where the institution does not exercise investment discretion, disclosure or other requirements may apply. Therefore, the institution should implement due diligence processes appropriate for the duties and responsibilities performed. Due diligence procedures should include a reasoned legal opinion in order to ensure compliance with applicable state and federal laws and regulations, as well as sound fiduciary principles. As part of the due diligence process, management and the board should establish adequate policies and procedures governing such fee arrangements for non-discretionary accounts. The institution, in addition, should document the "reasonableness" of the fees collected.

Except as noted in the following paragraph, a violation of general fiduciary duties resulting from the receipt of 12b-1 fees by a fiduciary from a mutual fund can be cured if the fiduciary rebates the 12b-1 fees back to the trust accounts that generated the transactions. Where the bank has retained 12b-1 fees without the authorizations or directions noted above, examiners should recommend that the fees be returned to the accounts that generated them. If there is a difference over the interpretation of state law, a general criticism of the matter should be presented together with a request for a legal opinion.

Financial institutions that operate proprietary mutual funds may attempt to resolve the conflict of interest and self-dealing concerns that result when a proprietary mutual fund collects 12b-1 fees from trust accounts that the institution administers in a discretionary capacity by rebating or waiving such fees for trust account shareholders. The proprietary fund, however, collects 12b-1 fees from non-trust account shareholders. The SEC has indicated that the waiving or rebating of 12b-1 fees for some shareholders, but not others, may violate the proprietary mutual fund's obligation to treat all shareholders impartially. See Southeastern Growth Fund, Inc.'s 1986 request for a No-action letter .

F.5. Hedge Funds

Product Overview

Although the term has not been formally defined, hedge funds refer to an entity that holds pools of securities or that does not register those securities under either the Securities Act of 1933 or the Investment Company Act of 1940.

The funds are exempt from the Investment Company Act due to the sales of the funds being limited to 100 or fewer investors. Also, the funds are only sold to highly sophisticated investors. To qualify for either exclusion, the funds must restrict the offerings, and by not selling to the general public. As a result, solicitation and advertising of hedge funds is prohibited. This includes advertising in written or verbal form, articles or other notices published in a newspaper or magazine, information on the Internet or via email, or at any meeting or seminar where the participants were invited by general solicitation or advertising.

Hedge funds may be sold to an unlimited number of "accredited investors." (In determining compliance with Rule 501(a) of Regulation D under the Securities Act of 1933, accredited investors are not included in the 35 limit.) To qualify as an accredited investor, the individual must have a minimum annual income of $200,000 ($300,000 when combined with spouse), or $1,000,000 in net worth. Most hedge funds require $5,000,000 in assets as a minimum. In order to avoid Investment Company Act registration, the fund may only be

sold to "qualified purchasers," which is a standard with significantly higher financial requirements than "accredited investors." Hedge fund investment advisors avoid registering under the Investment Advisors Act by relying on the de minimis exemption for registration, which is limited to 14 or fewer clients. Under SEC rules, each hedge fund counts as one client.

In recent years, hedge funds have grown significantly both by the number of hedge funds and the dollar amount invested in the funds. Much of the growth is associated with institutional investing by large plans, such as state teacher retirement plans, endowments, foundations, and other charitable organizations. Although the amount of media attention given to the funds gives the impression that hedge funds are a new investment product, the funds have actually been available for quite some time. The first hedge fund was established over 50 years ago.

Until recently, the funds actively avoided registration under the above Acts. Now, some hedge funds have registered under the Investment Company Act as closed-end investment companies, while others registered under the Securities Act of 1933. Registration makes the funds available to a larger number of potential investors, including trust and employee benefit accounts.

Hedge funds, whether registered or unregistered, invest in various financial instruments to achieve a positive return, and may take on speculative trading positions. Ironically, hedge funds may or may not engage in hedging or arbitrage activities. Some hedge funds adopt strategies similar to mutual funds, while others are extremely flexible in their approach. Hedge funds may or may not be as risky as other available investment options. However, hedge funds are constantly changing.

A substantial volume of hedge funds use leverage to increase an investment's value, without increasing the amount of funds invested. In many instances, the leverage factor is greater than 2:1. The ratio equals total absolute dollars invested divided by total dollars of equity. Therefore, leverage magnifies a position, so gains or losses are greater than they would otherwise have been without leverage. In addition, leverage may increase the risk of owning assets that are illiquid or those that are saleable, but at a price less than expected. In the end, leverage is only limited by margin or collateral requirements imposed by lenders and the willingness of lenders to provide credit to the funds.

Common traits of hedge funds

- The fee structure usually pays the adviser based upon a percentage applied to the fund's capital gains and appreciation.
- One or more brokers may be involved in providing trade clearance and settlement, financing, or custody services.
- The funds do not have specific time horizons, although the life may be shorter than other investment products.
- Investors cannot liquidate their assets during lock-up periods; redemption frequently allowed only quarterly.
- Hedge funds repurchase their own interests from investors on a limited, periodic basis.
- Fund managers provide potential investors with a private placement memorandum that discloses information about the investment strategies and operations.
- The funds may have the legal structure of a limited partnership, a limited liability company, or business trust. All three forms limit taxes and liability.
- If the fund is a limited partnership, the investment adviser normally serves as the general partner. If the fund is a limited liability company, the investment adviser normally serves as the managing member.
- Offshore hedge funds are originated outside of the United States, but are affiliated with United States-based funds.
- Hedge funds are not subject to any law or provision requiring financial statement audits.
- Fund advisers often invest heavily in their own fund.

Legal Structures

There are two different legal structures, depending on whether the funds are "Domestic"

or "Offshore." The manager of a domestic fund may also operate an affiliated offshore fund, either as a separate fund, or through a master fund, which is a non-US corporation. Domestic hedge funds typically do not have a board of directors or any comparable corporate body.

Offshore hedge funds are typically organized in countries considered tax havens. These funds attract investment by pension funds, as well as charities and foundations. While the fund may employ the same US entity to serve the offshore as well as domestic fund, most operational activities are performed at the offshore location. These funds generally have a board of directors. Offshore hedge funds may have over 100 investors, although Section 3(c)(1)of the Investment Company Act of 1940 limits investors to 100. The statute was interpreted to exclude non-US investors in determining the number of investors.

Supervision and Regulation
In general, the SEC does not examine or supervise hedge funds, as the funds can be exempt from the three SEC Acts previously described. While hedge fund regulations and supervision are under consideration, there is no definitive action in that direction at this time.

The most significant reason for establishing supervision, is the manner in which hedge funds are valued. There is no independent oversight of the valuation and performance results are not required to follow a standardized format and calculation. This may directly or indirectly affect the investor. First, the manner of presenting performance results may be inconsistent or inaccurate. With registered funds possibly investing in hedge funds, the net asset value of the mutual funds may be inaccurate and may result in violations for the registered mutual fund.

While the funds are not subject to supervision by the SEC, the funds are subject to the antifraud provisions of the federal securities laws. The identified frauds have been similar in nature to those fraudulent acts, such as misappropriation of assets or misrepresentation of performance, committed by other types of investment advisers. However, the frequency of outright theft, or misappropriation of investors' funds is greater.

ERISA Considerations An investment advisor to a hedge fund is a plan fiduciary, if it exercises discretionary authority over the management of plan assets. The hedge fund is considered a plan asset, when the plan's investment in a particular hedge fund is significant. This is defined to be more than 25 percent of the value of any class of equity interests in the hedge fund is held collectively by the employee benefit plan investors. Some hedge funds disclose in the private placement memorandum that a subscription may be denied, or a redemption may be forced, to maintain ownership at less than the 25 percent limitation. Once the ownership by an employee benefit plan exceeds 25 percent, the hedge fund is subject to regulation as an ERISA fiduciary. Conversely, some hedge funds accept regulation under ERISA to make their funds more attractive to investors.

Fund of Hedge Funds (FOHF)
Typically, FOHFs invest in 15 to 25 hedge funds to diversify the risks associated with an individual hedge fund. The minimum investment may be as low as $25,000. In concept, it is similar to a mutual fund investing in numerous stock or bond issues. FOHFs are generally not registered as investment companies under the Investment Company Act and use private placement to sell the funds. Some FOHFs are registered, but are not listed or traded on any exchange or NASDAQ.

On September 29, 2003, the SEC issued a paper entitled "Implications of the Growth of Hedge Funds." The paper provides a detailed explanation of the products, their usage, and the SEC's concerns that the product remains unregulated. To read this paper, go to www.sec.gov/news/studies/hedgefunds0903.pdf .

F.6. Notes and Mortgages

Notes and mortgages can be acquired in many ways, including: received in-kind, from the sale of real estate from a trust account in return for a mortgage, and the outright purchase

of notes and mortgages. There are three basic types of notes and mortgages: unsecured loans, loans secured by real estate, and loans secured by assets other than real estate.

The repayment of an unsecured note depends solely on the willingness and ability of the borrower to repay. Unsecured loans are, therefore, rarely seen in trust departments as they may be considered inappropriate.

Real estate loans are appropriate fiduciary investments for an account when the loans are secured. Prior to investing in loans, trust management should consider the liquidity needs of the account and how illiquid the loan may be. A trust department should not purchase loans or participations from the commercial department of the bank. Nevertheless, the trust department may participate in the origination of a loan, using the expertise of commercial loan officers to finalize the terms of the loan. Under the Prudent Man Rule, it is ordinarily improper to invest in second or junior mortgages unless the same account holds all senior mortgages. Although a sufficient margin of safety exists, a junior lienholder cannot control the foreclosure of collateral in the case of default.

Obtaining an appraisal is a common and prudent real estate lending practice. Examiners should be aware that the Corporation's appraisal regulation, Part 323 of FDIC's Rules and Regulations, does not generally apply to mortgages made by or to fiduciary accounts. Part 323 does apply, however, if an appraisal is required through the action of another law.

All mortgages should be held in some form of trust capacity unless otherwise permitted by the terms of the trust instrument or state statute. In addition, the mortgage should be accompanied by all the documentation necessary to establish the priority of the lien, an appraisal, and evidence of adequate insurance payable to the corporate fiduciary. The ratio of loan to appraised value should provide an adequate margin of collateral protection. Adequate credit information should be obtained to substantiate the borrower's ability to pay. Ticklers or checklists may be used by the bank to monitor payment of taxes, assessments, and insurance.

For notes secured by assets other than real estate, the bank should have a perfected security interest in the collateral. All states and the US Virgin Islands have adopted the requirements for secured transactions under Article 9 of the Uniform Commercial Code. For negotiable property, the key to security is physical possession. For physical property which is titled, such as automobiles and some machinery, filing is the key to perfecting security.

Procedures should be established to determine payment status and collect delinquent loans. Delinquencies should be reported on a regular basis to the board of directors, the trust committee, or another appropriate committee.

Notes and mortgages, like other investments, should be analyzed periodically to determine whether they should be retained. Collateral should be evaluated periodically to ensure it continues to exceed the balance due. Reappraisal reports should be obtained in limited circumstances, when it is in the best interest of the account. Also, if the security is real estate, it should be inspected periodically to ensure that it is being adequately maintained. Inspections should be standardized and documented. .

Privately negotiated loans between the trust department and a potential borrower, sometimes referred to as "private placements" are also potential trust department investments. Since the loan is privately negotiated, the instrument may be highly illiquid. Therefore, the highest degree of confidence should be placed on the financial strength of the borrower. Private placements, like other banking activities, should be subject to adequate safeguards and policy considerations. Special care should be exercised to ensure that self-serving practices or conflicts of interest are avoided. Policy constraints should prohibit placing private issues with funds the bank manages in a fiduciary capacity, especially when the issuer is a bank loan customer. A serious conflict of interest could result if the bank were to use or permit the use of proceeds from a placement to reduce criticized loans, or accommodate borrowers who are not creditworthy.

F.7. Real Estate

Real estate is generally acquired as a trust account asset as a result of the personal activities of the grantor or testator. Real estate holdings may include personal residences, residential income properties, commercial properties, unimproved lots, and acreage. The

real estate may be added to the trust as part of an overall estate plan, or left to a beneficiary under the will. In some instances, real estate may be added to trust accounts as an investment vehicle. However, in the absence of special circumstances or specific authority granted in the trust instrument, management should be cautious when investing trust funds in real estate. Under common law, the purchase of property for resale is not considered prudent unless specific provision has been made in the terms of the trust. The Prudent Investor Rule, however, does not consider such an investment inherently imprudent.

In considering the purchase or retention of real estate, management should first determine whether such investments are authorized in the governing instrument. Other factors to consider include: the types of accounts for which real estate may be appropriate; the current or planned use of the property; the geographic location; the size of the parcel and its future marketability; the risks involved in any planned construction or development of the property; the risks and liabilities from any potential environmental pollution or hazards; price comparisons with similar properties; the net yield from investing in the property; and the potential cash flow from and appreciation in the real estate investment.

Decisions to retain real estate should be governed by the requirements of the trust instrument. Appropriate consideration should be given to the current yield and the ease of marketability, if funds are needed to terminate the account or provide for principal withdrawals. Appropriate guidelines should also be in place for selling real estate, including appraisals by competent and impartial appraisers. It should be remembered that trustees have a duty of impartiality in dealing with beneficiaries and that capital gains generally accrue to remaindermen.

Investments in real property can sometimes be speculative in nature, especially when the assumption of risk and the hope of gain are much greater than the investment returns available from other investment vehicles. Real estate of all kinds is burdened with poor liquidity. Raw land generally bears an even higher degree of risk. Although long-term growth potential and possible tax benefits may be positive factors, the illiquid nature of real estate investments has limited their use to large or special purpose accounts (e.g., pension trusts).

The variety of real property investments requires different degrees of management knowledge and expertise. For example, farms are not managed in the same manner as a commercial income property. Every property held by the trust department should be reviewed at least annually, to determine whether the investment meets the needs and objectives of the account and its beneficiaries. When a property is received in kind, it should be physically inspected as soon as possible to determine its condition, verify leases and renters, and to ensure that adequate insurance is in force. In addition, the bank should have a program for reviewing the condition of the real estate through annual inspections, or through personal knowledge of the property obtained by bank personnel or agents, where inspections are not feasible. Each property should be evaluated periodically to ensure that adequate insurance is maintained, and to enable the department to decide whether the property should be retained or sold. The nature and estimated value of the property should be taken into consideration when deciding between an in-house or outside appraisal. For example, property of nominal value may not require an outside appraisal, whereas, a large shopping center would require an in-depth appraisal by a qualified appraiser. Appraisal review procedures should be established to evaluate the reasonableness of the overall conclusions and the assumptions employed by appraiser. At a minimum, most properties should have a current outside appraisal made prior to sale.

As noted under the previous section related to Notes and Mortgages, Part 323 of the FDIC's Rules and Regulations does not generally apply to real estate investments which are made by or for fiduciary accounts. The regulation would apply if an appraisal is required through the action of another law.

All parcels of real estate should appear on the books at some value, preferably market value, but the institution may, if reasonable, use historical cost or some other value. The bank should maintain appropriate documents for each parcel of real estate. Instruments, or copies of instruments, that should be on file are: deeds; mortgages (deeds of trust); liens and/or releases; owner's title policy or title opinion; leases; contract of sale and closing statements; receipted tax bills; fire and liability insurance policies; contracts for

improvements; and instruments conveying interests to the bank.

Procedures should be established to provide for the maintenance of adequate income and expense records covering the properties held. Ticklers or other methods should be used to monitor timely payment of insurance premiums, mortgages, and real estate taxes. Procedures should also be established to monitor payments and collect delinquent rent.

When property is managed by others, a management agency agreement should establish the agent's duties and responsibilities, the frequency of reporting, and the commission paid. Management contracts or leases of farms should include guidelines governing the authority for the sale of crops or livestock, the payment of operating expenses, basic repairs and maintenance of buildings, the fees charged by the bank, etc. In addition, procedures should be established for verifying the amount of farm commodities stored in elevators or warehouses.

F.7.a. 1031 Exchanges

This product is named for the Internal Revenue Code Section which authorizes the exchange of qualifying property and is commonly referred to as "Starker", "Exchange", or "Like-Kind Exchange." The most common examples of qualifying property are commercial, industrial, or residential investment property or heavy equipment or collectibles. Personal residences, partnership interests, and financial assets held for sale or resale are generally non-qualifying property, although exchanging one variable annuity product for another may qualify. A bank may serve in one of three capacities, but cannot serve in more than one capacity for any one transaction. The three capacities are lender, qualified intermediary (custodian), or property buyer/exchanger. The latter two may be found in trust department activities. When a trust department serves as a qualified intermediary, the trust department is responsible for holding the funds until the transaction is complete or the time limits expire. These accounts should be reflected as a non-managed personal agency account. From an asset viewpoint, these exchanges may be used for personal accounts, where there is a desire to exchange one form of income-producing property for another, without incurring a tax liability. For example, a personal account may hold farmland and exchange it for a strip-shopping center. The shopping center may provide a level of cashflow that the farmland does not provide. However, if the farm was sold outright, there may be a substantial tax liability to the beneficiary. The goal of these transactions is to shield the owner from incurring a large tax liability. Section 4, Personal and Charitable Trust Accounts provides a detailed explanation of the exchange itself.

F.7.b Environmental Liability

General

When a trust department account invests in real estate or operates a business, compliance with Federal and State environmental protection laws must be considered.

Resource Conservation and Recovery Act

Congress passed the Resource Conservation and Recovery Act (RCRA) in 1976 to complement laws governing other forms of pollution and environmental hazards. RCRA addresses solid waste disposal (superseding a 1965 Act which dealt with the issue) and encourages recycling and the use of alternative energy sources. The primary focus, however, is the control of hazardous waste disposal. Amendments added in 1984 regulate underground storage tanks (USTs, or LUSTs, if the tank was leaking).

In September 1995, the Environmental Protection Agency (EPA) issued regulations effective December 6, 1995, clarifying the liability of secured creditors holding as collateral properties with USTs. The EPA considered the question of trustee and fiduciary liability, as requested by commenters on the proposed regulation, but declined to include exemptions similar to those

provided secured creditors. The EPA concluded that the 1959 *Restatement of Trusts 2d* adequately addresses the issue of fiduciary liability and affords the trustee indemnification from the trust estate for the expenses properly incurred during the administration of the trust.

Comprehensive Environmental Response, Compensation and Liability Act of 1980

Congress enacted the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA), as amended by the Superfund Amendments and Reauthorization Act of 1986, to govern the financial responsibility for cleaning up toxic waste. CERCLA is generally considered to be the primary environmental cleanup and liability law. The Environmental Protection Agency administers the Act and has issued numerous implementing regulations. Many states have also issued similar toxic waste cleanup regulations. CERCLA does not address liability for petroleum wastes. Petroleum wastes include the wastes generated by oil or gas production, refining, storage and retailing. However, there are other Federal and State laws which may apply to petroleum products.

In 1996, Congress amended CERCLA, under an amendment known as the Asset Conservation, Lender Liability, and Deposit Insurance Protection Act (Asset Conservation Act). In short, under the amendment, a fiduciary's liability is limited to the assets held by that fiduciary in trust. However, this does not apply to the extent that a person is liable under the Act independently of the person's ownership of a facility as a fiduciary or actions taken in a fiduciary capacity. Also, if negligence of a fiduciary causes or contributes to the release or threatened release of hazardous substance, there is no limitation.

The Asset Conservation Act defines fiduciary as trustees; executors; administrators; custodians; guardians of estates or guardians ad litem; receivers, conservators, committee of estates of incapacitated persons, personal representatives, trustee (including successor trustees) under an indenture agreement; trust agreement; lease or similar financing agreement for debt securities or other forms of indebtedness as to which the trustee is not acting in the capacity of trustee, the lender or, representative in any other capacity that the administrator, after providing public notice, determines to be similar to the capacities previously described.

The Asset Conservation Act states that a fiduciary shall not be held liable for the following:

- Undertaking or directing another person to cleanup a site
- Terminating the fiduciary relationship
- Including in the terms of the fiduciary agreement a covenant, warranty, or other term or condition that relates to compliance with an environmental law, or monitoring, modifying or enforcing the terms or condition
- Monitoring or undertaking one or more inspections of the facility
- Providing financial or other advice or counseling to other parties to the fiduciary relationship, including the settler or beneficiary
- Restructuring, renegotiating, or otherwise altering the terms and conditions of the fiduciary relationship
- Administering, as fiduciary, a facility that was contaminated before the fiduciary relationship began; or
- Declining to take any of the above actions

This amendment was tested in the courts by Canadyne-Georgia Corporation. In 1996, the corporation sued a bank for its fiduciary capacity seeking damages for clean-up costs. After a lengthy legal process, in 2001, the district court held for the bank on the final issue.

Protections

Fiduciaries should have adequate written policies and procedures covering environmental risks and such policies should include:

- Pre-acceptance review of potential CERCLA and any state liability by identifying assets which could contain hazardous waste. If possible, the specific asset should not be accepted as part of the account. Potential accounts where the risks are too great or where the risks can not be managed properly should not be accepted;
- For existing accounts, a written evaluation of the potential environmental hazards for land and businesses held in trust accounts;
- Corrective action to clean up any hazardous wastes identified;
- Periodic inspection and appraisal practices should be amended to include coverage for hazardous and toxic wastes; and
- Required reporting to EPA and/or state pollution control agencies.

Trust counsel should review the department's policies to ensure that they provide adequate guidance for and oversight of the management of potential environmental risk.

F.7.c. Land Trusts

A land trust is a grantor-directed type of trust, where the title to real estate is held by the trustee on the customer's behalf, while all rights and benefits of ownership are retained by the grantor/beneficiary. The trustee only holds title to the property and has no responsibility for its care and maintenance. Several states recognize land trusts, including Illinois, Indiana, Florida, Virginia, North Dakota, and Arizona. In some states, the land trust is treated as personal property rather than real estate, during legal judgments. The benefits of a land trust are the following:

Elimination of probate expenses and delays

The ownership of the property is recorded in the trustee's name, and provides privacy to the actual owner.

Elimination of administrative difficulties related to multiple ownership and multiple beneficiaries.

Land trusts can be pledged as collateral.

Land trusts can be terminated at any time by either party.

While the trustees duties are extremely limited, there are several areas of potential exposure, including the following:

Forgeries - Internal policies should require the verification of signatures and identities.

Tax Bills - Internal procedures should include the prompt forwarding of special assessments, reassessments, delinquency and/or redemption notices.

Conflicts of Interest - The bank can be both a lender and a trustee for these transactions. Case law has generally permitted serving in two capacities, as long as the bank acts fairly and reasonably.

Litigation - The bank may become a party to lawsuits involving foreclosure proceedings, building code violations, IRS tax liens, and environmental liability issues. It appears that the more active and discretionary the trustees' powers are, the more likely the trustee is considered an "owner or operator" or "responsible party."

To mitigate these concerns, trust management should review title searches and other public records to determine if the person representing

ownership actually has ownership of the property and the current and prior uses of the property .

F.7.d. Real Estate Investment Trust (REIT)

Overview

The Real Estate Investment Trust Act of 1960 allows companies dedicated to owning and, in most cases, operating income-producing real estate to operate as a real estate investment trust. The REIT structure qualifies as a pass-through entity under IRC and is exempt from corporate taxes, as long as its activities are restricted to certain commercial and real estate activities. Most states also exempt REITs from state income taxes. The underlying real estate may be concentrated in a specific geographic region or in a certain type of property. Some REITs are more diversified and own property nationwide and/or in a wider variety of property types. The majority of the underlying real estate consists of retail, residential, and industrial/office. REITs provide current income, as they are required to pay out 90 percent of their income to investors. There is also the potential for long-term appreciation. The majority of REIT shares can be bought through brokers and can be purchased in small lots; the shares of REITs are traded on stock exchanges. The unsecured debt of a REIT is also rated by nationally recognized rating agencies. Some mutual funds invest entirely in REITs.

The three major types of REITs are described as follows:

Equity REIT - The vast majority of the REITs are Equity REITs, which invest in and owns properties through a corporation or trust that uses the invested funds to purchase and manage the properties. The rent from those properties is the income. Equity REITs are traded on major exchanges, which provide liquidity. The underlying property usually consists of commercial property, such as shopping centers and hotels. There is no minimum investment amount.

Mortgage REIT - These REITs loan funds to the owners of real estate (and obtain a mortgage), or invest in or purchase mortgages or mortgage-backed securities. Interest income on the mortgage loans serves as the source of income .

Hybrid REIT - This form is a combination of the above two forms. Therefore, both properties and mortgages are held.

In general, the evaluation of a REIT should include an assessment of those who manage the real estate held by the REIT; the perceived access to debt or equity financing sources; and the REIT's earnings potential. To determine the latter, the industry adopted the methodology of "Funds from Operations (FFO)" to address valuation problems and performance. FFO excludes the following from the net income figure: depreciation and amortization costs; gains and losses from extraordinary items; gains or losses from debt restructuring; and, gains or losses from sales of real estate. The allocable portions of funds from operations of unconsolidated joint ventures based on ownership interest are added back to net income under FFO. While this should be more accurate, the figure can be somewhat misleading in the analysis of older properties with high required maintenance expenditures .

Terms Associated with REITs

Payout Ratio - The ratio of a REIT's current annual dividend rate per share divided by its annual FFO per share.

REIT Purgatory - This is an unofficial industry term that means the REIT is shut-off from capital sources. This may occur due to reputation or growth. The most common reasons that a REIT is so designated are for providing misleading financial information; increasing leverage for growth, if the acquisitions would otherwise be unjustified under the REIT's strategy or portfolio composition; or taking actions that public companies would not

make. REIT Purgatory is reserved for companies that have long-term structural, systemic, or managerial problems.

Taxable Rent Subsidiary (TRS) - Created by the REIT Modernization Act of 1999, a TRS is a subsidiary of a REIT that provides services to the REIT's tenants and others and is required to pay Federal Income Tax, without disqualifying the tax-exempt status of the REIT. These are similar in concept to the affiliated relationships in mutual fund companies.

Umbrella Partnership REIT (UPREIT) - Generally, the partners of one or more existing partnerships and a newly formed REIT become partners in a new partnership termed the Operating Partnership. For their interest in the Operating Partnership (OP Units), the partners contribute the properties from existing partnerships and the REIT contributes the cash proceeds from its public offerings. The REIT typically is the general partner and majority owner of the Operating Partnership. Partners may sell their OP Units, usually in convertible format, for shares of the common stock of the REIT. When an OP Unit partner dies, the estate tax rules permit the beneficiaries to tender the Units for cash or REIT shares without paying income taxes.

F.7.e. Mineral Interests

Investments in natural resources such as oil, gas, and mineral interests, may be found in some trust departments. Such investments require special expertise. Policies for the management of these assets should be established. The authority for acquiring and/or retaining these assets should be evidenced either by specific language in the governing document, or by the consent of all interested parties. Holdings of this type should be reviewed regularly in terms of performance and appropriateness. Evidence of title, such as copies of deeds and title opinions should be maintained. Usually, title to land is a surface right and does not include mineral rights. Therefore, two or more different parties may have an interest in a parcel of real estate, with one having surface rights and the other mineral or subsurface rights. A review of the title should clearly show which interest is held. The status of the property, whether leased or unleased, and producing or nonproducing, should be determined by the trust management immediately upon accepting an account. When properties are placed in trust, the instrument conveying the property to the trustees should be recorded in the county or parish of the state in which the property is located. Copies of any leases should also be maintained. If working interests are involved, the trust department should have a copy of the operating agreement. If necessary, adequate property and liability insurance should be obtained. Proper bookkeeping and information systems should be established, including: ticklers covering delayed rentals on nonproducing interests, expiration of all leases and royalties, and income and expense records. Appropriate checks should be established to identify omitted or significant changes in regular lease income payments. In order to hold title to mineral interests in another state, the bank may have to qualify to do business as a fiduciary in that state, or arrange for the appointment of an ancillary trustee.

F.8 Limited Partnerships

Limited partnerships usually consist of a general partner, who manages the project, and limited partners, who invest funds in the project. The limited partners are not normally involved in the day-to-day management and usually cannot lose more than their capital contribution. Limited partners normally receive income, capital gains and tax benefits, while the general partner collects fees and a percentage of capital gains and income.

Public limited partnerships are sold through brokerage firms, typically for relatively small investments. Private limited partnerships are generally comprised of fewer than 35 limited partners, and require much more substantial investments than public limited partnerships. Both types of limited partnerships may have limited marketability. Limited partnerships may be difficult to value, which has led to the emergence of companies specializing in valuing limited partnership interests.

Limited partnerships are involved in real estate management and development, oil and gas exploration and recovery, and equipment leasing. They also finance movies and research and development projects. The limited partnership form of ownership is used extensively for venture capital and leveraged buyout funds. All types of investors participate in such investments.

In the early to mid-1980's, when real estate was booming and oil and gas prices were strong, $130 billion in limited partnerships were sold to an estimated 10 million investors. Tax laws initially allowed deductions of limited partnership losses from ordinary income, but this was eliminated by the Tax Reform Act of 1986.

One major advantage of limited partnerships is that they are excluded from corporate taxation by, as its name suggests, qualifying for taxation as a partnership. The principal disadvantages are that partnership tax accounting must be used and that the sponsor must provide a corporate general partner to hold 1 percent of the aggregate assets. General partners must make significant cash investments and they retain unlimited liability for the partnership's obligations.

Many limited partnerships have little or no market value. In 1995, one source estimated that fair market prices were only 20 percent to 60 percent of a partnership's net asset value. The same source concluded that of approximately 2,000 limited partnerships, only an estimated 300 traded with regularity -- and then only by independent dealers using their own clearinghouses for such transactions. These conditions do not contribute to high or competitive selling prices.

The proper valuation of such investments is especially important. Examiners should ascertain that the institution has the ability to obtain reasonably current fair market values for such investments and that customer statements reflect market values. The failure to properly value limited partnerships may lead to overcharging accounts if management or account fees are based on the market value of assets and, as noted in the following paragraphs, can cause difficulties for ERISA plans.

Limited partnership investments of employee benefit plans subject to ERISA must be reported by the plan administrator as a plan asset on the plan's Annual Report IRS Form 5500 found in Section 5. J. Form 5500 requires plan assets to be valued at a reasonable market value. If the bank acts as plan administrator, or is responsible for furnishing market values of plan assets to a plan administrator, it must have appropriate procedures for valuing limited partnerships. Since limited partnerships are not traded on a regular basis, it may be difficult for the plan administrator to arrive at a reasonable market value. Since many limited partnerships reportedly have little value, it is particularly important for plans to obtain accurate market values for these assets.

Formal annual appraisals are not required, but the plan administrator must be able to demonstrate that a reasonable approach was taken in valuing the asset. IRS Revenue Ruling 59-60 provides general guidance on valuing non-traded assets. It outlines the general factors that must be taken into consideration and requires a written report detailing the valuation. It indicates that the assets must be more than simply valued. The valuation should also reflect any "lack of control" or "lack of marketability." While the Revenue Ruling is specifically directed toward valuing estate assets, it is widely acknowledged as a general standard for valuing non-traded assets.

IRS Announcement 92-182, "Employee Plans Examination Guidelines," provides the following guidance in valuing limited partnership interests and applying I R S Revenue Ruling 59-60:

- "An accurate assessment of fair market value is essential to a plan's ability to comply with the requirements set forth in the [Internal Revenue] Code and in Title I of ERISA."
- "Plans must value their trust investments at least once a year, on a specified date, in accordance with a method consistently followed and uniformly applied."
- "Revenue Ruling 59-60 provides guidance for determining the value of plan assets. Although 59-60 provides methods for valuing shares of stock for closely-held corporations for estate and gift tax purposes, the factors may be used to determine

values of assets in qualified plans ..."
- "The detail of the plan's valuation should be examined in light of the plan assets involved. For example, the valuation should contain substantial detail if it values a limited partnership or a closely held corporation."

Under IRC Section 408)(i), IRA trustees/custodians are required to report the fair market value of assets to the IRS and IRA owners on an annual basis on Form 5498.

In an information letter dated February 24, 1993, the IRS provided guidance on how limited partnerships in IRA accounts should be treated. In addition to generally affirming the above points, it indicated that the IRA trustee "or issuer" is responsible for proper valuations, and that the trustee or issuer cannot waive, or be released or indemnified by the participant, from such valuation responsibility.

As a result, original cost or an amortized original cost would not normally be considered a reasonable valuation. Since most limited partnerships are not readily traded, the Net Asset Value (NAV) of each partnership unit may be available only on request of the general partner. Since the general partner may have a financial interest in the partnership, either as an investor or as a sponsor, the NAV obtained from the general partner should not automatically be considered the market value.

The plan administrator should attempt to evaluate the reasonableness of the NAV by, for instance, comparing it against other recent trades of the limited partnership's units, consulting a limited partnership valuation service or some equivalent approach.

F.9. Family Limited Partnerships (FLP) or Limited Liability Companies

FLP are a form of limited partnerships, formed to manage and control family property. All of the requirements for a limited liability partnership must be followed. In general, there are two types. One is the discounted technique, where assets are "discounted" in value, which ultimately reduces estate taxes. In order to receive this treatment, the principal must relinquish control, prohibit partners from withdrawing from the entity, and place severe limitations on transfers. Collectively, these restrictions allow the discounted limited partnerships to leverage wealth. The second form freezes the value of an individual's estate and shifts future appreciation to the next generation.

F.10. Master Notes

Master note arrangements, also known as "variable amount notes", are borrowing arrangements whereby trust accounts provide short-term cash to large companies. These types of investments may be operated in place of, or in addition to, a bank's Short Term Investment Fund. With the increased use of commercial paper and other sources of capital, this form of borrowing has lost much of its popularity.

The documentation of the borrowing arrangement includes the note evidencing the maximum amount of the loan, which may be on a demand basis or have a fixed maturity. Either the note or a separate loan agreement will detail the terms of the credit. The interest rate is usually adjusted monthly based on commercial paper rates. The note is payable to the bank or a nominee, and may be repaid by the borrower(s) in whole or in part at any time. The amount of the loan may fluctuate daily as increases or decreases are made in the participation. If an account acquires (increases) a participation, a buy order is executed; if the account withdraws (reduces) a participation, a sell order is executed. Buy and sell orders are combined at the end of the day, resulting in a net adjustment to the loan. This is communicated to the borrower on the following business day, and may be accepted or rejected. Interest, at an agreed upon rate, must be paid monthly on the daily amount of the loan outstanding during the preceding month.

A separate investment control is maintained for each master note. A participant record for each account should be maintained and appropriate accounting entries made by the bank each time the loan balance changes in order to ensure that participant records reconcile to the amount outstanding. Asset records for each participating account must reflect the investment in the master note.

Broad investment powers in the governing instrument are sufficient authority for such investments. However, investments by accounts for which the bank does not have full investment responsibility must have letters of direction from parties authorized to direct

each purchase or sale. Custodial and agency accounts may invest in master notes if the terms of the governing instrument permit.

All master notes should be issued by companies classified as "prime credits", i.e., an issuer rated in one of the two highest rating categories by at least two nationally recognized investment rating organizations. The bank should have full information on the capital, debt structure, and financial condition of the issuer, including: total amounts borrowed on master notes, total long and short-term borrowings, and the most current financial statement. Additionally, the bank should obtain quarterly certifications that the notes are: not subordinated to any other debt of the company, there is no litigation pending or threatened which would affect such notes, and the issuer is not in default on any of its outstanding obligations.

As a guideline, if the total amount of variable or master notes exceeds 10 percent of the market value of the assets held by the trust department, the examiner should question the prudence of such investments. A bank which has notes issued by any one company in excess of 5 percent of the market value of the department's total assets should be requested to justify the prudence of such investments. Where a note has both a demand and fixed term component, the examiner should comment upon the arrangement when the fixed term is in excess of 50 percent of the principal amount of the note. As with other types of investments, the bank should have appropriate written policies and procedures governing the use of master notes, including the maximum amount of funds to be extended, the submission of current financial information, periodic credit reviews of the borrower and the submission of corporate borrowing resolutions.

A conflict of interest may exist if the commercial department of the bank also has loans outstanding to the master note obligor.

F.11. Business Interests

The primary types of business interests encountered in a trust department are: (1) Stocks or other securities of closely held corporations, i.e., a corporate entity whose stock is not actively traded, (2) Partnership interests, either general or limited, (3) Sole proprietorships, and (4) Joint ventures. The management of business interests is often demanding, time consuming and requires expertise.

Family business interests can pose administrative problems to the trust department. One of the greatest problems in holding the securities of a closely-held business is the limited marketability due to concentrated ownership. This is particularly true if an accounts holds a minority interest. The illiquid nature of a minority interest, when combined with a lack of investment diversification, may cause concern. When the bank as fiduciary holds a minority business interest, it may attempt to identify other shareholders with whom it can jointly control or influence the management of the closely-held business. The surcharge potential is perhaps the most important concern with fiduciary appointments involving family business interests.

The purpose of reviewing the administration of closely-held business interests is to evaluate both the institution's expertise and its actual management of such business interests. Due to the relatively high surcharge potential, the bank should, prior to accepting such an appointment, thoroughly review all the potential risks and disadvantages associated with administering a closely-held business. If bank policy permits, it may be desirable for the fiduciary to represent the account by having a bank officer serve as an officer or director of the company. However, a directorship involves a certain degree of potential liability to the bank and the individual serving as a director. Therefore, consideration should be given to obtaining appropriate indemnity insurance to cover these situations.

Occasionally banks are appointed executor or administrator of an estate which includes a sole proprietorship or a partnership interest. As a general rule, such businesses terminate upon the death of the proprietor or partner, but it usually takes considerable time to settle outstanding business matters. The bank should work closely with estate counsel and others interested in the business, as conveyance of such business property is complicated and may be disruptive to the beneficiaries. It is important to determine that the bank has limited its liability in administering such property.

Conflicts of interest may be present when the bank is lending to the business. The bank should approach this area cautiously and seek outside financing sources first. Additionally, the bank should prohibit its personnel from acquiring an interest, financial or otherwise, in the company, other than representing the beneficiaries and the bank.

The examiner should review and evaluate the adequacy of the department policies governing the administration of business interests. The expertise of the bank in administering such interests should be evaluated through a review of board minutes, trust committee minutes, account files, and the qualifications of its personnel. Compliance with laws, governing instruments and standards of prudence should be determined, the possibility of conflicts of interest ascertained and the potential for liability to the bank assessed. Trust departments that actively manage business interests should be familiar with Federal Statutes that could impact the operation of the business. An example would be the Americans with Disabilities Act, which prohibits discrimination in private employment, transportation, telecommunications, and public accommodations.

Examiners should determine the extent to which the trust department monitors these investments. The department should periodically request financial information from the business, develop a method of evaluating the business' financial condition and document its findings. Additionally, these assets should be carried on the books of the trust department at some value that is supportable based on the available documentation.

F.12. Worthless Securities

On occasion, the trust department will receive securities which are or become worthless, particularly in estates and guardianship accounts. In determining if securities are indeed worthless, the department should obtain documentation, from the corporation commission or the secretary of state of the state in which the corporation that issued the security was chartered, evidencing that the corporation is no longer in business. Frequently, this documentation will state that the securities are worthless. Once such a determination has been made, the information should be presented to the trust committee with a request for approval to write-down the carrying value and identify the securities as worthless on the department's records.

Whenever possible, worthless securities should be returned to the trustor or distributed to the account beneficiary. Those securities remaining in the trust department's control can be listed among the account's assets, or carried in a house account with a reference to the account holding the asset. For control purposes, the department should continue to carry the securities on its records at a nominal value.

A complete list of worthless securities should be maintained and the securities kept in the trust securities vault under dual control. Periodically, the list should be reviewed to determine if any of the issues have become marketable, since they occasionally regain value. Protective measures are recommended to guard against neglect or misappropriation of any securities that regain value.

F.13. Tangible Assets and "Collectibles"

Tangible assets include works of art, antiques, stamps, coins and bullion, and diamonds and gemstones. Such assets often appeal to individuals who do not need current income from all their investments, and, therefore, can allocate a portion of their assets to tangibles in an effort to provide long-term capital gains with no current income tax consequences. Assets of this type are often viewed as an inflation hedge.

An examiner has several objectives in reviewing the management of tangibles. First, the examiner needs to determine that the department has adequate control over the assets and has made provisions for proper storage and adequate insurance. Management should attempt to verify ownership of the assets, as the grantor can't acquire good title to stolen property. Stolen artwork has resurfaced years later and has been returned to the rightful owner. However, discovery and demand for the return of stolen art must be made. The recovery period can extend well beyond the statute of limitations. In one case, the court ruled that the statute of limitations didn't begin until a museum demanded the item be returned. That was 30 years after discovery.

Rare stamps and coins should be authenticated by an expert (such as the Philatelic

Foundation of New York for stamps and the American Numismatic Association for coins). For diamonds and other gemstones a certificate should always be obtained. It is essential that such assets be maintained under dual control. Separate storage of tangible assets that might suffer significant damage, such as stamps, should be considered.

The purchase and retention of tangible assets should be permitted in the governing instruments. Appraisals should be obtained periodically. With some notable exceptions, tangible investments may be difficult to liquidate. A national auction market exists for investment grade stamps. Gemstones are usually sold by consignment through a major dealer. Some risks can be minimized by permitting such investments only in directed, i.e. non-discretionary, accounts, and by using reliable dealers and auction houses.

The Economic Recovery Tax Act of 1981 essentially eliminated the option of investing in tangibles for self-directed employee benefit accounts (IRA, Keogh, Pension and Profit Sharing) after December 31, 1981. Under the law, any funds of a self-directed retirement plan used to purchase tangible assets must be treated as a taxable distribution of the plan's assets to the participant(s). Refer to Section 5 for further discussion of this topic. However, if an independent trustee or qualified investment manager, vested with investment discretion, selects tangibles as an investment, the participants of the plan would not be similarly penalized.

F.14. Repurchase Agreements

A repurchase agreement is an acquisition of funds through the sale of securities, with a simultaneous agreement (commitment) by the seller to repurchase the securities at a later date. The owner of a U. S. Government or agency security transfers possession of the obligation for a percentage of its market value, but retains ownership and the inherent rights to receive the interest and principal of the obligation. At an agreed upon future date, the owner (seller) repurchases the obligation to repay the amount borrowed plus the agreed upon interest. A repurchase agreement, regardless of the terminology used, is a secured borrowing by which an owner (seller) leverages existing positions in securities by pledging these holdings against the repurchase liability.

Some trust departments engage in repurchase agreement transactions as a temporary investment vehicle for cash balances awaiting permanent investment or distribution. In this context, a trust account becomes the lender of funds to a financial institution or a broker/dealer. Although the trust account acquires an asset, it will generally be identified on the trust department's records as a repurchase agreement. Repurchase agreements are collateralized by U. S. Government or agency securities, bear a fixed or variable rate of interest, are payable at a fixed maturity (one day or longer) and may be subject to other terms and conditions.

Repurchase agreements bought from the bank's commercial department or from bank affiliates represent loans by trust account(s) to the fiduciary bank and involve a conflict of interest and self-dealing. The purchase of repurchase agreements from the bank's commercial department, affiliates of the bank or other organizations, where there exists an interest which might affect the best judgment of a fiduciary, should not be made unless specifically authorized either in the instrument creating the trust relationship, by court order, by local law or unless prior written approval is obtained from all interested parties. If appropriate authorization is contained in the instrument or local law, or obtained from a court or all interested parties, the examiner should review the investment in light of normal investment considerations, e.g., rate of return, diversification, adequacy of pledged securities (collateral margin), maturities, etc. The bank must pay a competitive rate of interest and the terms must be no less favorable than those granted to others purchasing the same types of repurchase agreement.

In those cases where such investments are not authorized, the examiner should fully discuss the matter with management, obtain a commitment to take corrective measures, and detail the situation in the Report of Examination.

The Department of Labor, in Prohibited Transaction Class Exemption 81-8 , dated January 23, 1981, "Short-Term Investments", allows employee benefit plans to acquire repurchase agreements with maturities of one year or less from parties-in-interest. However, the obligor financial institution or its affiliate(s) cannot hold discretionary authority

or control over the investment of assets of the plan purchasing its obligation. If the department has purchased own-bank or affiliate bank repurchase agreements for discretionary accounts, or directed employee benefit plans subject to ERISA prohibited transaction provisions without obtaining proper written direction, the examiner should fully discuss the matter with management and schedule the investment(s) as an apparent violation(s) of ERISA Section 406 (prohibited transactions with a party-in-interest) and/or ERISA Section 404 (fiduciary standards).

Repurchase agreements bought from other financial institutions or broker/dealers may be an acceptable short-term investment provided this type of investment is authorized by the governing instrument and/or state law, and is appropriate to the investment needs of an account's beneficiaries. Repurchase transactions represent a form of lending. Consequently, the considerations normally associated with granting secured credit should be made by the trust department. Repayment of repurchases by the selling institution or broker/dealer is a major consideration. The trust department should satisfy itself that the seller will be able to generate the funds necessary to repurchase the securities on the maturity date of the contract. In assessing the propriety of these transactions, the examiner must determine if the trust department has considered the ability of the seller to meet its commitment to repurchase on the prescribed date.

Because repurchase agreement transactions are considered a form of secured lending, the bank should have written policies governing their use as trust investments and a written agreement for each transaction outlining specific provisions pertaining to collateral margins. Acceptable margins, the percentage by which collateral securing the loan exceeds the credit, should be determined by considering the maturity and the volatility of the securities pledged, along with the maturity of the repurchase agreement. The collateral should be priced on a regular basis to assure maintenance of the required margin. Monies should not be lent until acceptable types of securities are delivered into the bank's custody or to an independent safekeeping agent designated by the bank. Trust department management should not make such investments without the account(s) acquiring a perfected security interest in the collateral securities. Registered securities should be endorsed in such a manner to ensure negotiability. In other respects, collateral coverage arrangements should be controlled by procedures similar to the safeguards used to control any type of liquid collateral. The examiner should determine that proper procedures have been established for the control of collateral and the maintenance of collateral margins.

Other areas that should be addressed in policies governing repurchase transactions include: setting a maximum amount to be extended to a single firm by any one account and by all accounts in the aggregate; requiring borrowing firms to supply corporate borrowing authorizations; requiring the submission of current financial information; and obtaining periodic credit reviews of the borrowing entities.

Additional guidance is also provided in: the February 17, 1994 Interagency Statement on Retail Sales of Nondeposit Investment Products (FIL-9-94) and the Government Securities Act of 1986. The FDIC adopted the FFIEC Supervisory Policy on Repurchase Agreements on February 10, 1998. This policy statement appears in Appendix C. The discussion of ERISA requirements is located in Section 5.H.7.f.16 Repurchase Agreements.

F.15. Securities Lending

A number of financial institutions and their trust departments are involved in securities lending activities in the capacity of either principal or agent. This is a fee-based service whereby the trust department lends customers' securities held in custodial, safekeeping, personal trust or employee benefit accounts. Collective investment funds and mutual funds whose investments are managed by the trust department may also engage in securities lending.

Securities lending primarily involves loans of large blocks of U.S. government and Federal agency securities held in corporate employee benefit plans. Corporate trust accounts, personal trust and agency accounts are involved to a lesser degree. The primary borrowers of securities are brokers and commercial banks. The primary reasons for borrowing securities are to cover securities fails (securities sold but not delivered), short sales, and option and arbitrage positions. On occasion, securities may be borrowed to meet pledging requirements. Securities lending is conducted through open-ended agreements which may

be terminated on short notice by either the lender or borrower. The objective of such lending is to increase a portfolio's yield by receiving fee-based income in addition to interest or dividends.

Securities loans are generally collateralized by U.S. government or Federal agency securities, cash or letters of credit. Each loan is initially collateralized at a predetermined margin. When the loan is terminated, the securities are returned to the lender and the collateral is returned to the borrower. Fees received are divided between the institution as lender/agent and the customer account that owns the securities.

While securities lending is similar to a repurchase agreement program, repurchase agreements have the following distinguishing characteristics:

- The sale and repurchase of U. S. Government or Federal agency securities,
- Cash is received by the seller and the party supplying the funds receives the collateral margin,
- The agreement is for a fixed period of time,
- The fee is negotiated and established for the transaction at the outset and no rebate is given to the borrower for interest earned on the cash collateral, and
- The confirmation received classifies the transaction as a repurchase agreement.

Traditionally, securities lending has been viewed as a low-risk activity which enhances a trust account's investment return. This has changed in more recent years, as a number of major losses have occurred due to securities lending activities. Previously, collateral was generally invested in very short-term investments. When interest rates were low, the returns on short-term investments were not attractive. To boost investment results further, high-grade but longer-term collateral was accepted. When interest rates suddenly rose, the value of this collateral dropped sharply.

To address those concerns, the FFIEC adopted a Supervisory Policy concerning Securities Lending in 1997. The Policy Statement includes the following guidelines for participation in a securities lending program.

- Develop and implement written policies, procedures, and a system of controls which enables the department to comply with applicable laws and regulations, and minimizes the potential risks associated with securities lending.
- Have a knowledgeable and experienced staff before engaging in any securities lending activity.
- Recordkeeping - Management should be able to readily determine which securities are lent, outstanding loans by borrower, outstanding loans by account, new loans, returns of loaned securities, and transactions by account.
- Administrative procedures - All securities lent and all securities used as collateral must be marked to market daily.
- Credit analysis of the borrower - Securities lending activities involve risk of loss, normally from malfeasance or failure of the borrowing firm or institution. Therefore, the lender should approve transactions with the borrower in advance of lending securities. The review should include at a minimum: an analysis of the borrower's financial statements, management, and any other material evidence of the borrower's creditworthiness
- Credit and limit approvals should be based on a credit analysis of the borrower. This analysis should be performed by individuals who normally perform credit analyses of borrowers, not the individual responsible for the securities lending program.
- Credit and concentration limits - A credit line should be established for specific borrowers and should be based on the market value f the securities to be borrowed. This does not violate material inside information. . Lending concentrations with any one borrower should be avoided.
- Conduct a due diligence analysis and review of the borrower. Enter into a securities lending arrangement only pursuant to a written agreement delineating the duties and responsibilities of each participant. The agreement should specifically address: the types of and the minimum margins acceptable for collateral, procedures to maintain adequate margin levels, custody of collateral, procedures for the collection of dividend and interest payments on securities lent, and procedures in the event of default. If securities are used as collateral, the trust department should review

regulations for applicable requirements relating to the pledging, the perfection of the security interest, and the custody of the securities.
- Collateral management - Securities borrowers pledge and maintain collateral at least 100 percent of the value of the securities borrowed. However, the minimum initial collateral on securities loans is at least 102 percent of the market value of the lent securities plus any accrued interest for debt securities. Collateral must be maintained at the agreed upon margin. A daily "mark-to-market" or valuation procedures must be in place to ensure that calls for additional collateral are made on a timely basis. The valuation procedures should take into account the value of accrued interest on debt securities. Securities should not be lent unless collateral has been received or will be received simultaneously with the loan.
- Cash as collateral - When cash is used, the lender is responsible for making it productive, by investing in repurchase agreements, master notes, shot-term investment fund, certificates of deposit, commercial paper or some other money market instrument. For fiduciaries lending securities, the governing customer agreement should outline how cash collateral is to be invested. Investing in own-bank deposits or repurchase agreements, or investments in the bank's parent company would be a conflict of interest, unless specifically authorized in writing by the owner of the lent securities.
- Letters of credit as collateral - Letters of credit are allowable as collateral for certain securities lending transactions.

Since trust departments are not investing for their own accounts, but rather for the beneficiaries of trust or agency accounts, any securities lending must also take into consideration:

- Authorization by the governing account instrument. Any discretionary management of the cash collateral should be subject to clearly delineated risk tolerance guidelines between the lending account and the trust institution.
- For accounts over which the bank exercises investment discretion, the decision to lend securities represents an investment decision. This decision should be subject to normal fiduciary standards of lending. The following considerations should be documented:
  - The appropriateness of the transaction with respect to account objectives and beneficiary needs;
  - Diversification;
  - The prudence of the investment.

The Department of Labor has issued two class exemptions which address securities lending programs for employee benefit plans covered by ERISA. Prohibited Transaction Exemption 81-6 (46 FR7527) issued January 23, 1981, supplemented by (52 FR 19754) issued May 19, 1987, and Prohibited Transaction Exemption 82-63 (47FR 14804) issued April 6, 1982, and corrected by 47 FR 16437 on April 16, 1982. The exemptions authorize transactions which might otherwise constitute prohibited transaction under ERISA. Prohibited exemption 81-6 permits the lending of securities owned by employee benefit plans to persons who could be a "party in interest" with respect to such plans, provided certain conditions specified in the exemption are met. Under those conditions, neither the borrower nor an affiliate of the borrower can have discretionary control over the investment of plan assets, or offer investment advice concerning the assets, and the loan must be made pursuant to a written agreement. The exemption also establishes a minimum acceptable level for collateral based on the market value of the loaned securities. Prohibited Transaction Exemption 82-63 permits a fiduciary to receive compensation for service rendered in connection with loans of plan assets that are securities.

Examiners should also refer to Section 5.H.7.f.17 Securities Lending for additional information and guidance with regard to ERISA account securities lending activities.

The FDIC adopted the FFIEC Supervisory Policy on Securities Lending on July 22, 1997. The policy statement is located in Appendix C.

J. FDIC Part 344: Record Keeping and Confirmation Requirements for Customer Securities Transactions

1. Exceptions to the Regulation
2. Record Keeping
3. Confirmations
4. Settlement of Securities Transactions
5. Written Policies and Procedures
6. Officer/Employee Reporting of Personal Investment Transactions

K. Compliance with SEC Requirements

1. Marketable Securities

a. Acquisition Statements for Registered Equity Securities - SEC 13(d) and SEC 13(g)

b. Reports of Equity Holdings - SEC 13F

c. Section 16 Statements for 10 percent or More Holders of Registered Stocks

2. Restricted Equity Securities - SEC Rule 144
3. Electronic Submission of Forms and Notices

A. Brokerage Placement

The Board of Director or trust committee should approve policies regarding the selection and retention of securities dealers. The FDIC Supervisory Statement Policy Statement on Investment Securities and End-User Derivative Activities considers the selection of dealers, investment bankers, and brokers particularly important in effectively managing risks. Trust management should have sufficient knowledge about the securities firm and the personnel with whom they are conducting business. At a minimum, trust management should consider the following before selecting a securities firm:

- The ability of the securities dealer, its subsidiaries or affiliates to fulfill commitments as evidenced by capital strength, liquidity, and operating results;
- The dealer's general reputation for financial stability, and fair and honest dealings with customers;
- Information available from State or Federal securities regulators and securities industry self-regulatory organizations, such as the National Association of Securities Dealers, concerning any formal enforcement actions against the dealer, its affiliates or associated personnel;
- In those instances when an institution relies upon the advice of a dealer's sales representative, the background of the sales representative with whom the business will be conducted, in order to determine their experience and expertise.

A.1. Approved Broker Monitoring

The Board or a committee thereof should approve the list of securities dealers used by the department. At least annually, a committee, which should include representation by senior investment officers and traders, should review the brokers used and forward recommendations as to the continued use or termination of relationships based on the following criteria:

- Commission rates,
- Net cost or net realization from the trade,
- Promptness and certainty of execution,
- Experience and knowledge of the broker with a security, industry, or market,
- Access to a security's sources of supply,
- The broker's market making ability,
- Financial stability and reputation.

The quality and quantity of investment research furnished by outside firms and/or "soft dollar" arrangements should be evaluated collectively by the department's research analysts, senior investment officers, and traders. The recommendations as to the continued use of the research providers should be forwarded to the Board or trust committee. Based on the foregoing, the committee, or committees, reviewing broker and investment research providers should also forward recommendations on the allocation of broker and "soft dollar" commissions.

Limiting third-party brokerage services to a single broker significantly limits the Board's and management's ability to evaluate the quality of brokerage services. In such cases, the Board and management must be able to demonstrate that the institution has established adequate procedures for monitoring broker performance. The institution should also be able to document that, despite limiting brokerage to a single broker, the department is obtaining " best execution " for discretionary transactions.

A.2. Internet Trading

Internet or electronic("E") trading did not exist a decade ago and has grown to an estimated over 10 million on-line brokerage accounts by year-end 2000. Experience to date suggests that Internet trading has actually increased the historical risks associated with securities trading. The explosive growth of the Internet in general, and Internet trading in particular, has given rise to:

Fraudulent and unregistered on-line brokers;

Fraudulent investment schemes;

Fraudulent news stories; and

New methods of disseminating erroneous reports on altered "website banners" pirated from legitimate institutions.

Fraudulent Internet investment schemes attempt to entice investors into purchasing investments whose values are inflated or worthless. In addition to investment scams, some on-line investors may be susceptible to intrinsic on-line trading system weaknesses. These weaknesses include the following:

Technological failures brought on by overwhelming internet traffic on finite or outdated systems;

The inability to effect transactions quickly enough to avoid volatile fluctuations in highly sought after securities,

The volume of which may be fraudulently induced; failure to use "limit orders" to prevent the purchase of securities at prices inflated by market volatility;

Failure to understand the meaning of "best execution" broker practices;

Technological failures induced by the investor's own equipment; and

The failure to recognize that on-line "real-time" pricing can in actuality be 15 minutes old, or older, which increases the likelihood that "market order" transactions may be executed at prices vastly different than anticipated by the investor in a turbulent market.

Internet Trade Execution Misconceptions:

Trades executed on-line are not instantaneous. The transmission of a trade order over the internet merely sends an order to the broker. The broker must then send the trade order into the market for execution. This is essentially the same process which occurs when investors place orders by phone. However, on-line investors may be easily mislead into believing that they are executing an order at the "real time" price appearing on their computer screen (a price which may be stale). In a volatile market, on-line investors may end up with "market order" trades executed at prices vastly different than expected. The execution process may also be affected by heavy internet traffic, faulty equipment, a broker's inadequate hardware or a slow internet provider, telephone line failures, etc.

Broker Options in the Execution of Trades:

Exchange listed securities - a broker may send the order to the exchange floor, to another exchange (regional), or to a firm which "makes a market" for the security. Some regional exchanges and "market makers" pay brokers to place orders with them, which may increase the cost of the executed price. This is called "payment for order flow." The existence of market makers which pay for order flow may influence how a broker directs a trade, and ultimately, the execution price.

Over-the-Counter (OTC) market securities - a broker may send the order to a NASDAQ "market maker" which may also pay for order flow.

Limit Orders may be routed by the broker to an Electronic Communications Network (ECN) - which matches buy and sell orders at specified prices by computer.

In a process called "Internalization" - the broker may execute the trade out of the firm's own trading inventory position in the security.

Best Execution Options:

NASD Regulation 2320 requires brokers to seek the "best execution" which is reasonably available. In doing so, brokers evaluate all orders received from all customers in light of

conditions existing at the time they are received, and then determine which markets, market makers, or ECNs offer the most favorable terms of execution. Best execution factors include the speed and likelihood of execution, not simply the best price.

During highly volatile market conditions, where there exist large order imbalances or significant price fluctuations, firms which operate automated order execution systems are permitted to implement special procedures to preserve the continuous execution of orders, while reducing their own exposure to market risk. This may include switching from automated mode to manual execution mode and routing orders to other market makers. Some firms may provide partial executions, and place the balance of an order in a queue which is operated in a first-in, first-out, basis. These are only two methods available to a firm. Regulations require that any algorithm system used be fair, consistent and "reasonable."

Investor Directed Trades:

Investors retain greater "direction" of their executions by using "limit orders," and by (if permitted by their broker) directing the broker to transmit the trade to a particular exchange, market maker, or ECN. Some brokers charge additional fees for permitting investors to direct a trade to a particular exchange or market maker.

All investors are entitled to information concerning broker policies on order flow payments, internalization and algorithm procedures during volatile market conditions. On-line investors should be aware of these policies. This is of particular importance, as volatile markets, together with internal broker practices and technological factors beyond the internet investor's control, may significantly impact the execution price.

In 2000, North American Securities Administrators Association issued the following guidance to assist on-line investors:

- Prior to opening an on-line account, obtain complete information about the alternatives available for buying and selling securities, and how to obtain account information if the broker's website cannot be accessed.
- Recognize that the investor's computer is not directly linked to any market and that orders are not instantaneously executed when entered on the computer screen.
- Obtain information from the firm to substantiate advertised claims concerning the ease and speed of on-line trading.
- Obtain information from the firm about significant website outages, delays, and other interruptions to securities trading and account access.
- Before trading, obtain information about entering and canceling orders (market, limit, and stop loss), and the details and risks of margin accounts.
- Determine whether the computer is displaying delayed or real-time stock quotes, and when the information was last updated.
- Review the firm's privacy and website security policies, and whether the investor's name may be used for mailing lists or other promotional activities.
- Obtain clear information about sales commissions and fees, and any conditions which may apply to advertised discounts.
- Learn how to contact customer service representatives with on-line trading concerns.
- Contact state securities agencies to verify the registration and licensing status, and any disciplinary history of on-line firms and representatives; and file complaints when appropriate.

The joint state regulatory issuance also recommended the adoption of specific internet trading policies. Before engaging in on-line trading, trust management should adopt written internet trading policies, including, but not limited to:

- Requiring a due diligence investigation of internet brokers.
- Inquiring among peer trust departments about their experience with internet brokers, and obtaining other references.
- Performing a due diligence review of the reasons for using internet trading instead of regular brokerage accounts.
- Requiring Board of Director or trust committee authorization of internet trading practices. The Board or trust committee should review trust management's

documented justification for using internet brokers, including:
    - projected commission savings by trust customers, and
    - best execution protections.
- Requiring periodic reporting to the trust committee, or other operating committee, of usage of internet trading, including:
    - number and dollar volume of trades,
    - listing of trades which were executed at prices which were different than "real time" price on internet sites,
    - trades which were not executed,
    - problems with internet brokers,
    - delays in order transmission due to hardware problems,
    - slow internet transmissions,
    - discrepancies between trade orders and confirmations,
    - fails, etc.
- Performing the following oversight functions by the Board, trust committee, or other operating committee:
    - Periodic reviews of the quality and execution of internet trading,
    - Approval of the continued use of internet trading brokers,
    - Analysis of whether the use of internet brokers will result in increased research costs, if internet broker does not provide investment advice, and
    - Analysis of the quality and availability of investment research provided by internet brokers.
- Specific controls to limit internet trading risk.
- Prohibiting the use of internet for personal trading by employees.
- Prohibiting officers and employees from trading for accounts off the banking premises (or at home).
- Prohibiting after-hours trading if the department has not established specific controls governing after-hours trading.

These policies, and the suggestions issued by state securities regulators, are all equally applicable to broker selection and trading in general. Examiners should inquire into trust management's due diligence policies and safeguards, and assess whether sufficient measures have been taken to limit broker and securities trading risk. Additional affirmative measures may be taken to protect the institution and its customers by obtaining on-line broker information from the SEC and NASD. The SEC's Enforcement Division website is http://www.sec.gov/enforce.html , and may be used to obtain information about disciplinary actions against broker/dealers, lodge complaints, and reference SEC customer awareness information. The NASD's public disclosure website is at http://www.nasdr.com , and provides broker background information and other useful investor guidance. NASD's broker complaint website is linked via their homepage at http://www.nasdr.com

B. Securities Trading

Trust department investment policies and procedures should prohibit research analysts, traders and/or portfolio managers from trading for their own account through brokerage accounts maintained by the trust department. Examiners should verify that the trust department's accounts with brokerage firms are used only to effect transactions for trust accounts or approved outside clients. If the bank has not established policies or control procedures, the examiner should discuss the potential hazards with management, and recommend adoption of policies and procedures. The audit program should include procedures to detect misuse of brokerage accounts.

In general, borrowing for the purpose of investment is an improper activity for a trustee, except when purchasing improved real estate. The bank as fiduciary should not maintain a margin account with a broker unless specifically authorized by the terms of the governing instrument and directed by a party having appropriate authority.

Examiners should be alert for any involvement in speculative securities trading activities. Any speculative transaction ordinarily evidences contravention of "prudent man" doctrines.

Churning is a term for excessive trading in an account for the purpose of generating and maximizing broker commissions and can occur in both discretionary and nondiscretionary accounts. The practice is illegal and is among the most common claims made against stockbrokers, investment advisers, and financial planners. In determining whether churning has occurred, consideration should be given to the

following:

- the number and frequency of trades;
- the amount of "in-and-out" trading; the amount of commissions generated;
- the investor's objectives and level of business sophistication; and
- the degree of control the broker has over the account.

To be considered churning, the broker:

- must have either explicit (discretionary accounts) or implied control (non-discretionary accounts) over the account;
- trading must be excessive in relation to the customer's objectives; and,
- the broker must have acted with the intent to defraud or with behavior that was reckless.

The broker's lack of or poor judgment does not demonstrate intent to defraud or reckless behavior. Furthermore, accounts with investment objectives of growth or speculation are likely to have more frequent transactions than accounts with investment objectives of long-term growth or income. Therefore, what may appear to be churning in accounts should be reviewed in light of the investment objectives of each account.

For a more detailed discussion on broker selection, internet trading, and due diligence policies and practices, refer to A. Brokerage Placement .

C. Brokerage Selection on Basis of Soft Dollars - SEC § 28(e)(1)

Section 28(e) was added to the Securities Exchange Act of 1934 by the Securities Acts Amendments of 1975. This section provides "safe harbor" protection to the fiduciary exercising investment discretion, provided certain conditions are met. Under Section 28(e)(1), "No person . . . shall be deemed to have acted unlawfully or to have breached a fiduciary duty . . . solely by reason of his having caused the account to pay . . . an amount of commission . . . in excess of the amount of commission another . . . dealer would have charged . . . if such person determined in good faith that such amount of commission was reasonable in relation to the value of the brokerage and research services provided . . . in terms of either that particular transaction or his overall responsibilities with respect to the accounts as to which he exercises investment discretion." Section 28(e)(3) defines research and brokerage services. in order to qualify as research or brokerage services, the services provided must:

- Furnish advice, either directly or through publications or writings, as to the value of securities, the advisability of investing in purchasing, or selling securities, and the availability of securities;
- Furnish analyses and reports concerning the issuer, industries, securities, economic factors and trends, portfolio strategy, and the performance of accounts; or,
- Effect securities transactions and perform functions incidental thereto, such as clearance, such as settlement and custody, or required in connection therewith by the SEC, or a self-regulatory organization.

Note that transactions in futures or for transactions done on a principal basis are not covered by the safe harbor.

Four requirements must generally be satisfied to obtain "safe harbor" protection under Section 28(e):

- The soft dollar goods and services must be provided by the broker-dealer effecting the securities transaction,
- The soft dollar goods and services must be provided to the party holding investment discretion over the account,
- The recipient of soft dollar goods and services must make a good faith determination that the commissions paid are reasonable in relation to the value of brokerage and research services provided, and
- The goods and services provided for the soft dollars must qualify as "brokerage and research" services.

Section 28(e) is a "safe harbor" which affords "protection." It is not a regulation, and, therefore, cannot in itself be violated. Any "violations" connected with transactions not afforded the protections under Section 28(e), would be of the antifraud provisions of federal securities laws. Also, while not specifically addressed within Section 28(e), there exists a general fiduciary duty to seek "best execution." Best execution implies the best net price to the customer, together with accuracy and speed of execution. It is

not intrinsically linked with, nor does it imply, the lowest brokerage commission.

Trust institutions which engage in soft- dollar trading are required to disclose the research products and services it obtains to the trust accounts paying soft-dollar commissions. In an inspection report on soft-dollar practices released September 22, 1998, the SEC stated that Section 28(e) "does not shield a person who exercises investment discretion from, violations of antifraud provisions of federal securities laws arising from churning an account, failing to obtain the best price or best execution, or failing to make required disclosure." Regarding full disclosure, the report provided, "Disclosure is required whether the product or service acquired by the adviser using soft dollars is inside or outside the safe harbor. Advisers are required to disclose, among other things, the products and services through soft dollar arrangements, regardless of whether the safe harbor applies." The SEC has directed advisers that they ".need not list individually each product, item of research, or service received, but rather .state the types of products, research, or services obtained with enough specificity so that clients can understand what is being obtained."

The SEC has also long taken the position that "mixed use items," or products and services that provide both research and non-research benefits (such as in-house computer networks used for other purposes in addition to research), should be allocated between soft dollars and hard-dollars. This requires institutions to allocate the costs associated with these products and to pay for the non-research portion with their own funds.

Refer to subsection E.2.a., located in Section 8 for additional discussion of this topic. Refer to Securities and Exchange Act of 1934 Release No. 34-23170, "Section 28(e) and Soft Dollars" , for a discussion of the scope of Section 28(e).

D. Broker Selection on Basis of Deposits - SEC § 28(e)(2)

The Justice Department has long viewed the allocation of brokerage business by banks based upon the volume of demand deposits maintained by a security dealer as reciprocity in violation of antitrust laws. Reciprocity means the use by a company of its power as the buyer of products or services to influence the sale of its own products or services.

Section 28(e)(2) of the Securities Exchange Act of 1934 states "A person exercising investment discretion . . . shall make such disclosure of his policies and practices with respect to commissions that will be paid . . . at such times and in such manner, as the appropriate regulatory agency, by rule, may prescribe as necessary or appropriate in the public interest or for the protection of investors." Although the Corporation does not require the disclosure of brokerage policies and practices, examiners should review this area to determine whether the bank is complying with its fiduciary duties in the placement of brokerage business. Consequently, the type and amount of deposit relationships maintained by brokerage firms used by trust departments should be ascertained. Examiners should evaluate whether reciprocity (as opposed to the quality of execution, research, cost, or other ancillary services), may have played a role in the selection of brokers.

E. Best Execution

The SEC and the courts have stressed the duty to obtain best execution. The term is usually defined as seeking the most favorable terms for a customer transaction reasonably available under the circumstances. Best execution does not require that the lowest possible commission be obtained and the SEC has not adopted regulations that require a trade to be executed within a set period of time.

Trust management should consider various qualitative and quantitative factors when determining the quality of execution and should establish policy and procedures to evaluate and demonstrate that trades are made using the following criteria: The selection of broker/dealers should comply with the FDIC Supervisory Policy Statement on Investment Securities and End-User Derivative Activities. The points to consider in determining best execution should consist of research provided if any, best price, speed of execution, certainty of execution, access to initial public offerings, recordkeeping, and the commission rate or spread. These general criteria do not endorse or prohibit on-line transactions.

The SEC has brought enforcement proceedings against investment advisors and those actions have been centered in transactions involving soft dollars, cross trade, affiliated trades, and advisors' failure to disclose execution practices. Failure to use best execution procedures, may violate the antifraud provisions under securities law.

Trust investment officers can verify that a particular investment is registered with the SEC via the SEC's

EDGAR system. The NASD can provide information on brokers and dealers, such as disciplinary information. States have securities regulators that can provide information and accept complaints for various causes, including but not limited to poor or inappropriate execution, and broker/dealer licensing status, and fraud.

F. Securities Settlement Practices

Settlement occurs when the transaction is completed by the exchange of securities and money between the buyer and seller. On settlement date, the buyer receives the securities in either book-entry or definitive (physical) form, and a change in ownership is recorded.

The settlement period is the time between trade date and settlement date. Since 1995, most trades of U.S. government and federal agency securities settle the day after the trade date, which is known as next-day settlement. The standard for corporate debt and equities, American Depository Receipts (ADRs), and municipal securities has been three days. However, an initiative is underway to ultimately allow for straight-through processing (STP), in real-time with multiple currencies. In order for STP to occur, various actions must be implemented, and includes, but is not limited to the following:

International /Foreign Exchange -Implications to foreign investors trading U.S. issued securities

Legal and Regulatory - Rule changes to accommodate STP improvements

Payment Processing - Automated payment process

Physical Securities - Eliminate the movement of physical securities

Securities Lending - Implement the Automated Recall Management Systems (ARMS) to improve level of STP in the stock loan recall process

Real-time trade matching - For fixed income securities

The following is a more detailed explanation of current settlement practices based on the type of investment:

Transactions involving U. S. Treasury and Agency obligations are typically in book-entry form, rather than in physical certificate form. Book-entry is an electronic registration, transfer, and settlement system that enables the rapid and accurate registration and transfer of securities with concurrent cash settlement. Book-entry reduces handling costs and quickens transaction completion. U. S. Treasury and Agency book-entry securities are delivered and cleared over the Federal Reserve Wire System (Fedwire) on a delivery versus payment basis. Acceptance of the security automatically debits the payment amount from the buyer's account and credits it to the seller's account. The payment and securities involved are transferred over the Fedwire system. The Federal Reserve Bank of New York maintains the book-entry custody system. All depository banks are eligible to maintain book-entry accounts at their Federal Reserve District Bank, provided that they also maintain a funds account with that Federal Bank.

Mortgage securities settlement procedures are more complex than those for government, corporate, and municipal bonds. The Bond Market Association developed the Uniform Practices for the Clearance and Settlement of Mortgage-Backed Securities and Other Related Securities (hereinafter, "Uniform Practices") to establish industry standards for mortgage securities settlements. Since the Uniform Practices are updated frequently, trust management engaged in mortgage and asset-backed securities transactions should keep abreast of current settlement standards.

Corporate and municipal debt securities are available in book-entry and registered, definitive form. Book-entry corporate and municipal bonds settle through the Depository Trust Company (DTC).

Electronic trade processing and recordkeeping systems have improved the trade and settlement time and have reduced failed trades. However, failed trades may occur due to the following reasons

- The buyer rejects the delivery due to not being in good delivery form or the records of the buyer and seller not matching. The primary reason for this problem is a lack of communication.
- The buyer recognizes the trade, but it is in a different dollar amount.
- The buyer rejects the transaction due to incorrect maturity date, interest rate, or series.

If the receiving party accepts delivery (upon payment) and discovers that it was not a good delivery, then the buyer can correct the error by reclamation. In the reclamation process, the buyer returns the securities with an explanation to the seller (who has already received payment). The seller is obligated to return the payment, if the claim is valid. Either party may make a reclamation, if information is discovered after delivery, which, if known at the time of delivery, would have caused the delivery not to constitute good delivery. However, reclamation must be made within the stated time limitations established by the Bond Market Association.

If a trade has a settlement date between a record date and a payable date, delivery of the securities must be accompanied by a due bill. A due bill is a document delivered by a seller of a security to a buyer evidencing that any principal and interest or dividends received by the seller past the record date will be paid to the buyer by the seller upon submission of the due bill for redemption. The record date is the date for determining who will be paid principal, dividends or interest on an issue. Book-entry messages are considered acceptable due bill substitutes for securities transferred over Fedwire (Treasury), DTC (Corporates and Municipals), or PTC (GNMA). Due bills and book-entry messages cease to be valid after 60 days from their issue date. A trust department may experience considerable delays in attempting to recover payments without the use of a due bill, which result in the accumulation of significant principal and interest receivable accounts. If delivery and payment on a trade occur after a record date and on or after a payable date, delivery of the securities must be accompanied by a check for the principal, dividend or interest due.

G. Securities Transfer Agent's Medallion Program (STAMP Program)

The Securities and Exchange Commission created a universal signature guarantee program that consists of a stamp that serves as a signature by an eligible institution, such as a bank, brokerage, or trust company, that participates in the program. The purpose is to ensure that the person signing the certificate or irrevocable stock or bond power form is the owner or authorized agent. The program also standardizes the signature guarantee by assigning a standard format and numbering system. The latter identifies the financial institution. The stamp is an ink impression applied to a certificate that allows good delivery form. It is not the same as a notary, which attests to the authenticity of documents and contracts and signatures of testator and witnesses.

H. Shareholder Communications Act of 1985

This Act gives the SEC jurisdiction to regulate the proxy processing of all entities exercising fiduciary powers, including trust departments. The Act is implemented primarily by SEC Rule 14b-2 , which can be found in Appendix D. The purpose of this regulation is to ensure that beneficial owners of securities are provided proxy materials and other corporate communications within specified time periods. Refer to Operations and Internal Controls - Shareholder Communication Act for additional information and guidance.

I. Proxy Voting

As a function of equity ownership, a fiduciary has the duty to cast proxy votes for shares of stock held in a discretionary capacity. A policy should be developed which establishes the department's position with regard to voting on routine, as well as controversial, issues. The policy should also establish voting and recordkeeping procedures.

For **ESOP** investing in the employer securities that are **registered** with the SEC, participants must be given full voting rights for stock allocated to their accounts. In addition, the DOL has opined in a letter ruling dated September 28, 1995, that fiduciaries of ESOP in which participating employees are covered by a collective bargaining agreement must pass through decisions concerning tender offers or proxy voting to the plan's participants and vote as directed.

ESOPS maintained by employers whose securities are **not registered** with the SEC are required to pass through voting rights to participants with stock allocated to their accounts only for the following purposes: Corporate mergers or consolidations; recapitalizations, reclassifications, liquidations, dissolutions, or, the sale of substantially all assets. Furthermore, the plan may authorize the trustees to vote allocated stock based on a one vote per participant basis, rather than number of shares basis. IRC 409(e)

Employer stock held in a suspense account, i.e., not yet allocated to participants, may be voted by the trustee, in accordance with their duty to plan participants and beneficiaries.

J. FDIC Regulations

J.1. FDIC Part 344: Record Keeping and Confirmation Requirements for Customer Securities Transactions

The purpose of Part 344 is to ensure that customers for whom state nonmember banks effect securities transactions are provided adequate information concerning a transaction, and that banks maintain adequate records and controls with respect to securities transactions. This part is also designed to ensure that banks subject to this part maintain adequate records and controls with respect to the securities transactions they effect. The regulation **does not apply** to trust company subsidiaries of FDIC insured banks. The regulation parallels the securities recordkeeping regulations of the other Federal financial institution regulators (FRB Regulation H, and OCC 12 CFR 12, OTS 563). The requirements are nearly identical to those contained in those regulations. FDIC examiners conducting concurrent examinations with these regulators may rely on their findings with respect to customer securities recordkeeping and confirmation requirements.

Part 344 applies to transactions (business and consumer) made by the bank as a whole, and is not department specific. Therefore, to determine if exceptions may apply, **all transactions subject to the regulation should be totaled.** Transactions may include sweep transactions made from deposit customers in the Commercial Department to mutual funds, all nondeposit securities products and variable annuities bought or sold, and transactions made within the Trust Department, for example. Unless one of two general exceptions to the regulation apply, a bank executing securities transactions for customers is subject to all of the requirements of Part 344. The regulation, however, provides specific requirements for trust department accounts.

The term "security" includes stocks, bonds, mutual funds, repurchase agreements, variable annuities, and other investments outlined in the regulation in Section 344.3(m). The term **security does not include** a deposit or share account in a Federally or state insured depository institution; a loan participation; a letter of credit or other form of bank indebtedness incurred in the ordinary course of business; currency; any note, draft, bill of exchange, or bankers acceptance which has a **maturity at the time of issuance** of not exceeding nine months, exclusive of days of grace, or any renewal thereof the maturity of which is likewise limited; units of a collective investment fund; interest in a variable amount (master) note of a borrower of prime credit; or U. S. Savings Bonds.

"Customer" as defined in Section 344.3(g) includes any person or account, including agency, trust, estate, guardianship, committee, or other fiduciary account for which a bank effects or participates in effecting the purchase or sale of securities. The term does not include a person or account having a direct contractual agreement with a fully disclosed broker/dealer, broker, dealer, dealer bank, or issuer of securities that are the subject of the transaction.

J .1.a. Exceptions to the Regulation

Low Activity Banks

Section 344.2(a)(1) provides that banks which, over the prior three calendar years, execute an average of fewer than 200 securities transactions per calendar year are exempt from the some of the recordkeeping requirements of 344.4(a)(2) through 344.4(a)(4) and the written policy and procedure requirements of 344.8(a)(1) through (3). All transactions in U.S. Government and agency securities, as defined in Section 344.3(i),are excluded when calculating the number of transactions. The recordkeeping requirements of Section 344.4 do not apply to banks effecting fewer than 500 government securities brokerage transactions per year. However, mutual fund, repurchase agreement, and variable annuity transactions are included when calculating the number of transactions.

High-Activity Banks

Banks which exceed the 200 securities transaction threshold are referred to as "high activity" banks in this material.

Transactions with a Broker/Dealer

Section 344.2(a)(5) exempts securities transactions from the requirements of

the regulation if those transactions were effected for a bank customer by a registered broker/dealer. This exemption also applies when the broker/dealer is a dual employee. The exemption is applicable as long as: (1) the broker/dealer is "fully disclosed" to the customer, and (2) the bank customer has a direct contractual agreement with the broker/dealer. The term "fully disclosed" means that the broker/dealer's name (and not the bank's) appears on account documents, confirmations, statements, etc.

J.1.b. Record Keeping

Section 344.2(b) requires that a bank executing securities transactions for its customers is responsible for maintaining, directly or indirectly, an effective system of records and controls to ensure safe and sound operations. The records and systems must clearly and accurately reflect the information required by Part 344, and provide an adequate basis for an audit.

Section 344.4 requires the maintenance of certain records. Two sets of records are required. The first set of requirements applies to **all** banks providing such services, while the second set applies only to "high activity" banks.

Mandatory Basic Records for All Banks

Pursuant to Section 344.4(a)(1), securities transaction records must be maintained for at least three years and be in a chronological order. The account or customer name for which the transaction was effected, a description of the securities, the purchase or sales price, trade date, and the name of the broker/dealer or other person the securities were purchased from or sold to should be maintained as. Otherwise, under Section 344.4(b), the regulation does not require either the use of specific forms or the creation of specific recordkeeping systems. The records may be maintained in hard copy, automated, or electronic format, but must be "easily retrievable, readily available for inspection and capable of being reproduced in a hard copy. A bank may contract with third party service providers, including broker/dealers, to maintain records required by this section. Thus, a bank subject to all of the recordkeeping requirements noted below may, if it chooses, maintain one computer system for all of the required information.

Pursuant to Section 344.4(a)(5), written notifications are required by Section 344.5 and 344.6. The notification may take the form of a broker/dealer's confirmation or a confirmation from the bank that includes specific items. Section 344.6(b) permits trust departments to elect an alternative notification procedures, when the department exercises investment discretion other than in an agency capacity, whereby the grantor, or if there is no such person, then the beneficiary, and gives or sends to such person written notification within a reasonable amount of time. A fee may be charged for providing this information. For agency accounts, where the trust department exercises investment discretion, the department will provide the customer with an itemized statement no less frequently than once every three months. The statement will specify the funds and securities in the custody or possession at the end of the period, and all debits, credits, and transactions in the customers' account during the period.

"High Activity" Recordkeeping

All banks exceeding the 200-securities transaction threshold must maintain the following in addition to the requirements for all banks previously outlined:

- For each customer, account records reflecting all purchases and sales of securities, and all receipts and disbursements of cash [Section 344.4(a)(2)];
- A separate memorandum (order ticket) for each order to purchase or sell securities (whether executed or canceled). The memorandum must include: (i) the account name(s), (ii) whether the transaction(s) was a market order, limit order, or subject to special instructions, (iii) the time the order was received by the person responsible for effecting the

transaction, (iv) the time the order was placed with the broker/dealer, or if there was no broker/dealer, the time the order was executed or canceled, (v) the price at which the order was executed, and (vi) the broker/dealer utilized [Section 344.4(a)(3)];
- A record of all broker/dealers selected by the bank, and the amount of commissions paid or allocated to each broker during the calendar year [Section 344.4(a)(4)].

Records Retention

Records required by Part 344 must be retained for at least three years after the date of the transaction. [Section 344.4(a)]

J.1.c. Confirmations

All trust departments must follow the minimum guidelines of Section 344.5 in complying with the confirmation requirements. However a trust department may, optionally, comply with Section 344.6 for all or some of its accounts. Section 344.6 is an alternative approach which provides an exemption from most of the confirmation requirements. Examiners should note that trust department accounts generally comply under Section 344.6. The following discusses the general requirements first, and then the exemptive provisions of Section 344.6.

General Provisions

The bank must provide customers with information (a confirmation) regarding securities transactions effected for their accounts by either of the following types of notification:

- A copy of the broker/dealer's confirmation and, if any remuneration is to be received by the bank, a statement of the source and amount of the remuneration (refer below for special remuneration provisions). If the confirmation is sent from the bank, it must be sent within one business day from the bank's receipt of the broker/dealer's confirmation. [Section 344.5(a)]; or
- A written notification (bank confirmation) disclosing specified items of information about the transaction. [Section 344.5(b)] The confirmation may be sent to the customer by mail, FAX, or electronically.

The bank may elect to have the broker/dealer send the confirmation directly to the customer with either of these options. [Section 344.5(a)(1)]

If the broker/dealer's confirmation is not sent to the customer, the bank must provide the following in its confirmation: (1) the name of the bank, (2) the name of the customer, (3) the capacity in which the bank is acting (as principal or agent - see below), (4) the date and time of execution (or the fact that the time of execution will be furnished within a reasonable time upon request), the identity, price, and number of shares of securities purchased/sold, (5) the source and amount of any remuneration received by any broker/dealer or by the bank in connection with the transaction, and (6) the name of broker/dealer used or the name of the person from whom the securities were purchased/sold. [Section 344.5(b)(1) through (7)] The regulation also requires specific disclosures for transactions in debt securities [Section 344.5(b)(8) through (12)]. These requirements generally parallel the contents of the confirmations that broker/dealers must provide customers under SEC Rule 10b-10.

If the bank is acting as a "principal," it is selling or buying the security to the customer, in effect setting the purchase or sale price internally. If the bank is acting as an "agent," it is acting only as an intermediary between its customer and a third party. Disclosure must be made to the customer as to which capacity the bank is acting in.

Special Remuneration Provisions

Normally, the customer pays the broker/dealer a commission, and sometimes

an additional bank fee, for executing a securities transaction. In addition to the direct commissions and fees paid by the customer, the bank may receive remuneration from outside sources, such as a broker/dealer or a mutual fund.

Under both of the general methods of complying with the confirmation requirements, the existence of any additional remuneration received (or to be received) by the bank from outside sources must be disclosed to the customer. [Section 344.5(b)(6)(i)] In general, the source and the amount of such remuneration must be disclosed. In three situations, however, the regulation provides an alternative approach:

- When a prior written agreement between the bank and the customer provides for different treatment;
- When the bank acts in a principal capacity for transactions involving government or municipal securities;
- When the transaction involves open end mutual funds (where the amount of the bank's remuneration may be based on the number and/or amount of transactions over a given period which has not yet expired), if the customer has been provided a current prospectus which discloses all current fees, loads, and expenses at or before completion of the transaction.

In these three instances, Section 344.5(b)(6)(ii) provides that a bank may elect not to disclose the source and amount, if the customer's confirmation indicates that the bank will furnish the information within a reasonable period after the customer's written request.

Exemptive Provisions for Confirmations in Section 344.6

Section 344.6 permits a different approach from the general confirmation rules above. The exemptive provisions basically provide that the trust customer may agree to waive the general confirmation provisions outlined above. This exemption differs according to the type of account.

- In discretionary fiduciary accounts (trusts, estates, guardianships, etc., but excluding collective investment funds), the customer may agree to the receipt of transaction information within a "reasonable" time frame other than that specified in the regulation. This alternative arrangement may be a part of the text of the trust agreement. The bank may charge a "reasonable" fee for furnishing such information. [Section 344.6(b)]

  In such discretionary fiduciary accounts, the "customer" is the person having the right to terminate the account. If no such person exists, anyone with a vested interest in the account is the "customer."
- In discretionary agency accounts, the bank must mail an itemized statement to the customer not less than once every three months. The statement must provide a detail of investments in the account, together with uninvested cash balance(s). It must also show all transactions during the statement period. [Section 344.6(c)]

  If the customer requests, the bank is required to provide written notification conforming with Section 344.5. In such instances, the confirmation must be provided "within a reasonable time." The bank may charge a "reasonable" fee for furnishing these confirmations.
  - The term "reasonable," when applied to the time to provide confirmations as above, has not been interpreted to date. It must be applied in light of: (i) any provisions of the instrument, (ii) state law and regulation (if any), and (iii) the facilities and capabilities of the fiduciary institution.
  - The term "reasonable," when applied to the fees which may be charged as above, has not been interpreted to date either. It must be applied in light of: (i) any provisions of the instrument, (ii) state law and regulation (if any), and (iii) the bank's pricing for equivalent statements, such as deposit or loan statements.

- In all nondiscretionary accounts (fiduciary and agency accounts, but excluding dividend reinvestment and similar periodic plans), the customer may opt to waive the confirmation.

  The agreement (or separate disclosure statement), however, must clearly indicate that the customer may receive a confirmation within regulatory time frames at no additional cost. [Section 344.6(a)] The waiver must be sufficiently prominent that the customer realizes what is being waived. It may be either a separate disclosure document or included in the body of the trust agreement. If included in the agreement, the waiver may not be buried in "boiler plate" text. The waiver should be positively affirmed by the customer with a separate signature or initials, or by having the customer check a box.
- In cash management sweep accounts, the bank must provide the customer a written statement for each month in which a purchase or sale of a security is effected in a customer's account. If no transactions occur in the account, a written statement must be provided to the customer at least quarterly. [Section 344.6(d)]
  - On December 22, 1998, the FDIC Legal Division issued an interpretation which provides that the monthly statement requirement in 344.6(d) for sweep accounts does not apply to sweeps performed for fiduciary and agency accounts in trust departments. The monthly statement requirement applies only to sweeps from retail deposit accounts of the commercial bank. However, if sweeps for the retail deposit accounts are routed through the trust department, the monthly statement requirement would apply. They would not be exempted merely because they were routed through the trust department.
  - Sweeps into repurchase agreements collateralized by government securities fall under U.S. Treasury Department regulations for government securities dealers, which require a daily confirmation [subject to the requirements of 17 CFR 403.5(d)] and do not permit the monthly/quarterly statement of Section 344.6(d).
- Collective investment funds may follow the same provisions as in OCC Regulation 9.18(b)(6). [Section 344.6(e)]
- Periodic plans (such as stock purchase or dividend reinvestment plans) must provide the customer written statements at least quarterly. The statement must detail the asset holdings of the account, charges and commissions paid by the customer, and all account transactions. The bank may charge a "reasonable" fee for providing this information. [Section 344.6(f)]
- Retail bank customers may not waive the receipt of confirmations or statements, even by written agreement.

J .1.d. Settlement of Securities Transactions

Except under limited circumstances described in Section 344.7, a bank should not effect or enter into a contract for the purchase or sale of a security that provides for the payment of funds and delivery of securities later than the third business day after the date of the contract unless agreed upon by the parties at the time of the transaction. This portion of the regulation parallels SEC Rule 15c6-1 which established three business days instead of five as the standard settlement time frame.

J.1.e. Written Policies and Procedures

Section 344.8 requires that a bank executing securities transactions for its customers establish certain specified written policies and procedures. Two levels of policies are provided for in the regulation. The first applies to any bank providing such services, while the second applies only to "high activity" banks.

Mandatory Written Policy

All banks executing securities transactions for their customers must establish written policies and procedures for the crossing of buy and sell orders on a fair and equitable basis where applicable and permitted under local law. [Section 344.8(a)(4)]

"High Activity" Bank Policies

Section 344.8(a)(1) through (3) requires that banks exceeding the 200-securities transaction threshold [Section 344.2(a)(1)] maintain written policies and procedures governing:

- The supervision of traders or others who transmit orders or execute transactions in securities for customers;
- The supervision of all officers and employees who process orders for notification or settlement purposes, or perform back office functions with respect to securities transactions; and
- Fair and equitable allocation of securities and prices to accounts when orders for the same security are received at approximately the same time.

J.1.f. Officer/Employee Reporting of Personal Investment Transactions

Section 344.9 requires bank officers and employees who make investment recommendations or decision for the accounts of customers, participate in such determination, or obtain information concerning which securities are being purchased, sold, or recommended must report to the bank within 10 business days after the end of the calendar quarter, all transactions in securities made by them or on their behalf, either at the bank or elsewhere in which they have a beneficial interest. The regulation does not require that the bank or trust department have written policy or procedures to ensure appropriate disclosure and only requires disclosure when transactions meeting the requirements are present. Similar policies and procedures are required for national banks (12 CFR 12) and state member banks [FRB Regulation H, Section 208.8(k)(5)(iv)].

Quarterly reports are required from bank officers and employees who make or participate in the making of investment recommendations or decisions for the accounts of customers, or who obtain information concerning which securities are being purchased or sold.

- Bank directors are not covered by this provision. However, bank directors who are also officers of the bank are required to file the reports, when applicable.
- Reports are required when transactions made by the covered officers and employees (or on their behalf) aggregate to more than $10,000 during the calendar quarter. All transactions in U.S. Government and agency securities [defined in Section 344.3(i)], and all mutual fund shares, are excluded when calculating the $10,000 threshold. The same securities are also excluded from the reporting requirement.
- Reports must be provided to the bank within 10 days after the end of each calendar quarter.
- Personal investment transaction reports are required whether or not the bank falls under the 200 securities transaction threshold exemptions of Section 344.2(a)(1).
- Reports are required only if transactions have occurred. There is no requirement for "no-activity" reports to be filed by covered officers and employees with the bank.

The regulation does not specify with whom the reports are to be filed, but positions appropriate to each bank's organizational structure, such as the internal auditor, ethics office, or corporate secretary would be appropriate. Whatever position is chosen, it must have sufficient authority to effect corrections.

The purpose of these reports is to provide the institution with a mechanism for

monitoring and identifying certain violations, conflicts of interest, self-dealing, violations of its own employee ethics code, and unethical actions. When properly monitored, the reports should aid in deterring and detecting the following personal investment transactions of covered bank investment insiders:

- fraudulent, deceptive and manipulative acts,
- improper use of material inside information, and
- other abusive practices.

The report should identify the individual who is filing the report, and identify and describe each transaction being reported. [Section 344.9(a)(3)] If the $10,000 per quarter transaction threshold for any covered individual is met, all transactions (other than those exempt from the reporting requirements) must be reported, not merely those in excess of $10,000 per quarter.

Reports must contain certain details of the transaction(s), including the date(s) of the transactions, the type of transaction (purchases, sales, etc.) and an identification of the securities purchased or sold. While not required by the regulation, certain additional information is helpful in describing the securities and the transaction(s). This information includes: (1) the number of shares or the principal dollar amount of each transaction, (2) the price at which the transaction was effected, and (3) the name of the broker, dealer, or bank with or through which the transaction was effected. The absence of this additional information, however, should neither be scheduled as a violation nor criticized.

While not covered by Part 344, the bank should review the reports filed and investigate any indications of potential violations, exceptions and unethical conduct. The following illustrate transactions that should be of concern to the bank:

- "front running" - A practice where an investment manager purchases securities for his/her own personal interest prior to an anticipated purchase of the same securities by the accounts for which he/she acts as investment manager. For example, the money manager may purchase securities for his/her personal account ahead of a purchase of the same securities by institutional accounts, since the purchase of a large block of securities could cause the price of the securities to increase.
- "insider trading" - transactions where an individual uses nonpublic material inside information (covered by the SEC's Rule 10b5-1), typically concerning the condition of a company or impending announcements (mergers, takeovers, profits/losses, new products, product recalls, etc.) which may materially affect the price of a company's stock, to benefit personally from investment transactions (refer also to Section 8. D. Material Public Information),
- "scalping" - trading for small gains over a short period of time, usually within a day. In some cases, this involves taking advantage of very narrow spreads in volatile markets. "Scalping" may be indicative of trading securities with advance knowledge of portfolio changes (particularly with respect to very large portfolios, usually the trust department's entire discretionary portfolio), or knowledge of material inside information.
- transactions with the institution's fiduciary accounts, and
- compliance with the provisions of the bank's code of ethics that restrict or otherwise require the reporting of securities trading by the bank's investment management staff for their personal benefit. Practices typically covered by an investment code of ethics include:
  - clearance in advance of personal trades;
  - delays of "x" period before buying or selling a security recently traded for discretionary trust accounts;
  - restrictions on short-term trading, such as requiring the holding

of a stock for a designated period of time before taking a profit, perhaps dependent on whether a security is held in discretionary trust portfolios or recent trades in such securities;
   - selling short or investing in options on stocks, bonds and commodities held in trust accounts;
   - prohibitions against purchases of initial public offerings (IPOs), which are often hard to get and may be easily "flipped" for a quick profit; and
   - improper placement of personal investment transactions through the institution's brokerage accounts.

Examiners should not only ascertain that the required policies exist and the reports are filed, but also that the reports are reviewed by an appropriate bank official and that adequate follow-up action is taken as warranted.

If a bank acts as investment advisor to a mutual fund, the bank must also comply with SEC Rule 17j-1, as promulgated under the Investment Company Act of 1940 [17 CFR Section 270.17j-1], in addition to Part 344. Rule 17j-1 generally requires the same quarterly disclosures as Part 344, except:

- All transactions must be reported; there is no $10,000 filing threshold;
- Directors are covered by the report, as they are considered "access persons" under the SEC rule; and
- The reports must be covered in the mutual fund's code of ethics . [Note that a model code of ethics has been prepared by the Investment Company Institute]

K . Compliance with SEC Requirements

Securities and transactions in securities are largely governed by Federal law. The following discussion addresses some important aspects of securities regulation which are relevant to trust departments. Special reports or notices may need to be filed in those accounts holding equity securities which are registered under Federal securities laws. These requirements may apply to the trust department as a whole, to individual trust accounts, and to individual transactions. Others apply to the selection of brokers, the placement of brokerage transactions, and mutual fund 12b-1 fees.

K .1. Marketable Securities

Section 12 of the Securities and Exchange Act of 1934 (Act) required that equity securities (common stock) issued by corporations with 500 or more shareholders and $1 million or more in assets be registered in order to be traded on a national securities exchange. The SEC's Rule 12g-1 (17 CFR 240.12g-1), which was issued subsequent to Section 12, increased the asset size threshold to $10 million in total assets.

FDIC Part 335 implements the law governing stock issued by FDIC-supervised banks. This regulation incorporates the SEC's asset size threshold of $10 million.

The following list recaps various requirements involving equity securities. A more extensive discussion of each requirement is included after the listing. When applicable, examiners should verify compliance with the requirements.

- If the bank controls more than 5 percent of a registered company's outstanding stock, it must file notices under Section 13 of the Securities Exchange Act of 1934. Refer to the discussion in K.1.a. below, under the caption 13D and 13G, Acquisition Statements for Registered Equity Securities.
- If the bank has discretion over $100 million or more in stocks and convertible bonds, it must file quarterly 13F reports under SEC regulations. Refer to the discussion under Quarterly SEC 13F Equity reports in K.1.b. below.
- If a "person" controls 10 percent or more of a registered company's outstanding stock, a filing under Section 16 of the Securities Exchange Act of 1934 may be required. Refer to K.1.c. below.
- SEC Rule 144 governs the sale of restricted securities. Refer to K .2 below.

NOTE : Examiners may search the SEC EDGAR database to determine whether a bank (or anyone or entity) has submitted any required filing with the SEC at the following internet

site: http://www.sec.gov/edgar/searchedgar/webusers.htm

K.1.a. Acquisition Statements for Registered Equity Securities - SEC 13(d) and SEC 13(g)

As with any investor, bank trust departments must file Acquisition Statements when required by Federal securities law. Acquisition statements are required only for equity securities and are required only under certain circumstances.

Section 13(d)(1) of the Securities Exchange Act of 1934 (Act) requires that persons holding a "beneficial ownership" in certain types of equity securities file a notice ("acquisition statement") with the SEC when such "beneficial ownership" exceeds 5 percent of the total outstanding shares of a covered equity security. Two types of notices are involved, more generally referred to as Schedules 13D and 13G under Federal securities law. Schedule 13G imposes similar, but less burdensome, requirements than Schedule 13D. Refer to the discussion of "beneficial ownership" below.

Purchasers of equity securities issued by entities (including national and state member banks, thrifts and bank holding companies) that are not FDIC-supervised state nonmember banks follow SEC requirements. SEC Rule 13d-1 (17 CFR 240.13d-1) implements Sections 13(d)(1) and 13(g)(1) of the Act regarding acquisition statements.

Purchasers of equity securities issued by nonmember banks and registered under Part 335 of FDIC's Rules and Regulations must follow requirements equivalent to those in Section 13 of the Act. FDIC Section 335.331 requires compliance with SEC Sections 13(d) and 13(e) of the Exchange Act. FDIC acquisition statements are the same as the acquisition statements required by the Securities Exchange Act of 1934.

Beneficial Ownership

For bank trust departments, "beneficial ownership" involves the department's total holdings of any covered equity security where the bank: (1) has investment discretion over more than 5 percent of the total outstanding shares, or (2) has voting authority over more than 5 percent of the total outstanding shares. Note: "beneficial ownership" is defined in SEC Rule 13d-3 [17 CFR 240.13d-3].

It is important to note that the 5 percent threshold may be exceeded by the bank in its fiduciary capacity if it possesses any vestige of discretionary investment power or voting power. Neither of these powers must actually be exercised by the fiduciary. In fact such powers could be delegated to another interested party. If the bank as fiduciary has the authority to exercise either of these powers and has such powers over an aggregate exceeding 5 percent of a registered equity security, it must file the acquisition statements.

From the above, it is clear that such conditions are not met by:
(1) nondiscretionary accounts where the bank has no voting authority or no investment authority, (2) custodial accounts, or (3) investment advisory accounts where the bank acts as custodian and does not manage the assets.

13D Acquisition Statements

13D filings are transaction-based reports that, typically, will not apply to trust departments. They are filed primarily when stock is being accumulated to obtain a controlling interest. Most trust department holdings are of a passive investment nature.

When a transaction occurs resulting in the control of a covered equity security in excess of the 5 percent beneficial ownership threshold, a 13D filing is required. Every time the beneficial ownership changes one percent or more, the change is considered a material change, and an amended 13D filing is required. A 13D Acquisition Statement must be filed within 10 days with:
(1) the issuer of the security by certified or registered mail, (2) each exchange where the security is traded, and (3) the SEC or the primary Federal bank

regulator for publicly held bank securities.

More than one 13D filing may be required.

Example:

> On July 1st, a trust department's beneficial ownership holdings of ABC Company's registered stock increases to greater than 5 percent of the outstanding stock. The 5 percent threshold has been exceeded and, therefore, a 13D filing is generally required.
>
> On September 15, the department's beneficial ownership holdings decrease by less than 1 percent, resulting in an assumed 5.5 percent position. Generally, no filing is required because no material change in ownership has occurred.
>
> On November 15th the department's holdings rise again, this time exceeding 8 percent of outstanding stock. An amendment to Schedule 13D is required because a material change of ownership of outstanding stock has occurred since its previous filing.

13G Abbreviated Statements

13G filings are year-end reports of equity security holdings that often apply to trust departments. If the securities are not held for the purpose of exercising control (or as part of a related transaction, such as a takeover), but rather are for passive investment purposes, a short-form Schedule 13G may be filed instead of the 13D. The same 5 percent threshold must be exceeded, but it is applied only as of the calendar year-end. A Schedule 13G must be filed by February 14 of the following calendar year-end with the same entities as a Schedule 13D.

If there is no change from one year end to the next, no new 13G filing is required. However, if there is any change from one year-end to the next, a new 13G filing would be required. If there is a change of agency (e.g., due to a change from FDIC-registered bank stock to SEC-registered holding company stock), a new 13G filing would be required, even if there had been no change in beneficial ownership from one year-end to the next.

K.1.b. Reports of Equity Holdings - SEC 13F

This report applies to institutional investors, including trust departments, that exercise investment discretion over $100 million or more of equity securities (or securities convertible into stock).

SEC Rule 13f-1 securities include equities "traded on a national securities exchange or quoted on the automated quotation system of a registered securities association" [e.g., NASDAQ - ed.]. The Rule also states that filers may rely on the most recent SEC-released list of all required 13F securities.

Reports are filed with the SEC using the format of SEC Form 13F, which is required by SEC Regulation 240.13f-1 (Rule 13f-1). A sample 13F form is shown in SEC Regulation 249.325.

For each security held, the report: identifies the issuer, gives the CUSIP Number, and shows the market value and number of shares held. The number of shares reported is then broken down into two categories: investment discretion and voting authority. Under each category, the number of shares is further divided into three categories: sole authority, shared authority, and "other" discretionary authority.

Both the SEC Rule and Section 13f-1 of the Securities Exchange Act of 1934 require that copies of reports covering banks be filed with the primary Federal banking regulator. Thus, state nonmember banks filing individually must provide the FDIC with a copy of their 13F reports, as must holding companies whose 13F reports include the securities holdings of state nonmember banks.

SEC Rule 13f-1 and a copy of a printed Form 13F are in the FDIC's Rules and Regulations service in Volume III under the Miscellaneous Statutes and Regulations tab. The SEC's Division of Investment Management has issued a publication "Frequently Asked Question About Form 13F", which can be accessed on the internet at http://www.sec.gov . O nce in the website, go to Divisions, Investment Management, Frequently Asked Questions about 13f. The website cannot be accessed directly.

K.1.c. Section 16 Statements for 10 percent or More Holders of Registered Stocks

» Not Applicable to Trust Departments «

Section 16(a) of the Securities Exchange Act of 1934 generally requires that certain filings be made with the SEC for "persons" that have 10 percent or more "beneficial ownership" in stocks that are registered under Federal securities laws. The Act is implemented by SEC Rule 16a-3.

In a no-action letter to CS Holding (January 16, 1992), however, the SEC indicated that bank trust departments will not be deemed to be beneficial owners "of securities held for the benefit of third parties or in customer or fiduciary accounts where such securities are held in the ordinary course of business without the purpose or effect of changing or influencing control of the issuer."

K.2. Restricted Equity Securities - SEC Rule 144

In general, as promulgated under Section 4 of the Securities Act of 1933, Rule 144 (SEC regulation 230.144) provides that in order for securities to be sold without a formal registration:

- the securities must have been beneficially owned for at least two years,
- the number of shares sold in any three-month period must not exceed the greater of 1 percent of the total outstanding securities of the same class, or the average weekly trading volume for the class of securities during the four-week period preceding the sale, and
- the securities must be sold either in a broker's transaction or in transactions directly with a market maker.

In addition, adequate information regarding the issuer must be available to the public and a Notice of Sale (Form 144) must be filed with the SEC. No report to the SEC is required if less than 500 shares are sold in any three-month period and the sales price does not exceed $10,000..

On February 20, 1997, the SEC issued Release No. 33-7390, which amended Rule 144 to reduce the holding periods for restricted securities (i.e., those securities issued in private placements under certain conditions) that are covered by Rule 144. Effective April 29, 1997:

- the holding period requirement applicable to the resale of limited amounts of such restricted securities by any person will be reduced from two years to one year, and
- the holding period applicable to the resale of unlimited amounts of restricted securities held by non-affiliates is reduced from three years to two years.

Regulation S provides both an issuer-distributor safe harbor (Rule 903) and a resale safe harbor (Rule 904) for offshore sales of securities. To qualify for either safe harbor, Regulation S requires that: (i) the offer or sale must be made in an "offshore transaction" and (ii) the offer or sale must not involve any "directed selling efforts" in the United States. "Offshore transaction" is defined in Rule 902(h)(1)(i) as those in which an offer is not made to a person in the United States, and (ii) either the buyer must be outside the United States (or the seller must reasonably believe that the buyer is) or the transaction is executed, for purposes of Rule 903, on or through a physical trading floor of an established foreign securities exchange, or for purposes of Rule 904, in, on or through the facilities of a "designated offshore securities market," which is either one of an enumerated list of foreign securities exchanges or one that meets a set of criteria set forth in Rule 902. "Directed selling efforts" is defined in Rule 902(c) to include those that are "undertaken for the

purpose of, or that could be reasonably expected to have the effect of, conditioning the market in the United States" for the related securities (e.g., widespread advertising).

K.3. Electronic Submission of Forms and Notices

Since 1999, many forms, notices, and reports filed under various securities laws and regulations must be filed electronically:

- Under SEC Regulation S-T (17 CFR 231.10 - .601) the SEC requires the electronic submission of all reports, statements, and schedules filed pursuant to:
  - Sections 12(b) and 12(g) of the Securities Exchange Act of 1934;
  - the Trust Indenture Act of 1939 (other than applications for exemptive relief filed pursuant to section 304 and section 310 of that Act);
  - Sections 13, 14, and 15(d) of the Securities Exchange Act of 1934;
  - Sections 8, 17, 20, 23(c), 24(e), 24(f), and 30 of the Investment Company Act of 1940; and
  - the Public Utility Act.

The rule also permits, but does not require, the electronic filing of Form 144, where the issuer of the securities is subject to 13 or 15(d) of the Exchange Act. Otherwise, Form 144 should be filed in paper format. However, some notices are required to be submitted in paper copy only, including, but not limited to: filings pursuant to Regulations A, D, and E; Form F6; and annual reports required by section 313 of the Trust Indenture Act of 1939.

- "Temporary Hardship Exemption" hardcopy filings are permitted under Regulation S-T (Rule 201), for unanticipated technical difficulties. "Continuing Hardship Exemption" hardcopy filings are also permitted under Regulation S-T (Rule 202), if the filings cannot be submitted electronically without "undue burden and expense."
- Under the revised reporting requirements of **17 CFR 249 . 325**, banks which electronically submit Form 13F may submit a copy of the form to their banking agencies either: (a) in hardcopy; or (b) electronically, if the agency is capable of receiving the filings in electronic format (the FDIC currently receives this form in hardcopy).

FDIC FEDERAL DEPOSIT INSURANCE CORPORATION

Trust Examination Manual

Section 4 - Compliance/Account Administration - Personal and Charitable Accounts

Table of Contents

The services discussed below are commonly offered by the majority of trust departments and the duties described are typical. The duties associated with the various fiduciary capacities described vary from state to state. For this reason, they are described in general terms. In order to gain a more complete understanding of the scope of the duties and responsibilities of a given fiduciary capacity examiners should be familiar with applicable state statutes.

This section of the Manual is organized into the following parts:

A. General Overview

1. Policy Guidelines
2. Account Administration Considerations
3. Legal Considerations/Applicable Law and Regulations

B. Types of product lines

C. Types of accounts and fiduciary capacities

1. Court Supervised Accounts
   a. Estates
   b. Guardianships
2. Personal Trusts
   a. Trustee Under Will
   b. Trustee Under Agreement or by Declaration
   c. Trustee by Order of The Court
3. Charitable Trusts
   a. Internal Revenue Code Concepts
   b. Charitable Lead Trust
   c. Charitable Remainder Trusts
   d. Pooled Income Fund
   e. Charitable Contribution "Clifford Trusts" for Banks
4. Agencies

a. Custodian

b. Escrow Agent

c. Trustee for Land Trusts or Real Estate Trusts

d. "Qualified Intermediary" for 1031 Exchange or "Like Kind Property Exchange"

e. Investment Advisory Agent

f. Managing Agent

g. Farm Management Agent

h. Attorney-in-Fact Pursuant to an Executed Power of Attorney

i. Safekeeping Agent

D. Additional fiduciary capacities

1. Co-Fiduciaries

2. Successor Trusteeships

E. Asset Protection Trusts

A. General Overview

The proper and efficient administration of personal and charitable trust and agency accounts requires the establishment and implementation of policies and procedures, a system to monitor compliance therewith, and prompt correction of nonconformance.

The knowledge and expertise of management and operational staff; active involvement by the board of directors acting through a trust committee, and possibly through subcommittees; and adequate policies and effective procedures, coupled with systems for monitoring and ensuring compliance therewith; form the core of a risk management system designed to monitor, measure, and manage the various risks inherent in the administration of personal and charitable accounts.

Note: Unless specifically indicated otherwise, the term "personal trust" refers to court supervised accounts, personal trust accounts and personal agency accounts.

A.1. Policy Guidelines

The breath and depth found in an institution's policies and procedures depend upon the types, size, and complexity of accounts administered. Most policies, however, include the following elements:

- Account Acceptance Guidelines - Guidelines for the acceptance of accounts establishes limits on the type of fiduciary accounts that will be accepted. In establishing these guidelines, management should consider in establishing these guidelines are the level of expertise and experience available, either in-house or through third-party arrangements. It should also identify circumstances that may render the administration of an account overly complex or risky, such as unique or difficult-to-administer assets or ambiguous or complex terms in the governing document.

As such, an appropriate Account Acceptance Policy, coupled with an adequate pre-acceptance review process, is a fundamental element in an institution's risk management process. One of the most effective methods of limiting the risk inherent in fiduciary operations is to decline appointments for which the institution lacks appropriate

qualifications or that present heightened administration or compliance risks. For example, a policy may, within given limits, permit the acceptance of personal trust and investment agency accounts, but state that charitable trusts and insurance trusts should not be accepted. The policy may, however, provide for exception and establish a review process necessary to accept an appointment that would otherwise be contrary to policy. All such exceptions should be approved by the trust committee, or other duly appointed subcommittee thereof.

- Account Termination (or Closing) Guidelines - These guidelines ensure that upon terminating an account, the institution has adequately completed all of its administrative duties and responsibilities. The guidelines should identify all documentation required to close the account and include a process whereby account administration will be reviewed so that no outstanding administrative concerns remain unresolved. Often, an institution will develop checklists to ensure that all necessary items have been adequately addressed prior to closing the account. The lack of, or flawed, account closing procedures could result in future litigation.

- Fiduciary Appointments - These guidelines describe the types of fiduciary appointments (e.g. trusteeships, guardianships, successor trusteeships, co-fiduciary appointments, etc.) that an institution will accept. The guidelines may be included in account acceptance guidelines, if not addressed in a separate policy.

- Documentation Guidelines - These guidelines identify the documentation required to be maintained for each type of account accepted. For less complex accounts, the guidelines may briefly refer to administrative issues and approved checklists. Since a fiduciary must be able to demonstrate the appropriateness and prudence of its account administration, an institution's documentation guidelines must require the maintenance of original governing agreements, or working copies thereof, documentation evidencing fiduciary appointment, synoptic records, legal documents, etc.

- Account Review Guidelines - These guidelines communicate the Board's evaluation of the risk characteristics of various types of accounts by designating the depth and level of review. Accounts having a greater degree of complexity or risk may require an individual review performed at the trust committee level, whereas homogeneous accounts posing a relatively lower level of risk may be reviewed in groups at a lower management level. In any event, an institution's account review guidelines should ensure that each account is reviewed at least once during each calendar year. The FDIC's Statement of Policy of Trust Department Management requires an annual review for all accounts, even those that do not involve investment decisions.

A.2. Account Administration Considerations

It is the fundamental duty of a fiduciary to administer an account solely in the interest of the beneficiaries without permitting the interests of the trustee, or any third parties, to conflict in any manner. The duty of loyalty is of paramount importance, and is the cornerstone of all fiduciary appointments. The successful administration of an account must meet the needs of the beneficiaries in a safe and productive manner and equitably balance the interests of each beneficiary. This is true for any account administered. Therefore, a satisfactory account administration program ensures that accounts comply with applicable laws and the governing agreement. Such a program follows fundamental concepts of management and includes the following:

- Assignment of accounts to a specific officer. In larger departments two officers may be assigned: an administrative officer and an investment officer. This allows for the assignment of accountability for the various aspects of account administration.

- The intent of the testator, settlor, or principal must be clearly understood by the account officer(s). This ensures the identification and fulfillment of the purposes and objections of an account.

- Identification of any restrictive language, such as exculpatory language, provisions governing the invasion of principal, or spendthrift clauses.

- Adherence to the investment provisions, including restrictions, contained in the

governing agreement. This affords the income beneficiary and the remainderman or principal beneficiary, respectively, of an level of income or capital appreciation consistent with the intent of the creator of the trust.

A.3. Legal Considerations/Applicable Law and Regulations

Both common law and civil law (Federal, state and local statutes and regulations) govern trust activities. There are laws that apply to fiduciary activity in general, to specific fiduciary functions (trustee, conservator, guardian, agencies, etc.), and to the specific type of property under administration (securities, real estate, etc.)

A.3.a. Common Law/Fiduciary Principles

The body of common law is much more voluminous and detailed than civil law. Therefore, management should have at least a general familiarity with some of the more widely known common law authorities such as Scott, Bogert, and the Restatement of the Law of Trusts. Each of these sources provides insight into the general fiduciary principles that should be followed in the administration of personal and charitable trusts. The following are some of the more important duties of a trustee that originated out of common law:

- A trustee owes a duty of loyalty to administer trust affairs solely for the benefit of the beneficiaries. The thrust of this duty is to avoid conflicts of interest that would enrich or provide an advantage to the trust administrator at the expense of the beneficiary.

- A trustee must exercise the skill and prudence, as a person of ordinary prudence would exercise in managing his own property. Trust managers who represent themselves as having expertise will be held to that level of expertise.

- A trustee may not delegate the administration of the trust or the performance of acts that the trustee should personally perform. It should be noted that the trust agreement or state law may permit certain delegations. However, the determination of whether a delegation is appropriate is contingent upon whether the act requires professional skills or abilities not possessed by the trustee. For example, trustees can employ accountants, attorneys, and other professionals, when those qualifications or abilities are lacking in the trust department. Furthermore, a breach of trust for not delegating duties may occur when certain qualifications are necessary, but are not possessed or obtained through other sources. Refer to the Prudent Man Rule in Appendix C for additional information.

- A trustee must keep and render accurate accounts. The accountings should reflect receipts and disbursements, gains and losses on investments, and other transactions affecting the account. Such records are also necessary for completion of tax returns. Usually, the state law requirements apply to testamentary trusts or court-appointments and call for accountings to the court at specific intervals. If the trustee fails to keep accurate records, the court may take actions, up to and including removal of the trustee. Also, a beneficiary may request an account statement from the trustee, as deemed necessary. Most trust departments provide at least quarterly statements to accountholders, but not beneficiaries.

- The trustee must provide information to the beneficiary that will protect his rights or that would be viewed as important by the beneficiary.

- A trustee has a duty to keep trust property separate from his own property and should not commingle trust property with that of other trust accounts. Trust property should be clearly earmarked. The purpose behind this duty is to provide an audit trail, to prevent the trust's assets from being attached by the trustee's creditors, and to prevent fraudulent use. This duty does not preclude a trust manager

from using mutual funds or other pooled investment vehicles.

- A trustee must take title to all titled or certificated assets and secure documents representing intangible assets upon becoming trustee.
- A trustee must make the trust productive and must invest the trust assets for income or increase in market value. Uninvested cash (other than held for distribution or reinvestment) held for periods of time, may be evidence of negligence by the trustee.
- A trustee must comply with all provisions of the trust instrument, including those regarding distributions to or for beneficiaries. The trustee must exercise care to ensure that distributions are made in an accurate and timely manner.
- A trustee must deal impartially with beneficiaries. An equitable balance must be made between the income beneficiaries and principal beneficiaries (remaindermen).
- The trustee must work with persons holding power and control, such as state courts, local taxing authorities, property managers, etc. One task related to this duty is the voting of proxies.
- A trustee has an obligation to work with and exercise skill in communicating with co-trustees. A co-trustee must be especially wary of acting unilaterally, or conversely, being indifferent toward the actions of the other trustee.
- A trustee has a duty to defend against claims involving trust assets or the validity of the trust. It is imperative that fiduciaries have access to legal advice as questions arise and whenever a claim is made.
- The trustee must preserve and protect the property of the trust. In practice, this means obtaining and maintaining insurance, ensuring that deeds, mortgages and titles are properly recorded, and depositing funds within the FDIC deposit insurance limitations. Trustees must maintain buildings, vehicles, and equipment in good condition to prevent deterioration.

Examiners should not cite "violations" of common law (equity). Noncompliance with certain principles of equity would normally be treated as another criticism with reference to "generally accepted trust practices", rather than a statutory violation. Noncompliance with common law may involve a substantial exposure to liability and loss.

Trust companies will attempt to limit exposure to liability and loss by inserting **exculpatory clauses** into the trust instrument. These clauses usually seek to limit liability to severe breaches of trust, such as negligence, bad faith, or willful misconduct, and not for every failure to use ordinary skill and ability. The courts have afforded fiduciaries only limited protection from lawsuits against fiduciaries employing these clauses. Since a trustee purports to have specialized fiduciary skills, courts do not appreciate a defense claiming only ordinary care and skill was utilized. Additionally, the fact that the trustee often demands the insertion of this clause could be construed as conflicting with the fiduciary's duty of loyalty to his client. Clauses which limit losses resulting from a co-trustee's own actions or property under his control, exclusive of the other co-trustee, usually have similar limited effectiveness.

Civil courts have provided several remedies for failure of fiduciaries to properly exercise their obligations. These remedies include setting aside inappropriate transactions, enjoining a disloyal act, monetary damages, forfeiture of fees or interest or nullifying a sale and ordering a re-sale of property. Courts have removed trustees where there were egregious instances of improper administration of trust agreements. Examples of circumstances where a trust could be found liable follow:

In the event of an improper transaction, such as a sale of assets from a trustee to a trust, or an inter-account transaction, a beneficiary will often be given a choice of either affirming the transaction, setting aside the sale, or taking the profit resulting from the sale. It is the burden of the trustee to prove that any transaction is fair to all parties.

The failure to adequately defend the trust from attack could result in financial liability. Such attacks may derive from creditors seeking to attach the assets of the trust, a lawsuit challenging the validity of the trust, or attempts to prematurely terminate the trust. Fiduciaries have been found liable for failure to appeal a court case where the trust was held liable. Expenses from a successful court challenge can be paid from the trust; frequently, an unsuccessful challenge can be defended using trust assets if the defense was encouraged by the beneficiary.

A failure by a trustee to act promptly and competently in receiving and maintaining trust assets could result in whatever loss ensues. For example, failure to ensure trust property could result in the trust being held liable in the event of storm damage or theft. Additionally, unwarranted delays by a successor trustee in obtaining financial assets could result in liability if these assets declined in value during the delays.

Co-mingling the assets of the trust with the assets of the trustee or another trust could result in significant liability. Should a trustee be unable to trace the source of assets, the trustee may be held liable for damages or a court may conclude that all the co-mingled assets are those of the trust.

The failure to make trust assets productive also produces liability exposure. A trustee that does not promptly invest cash, that deposits funds in excess of FDIC insurance coverage, or that does not make necessary changes in investments received, could cause significant liability.

Examiners are not expected to render a legal opinion as to equity matters involved in the administration of personal trusts. However, the examiner should discuss the facts of an apparent violation of a common law principle or of the trust instrument itself, and extend contingent liabilities as necessary. In complex and significant matters, the bank's legal counsel may provide a legal opinion concerning the matter.

A.3.b. Federal Statutes

The administration of personal trusts, including charitable trusts, is subject to federal statutes. A fiduciary is subject to Federal laws in the same manner as any individual or business owning or dealing with property. The violation of Federal statute is typically described in the report of examination. Examples of Federal laws and regulations with which a fiduciary must comply include: Federal securities laws; consumer protection laws; the Federal Reserve Act and implementing regulations; fair credit laws; U.S. Treasury regulations; the Internal Revenue Code, etc. Violations may result from the activities of a trustee or other fiduciary or apply by reason of the type of property held and/or administered by the fiduciary.

A.3.c. State Statutes

State financial or banking codes include laws governing banks, trust companies, and similar institutions. A growing number of states have adopted various uniform statutes that apply directly or indirectly to the conduct of trust activities. States adopting uniform statutes often modify them. Therefore, management should be familiar with the text of their respective state law. Below are some of the more common uniform codes.

- Uniform Prudent Investor Act - The Uniform Prudent Investor Act establishes "modern portfolio theory" as the standard for the management of trust assets, rather than focusing on the prudence of individual investments, as is the case with the Prudent Man Rule.

Uniform Prudent Investor Act permits the delegation of investment and management functions, subject to safeguards. The text of the Uniform Prudent Investor Act and comments is found in Appendix C.

- Uniform Trust Code - The act comprises a comprehensive codification of trust law. However, many states have modified major portions relating to the rule of perpetuities, and asset protection trusts. See Asset Protection Trusts in this chapter.

- Uniform Probate Code - The act simplifies and clarifies the law concerning the affairs of decedents, missing persons, protected persons, minors, and incapacitated persons. The code is designed to promote a speedy and efficient system for liquidating the estate of a decedent and distributing estate assets to the designated heirs, facilitating the use and enforcing certain trusts, and providing a uniform law among various jurisdictions.

- Uniform Principal and Income Act (UPIA) - The UPIA provides guidance to fiduciaries regarding the allocation of assets between principal and income. This allocation is very important when the trustee must consider the interests of both an income beneficiary and a remainderman in administrating a trust or estate. The UPIA is a default statute that only operates when the governing instrument is silent. The UPIA provides guidance to the fiduciary when the settlor grants discretion to the trustee or when the trust agreement is silent as to the allocation. Therefore, a settlor may direct the allocation of principal and income in any manner in a revocable trust. The UPIA was originally written in 1931 and was revised in 1962. Another revision, endorsed by the American Bar Association, was drafted in 1997. It is now being recommended for enactment in all states. The recent revision has two main purposes. First, a general revision was necessary to bring the act up to date. Second, the rules for allocating income and principal was updated to address the principles of modern portfolio theory. The 1997 UPIA amends existing rules (it expands the definition of receipts from an entity, provides for uniform treatment of corporate distributions and when an investment in an entity is liquidated, and modifies the treatment of receipts from the exploitation of natural resources, etc.) and establishes rules for asset types (derivatives, asset-based securities, etc.) not mentioned in the prior UPIA. A copy of the 1962 UPIA and 1997 UPIA are found in Appendix C. Please refer to the discussion in Section 3.

- Uniform Fraudulent Transfer Act (UFTA) - The UFTA is designed to prevent fraudulent transfers which occur when a debtor intends to hinder, delay, or defraud a creditor, or transfers proceeds under certain conditions to another person without receiving reasonable equivalent value in return. Included within the law are the "Badges of Fraud", which aid in determining whether the debtor had actual intent to defraud. See www.FraudulentTransfers.com.

- Uniform Gifts to Minors Act (UGMA) - The UGMA allows an adult to contribute to a custodial account in a minor's name without having to establish a trust or name a legal guardian for the transfer of property to a minor.

- Uniform Simultaneous Death Act (USDA) - The purpose of the USDA is to establish priority of death in the case of simultaneous deaths. The priority affects the distribution of a decedent's assets.

The text of these and other uniform acts is also available at the Internet site of the National Conference of Commissioners of Uniform State Laws http://www.nccusl.org/nccusl/DesktopDefault.aspx

State laws that apply to classes of property also are relevant. For example,

real property held as an asset of a trust or estate would be subject to state real property laws, while some states have intangible taxes on monetary assets.

B. Types of Product Lines

The volume and type of personal trust accounts can be segregated into three broad product lines; trusts, estates (including guardianships), and agencies. An important distinction is made between those accounts for which the institution has investment discretion, and those for which it does not. The relationships may be further categorized by the specific capacity in which the institution serves, the purpose of a particular type of account, and/or other unique features of an account. Personal trust accounts can also be segregated into those accounts subject to supervision by a court and those that are not.

C. Types of Accounts and Fiduciary Capacities

C.1. Court Supervised Accounts

The administration of estates and guardianships is supervised by an appropriate court, referred to in various jurisdictions as probate, chancery, or surrogate court. Judicial supervision is intended to protect the interests of minors, incompetents, unknowns, and the deceased. The court formally appoints the fiduciary (even though perhaps "nominated" by the will), and reviews and approves all acts of the fiduciary. The fiduciary typically must periodically provide the court with "accountings" of the fiduciary's activities in administering the account.

C.1.a. Estates

In an estate, the trust department, as either executor or administrator, is responsible for a decedent's assets from the time of formal appointment by an appropriate court until the estate's final settlement is approved by the court. A fiduciary is not responsible for events prior to its appointment. However, once appointed, the trust department, as executor or administrator, is responsible for protecting the estate's assets, and is held responsible for neglectful or delayed administration. All acts in the administration of an estate are reported to, and subject to approval by, an appropriate court. The department's duties and responsibilities are dictated by the decedent's will and by state and common law.

The primary duties of an executor, or administrator cum testamento annexo (c.t.a.), include the following:

- assembling of decedent's assets;
- preparation of an inventory of all assets of the deceased;
- taking control or custody of such assets;
- orderly conversion of certain assets "in kind";
- payment of administration costs, taxes (including Federal estate and/or state inheritance taxes), and all other legal claims against the estate;
- distribution of the net estate in accordance with the terms of the will; and
- filing of a final accounting with the court of competent jurisdiction, if required.

Probate procedures may also require interim accountings, but this varies between states. The duties of an administrator are essentially the same as for an executor or administrator c.t.a., but are dependent upon the intestacy laws of individual states.

Generally, the trust department will act in one of the following capacities:

C.1.a.(1). Executor

An executor, whether an individual or an institution, is nominated in a will by

the maker (testator) to settle an estate and to perform in any other manner described in the will. Before a bank acts as executor, it must have the will accepted by a court of competent jurisdiction as the valid and final will of the deceased. The court will then issue written authority to serve as executor, often termed Letters Testamentary.

C.1.a.(2). Administrator

An administrator is appointed by the court to settle the estate of a person who died leaving no valid will. Without a will, the administrator must carry out its functions solely in accordance with state intestacy laws. Written authority, often termed Letters of Administration, must be received from the court to serve as administrator of an estate.

C.1.a.(3). Administrator cum testamento annexo (c.t.a.)

The court appoints an administrator c.t.a. (i.e., with the will annexed) when there is no executor named in the will, or when the executor named is unable or unwilling to serve. As with an executor, the will must be accepted by a court of competent jurisdiction, and the administrator c.t.a. must receive written authorization to settle the estate. Settlement of the estate is made in accordance with the terms of the will. When an executor or an administrator c.t.a. dies or is removed before completing the settlement of the estate, the substitute fiduciary is known as an administrator c.t.a., d.b.n. (de bonis non) (i.e., administrator with the will annexed for assets not yet distributed).

C.1.a.(4). Ancillary Administrator

Ancillary administration may be necessary if an estate contains property in a state or jurisdiction (foreign country) other than the decedent's domicile at the time of death. The ancillary administrator represents the estate on all matters within the alternate jurisdiction. Typically, performance in this capacity involves the handling of real property when an estate contains property in another state.

C.1.b. Guardianships

A guardian is an individual or institution appointed by a court to care for the property and/or the person (referred to as the "Ward") of a minor, an incompetent, a spendthrift, or other incapacitated person. The powers and responsibilities of the guardian are governed by the provisions of state statutes and court decisions. Investment limitations are often delineated by statute and any exceptions require court approval. The guardian's duties may be limited to the property (guardian of the estate), the person (guardian of the person), or both (guardian). Banks generally will serve only in the capacity of guardian of the estate and many states prohibit a bank from serving as the guardian of a person.

Under a guardianship, the ward is the beneficial owner of property. A guardian is an agent of the court and has no legal or equitable title to the ward's property. The guardian of a minor receives, holds and manages the property, renders accountings to the court and makes a final settlement with the minor when he becomes of age. A guardian for an incompetent or absentee performs the above duties as long as the incompetency or absenteeism lasts. Such words as committee, conservator, curator and tutor are used in various states to describe particular types of guardianships.

Obligations of a guardian include:

- Protect and preserve the assets;
- Submit an inventory and appraisal to the court;
- Retain or reinvest assets as advised by the court, or as permitted under state law;
- Use income and principal to meet the needs of the ward; and

Submit accountings (usually annually) to the court.

C.2. Personal Trusts

A trust is a fiduciary relationship by which legal title to property is held by one person or corporation for the benefit of another. In trust relationships, the trustee has the responsibility of ownership and holds legal title to the trust property, while the beneficiary enjoys the benefit of ownership and holds equitable title.

Personal trusts can be broadly classified as either testamentary (also known as trust under will), or living (also known as inter vivos or trust under agreement). Trusts can further be classified as revocable or irrevocable. In a revocable trust, the settlor retains the right to change or terminate the trust at any time and does not relinquish control over the assets held in a revocable trust. Therefore, under Federal estate tax law, those assets are considered owned by the grantor. Furthermore, the revocable trust is not a public record, and assets transferred to beneficiaries via a revocable trust remain a private transaction. For irrevocable trusts, the trust cannot be modified or revoked by the settlor; however, the instrument may provide that a designated person can modify or terminate the trust. The settlor of an irrevocable trust relinquishes control over the assets and is, therefore, those assets are not subject to estate taxes. An irrevocable trust may be amended or revoked under specific circumstances. For example, one state supreme court held that a person who is both a settlor and sole beneficiary of an inter vivos trust may revoke the trust when the agreement specifically provides that the trust is irrevocable. As with the revocable trust, assets transferred to beneficiaries remain a private transaction. Under common law, if the instrument is silent regarding revocation, the trust is assumed to be irrevocable.

Fiduciary powers and duties should be clearly defined in the trust agreement. A lack of definition may cause uncertainty, impair investment performance, and prevent the trustee from taking actions in the best interests of the beneficiaries. In the absence of clearly defined provisions, state statutes also contain a list of the trustee's powers and duties. The general responsibilities of the trustee include:

- Preservation of the assets composing the trust;
- Management of assets to provide income;
- Distribution of income to designated beneficiaries;
- Accounting for all actions; and
- Dealing with interested parties.

The administration of personal trust accounts is primarily controlled by the terms of the governing instrument. State statutes and common law technically govern only when the instrument is silent or the provisions violate public policy. Refer to the discussion of Account Administration Considerations.

The fiduciary capacity under which personal trusts are administered is generally that of trustee under will, trustee under agreement, trustee by declaration, or in some circumstances, trustee by order of the court.

C.2.a. Trustee Under Will

A trust under will (testamentary trust) is created when the decedent's will bequeaths property to be held in trust for the benefit of a person, corporation, or charitable organization. The trustee receives the property from the executor or administrator and administers the assets for the beneficiaries. A probate court usually has jurisdiction over a testamentary trust. When the will is probated, the trust included in the will becomes a public record. Frequently, the bank may first serve as executor (or administrator c.t.a.), and then follow as trustee if the will establishes a trust, and the court permits by necessary appointment.

Common types of testamentary trusts used by modern estate planners include: the marital deduction trust and non-marital (a.k.a. bypass trust, credit shelter, or exemption-equivalent) trust. These two are frequently used in conjunction with one another, and are sometimes referred to as "a-b" trusts.

Another is the QTIP (Qualified Terminable Interest Property) trust. Testamentary "support", "education", and "health and welfare" trusts for spouses, children, and grandchildren, are also common. Other types of trusts may also be encountered. In each instance, the successful administration, and supervisory review of such administration, requires an understanding of the objectives of the trust, as well as the specific language of the trust instrument.

C.2.b. Trustee Under Agreement or by Declaration

A trust under agreement (living or inter vivos trust) comes into existence when the creator of the trust enters into an agreement or contract with the trustee setting out the terms of the trust. A trust by declaration is created upon declaration by one person to be trustee of property for the benefit of someone else. The trustee's duties are set out in the agreement or declaration and may include a wide range of responsibilities. The creator may have reserved the right to amend or terminate the agreement, in which instance the trust is considered either partially or fully revocable. Irrevocable forms of agreement are also used and may have certain tax advantages.

The desire of individuals to obtain favorable tax treatment under Federal income tax laws has led to the creation of various types of special purpose irrevocable trusts. Examples of such trusts include "Clifford Trusts," "Crummey Trusts", and various gift-related estate tax reduction trusts (RPM Trusts, Grantor Retained Income Trusts, Grantor Retained Annuity Trusts, and Grantor Retained Unitrusts)." To properly administer such trusts, trustees must have a comprehensive knowledge of the applicable Federal income tax laws, since a failure to satisfy all the requirements of the Federal tax code could cause a trust to lose the favorable income tax treatment for which the trust was created.

Other types of living trusts are Medicaid trusts, family incentive trusts, and insurance trusts. Such trusts have a unique or limited purpose. The successful administration of such trusts requires an understanding of the each trust's unique objectives, including the specific provisions contained in the trust instrument, and the laws and regulations governing such trusts.

C.2.c. Trustee by Order of The Court

A court of competent jurisdiction may appoint a bank as trustee to receive property in trust and administer it for the benefit of the person(s) designated. In some states, the capacity is known as a guardianship or conservatorship rather than trusteeship. Often, the court appoints the trustee for a special purpose arising from litigation. In divorce proceedings or real property disputes, the court may appoint a trustee to care for disputed property and account to beneficiaries pending settlement. The trustee in this instance may have full or only directed authority over the management of the disputed property.

C.3. Charitable Trusts

A charitable trust may be established by will or agreement for religious, educational, cultural or community-welfare purposes. It is normally exempt from Federal income tax if it meets the requirements of the Internal Revenue Code. In many states, the rights of the charitable beneficiary are enforced by that state's attorney general. Some charitable trusts may last forever, while duration of other trusts is limited by the rule against perpetuities, which differs in important respects from state to state. The purposes of charitable trusts depend upon the intent of the trustors, but tax planning will usually be important.

The following sections provide an overview of the Internal Revenue Code as it applies to charitable trusts and of the potential adverse consequences of failing to comply with the requirements of the Code. The discussion is general in nature and primarily focuses on "nonexempt" activity.

C.3.a. Internal Revenue Code

The administration of charitable trusts is governed to a significant extent by the

provisions of the Internal Revenue Code (IRC). These rules and regulations are quite extensive and complex and it is essential that the trustee have a good working knowledge of the applicable provisions of the Code and the requirements for maintaining a charitable trust's favorable tax treatment. The failure to maintain the favorable tax status may result in unfavorable tax consequences to individual donors and the charitable organization itself. In such cases, the trustee may be subject to losses as a result of legal actions and court surcharges. The miscalculation of payments and distributions may also result in surcharges and other liabilities.

The first step in the management process for charitable trusts is determining whether a charitable organization and the trust created for its benefit are classified as "exempt" or "nonexempt".

a. Organizations are granted tax-exempt status under Section 501(a) of the IRC. Though there are many types of exempt organizations, the most common are found in Section 501(c)(3). These are nonprofit organizations operated exclusively for charitable or educational purposes. Exempt organizations are then further categorized by the Tax Reform Act of 1969, which introduced the concept of a "private foundation". The act differentiates between two groups: public charities and private foundations. The restrictions and requirements imposed upon private foundations to qualify favorable tax treatment are numerous and complex.

   Additional information is available from the Department of Treasury, Internal Revenue Service, Publication 557, "Tax-Exempt Status of Your Organization." Publication 557 can be found on the IRS web site www.irs.gov

b. Nonexempt organizations are those that do not qualify for tax-exempt status. However, they involve certain charitable purposes for which a contributor is allowed a deduction. Nonexempt activity is governed by section 4947(a)(2) of the Internal Revenue Code. There are two categories of nonexempt trust. The first are trusts that devote all of their "unexpired interests" to charitable purposes. The second are trusts where the unexpired interests are devoted to both charitable and non-charitable purposes. These are also known as "split-interest" trusts. There are three types of split-interest trusts: Charitable Lead, Charitable Remainder, and Pooled Fund trusts. The split-interest trusts are more fully discussed in the following sections.

C.3.b. Charitable Lead Trust

A charitable lead trust is a trust for a fixed term of years wherein a charity is the beneficiary of an annual annuity or unitrust payment, with the remainder interest belonging to a noncharitable beneficiary. It is designed to provide income payments to at least one qualified charitable organization. The fixed term may be measured by a fixed number of years, the lives of one or more individuals, or a combination of the two. If the life of an individual option is chosen, the individual must be alive at the origination of the trust. After the expiration of the fixed term, trust assets are paid to the grantor or one or more of the noncharitable beneficiaries named in the trust agreement.

As previously noted, the trust may be designed as either an "annuity trust" or a "unitrust".

In an **annuity trust**, a trust is formed where a fixed amount is paid not less often than annually. The fixed amount (the annuity) may be stated as a fixed percentage of the initial net fair market value of the trust assets, as a fixed sum, or an amount determined by a formula stated in the trust agreement. The annuity may be changed during the term of the trust; however, there are specific criteria that must be met. In the event that trust income is insufficient to meet the annual annuity payment, the corpus of the trust may be invaded.

In a **unitrust**, a trust is formed where a fixed percentage of the net fair market value of its assets, valued at least annually, is distributed, not less often than annually. The net fair market value of the trust assets may be determined under a number of methods, provided the methodology and timing used are consistent. The determination may be made on any one date during the taxable year, or may be made by taking an average of the valuations made on more than one date during the taxable year. If the trust agreement is silent, the trustee may select the method and date.

Other key features of unitrusts include the following:

- Charitable organizations are described in IRC Section 170(c)
- No minimum or maximum payout annuity or payout rate
- No five-percent probability test
- No maximum term for the trust unless required by state law
- Additional contributions allowed (Note: Adding additional monies to an annuity trust will not increase the income paid out.)

C.3.c. Charitable Remainder Trusts

A charitable remainder trust is an irrevocable trust that provides for a specified distribution, at least annually, to one or more beneficiaries, at least one of whom is not a charity. The term of the trust is not to exceed the lesser of 20 years or the life or lives of the individual beneficiary(ies). If the beneficiary is an individual, he must be living at the time the trust is created. The irrevocable remainder interest is held for the benefit of, or paid over to, one or more qualified charities. The specified distribution must be either a sum certain (annuity) or a fixed percentage (unitrust).

A Charitable Remainder Annuity Trust (CRAT) provides a sum certain that is paid out, not be less than 5 percent nor more than 50 percent of the initial net fair market value of the property placed in the trust. The annuity amount may be a percentage of the initial fair market value or an amount fixed in the trust agreement. Neither the percentage nor the fixed payment may can be changed, regardless of fluctuations of portfolio value. Therefore, additional contributions are prohibited. [Authority under IRC 664(d)(1)]

A Charitable Remainder Unitrust (CRUT) provides for the payment to a noncharitable beneficiary, of a fixed percentage, not less than 5 percent nor more than 50 percent of the net fair value of its assets, valued annually. The fair market value of the trust assets may be determined on any one date during the taxable year of the trust, or by taking an average of the valuations made on more than one date during the taxable year. The valuation method must be applied consistently, although the annual payment from a unitrust will vary, depending upon the value of trust assets. There are a number of payout options: standard, income, net income, make-up, and flip. Each option presents unique payout considerations that the trustee must be familiar with to ensure that proper distributions are made. Additional contributions are permitted. [Authority under IRC 664(d)(2)]

Charitable remainder trusts may be constructed with many variations, and require a good understanding of the Internal Revenue Code. Other important considerations for this type of trust include:

- Charitable contributions are defined in IRC Section 170(c).
- To qualify as a charitable remainder trust, the trust must meet all of the requirements set forth in IRC Section 664. Note, the IRS no longer issues determination letters stating that a charitable remainder trust qualifies for a charitable income, gift, or estate tax deduction. The IRS does provide sample documents to provide guidance.

- There is a requirement called the "10 Percent Minimum Present Value", or prequalification floor. In 1998, the law was revised to require that the present value of the charitable remainder interest be at least 10 percent of the net fair market value of the property transferred into the trust on the date of transfer. If a trust fails this test, there are additional rules to provide relief.
- The transfer of trust principal and excess income to the charitable remainderman prior to the termination of the trust is permitted within certain limitations.

C.3.d. Pooled Income Fund

A pooled income fund is a trust established by a charity to receive donated property and to provide the donors with income for life. The pooled fund maintains an investment portfolio and provides the donor a rate of return on the donated property. The donor receives income, gift, or estate tax deductions. Trust departments may be appointed to act as an administrator or investment manager for pooled income funds. Refer to Section 7, Subsection N.4, Bank Managed "Pooled Income Funds" Organized by Outside Entities for additional information.

C.3.e. Charitable Contribution "Clifford Trusts" for Banks

This special purpose account combines charitable features with the customary Clifford Trust, a form of personal trust created for a period exceeding 10 years. The grantor of such a trust transfers assets irrevocably in trust (i.e., for the duration of the trust) and, the income is not taxable to the grantor during the term of the trust. It is important to note that the income may, or may not, be used for charitable purposes. The Tax Reform Act of 1986 eliminated the 10-year or Clifford trusts exception from grantor-trust taxation rules, thereby eliminating the establishment of such trusts. Some older trusts may still exist.

A bank itself may have established a Clifford Trust, primarily for income tax purposes. Under the Internal Revenue Code, a corporation is restricted to a maximum percentage of its taxable income that may be deducted as a charitable contribution. By employing the trust vehicle, a bank may increase its charitable contributions beyond the percentage limitation without subjecting the excess amount contributed to taxation. The trust is funded with bank assets, usually cash or prime quality securities, and all of the income is distributed to charities, with the principal reverting to the bank upon termination of the trust. One or more of the bank's directors and/or officers may be appointed as individual trustee(s). In such cases, the bank does not need trust powers. However, if the bank has a trust department it would be preferable for that department to be named as trustee.

The trust instrument should: provide a statement of the purpose and objectives of the trust; specifically prohibit "insider" transactions, self-dealing and conflicts of interest; provide for disclosure of the trust's operations to the FDIC and State banking authority; and require periodic (at least annual) accountings to the board of directors. The trust instrument should not include any authority to borrow funds or permit trust assets to be mortgaged, pledged or otherwise encumbered.

A bank's current and projected liquidity, its future earnings and the adequacy of its capital are impacted by a Clifford Trust arrangement. In light of these considerations, it seems reasonable to expect a bank to be able to project that a Clifford Trust will not seriously impact its capital, liquidity, and earnings during the term of the trust.

C.4. Agencies

An agency relationship is created by an agreement under which the trust department is appointed to act as agent for the property belonging to the principal. Many banks use standardized language in agency agreements. The use of such agreements eases account administration by standardizing the institution's fiduciary duties, which also limits the

potential risks that can result from complex, non-standard agency contracts. There are two basic distinctions between an agency relationship and a trust relationship:

- Ordinarily, agents do not hold legal title to property, while trustees hold legal title for the benefit of account beneficiaries. (Agency assets are now registered in the name of the bank, or its nominee, more frequently as this expedites trading and the transfer of ownership when assets are sold.)
- An agency is usually revocable at the option of the principal, and is automatically terminated at the death of the principal (account assets must then be turned over to the executor of the estate or to a court appointed administrator). Trusts, on the other hand, may be irrevocable, and continue long after the death of the settlor and/or the original beneficiary(ies).

An example of some of the duties performed under an agency agreement include accepting possession of the principal's assets, collecting and distributing income, and buying and selling investments, either at the department's discretion or as directed by the principal. A trust department acting as an agent should always operate under a written agreement, with the agent's authority and duties clearly defined by the terms of the agreement. Some of the most common agency capacities in which a trust department may serve include:

C.4.a. Custodian

In a Custodianship, the trust department has only the duties of safekeeping property and performing ministerial acts, as directed by the principal. As a rule, investment management or advisory duties are not exercised. For example, in the exercise of custodial duties involving securities, the bank may be required to collect income and principal; notify the principal of defaults, called securities, stock rights for purchase; and execute instructions to buy and sell securities.

C.4.b. Escrow Agent

In this capacity, a bank has the responsibility of holding the assets and other documents delivered into its custody until the conditions for their release to a third party have been fulfilled according to the terms of the escrow agreement. Added responsibilities include ensuring that the conditions specified in the escrow agreement have been fully satisfied before assets and other documents are delivered to the third party. The bank is liable for its actions not only to the principal, but also to the third party. The bank as escrow agent should: assume no liability under the terms of the agreement; perform in accordance with the duties and obligations set forth in the escrow agreement; and not arbitrate in the case of disputes or disagreements between the principal and the third parties to the escrow agreement.

C.4.c. Trustee for Land Trusts or Real Estate Trusts

A land trust may be used for privacy purposes, for estate planning purposes, or to facilitate borrowing arrangements. The bank as trustee acts solely as the holder of the legal title to the property. Typically, the beneficiary(ies) retains the power of direction and control over the trust property. In some cases, however, the trust document may indicate that another party (not the bank) has the power to direct the trust. This is a unique type of fiduciary relationship that is not allowed in every state. Illinois is the state in which land trusts are most prevalent.

The administration of this type of trust, if allowed, is addressed in state statute. Typical documentation includes:

- Land Trust Agreement - This is a document that identifies the property(ies) held in trust, the individuals or entity that holds a beneficial interest in the trust, the manner in which the benefit is held (tenets in common, joint tenet, etc.), the successor beneficiary, and the individual(s) or entity with power of direction. There should be no responsibilities assigned to the trustee other than that of holding title to the property and recordkeeping.

- Deed of Trust - This is a document that conveys property into and out of the trust and is sometimes referred to as a "deed in trust". This document evidences legal title to the parcel of land and the change in ownership. State law dictates whether the deed must be recorded.
- IRS filing (Notice of Fiduciary Relationship) - This is required at the time a property is deeded into or out of the trust.
- Legal Notices - As the trustee is the holder of legal title, it will receive all legal notices pertaining to the property. The notices should be forwarded for further action to the party or parties identified in the agreement. If the notice requires disclosure of the names of the beneficial owner(s), the trustee will be guided by state statute for direction.
- Written Letters of Direction - These are instructions to convey a property into or out of a trust. They also inform the trustee if the property is to be encumbered with a mortgage or with the assignment of a beneficial interest, and so on. The direction is to be signed by the individual or entity identified in the trust agreement.

To appropriately administer this type of account, management must understand applicable state law and IRS statutes. Good recordkeeping procedures require the documentation of all actions taken with regard to the property in the trust. Since the trustee assumes minimal liability from holding title to the property and has no duty to maintain the property or to defend claims against it, management may view the administration of land trusts as a low risk activity. This is not, however, the only risk factor to be considered. The level of risk also depends upon the type of property held and the beneficiary. The lowest risk is typically associated with an owner occupied single family residential property. Administering this type of property in a land trust requires only limited recordkeeping, basic documentation, and limited monitoring. A higher level of risk accompanies the holding of commercial property (income producing properties, land development, raw land) and/or beneficiaries who are not individuals (e.g., partnerships and corporations, etc). The higher risk results from the volume of transactions associated with commercial property, along with the specialized documentation required. For example, administering a land trust holding a parcel of land under development by a corporation represents a higher level of risk to the trustee. The additional risk results from multiple conveyances of the property, changes in legal descriptions (as the parcel is subdivided), and changes in encumbrance. The type of beneficiary requires specialized documentation to allow the trustee to clearly identify which individuals are the beneficial owners.

C.4.d. "Qualified Intermediary" for 1031 Exchange or "Like Kind Property Exchange"

In this capacity, the bank serves as a specialized custodian identified by the IRS as a "qualified intermediary." This is an agency relationship governed by IRC Section 1031 (26CFR1.1031(k)-1). The agreement governing this relationship is commonly referred to as "Starker", "Exchange" or "1031 Exchange" trust. The client typically uses this type of account as a method of deferring income tax on the exchange of business-use property, but it may also be used to structure a tax-free exchange. Essentially, it permits property used in a trade or business or held for investment ("relinquished property") to be exchanged solely for like-kind property ("replacement property") which will be used in a trade or business or held for investment. Like-kind exchange does not mean 100 acres of farmland for 100 acres of farmland. A transaction may, for example, be structured to exchange farmland for apartment buildings. Items transferred in this manner may include real estate (as mentioned in the explanation of like-kind), heavy equipment, or collectibles. The exchange is usually a three-way transaction that is facilitated by an intermediary, referred to as a "qualified intermediary". There are five types of exchanges: delayed/deferred, simultaneous, reverse, improvement, and

clearing house.

The typical sequence of events for a simple deferred exchange is described as follows:

- Sale - The seller sells the "relinquished" property.

- Establishment of Agency Relationship - At the close of a sale, the proceeds go to a "qualified intermediary". The funds are held in a "qualified escrow account" or "qualified trust" - essentially an account for the benefit of the seller. The relationship must be set forth in a written agreement that includes language expressly limiting the seller's rights to receive, pledge, borrow, or otherwise obtain the benefits of the cash or cash equivalents held in the account prior to the consummation of the entire transaction. The "qualified intermediary" may not have a fiduciary relationship with the seller. This means that the "qualified intermediary" cannot give legal or tax advice. The "qualified intermediary" must return the funds held on deposit, with any accrued interest, to the seller if any of the timing restrictions can not be met.

- The "qualified intermediary, whose duties are set forth in the Exchange Agreement, must acquire the "relinquished property" from the seller, transfer the "relinquished property" (to the buyer), acquire the "replacement property", and transfer the "replacement property to the seller (who is now the buyer).

- Identification Period - The seller identifies replacement property(ies) within 45 days of the closing of the sale of the "relinquished" property. The property does not have to be purchased or under a contract to purchase in 45 days, it simply must be identified. The written notification must designate the property as "replacement" property and be signed by the seller. Identification must be unambiguous, e.g., for real estate the legal description or legal address. The written notification must be delivered to the "qualified intermediary" by midnight of the 45th day following the close of the sale of the "relinquished" property.

- Exchange Period - The seller (now the buyer) closes on the replacement property within 180 days of the sale of the "relinquished" property. The funds are wired from the account to the closing agent.

A "reverse exchange" occurs when the replacement property is closed before the relinquished property is sold. The IRS allows a bank to be a "qualified intermediary" to take title to the property and hold it until the relinquished property is sold. As long as the length of the holding period is 180 days or less, then the exchange should be allowed by the IRS.

These are complex transactions that must meet specific IRC requirements. As demonstrated by the example, the agency agreement is specially tailored, and the bank's primary duty is to document the chain of events required to qualify for the favorable tax treatment afforded by the IRC. This documentation is essential if the IRS audits the seller. To effectively supervise this type of arrangement, management must have a fundamental knowledge of IRS requirements, maintain sufficient documentation to prove the chain of events, and have a method of monitoring all the triggering events (ticklers for notification purposes and the triggering of a tax event). This topic is also discussed in the Asset Management section of the manual. Link

C.4.e. Investment Advisory Agent

As Investment Advisory Agent, the bank may exercise a number of duties, with

the primary duty being to offer investment recommendations to the principal. Other responsibilities may include: execution of security transactions; collection and disbursement of funds; and other custodial duties. Generally, written approval of the principal is needed for investment transactions or the disbursement of funds and/or assets.

C.4.f. Managing Agent

In a Managing Agency, the bank normally has the same duties as an investment advisory agent, with the additional authority to make investment selections and execute transactions without the written consent of the principal. Managing agency agreements are general in nature, and sometimes grant agents significant discretionary authority. While a managing agency may appear similar to a trust relationship, basic differences in the transfer of title and revocability, as previously discussed, remain. However, an exception may exist in certain conventional managing agency accounts, whereby the agreement may provide for assets to be registered in nominee form, to facilitate trading activities. The agency relationship terminates upon the revocation by either party or at the death of the principal.

C.4.g. Farm Management Agent

Farm management agency account relationships are utilized for a number of reasons. Agricultural assets are unique and require a particular expertise to maximize income potential and enhance value. Whether the assets are held in a trust, or in an agency capacity, the fiduciary must exercise the requisite level of care. Some farms may be managed as an account investment alternative, assuming farmland returns compare favorably to other investments. An account beneficiary may be interested in retaining ownership and operating a family farm. An absentee owner or a retired farmer may contract for farm management because they no longer may be able to manage the farm themselves.

Banks offering farm management services must address the following areas: the establishment of a written agreement clearly delineating the responsibilities of the bank (as an agent or other capacity) and the principals; the appointment of a farm operator or manager responsible for actual day to day operation of the farm; the execution of a lease governing the operation of the farm; and the monitoring of the farm operator's performance in order to identify and correct problems with farm operations. Each of these is discussed below.

1. Establishment of Farm Management Agreements

    a. The governing agreement should delineate the bank's responsibility for operating, leasing, retaining, deeding, or selling the farm; making crop planting and marketing decisions; entering into borrowing arrangements; making major capital improvements; and selecting and dismissing tenants.

    b. The agreement should include any provisions whereby the bank must obtain the approval of other parties to the agreement for matters cited in the preceding paragraph.

2. Appointment of a Farm Operator or Manager

    a. Leases with tenant farmers should be current and of an appropriate duration in order to facilitate the removal of poor tenants or the alteration of lease terms.

    b. If an outside agent is used to manage farmland, they should be carefully selected, adequately bonded, and should submit reports of their activities to the institution.

    c. Obtaining financial statements from the farm operator may

also be appropriate to ensure their capacity to perform under the lease terms.

3. Lease Arrangements

The types and terms of leases vary in each account, but one type of lease arrangement may be more prevalent in a given geographic area. Account officers should periodically determine which arrangement maximizes the return for beneficiaries relative to the level of the risk appropriate for the account. Leases are usually written for one year, but typically a farm operator's tenure is considerably longer, providing the tenant continues to perform satisfactorily. The more prevalent types of lease arrangements are summarized below.

a. Cash rent lease. Under this arrangement, the farm operator pays a predetermined sum of cash rent for the use of the farm in a given year. A portion of the rent is usually paid in the Spring, with the balance of the rent paid in the Fall. The farm operator retains all of the crop production, receives the government crop production subsidies, provides all labor and equipment, and pays all of the cost for seed, fertilizer, chemicals, etc. The land owner contributes the land and buildings and typically pays the real estate taxes, insurance and maintenance expenses. Cash rental arrangements are becoming increasingly popular because the arrangement provides a predetermined annual return to the trust that is not subject to the significant risks of crop production and market price variations. Cash rental rates are also readily comparable and can allow competitive bidding by potential farm operators.

b. Bushel rent lease. The bushel rent lease is very similar to cash rent; however, the rent is paid in the form of a specified number of bushels of grain, in lieu of cash, delivered to a local market. The farm operator and land owner pay the same respective expenses as mentioned in the cash lease arrangement. This rental arrangement results in a moderate increase in income volatility compared to the cash rent lease. The return is not subject to production risk; however, the return is subject to changes in grain market prices.

c. Net share lease. Under the net share lease arrangement, the land owner's rent is a predetermined percentage of the crop produced. Depending on the geographic location and the crop produced, the arrangement may require 25 to 35 percent of the crop. The farm operator and land owner pay the same respective expenses as mentioned in the cash lease arrangement. This rental arrangement results in a moderate increase in income volatility compared to the bushel rent lease. The return is subject to both production risk and to changes in grain market prices.

d. Crop share lease. The 50/50 crop share lease has historically been the most prevalent farming arrangement for good quality farms in the Corn Belt. The farm operator provides all labor and equipment, pays 50 percent of all of the cost for seed, fertilizer, chemicals, etc., retains 50 percent of all of the crop production, and receives 50 percent of the government crop production subsidies. The land owner

contributes the land and buildings, pays the real estate taxes, insurance and maintenance expenses, pays 50 percent of all of the cost for seed, fertilizer, chemicals, etc., retains 50 percent of all of the crop production, and receives 50 percent of the government crop production subsidies. This rental arrangement results in a moderate increase in income volatility compared to the net share lease. The return is subject to an increased share of both production risk and to changes in grain market prices.

e. Custom farming operation. Under this arrangement, the land owner pays 100 percent of the crop production costs, real estate taxes, insurance and maintenance expenses, retains 100 percent of all of the crop production, and receives 100 percent of the government crop production subsidies. The land owner pays the farm operator specified "custom fees" to provide labor and equipment to perform the planting, harvesting, etc. This rental arrangement has the potential for a greater overall return but results in a higher level of income volatility. The return is subject to all of the crop production risk, along with the change in grain market prices.

f. Direct farming operation. Under this arrangement, the land owner owns all of the farm equipment and pays all of the necessary operating expenses, including labor. A resident manager is paid by the farm operation, and the land owner receives 100 percent of all crop proceeds. The return is subject to the risks described in the custom farming operation; however, the arrangement has the added risk of equipment ownership verses the elimination of "custom fees."

4. Monitor the account and the farm operator's performance.

a. A record of farm income and expense should be available for the property under management.

b. Evidence that taxes have been paid should be maintained.

c. Evidence that proper **insurance** is in force should be maintained. Three types of insurance should usually be required: fire and extended coverage on buildings and improvements, public liability, and multi-peril crop insurance. Some farm operators may only carry crop hail insurance. Hail insurance is a private (and often expensive) insurance program that insures only crop losses related to hail. Multi-peril crop insurance is a very widely utilized government farm income insurance program. Government subsidies make multi-peril insurance an affordable income management tool. Multi-peril insures crop yields and, depending on the policy provisions selected, crop revenues. Multi-peril protects the landowner and/or the tenant's crop revenue from all types of perils that could adversely impact yields, including wind, hail, disease, frost, drought, insects, weeds, and flooding. Multi-peril crop insurance is strongly warranted in crop share and custom farming arrangements, i.e. arrangements where crop yield is the deciding factor on the return realized from the farmland investment. Crop yield coverage levels vary from 50 percent to 85 percent of a normal crop yield. The higher coverage levels are available at higher premiums. The farm management agent must determine what level of crop and income risk protection is appropriate for a given account.

d. On-site farm visits are essential. The type of lease

arrangement dictates the frequency and nature of on-site visits. In a custom farming or crop share lease arrangement, two or more visits may be warranted during the planting/growing/harvesting season to monitor the quality of the tenant and crop conditions due to the weather, disease, insects, weeds, etc. A cash rental lease arrangement may require only an annual visit to monitor maintenance of the soil and any facilities. Detailed records of visitations should include the date, purpose, persons contacted, observations made, and any facts or opinions that were developed.

e. Cash flow projections are considered a good management tool and are often essential to obtain credit. Annual crop plans should be on hand. USDA yield averages for the area may provide a benchmark performance measurement.

f. Farm management agents marketing grain should maintain records of prices obtained and document decisions regarding grain sales.

g. A record should be maintained showing the quantity and storage location of harvested crops (on the farm or stored in elevators or warehouses). When not on the farm, detailed storage receipts should be on hand.

h. Soil maps should be retained to assist in determine soil quality, soil erodibility, and whether drainage might be a problem. Soil tests should be performed every few years because soil fertility may be subject to depletion over time. Lease arrangements, supported by periodic farm inspections and soil testing, should be designed to ensure the farm operator's practices maintain soil fertility.

5. Other problems

a. Inadequate Performance. A bank may encounter problems where the farm is not achieving adequate returns or there are conditions that limit the value of the farm. Lease arrangements may be outdated and no longer provide the risk/return appropriate for the managed account.

b. Environmental Concerns. The farm management agent should have policies and procedures to identify potentially adverse environmental conditions such as fuel storage tanks, improper disposal of pesticide containers, dump sites, or other hazardous conditions. Such conditions may require that an environmental specialist or engineer review the situation and, if necessary, supervise proper cleanup. Environmental monitoring safeguards the value of the asset and reduces the farm management agent's potential exposure to liability.

c. Conservation Concerns. Problems can arise involving compliance with governmental conservation programs. "Swamp buster" is intended to prevent the drainage of wetlands. "Sodbuster" is intended to protect the farming of highly redouble lands (HEL). "Conservation Compliance" provisions require an acceptable conservation plan on highly erodible soils to prevent soil erosion. Compliance with conservation programs by farming operations is important because compliance usually is a prerequisite to receiving related government income support. Financial incentives such as the Wetland Reserve Program (WRP) and the Environmental Conservation Acreage Reserve Program

(CRP) may be attractive alternatives for enhancing the value of environmentally sensitive cropland.

d. Livestock. The complexities of properly monitoring, growing, and marketing livestock or operating livestock enterprise investments within a trust arrangement could result in relatively high risk to the account. Livestock arrangements are highly unusual and should require a high level of expertise and monitoring.

e. Conflicts of Interest. Banks sometimes obtain a discount for seed purchases by buying seed in large quantity or by being a "district dealer" for seed companies. District dealer status should be approved by a committee. These discounts present potential conflicts of interest in the form of side commissions, paid either to a farm manager personally or to a bank for being a district dealer; or from a bank retaining a portion of the bulk discount obtained. A bank, however, might be entitled to a small portion of such a discount in return for the bank's efforts in negotiating the discount, if most of the discount were passed on to the farm. In addition, a conflict of interest may arise if the bank as farm management agent enters into a lease arrangement with a farm operator that is also a borrower from the commercial side of the bank. Policies should adequately address the conflict of interest to ensure the farm lease arrangement is not adversely impacted.

C.4.h. Attorney-in-Fact Pursuant to an Executed Power of Attorney

A bank becomes Attorney-in-Fact when it receives a formally executed written power of attorney. There are various types of powers of attorney: general, special power, heath care, "durable", and "springing." Each of these is defined in Appendix H, under power of attorney. The durable and springing aspects may be added to any type of power of attorney.

To limit fiduciary risk, a trust department that accepts an appointment as attorney-in-fact should only do so under a special power of attorney. A specialized power of attorney can be tailored to limit the attorney-in-fact's responsibilities to those found in a revocable personal trust agreement. A general power of attorney provides too broad a range of powers and the health care power of attorney addresses issues not traditionally administered by bank fiduciaries. A general power of attorney grants authority to the bank to do anything as attorney-in-fact which the principal could legally do, including: the voting of stock; signing or endorsing checks; signing proxies; collecting debts; conveying real estate; transferring personal property; or performing similar services. Principal is the term used to identify the person who executes the power of attorney.

The principal may wish to use a power of attorney to manage his personal financial affairs, as it is traditionally an inexpensive means to have another party take care of principal's affairs when the principal is incapacitated or otherwise unable to care for his financial affaires. It is generally less costly than a revocable trust and provides more management options than an investment management account. Note, in order for the power of attorney to be effective in the event of the principal's incapacitation, it must be a "durable" or "springing" power of attorney. Appointing an Attorney-in-Fact is typically less costly and easier to acquire, than a court appointed conservatorship.

Regardless of the type of power of attorney accepted, the trust department must act in the principal's best interest, keep accurate records, keep the principal's property separate and distinct from that of all other accounts, and avoid conflicts of interest. Management must be aware of any state statutes governing this type of fiduciary appointment. For example, in some states, to

effect real estate transactions the power-of-attorney must be recorded within a particular jurisdiction, such as a county. In some states the power-of-attorney must be notarized before becoming effective, and in some states the Attorney-in-Fact must appear before a public official and state under oath that he intends to give the power (knowing full well of its consequences).

C.4.i. Safekeeping Agent

A bank performs safekeeping duties when it limits itself to the safekeeping and delivery of property (to the principal or others as the principal may direct), with no ministerial duties required. The safekeeping division of the trust department should maintain adequate records and controls, together with suitable physical security. Articles left for safekeeping should not be commingled with bank assets, but should be properly identified and adequately insured.

D. Additional Fiduciary Capacities

D.1. Co-Fiduciaries

In each of the aforementioned trust capacities, the bank, in accordance with the governing instrument or appointment, may be required to share the administration of an account with another fiduciary, referred to as a co-fiduciary. Examples of co-fiduciary arrangements include the following:

- A court may appoint a co-guardian to provide for special expertise over investments, or more commonly, may appoint a separate Guardian of the Person (Ward), while the bank serves as the Guardian of the Property.
- A co-fiduciary relationship may be requested by the testator of a will, or the settlor of a trust, to provide for special expertise over investments, or to be assured that certain family interests are considered when the account is being administered.

It is not uncommon for a family member to be appointed co-trustee with a financial institution. A co-fiduciary may also be one or more individuals, or another bank or trust company. If the co-fiduciary is an individual, the bank is commonly referred to as the corporate fiduciary. Regardless of the term used, each fiduciary has a responsibility to participate in the administration of the account.

It is generally held under common law that co-fiduciaries act in unison. It is the duty of each co-fiduciary to use reasonable care to prevent other co-fiduciaries from committing a breach of trust, and if a breach occurs, to compel the responsible party to correct it. Co-fiduciaries can be held responsible for a breach of trust committed by co-fiduciaries if, by neglect or willful misconduct of its own, it fails to protect the account from the other co-fiduciary's breach of trust. Further, while a fiduciary is ordinarily liable only for its own actions, a corporate fiduciary is often held to a higher standard of care than an individual co-fiduciary. As a result, a corporate fiduciary may be held liable if it does not compel a co-fiduciary(ies) to initiate corrective action to cure a breach of trust.

As a matter of sound policy, and to protect against possible liability, management should ensure the following:

- Documentation of Co-Fiduciary Actions - Management should maintain documented approvals from co-fiduciaries for all investment transactions and all other discretionary actions made during an account's administration. Approvals should be in written form and retained as permanent file documentation.

- Physical Control of Account Assets - It is generally undesirable for an individual (i.e. non-corporate) co-fiduciary to maintain physical possession or control over account assets. When this occurs, management should evaluate the controls over the assets in the custody of co-fiduciaries, as well as any bonding requirements applicable to the individual fiduciary.

- Joint Responsibility for Administration - Management should not delegate excessive authority over investments or other matters to the individual co-fiduciary. Examples of excessive delegation include purchasing assets requested by the non-corporate co-fiduciary without proper research or making a discretionary distribution requested by the non-corporate co-fiduciary without first substantiating that the distribution meets the needs of the beneficiary and/or the purpose of the account.

- Appropriate Response to a Disinterested or Uncooperative Co-Fiduciary - Situations may be encountered where a co-fiduciary has become disinterested or uncooperative and is not performing properly. Ideally, the bank, as corporate fiduciary, should try to avoid such situations through pre-acceptance review of the account. Failing that, special efforts may be needed to obtain the co-fiduciary's cooperation or, ultimately the bank may have to seek relief through a court.

D.2. Successor Trusteeships

The bank may be requested or appointed to serve as successor trustee in the event the originally appointed trustee is removed, unable, or unwilling to continue in office. Often, potential successor trustees are specifically designated in the trust document. Accepting an appointment as a successor trustee can entail additional risk to the bank. Although a successor trustee is generally not liable for acts of prior trustees, it can be held liable for actions of predecessor trustees if: (1) the successor trustee knows, or should know, of a breach of trust, or any other situation injurious to the account, and (2) it fails to take action to compel its predecessor(s) to remedy the situation.

Before acceptance, the bank should perform a due diligence review of an account's prior administration and require the prior trustee to furnish a complete accounting of its administration leading up to the time the successor is formally appointed. If the review discloses acts of improper administration, the successor trustee should either: (1) refuse to accept the appointment, or (2) take immediate steps to protect the account by asserting liability against its predecessor(s). The bank may also request appropriate releases from the court and/or all beneficiaries to further protect itself from the assumption of liability arising from the administration of prior trustees. The bank should maintain written documentation of both the performance of a due diligence review and any measures that were taken to protect both the account and the bank from potential liability arising from the actions of prior fiduciaries.

Even if the due diligence review does not disclose improper administration by the previous fiduciary, the bank should consider other factors prior to accepting the trust, such as:

- Does the beneficiary of the trust have unrealistic expectations regarding the rate of return on investments or level of service that can be provided?
- Is the language of the trust document overly complex or contradictory?
- Are the assets managed by the successor trustee unusual or beyond the expertise of the trust officers?
- Are fees sufficient in relation to the degree of difficulty in management of the trust?
- Is the trust subject to the laws of other states and, if so, is the trust department capable of complying with all required regulations?

A will or trust instrument may include an exculpatory clause, which relieves, or attempts to relieve, a fiduciary from liability for breach of trust. However, a fiduciary is not always fully protected by an exculpatory provision, and such provisions do not protect fiduciaries from breach of trust or actions which are illegal. Some states have passed statutes affording protection to the successor fiduciary from acts of its predecessor(s).

E. Asset Protection Trusts

In most instances, trusts are created to preserve and protect assets for beneficiaries. The most prominent attacks against assets come from the following sources:

- Contract creditors including personal debt contracted for a variety of reasons.
- Tort creditors resulting from court or other legal judgments.
- Regulatory liability imposed by government to achieve social goals. One of the most common sources of regulatory liability is the cost of cleaning up environmentally damaged property.
- Divorce claims.
- Disabled beneficiaries. Often many clients will create trusts for an immediate family member, with the purpose of avoiding having the trust assets included in determining eligibility for Medicaid or public assistance.

Assets afforded Creditor Protection

Certain assets are exempt or partially exempt from creditors under either federal of state law. Many states allow an individual or married couple to retain a certain amount of equity in their residence. ERISA and many state laws protect qualified retirement plans from creditors. Some states also protect cash value of life insurance and annuities from creditors.

In *In Re Rousey* 347 F.3d 689 (8th Cir. 2003), the debtors voluntarily filed for relief under Chapter 7 of the Bankruptcy Code. Included in their assets were two IRA's, which were funded as roll-overs from their previous employer's pension plans. No additional funds were added to the accounts. The U. S. Court of Appeals for the Eighth Circuit ruled that IRA's were not exempt under 11 U.S.C. §522(d)(10)(E), affirming the decision of the Bankruptcy Appellate Panel. The court found that IRA's should not be exempted from a person's bankruptcy estate and pointed out that Congress could easily change the law if it wanted to protect IRA's. Furthermore, the Eighth Circuit held that because the Rousey's could withdraw money, the IRA's were similar to savings accounts. The debtors appealed. The U.S. Supreme Court is scheduled to hear the case in the Fall 2004 term. See *In Re Rousey* 347 F.3d 689 (8th Cir. 2003), cert granted, 72 U.S.L.W. 3740 (U.S. June 7, 2004) (No. 03-1407)

Other methods established to protect assets against creditors include:

- Limited Partnerships. Under this type of partnership agreement, a limited partner's exposure for the debts of the partnership is limited to the investment in the partnership, and the creditor cannot attack the personal assets of the limited partner.
- Limited Liability Companies (LLC). The LLC limits the liability similar to other corporations, but allows flow-through treatment of taxable income or loss.

In general, a beneficiary's creditors cannot reach trust assets if a trust is created in good faith by an individual other than the beneficiary. Under the English "Statute of Elizabeth", which is embodied in the Second Trust Restatement, if a person created a trust for his own benefit, his creditors could reach the trust assets. Both Offshore Protection Trusts and Domestic Protection Trusts have been designed to overcome this traditional precept.

Offshore Protection Trusts

Offshore protection trusts established in several jurisdictions purport to offer considerable protection against creditor claims. A key feature that generally differs from trusts established in the United States is that a settlor is permitted to create a spendthrift trust for the settlor's own benefit. With a few exceptions, laws in the states require someone other that a beneficiary to create the trust.

Offshore trusts are difficult for creditors to attack for several reasons, including:

- Simply because it's a foreign trust may deter creditors.
- Legal costs may be high. Several jurisdictions do not allow contingency fees or require deposits to commence a proceeding.
- Some jurisdictions do not recognize foreign judgments, forcing the creditor to obtain judgments in both the United States and the foreign jurisdiction.

- A foreign jurisdiction may offer anonymity with respect to wealth.

The effectiveness of the ability of the offshore trust to protect assets from creditors is often dependent upon the amount of control retained by the settlor. Generally, the more control that is retained by the settlor, the less protection is provided by the trust against creditors.

Additional provisions frequently found in offshore protection trust designed to increase protection against potential creditors include:

- Ability of Foreign Trustees or Other Fiduciary to Change Situs of Trust Assets. The trust can be given power to change the situs of the trust assets to another jurisdiction if an action against the trust is threatened in the original jurisdiction. This can increase the costs of and time consumed by the creditor.

- Letter of Wishes. The settlor can provide nonbinding written guidelines to the trustee, covering the settlor's intent regarding investment of assets and distributions.

- Duress Clause. This clause directs a trustee to ignore direction of a U. S. trustee, if such direction is given under duress, including court compulsion.

- No Benefits Term. The trust might include a provision that provides for a term in which the beneficiaries are persons other than the settlor. The term could correspond with the limitations period applicable to claims of creditors in the foreign jurisdiction governing the trust.

- Restrictions on Beneficial Interests. The trust can provide that the settlor is only one of several permissible beneficiaries with the trustee having the power to choose among them or remove one or more. This trust can also provide upon the occurrence of certain events, the settlor's beneficial interest in the trust may either be terminated or held in abeyance for a specific period of time.

Offshore trusts have not proved impenetrable from state or Federal court actions; in fact, court decisions have order repatriation of assets to U. S. jurisdictions. Courts are generally unkind if evidence indicates a fraudulent transfer or attempts to avoid payment of alimony or child support. Creditors can often force bankruptcy or make it very difficult for a beneficiary to obtain the use of the assets of an offshore protection trust.

Domestic Protection Trusts

Domestic Protection Trusts (also known as Dynasty Trusts) are attempts by several states to provide spendthrift protection for trusts in which the settlor is the beneficiary (self-settled trusts), similar to offshore protection trusts. States that have adopted Domestic Protections Trusts include Nevada, Rhode Island, Delaware, and Alaska, and other states are considering adopting similar measures. Two effects of a discretionary self-settled trust are:

- Any gift made by the settlor to the trust in which the settlor retains an interest causes the trust to be incomplete for federal gift tax purposes.

- The settlor's interest in the trust will continue to be part of the settlor's gross estate for federal estate tax purposes.

Several states permit exceptions of Domestic Protection Trusts which allow creditors to reach the trust assets of self-settled trusts include:

- Creditors can reach the assets if the transfer of assets into the trust was intended to hinder, delay or defraud creditors, that is, it was a fraudulent conveyance.

- The claim resulted from an agreement or a court order for child support, or at the time of the transfer of assets, the settlor was delinquent in child support payments. Some states also include court orders arising out of divorce decrees.

- The administration of the trust must take place in the state where the trust was created.

During 2003, the State of Alaska modified its trust statutes allowing substantial protection for beneficiaries from creditors desiring to attach assets of self-settled trusts. Major provisions

of the statute include the following:

- The statute provides protection for the trust assets against claims for spousal support, alimony, child support, providers of necessities, and claims for tort liability. Note, however, that a settlor cannot be delinquent in a child support obligation when the trust is settled.
- The statute prohibits an order or attachment against the beneficiary's assets held in trust.
- A non-resident beneficiary is now allowed to act as co-trustee with distribution authority without compromising creditor protection.
- Claimants of pre-existent creditors must demonstrate evidence that a specific claim was made prior to assets being transferred to the trust or file an action within four years of an asset transfer asserting a specific cause of action based on an act of omission prior to the transfer, such as negligence. Most other states have unlimited statutes of limitations for actions that occurred prior to the asset transfer.
- The definition of a "fraudulent conveyance" has been modified, hampering the ability of a creditor to assert that an asset transfer was fraudulent. The phrase "hinder or delay" has been removed from the statute, so now a claim of fraud must prove that the transfer was intended to defraud a creditor. The higher standard in the new statute will make it significantly more difficult for a creditor to attach the assets of the trust.

Should other states follow the example of Alaska and loosen the restrictions on self-settled trusts, the effects could be far-reaching and substantially inhibit creditors and other claimants from reaching the assets of these trusts.

While self-settled trusts reduce the ability of creditors to attach trust assets, several limitations restrict their ability to protect trust assets. Some of these limitations include:

- Since states cannot exempt themselves from Federal law, the state cannot hinder the IRS, a Federal court, or some other Federal body from reaching the trust assets.
- The effectiveness is usually limited to the state where the trust is administered. Since a state cannot impose its regulations upon assets located in other states, the trusts can provide only limited ability to protect assets located in other states, even if these assets are administered by the trusts.
- States are required to recognize the judgments of other states, so judgments ordered in one state can be enforced in the state where the trust is administered, despite the terms of the trust.
- While an offshore protection trust can maintain some degree of confidentiality and secrecy, a domestic protection trust is subject to subpoena or discovery either through Federal courts or the regulations of another state.
- Most states will allow claims that originated prior to the transfer of assets. Claimants usually are unable to transfer assets into dynasty trusts after claims have been presented.

Signs of Fraudulent Transfer of Assets

Trust Department managers must be wary of trusts being used for fraudulent transfers. Most states have adopted legislation similar to the Uniform Fraudulent Transfer Act which defines several factors, called *Badges of Fraud,* which are indicators that the transfer of assets to a trust may be fraudulent. These factors are:

1. the transfer or obligation was to an insider;
2. the debtor retained possession or control of the property transferred;
3. the transfer or obligation was concealed;
4. before the transfer was made or obligation was incurred, the debtor had been sued or

threatened with suit;

5. the transfer was of substantially all the debtor's assets;
6. the debtor absconded;
7. the debtor removed or concealed assets;
8. the value of the consideration received by the debtor was reasonably equivalent to the value of the asset transferred or the amount of the obligation incurred;
9. the debtor was insolvent or became insolvent shortly after the transfer was made or the obligation was incurred;
10. the transfer occurred shortly before or shortly after a substantial debt was incurred; and
11. the debtor transferred the essential assets of the business to a lienor who transferred the assets to an insider of the debtor.

Rule Against Perpetuities

In order to compete with states with liberal trust laws, many states have recently passed regulations abolishing or severely modifying the "rule against perpetuities." The "rule against perpetuities" is the rule originating in common law that prohibits the grant of an estate unless the future interest granting that estate vests within 21 years after the death of someone alive when the interest was created. In other words, the estate must distribute assets no later than 21 years after the death of someone now living.

The original purpose of the rule was to strike a compromise between allowing an owner of assets to exercise his will over his assets at death and, on the other hand, tying up assets in such a way and for an indeterminate time so as to prevent the workings of a free market.

Estate planners have created innovative methods of using trusts in states that have abolished the above rule. In one instance a trust was created in order to perpetuate and grow a business. This was accomplished through the use of a defective trust, so income taxes were paid outside the trust, allowing the trust and the business to continue to grow for future generations.

Examination review of trusts designed to protect assets should insure that the transfer of assets was not fraudulent and did not violate any state regulation, including the "rule against perpetuities". Furthermore, most states have passed a version of the Uniform Fraudulent Transfers Act, designed to ensure transfers are not made into trusts to avoid an immediate claim by creditors, or avoid child support or alimony.

A. Introduction

The field of employee benefits is one which applies to banks with or without trust departments. Employee benefit plans are vehicles for which the benefits promised by an employer are funded, administered, and provided to eligible employees or members. Individual Retirement Accounts (IRAs) established by individuals under certain provisions of the tax laws are also covered in this section.

Employee benefit plans represent a diverse field. Plans vary according to the types of benefits provided, the manner in which plan assets are administered, and the manner in which benefit amounts are provided to the employees/participants and their beneficiaries. Every bank offers various types of employee benefits to its employees and their beneficiaries. As such, portions of the material in this section of the manual are relevant to every bank supervised by the FDIC.

Bank trust departments may manage the bank's own employee benefit plan(s) for its own employees. The trust department may perform the same services for the bank's parent holding company and affiliates. In addition, the trust department may service employee benefit plans sponsored by outside corporations, unions, individuals, and government entities.

B. Scope of Bank Activity

A bank may serve in various capacities with respect to employee benefit plans. For example, a bank may be appointed trustee or co-trustee for a plan, or may accept an appointment as agent, custodian, depository, or recordkeeper for a plan, or fulfill a combination of these duties. In addition to the duties described above, a bank may also perform administrative functions for a plan. The duties of the bank with respect to an employee benefit account depend upon the governing plan documents and the written documents, including trust and agency agreements, between the bank and the sponsor of the employee benefit plan.

While banks provide various trust and agency services to employee benefit plans sponsored by non-affiliated corporations, unions, government entities and individuals, they often provide such services for own-bank or affiliated institution plans. Since a bank is not required to obtain trust powers in order to serve as trustee for its own-bank plans, many banks without trust departments will also be subject to ERISA and Department of Labor regulations. Therefore, the material covered in this section will be applicable to banks that do not operate a trust or fiduciary services department.

Moreover, banks often serve as trustee or custodian for retirement benefit plans established by individuals. The most common type of retirement plan established by individuals is the Individual Retirement Account (IRA). While retirement plans established by individuals are not subject to ERISA or Department of Labor regulations, they are, due to their tax-advantaged status, subject to various sections of the Internal Revenue Code and regulation by the Internal Revenue Service. This section also covers IRA's and other individual retirement plans, along with the applicable Internal Revenue Code and IRS regulations governing such plans.

C. Types of Benefits

One way of describing various types of employee benefit plans is to reference the types of benefits the plan provides. In general, there are two types of benefits: retirement and welfare.

Retirement plan benefits generally arise when an employee is qualified to retire, and often provide benefits to the employee's spouse and dependents. Some retirement plans involve the deferral of income for periods extending to the termination of employment, or beyond. Such plans usually cover key members of management. Retirement plans involve a number of different types of plans and funding arrangements. Although trust departments are generally more active in the retirement benefits field, examiners need to be aware of the general requirements for welfare benefit plans as well.

The term welfare benefits is used to describe non-retirement benefits. Welfare benefits may involve health and life insurance, scholarships and education assistance, day care centers, apprentice programs, prepaid legal services, vacation and sick-leave programs, and all other non-retirement benefits.

D. Types of Plans

A second, and more common way of generically describing various types of employee benefit plans involves the method used to determine how assets are contributed to the plan. In this regard, there are two main types of pension plans: defined benefit and defined contribution plans.

Most plans operated by private employers are offered, at least in part, because contributions to the plan are tax deductible to the plan sponsor. In order to be tax deductible, an employee benefit pension plan must meet certain minimum standards and have certain provisions required by the Internal Revenue Service (IRS). As the tax laws and regulations tend to change often, the specific requirements, eligibility,

conditions, and thresholds also are subject to change.

Types of Employee Benefit Pension Plans					
Plan Type	**Benefit Basis**	**Examples of Plans**	**Risk Born By**	**Assets Available for Benefits**	**Admin Cost**
Defined Benefit	Formula - (based on Salary & Longevity)	Pensions	Sponsor	All Plan Assets	HEAVY
	Cash Balance (based on "Pay Credit" and "Interest credit")	Pensions	Sponsor	Participant's Vested Account Balance	Less costly than traditional defined benefit plan
Defined Contribution	Employee (+ Employer) Contributions	Profit- Sharing ESOP 401(k) 403(b) SEP-IRA Pensions	Employee	Participant's Own Portion of Plan	Much Less
	Investment Choices				
	Investment Results				

D.1. Defined Benefit Plans

A defined benefit plan is one which establishes a formula to define what the participant (employee) is entitled to receive. The formula is usually based on longevity and/or income. Most traditional pension plans use this approach, which often provides greater benefits the longer the employee stays with the plan sponsor. Employees/participants are entitled to the percentage of the benefits established under the plan. This entitlement is termed "vesting."

D.1.a. Defined Benefit Pension Plans

In this approach, the *benefit* payment is defined. The participant is entitled to whatever amount the formula results in, and has a claim against all of the plan's assets for payment of the vested benefit. The plan sponsor (employer or union) is responsible for ensuring that sufficient assets are in the plan to pay those defined benefits. The most common type of defined benefit plan is the traditional pension plan.

Pension plan benefits are generally paid out in the form of a life annuity beginning at the participant's normal retirement date. Other methods of paying benefits are installment payments and lump sum distributions, with options sometimes given to the participant. The Pension Benefit Guarantee Corporation (PBGC) insures the benefits of private defined benefit plans to the extent provided in Title IV of ERISA.

In private plans, it is common for retirement benefits payable under the pension plan to be set in conjunction with Social Security benefits. Benefits calculated in this manner are said to be *integrated* with Social Security retirement benefits. IRS regulations governing the integration of Social Security benefits are complex and designed to prevent discrimination in favor of highly paid employees.

Defined benefit plans are more expensive to administer and operate than defined contribution plans. Defined benefit plans involve projecting a host of variables to estimate the amount of benefits payable upon retirement and the amount of assets that must be contributed today to fund those benefits in the future. Actuaries are required to perform the projections. Due to the extra costs involved, defined benefit plans have become less popular, with many defined benefit plans terminated and replaced by defined contribution plans.

D.1.b. Cash Balance Plans

Another form of defined benefit plan is the "cash balance" plan. Cash balance plans are similar to traditional defined benefit pension plans in that: (a) they guarantee a specific benefit upon retirement which is not dependent upon the plan's investment performance; (b) retirement benefits are payable as an annuity with surviving spouse protection; (c) employers must follow minimum funding policies under ERISA, and (d) basic plan benefits are guaranteed by the PBGC up to limits set by law.

In recent years, this type of plan has become increasingly popular. Most of these plans have emerged as conversions from overfunded traditional defined benefit pension plans. Following conversion, plan assets remain intact. And employers cannot remove overfunded assets unless the plan has been terminated and full benefits under the terminated plan have been funded. Despite this protection, some conversions by high profile employers have attracted media attention. The focus of much of the attention, and controversy, surrounds diminished benefits for employees with long years of service. Unless employers take explicit steps to protect older employees with long company service, conversions from traditional pension plans (whose benefits are largely determined by years of service and final average pay) into cash balance plans, may impact these employees negatively.

Cash balance plans differ from traditional defined benefit plans in that they define benefits in terms of a stated "account balance," as opposed to a specific monthly benefit for life under traditional defined benefit pension plans. In this form of plan, employers credit a participant's account each year with a "pay credit" (typically based on a percentage of compensation) plus an "interest credit" (either a fixed rate, or a rate which is linked to an index, such as the one year treasury bill rate). When a participant retires under a cash balance plan, he or she is entitled to the balance of his or her vested benefit (similar to a defined contribution plan), which may be taken as an annuity or in a lump sum. This is opposed to retirements under traditional defined benefit pension plans, where retirees are entitled to lifetime monthly annuities based upon years of service and pay.

A transition device, called "wearaway," is sometimes offered to employees with long service when traditional defined benefit pension plans are converted to cash balance plans. Wearaway provides employees the option of receiving the greater of their frozen benefit under the phased out pension plan formula, or their total benefit under the cash balance formula. Employees near early retirement age may accrue little or nothing for a prolonged period under a cash balance plan until the phased out plan benefit is *worn away*. This is because the value of the traditional pension plan benefit may be far greater than future accruals under the cash balance plan. Furthermore, beginning balances under the cash balance plan may be set lower than the present value of the phased out plan's accrued benefit. This serves to worsen the wearaway effect. Some employers temper the adverse conversion impact on long service employees by: (a) "grandfathering" them under the older plan's benefit formula, (b) providing higher "pay credits," (c) setting their opening balances higher, or (d) permitting employees to choose between benefit formulas under the old or new plans.

Employer accruals under a typical cash balance plan remain relatively level,

increasing only slightly toward the end of an employee's career. Employer accruals under a traditional defined benefit pension plan begin relatively low, but increase sharply as an employee approaches retirement. This tends to make cash balance plans less costly to fund and operate than traditional defined benefit pension plans. Unlike traditional pension plans, cash balance plans also typically eliminate early retirement options but permit participants to receive retirement benefits in a lump sum, which can be rolled over into an IRA or another employer's plan.

D.2. Defined Contribution Plans

A defined contribution plan is one which establishes a formula defining how much the plan sponsor will contribute to the plan. The formula may be based on the sponsor's profitability, on the amount of the participant's earnings, or on any number of other factors or combinations. In some plans, the sponsor determines the amount of contribution on a discretionary basis.

Profit sharing, employee stock ownership, thrift 401(k) and 403(b), Simplified Employee Pension (SEP)-IRA, Salary Reduction SEP (SARSEP), Savings Incentive Match Plan for Employees (SIMPLE), and other types of commonly encountered plans use the defined contribution approach. As with defined benefit plans, plan participants are entitled to their vested percentage of the benefits, as established under the plan.

In this approach, the *contribution* is defined; the benefit payment is not. The benefit amount is dependent on both the amount contributed and the success of the investment results. Under this approach, the participant is entitled only to the amount in his or her account, based on the varying amounts contributed and the investment return. The participant has a claim only on the assets of his or her account in the plan; there is no claim against all of the plan assets belonging to other plan participants. The PBGC does not insure the benefits of defined contribution plans.

In general, there are five basic types of plans or formulas for defined contribution plans: profit sharing, money purchase pension, target benefit, stock bonus, and employee stock ownership.

D.2.a. Profit Sharing Plans

A profit sharing plan is a qualified defined contribution plan which is also an Individual account plan. These plans are subject to ERISA. Plan assets are often invested wholly in the employer's stock. ERISA diversification requirements are not generally violated so long as the plan or trust instrument allows no more than 10% of the plan's assets to be invested in employer securities, except as provided in Section 407(a) of ERISA. Such plans are believed to foster productivity on the part of employees, who will own part of the company.

There are two types of profit sharing plans: current or deferred plans. In a current profit sharing plan, profits are paid directly to employees in cash, check, or stock as soon as profits are determined. Deferred profit sharing plans are more common. Deferred profit sharing plans are defined contribution plans operating under a written plan and qualified under the Internal Revenue Code (IRC) where the employer provides retirement benefits.

The employer's contribution to the plan each year can be either purely discretionary (nothing at all, if the employer wishes) or based on some type of predefined formula. If a formula is used, it typically relates the contribution to the employer's profits. The term profit sharing plan implies that an employer must have profits before any contributions are made to the plan. However, this requirement was eliminated under the Tax Reform Act of 1986. Contributions to profit sharing plans are not required to be based on an employer's profits according to Section 401(a)(27)(A) of the IRC.

The plan must provide a definite predetermined formula for allocating the contributions made to the plan among the participants. In addition, the plan must provide a predetermined formula for distributing the fund accumulated under the plan after a fixed number of years; attainment of a stated age; or upon the prior occurrence of some event such as layoff, illness, disability, retirement, death, or severance of employment.

Generally, contributions are allocated to participants in proportion to their compensation with subsequent allocations reflecting future contributions adjusted by the investment experience of the plan. Plan benefits consist of the amount accumulated in each participant's account including: (1) employer contributions, (2) forfeitures from other employee's accounts, and (3) interest and capital gains. Many plans permit participants to borrow against their vested interest in the plan.

D.2.b. Money Purchase Pension Plans

A Money Purchase Pension Plan (MPPP) is a defined contribution plan which is also an Individual account plan. Employer contributions are usually determined based upon a percentage of compensation for specific Individuals. As with the profit sharing plan, benefits for each participant are derived from the amounts contributed to each Individual account. Unlike a profit sharing plan, forfeitures are not added to participants' accounts but are used to reduce the employer's contributions.

Money purchase pension plans differ from profit sharing plans in a number of ways:

- MPPPs must state a definite formula or approach for employer contributions; contributions may not be determined annually by the employer;
- MPPPs are subject to minimum funding requirements of the IRC;
- MPPPs must provide for a life annuity as a distribution option;
- MPPPs have different deduction limitations under the IRC than profit sharing plans; and
- MPPPs distributions are not permitted before retirement age, death, disability, or termination of either the plan or employment.

D.2.c. Target Benefit Plans

Target benefit plans are intended to provide a target benefit to each participant upon retirement. Employer contributions to each participant's account are established through a defined benefit formula. The amount of the contribution is determined by an actuary. The plan does not guarantee that the target benefit will be paid at retirement; its only obligation is to pay whatever can be provided by the amount in the participant's account depending on the actual investment results achieved by the fund. A life annuity must be one distribution option for the employee.

Target benefit plans are hybrids of a money purchase plan and a defined benefit plan. Target benefit plans are Individual account plans because contributions are allocated to each participant's Individual account.

D.2.d. Stock Bonus Plans

Stock bonus plans are identical to profit sharing plans and are usually established to permit employees to share in the ownership of the business and/or to reward meritorious service. Contributions, as with profit sharing plans, are not necessarily based upon profits and the benefits are distributable in cash or stock of the employer.

Generally, the plan must allow the participant to demand that the benefit be distributed in employer securities. If employer stock is not traded on an established market, the employee must have the right to require the employer to repurchase the stock under a fair market value formula.

D.2.e. Employee Stock Ownership Plans (ESOPs)

The information presented under this section will apply to both ESOPs sponsored by the bank for its own employees, and ESOPs found in the bank's trust department which are sponsored by different employers. In addition to the material presented under this heading, examiners should also refer to the following:
(1) ESOP Plans - Employer Securities Investments - Prudence; (2) ESOP Plans - Employer Securities Investments - Valuation; and (3) ESOPs Loans to Plans - Section 408 Statutory Exemption. The pertinent areas related to ESOPs are noted below:

- ESOPs, In General
- Leveraged ESOPs
- Advantages and Disadvantages of ESOPs

D.2.e.(1). ESOPs, In General

An ESOP is an Individual account plan that is either a qualified stock bonus plan or a combination qualified stock bonus and qualified money purchase plan. ESOPs provide separate accounts for each participant. Benefits are based solely on amounts contributed to each Individual account including attributable income, expenses, gains and losses, and allocated forfeitures of other participants' accounts. ESOPs are defined in Section 407(d)(6) of ERISA, Department of Labor (DOL) ERISA Regulation 2550.407d-6, and Section 4975(e)(7) of the IRC. See Appendix E.

Congress has provided a number of tax incentives to encourage the formation and continuation of ESOPs. ESOPs operate primarily under IRS requirements but are also subject to certain ERISA provisions. Since tax incentives impact government revenues, the rules under which ESOPs operate are subject to change by Congress and implementing IRS regulations. Some ESOPs which reflect various statutory or regulatory approaches have special names: Tax Reform Act Stock Ownership Plans (TRASOPs), Payroll-deduction Stock Ownership Plans (PAYSOPs), etc.

Most ESOPs invest solely in the employer's stock. Since many companies are either closely-held or have a very limited market for their stock, valuing the stock can prove problematic and provide opportunities for abuse. The value of the employer's stock greatly impacts the employee's eventual benefits.

In reviewing the administration of an ESOP's investments, the examiner must be cognizant of the following facts pertaining to ESOPs. ESOPs:

- *Are not* exempt from ERISA's prudence and exclusive benefit rules; but
- *Are* exempt from ERISA's diversification rule; and
- *May be* exempt from prohibited transactions (purchases and sales of employer securities from the employer and/or parties in interest) *if* certain conditions are met. In general, refer to ERISA Section 408(e) and DOL

ERISA Regulation 2550.408e. See Appendix E. Three main conditions for exemption require:

- Not more than adequate consideration may be paid by the plan (see Definitions, ERISA 3(18);
- No direct or indirect commissions may be paid; and
- The investment meets the prudence requirement of Section 404(a) of ERISA.

As tax-qualified plans, ESOPs must follow applicable IRS requirements, in addition to ERISA provisions. Except as otherwise indicated below, IRS Regulation 54.4975-11 (see Appendix E) establishes most of the following operational requirements for ESOPs. An ESOP must:

- Be formally designated as an ESOP in the plan document.

- Be designed to invest primarily in qualifying employer securities. For leveraged ESOPs, investments are restricted to the employer's common stock or convertible preferred stock; stock rights, warrants, and options are not considered in the definition. For non-leveraged ESOPs, the definition also includes marketable bonds, debentures, notes, and similar marketable debt instruments of the employer.

  The types of qualifying employer securities are covered by IRS Regulation 54.4975-12. DOL ERISA Regulation 2550.407d-5 defines the term qualifying. See Appendix E.

- Value employer securities in accordance with both IRS and ERISA requirements. The valuations affect purchases and sales of employer securities, market-value reporting on the Annual Report (Form 5500), allocations to participants' accounts, and distributions to participants.

  ERISA Section 408(e)(1) and DOL ERISA Regulation 2550.408e require that transactions for employer securities involve no more than adequate consideration. This term is defined in ERISA Section 3(18).

  Section (d)(5) of IRS Regulation 54.4975-11 requires certain steps when valuing employer securities by an ESOP. For securities traded on securities exchanges, the quoted prices may be used. If the stock is publicly traded, no appraisal is necessary. But if it is traded infrequently, an appraisal may still be needed. In general, employer securities which are not readily tradable on an established securities market must be valued by an independent appraiser.

  - Valuations must be made in good faith and based on all relevant factors:
    - In any transaction between the ESOP and a disqualified person, the value of the securities must be determined *as of the date of the transaction.* In such transactions,

an independent appraisal, by itself, does not automatically equal good faith.

  - For all other transactions, values must be determined as of the most recent valuation date under the plan. In such transactions, an independent appraisal will generally be deemed to be a good faith determination of value.

- Include a put option. IRC Section 401(a)(23) also states that, to be qualified, a stock bonus plan must include a put option for securities that are not publicly traded.

  With a put option, an employee who is entitled to a distribution from an ESOP has the option of requiring the employer to repurchase employer securities from the employee's Individual account in the plan. If the securities are not readily tradable on an established market, the securities must be valued at a reasonable fair market value. Through this arrangement, the employee receives a cash distribution instead of an in-kind distribution of illiquid securities.

- Include a suspense account for which assets are added to and maintained.

In addition, an ESOP must (1) pass voting rights through to participants for those shares allocated to Individual accounts according to Security and Exchange Commission (SEC) Regulation 240.14c-7 and (2) meet stringent nondiscrimination tests as to employee participation according to IRS regulations.

ESOPs can acquire assets through: (1) an outright gift of cash or newly issued common stock to the plan, (2) a thrift arrangement under which employees contribute money (PAYSOPs), (3) a profit-sharing arrangement where the employer's annual contribution is a percentage of profits, or (4) a money purchase arrangement where a percentage of compensation is contributed each year irrespective of profits. Most ESOPs; however, obtain initial funding through loans and are termed *leveraged* ESOPs. Loans to ESOP plans must comply with IRS and Labor Department requirements. Refer to the Leveraged ESOPs caption below.

D.2.e.(2). Leveraged ESOPs

Since a majority of ESOPs are leveraged, the examiner needs to understand the concept of a leverage ESOP and the conditions that apply. A corporation creates an ESOP, alone or in addition to (sometimes referred to as piggyback) another qualified retirement plan. The ESOP applies for a loan. The lender is usually an independent third party, but it could be anyone, including a party in interest such as the plan sponsor or the bank.

A number of conditions apply to such loans when the loan is with or guaranteed by a party in interest. The ESOP loan should be primarily for the benefit of participants and beneficiaries. Demand loans are not permitted and the loan

must be payable over a set period. Terms of the loan must be, at the time it is made, at least as favorable to the ESOP as those of a comparable loan negotiated at an arm's-length basis by independent parties. No more than a reasonable rate of interest may be charged. While the loan may be unsecured, most ESOP loans are secured. If collateral is given by the plan to a party in interest, it may consist only of qualifying employer securities.

Leveraged financing may operate in two different ways. In the first way, the company gives the lender a written guaranty promising that the ESOP will repay the loan and that, each year, the employer will contribute to the ESOP sufficient funds to permit the ESOP to make its annual repayment of the loan. In the second way, the company borrows money from a bank and lends the money to the ESOP under terms identical to those negotiated between the company and the bank (mirror loan). After one of the financing options is chosen, the ESOP takes the loan proceeds and purchases qualifying employer securities at a reasonable price. Purchases must meet the conditions of ERISA Section 408(e) to avoid violating prohibited transaction rules.

Company contributions to the ESOP, which are tax-deductible under IRC Section 404, are used to pay off the loan. The employer's entire plan contribution (used to pay back the loan) is deductible within the limits of the IRC. If the employer borrowed the money directly, only the interest paid on the loan, and not repayment of the principal, would be deductible. The payments release a proportionate amount of securities from the loan's collateral. The securities, which were held in a suspense account by the plan, can be allocated among the plan participants as portions of the loan are paid off.

D.2.e.(3). Advantages and Disadvantages of an ESOP

There are a number of factors that influence the decision to sponsor an ESOP. Many of the considerations are tax-oriented. The plan sponsor, participating employees, and other parties all derive various advantages and disadvantages from the operation of an ESOP.

Employer Considerations

The employer's advantages include the fact that ESOPs are believed to foster productivity on the part of employees who will own part of the company. An ESOP may also provide a means of raising capital internally without resorting to outside financing, which may be more expensive. If leverage for the ESOP is necessary, the lender may offer a lower interest rate to the plan since interest received on the loan may be non-taxable to the lender (see Lenders to ESOPs). In addition, an ESOP may be used to convert a public company to a private one or to resist an unwanted takeover. An ESOP used for such a purpose is subject to, among other things, the fiduciary responsibility and prohibited transaction provisions of Title I of ERISA, Protection of Employee Benefit Rights

Operating an ESOP also offers the employer a number of tax advantages. Tax deductions are available for stock or cash contributions to the plan, cash dividends paid to plan participants, and dividends used to repay the loan. Particularly noteworthy is that the employer's entire plan contribution (used

to pay back the loan) is deductible within IRC Section 404 limits.

Disadvantages for the employer involve the dilution of ownership and/or control, and the difficulties and costs inherent in arriving at recurring fair market valuations for thinly-traded securities.

Employee Considerations

The primary consideration for most employees is that contributions made by the employer and accumulated earnings are tax-deferred. In addition, taxes on stock appreciation, when the stock is distributed, may be deferred by rolling the distribution over into an Individual Retirement Account (IRA). The fact that ESOPs offer employees a stake in the employer corporation through stock ownership has meant, in some situations, that employees have been able to save their jobs by purchasing a company or production facility which was scheduled for closure.

One significant disadvantage is that the employee bears all investment risk. In addition, the employee's investment is concentrated in one company's stock performance and valuations for the employer stock may be difficult to achieve. If the outlook for the employer's industry or for the employer itself is poor, the employee's retirement benefits may be threatened. Ownership of marginal or poorly managed companies, or those in declining industries, is of little value to employees and no foundation for careful retirement planning. As with any defined contribution plan, the employee's benefits are not insured by the PBGC.

When employees own stock in the employer, they exercise a certain amount of control over the employer. However, their influence may be limited as most ESOPs do not own a majority of the company's stock. Only shares allocated to Individual accounts have voting rights. And, the allocation of stock to Individual employees' accounts is a slow process in leveraged ESOPs. Voting rights are fully passed through only in publicly traded companies; in non publicly traded companies, only certain issues are voted on by participants. In a number of instances where an ESOP was formed to permit employees to purchase a facility from the employer, the employees owned a majority of the stock but management controlled voting authority. In effect, the employees may have little or no say in how the company they own is managed or operated.

To qualify for tax credit under IRC Section 409, ESOPs are required to pass the following voting rights on to Individual accounts holding allocated shares. IRC Section 409(e)(2) requires plans holding registered employer securities to permit plan participants to direct the plan on how to vote allocated securities. Where plans hold non-registered securities, IRC Sections 409(e)(3) and (5) require plans to permit plan participants to direct the plan on how to vote allocated securities with respect to corporate matters, such as: mergers, consolidations, recapitalization, reclassification, liquidation, dissolution, sale of substantially all assets of a business, or similar transactions. IRC Section 409(e) is located in Appendix E.

Lenders to ESOPs

Tax laws provide incentives for lenders to grant loans to ESOPs. Under IRC Section 133, 50% of the interest the lender earns from an ESOP loan is non-taxable income when certain conditions are met:

- The ESOP owns at least 50% of each class of the outstanding stock of the corporation issuing the stock (or 50% of all outstanding stock) immediately after the acquisition (there are some limited additional provisions for isolated situations);
- The term of the loan isn't for more than 15 years; and
- The participants can direct the plan how to vote the shares allocated to their Individual accounts and acquired with the exempt loan.

These loans carry normal credit risk to the lender; plan sponsors in weak financial condition may involve more than normal credit risk. If the employer is unable to make its contributions to the ESOP, the plan will be unable to repay the lender. If the lender exercises its rights as a secured lender (the employer stock collateral pledged by the ESOP and the employer guarantee), it may wind up owning and operating the company.

Company Shareholder Considerations
Generally, if an ESOP exists, shareholders of the employer have a ready market for their stock. In addition, if a shareholder sells his or her employer stock to the ESOP, any unrealized gain may be deferred. The shareholder may elect not to recognize the gain on the sale of stock to the ESOP if qualified replacement property is purchased within the replacement period. Refer to IRC Section 1042 regarding the Sales of Stock to Employee Stock Ownership Plans or Certain Cooperatives.

D.2.f. Thrift and Savings Plans

A thrift or savings plan is a defined contribution plan which is also a type of Individual account plan. These plans are employer sponsored and employee participation is normally voluntary. The plans permit the employee to make contributions, usually established as a percentage of pay. Employers normally make matching or partially matching contributions.

In many thrift and savings plans, employees can direct their plan assets into several pre-selected investment vehicles. Many corporate plans include employer stock as one of the investment options for these plans. An advantage to a plan where the employee decides how to invest funds in his or her plan account is that there is a reduced fiduciary liability for both the plan sponsor and any bank trustee. Self-directed thrift plans must generally comply with the requirements of DOL ERISA Regulation 2550.404c-1. This is discussed further in subsection H.5.c.(6), Individual Account (Section 404(c)) Plans.

Most thrift and savings plans are tax-qualified. Section 401(k) of the IRC, which originally was added in 1978, permits employers to establish tax-qualified cash or deferred profit sharing or stock bonus plans. Under such plans, taxes on amounts contributed by both the employer and the employee, as well as accumulated earnings are deferred. With a salary reduction-type arrangement, the employees receive less current cash income and pay correspondingly lower Federal income taxes. Essentially, what a salary reduction plan accomplishes is to permit employees to provide for their own retirement with pre-tax dollars, rather than after-tax dollars.

To qualify for the mentioned tax benefits, the IRS requires the plan document to cover a number of specific areas. Among these are nondiscrimination in eligibility for the plan, and provisions to assure that executives and highly-paid employees do not receive preferential treatment. Vesting, withdrawals, participant loans, distribution of benefits, and other requirements must be met. The IRS rules governing these matters are complex and are primarily a concern for the plan sponsor, not a bank fiduciary.

D.2.g. Welfare Benefit Plans

The more common types of employee welfare benefit plans and the related benefits include:

- *Health Plans* which provide for hospital expenses, diagnostic X-ray and laboratory fees, surgical and medical fees, medicine and drugs, major medical insurance, accidental death and dismemberment, and life insurance benefits. Such plans may also provide for dental care, visual care, psychiatric care, and preventive medical examinations.
- *Disability Plans* which normally provide benefits during periods of inability to work because of physical incapacity from illness or injury.
- *Vacation and Holiday Plans* which provide cash benefits to cover time off for vacation purposes.
- *Apprenticeship, Educational, and Similar Plans* which provide funds for retraining Individuals in the event of termination of a job in a particular industry, provide an opportunity to expand skills to improve job performance, or take on new responsibilities within or outside of the company.
- *Multiple Employer Welfare Arrangements (MEWAs)* which permit a pooling of employer contributions to purchase health insurance for their employees at favorable rates. Problems can arise because some suppliers offer attractively priced but unfunded "insurance-like" products without complying with state insurance laws. These suppliers claim their products are employee benefit "plans" and are, therefore, preempted from state insurance laws by ERISA. In doing so, they attempt to avoid state regulation and insurance reserve requirements. The following rules apply: (1) when a MEWA is covered by ERISA and fully insured (which rarely happens), state insurance laws may apply to the extent they provide specified levels of reserves and contributions to pay future benefits; (2) when a MEWA is covered by ERISA and not fully insured, any state insurance law "not inconsistent" with ERISA may also apply; (3) when a MEWA is not covered by ERISA, no preemption can be claimed. Refer to subsection L, Compliance with State Laws for additional comment on state law and MEWAs. [The term MEWA is defined for purposes of Title I of ERISA in Section 3(40)(A); section 514(b)(6) of ERISA addresses the issue of presumption with respect to MEWAs.]

Most single employer welfare plans are either insured plans or unfunded plans. The insured plans typically provide medical and/or life insurance. The unfunded benefit plans most common for single employers are vacation and sick leave plans. The establishment of a single trust, to which contributions are made and from which benefits are paid, normally involves multiple employer plans. Occasionally larger corporations may provide medical and life benefits on a self-insured basis. In these instances, a trust to which annual contributions are made may be established.

Since welfare benefits are normally included in group insurance programs, an examiner will infrequently encounter a trust department acting as trustee of a welfare benefit plan. However, trusteed welfare benefit plans are subject to the various provisions of ERISA in the same manner as pension benefit

plans. Thus, when encountered in trust departments there must be a plan and trust document which defines the manner of contribution, provides the basis for payment of benefits, and describes the manner in which such plan funds are to be invested.

D.3. Abandonned Plans

The Abandoned Plan Program facilitates the termination of, and distribution of benefits from, individual account pension plans that have been abandoned by their sponsoring employers. The program was established pursuant to three final regulations and a related class exemption and is administered by Employee Benefits Security Administration national and regional offices.

Significant business events, such as bankruptcies, mergers, acquisitions, and other similar transactions affecting the status of an employer, too often result in employers, particularly small employers, abandoning their individual account pension plans (e.g., 401(k) plans). When this happens, custodians such as banks, insurers, mutual fund companies, etc. are left holding the assets of these abandoned plans but do not have the authority to terminate such plans and make benefit distributions – even in response to participant demands. In these situations, participants and beneficiaries have great difficulty accessing the benefits they have earned. In response, the Labor Department's Employee Benefits Security Administration (EBSA) has developed rules to facilitate a voluntary, safe and efficient process for winding up the affairs of abandoned individual account plans so that benefit distributions are made to participants and beneficiaries. Information about the program is available under the Abandoned Plan Program section of EBSA's Web site at www.dol.gov/ebsa.

Overview of Regulations

The regulations, 29 CFR Parts 2550 and 2578, establish standards for determining when a plan is abandoned, simplified procedures for winding up the plan and distributing benefits to participants and beneficiaries, and provide guidance on who may initiate and carry out the winding-up process.

Plan Abandonment

A plan generally will be considered abandoned if no contributions to or distributions from the plan have been made for a period of at least 12 consecutive months and, following reasonable efforts to locate the plan sponsor, it is determined that the sponsor no longer exists, cannot be located, or is unable to maintain the plan.

Determinations of Abandonment

Only a qualified termination administrator (QTA) may determine whether a plan is abandoned under the regulations. To be a QTA, an entity must hold the plan's assets and be eligible as a trustee or issuer of an individual retirement plan under the Internal Revenue Code (e.g., bank, trust company, mutual fund family, or insurance company).

Termination and Winding-Up Process

The regulations establish specific procedures that QTAs must follow, including:

- Notifying EBSA prior to, and after, terminating and winding up a plan.
- Locating and updating plan records.
- Calculating benefits payable to participants and beneficiaries.
- Notifying participants and beneficiaries of the termination, their rights and options.
- Distributing benefits to participants and beneficiaries.
- Filing a summary terminal report.

A QTA is not required to amend a plan to accommodate the termination.

The regulations include model notices that the QTA may use.

Distribution Safe Harbor for Missing Participants

The regulations establish a fiduciary safe harbor for distributions from terminating individual account plans (whether or not abandoned) on behalf of missing participants.

In most cases, the account of a missing participant will be transferred directly to an individual retirement plan. In some cases, accounts of $1,000 or less may be distributed to a bank account or state unclaimed property fund on behalf of the missing participant.

Fiduciary Liability

QTAs that follow the regulations will be considered generally to have satisfied the prudence requirements of ERISA with respect to winding-up activities.

A QTA does not have an obligation to conduct an inquiry or review to determine whether or what breaches of fiduciary responsibility may have occurred with respect to a plan prior to becoming the QTA for such plan.

A QTA is not required to collect delinquent contributions on behalf of the plan, provided that the QTA informs EBSA of known delinquencies.

Since more than one entity may be holding assets of a plan, the regulations provide a safe harbor for other asset custodians who cooperate with the QTA.

Annual Reporting Relief

The regulations provide annual reporting relief, under which QTAs are not responsible for filing a Form 5500 Annual Report on behalf of an abandoned plan, either in the terminating year or any previous plan years; but the QTA must complete and file a summary terminal report at the end of the winding-up process.

Instructions on how to file the terminal report will be available under the Abandoned Plan Program section of EBSA's Web site at www.dol.gov/ebsa.

Class Exemption

Accompanying the regulations is a class exemption, PTE 2006-06 (116KB PDF file - PDF Help), that provides conditional relief from ERISA's prohibited transaction restrictions.

The exemption would cover transactions where the QTA selects and pays itself:

- For services rendered prior to becoming a QTA.
- To provide services in connection with terminating and winding up an abandoned plan.
- For distributions from abandoned plans to IRAs or other accounts maintained by the QTA resulting from a participant's failure to provide direction.

D.4. Health Savings Accounts (HSAs)

Health Savings Accounts (HSAs) were created on December 8, 2003 under Title XII of the Medicare Prescription Drug, Improvement and Modernization Act of 2003," (MPDIMA of 2003) and updated under Title III of the Tax Relief and Health Care Act of 2006 (TRHCA of 2006).

In general, HSAs are tax-exempt trusts or custodial accounts created exclusively to pay for the qualified medical expenses of the account holder and his or her spouse and dependents. Individuals with a high deductible health plan (and no other health plan other than a plan that provides certain permitted coverage) may establish an HSA. However, individuals who may be claimed as a dependent on another person's tax return are not eligible to open an HSA. HSAs provide tax-favored treatment for current medical expenses as well as the ability to save on a tax-favored basis for future medical expenses. Within limits, contributions to an HSA made by or on behalf of an eligible individual are deductible by the individual. Where the establishment of an HSA is voluntary on the part of an employee, and the employer does not influence or limit the investment or use of HSA funds, the HSA does not constitute "employee welfare benefit plans" for purposes of Title I of ERISA . Individuals may make tax deductible contributions to the HSA even if they do not itemize deductions; the individual's employer can make contributions that are not taxed to either the employer or the employee; and, employers sponsoring cafeteria plans can allow employees to contribute untaxed salary through salary reduction. Individuals age 55 and older are also allowed to make additional catch-up contributions to their HSAs. Furthermore, certain credits on behalf of the individual by plan sponsors are permissible and not viewed as a prohibited transaction under ERISA or the Code. Amounts contributed to an HSA belong to the account holder and are portable. Earnings on HSAs are not taxable, and can grow tax-free through investment earnings. Unlike amounts in Flexible Spending Arrangements that are forfeited if not used by the end of the year, unused funds remain available for use in later years. Distributions from an HSA for qualified medical expenses are not includible in gross income. However, distributions from an HSA which are not used for qualified medical expenses are includible in gross income and subject to an additional 10 percent tax. The additional tax does not apply if the distribution is made after death, disability, or the individual attains the age of 65. After an individual has attained age 65 and becomes enrolled in Medicare benefits, contributions cannot be made to an HSA.

A high deductible health plan is a health plan that, for 2007, has a deductible that is at least $1,100 for self-only coverage or $2,200 for family coverage and that has an out-of-pocket expense limit that is no more than $5,500 in the case of self-only coverage, and $11,000 in the case of family coverage. Out-of-pocket expenses include deductibles, co-payments, and other amounts (other than premiums) that the individual must pay for covered benefits under the plan. A plan is not a high deductible health plan if substantially all of the coverage is for permitted coverage or coverage that may be provided by permitted insurance. A plan does not fail to be a high deductible health plan by reason of failing to have a deductible for preventive care.

Permitted insurance is: (1) insurance if substantially all of the coverage provided under such insurance relates to (a) liabilities incurred under worker's compensation law, (b) tort liabilities, (c) liabilities relating to ownership or use of property (e.g., auto insurance), or (d) such other similar liabilities as the Secretary of Treasury may prescribe by regulations; (2) insurance for a specified disease or illness; and (3) insurance that provides a fixed payment for hospitalization.

Permitted coverage is coverage (whether provided through insurance or otherwise) for accidents, disability, dental care, vision care, or long-term care.

Health flexible spending arrangement ("FSAs") and health reimbursement arrangements ("HRAs") are health plans that constitute other coverage under the HSA rules. An individual who is covered by a high deductible health plan and a health FSA, or HRA, is generally not eligible to make contributions to an HSA. An individual is eligible to make contributions to an HSA if the

health FSA or HRA is: (1) a limited purpose health FSA or HRA; (2) a suspended HRA; (3) a post-deductible health FSA or HRA; or (4) a retirement HRA.

Tax Treatment of and Limits on Contributions

Contributions to an HSA by or on behalf of an eligible individual are deductible (within limits) in determining adjusted gross income. In addition, employer contributions to HSAs (including salary reduction contributions made through a cafeteria plan) are excludable from gross income and wages for employment tax purposes. In the case of an employee, contributions to an HSA may be made by both the individual and the individual's employer. All contributions are aggregated for purposes of the maximum annual contribution limit. Contributions to Archer MSAs (medical savings accounts for self-employed individuals and employees of small employers with 50 or fewer employees) reduce the annual contribution limit for HSAs. The maximum aggregate annual contribution that can be made to an HSA is the lesser of (1) 100 percent of the annual deductible under the high deductible health plan, or (2) (for 2007) $2,850 for self-only coverage and $5,650 for family coverage. The annual contribution limit is the sum of the limits determined separately for each month, based on the individual's status and health plan coverage as of the first day of the month. The annual contribution limits are increased for individuals who have attained age 55 by the end of the taxable year. In the case of individuals and covered spouses who are age 55 or older, the HSA annual contribution limit is increased by catch-up contributions of $700 in 2006, $800 in 2007, $900 in 2008, and $1,000 in 2009 and thereafter. As in determining the general annual contribution limit, the increase in the annual contribution limit for individuals who have attained age 55 is also determined on a monthly basis. Contributions, including catch-up contributions, cannot be made once an individual is enrolled in Medicare. In the case of individuals who are married and either spouse has family coverage, both spouses are treated as having only the family coverage with the lowest annual deductible. The annual contribution limit (without regard to the catch-up contribution amounts) is divided equally between the spouses unless they agree on a different division (after reduction for amounts paid from any Archer MSA of the spouses). An excise tax applies to contributions in excess of the maximum contribution amount for the HSA. The excise tax generally is equal to six percent of the cumulative amount of excess contributions that are not distributed from the HSA. Amounts can be rolled over into an HSA from another HSA or from an Archer MSA.

Comparable Contributions

Section 306 of the TRHCA of 2006 requires employers to make available comparable contributions on behalf of all employees with comparable coverage during the same period. Contributions are considered comparable if they are either of the same amount or the same percentage of the deductible under the plan. If employer contributions do not satisfy the comparability rule during a period, then the employer is subject to an excise tax equal to 35 percent of the aggregate amount contributed by the employer to HSAs for that period. The comparability rule does not apply to contributions made through a cafeteria plan.

Taxation of Distributions

Distributions from an HSA for "qualified medical expenses" of the individual and his or her spouse or dependents are excludable from gross income. Qualified medical expenses include expenses for diagnosis, cure, mitigation, treatment, or prevention of disease. Qualified medical expenses do not include expenses for insurance other than for (1) long-term care insurance, (2) premiums for health coverage during any period of continuation coverage required by Federal law, (3) premiums for health care coverage while an individual is receiving unemployment compensation under Federal or State

law, or (4) health insurance premiums for Medicare, other than premiums for Medigap policies. Qualified health insurance premiums include Medicare Part A and Part B premiums, Medicare HMO premiums, and the employee share of premiums for employer-sponsored health insurance. Distributions from an HSA that are not for qualified medical expenses are includible in gross income. Distributions includible in gross income also are subject to an additional 10 percent tax unless made after death, disability, or the individual attains the age of 65.

Health Flexible Spending Arrangements and Health Reimbursement Arrangements

Arrangements commonly used by employers to reimburse medical expenses of their employees include health flexible spending arrangements ("FSAs") and health reimbursement accounts ("HRAs"). Health FSAs are typically funded on a salary reduction basis. If the health FSA meets certain requirements, the compensation that is forgone is not includible in gross income and reimbursements for medical care from the health FSA are excludable from gross income and wages. Health FSAs are subject to the general requirements relating to cafeteria plans, including a requirement that a cafeteria plan generally may not provide deferred compensation. This requirement is referred to as the "use-it-or lose-it-rule." Until May of 2005, this requirement was interpreted to mean that amounts available from a health FSA as of the end of a plan year must be forfeited by the employee. In May 2005, the Treasury Department issued a notice that allows a grace period not to exceed two and one half months immediately following the end of the plan year during which unused amounts may be used. An individual participating in a health FSA that allows reimbursements during a grace period is generally not eligible to make contributions to the HSA until the first month following the end of the grace period even if the individual's health FSA has no unused benefits as of the end of the prior plan year. HRAs operate in a manner similar to health FSAs, in that they are an employer maintained arrangement that reimburses employees for medical expenses. Some of the rules applicable to HRAs and health FSAs are similar, e.g., the amounts in the arrangements can only be used to reimburse medical expenses and not for other purposes. Some of the rules are different. For example, HRAs cannot be funded on a salary reduction basis and the use-it-or lose-it rule does not apply. Rather, amounts remaining at the end of the year may be carried forward to be used to reimburse medical expenses in the next year. Reimbursements for insurance covering medical care expenses are allowable reimbursements under an HRA, but not under a health FSA. Subject to certain limited exceptions, health FSAs and HRAs constitute other coverage under the HSA rules.

Rollovers from Health FSAs and HRAs into HSAs for a Limited Time

Section 302 of the TRHCA of 2006 permits certain amounts in a health FSA or HRA to be distributed from the health FSA or HRA and contributed through a direct transfer to an HSA without violating the requirements for such arrangements. The amount that can be distributed from a health FSA or HRA and contributed to an HSA may not exceed an amount equal to the lesser of (1) the balance in the health FSA or HRA as of September 21, 2006 or (2) the balance in the health FSA or HRA as of the date of the distribution. Amounts contributed to an HSA under this section are excludable from gross income for tax purposes, are not taken into account in applying the maximum deduction limitation for other HSA contributions, and are not deductible. Contributions must be made directly to the HSA before January 1, 2012. The rollover is limited to one distribution with respect to each health FSA or HRA of the individual. This provision was designed to assist individuals in transferring from another type of health plan to a high deductible health plan. If an individual for whom a contribution is made under the provision does not remain an eligible individual during the "testing period," the amount of the contribution is includible in gross income of the individual. An exception

applies if the employee ceases to be an eligible individual by reason of death or disability. The amount is includible for the taxable year of the first day during the testing period that the individual is not an eligible individual. A 10 percent additional tax applies to the amount includible. A modified comparability rule applies with respect to contributions under the provision. If the employer makes available to any employee the ability to make contributions to the HSA from distributions from a health FSA or HRA under this section, all employees who are covered under a high deductible plan of the employer must be allowed to make such distributions and contributions. The IRS issued guidance regarding rollovers from FSAs and HRAs into HSAs. See Internal Revenue Service Notice 2007-22.

Certain FSA Coverage Treated as Disregarded Coverage

Section 302 of the TRHCA of 2006 provides that, for taxable years beginning after December 31, 2006, coverage under a health flexible spending arrangement ("FSA") during the period immediately following the end of a plan year during which unused benefits may be paid or reimbursed to plan participants for qualified expenses is disregarded coverage. Such coverage is disregarded if (1) the balance in the health FSA at the end of the plan year is zero, or (2) the entire remaining balance in the health FSA at the end of the plan year is contributed to an HSA.

Repeal of Annual Plan Deductible Limitation on HSA Contribution Limitation

Section 303 of the TRHCA of 2006 modifies the limit on the annual deductible contributions that can be made to an HSA. The maximum deductible contribution is not limited to the annual deductible under the high deductible health plan. The maximum aggregate annual contribution that can be made to an HSA in 2007 is $2,850 for self-only coverage and $5,650 family coverage.

Indexing of Cost of Living Adjustments

Section 304 of the TRHCA of 2006 provides that for adjustments made for any taxable year beginning after 2007, the Consumer Price Index for a calendar year will be determined as of the close of the 12-month period ending on March 31 of the calendar year for the purpose of making cost-of-living adjustments for the HSA dollar amounts that are indexed for inflation (contribution limits and high-deductible health plan requirements).

Contribution for Months Preceding Month that Taxpayer is an Eligible Individual

Section 305 of the TRHCA of 2006 allows individuals who become covered under a high deductible plan in a month other than January to make the full deductible HSA contribution for the year. An individual who is an eligible individual during the last month of a taxable year is treated as having been an eligible individual during every month during the taxable year for purposes of computing the amount that may be contributed to the HSA for the year. For the months preceding the last month of the taxable year that the individual is treated as an eligible individual solely by reason of this section, the individual is treated as having been enrolled in the same high deductible health plan in which the individual was enrolled during the last month of the taxable year. If an individual makes contributions permitted by section 305 but does not remain an eligible individual during the "testing period," the contributions preceding the month in which the individual was an eligible individual are includible in gross income. An exception applies if the employee ceases to be an eligible individual by reason of death or disability.

The "testing period" is the period beginning with the last month of the taxable year and ending on the last day of the 12th month following such month. The amount is includible for the taxable year of the first day during the testing period that the individual is not an eligible individual. A 10-percent additional tax applies to the amount in question.

Employer Comparable Contribution Requirements for Contributions Made to Nonhighly Compensated Employees

Section 306 of the TRHCA of 2006 provides an exception to the comparable contribution requirements which allows employers to make larger HSA contributions for nonhighly compensated employees than for highly compensated employees. Highly compensated employees are defined as under section 414(q) and include any employee who was (1) a five-percent owner at any time during the year or the preceding year; or (2) for the preceding year, (A) had compensation from the employer in excess of $100,000 (for 2007) and (B) if elected by the employer, was in the group consisting of the top 20 percent of employees when ranked based on compensation. The comparable contribution rules continue to apply to the contributions made to nonhighly compensated employees so that the employer must make available comparable contributions on behalf of all nonhighly compensated employees with comparable coverage during the same period.

Rollovers from IRAs into HSAs

Section 307 the TRHCA of 2006 permits a one-time contribution to an HSA of amounts distributed from an individual retirement arrangement (“IRA”). The contribution must be made in a direct trustee-to-trustee transfer. Amounts distributed from an IRA under this section are not includible in income, and are not subject to the 10 percent tax on early distributions. The amount that can be distributed from the IRA and contributed to an HSA is limited to the maximum deductible contribution to the HSA computed on the basis of the type of coverage under the high deductible health plan at the time of the contribution. The amount that can otherwise be contributed to the HSA for the year of the contribution from the IRA is reduced by the amount contributed from the IRA. No deduction is allowed for the amount contributed from an IRA to an HSA. Only one distribution and contribution may be made during the lifetime of the individual. However, if a distribution and contribution are made during a month in which an individual has self-only coverage as of the first day of the month, an additional distribution and contribution may be made during a subsequent month within the taxable year in which the individual has family coverage. The limit applies to the combination of both contributions. If the individual does not remain an eligible individual during the "testing period," the amount of the distribution and contribution is includible in gross income. An exception applies if the employee ceases to be an eligible individual by reason of death or disability. The amount is includible for the taxable year of the first day during the testing period that the individual is not an eligible individual. A 10-percent additional tax applies to the amount in question. Section 307 does not apply to simplified employee pensions (“SEPs”) or to SIMPLE retirement accounts. The IRS issued guidance on this matter in the form of a Service Notice on March 5, 2007.

DOL Guidance Regarding HSAs

The DOL has issued gudiance on several issues concerning HSA and the application of ERISA and the Internal Revenue Code to HSAs. In 2004, the DOL issued Field Assistance Bulletin 2004-01 which addressed the application of ERISA to HSAs established in connection with employment. DOL expanded on this guidance by issuing Q&As in Field Assistance Bulletin 2006-02. In addition, in 2004, DOL issued Advisory Opinion 2004-09A, which

addresses the application of the prohibited transaction provision of IRC Section 4975 to certain contributions to HSAs.

E. Self-Employed Retirement (KEOGH or HR-10) Plans

Self-employed Individuals are permitted to establish tax-qualified pension and profit sharing plans for themselves and their employees. A self-employed Individual is a sole proprietor or partner who works in his or her unincorporated business. Such arrangements are normally designated as Keogh or HR-10 plans, trusts, or accounts. Sometimes Keogh accounts are termed Self-Employed Retirement Plans (SERPs). Keogh plans are generally comparable to corporate-sponsored defined contribution plans that are Individual account plans.

There are specific provisions in the IRC covering Keogh accounts. Only self-employed Individuals may deduct contributions to a Keogh plan. Participants may be permitted to make nondeductible contributions to a plan in addition to employer contributions. Even though these employee contributions may not be deductible, the earnings on them and the contributions by the employer are tax deferred until the Individual begins retirement withdrawals. Retirement withdrawals may commence upon attainment of age 59 1/2 but must commence by the end of the calendar year in which the Individual attains age 70 1/2. The owner-employee may contribute up to 25% of the first $150,000 of earned income or $30,000, whichever is less. In addition, the IRC requires that contributions, in the same percentage of compensation as for the owner-employer, be made on behalf of common law employees with three or more years of service. Plan participants rarely direct their own investments.

In self-employed retirement plans, the *contribution* is defined but the benefit payment is not. Benefits are subject to both the amount contributed and the success of the investment results. Under this approach, the participant is entitled only to the amount in his or her account, based on the varying amounts contributed and the investment return. The participant has a claim only on the assets of his or her account in the plan; there is no claim against all of the plan assets belonging to other plan participants. The PBGC does not insure the benefits of defined contribution plans. IRS Publication 560, Retirement Plans for the Self-Employed, provides more detailed information on both defined benefit and defined contribution Keogh plans.

A bank may serve as a trustee or custodian for Keogh or HR-10 plans. As trustee, the bank's responsibilities may range from ministerial functions to the exercise of broad discretionary duties. As custodian, responsibilities are essentially ministerial in nature. In either case, the bank's responsibilities will be governed by the instrument and ERISA.

- Keogh accounts which cover only the owner-employer, and no other employees, are subject to compliance with the prohibited transaction provisions of ERISA Section 406 and the parallel IRC Section 4975 (refer to subsection H.7, Prohibited Transactions - ERISA Section 406).
- Keogh accounts which cover both the owner-employer and other employees are subject to ERISA Sections 404 and 406, covering fiduciary responsibility and prohibited transactions (refer to subsection H.7, Prohibited Transactions - ERISA Section 406).
- IRC Section 408(m) indicates that if self-directed and Individual account plans invest in collectibles, the investment will be treated as a distribution. Collectibles include: stamps, coins, artwork, gems, antiques, etc. An exception is made for U.S. American Eagle gold coins, which are permissible investments (refer to Appendix E)

A bank may accept non-deposit self-directed Keogh custodial accounts without trust powers under Section 333.101(b) of the FDIC's Rules and Regulations, if the appropriate state authority also permits such accounts to be accepted without trust powers. Despite the fact that trust powers are not needed, banks accepting such accounts must implement appropriate controls. Refer to Section 2, subsection O, Self-Directed IRAs and Keogh Accounts.

Examiners should also be aware that Keogh accounts may not normally be invested in Collective Investment Funds (CIFs) without violating Federal securities laws. There are a few approaches where collective investments are possible, but with many restrictions. Refer to Section 7, subsection D.1, Keogh Account Usage Of Collective Investment Funds. Under certain conditions, banks may offer beneficiaries of Keogh accounts reduced or no cost banking services, refer to Section 5, subsection H.9.c, Receipt of Services by IRAs and Keogh Plans.

F. Individual Retirement Accounts (IRAs)

As tax laws change, the types of IRA and the conditions affecting their availability and operation change. An IRA is a personal savings plan that offers a person tax advantages to set aside money for retirement. Two advantages for the individual include that they may be able to deduct contributions to the IRA in whole or in part, and generally, earnings and gains are not taxed until retirement distributions commence. Tax qualification for IRAs is achieved pursuant to IRC Section 408.

In 2003 and 2004, an individual may contribute the lesser of $3,000 ($3,500 if the individual reached age 50 before 2004) or taxable compensation into an IRA. An individual and a non-working spouse (a one-income couple) are limited to $6,000 per year in contributions ($3,000 each to a Traditional IRA and a Spousal IRA). This limit increases to $6.500 if one individual reached age 50 before 2004, or $7,000 if both reached 50 before 2004. The amount contributed is deductible on the Individual's tax return. IRA contributions must end in the year the participant turns 70 1/2. (Note: Traditional IRAs are IRAs which are neither Roth IRAs nor SIMPLE IRAs.)

IRA deductibility for Federal income tax purposes is limited based on income tax filing status, the amount of earned income, and/or coverage of the participant or spouse by an employer-sponsored retirement plan(s). Even if Individuals cannot take a full deduction because of one of the limitations described above, they may still contribute up to the maximum amount permitted in the current year (refer to IRS Publication 590 for detailed information pertaining to IRA contributory and deductibility limits, these limits are subject to change). Retirement withdrawals may commence upon attainment of age 59 1/2, but must commence by the end of the calendar year in which the Individual attains age 70 1/2.

Under certain conditions, banks may offer beneficiaries of IRAs reduced or no cost banking services, refer to subsection H.9.c. Receipt of Services by IRAs and Keogh Plans.

IRS Publication 590, Individual Retirement Arrangements provides further information on IRAs.

F.1. Operating/Filing Requirements

The IRS requires all IRAs to operate under either one of two versions of IRS Form 5305, or under a written agreement which incorporates the provisions of either of the versions of this form. The two forms are identical except for the interchangeability of the terms trust and custodian throughout the forms. As custodian, responsibilities are essentially ministerial in nature.

The examiner should note:

- Under IRC Section 408(h) - bank custodians of IRAs are considered trustees, hence fiduciaries.

- Under IRC Section 408(i) - IRA trustees are required to report contributions, distributions, and other matters required by regulation (including the fair market value of assets) to the IRS and the IRA owner on an annual basis. As the value of some types of assets, such as limited partnerships, is not easily ascertainable, the administration of some IRA accounts can be problematic.

  In a 2-24-93 letter to Partnership Valuations, Inc., Annapolis, Maryland, the IRS indicated that trustees of IRAs were responsible for ensuring that IRA assets are properly valued on an annual basis, including assets which are "hard to value". It also stated that IRA trustees could not evade evaluation responsibility by having the IRA owner sign a release, indemnification or other instrument. The IRS indicated that IRA contributions, distributions, and valuations should be reported on IRS Form 5498 (Individual Retirement Arrangement Information) to satisfy annual reporting requirements. A copy of the 2-23-93 IRS Interpretive Letter EP:R:9 - Valuation of IRA Assets to Partnership Valuations, Inc. is located in Appendix E. IRS Revenue Ruling 59-60 - Valuation of Non-Traded Assets, in Appendix E also provides general guidance on valuing non-traded assets.

F.2. Types of IRAs

In addition to IRAs for Individuals, a number of different variations now exist and are highlighted below:

- *Rollover IRAs* enable an employee to transfer, tax-free, lump-sum distributions from a previous employer's tax-deferred retirement plan to a new IRA. Rollovers may also be used to transfer funds from one IRA account to another IRA account. The transfer permits the employee to continue tax-deferred earnings.

  When a lump-sum distribution from an employee benefit plan is "rolled" into an IRA, the entire distribution from the previous plan must be transferred to one or more rollover IRAs. In addition, if the funds being transferred originate from either a lump-sum distribution or represent the movement from an existing IRA account to a new IRA account, the transfer must be done directly from the previous plan or IRA to the rollover IRA. If the transfer is done by a check to the employee, the employee must:

  - Pay 20% of the total amount to the government for Federal income taxes, which is withheld from the initial disbursement;
  - Furnish the 20% that was withheld in order to avoid tax consequences since the entire amount of the initial distribution must be rolled into the new rollover IRA; and
  - Place the total amount of funds into the rollover IRA by the 60th day after the day the distribution is received.

- *Individual Retirement Annuity* is an IRA which is established by purchasing an annuity contract or an endowment contract from a life insurance company. The annuity must be issued to the IRA owner, and either the owner or their surviving beneficiaries may receive benefits from the IRA. The entire interest in the contract must be nonforfeitable, it must provide that the owner cannot transfer any portion of it to any person other than the issuer, it must (for contracts issued after 11-6-78) have flexible premiums to permit annuities to change as the owner's compensation changes, it must limit annual contributions to the maximum amount permitted under Traditional IRAs discussed above, and provide for refunded premiums to pay for future premiums or to buy additional benefits before the end of the calendar year after the year the refund is received, and it must begin distributions by April 1 of the year the owner reaches age 70 1/2. IRS Publication 590, Individual Retirement Arrangements, provides further basic information on IRAs.

- *Individual Retirement Bonds* are IRAs which were funded through the purchase of Individual retirement bonds issued by the Federal government. The program was suspended after 4-30-82. It had the following characteristics: the bonds paid interest only until they were cashed in by the owner; no interest was paid on the bonds after the owner reached 70 1/2 years of age; upon the owner's death, the bonds stopped paying interest at the earlier of 5 years after the date of death or the date on which the owner would have reached age 70 1/2; and the bonds could not be sold, discounted, or used as collateral or security. IRS Publication 590, Individual Retirement Arrangements, provides further basic information on IRAs.

- *Simplified Employee Pension (SEP)-IRA* is a pension plan where the employer establishes an IRA account for the benefit of each covered employee. Employer contributions are excluded from an employee's income. In any year where the employer's contribution is less than the normal IRA maximum for Individuals (refer to Traditional IRAs above), the employee may contribute the difference. SEP-IRAs are much simpler and involve less administrative cost for the employer than do other types of retirement plans. I RS Publication 560, Retirement Plans for the Self-Employed, provides information on SEP-IRA plans.

  The Economic Growth and Tax Relief Reconciliation Act of 2001amended Sections 402 and 414 of the Internal Revenue Code, enabling individuals age 50 and over to make elective retirement plan deferrals (catch-up contributions) to 401(k) plans, SIMPLE IRA plans, simplified employee pensions (SEP), Section 403(b) arrangements, and Section 457 governmental plans effective for plan years beginning after December 31, 2001. Refer to Section Q. Catch-Up Contributions for additional details.

- *Salary Reduction Simplified Employee Pension Plan (SARSEP)* is a type of defined

contribution employee benefit plan established under the Tax Reform Act (TRA) of 1986. SARSEPs are sometimes referred to as elective deferral arrangements or as salary reduction arrangements. SARSEPs operate with pretax employee contributions, thus reducing the employee's income tax liability.

New SARSEPs could be adopted by employers through December 31, 1996. Beginning January 1, 1997, SARSEPs were replaced by Savings Incentive Match Plans for Employees (SIMPLEs), and no new SARSEPs may be established. SARSEPs adopted prior to 1997 can be continued with additional contributions made to them.

SARSEPs were available to employers with 25 or fewer employees, and with at least 50% of eligible employees participating in the plan. Employees contribute a percentage of their salary, thus reducing current income and current income taxes. Income and capital gains earned by SARSEPs are tax-deferred. The annual limit on salary contributions to a SARSEP is limited ($9,500 in 1996), with the limit indexed. In top heavy plans, the amount contributed for the highly compensated employees cannot be more than 125% of the average percentage of pay contributed by all non-highly-compensated employees.

IRS Publication 560, Retirement Plans for the Self-Employed, also provides information on SARSEP plans.

- *Inherited Individual Retirement Accounts* are subject to special rules. The IRA is included in the estate of the decedent who owned it. Unless the inheriting beneficiary is the decedent's surviving spouse, the beneficiary cannot treat the IRA as their own. Only the surviving spouse can elect to: make contributions to the IRA, including rollover contributions; rollover the inherited IRA into another IRA; and to delay receipt of distributions until (the surviving spouse reaches) age 70 1/2. All other inheriting beneficiaries must take distributions from the IRA, which is dependent upon the IRA owner's election at the time the IRA was opened and minimum distribution requirements. IRS Publication 590*, Individual Retirement Arrangements*, provides further basic information on IRAs.
- *Roth Individual Retirement Accounts* were introduced in 1998. Except for some special rules which apply only to Roth IRAs, these Individual retirement accounts are subject to the same IRS rules as are traditional IRAs. IRS Publication 590, *Individual Retirement Accounts*, extensively discusses all types of IRAs, and it should be used as general guidance when reviewing IRAs. Some of the basic Roth IRA rules follow:

    1. A Roth IRA must be initially designated as a Roth IRA *when it is established*. Neither SEP-IRAs nor SIMPLE IRAs may be designated or operated as Roth IRAs.

    2. Contributions to Roth IRAs are not tax deductible and are not reported on the individual's tax return:

        a. Roth IRA contribution limit:

        If contributions are made only to Roth IRAs, the contribution limit for 2003 for individuals under age 50 is generally the lesser of:

        - $3,000 ($3,500 if the individual is 50 or older in 2003), or
        - An individual's taxable compensation for the year.
        - These $3,000 and $3,500 amounts do not increase in 2004.

b. Contributions to both traditional and Roth IRAs for same year:

If contributions are made to both a Roth IRA and a traditional IRA, the contribution limit for 2003 is the lesser of:

- $3,000 ($3,500 if the individual is 50 or older in 2003) minus all contributions (other than employer contributions under a SEP or SIMPLE IRA plan) for the year to all IRAs other than Roth IRAs, or
- An individual's taxable compensation minus all contributions (other than employer contributions under a SEP or SIMPLE IRA plan) for the year to all IRAs other than Roth IRAs.

If an individual's modified adjusted gross income is above a certain amount, contribution limits may be reduced and must be computed. IRS Publication 590*,* Individual Retirement Arrangements, details how to calculate the reduced contribution limits.

c. An individual can contribute to a Spousal Roth IRA, provided:

- The contributions satisfy the Spousal IRA limit (same as Traditional IRA Spousal Limit above),
- A joint tax return is filed for the year, and
- The couple's modified adjusted gross income is less than $160,000.

3. Contributions to Roth IRAs may continue even after the owner has reached 70 ½ years of age, there is no age limit for contributions.

4. A contribution to one type of IRA may be "recharacterized" as a contribution to a different IRA, but it must be performed in a trustee-to-trustee transfer.

5. Roth IRAs are not subject to any minimum distribution, and account balances can be left in the IRA as long as the owner lives.

6. Traditional IRAs, SEP-IRAs, and SIMPLE IRAs can be converted to Roth IRAs if the owner has a "modified adjusted gross income" of not more than $100,000 and (if married) files a joint return. Except for the one year waiting period, most rollover rules for traditional IRAs apply.

7. A Traditional IRA may be converted to a Roth IRA. The conversion is treated as a rollover, regardless of the conversion method used. Most of the rules for rolloversapply to these rollovers. However, the 1-year waiting period does not apply. Although the conversion of a Traditional IRA is considered a rollover for Roth IRA purposes, it is treated as a taxable distribution from the Traditional IRA.

8. Individuals who convert traditional IRAs to Roth IRAs, but who are ineligible to do so, are subject to a taxable distribution for the amount of the conversion, plus any additional taxes on early withdrawals. A Roth IRA conversion may be "re-characterized" by converting it back to a traditional IRA prior to the owner's tax return due date, including extensions.

9. For tax years 1998 and 1999, IRA owners were permitted to convert

an amount from a traditional IRA to a Roth IRA, transfer that amount back in a "re-characterization," and then reconvert it back to a Roth IRA in a "re-conversion." After 1999, owners cannot convert and reconvert an amount during the same taxable year.

10. Qualified distributions from Roth IRAs are not taxable, if they are made after a 5 year period beginning with the first taxable year for which a contribution was made, *and* the distribution is:

    a. Made on or after the date the owner reaches age 59 ½,

    b. Made because of the owner's disability,

    c. At the owner's death, made to a beneficiary or the to the owner's estate, or

    d. One that meets the traditional IRA "First" home requirements, up to a lifetime limit of $10,000.

11. Distributions of regular contributions are not taxable.

12. If the owner of a Roth IRA dies, the minimum distribution rules that apply to traditional IRAs apply to Roth IRAs as though the Roth IRA owner died before his or her required "beginning date" (by April 1 of the year following the year in which the owner reaches age 70 ½).

13. Beneficiaries:

    a. Generally, upon the death of the owner, the entire interest in the Roth IRA must be distributed to a beneficiary by the end of the fifth year of the owner's death, unless the interest is payable to a designated beneficiary over his or her life expectancy.
    b. A beneficiary of a Roth IRA may *aggregate an inherited Roth IRA with another Roth IRA*, if: (i) either the beneficiary inherited the other Roth IRA from the decedent, or was the spouse of the decedent, (ii) the beneficiary is the sole beneficiary of the Roth IRA, and (iii) the beneficiary elects to treat it as his or her own IRA.
    c. If the sole beneficiary of a Roth IRA is the spouse, he or she can either delay distributions until the decedent would have reached age 70 ½ , or treat the IRA as his or her own.

14. Excess contributions are subject to a 6% excise tax.

15. Early withdrawals are subject to a 10% premature distribution tax in addition to other applicable taxes.

- Abusive Roth IRA Transactions - The Treasury Department issued Notice 2004-8 identifying and prohibiting certain abusive Roth IRA contribution transactions. The notice was effective on the date of issuance, December 31, 2003. The transactions in question are used to avoid Roth IRA contribution limitations and, in some instances, taxation as income or capital gains. These and similar types of transactions subject the IRA to possible d isqualification and/or excise tax as prohibited transactions under the IRS Code.

- Deemed IRAs (Traditional IRA and/or Roth contributions to an individual retirement account within a qualified employer plan). The Economic Growth and Tax Relief

Reconciliation Act of 2001 added IRC Section 408(q), creating "deemed IRAs" for plan years after 2002. Contributions to deemed IRAs may only be made on a voluntary basis by the employee and are not deductible from income. These contributions do not affect the dollar amount of employer based contributions under a qualified plan. Deemed IRAs must be maintained in a separate account or annuity under the plan, and are subject to IRA rules, not qualified plan rules. However, the plan may commingle deemed IRA assets with qualified employer plan assets for investment purposes. The IRS issued Revenue Procedure 2003-13 outlining amendment guidance for existing qualified employer plans. The revenue procedure also provides sample plan amendment language which allows qualified plans to include deemed IRAs. For Deemed IRA purposes, the IRS has ruled that qualified employer plans include Section 401(a) defined benefit and defined contribution plans, Section 401(k) plans, Section 403(a) annuity plans and 403(b) plans, and Section 457 deferred compensation plans. They do not, however, include Savings Incentive Match Plans for Employees of Small Employers (SIMPLE) IRAs. Procedures for amending qualified employer plans are also provided in IRS Bulletin 2003-4.

- Group Trust Participation by Roth and Deemed IRAs - IRS Revenue Ruling 2004-67 extends the ability to participate in group trust investments described in Revenue Ruling 81-100 to Roth individual retirement accounts described in § 408A and deemed individual retirement accounts described in § 408(q). (Note: investing IRAs in common or collective funds is prohibited under Federal securities laws, refer to IRS Revenue Ruling 81-100 in Section 7.)
- Coverdell Education Savings Accounts (ESAs) - referred to as Education IRAs until July 26, 2001 - are not Individual Retirement Accounts or retirement arrangements of any kind. They are trust or custodial accounts established for the purpose of paying "qualified higher education expenses" (tuition, fees, books, supplies, equipment, and "contributions to a qualified state tuition program") of a designated beneficiary at an "eligible educational institution" (either an eligible postsecondary school - any college, university, vocational school, or other post secondary educational institution qualified to participate in student aid programs by the U.S. Department of Education; or an eligible elementary or secondary school - any public, private, or religious school that provides elementary or secondary education - kindergarten through grade 12 - as determined under state law.)

  Earnings on investments grow tax free until distributed. Upon distribution, if the withdrawals are less than the beneficiary's qualified higher education expenses, the withdrawals are tax free. Any portion of a withdrawal which is greater than the beneficiary's educational expenses is taxable to the beneficiary. Taxable distributions are subject to a 10% tax in addition to other applicable income taxes.

  To be treated as an ESA, the account must be designated as such when it is established. Any Individual, including the designated beneficiary, can contribute to an ESA if the individual's modified adjusted gross income for the year is less than $110,000 ($220,000 for individuals filing joint returns). Contributions are not tax deductible. There is no limit on the number of ESAs which can be established for the same beneficiary, and there are no limits to the number of beneficiaries a contributor may contribute towards in the same year. However, total contributions for the *same beneficiary* in any tax year cannot exceed $2,000. Contribution limits are gradually reduced if a contributor's modified adjusted gross income is between $95,000 and $110,000 (between $190,000 and $220,000 if filing a joint return). Excess contributions are subject to a 6% excise tax. No contributions may be made to an ESA in any tax year in which the beneficiary receives a contribution toward a "qualified state tuition program."

  Education IRA Account requirements:

1. The trustee or custodian must be a bank or an entity approved by the IRS.

2. The document must provide that the trustee or the custodian can only accept a contribution that:

    a. is in cash,
    b. is made before the beneficiary reaches age 18 (no contributions can be made to an ESA after the beneficiary reaches age 18, unless the beneficiary is a special needs beneficiary (not defined as of 2004), and
    c. would not result in total contributions for the tax year (not including rollover contributions) being more than $2,000.

3. Money in the account cannot be invested in life insurance contracts.
4. Money in the account cannot be combined with other property except in a "common trust fund or common investment fund." *(Note: investing IRAs in common or collective funds is prohibited under Federal securities laws, refer to* IRS Revenue Ruling 81-100 in Section 7.*)*
5. Generally, the balance in the account must be distributed within 30 days after the beneficiary reaches age 30, or the death of the beneficiary. Assets distributed upon the death of a beneficiary must either be made to the beneficiary's estate, or to a beneficiary named by the designated beneficiary. However, distribution is not required if the Education IRA is transferred to a surviving spouse or other family member under age 30.

   IRS Publication 970,Tax Benefits for Education provides information on Education IRAs.

F.3. Bank Trustee and Custodial Responsibilities

As trustee, the bank's responsibilities may range from ministerial functions to the exercise of broad discretionary duties. In most instances, IRAs found in trust departments are subject to the investment direction of the Individual or possibly an investment advisor. However, the trust department may be given full discretion in the investment selection process. As custodian, responsibilities are essentially ministerial in nature. The examiner should note that IRC Section 408(h) considers bank custodians of IRAs to be trustees, hence fiduciaries (refer to Appendix E).

Whether acting as trustee or custodian, the bank's responsibilities and duties will be controlled by provisions of the instrument under which the relationship is established. Examiners should perform a careful review of this instrument in order to ascertain the degree of responsibility assumed by the bank and conformity with the duties imposed upon the institution under the agreement.

F.3.a. Self-Directed Custodial IRAs - Own Bank Deposits

The majority of IRAs serviced by banks are handled in the commercial department in a custodial capacity. These accounts are restricted to investments in own bank deposits. Unless state law provides to the contrary, trust powers for such accounts are not required, even if the account document indicates the bank is a trustee.

F.3.b. Self-Directed Custodial IRAs - Non Bank Deposits

A bank may accept non-deposit self-directed custodial IRAs without trust powers under Section 333.101(b) of the FDIC's Rules and Regulations, if the appropriate state authority also permits such accounts to be accepted without trust powers. Despite the fact that trust powers are not needed, banks which accept such accounts must implement appropriate controls. Refer to Section 2, subsection O, Self-Directed IRAs and Keogh Accounts for additional information.

F.4. Special Examination Application

There are several provisions involving IRA accounts which examiners should be aware of:

- According to Advisory Opinion 93-33A issued by the PWBA Office of Regulations

and Interpretations of the US Department of Labor on December 16, 1993, pursuant to Regulation 2510.3-2(d), the DOL does not have jurisdiction over IRAs which are not part of an employer sponsored pension plan falling under Title I of ERISA. Nevertheless, under Presidential Reorganization Plan No. 4 of 1978, effective December 31, 1978, the DOL was given the authority to issue interpretations of section 4975 of the Internal Revenue Code (with certain exceptions, including sections 4975(a), (b), (c)(3), (d)(3), (e)(1), and (e)(7)) involving prohibited transactions of that section of the Code. Accordingly, employer sponsored IRAs are subject to ERISA and fall under DOL jurisdiction. Traditional or individual non-employer-sponsored/non-employer-contributed IRAs are not subject to ERISA and fall under the supervision of the Secretary of the Treasury. They are, however, subject to DOL interpretations of section 4975 of the Code with regard to prohibited transactions under that section of the Code. (Refer also to subsection H.7, Prohibited Transaction - ERISA Section 406)

Several IRA-specific interpretations have been issued by the Labor Department, which has authority over ERISA and also to interpret IRC Section 4975. All of the Advisory Opinions (AOs) noted below deal with self-directed transactions.

- AOs 88-9 and 88-28 deal with investment in the fiduciary bank's stock (or that of its holding company). These AOs include guidance on purchases of treasury stock and stock issued in an Initial Public Offering (IPO).

- AO 88-18 deals with a loan from the IRA to a company where the grantor/customer has a substantial interest. Under the circumstances described, DOL concludes that a prohibited use of plan assets for the benefit of a disqualified person under Section 4975(c)(1)(D) or an act of self-dealing under Section 4975(c)(1)(E) is likely to result if the customer directs the IRA to lend funds to the company.

- AO 89-3 deals with the investment of IRA assets in the stock of the company which employs the grantor/customer. In this case, the stock was purchased directly from the employer company. Under the circumstances described, particularly that the employer had no involvement with the establishment or maintenance of the IRAs, the employer company is not a disqualified person under Section 4975(e)(2); therefore, no prohibited transaction under Section 4975(c)(1)(D) exists. The AO cautions that a prohibited transaction may occur under other provisions of Section 4975.

- SEP-IRAs are subject to ERISA Sections 404 and 406, covering fiduciary responsibility and prohibited transactions.

- IRS Forms 5305 (the governing IRA document) prohibit the Individual sponsoring an IRA from borrowing from the account or from pledging the account as collateral for a loan.

  IRS Regulation 1.408-4 regarding the Treatment of Distributions from IRAs states that if the Individual establishing the account uses, directly or indirectly, any portion of the IRA as security for a loan, the amount used as collateral will be deemed a distribution for that tax year [IRS Regulations 1.408-1(c)(4) and 1.408-4(d)(2)]. The regulation requires the issuing of a W2-P to the borrower and to the IRS to report the distribution. If the distribution occurs prior to the Individual reaching age 59½, a premature distribution would take place, involving an IRS penalty equal to 10% of the pledged amount under IRS Regulation 1.408-1(c)(6).

- Section 408(m) of the IRC indicates that if an IRA invests in collectibles, the investment will be treated as a distribution. Collectibles include: stamps, coins, artwork, gems, antiques, etc. Both Section 408(m) and DOL Prohibited Transaction

Class Exemption (PTE) 91-55 provide an exception for U.S. American Eagle gold coins, which are permissible investments.

- Group Trust/Collective Investment Funds - Examiners should be aware that IRAs of all types may not invest in OCC Regulation 9.18 Collective Investment Funds (CIFs) without violating Federal securities laws. A number of lawsuits have resulted from IRAs being placed in CIFs, and there is one instance of the SEC taking enforcement action against an FDIC-supervised bank for having done so. There are a few approaches where IRAs may be collectively invested, with many restrictions. The investments are usually confined to mutual funds, but never to Regulation 9.18 CIFs. (Refer to IRS Revenue Ruling 81-100 in Section 7

G. Savings Incentive Match Plan for Employees (SIMPLE)

Savings Incentive Match Plans for Employees (SIMPLEs) plans are defined contribution employee benefit plans which replaced SARSEP plans effective January 1, 1997 . SIMPLE plans permit small employers and their employees to make salary reduction contributions toward a simplified retirement arrangement. Employers may establish a SIMPLE IRA plan: (a) if they had 100 or fewer employees who received $5,000 or more in compensation in the preceding year; and (b) they do not maintain another qualified plan, unless the other plan is for collective bargaining employees. These plans must be maintained on a calendar year basis, and may be established as either:

- part of a 401(k) plan (SIMPLE 401(k)), or by
- using SIMPLE IRAs (SIMPLE IRA plan).

Employer matching contributions - employers are required to match each employee's salary reduction contributions on a dollar for dollar basis up to 3% of the employee's compensation. This requirement does not apply if employers make non elective contributions.

Non elective contributions - employers may choose to make non-elective contributions of 2% of compensation on behalf of each eligible employee who will earn at least $5,000 (or a lower employer designated amount) in the current calendar year. Employers opting for this contributory method must make non elective contributions whether or not employees elect to make their own salary reduction contributions.

Employees earning at least $5,000 during any 2 years preceding the current calendar year, and who are reasonably expected to do so in the current calendar year, are eligible to participate in a SIMPLE plan. Employees may elect to contribute up to $8,000 for 2003 (increasing $1,000 each tax year until it reaches $10,000 in 2005). Salary reduction contributions under a SIMPLE IRA plan count toward the overall annual salary exclusion limit ($12,000 for 2003) when employees participate in other employer plans with elective salary reductions or deferred compensation. Participants who are age 50 or over at the end of the calendar year may make catch-up contributions. The catch-up contribution limit for 2003 is $1,000; it increases by $500 each year until it reaches $2,500 in 2006. The limit is subject to cost-of-living increases thereafter.

The Economic Growth and Tax Relief Reconciliation Act of 2001amended Sections 402 and 414 of the Internal Revenue Code, enabling individuals age 50 and over to make elective retirement plan deferrals (catch-up contributions) to 401(k) plans, SIMPLE IRA plans, simplified employee pensions (SEP), Section 403(b) arrangements, and Section 457 governmental plans effective for plan years beginning after December 31, 2001. Refer to Section Q. Catch-Up Contributions for additional details.

IRS Publication 560, Retirement Plans for the Self-Employed provides information on SIMPLE plans.

H. Compliance with the Employee Retirement Income Security Act of 1974 (ERISA)

ERISA is a very complicated law and the employee benefit area is constantly being impacted by changes in Federal tax laws. In addition, the Labor Department issues various regulations, interpretations, and opinions in response to changes in the industry and the need to clarify various requirements of ERISA. As a result, the material in this part is grouped according to the various requirements of ERISA.

Before reviewing the entire ERISA section of this manual, the examiner should initially review four parts of this section which may highlight plans, accounts, and/or circumstances, which in general, ERISA does

not apply. The four sections include: (1) Accounts Covered/Not Covered by ERISA; (2) Fiduciaries Defined; (3) Exemptions from Prohibited Transactions; and (4) Compliance with State Laws.

H.1. Introduction

The primary objective of ERISA is to protect the rights and interests of participants and their beneficiaries in the various plans and accounts described above. Plans and accounts which fall under ERISA are required to: contain certain data, be properly administered in an arm's-length manner, make disclosures to employees and beneficiaries, and comply with government reporting requirements.

Two government agencies are primarily responsible for administration and enforcement of ERISA. DOL is responsible for interpreting and enforcing fiduciary provisions of ERISA and also interprets those sections of the IRC dealing with fiduciary requirements for employee benefit plans. The IRS is responsible for IRAs, Keogh accounts that cover only the Individual/employer, and various tax-related provisions of the IRC.

ERISA also established the Pension Benefit Guaranty Corporation (PBGC), which insures participants' and beneficiaries' vested interests in defined benefit pension plans to a maximum monthly benefit as specified in Title IV of ERISA. PBGC also acts as trustee and receiver for pension plans voluntarily terminated by their sponsors, or involuntarily terminated because of the failure of the sponsor for financial or other reasons. All private defined benefit pension plans meeting certain requirements must, under ERISA, make required annual premium payments to the PBGC.

Important Notice
Material in this section, dealing with ERISA, makes reference to various sections and interpretations of ERISA. Appendix E provides information covering four general types of reference material: • ERISA Law and Internal Revenue Code Sections. • Summaries of ERISA Regulations, Opinions, and Court Decisions, by ERISA Section. • Implementing Labor and IRS Regulations. • Interpretive Opinions, Technical Bulletins, Exemptions, etc.

H.2. Accounts Covered/Not Covered by ERISA - ERISA Section 401

ERISA basically covers the administration and operation of all kinds of employee benefit plans. This includes pension plans, profit-sharing plans, 401(k) plans, ESOPs, IRAs, and Keogh Plans (HR-10 Accounts). Banks which sponsor these for their own employees or offer them to bank customers must comply with ERISA. Bank trust departments which administer the bank's own plan or the plans of others must also comply with ERISA. As a result, ERISA applies to all plans sponsored by banks and their holding companies, and will apply to most employee benefit plans the examiner will encounter in trust departments.

Described below are three frequently encountered employee benefit plans which are not subject to ERISA. ERISA does not apply to:

- *Government plans*. These include plans sponsored by Federal, State, and local government instrumentalities (Nonqualified deferred compensation plans offered by government agencies may also be referred to as 457 plans). As a result, plans for county or city employees, fire and police forces, economic development authorities, etc. are excluded from ERISA requirements. In 1986, a tax-deferred savings plan was established for Federal employees pursuant to the Federal Employees' Retirement System Act of 1986.

Church plans. Plans sponsored by religious (church) organizations and their affiliated organizations.

- *Excess benefit plans that are unfunded.* In general, these plans cover a select group of highly compensated employees and provide benefits in addition to those provided under a tax-qualified plan. Excess benefit plans are funded solely out of the general assets of the employer. These plans are not tax-qualified nor protected in a trust from creditors of the plan sponsor. The reason these plans are not tax-qualified is that benefits provided under the plan are in excess of those permitted for tax-exemption under the IRC and coverage under the plan is limited to highly paid employees. (Examiner note: there is nothing illegitimate or inappropriate about this type of plan if established and administered properly.)

The above list is not all inclusive and the examiner should refer to ERISA Section 4(b) for a complete listing. The types of employee benefit plans that are exempt from ERISA are generally subject to State statutes.

H.3. Establishment of Plan - ERISA Section 402

Every employee benefit plan shall be established and maintained pursuant to a written instrument. Such instrument shall provide for one or more named fiduciaries who jointly or severally shall have authority to control and manage the operation and administration of the plan. Every employee benefit plan shall:

- Name a Plan Administrator;
- Provide a procedure for establishing and carrying out a funding policy;
- Describe any procedures for the allocation of responsibilities for the operation and administration of the plan;
- Provide a procedure for amending such plan, and for identifying the persons with authority to amend the plan; and
- Specify the basis on which payments are made to and from the plan.

Examiners should note that the plan sponsor is generally responsible for ensuring that the plan meets the requirements of ERISA Section 402.

H.4. Trustee Requirements - ERISA Section 403

Section 403 of ERISA requires that all assets of employee benefit plans must be held in trust by one or more trustees. There is no requirement that a bank or other corporate fiduciary be used. Individuals may serve as plan trustees under ERISA.

Trusteed plans are those most frequently encountered and a trust agreement, as distinguished from the governing plan, establishes the trustee's duties and responsibilities. Principal among these, the trustee holds title to and takes possession of account assets. The trustee is also responsible for safekeeping and asset management, to the extent this is not delegated to others. Other typical trust agreement provisions relate to irrevocability and non-diversion of trust assets, as well as investment powers of the trustee, payment of legal and other fees, periodic reports by the trustee, records and accounts to be maintained, payment of benefits, and the rights and duties of a trustee in case of amendments to or termination of the plan.

H.5. Fiduciary Responsibilities - ERISA Section 404

ERISA codifies traditional fiduciary responsibilities into a single nationwide standard. The primary section of the ERISA which deals with fiduciary responsibilities is Section 404. The standards enunciated by Section 404 amount to an itemization of how a fiduciary *should* act.

H.5.a. Fiduciary Defined

For the most part, the definition of a fiduciary under ERISA is a functional definition. Therefore, a person is a fiduciary to the extent he:

- Exercises any discretionary authority or discretionary control respecting management of such plan, or exercises any authority or control respecting

management or disposition of its assets;

- Renders investment advice for a fee or other compensation, direct or indirect, with respect to any moneys or other property of such plan, or has any authority or responsibility to do so; or

- Possesses any discretionary authority or discretionary responsibility in the administration of such plan.

See Section 3(21)(A) of ERISA.

Certain entities with respect to a plan are automatically fiduciaries: trustees, named fiduciaries, plan administrators and investment managers. This includes the management of the plan sponsor. For a bank's own employee benefit plan, this would typically mean the bank's board of directors, senior management, and any plan committee. Employees (if any) of a plan who exercise discretionary authority or responsibility in the administration of a plan become fiduciaries with respect to such plan. In addition, banks sometimes provide plan administration services, especially for the bank's own plan, and, as a result, are fiduciaries with respect to such plans.

Every qualified plan must have at least one named fiduciary person designated as the one responsible for operating the plan. This person may be the trustee, the plan administrator, the employer/plan sponsor, or the investment advisor. Fiduciaries generally do not include accountants, attorneys, insurance agents, insurance companies, consultants, or actuaries unless they exercise control over the plan in some fashion.

The examiner should remember that DOL has ruled that a bank serving solely as custodian is not a fiduciary according to Advisory Opinion 77-45.

H.5.b. Requirements

Exclusive Benefit - ERISA Section 404(a)(1)(A): The overall thrust of ERISA is that the plan must be operated solely for participants and beneficiaries of the plan. Section 404(a)(1)(A) expands on this underlying theme by stating that the plan must be operated for the exclusive purpose of providing benefits and defraying reasonable administration expenses. Any violations of ERISA's self-dealing or conflict of interest provisions (Section 406 prohibited transactions) would also normally involve a violation of Section 404 addressing the exclusive benefit provisions.

Prudent Man Rule - ERISA Section 404(a)(1)(B): This section of ERISA requires that fiduciaries act prudently. Prudence is normally associated with asset management, but this section also applies to all of a fiduciary's duties for a plan. ERISA Section 404(a)(1)(B) states that fiduciaries must manage the plan:

> With the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent man acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character with like aims.

The wording of the prudence requirement under ERISA includes an implication that a trust department may be held to a higher standard of prudence than Individual fiduciaries. The text of ERISA refers to a fiduciary acting in like capacity and familiar with such matters would use in the conduct of an enterprise of a like character with like aims. A fiduciary which holds itself out as having a certain expertise (such as a trust department marketing and charging fees for its services and expertise) is to be held to a higher standard of prudence than merely a prudent Individual.

Section 404(a)(1)(B) of ERISA discusses investment duties of the fiduciary which somewhat mirror the Prudent Investor approach. This approach differs from the traditional Prudent Man Rule in two major aspects:

- No category of investment is deemed inherently imprudent by its very nature.

- Prudence is evaluated by looking at the entire investment portfolio. The Prudent Man Rule approach looks at Individual investments, ignoring all investments with gains and focusing only on those with losses.

Prudence is generally viewed by evaluating the decision-making process, not necessarily the results. Therefore, investment decisions tend to be viewed as of the date of the transactions, not on the basis of what happened after an investment was made. Also see related discussions of the Prudent Man Rule and the Uniform Prudent Investor Act in Section 3 - Asset Management and in Appendix C - Fiduciary Law.

Examiners should be aware that a plan's exemptions under Sections 407 and 408 from prohibited transactions under Section 406 of ERISA, do not release the fiduciary's duty under Section 404 regarding prudence. The fact that a bank has plan and statutory authority to invest up to x percent of its assets in employer securities does not mean it can make an investment if, to do so, would be imprudent. This is true even if the only investment that can be made under the plan is restricted to employer securities.

Appropriate Consideration of Investment Decisions - DOL ERISA Regulation 2550.404a-1(b): The Labor Department has provided guidance on the actions a fiduciary must take in order to demonstrate it was prudent. DOL ERISA Regulation 2550.404a-1(b) addressing Investment Duties provides the fiduciary must exercise appropriate consideration when making investment decisions including:

- Determining that the investment or investment course of action is reasonably designed as part of the portfolio (or the portion of the plan's portfolio for which the fiduciary has investment duties) to further the purposes of the plan, taking into account the risk of loss and the opportunity for gain associated with the investment or investment course of action; and

- Considering the portfolio's or portion of the portfolio's: (1) diversification, (2) liquidity and current return relative to plan cash flow and needs, and (3) projected return relative to plan funding requirements.

The regulation points out that contemplation of an investment decision must include the above considerations, but that it is not necessarily limited to only the itemized points. The regulation does not explicitly state that the appropriate consideration must be in writing; however, documentation is the only logical way a bank could demonstrate prudent actions at a later date. Examiners, therefore, should expect to see reasonable written documentation of investment decisions for ERISA plans, although failure to have appropriate documentation is not a violation. Examiners should remember that a bank is not responsible for reviewing the prudence of investment decisions made by outside investment managers to whom investment responsibility has been properly delegated by the plan administrator or other authorized party.

Diversification of Investments - Section 404(a)(1)(C): Section 404(a)(1)(C) of ERISA requires that plan investments be diversified in order to minimize the risk of large losses. Prior DOL rulings indicate an appropriate benchmark of one-third (33%) of the total portfolio of assets should be used in evaluating whether an investment is diversified. The 25% banking statutory standard to determine concentrations of credit does not apply to ERISA accounts.

While ERISA requires that plan assets be diversified, and failure to do so is a violation, there are a number of specific instances where the diversification standard does not apply, including the following:

- Individual account plans where the participant directs his or her own investments. See the discussion on Section 404(c) plans.

- Insured bank, thrift, and credit union deposits which comply with the statutory exemptive provisions of ERISA Section 408(b)(4) and DOL ERISA Regulation 2550.408b-4.

- Bank, thrift, and credit union deposits which are in excess of the amounts covered by Federal insurance, if the institution's assets are diversified, and if the transaction also complies with the statutory exemptive provisions of ERISA Section 408(b)(4) and DOL ERISA Regulation 2550.408b-4. Also refer to DOL Advisory Opinion 77-46 in Appendix E.

- Mutual funds, collective investment funds, Real Estate Investment Trusts (REITs), and annuities, as these investments are not considered single investments. Refer to DOL Advisory Opinions 75-93, 80-13, 78-30, and 75-79, respectively.

Adherence to Plan Document - ERISA Section 404(a)(1)(D): Section 402(a)(1) of ERISA requires that every employee benefit plan shall be governed by a written plan instrument. Failure to follow this governing plan document is normally a violation of ERISA Section 404(a)(1)(D).

If the trustee's actions comply with the plan or trust agreement but would violate ERISA, the plan or agreement may not be followed. In such instances, ERISA takes precedence over the governing documents.

Indicia of Ownership of Plan Assets - ERISA Section 404(b): In order to facilitate oversight and enforcement by appropriate agencies, ERISA Section 404(b) requires that documents evidencing ownership of plan assets must be maintained within the jurisdiction of United States (U.S.) courts. These documents (securities, certificates, etc.) are termed indicia of ownership. A number of specific exceptions to holding plan assets which are foreign securities outside the U.S. are outlined primarily in DOL ERISA Regulation 2550.404b-1 and, under certain circumstances, the accompanying Preamble. Listed below are some of the exceptions provided by the regulation. Each of the exceptions is subject to specific conditions.

- American Depository Receipts (ADRs). ADRs that enable a person to demand delivery of a foreign security constitutes the indicia of ownership of the foreign security. This exception is specifically noted in the Preamble to DOL ERISA Regulation 2550.404b-1.

- Assets that are under the management and control of a U.S. regulated bank, insurance company, or investment adviser, which is organized under the laws of a State or of the U.S. In addition, the plan fiduciary's principal place of business must be in the U.S. and certain minimum financial conditions must be satisfied.

- Foreign securities which are in the physical possession of, or in transit to, a U.S.-based bank or registered broker or dealer and certain other conditions are met.

- Contributions made on behalf of plan participants who are Canadian citizens or residents may be maintained in Canada if required by Canadian tax or other laws.

- Foreign Currency maintained outside the U.S. solely as an incident to the purchase, sale, or maintenance of securities by a U.S. plan.

- Assets which are maintained by a registered broker or dealer in SEC-designated satisfactory control locations if certain other conditions are met. The SEC regulation covering designation of satisfactory control locations is Rule 15c3-3 [17 C.F.R. 240.15c3-3].

The DOL's indicia of ownership rules also address any securities (other than those issued by Individuals) the principal trading market for which is outside the jurisdiction of the U.S. District courts. SEC Rule 17f-5(c) provides fiduciary standards for Eligible Foreign Custodians. These standards concern whether: (1) the Eligible Foreign Custodian has the requisite financial strength to provide reasonable care for the foreign

assets, (2) the Custodian has adequate reputation and standing, and (3) the mutual fund will have jurisdiction over and be able to enforce judgments against the Custodian.

The FDIC has been advised that an **eligible foreign custodian** as defined in SEC Rule 17f-5 of the Investment Company Act of 1940 [**17 C.F.R. 270.17f-5**], may fulfill the requirements of a satisfactory control location. An eligible foreign custodian under the revised rule is any one of the following:

> An entity that is incorporated or organized under the laws of a country other than the United States ***and*** which is a Qualified Foreign Bank ***or*** which is a majority-owned direct or indirect subsidiary of a U.S. Bank or bank-holding company.

Under the revised rule: (1) A Qualified Foreign Bank is a bank or trust company, organized under the laws of a country other than the United States, and which is regulated by that country's government or an agency of the country's government. (2) U.S. Bank is: (i) a national bank; (ii) a Federal Reserve member bank; (iii) a state chartered bank or trust company which is supervised by state or federal authority; or (iv) a receiver, conservator, or other liquidating agent of any of these institutions. (3) Foreign Assets consist of investments for which the primary market is outside the United States, and any cash and cash equivalents reasonably necessary to effect transactions in those investments.

H.5.c. Special Examination Applications of Fiduciary Responsibility Provisions

A number of areas not specifically covered in the ERISA statute are particularly relevant to banks and trust departments. Many areas are noted because of frequent inquiries by examiners and bankers, while other areas have been subject to criticism in examination reports. The special application of a number of issues regarding ERISA plans are commented on below, grouped alphabetically by topic.

Topic	Section
(1) Contributions, In-Kind	H.5.c.(1)
(2) Derivatives	H.5.c.(2)
(3) Economically Targeted Investments (ETIs) (Social/Ethical Investing) Section 3, F.3.e and	H.5.c.(3)
(4) ESOP Plans - Employer Securities Investments - Prudence	H.5.c.(4)
(5) ESOP Plans - Employer Securities Investments - Valuation	H.5.c.(5)
(6) Individual Account (Section 404(c)) Plans	H.5.c.(6)
(7) Loans - Documentation	H.5.c.(7)
(8) Own-Bank/Holding Company Stock Investments	H.5.c.(8)
(9) Proxy Voting and Corporate Governance	H.5.c.(9)
(10) Directed Trustees	H.5.c.(10)

H.5.c.(1). Contributions, In-Kind

Instead of making a cash contribution to an employee benefit plan, some plan sponsors have attempted to make a contribution of non-cash assets, usually termed an in-kind contribution. DOL Interpretive Bulletin 94-3 explains that it is a prohibited transaction for the sponsor to make in-kind contributions in satisfaction of an obligation to contribute to defined benefit plans and certain defined contribution and welfare benefit plans. Refer to subsection H.7.f.(2), Contributions, In-Kind for additional information regarding in-kind contributions and the associated prohibited transaction under ERISA Section 406.

Independent of the application of the prohibited transaction provision, Interpretive Bulletin 94-3 also states that a fiduciary has a duty to review in-kind contributions when such contributions are permissible. The bulletin indicates that automatic acceptance of an in-kind contribution

may violate ERISA Sections 404(a)(1)(A) addressing the exclusive benefit rule, 404(a)(1)(B) addressing the Prudent Investor Rule, and/or 404(a)(1)(C) regarding the lack of diversification. If accepting an in-kind contribution results in ERISA violations of 404(a)(1)(A), (B), and/or (C); the fiduciaries of the plan would be liable for any losses resulting from such a breach of fiduciary responsibility, even if the contribution in-kind does not constitute a prohibited transaction under ERISA Section 406.

H.5.c.(2). Derivatives

Derivative investments are not automatically contrary to ERISA's provisions. It should, however, be considered imprudent and an apparent violation of ERISA Section 404(a)(1)(B) if an employee benefit plan invests in derivatives without: (1) understanding the investment vehicle, (2) realizing that the investment involves derivatives, either directly or through a pooled investment vehicle which uses derivatives; (3) adequately evaluating the market, legal, credit and operational risks associated with investments in derivatives; (4) obtaining timely and accurate market prices for investments in derivatives; and (5) adequately monitoring investments in derivatives. For a further discussion of derivatives, associated risks, and considerations in evaluating prudence, refer to subsection F.2.C of Section 3 of this Manual. In addition, refer to the Labor Department letter issued to the Office of the Comptroller of the Currency regarding Investments in Derivatives dated March 21, 1996 (refer to Appendix E).

One of the problems associated with derivatives is the inability to properly price and value the investment, both at acquisition and during the period that the investment is held. Often, derivatives are overvalued at book value, rather than the lower market value. Failure to value such investments at a fair market value for employee benefit plans may have two further consequences on:

- Fees - If the plan's fees are based on its asset size, as is common, the overvaluation of derivatives will cause the plan to pay unwarranted fees.

- Reports - The overvaluation of the derivatives will normally result in a parallel failure to accurately report the plan in regulatory filings, particularly the Form 5500 annual report. In such cases, an appropriate violation for inaccurate reporting should be cited.

H.5.c.(3). Economically Targeted Investments (ETIs or Social investing)

Social investing is an investment approach whereby the investor attempts to inject non-investment criteria into the investment process. Normally, the investment manager desires to either promote or endorse a non-investment criteria or attempts to criticize or avoid certain criteria (for example, promotes environmentally friendly firms and avoids tobacco firms). The screening process may deal with Individual companies, or entire countries and industries. Many times, a potential investment is reviewed through multiple filters or screens to determine whether the non-investment goals can be met.

In 1994, the Labor Department issued Interpretive Bulletin 94-1 dealing with ETIs. The bulletin indicates that an ETI philosophy is not, in and of itself, imprudent. The Interpretive Bulletin states that ETIs are subject to the same standards as any other plan investment in that the investment must be: (1) prudent, (2) authorized by the plan, and (3) considered in light of other available investment alternatives. In accordance with the standard of care (Section 227) and duty of loyalty (Section 170) in the

Prudent Investor Rule, an ETI would not be prudent if it would be expected to provide a plan with a lower rate of return than available alternative investments with commensurate degrees of risk, or if the ETI is riskier than alternative available investments with commensurate rates of return. Refer to Section 3 of this Manual for additional comment.

H.5.c.(4). ESOP Plans - Employer Securities Investments - Prudence

Some ESOPs are sponsored by companies which are encountering difficulties (for example, banks with low capital) or are in declining industries. While the ESOP plan document may restrict plan investments to employer stock, the prudence of such an investment may be open to question. This is especially true if the employer eventually fails, the plan's employer stock become worthless, and hindsight is used.

A number of court challenges have been brought against bank trustees who followed the plan document and continued purchasing employer stock, even as the employer trended toward eventual failure. The actual failure of the employer is not necessarily required for a challenge -- merely the loss of a major portion of the stock's value. The fact that the trustee followed the plan document which authorized no other investment vehicle, has not always been a sufficient defense for the trustee. In addition, the price paid by the plan for the employer stock may be called into question.

Court decisions have reportedly differed, in some cases deciding for the trustee and in other cases deciding for the plan participants. A sampling of court cases appears in Appendix E. The court decisions provide guidance for how such investment transactions may be evaluated. When an ESOP invests in employer securities, the examiner should:

1. Determine if the trustee (bank, directors, officers, plan committee, etc.) is following the plan document(s) [Reference: Statewide Bancorp ESOP court case.

2. Determine if the plan requires investment in the employer securities or if the language is permissive.

   If the plan requires investment in employer securities, the trustee must comply unless "compliance would be impossible or illegal" or a court approves a deviation.

   If investment language is permissive, prudence is required in the acquisition and retention of the securities. A fiduciary is presumed to have complied with ERISA unless the facts and circumstances would defeat or substantially impair the plan's purpose. If trustees are also directors of officers of the employer (likely in own-bank plans), they must show that they acted impartially in investigating available investment alternatives -- particularly if the employer is experiencing financial difficulty.

   In evaluating a fiduciary's prudence when an ESOP's investment language is permissive, the examiner should evaluate the reasonableness of the fiduciary's actions based on whether the action:

   - Complies with the provisions of the plan;

   - Complies with the goals of the plan; and

   - Conflicts with the substantive or procedural requirements of ERISA, or the regulations thereunder.

[References: U.S. Supreme Court Case, Firestone Tire and Rubber Co. v. Bruch, 489 U.S. 101 (1989); and Moench v. Robertson, 62 F.3d 553 (3d Cir. 1995).]

3. Evaluate, based on the facts presented, if the trustee administered its investment responsibilities prudently in either continuing or discontinuing the purchase of the employer stock.

In those situations where the value of the securities and/or the financial stability of the employer is declining, and in the examiner's judgment the trustee is acting imprudently, the examiner should criticize the administration of the account and cite the apparent violation(s) of the applicable ERISA section(s) [primarily ERISA Section 404(a)(1)(B)].

H.5.c.(5). ESOP Plans - Employer Securities Investments - Valuation

Many of the ESOPs that FDIC examiners will encounter are sponsored by small banks and small companies in small towns. The stock of such entities is typically closely held and not listed or traded on securities exchanges or NASDAQ. Brokers usually do not make a market for the stock and it is thinly traded in the local area. The question of fair and proper valuation of such stock is critical to any ESOP plan.

The valuation of employer stock is covered in both IRS and DOL regulations applicable to ESOPs. The standard established in DOL regulations requires that no more than adequate compensation may be paid. IRS regulations expand on this somewhat by providing that an independent appraiser must be used to establish a fair price. The IRS stresses that the mere presence of a written appraisal does not necessarily mean that the appraisal arrived at a fair valuation. Refer to subsection D.2.e., Employee Stock Ownership Plans (ESOPs) regarding valuing employer securities in accordance with both IRS and ERISA requirements.

Both the DOL and IRS indicate that no one method of valuation is acceptable or unacceptable in every situation. Examiners must use judgment in assessing if adequate consideration for the transaction was provided. In general; however, book value by itself is not considered a sufficient independent basis for valuation.

Despite the guidelines above, a number of abuses or potential abuses have occurred in ESOPs, including those sponsored by banks and bank holding companies. The abuses often involve insiders of the employer, who set unrealistically high values for the employer stock. In some instances, the inflated prices help maintain a market for the employer's stock. In other cases, the insiders sell their stock to the ESOP at the inflated price. The FDIC has referred a number of these plans to the Labor Department for apparent ERISA violations involving the pricing of the employer securities.

Failure to value employer securities at a fair market value for the plan itself will normally result in an apparent violation of ERISA 404(a)(1)(B). In addition, failure to value employer securities at fair market value will result in a parallel failure to accurately report the plan assets in regulatory filings, particularly the Form 5500 annual report. In such cases, ERISA Section 103(b)(3)(A) should be cited for inaccurate reporting (refer to DOL ERISA Regulation 2520.103-1(a)(1) and -1(b)(2)(i) for additional guidance).

H.5.c.(6). Individual Account (Section 404(c)) Plans

Section 404(c) of ERISA provides limited relief from certain fiduciary responsibilities and duties for plans which permit participants to self-direct

their plan investments. Plans such as 401(k) and 403(b) are Individual account plans. Under Section 404(c), plan participants who direct their own investments are not considered to be fiduciaries, provided that the conditions set forth in DOL Regulations under Section 404(c) are met.

Plan sponsors can limit their fiduciary liability if the plan operates in conformance with DOL ERISA Regulation 2550.404c-1. Compliance with the regulation is optional, but if a plan does not comply with the regulation, the relief provided by Section 404(c) is not available. The regulation is generally for transactions beginning with the first day of the second plan year beginning on or after October 13, 1992. Transactions occurring before that date are subject only to the general requirements of Section 404(c) of ERISA, without regard to the specifics of regulation.

Compliance with the regulation generally imposes requirements on the plan, not the participants. The Individual account plan must permit participants with the ability to:

- Choose from a broad range of investment alternatives. At least three investment alternatives must be provided, each of which is diversified and has materially different risk and return characteristics [see 2550.404c-1(b)(3)(i)(B)].

  In practice, the three alternatives will generally consist of the following types of investment vehicles: (1) a no-risk investment [for example, money market mutual fund, Short-Term Investment Fund (STIF), or Guaranteed Investment Contract (GIC)]; (2) a stock investment; and (3) a fixed-income investment. Employer stock may be a choice but special requirements apply to this investment.

- Give investment instructions with a frequency appropriate to the market volatility of the investment alternatives. Plan participants must be able to make changes to at least three of the investment vehicles not less than once a quarter [see 2550.404c-1(b)(2)(ii)(C)(1)].

  If an investment vehicle permits investment changes more often than quarterly, the participant must have the ability to immediately roll the proceeds into another plan investment vehicle that is a low risk, liquid investment choice [see 2550.404c-1(b)(2)(ii)(C)(2)]. Special provisions are given for investments in stock of the employer/sponsor.

- Diversify investments within and among investment alternatives. [refer to DOL regulation 2550.404c-1(b)(3)(i)(C)].

- Obtain sufficient information to make informed investment decisions. This involves specific disclosures about the plan itself, as well as each authorized investment alternative within the plan with respect to participants or beneficiaries of a plan.

  [see 2550.404c-1(b)(2)(i)(B)(1) and (2)].

  The Labor Department has released special guidance on this requirement to provide investment information and education to plan participants [see Interpretive Bulletin 96-1]. Examiners should be aware that this guidance applies primarily to plan sponsors, not to bank trustees who service outside accounts. It will; however, apply to banks and bank holding companies who sponsor Individual account plans for their own employees. The bulletin will also apply in those instances where banks provide such investment information and/or education to outside plan sponsors.

Special provisions are given for investments in stock of the employer/sponsor [see 2550.404c-1(b)(2)(ii)(C)(3)].

Under Section 404(c) of ERISA and the implementing regulation, the plan sponsor and fiduciaries have no obligation to provide investment advice to plan participants and beneficiaries. However, the plan sponsor and fiduciaries do have an obligation (see requirements above) to provide sufficient information on which the participants can make informed and intelligent decisions.

H.5.c.(7). Loans - Documentation

The FDIC has made a number of ERISA referrals to the Labor Department regarding loans made by plans where the loans lacked key or common documentation. Examiners applied normal underwriting or documentation standards that examiners would expect to find if the loan had been made by the bank itself. Granting of loans in the absence of such key documentation was cited as an apparent violation of the ERISA prudence standards. Examples of the documentation deficiencies reported include nonexistent corporate borrowing authority, missing financial information, unsupported repayment capacity, and inadequate lien filings.

For each referral, Labor Department investigators determined that either such documentation deficiencies did not represent a violation of ERISA, or the matter did not qualify for further investigation. As a result, examiners should not cite apparent violations of ERISA Section 404(a)(1)(B) regarding prudence for such documentation exceptions.

H.5.c.(8). Own-Bank/Holding Company Stock Investments

One common inquiry from examiners involves discretionary investments of an outside account's assets in the stock of the fiduciary bank or its holding company. In a 1980 letter to the OCC, the Labor Department stated that a discretionary investment in own-bank or own-holding company stock was an imprudent act. DOL commented that such a discretionary investment burdens our imagination to envision a situation in which a trustee with investment discretion could make an objective decision, solely on the basis of the prudence standard, regarding the purchase or sale of its own stock.

In a number of situations DOL has indicated that self-directed or non-discretionary purchases, sales, and retention of own-bank and own-holding company stock are permitted. Specific guidance was given for self-directed IRA purchases and initial public offerings of savings bank stock upon conversion from a mutual to a stock institution [see DOL Advisory Opinions 88-9, 88-28, and 92-23 in Appendix E].

H.5.c.(9). Proxy Voting and Corporate Governance

In Interpretive Bulletin 94-2, the Labor Department has stated that the voting of proxies is a fiduciary responsibility under the prudence requirements of ERISA. Trustees have the duty to execute proxies unless they receive proper instructions from the named fiduciary. The absence of explicit proxy voting instructions in a plan document or trust agreement does not relieve the fiduciary of the duty to vote the proxies. If the investment management responsibility has been properly delegated to an investment manager by a named fiduciary, the investment manager has authority to execute proxies unless the right to vote proxies (in whole or in part) has been reserved by the plan to the trustee or named fiduciary. The fiduciary is responsible not only for voting all proxies which it receives, but also for ensuring that it receives all proxies to which a plan

is entitled. Records must be kept of proxy voting.

The fiduciary duties of prudence and loyalty to participants and beneficiaries require trustees and investment managers to vote on every proposal that might affect the value of a plan's investment. In voting proxies, the fiduciary may consider only those factors that affect the value of a plan's investment. The impact on the plan participants and beneficiaries of the subject being voted upon may not be considered. This is especially relevant in cases of leveraged buyouts or unfriendly takeovers, where the jobs of the participants may be in jeopardy.

The Labor Department has also stated that an activist stance in shareholder rights is not automatically imprudent. A plan may undertake activities intended to monitor or influence the management of corporations in which the plan owns stock. Circumstances where this may occur are in closely-held companies, or stock intended to be held as a long-term investment. Actions might be undertaken for such concerns as mergers and acquisitions, capitalization and debt levels, executive compensation, and long-term business plans.

H.5.c.(10). Directed Trustees

While a plan trustee is always a fiduciary under ERISA 3(21), not all trustees have the same level of control or authority over the management of a plan's assets. A directed trustee is a plan trustee who is, by the terms of the plan, subject to the direction of a named fiduciary who is not a trustee. Section 403(a) of ERISA recognizes that such trustees have limited authority and discretion, and, therefore, limits the fiduciary liability of directed trustees provided that the directions being carried out for named fiduciaries are proper, in accordance with the terms of the plan, and not contrary to ERISA. On December 17, 2004, DOL issued Field Assistance Bulletin 2004-03, Fiduciary Responsibilities Of Directed Trustees, which provides, in the context of publicly traded securities, guidance regarding the fiduciary duties of directed trustees and factors to be considered in determining whether the directions of a named fiduciary are "proper." See FAB 2004-03 for a complete discussion.

H.6. Co-Fiduciary Liability - ERISA Section 405

ERISA Section 405(a) provides that, in general, a fiduciary is liable for the actions of another fiduciary that breaches fiduciary responsibilities if it:

- Participates knowingly in an act or omission of the other fiduciary.
- Undertakes knowingly to conceal an act or omission of the other fiduciary.
- Enables the other fiduciary to breach its duties by a failure to comply with Section 404(a)(1) [Prudence] in the administration of its specific fiduciary responsibilities.
- Possesses knowledge of a breach by the other fiduciary and does not make reasonable efforts under the circumstances to remedy the act.

Examiners must be careful in citing violations of this section as a fiduciary is not automatically liable for the misconduct of a co-fiduciary. The fiduciary is required to know that: (1) a co-fiduciary exists, (2) the other fiduciary participated in the act in question, and (3) the action was a breach of fiduciary duty.

Fiduciaries with limited required duties (for example, when fiduciary responsibilities are properly allocated or delegated), do not insulate themselves from breaches in other areas by other plan fiduciaries. On one hand, a fiduciary may become liable if it merely knows of a breach of fiduciary duty by another fiduciary and does nothing to remedy the problem. On the other hand, failing to adequately monitor the conduct of another fiduciary may be an imprudent act and cause co-fiduciary

liability to be incurred.

One of the remedies often proposed by a fiduciary who learns of a co-fiduciary's misconduct is to offer resignation of the fiduciary appointment, thereby attempting to insulate itself from the co-fiduciary's misconduct. However, mere resignation by the fiduciary as a protest against the breach is not sufficient. Action must be taken to rectify the breach of fiduciary responsibilities.

A successor trustee is not responsible for breaches of fiduciary responsibilities by predecessor trustees. However, it cannot ignore any misconduct by a previous trustee. The successor trustee has a duty to correct prior improper investments upon assuming responsibilities.

H.6.a. Allocation and Delegation of Fiduciary Responsibility

Each plan document must designate a named fiduciary as defined in Section 402(a)(2) of ERISA. While this is often a plan committee, it may also be Individuals identified by name or position. The named fiduciary is primarily responsible for managing the plan and for selecting and monitoring any outside trustees, investment managers, and other fiduciaries.

The allocation of responsibilities usually requires specific authorization in the plan document. If properly implemented, allocation procedures can protect named fiduciaries. In addition, proper allocation procedures may permit one fiduciary to insulate itself from the actions of another fiduciary, despite the co-fiduciary liability provisions of ERISA Section 405. Refer to ERISA Section 405(c)(2).

Sections 402, 403, and 405 of ERISA contain various overlapping provisions dealing with the allocation and delegation of duties and responsibilities among fiduciaries. Two significant provisions note that a named fiduciary:

- May allocate either trustee responsibilities (authority and discretion to manage and control plan assets) and/or non-trustee responsibilities (fiduciary duties that do not involve asset management) to entities, groups, Individuals, etc., other than those referenced in the plan document as named fiduciaries.

- May not allocate *trustee* responsibilities (non-trustee fiduciary responsibilities are permissible) among themselves, as named fiduciaries are jointly and severally liable for such responsibilities.

Trustee responsibilities normally lie with the named fiduciary. However, if the plan states a non-trustee named fiduciary may appoint outside trustees:

- The named fiduciaries are insulated from the actions of the outside trustee. But, the named fiduciaries must monitor the outside trustee's actions.

- The outside trustee is obligated to follow the proper directions of the named fiduciary. Proper directions are those which follow the plan document and do not violate ERISA. [References: ERISA Sections 402(c)(3), 403(a)(1), and 405(c)(3)]

ERISA also permits the named fiduciary to delegate authority to one or more qualified investment managers. A qualified investment manager is: (1) a bank, (2) an investment manager registered with the SEC under the Investment Advisors Act of 1940, or (3) an insurance company which is qualified under the laws of more than one state to perform services, and which has acknowledged in writing its fiduciary status with the plan. If responsibilities are delegated to a qualified investment manager:

- Named fiduciaries are insulated from the actions of the investment manager as long as:

    - The investment manager was prudently chosen and retained.

    - The investment manager does not violate the fiduciary responsibilities of ERISA Section 404(a)(1).

    - The named fiduciary monitors the performance of the investment manager. This may occur by formal periodic review, day-to-day contact and evaluation, or other appropriate means.

- Trustees are not responsible for the actions of a properly-appointed investment manager, even when the trustee is subject to direction from the investment manager.

  [References: ERISA Sections 3(38), 402(c)(3), 403(a)(1), 403(a)(2), and 405(c)(2)(A)(iii)]

Where the plan permits, named fiduciaries may allocate responsibility for non-trustee fiduciary responsibilities among themselves. If the named fiduciary delegates non-trustee responsibilities, they are not liable for such other person(s) who carry out these responsibilities, provided that:

- The plan's provisions regarding establishment, implementation, and continuation of the allocation are appropriate and properly followed.

- The non-trustee fiduciary is prudently chosen and retained.

  [References: ERISA Sections 403(a)(2), 405(c)(1)(A), 405(c)(1)(B), 405(c)(2), and 405(c)(3)]

H.6.b. Directed Accounts

One aspect of employee benefit account administration that merits special examiner attention relates to directed accounts. ERISA provides statutory protection from liability for trustees who follow the directions of an investment manager as defined in Section 3(38), or of a plan participant, who is properly authorized in the plan instrument(s) to instruct the trustee in the investment of plan funds.

For example, many plans permit the sponsor (employer) or the plan administrative body (Individual, plan committee, etc.) to appoint investment managers who are authorized to direct the trustee in the selection of trust investments. Where a duly qualified investment manager has been appointed, Section 405(c) of ERISA affords the trustee substantive protections in following the investment manager's directions.

Some plans include provisions authorizing each plan participant, at his or her election, to direct investment of funds allocated to their account. In these cases Section 404(c) affords protection to plan fiduciaries, including the trustee, if the conditions set forth in DOL Regulation 2550.404c-1 are met. However, it is not uncommon for the plan document(s) to permit the employer, plan administrator, or plan administrative committee to instruct the trustee to retain or dispose of specific trust assets at their option. Other plans specifically require that the employer or the plan administrative body direct all investments. Thus, examiners will frequently find it necessary to determine whether investment selection by an outside party is merely allowed, or is required by terms of the plan and trust instruments.

The trustee should insist that all directions received from a participant, investment manager, employer, or plan administrative body relative to investment purchases or sales be in writing, whether or not the plan/trust instruments require such documentation. Where the plan documents require that investment instructions, or any other instructions, from outside parties to the trustee be in writing, a trustee's failure to obtain such documentation would constitute a violation of Section 404(a)(1)(D) of ERISA.

As a result of the statutory protections afforded directed trustees under ERISA, many trust managers have taken the position that as long as they faithfully follow the instructions of an outside party who is duly authorized to select investments, the bank is fully protected. This is not the situation in all instances. Where the trustee follows

instructions of an outside fiduciary which violate the prohibited transaction provisions of Section 406, or the limitation provision relative to holdings of employer securities or real property of Section 407 of ERISA, the trustee would be equally liable with the co-fiduciary. In instances where the employer or plan administrative body instructing the trustee failed to: (1) adhere to the prudence standards prescribed in Section 404(a)(1)(B), (2) diversify plan investments as required by Section 404(a)(1)(C), or (3) act in accord with the documents and instruments governing the plan as prescribed by Section 404(a)(1)(D) of ERISA, the trustee would be exposed to liability as a co-fiduciary under Section 405 of ERISA in accepting and acting upon such instructions.

H.7. Prohibited Transactions - ERISA Section 406

H.7.a. Introduction

ERISA prohibits a fiduciary of an employee benefit plan from causing the plan to engage in certain transactions with a "party in interest". Generally, all transactions with parties in interest are prohibited, even if done on an arm's length basis. Certain transactions with parties in interest are exempted from the prohibition, either by statute or by an administrative exemption granted by the U.S. Department of Labor (DOL).

ERISA Section 406, the primary section dealing with prohibited transactions, is divided into two parts. The first part prohibits fiduciaries of plans from causing the plan to engage in transactions with parties in interest. The second part sets forth additional prohibitions on transactions between a plan and a fiduciary of the plan. ERISA Section 407 contains special provisions covering securities and real estate of the employer sponsoring the plan. ERISA Section 408 provides the statutory exemptions for certain prohibited transactions and authorizes the issuance of administrative exemptions by the DOL. All three of these sections are very pertinent to bank trust departments and own-bank plans. Examiners need to be aware of provisions that may appear in more than one section of the law, as well as covered in various exemptions.

A prohibited transaction violation usually generates a corresponding violation of the fiduciary responsibility provisions (exclusive benefit and/or prudence rules) of ERISA Section 404. In drafting Report of Examination comments, the examiner should bear in mind that the prohibited transaction violation is generally deemed to be the more concrete and significant of the two sets of violations.

Examiners should note that there is a parallel set of violations involving Section 4975 of the IRC for most types of prohibited transactions. While IRC Section 4975 is similar to the provisions of ERISA regarding prohibited transactions, the two are not identical. Where applicable, both sets of violations should be cited. Refer to subsection M , Compliance with the Internal Revenue Code for coverage of these provisions. Where possible, a cross reference to IRC Section 4975 is given.

H.7.b. ERISA Insiders - Party in Interest Defined

Section 3(14) of ERISA provides a definition of a party in interest. Definitions applicable to bank insiders from banking laws and regulations do not apply. Reference is made to the text of ERISA definitions and the summary of interpretations for a more complete description.

In general, a party in interest will include the following:

- The plan sponsor and its directors and officers.

- Fiduciaries, legal counsel, and employees of the plan. Fiduciaries include plan administrators, investment managers and trustees of the plan.

- Service providers and their directors, officers, and employees.

Certain subsidiaries, affiliates, and controlling shareholders of parties in interest are themselves considered parties in interest, as well as relatives of certain parties in interest. Section 3(15) defines the term relative as a spouse, ancestor, lineal descendant, or spouse of a lineal descendant [also see IRC 4975(e)(2)].

A bank normally serves in one or more of the primary party in interest positions. For own-bank plans, the bank is the plan sponsor and therefore a fiduciary, and also may also be a service provider. For outside plans, the bank may serve as fiduciary and service provider. Examiners should note that a bank serving as a mere custodian is generally not a fiduciary (As explained in subsection H.7.c., the definition of fiduciary is a functional one.), but is a party in interest under ERISA.

The chart below is a summary of the major party in interest provisions. For each of the primary party in interest positions, the chart indicates if the organization/Individuals, directors and officers, owners, and affiliates are considered to be a party in interest. Reference is made to the appropriate section(s) of ERISA. For further details, consult the definition of a party in interest and ERISA Section 3(14) in Appendix E [Also see IRC 4975(e)(2)].

ERISA INSIDERS (Party in Interest)								
							50+ % Affiliates	
		Organizations or Individuals	Directors Officers	50+ % Owners	10+ % Owners	Relatives	Organizations	DOE & 10%+ Owners
Type of Insider	Sections	3(21)(A)	3(14)(H)	3(14)(E)	3(14)(H) and 3(14)(I)	3(14)(F) and 3(15)	3(14)(G)	3(14)(H) and 3(14)(I)
Fiduciaries	3(14)(A)	X	X			X	X	X
Plan Sponsor	3(14)(C)	X	X	X	X	X	X	
Employee Unions	3(14)(D)	X	X	X	X		X	
Service Providers	3(14)(B)	X	X		X	X	X	X
Owners include: Corporations, Partnerships, Joint Ventures, Trusts, and Estates								

H.7.c. Prohibited Transactions With Parties in Interest

Section 406(a) of ERISA prohibits a fiduciary from causing an ERISA plan to engage in five general types of transactions between the plan and parties in interest, if the fiduciary knows or should know that the transaction constitutes a direct or indirect:

- Selling, exchanging, or leasing of any property [see Section 406(a)(1)(A) and IRC 4975(c)(1)(A)].

- Lending of money or other extensions of credit [see Section 406(a)(1)(B) and IRC 4975(c)(1)(B)]. Exceptions exist for own-bank deposits, overdrafts, repurchase agreements, securities lending, and loans to plan participants. See Special Examination Applications below.

- Furnishing goods, services, or facilities [see Section 406(a)(1)(C) and IRC 4975(c)(1)(C)]. Much of this prohibition is negated by the ancillary service exemptions in Section 408.

- Transferring of plan assets to a party in interest, or use of plan assets by (or for the benefit of) a party in interest [see Section 406(a)(1)(D) and IRC 4975(c)(1)(D)].

- Acquiring or holding of sponsor employer securities or employer real property. Special exemptions are included in Section 407, with different provisions for different types of plans [see Section 406(a)(1)(E)]. There is no parallel IRC provision, but see subsection H.5.c.(5) for special IRC rules for ESOPs.

Transactions are prohibited even when done on an arm's-length basis. ERISA Section 408 and related DOL Regulation 2550.408 contain a number of statutory exemptions for transactions covered by Section 406. In addition, the DOL has issued a number of official interpretations and class exemptions for transactions covered by Section 406.

H.7.d. Prohibited Transactions With Fiduciaries

Section 406(b) of ERISA prohibits three general types of self-dealing transactions between ERISA plans and fiduciaries, even if done on an arm's-length basis. The fiduciary is prohibited from:

- Dealing with a plan's assets in its own interest or for its own benefit [see ERISA Section 406(b)(1) and IRC Section 4975(c)(1)(E)].

- In any transaction involving the plan, acting on behalf of a party whose interests are adverse to the interests of the plan, its participants or beneficiaries [see ERISA Section 406(b)(2)][no parallel IRC provision].

- Receiving any consideration for itself from any party dealing with the plan in connection with a transaction involving assets of the plan [see ERISA Section 406(b)(3) and IRC Section 4975(c)(1)(F)].

As is the case with Section 406(a), there are statutory exemptions, as well as DOL interpretations and transaction class exemptions, that cover certain transactions covered by Section 406(b).

H.7.e. Prohibited Transaction Liabilities of Non-Fiduciary Parties In Interest

As explained above, ERISA Section 406 prohibits fiduciaries from causing a plan to engage in a prohibited transaction. In *Harris Trust and Savings Bank v. Salomon Smith Barney, Inc.*, No. 99-579, 120 S.Ct. 2180, (June 12, 2000), the U.S. Supreme Court held that non-fiduciary parties in interest who participate in prohibited transactions also may be held liable under ERISA.

Salomon Smith Barney, Inc. (Salomon) provided broker-dealer services to the Ameritech Pension Trust (APT). Salomon acted on a non-discretionary basis, subject to the direction of APT's investment manager. Solomon accordingly was considered a party in interest, but not a fiduciary, of APT. APT's trustee, Harris Trust and Savings Bank, sued Salomon when certain motel interests sold by Salomon to APT were discovered to be nearly worthless. Solomon had provided financing for two motel chains and, in exchange, received a percentage of the net cash flow generated by the motels and a share of any increase in the property value. Solomon sold these interests to APT. Both motels went bankrupt shortly after being sold to APT.

The action was brought under ERISA Section 502(a)(3), which authorizes civil actions to obtain "appropriate equitable relief" to redress violations of ERISA, and sought rescission of the transaction, restitution and disgorgement of profits. Salomon moved for summary judgment, noting that ERISA Section 406 applies only to fiduciaries, and asserting that "absent a substantive provision of ERISA expressly imposing a duty upon a non-fiduciary party in interest, the non-fiduciary party may not be held liable under ERISA Section 502(a)(3)."

The Supreme Court rejected Salomon's position. It stated that ERISA Section 502(a)(3) "itself imposes certain duties, and therefore . . . liability under that provision does not depend on whether ERISA's substantive provisions impose a specific duty on the party being sued." Actions under ERISA Section 502(a)(3), the Supreme Court found, are not limited to specific defendants, but are limited by the requirement that relief sought be "appropriate equitable relief."

Utilizing a similar analysis, several other courts have found that entities that are neither parties in interest nor fiduciaries may be sued under ERISA Section 502(a)(3) for participation in a prohibited transaction. See *LeBlanc v. Cahill*, 153 F.3d 134 (4th Cir. 1998); *Reich v. Compton*, 57 F.3d 270 (3d Cir. 1995).

H.7.f. Special Examination Applications of Prohibited Transaction Provisions

A number of areas not specifically covered in the ERISA statute are particularly relevant to banks and trust departments. Many of the topics have been the subject of inquiries by examiners and bankers and subject to criticism in examination reports. In some cases, banks have been subject to Labor Department lawsuits or investigations, plan or beneficiary reimbursements, and/or penalty payments. The topics most relevant to examiners are noted below and grouped alphabetically by topic.

Topic	Section
Brokers Executing Securities Transactions	H.7.f.(1)
Contributions, In-Kind	H.7.f.(2)
Float Management	H.7.f.(3)
Foreign Exchange	H.7.f.(4)
Loans to Common Borrowers - General	H.7.f.(5)
Loans to Common Borrowers - Lending Limits	H.7.f.(6)
Loans - Takeout Financing	H.7.f.(7)
Loans - Own-Bank Origination and Servicing	H.7.f.(8)
Mortgages (Residential), Investment in	H.7.f.(9)
Mutual Funds, Conversion from Collective Investment Funds	H.7.f.(10)
Mutual Funds, Investment in Proprietary (Own-Bank or Affiliated) and Advised	H.7.f.(11)
Investment of Own Bank EB Funds in Proprietary Mutual Funds	H.7.f.(12)
Mutual Funds, Receipt of 12b-1 Fees	H.7.f.(13)
Overdrafts	H.7.f.(14)
Qualified Professional Asset Managers - Transactions With Investment Managers	H.7.f.(15)
Repurchase Agreements	H.7.f.(16)
Securities Lending	H.7.f.(17)
Securities Issued - Proceeds Used to Reduce Debt at a Party in Interest	H.7.f.(18)
Soft Dollars	H.7.f.(19)
Sweep Fees	H.7.f.(20)

H.7.f.(1). Brokers Executing Securities Transactions

Prohibited Transaction Class Exemption (PTE) 86-128 is designed more for securities brokers who execute transactions for ERISA plans than it is for banks and trust departments. However, there are several portions which are very applicable to trust departments. In general, PTE 86-128 permits fiduciaries to execute securities transactions for ERISA accounts. The PTE states to what extent the fiduciaries may charge and retain commissions on the transactions.

PTE 86-128 is based on the ancillary services statutory exemption of ERISA Section 408(b)(2). The PTE provides relief only from the prohibited transaction provisions of ERISA Section 406(b), which involves plan transactions with a fiduciary. Direct and indirect sales (or other underlying transactions) under ERISA Section 406(a) between an ERISA plan and a party in interest are not covered.

There are a number of other exclusions from the PTE that are relevant to trust departments. Custodians, non-discretionary trustees, and trustees of self-directed plans are excluded from the general definition of trustee. In addition, it explicitly does not exempt churning of account assets, inter-trust transactions where the bank has discretion on both sides of a transaction, and transactions of IRAs.

PTE 86-128 deals with securities transactions which occur in several different scenarios:

- Non-Profit Basis - Under the PTE, any fiduciary (including trustees, plan administrators, and plan sponsors) may execute securities transactions for Individual ERISA plans if *all* profits earned in connection with the transaction are credited back to the plan. This is termed a recapture. Both direct and reasonable indirect costs (including overhead) of executing the transaction may be retained. The nonprofit approach would apply to both discretionary and non-discretionary trust department accounts.

- Profit Fees Charged - The PTE permits broker-dealers to execute securities transactions for ERISA accounts and charge commissions to make a profit. Ordinarily, a broker providing services to an ERISA plan is a party in interest, and the plan is prohibited from having any transactions with such an insider.

  This portion of the PTE covers fiduciaries who are *not* trustees, plan administrators, and plan sponsors. As such, it would cover bank-affiliated securities brokers, custodians, non-discretionary trustees, and trustees of self-directed plans.

- Collective Investment Funds (CIFs) - For CIFs with ERISA accounts, the recapture method is authorized. Alternatively, commissions from CIF transactions may be retained if:

  - The employer-bank's ERISA plan(s) amounts to no more than 20% of the CIF, *and*

  - The total commissions from all CIFs containing the employer-bank's ERISA plan(s) amount to no more than 5% of all brokerage commissions received by the bank during the calendar year.

  These provisions seem primarily aimed at preventing abuses by the bank of its own-bank ERISA plan(s) invested in the bank's CIFs. The conditions are intended to prevent undue commissions from being paid by the bank's plan(s) to a bank-affiliated broker through the medium of the CIF transactions.

- Inter-Account Transactions - These transactions (agency cross transactions), where the buyer and seller of a security use the same broker, are permitted, if certain conditions are met. Inter-trust account transactions, where the bank has discretion over both accounts, are not included in this part of the PTE.

PTE 86-128 also sets conditions for Individual plans pertaining to: (1) Information, (2) Non-discretionary Status, (3) Authorization, (4) Disclosure and Approval, (5) Confirmations, and (6) Summary Reports. Refer to the PTE 86-128 for further details.

H.7.f.(2). Contributions, In-Kind

Instead of making a cash contribution to an employee benefit plan, some plan sponsors have attempted to make a contribution of non-cash assets, usually termed an in-kind contribution. Based on a Supreme Court case, the Labor Department released Interpretive Bulletin 94-3, which indicates that a prohibited transaction exists when the plan sponsor makes such a contribution to defined benefit and certain defined contribution and welfare benefit plans.

An in-kind contribution to a defined *benefit* plan by a plan sponsor constitutes a prohibited transaction in violation of ERISA Section 406(a)(1)(A) and a violation of IRC Section 4975(c)(1)(A). The transaction constitutes a prohibited transaction because such a contribution would be credited to the plan's funding standard account. Such an in-kind contribution is considered a prohibited transaction even if the value of the contribution exceeds the funding obligation for the plan year, as it

would be credited against future funding obligations.

An in-kind contribution to a *defined contribution plan* or a *welfare plan* is considered a prohibited transaction if it reduces an obligation of the plan sponsor to make a contribution measured in terms of cash amounts. As an example, the Interpretive Bulletin states that an in-kind contribution to a profit sharing plan, the terms of which require the employer to make annual contributions of a specified percentage of profits, would be considered a prohibited transaction, even if the terms of the plan permit an in-kind contribution. On the other hand, an in-kind contribution to a plan which is funded solely at the employer's discretion would not constitute a prohibited transaction.

Interpretive Bulletin 94-3 also provides details about a fiduciary's duty to review in-kind contributions. This is covered in the material for Section 404 of ERISA dealing with fiduciary responsibilities in subsection H.5.c.(1). Contributions, In-Kind.

H.7.f.(3). Float Management

When employee benefit funds are distributed from a trust account, funds are transferred from the trust account to a general Demand Deposit Account (DDA) for the trust department. This DDA is normally with the commercial side of the bank. Until the checks are returned and paid, the bank earns the float from the demand deposit balance.

In Advisory Opinion 93-24A and a follow-up interpretation to the American Bankers Association, DOL indicates that a violation of ERISA Section 406(b)(1), and possibly 406(b)(3), may occur. The DOL asserted that this would be the case regardless of whether the funds are technically considered plan assets after they were transferred from the trust. On November 5, 2002, the DOL issued Field Assistance Bulletin 2002-3, Disclosure and other Obligations Relating to “Float, ” in which DOL discusses the factors that a fiduciary must consider in assessing the reasonableness of an agreement wherein a service provider retains float and the disclosure requirements for service providers under such an arrangement.

The statutory ancillary services exemption of ERISA 408(b)(6) does not include the float earned by the fiduciary bank from a DDA to the extent that it is reasonably possible to earn a return on such funds. Retention of float would be permissible; however, if it was a part of the trust department's overall compensation from the plan and if appropriate disclosures regarding the use of float were provided to the plan.

H.7.f.(4). Foreign Exchange

The Pension Protection Act of 2006 added a statutory exemption for foreign exchange transactions. See Section H.9.I for details concerning the exemption contained in
ERISA Section 408(b)(18). Prior to the enactment of the statutory exemption, DOL issued several PTEs covering certain foreign exchange transactions.

Prohibited Transaction Class Exemption 94-20 (PTE 94-20) permits banks and broker-dealers to effect foreign currency exchanges and foreign currency options transactions for employee benefit plans for which the banks or broker-dealers are parties in interest. To qualify for PTE 94-20, the transactions may be performed only for non-discretionary accounts or upon the direction of an independent fiduciary. In addition, the terms of the transaction must be the same afforded on an arm's-length basis, written policies must be maintained, written confirmations (with specified contents) must be provided, and appropriate records retained for six years. PTE 94-20 is effective for transactions incurred on June 18, 1991, and later. Provisions are also included for transactions prior to that date. The full text of PTE 94-20 can be found in Appendix E.

Under the Labor Department's Prohibited Transaction Class Exemption 98-54 (PTE 98-54), [located in Appendix E], the following foreign exchange transactions between employee benefit plans and banks or broker-dealers (which are trustees, custodians, fiduciaries or other parties in interest with respect to the plans), are permitted pursuant to standing instructions:

1. conversions of interest, dividends or other securities distributions into U.S. dollars, or into other currencies, in an amount equivalent to no more than $300,000 U.S. dollars. **Note:** As stated in footnote 4 of PTE 98-54, although the Department of Labor believes that the $300,000 threshold is appropriate for large plans that purchase and sell foreign securities, the Department notes that such dollar limitations may not be appropriate for smaller plans (e.g., plans with aggregate plan assets of less than $50 million), and

2. the purchase or sale of foreign currencies in an amount equivalent to no more than $300,000 U.S. dollars, in connection with the purchase or sale of foreign securities.

The exemption contains both retroactive conditions for transactions prior to January 12, 1999, and prospective conditions for transactions occurring after that date. Prospective conditions include the following: (1) arm's-length terms; (2) no discretionary authority or control or investment advice by the bank or broker-dealer with respect to the plan assets involved in the transaction; (3) deadlines for trades following the receipt of good funds, and daily establishment of an exchange rate for the trades; (4) advance written authorization by an independent fiduciary; (5) written policies and procedures for handling foreign exchange transactions for plans; (6) written confirmations; (7) compliance with certain recordkeeping procedures.

H.7.f.(5). Loans to Common Borrowers - General

In a number of banks, examiners have found that employee benefit plans sponsored or administered by the bank have invested plan assets in loans to the same borrowers as the bank itself. This would appear to violate ERISA Section 406(b)(2) in that the plan's interests are, directly or indirectly, in conflict with the bank's interests as lender to the same party.

Examiners should review the performance and credit quality of such loans, applying normal loan examination standards. Where loans are delinquent, appropriate comments should be made and the examiner should also review the procedures used to monitor loan performance. Examiners should also sample the status of loans made by the commercial loan department to the same borrowers. When both loans are delinquent, examiners should provide details of both sets of loans and also review adequacy of procedures to protect the plan's interests. In several instances, examiners have noted favoritism given to the loans made by the bank over those made by the plan.

Examiners should be aware that, like any investment, loans of this nature may represent a violation of the diversification and prudence requirements of ERISA Section 404(a)(1). The bank must also be able to demonstrate that it exercised the appropriate consideration of DOL ERISA Regulation 2550.404a-1 regarding investment duties for investing plan assets in a loan where the plan's interests conflict with that of the bank.

H.7.f.(6). Loans to Common Borrowers - Lending Limits

FDIC examiners have encountered a number of instances where a bank used an employee benefit plan to circumvent state legal lending limits. When the amount of a loan (or credit line) exceeds the bank's legal lending limit, either a separate loan is made by an employee benefit plan or the employee benefit plan participates in the bank's loan. This is clearly a conflict of interest and self-dealing, irrespective of the credit quality of the borrower.

The primary ERISA violation in such cases is Section 406(b)(1) in that the transaction would primarily have taken place to enable the bank to make the loan or keep a customer relationship, which would otherwise have violated state law. Section 404(a)(1)(A), which requires that the plan be operated exclusively for the benefit of plan participants and beneficiaries, would coexist with the Section 406(b)(1) violation. The bank is also likely to be in violation of ERISA Section 406(b)(2). The bank's interests as a lender to the same borrower as the plan would, directly or indirectly, be in conflict with the interests of the plan.

Examiners should be aware that, like any investment, loans of this nature may represent a violation of the diversification and prudence requirements of ERISA Section 404(a)(1). The bank must also be able to demonstrate that it exercised the appropriate consideration of DOL ERISA Regulation 2550.404a-1(b)(2) regarding investment duties for investing plan assets in a loan where the plan's interests conflict with that of the bank.

H.7.f.(7). Loans - Takeout Financing

In a number of instances, a bank has granted construction loans in conjunction with ERISA employee benefit plans. The bank will provide the short-term construction loan and the employee benefit plan will fund the long-term financing for the same construction project. This type of arrangement is a prohibited transaction in violation of ERISA Section 406(b)(1) and 406(b)(2) because the plan is providing the financing to pay off the bank's loan. In addition, the construction loan was most likely granted with the knowledge that the ERISA plan would provide the permanent financing.

H.7.f.(8). Loans - Own-Bank Origination and Servicing

Employee benefit plans may invest in loans if authorized by plan documents. A trust department may utilize the experience and facilities of the bank's loan department to originate and service loans for employee benefit accounts. Such arrangements are not prohibited transactions so long as the bank either charges no fee or charges no more than its direct costs of performing these services for the plan. Indirect costs may not be charged to the plan.

When the bank acts as a loan originator, great care must be taken to ensure that all of the loan documents are either (1) in the plan's name, or (2) in the name of the bank as trustee or agent of the plan. If the loan documents are in the bank's name, there is a presumption that the loan was made by the bank and sold to the plan, which would be a prohibited transaction in violation of ERISA Section 406(a)(1).

When the bank acts as a loan originator and the borrower pays certain fees to obtain the loan (such as a loan origination fee), all of these fees must flow back to the plan, and not be retained by the bank. If the bank retained such fees, it would be a prohibited transaction in violation of ERISA Section 406(b)(3).

H.7.f.(9). Mortgages (Residential), Investment in

Prohibited Transaction Class Exemption (PTE) 82-87 (as amended by PTE 88-59), permits employee benefit plans to participate in transactions related to residential mortgage financing, including commitments for the provision of mortgage financing, receipt of commitment fees, the making or purchase of loans or participation interests, and the sale, exchange or transfer prior to the maturity date of mortgage loans or participations in mortgage loans. The PTE applies to mortgage loans on single or multiple residential dwelling units, such as detached houses, townhouses, and condominiums.

The exemption is necessary in the case of plans that engage in mortgage financing transactions with parties in interest. The exemption provides relief only from ERISA Section 406(a), and not ERISA Section 406(b).

General conditions exist for relief under the PTE, including

- mortgage loans acquired must be "recognized mortgage loans" or participation interests in such loans. "Recognized mortgage loans" are defined as either residential mortgages eligible for purchase by FNMA, GNMA, FHLMC, or Federal Housing Administration insured GNMA tandem project residential mortgage loans.

- loans must be made for the purchase of a residential dwelling unit(s).

- mortgage loans must be originated by an independent established mortgage lender.

- the price paid or received by the plan must be at least as favorable as available in a similar transaction involving unrelated parties.

- certain Individuals may not be fiduciaries with respect to the plan's decision to engage in the transaction, including developers and builders of the units, lenders, and existing owners of the mortgage or participation interests.

- the decision to engage in the mortgage financing transaction must be made by an independent qualified real estate manager. This is a financial institution or business organization that advises institutional investors in similar investments and which acknowledges in writing that it will make relevant decisions in the capacity as a fiduciary.

- the plan must maintain records for the duration of any loan made pursuant to the exemption sufficient to demonstrate compliance with the exemption.

The PTE also contains specific conditions applicable to commitments to purchase either a mortgage loan or a participation interest, and for the purchase of participation interests.

H.7.f.(10). Mutual Funds, Conversion from Collective Investment Funds (CIFs)

In a 1994 letter to the OCC's trust examination section (see Appendix E), the Labor Department indicated that a transaction involving a CIF used by ERISA accounts which converted into a proprietary mutual fund would represent a prohibited transaction under ERISA Sections 406(a) and 406(b). The opinion letter specifically notes that PTE 77-4 [located in Appendix E] covers the acquisition and sale of mutual funds for cash, but it does not provide relief for conversion transactions. The Labor Department took the position that a prohibited transaction occurs because the bank, as an ERISA plan fiduciary, is involved in the following:

- Transferring plan assets to itself (by imposition of mutual fund fees) in violation of ERISA Section 406(a)(1)(D).

  ERISA applies because, as either investment advisor or custodian of a mutual fund, the bank (or an affiliate) gains financially through increased fee income. Fee income is increased by investing ERISA plan assets in an investment vehicle where the bank/affiliate's investment advisor or custodian fees are dependent on the amount of assets invested in the mutual fund.

- Dealing with itself (or an affiliate) on both sides of the conversion transaction, in violation of ERISA Sections:
  - 406(b)(1), dealing with itself, which constitutes self-dealing;
  - 406(b)(2), by serving on both sides of the transaction; and/or
  - 406(b)(3), by receiving fees based on the transaction.

In 1997, the Labor Department issued Prohibited Transaction Exemption 97-41 (PTE 97-41) [which is located in Appendix E], providing relief from the prohibitions of ERISA Sections 406(a), 406(b)(1) and 406(b)(2) for conversions of CIFs into mutual funds, and the investment of employee benefit plans in the converted funds. Note that no exemption is provided from the prohibition of ERISA Section 406(b)(3). PTE 97-41 permits employee benefit plans to: (a) purchase shares of a mutual fund advised by a bank or investment adviser which is also a fiduciary to the plan, (b) in exchange for assets transferred in-kind from the CIF, (c) when the plan's assets are completely withdrawn from the CIF. These transactions are also subject to in-kind asset transfer requirements of SEC Rule 17(a)-7, issued under the Investment Company Act of 1940 [17 C.F.R. 270.17(a)-7]. PTE 97-41 is retroactive from October 1, 1988.

PTE 97-41 requirements for the in-kind transfer of plan assets and purchase of mutual fund shares are virtually identical for retroactive exemptions of previous transactions (occurring between October 1, 1988 and August 8, 1997), and later transactions. In both cases, the transfer and purchase must be in connection with a complete withdrawal of an employee benefit plan's assets from a CIF. Conversions occurring after August 8, 1997 must meet the following conditions:

- No sales commissions or other fees are paid by the employee benefit plan in connection with the purchase of mutual fund shares.
- All transferred assets are securities for which market quotations are readily available, or cash.
- The transferred assets constitute the employee benefit plan's pro rata portion of all assets that were held by the CIF immediately prior to the transfer.
- The employee benefit plan receives mutual fund shares that have a total net asset value equal to the value of the plan's transferred assets on the date of the transfer, in accordance with SEC Rule 17a-7.
- An independent fiduciary with respect to the employee benefit plan receives advance written notice of the in-kind transfer and purchase of assets, and full written disclosure of information concerning the mutual funds, including:
    - A current prospectus for each mutual fund to which the CIF assets may be transferred;
    - Fees to be paid by an employee benefit plan and the mutual funds to the Bank or Plan Adviser;
    - Reasons why the Bank or Plan Adviser considers the transfer and purchase to be appropriate for the employee benefit plan;
    - Limitations with respect to plan assets which may be invested in shares of the mutual funds, and, if so, the nature of such limitations;
    - The identity of all securities to be valued in accordance with SEC Rule 17a-7(b)(4); and
    - The identity of fixed-income securities to be allocated on the basis of each employee benefit plan's pro rata share of the aggregate value of such securities.
- An independent fiduciary must give prior written approval for each purchase of mutual fund shares in exchange for the employee benefit plan's assets transferred from the CIF.
- An independent fiduciary of each employee benefit plan is provided, in writing:

    - Within 30 days of purchase--(i) The identity of each transferred security that was valued in accordance with Rule 17a-7(b)(4); (ii) The current market price, as of the date of the in-kind transfer, of each such security; and (iii) The identity of each pricing service or market-maker consulted in determining the current market price of such securities.
    - Within 105 days following each purchase--(i) The number of CIF units held by the plan immediately *before* the in-kind transfer, the related per unit value, and the total dollar amount of such CIF units; and (ii) The number of shares in the mutual funds held by the plan immediately *following* the purchase, the related per share net asset value, and the total dollar amount of such shares.
- With respect to each of the mutual funds which an employee benefit plan continues to hold shares acquired in connection with the in-kind transfer, the Bank or Plan Adviser must provide the independent fiduciary--(i) A prospectus of such fund annually; and (ii) Upon request, a description of all fees paid by the fund to the Bank or Plan Adviser.
- The combined total of all plan fees received by the Bank or Plan Adviser must not be in excess of "reasonable compensation" within the meaning of section 408(b)(2) of the Act.
- All dealings in connection with the in-kind transfer and purchase between the employee benefit plan and a mutual fund must be on a basis no less favorable to the employee benefit plan than dealings between the mutual fund and other shareholders.

As noted above, the PTE does not provide relief for prohibited transactions in violation of ERISA Section 406(b)(3). However, the PTE provides that a transaction that complies with the exemption is deemed to satisfy certain conditions under PTE 77-4 (which does provide such relief), and therefore may qualify under that exemption if the additional conditions are met. PTE 77-4 provides relief for ERISA Section 406(a) and 406(b), including 406(b)(3). Accordingly, a bank that complies with PTE 97-41 may receive investment management and advisory fees with respect to the plan's assets invested in the fund if it complies with the additional requirements of PTE 77-4.

Another type of CIF conversion, involving liquidation-to-cash of a CIF's assets, with simultaneous rollover of the cash proceeds into a mutual fund, is *not* considered an ERISA prohibited transaction. Further, employee benefit CIFs are permitted by the IRS to convert into a mutual fund using the liquidation-to-cash method without being subject to capital gains taxes.

Examiners should consider conversions of ERISA CIFs into proprietary mutual funds which fall outside the requirements of PTE 97-41, or the liquidation-to-cash method, to be a prohibited transaction.

A bank electing to convert a CIF through an in-kind transfer of assets which does not meet the conditions of PTE 97-41 may seek an Individual prohibited transaction exemption from the DOL. See e.g., Allfirst Bank, 64 FR 57129; Pacific Income Advisors, 63 FR 60408; Society National Bank, 61 FR 44081. [See 29 C.F.R. 2570.30 -.52 Individual and Class Prohibited Transaction Exemption Requests, which replaced ERISA Procedure 75-1, for information about the requirements for requesting exemptions.]

The DOL staff has indicated its primary concerns involve (i) the proper valuation of the CIF and mutual fund assets, and (ii) various fees and commissions which may be levied, together with the disclosure.

Some bank counsel have suggested that PTE 84-24 regarding Transactions Involving Insurance Agents and Brokers, Pension Consultants, Insurance and Investment Companies, and Investment Company Principal Underwriters, may provide an alternative approach to PTE 77-4. The Labor Department staff has verbally indicated that this is an unsatisfactory approach.

H.7.f.(11). Mutual Funds, Investment in Proprietary (Own-Bank or Affiliated) and Advised

A bank that exercises its discretionary authority to cause an employee benefit plan to invest in the bank's proprietary mutual funds or in mutual funds advised by a bank's trust department would be engaging in a prohibited transaction under ERISA Sections 406(b)(1) and 406(b)(3). The bank (and its holding company or an affiliate) receives a management fee from the mutual fund based on the amount of assets advised. The placement of plan assets in the mutual fund thus generates direct or indirect compensation for the bank and represents a conflict of interest prohibited by ERISA Section 406(b).

Prohibited Transaction Class Exemption 77-4 (PTE 77-4) permits employee benefit plans to invest in mutual funds which are proprietary to or advised by a bank that is a fiduciary to such plans. If certain requirements are satisfied, PTE 77-4 exempts fiduciaries from the prohibitions of ERISA Sections 406(a) and 406(b). In general, PTE 77-4 applies differently to discretionary and non-discretionary accounts as follows:

- Applicability to Discretionary ERISA Accounts
  - An independent fiduciary must approve purchases and sales of the proprietary mutual fund for the account. The approval must be:
    - Indicated in writing prior to each Individual purchase or sale of the fund,
    - Indicated in writing prior to the commencement of a specified purchase program, or
    - Set forth in the plan documents or in the investment management agreement between the plan and the fiduciary/investment advisor.
  - No sales commission load is paid in connection with the purchase.
  - No redemption fee is paid, unless the fee is:
    - Paid only to the mutual fund, and
    - Disclosed in the prospectus both at the time of the purchase and at the time of the sale.
  - No investment management/advisory fee is paid to the mutual fund for the entire period of the investment, subject to specific limitations.
  - The independent fiduciary receives mutual fund prospectuses, written disclosures of investment advisory and other fees charged, notification of any fee changes, and analyses of the advantages of the affiliated arrangement.
- Applicability to Non-Discretionary ERISA Accounts

  PTE 77-4 also applies to non-discretionary transactions. Only the three conditions above involving fees would apply in all cases. The final condition above covering prospectuses would be satisfied if the party making investment decisions receives the specified information noted above.

PTE 77-4 was released in 1977 and was not intended specifically for bank-related or bank-affiliated mutual fund investments. The PTE was intended for mutual funds operated by insurance companies and securities brokers. Nonetheless, it is the primary guidance available at this time to evaluate similar arrangements in banks and trust companies.

The Labor Department has released two Advisory Opinions (AO) applying PTE 77-4 to banking-related situations. AO 93-13A provides guidance on how PTE 77-4 applies to affiliated mutual funds and AO 93-26A provides guidance on how the PTE applies to the use of affiliated mutual funds by IRA and Keogh accounts.

H.7.f.(12). Investment of Own Bank Employee Benefit Plans In Proprietary Mutual Funds

As discussed in the Collective Investment Fund Conversion section above, the Labor Department's Prohibited Transaction Exemption 97-41 (PTE 97-41), [located in Appendix E], provides relief from ERISA Section 406 violations for conversions of CIFs into mutual funds, and the investment of employee benefit plans in the converted funds. However, it does not provide a specific exemption for the investment of a bank's own employee benefit plans in mutual funds which are sponsored, advised, or underwritten by the fiduciary bank, or any of its affiliates.

Prohibited Transaction Exemption 77-3 (PTE 77-3), [located in Appendix E] provides relief from ERISA Sections 406 and 407(a) for transactions involving the purchase or sale of shares of registered open-end investment companies by plans covering employees of the mutual fund, its investment advisor, its principal underwriter and affiliates of such entities.

The exemption is conditioned on the following:

- the plan may not pay plan-level advisory fees to an investment advisor, principal underwriter or affiliated person.

- the plan may not pay a redemption fee in connection with the sale by the plan to the mutual fund of shares unless the redemption fee is paid only to the mutual fund and the existence of the fee is disclosed.

- the plan may not pay a sales commission in connection with the purchase or sale of shares.

- all dealings between the plan, the mutual fund, the investment advisor or principal underwriter and any affiliate must be on a basis no less favorable to the plan than dealings with other shareholders of the fund.

PTE 77-3 was not initially intended to cover banks. Nonetheless, it, together with Department of Labor Advisory Opinion 98-06A (AO 98-06A), [located in Appendix E], applies to bank sponsored plans. The AO 98-06A addresses investment in kind by own-bank plans in funds advised by the bank. The AO provides that relief is available not only for cash purchases of mutual fund shares, but also for transactions involving the exchange of securities held on behalf of a plan for shares of the mutual fund. The AO further provides that PTE 77-3 requires the same methodology as PTE 97-41 for valuing the assets of the plan and determining the number of shares of the fund received by the plan. The AO clarifies that PTE 77-3 would not provide relief for a prohibited transaction arising in connection with terminating a CIF, permitting certain plans to withdraw from a CIF that is not terminating, or transferring any plan assets held by a CIF.

The July 30, 1998 opinion, issued in response to an inquiry by Federated Investors, provides the following cautionary notes:

- "...a plan fiduciary considering the in-kind acquisition of shares of a mutual fund advised by the bank in exchange for assets of the bank's in-house

plan must insure that the fiduciary's or the bank's interest in attracting and retaining investors in the mutual fund does not conflict with the interests of the plan or its participants and beneficiaries in the selection of appropriate investment vehicles."

- "If the decision by the plan fiduciary to enter into the transaction is not "solely in the interest" of the plan's participants and beneficiaries, e.g., if the decision is motivated by the intent to generate seed money that facilitates the marketing of the mutual fund, then the plan fiduciary would be liable for any loss resulting from such breach of fiduciary responsibility, even if the acquisition of mutual fund shares was exempt by reason of PTE 77-3."

At least two companies, New York Life Insurance Company and First Union Corporation, have been sued for breach of fiduciary duty by in-house plan participants in connection with the investment of in-house plans in proprietary mutual funds.

H.7.f.(13). Mutual Funds, Receipt of 12b-1 Fees

Under SEC Rule 12b-1, mutual funds are permitted to pay, from the assets of the mutual fund itself, certain distribution costs. These payments may take the form of commission-like payments to organizations which generate large numbers of transactions in the mutual fund. Not all mutual funds have 12b-1 arrangements.

ERISA Section 406(b)(3) prohibits a fiduciary bank from receiving any direct or indirect compensation for itself from a plan's investment in a mutual fund, including the receipt of 12b-1 fees. In addition, a bank with discretionary authority to invest in a mutual fund which pays the bank a 12b-1 fee would violate ERISA Section 406(b)(1) because it is involved in a conflict of interest. The Department of Labor has issued several advisory opinions clarifying the circumstances in which receipt of 12b-1 fees constitutes a violation of ERISA Sections 406(b)(1) and (3).

The Department of Labor issued Advisory Opinion 93-13A on the receipt by a fiduciary of 12b-1 fees from mutual funds involving bank proprietary mutual funds. In Footnote 4 to AO 93-13A, the DOL was unable to conclude that PTE 77-4 would be available for plan purchases and sales of mutual fund shares if a 12b-1 fee is paid to the fiduciary or its affiliate. This means that the purchase of a proprietary mutual fund would be a prohibited transaction if a 12b-1 fee was paid to a fiduciary or affiliate.

The Department of Labor has also issued Advisory Opinions involving discretionary and non-discretionary accounts which invest in mutual funds which pay 12b-1 fees to fiduciaries. These opinions are discussed below. DOL Advisory Opinion 97-15A to Frost National Bank, commonly referred to as Frost and Advisory Opinion 97-16A to the Aetna Life Insurance and Annuity Company, commonly referred to as Aetna appear in Appendix E. The Department of Labor also issued an interpretive letter to the American Bankers Association on 8-20-97, summarizing the issues addressed by these advisory opinions.

An analysis of ERISA and corresponding exemptions and interpretations, leads to two potential interpretations, one for discretionary accounts and the other for self-directed and non-discretionary accounts:

- Discretionary Accounts - As a general rule, ERISA Section 406(b)(3) prohibits a fiduciary from using the control, authority, or responsibilty that makes it a fiduciary, to cause such fiduciary to receive any direct or indirect compensation for itself from a plan transaction, including the receipt of 12b-1 fees. A bank with discretionary authority to invest in a mutual fund which pays the bank a 12b-1 fee would appear to violate ERISA Section 406(b)(1) because it is involved in a conflict of interest that causes itself to receive additional compensation.

Advisory Opinion letter AO 97-15A - Frost National Bank:

- The general prohibition with respect to discretionary authority was tempered in AO 97-15A to Frost National Bank on 5-22-97. The DOL indicated that advising plan assets invested in mutual funds which pay additional fees to the advising fiduciary would generally violate the prohibitions of Sections 406(b)(1) and (b)(3). The DOL indicated, however, that a fiduciary would not violate these sections by receiving 12b-1 fees from a mutual fund if the fiduciary used the fees to offset, on a dollar-for-dollar basis, a plan's obligation to pay the fiduciary for its services.

- The DOL further stated that fiduciaries which do not advise or exercise authority or control to cause a plan to invest in a mutual fund, would not violate these sections merely by the receipt of a fee or other compensation from a mutual fund in connection with a plan's investment. See AO 2003-09A, ABN AMRO Trust Services Company. It cautioned, however, that if a fiduciary retains authority to delete or substitute mutual funds which it makes available to plans, the fiduciary in fact may, depending upon the circumstances, exercise discretionary authority or control to cause the payment of fees to itself. If the fees were used to offset the plan's liability to the trustee, however, the fiduciary would not violate Sections 406(b)(1) and (b)(3).

- Finally, DOL's Frost opinion noted that with respect to the standards of fiduciary conduct stated in ERISA Section 404(a)(1), the plan fiduciary must assure that the compensation paid directly or indirectly by the plan to its administrator is reasonable, taking into account the trustee services provided to the plan in addition to any other fees or compensation received by the plan administrator in connection with the investment of plan assets. DOL emphasized that the responsible plan fiduciaries must obtain sufficient information regarding any fees or other compensation that the plan administrator receives with respect to the plan's investments in each mutual fund to make an informed decision as to whether the plan administrator's compensation for services is no more than reasonable. In addition, DOL required that plan fiduciaries monitor the actions taken by the plan administrator in the performance of its duties, to assure, among other things, that any fee offsets to which the Plan is entitled are correctly calculated and applied.

- **Self-Directed and Non-Discretionary Accounts -** It is possible that DOL may exempt such transactions if the use of the mutual funds generating the 12b-1 fees is specifically authorized in the plan and if a fiduciary's receipt of the 12b-1 fees is disclosed in the mutual fund's prospectus and by the plan.

Advisory Opinion letter AO 97-16A - Aetna Life Insurance and Annuity Company:

- While the DOL has not adopted a Prohibited Transaction Exemption on this matter, it did release AO 97-16A on 5-22-97 to the Aetna Life Insurance and Annuity Company. The opinion addresses the acceptance of fees by non-discretionary administrative and record keeping service providers.

- In application, the letter indicated the mere receipt of a fee or other compensation from a mutual fund in connection with a plan's investment would not in and of itself violate section 406(b)(1) or (b)(3) if a service provider did not advise or otherwise exercise authority or control to cause a plan to invest in a mutual fund.

- In a cautionary note, the DOL stated that service providers retaining authority to delete or substitute mutual funds made available to plans might, depending upon the circumstances, be deemed to exercise discretionary authority or control to cause the payment of fees to themselves. Once again, the DOL took the position that if the fees were used to offset the plan's liability to the trustee, the fiduciary would not violate Sections 406(b)(1) and (b)(3)

  Consequently, examiners should not cite the receipt of 12b-1 fees by self-directed or non-discretionary accounts as an ERISA violation or recommend them for referral to the Department of Labor.

  Advisory Opinion letter AO 2003-09A - ABN AMRO Trust Services Company :

- A trustee that provides bundled services to plans, but not investment discretion, may keep 12b-1 fees from affiliated mutual funds as long as a fiduciary, who is independent of the trustee and it's affiliates, elects to include the particular fund as one of the allowed investment elections.

- If the trustee, however, provides investment advice within the meaning of regulation 29 CFR 2510.3-21(c), the trustee will cause a violation of 406(b)(1) .

Except as noted in the following paragraph, a violation of general fiduciary duties (ERISA Section 406(b)(3)) resulting from the receipt of 12b-1 fees by a fiduciary from a mutual fund can be cured if the fiduciary rebates the 12b-1 fees back to the trust accounts that generated the transactions. Where the bank has retained 12b-1 fees without the authorizations or directions noted above, examiners should recommend that the fees be returned to the accounts that generated them.

Financial institutions that operate proprietary mutual funds may attempt to resolve the ERISA conflict of interest and self-dealing concerns that result when a proprietary mutual fund collects 12b-1 fees from trust accounts that the institution administers in a discretionary capacity by rebating or waiving such fees for trust account shareholders. The proprietary fund, however, collects 12b-1 fees from non-trust account shareholders. The SEC has indicated that the waiving or rebating of 12b-1 fees for some shareholders, but not others, may violate the proprietary mutual fund's obligation to treat all shareholders impartially. See 1986 no-action letter to Southeastern Growth Fund, Inc. If the bank is using this no-action letter as a defense for not rebating the 12b-1 fees, a general criticism of the matter should be presented in the examination report together with a request for a legal opinion. Furthermore, acceptance of 12b-1 fees on discretionary employee benefit accounts invested in such funds would violate ERISA Section 406(b)(3) as noted above.

H.7.f.(14). Overdrafts and Interest-Free Loans

An overdraft in an ERISA plan's deposit account may be a transaction prohibited by ERISA Section 406(a)(1)(B), as overdrafts represent the lending of funds from a depository institution to an ERISA plan. The depository institution is a party in interest either because it is a fiduciary (own-bank deposits) or a provider of services to the plan.

The Department of Labor has recognized that most overdrafts are of a temporary nature and not abusive. Overdrafts may occur as the result of securities transactions or check clearings. As a result, the DOL provided relief in Prohibited Transaction Class Exemption 80-26 (PTE 80-26) [located in Appendix E] from the prohibitions of ERISA Sections 406(a)(1)(B), 406(a)(1)(D) and 406(b)(2), for interest free loans and other extensions of credit from parties in interest to

employee benefit plans. The PTE is effective January 1, 1975. The exemption covers loans or other extensions of credit used for the payment of ordinary operating expenses of the plan, or for a period of no more than three days for a purpose incidental to the ordinary operation of the plan.

The exemption requires the following:

- no interest or other fee may be charged to the plan and no discount for payment in cash is relinquished by the plan.
- the loan or extension of credit must be unsecured.
- the loan or extension of credit may not be made, directly or indirectly, by an employee benefit plan.

The Department of Labor also issued PTE 2000-14, as a temporary amendment to PTE 80-26 (both of which are located in Appendix E). The purpose of the temporary amendment was to permit parties in interest to make interest free loans to plans, enabling them to continue to operate in the event they experienced an inability to liquidate or access assets, or to access data caused by Y2K problems. The amendment was effective from November 1, 1999 until December 31, 2000. Loans extended under this exemption were to be repaid no later than December 31, 2000.

In addition to the guidance discussed above, the Department of Labor issued an advisory opinion on February 10, 2003, that discusses the provision of overdraft protection services in connection with securities and other financial market transactions. In AO 2003-02A, the Department of Labor opined that, under certain circumstances, the extension of an overdraft to a plan in connection with the settlement of a securities or other financial market transaction would satisfy the requirements for the exemptions provided in ERISA Sections 408(b)(2) and 408(b)(6).

H.7.f.(15). Qualified Professional Asset Managers (QPAMs) - Transactions With Investment Managers

PTE 84-14 (80KB PDF file - PDF Help) permits various parties in interest with respect to employee benefit plans to engage in transactions with investment funds in which plans are invested if the investment fund is managed by a "qualified professional asset manager" (QPAM). Investment funds are accounts subject to the discretionary authority of the QPAM, including accounts maintained by an insurance company and trusts maintained by a bank. PTE 84-14, therefore would apply to certain transactions between a bank with discretionary investment authority over an ERISA plan and parties in interest for such a plan, provided the bank meets the definition of a QPAM given below. The exemption permits banks and other parties in interest to avoid costly ERISA compliance reviews for investment transactions under consideration. PTE 84-14 became effective December 21, 1982.

A bank that has the power to manage, acquire or dispose of the assets of a plan qualifies as a QPAM if it has equity capital in excess of $1,000,000 as of the last day of its most recent fiscal year, and acknowledges in writing that it is a fiduciary with respect to each plan that has retained it as a QPAM. Savings and loan associations, insurance companies, and investment advisors that meet certain qualifying conditions may also be QPAMs. With respect to bank trust departments, Individual ERISA plans and Collective Investment Funds would usually satisfy the definition of an investment fund.

The exemption deals with different types of scenarios and, depending on the type of scenario, provides relief from Section 406(a) prohibited transactions with parties in interest, Sections 406(b)(1) and (2) prohibited transactions with fiduciaries, and Section 407(a) restrictions on investments in employer real estate. No relief is

provided by the PTE from ERISA Section 406(b)(3), involving a fiduciary earning fees or profiting from the transactions it places. In addition, the exemption specifically excludes securities lending (PTE 81-06) [refer to subsection H.7.e.(17), Securities Lending], investments in residential mortgages (PTE 82-87) [refer to subsection H.7.e.(9), Mortgages (Residential), Investment In], and investments in mortgage pools (PTE 83-1).

The QPAM PTE (80KB PDF file - PDF Help) provides a safe harbor for a number of situations which may occur after a particular transaction first occurs. For instance, a loan may be made to an outside person or organization who later becomes a party in interest [relief provided]. In another situation, a plan purchases an office building from an unrelated party, but among the building's tenants is an office of an affiliate of a plan sponsor [relief provided if percentage tests met]. In another instance, a bank QPAM hires an outside investment manager for its expertise with a particular type of asset, with the bank retaining a potential veto power over transactions [no relief provided]. The Preamble for the PTE gives more than 20 examples of when, how, and if the PTE applies.

If certain general conditions of the PTE 84-14 are satisfied, many types of transactions are exempted if other specific conditions are satisfied.

- General Conditions - Although PTE 84-14 addresses seven general conditions, two of the most important conditions are noted below.
  - The plan in question, when combined with the assets of other plans established or maintained by the same employer or by the same employee organization, does not represent more than 20% of *all* discretionary assets managed by the QPAM for the client at the time of the transaction (not just employee benefit accounts).

  - At the time of a transaction, the party in interest (or its affiliate) did not possess, and during the immediately preceding year did not exercise the authority to:
    - Appoint or terminate the QPAM as a plan asset manager, or
    - Negotiate a management agreement for a plan with the QPAM. This includes renewals or modifications to existing agreements.

- Transactions With Employers - A QPAM may have the following types of transactions with employers or with any person who is a party in interest by virtue of a relationship with an employer whose ERISA plans are invested in the investment fund:
  - Selling, leasing, or servicing of goods, or the furnishing of services to an investment fund managed by a QPAM by a party in interest if the transaction meets five requirements:
    - The transaction must be necessary for the administration or management of the investment fund;
    - The transaction takes place in the ordinary course of business engaged in by the party in interest with the public;
    - Effective as of August 23, 2005, the revenue received from the investment fund by a party in interest does not exceed 1% of the party in interest's gross annual receipts; and
    - The requirements of Sections I(c) through I(g) of the General Exemption are satisfied.

  - Leasing commercial or office space by an investment fund managed by a QPAM to a party in interest with respect to a plan having an interest in the investment fund if the transaction meets six requirements:
    - No more than 10% of the investment fund's assets are invested in the employer's securities and real estate;
    - No commissions or fees are paid by the investment fund to the QPAM or employer (or their affiliates);

- The space leased must be adaptable to more than one use;
- The leased space must represent no more than 15% of the building; and
- For a plan that is not an individual account plan, the aggregate fair market value of employer real estate and employer securities held by the investment funds of the QPAM does not exceed 10% of the fair market value of the assets of the plan held those investment funds; and
- The requirements of Sections I(c) through I(g) of the General Exemption are satisfied.

- Leases to the QPAM - This section permits the investment fund to lease to the bank various office or commercial space in which the investment fund has invested, if the following general requirements are satisfied:
  - No commissions or fees are paid by the investment fund to the QPAM-bank or its affiliates;
  - The space leased is adaptable to more than one use;
  - The leased space is not more than the greater of 7,500 square feet or 1% of the building; and
  - The transaction takes place on an arm's length basis.

- Transactions Involving Places of Public Accommodation - Effective as of August 23, 2005, the restrictions of Sections 406(a)(1)(A) through (E) and 406(b)(1) and (2), along with the corresponding taxes imposed by Code Section 4975(a) and (b) do not apply to the furnishing of services and facilities (and goods incidental thereto) by a place of public accommodation owned by an investment fund managed by a QPAM to a party in interest if the services and facilities (and incidential goods) are furnished on a comparable basis to the general public.

On August 23, 2005, the Department of Labor's Employee Benefits Security Administration adopted amendments to PTE 84-14 (80KB PDF file - PDF Help). The amendments provide for the following:

- Eliminates the "one year look-back rule" where the exemption was not available if a party in interest had exercised the power to appoint the QPAM within one year preceding a transaction;
- Clarifies that the power to appoint the QPAM provision of the PTE applies only with respect to the assets involved in a transaction, as opposed to a plan's other assets;
- Makes the exemption available to a party in interest investing in a commingled investment fund, notwithstanding that the party in interest has the authority to redeem or acquire units of the fund on behalf of the plan, if the plan's interest in the fund represents less than 10% of the investment fund's total assets;
- Amends the definition of affiliate as it applies to sections I(a) and Part II, to delete those partnerships in which the person has less than a 10% interest, and to only include highly compensated employees as defined in IRC 4975(e)(2)(H);
- Amends the determination of when a party in interest is related to a QPAM to those instances where:
  - The QPAM or the party in interest owns a 10% or greater interest in the other entity; or
  - A person controlling, or controlled, by the QPAM or the party in interest owns a 20% interest in the other entity; or
  - A person controlling, or controlled, by the QPAM or the party in interest owns less than a 20% interest in the other entity, but nevertheless exercises control over the management or policies of the other party by reason of its ownership interest.
- States that determinations of whether the QPAM is "related" to a party in interest for the purposes of Section I(d) may be made as of the last day of

the most recent calendar quarter;
- States that shares held in a fiduciary capacity need not be considered in applying percentage limitations;
- Raises the threshold for client assets from $50 million to $85 million for registered investment advisors (RIAs) to meet the definition of QPAM. Client assets are determined as of the last day of the RIA's fiscal year. Similarly, the minimum shareholders' and partners' equity for RIAs was increased from $750,000 to $1 million;
- Requires that a QPAM must be independent of an employer with respect to a plan whose assets are managed by the QPAM, i.e. an employer cannot be a QPAM for its own plan(s).

H.7.f.(16). Repurchase Agreements

Since a repurchase agreement is generally considered to represent a loan, a repurchase agreement between a party in interest and the fiduciary bank would normally be a prohibited transaction under ERISA Section 406(a)(1)(B). The DOL issued Prohibited Transaction Class Exemption 81-8 (PTE 81-8) (as amended 50 FR 14043, April 9, 1985) which provides relief from the restrictions of ERISA Section 406(a)(1)(B). Repurchase Agreements are also discussed in subsection F.14. of Section 3, Asset Management. The FDIC adopted the FFIEC Supervisory Policy on Repurchase Agreements of Depository Institutions with Securities Brokers and Others on November 12, 1985. The policy statement is located in Appendix C.

PTE 81-8 addresses a number of short-term investments including repurchase agreements. The restrictions of ERISA Section 406(a)(1)(A), (B), and (D) do not apply to the investment of employee benefit plan assets which involves the acquisition, holding, sale, exchange or redemption by or on behalf of the plan of banker's acceptances, commercial paper, repurchase agreements, certificates of deposit and, as of 1985, securities of certain banks.

Conditions applicable to repurchase agreements in which the seller of the underlying securities is a bank, broker-dealer, or a dealer who makes primary markets in securities of the United States or any agency thereof or in bankers acceptances include:

- the repurchase agreement must be embodied in a written agreement the terms of which are at least as favorable to the plan as an arm's-length transaction between unrelated parties.

- the plan must receive interest at a rate no less than in a comparable transaction with an unrelated party

- the repurchase agreement must have a duration of one year or less.

- the plan must receive securities, banker's acceptances, commercial paper or certificates of deposit with a market value of not less than 100 percent of the purchase price paid by the plan.

- upon expiration of the repurchase agreement and the return of the securities or other instrument to the bank, the seller must transfer to the plan an amount equal to the purchase price plus appropriate interest.

- neither the seller nor an affiliate may have discretionary authority with respect to the plan assets invested in the transaction, or may render investment advice with respect to those assets.

- the underlying securities or other instruments must be of a type that could be acquired by the plan without violating the restrictions of the prohibited transaction rules and such securities may not be not restricted securities

within the meaning of Rule 144 of the Securities Act of 1933.

- certain measures must be agreed to such that, during the term of the agreement, the plan always holds securities or other instruments with a market value equal to the purchase price paid by the plan.

- the seller must furnish the plan with specified financial statements.

H.7.f.(17). Securities Lending

The lending of securities from employee benefit plans is a fairly common practice. When the lending is fully collateralized, there is little risk and the plan earns additional income from the lending of the securities. Generally, this activity takes place with the fiduciary bank, a securities broker, and/or one of their affiliates providing services to the plan. In such cases, a prohibited transaction in violation of ERISA Section 406(a) would exist because the fiduciary bank and/or service providers are considered parties in interest by definition. Securities lending is also discussed in subsection F.15 of Section 3, Asset Management. The FDIC adopted the FFIEC Supervisory Policy on Securities Lending on July 22, 1997. The policy statement is located in Appendix C.

Prohibited Transaction Class Exemption 81-6 (PTE 81-6) (as amended 52 FR 18754, May 19, 1987) permits securities lending with parties in interest if certain conditions are satisfied. In addition, Prohibited Transaction Class Exemption 82-63 (PTE 82-63) permits the fiduciary bank to charge a reasonable fee for securities lending services. A fiduciary bank may instead use the statutory exemption under Section 408(b)(6) of ERISA to receive a fee for these services.

PTE 81-6 provides relief from ERISA Sections 406(a)(1)(A) - (D). Conditions include:

- neither the borrower nor an affiliate has discretionary authority or control with respect to the investment of the plan assets involved in the transaction, or renders investment advice with respect to those assets;
- the plan must receive as collateral either cash, securities issued by the U.S. Government, or its agencies or instrumentalities, or irrevocable bank letters of credit;
- collateral must be provided equal to 100 percent of the market value of the securities lent, and if on any day the market value of the collateral is less than 100 percent of the market value of the securities lent, the borrower must deliver additional collateral such that the total collateral equals 100 percent of the market value of the securities lent;
- the borrower must provide the plan with certain financial statements prior to the loan;
- the loan must be made pursuant to a written loan agreement with arm's length terms;
- the plan must receive reasonable fees for the loan of the securities, or the opportunity to invest cash collateral, and also must retain all income from the securities that were lent under certain circumstances, rebates to the borrower are permitted;
- the plan must be able to be terminate the loan at any time, at which time the borrower shall deliver to the plan certificates for such securities or the plan may apply the collateral to the purchase of equivalent securities.

H.7.f.(18). Securities Issued - Proceeds Used to Reduce Debt at a Party in Interest

If a fiduciary uses its discretionary authority to cause an employee benefit plan to purchase securities, the proceeds of which will be used to repay a debt owed by the issuer to a party in interest or a plan fiduciary that is a bank or a bank affiliate, such a transaction would violate ERISA Section 406(a). Violations of ERISA Sections 406(b)(1) and (2) are also possible.

Prohibited Transaction Class Exemption 80-83 (PTE 80-83) permits the purchase of such securities in several different situations. Generally, the price paid by the plan for such securities may not be greater than the offering price described in an effective registration statement under the Securities Act of 1933 or an offering circular required under applicable federal law, and the plan must comply with certain recordkeeping procedures. In addition, when a fiduciary bank's loan is to be repaid with the proceeds of a securities issue, the PTE includes the following additional requirements that must be satisfied:

- with some exceptions, the securities generally must be purchased prior to the end of the first full business day after the securities are offered to the public;
- the securities must be offered by the issuer pursuant to an underwriting agreement under which the underwriters have generally committed to purchasing all of the securities being offered;
- the issuer must have been in continuous operation for at least three years;
- the amount of securities purchased by the plan may not exceed three percent of the total offering;
- the price to be paid by the plan may not exceed three percent of the fair market value of the plan's assets which are subject to the management and control of such fiduciary;
- the total amount of securities in any single offering purchased by the fiduciary of the plan, combined with all other securities purchased by the fiduciary on behalf of all other employee benefit plans may not exceed 10 percent of the offering.

H.7.f.(19). Soft Dollars

The term soft dollars refers to the practice whereby the investment manager of a discretionary account pays more than the absolute minimum commission in placing securities transactions with a broker. In return, the investment manager receives research services paid for by the excess commissions. Section 28(e) of the Securities Exchange Act of 1934 permits this practice and authorizes a safe harbor if bona fide research services are provided. In addition to the statutory provision of Section 28(e), the SEC has issued additional guidance governing "soft dollar" arrangements. See Securities Exchange Act Release No. 34-23170 and Release No. 34-54165 (217KB PDF file - PDF Help)

For discretionary accounts, Technical Bulletin 86-1, indicates that soft dollar transactions which meet the safe harbor of Section 28(e) do not represent a prohibited transaction under ERISA. However, those that do not fall within the safe harbor would represent a violation of ERISA Sections 406(a)(1)(D), 406(b)(1), and 406(b)(3).

For non-discretionary accounts, the safe harbor is not available. A non-discretionary account cannot justify paying higher brokerage commissions in order to receive investment research which won't benefit the account. The same violations would apply as noted in the preceding paragraph, in such instances.

H.7.f.(20). Sweep Fees

Banks acting as trustees or investment managers to employee benefit plans may agree to provide "sweep services" to such plans. Sweep services involve investing excess uninvested cash of a plan in either a deposit account or other short-term investment vehicle. Depending on how the arrangement is structured, provision of sweep services may involve one or more prohibited transactions under ERISA Section 406. In some cases, the statutory exemptions of ERISA Section 408 may provide a safe harbor.

The primary guidance regarding sweep fees is contained in two DOL opinions, AO 88-2A and AO 86-FRB, the Plotkin Letter. The two overriding variables applicable to sweep fees are whether fees are earned by the bank from the transaction and whether the bank has discretion to make the sweep transaction.

The key is whether the bank is exercising its fiduciary authority or control to cause a plan to pay an additional fee. The examiner needs to identify the variables present at the bank under examination.

The general rule is that a bank which has authority to decide when a sweep transaction should be performed *and* which levies a separate fee for this service, is in violation of ERISA Sections 406(b)(1), (2) and (3). Section 406(b)(1) [Also see IRC 4975(c)(1)(E)] is applicable because the bank is exercising its discretionary authority to cause the plan to pay an extra fee. Section 406(b)(2) is applicable because the bank is charging a fee for the sweep transaction which is adverse to the interest of the plan or the plan's participants or beneficiaries. Section 406(b)(3) [Also see IRC 4975(c)(1)(F)] is applicable because the extra fee is being paid to the bank. Mere authorization by an independent fiduciary does not preempt a violation.

Whether a bank may provide sweep services involves a number of interrelated areas. Four primary areas or questions to consider include the following: (1) Are any extra fees charged for sweep services? (2) Does the bank have discretion over the plan's investments? (3) What is the bank's discretion over *when* sweeps will occur and *how much* will be swept? and (4) What type of investment vehicle is used?

For all types of ERISA accounts, the bank may:

- Provide sweep services if no fee is charged [Plotkin Letter].
- Provide investment services, including sweep services, under a single fee arrangement which is calculated as a percentage of the market value of the total assets under management [Plotkin Letter].
- Charge direct expenses properly and actually incurred in the performance of such services [Plotkin Letter].
- Provide sweep services where a for-profit fee is charged, if a fiduciary independent of the bank (such as the plan sponsor, plan administrator, or outside investment manager) [See AO 88-2]:
    - Authorizes either Individual sweep transactions or authorizes a standard procedure as to when and how sweeps will occur;
    - Is provided adequate disclosures of pertinent matters such as the fees, sweep intervals, and sweep levels;
    - Authorizes the investment vehicle(s);
    - Is permitted to terminate the sweep arrangement at any time without penalty; and
    - Receives notice from the bank, not less than 30 days prior, of any change in sweep fees.

    The independent fiduciary must be provided with sufficient information so that it can adequately exercise its responsibility to monitor the sweep arrangement [AO 88-2].

    For-profit fees may be based on a percentage of the income paid by the sweep investment vehicle [Plotkin Letter] or on a percentage of the amount swept.

  Normally, uninvested cash is swept to high-quality and highly liquid money market investment vehicles. Examples of these vehicles include the following (list is not all-inclusive):

    - Own-bank and other-institution deposits.
    - Trust collective investment funds (such as a Short-Term Investment Fund).

- Mutual funds which are:
  - Independent of the bank or its parent,
  - Bank or holding company related mutual funds (such as proprietary funds - refer to subsection H.7.f.(11). Mutual Funds, Investment in Proprietary (Own Bank or Affiliated) and Advised), and
  - Advised by the bank's investment advisor (refer to subsection H.7.f.(11). Mutual Funds, Investment in Proprietary (Own Bank or Affiliated) and Advised).
- Repurchase agreements (refer to subsection H.7.f.(16). Repurchase Agreements).
- Commercial paper (refer to PTE 81-8).

Even with this guidance; however, trust department management may contend that sweep fees are permissible. One type of defense which may be raised by management involves the statutory exemptions under ERISA Section 408. These exemptions are addressed in the Plotkin letter. Sections 408(b)(4) Deposits and 408(b)(8) Collective Investment Funds provide authority to utilize own-bank investment vehicles, but do not preempt sweep fee violations of Section 406(b) (see the conditions listed for the use of those section 408 exemption categories in Section 408(b)(4)(A) and (B) and 408(b)(8)(A) and (C)). The same can be said for the ancillary services provisions of Sections 408(b)(2) and (6), particularly with investment vehicles such as repurchase agreements and commercial paper. In addition, the Plotkin letter discusses the applicability of the statutory exemptions under Section 408(b)(6) regarding ancillary services and under Section 408(b)(8) regarding collective trust funds for sweep service arrangements maintained by a bank.

H.7.f.(21). Release of Claims and Extensions of Credit in Connection with Litigation

On December 31, 2003, the Department of Labor issued PTE 2003-39 (72KB PDF file - PDF Help), "Release of Claims and Extensions of Credit in Connection with Litigation." The exemption provides relief from Sections 406(a)(1)(A), (B), and (D) of ERISA, and the taxes imposed by Sections 4975(c)(1)(A), (B), and (D) of the Internal Revenue Code for the following transactions:

- The release by the plan, or a plan fiduciary, of a legal or equitable claim against a party in interest in exchange for consideration, given by, or on behalf of, a party in interest to the plan in partial or complete settlement of the plan's or the fiduciary's claim; or
- An extension of credit by a plan to a party in interest in connection with a settlement where the party in interest agrees to repay, over time, an amount owed to the plan for the settlement of a legal or equitable claim.

The exemption is subject to the following conditions:

- There must be a genuine controversy involving the plan. A genuine controversy is deemed to exist when a court has certified a case as a class-action;
- The fiduciary that authorizes the settlement has no relationship to, or interest in, any of the parties involved in the litigation, other than the plan, that might affect the exercise of such fiduciary's best judgment;
- The settlement is reasonable in light of the plan's likelihood of full recovery, the risks and costs of litigation, and the value of the claims foregone;
- The terms and conditions of the transaction are no less favorable to the plan

than comparable arms-length terms and conditions that would have been agreed to by unrelated parties under similar circumstances;
- The transaction is not part of an agreement, arrangement, or understanding designed to benefit a party in interest;
- Any extension of credit by the plan to a party in interest in connection with the settlement is on terms that are reasonable, taking into consideration the creditworthiness of the party in interest and the time value of money; and
- The transaction does not involve matters covered by PTE 76-1, which relates to delinquent employer contributions to multiemployer and multiple employer collectively bargained plans.

In addition to the conditions above, transactions entered into after January 30, 2004 are subject to several additional conditions:

- Where the litigation has not been certified as a class action, an attorney(s) of the plan, having no relationship to any of the parties other than the plan, determines that there is a genuine controversy involving the plan;
- All terms of the settlement are specifically described in a written settlement agreement or consent decree;
- Assets other than cash may be received by the plan from a party in interest in connection with the settlement only if:
  - Necessary to rescind a transaction that is the subject of the litigation; or
  - Such assets are securities having a generally recognized market, per ERISA 3(18)(A), and which can be objectively valued. A settlement wil not, however, fail to meet this requirement solely because it involves the contribution of additional qualifying employer securities in settlement of a dispute involving such qualifying employer securities.
- To the extent that assets other than cash are received by the plan for the release of claims, such assets must be specifically described in the written settlement and valued at their fair market value in accordance with Section 5 of the VFC. The valuation methodology, including the appropriate date, must be set forth in the written settlement agreement;
- Nothing precludes the exemption from applying to a settlement that includes a written agreement to:
  - Make future contributions;
  - Adopt amendments to the plan; or
  - Provide additional employee benefits
- The fiduciary acting on behalf of the plan acknowledges in writing that it is a fiduciary with respect to the settlement of the litigation on behalf of the plan.

Finally, the PTE requires the maintenance and retention of certain records demonstrating compliance with the conditions of the PTE for a period six years.

H.8. Investment in Employer Securities and Real Property - ERISA Section 407 and 408(e)

When Congress considered various provisions for ERISA, it reviewed employee benefit plan losses and abuses. Congress found that a number of plans incurred major losses because they had placed large amounts of their assets in employer securities and/or real property. However, Congress also realized that some investment in employer securities and real property could be beneficial when not done to excess.

In general, ERISA Section 407(a)(2) provides that no employee benefit plan may invest more than 10% of its assets, valued at market at the time of the transaction, in employer securities and real property. In determining the 10% maximum, both employer securities and employer real property are added together. Since certain types of employee benefit plans are designed to invest *exclusively* in employer securities (ESOPs, etc.), certain exceptions to the general limitations were included in the law.

An important exception to the 10% limitation is embodied in ERISA Section 407(b)(1). This section provides that the *10% limitation does not apply to eligible Individual plans* (generally, defined contribution plans) as defined in ERISA Section 407(d)(3). Therefore, the *10% limitation usually only applies to defined benefit plans.*

For any investment in employer securities or real property, ERISA Section 407 establishes three tests. The securities and/or real property must be: (1) *qualifying*, (2) within statutory limits which differ according to the type of plan, and (3) meet certain fiduciary standards of ERISA Section 404. The acquisition or sale of such securities and/or real property must also meet the conditions of ERISA Section 408(e). Acquiring, holding, or selling employer securities and/or real estate which do not qualify as such, exceed the limitations of Section 407, or do not meet the conditions of Section 408(e) result in a violation of ERISA Section 406(a)(1)(E) and/or Section 406(a)(2).

Examiners should also take special note that there is a parallel set of violations involving Section 4975 of the IRC for most types of prohibited transactions. Both sets of violations should be cited whenever applicable. Refer to subsection M, Compliance with the Internal Revenue Code for coverage of these provisions.

H.8.a. Qualifying Employer Securities

ERISA Section 407(d)(5) defines the term qualifying employer security to include stock and other marketable obligations of the employer. In addition, Section 407(d)(1) provides that securities issued by affiliates of the employer are also included in the term "employer security." The term affiliate is itself defined in Section 407(d)(7). The IRS definition for the term qualifying employer security" is found in IRS Regulation 54.4975-12.

For employer stock held in plans, *other than eligible Individual account plans*, ERISA Section 407(f) imposes the following percentage limitations *(which should not be confused with the maximum 10% limitation of employee benefit plan assets discussed under H.8 above):*

1. no more than 25% of the aggregate amount of the same class of stock (issued and outstanding at the time of acquisition) is held by the plan, and

2. at least 50% of that amount is held by persons independent of the issuer.

However, ERISA Section 407(f) also provided temporary exemptive relief from the limitations until 1-1-93, provided: (1) the stock was held since 12-17-87, or (2) the stock was acquired after 12-17-87 (under a contract legally binding as of 12-17-87) and was continuously held following its acquisition.

ERISA Section 407(e) defines marketable obligations to include debt obligations (bonds, debentures, and notes), certificates, or other evidence of indebtedness. The same section requires that the debt obligations must be acquired for no more than the value which is established independent of the issuer and meets one of the market price categories listed in ERISA Section 407(e)(i)(A), (B), or (C). The acquisition of debentures convertible into stock is deemed to be the acquisition of a debenture, not stock.

H.8.b. Qualifying Employer Real Property

ERISA Section 407(d)(2) states that employer real property includes land and buildings (and related personal property) leased to an employer or to an affiliate of the employer. Section 407(d)(4)(C) permits all of the property to be leased to the employer or its affiliate. The term affiliate is defined in Section 407(d)(7).

Real property must satisfy three requirements to be considered *qualifying* employer real property:

- There must be at least two pieces of real property. A single parcel of land, or a single building or lease can never be considered qualifying [ERISA Section 407(d)(4)(A)].

- The real property (consisting of at least two parcels) must be geographically dispersed. This is decided on a fact and circumstance basis [ERISA Section 407(d)(4)(A)].

Each piece of real property and its improvements, must be adaptable to more than one use. This is also decided on a fact and circumstance basis [ERISA Section 407(d)(4)(B)].

DOL ERISA Regulation 2550.407a-1 refers to applicable requirements in ERISA Sections 406 and 407 concerning the acquisition and holding of employer securities and employer real property.

H.8.c. Statutory Limitations

H.8.c.(1). Defined Benefit Plans

Defined benefit plans and most money purchase plans may invest no more than 10% of their assets, in aggregate, in employer securities and employer real property. Total plan assets are calculated net of plan debt (including any debt to acquire the securities or real property). [See DOL ERISA Regulation 2550.407a-2(c)]

H.8.c.(2). Individual Account Plans

The statutory limit of 10 percent does not apply to "eligible Individual account plans." Eligible Individual account plans are profit-sharing and employee stock ownership plans (ESOPs), as well as stock bonus, thrift and savings plans, that explicitly provide for the acquisition and holding of qualifying employer securities or qualifying employer real property. [See ERISA Section 407(d)(3)(A)] Generally, these plans are intended to invest wholly or largely in employer securities. Section 407(d)(3)(B) requires that such plans must *explicitly authorize* the holding of employer securities and/or real property in excess of the Section 407(d)(3)(A) 10% general limitation.

Plans offering participant-directed investments (such as 401(k) and 403(b) plans) may provide for investment in employer securities, so long as certain requirements are observed [see DOL ERISA Regulation 2550.404c-1 and subsection H.5.c.(6). Individual Account (Section 404(c)) Plans]. The regulation contains specific requirements when employer securities are offered as an investment alternative to participants. Generally, fiduciaries are provided with limited relief from ERISA fiduciary responsibility liability if plans meet certain conditions and participants direct their own investments [see 2550.404c-1(d)(2)].

H.8.d. Acquisition of Employer Securities and/or Real Property

ERISA Section 408(e) and DOL Regulation 2550.408e indicate that the acquisition or sale of employer securities and/or real property must be for adequate consideration and that the plan may pay no fee or commission. Adequate consideration refers to the price paid for the securities and/or real property. For a parallel discussion, refer to the discussion of valuing employer securities for ESOP plans in subsection H.5.c.(5). ESOP Plans - Employer Securities Investments - Valuation.

The 10% limitation is viewed at the time of the acquisition; subsequent upward movements in market prices do not create violations. DOL ERISA Regulation 2550.407a-2(b) indicates that acquisitions include contributions to the plan, outright purchases, exchanges of assets, or foreclosures of collateral for a defaulted loan. The exercise of warrants resulting in the acquisition of an employer's common stock is considered a transaction subject to Section 407; however, employer stock acquired as a result of a stock dividend or stock split should *not* be included when determining whether the 10% maximum has been breached.

H.8.e. Fiduciary Standards

Even if all of the above conditions are met, a fiduciary making decisions to invest in

employer securities/real property must ensure that the exclusive benefit and prudence rules of ERISA Section 404(a)(1) are met. Refer to a parallel discussion of the prudence of ESOP investments in employer securities in subsection H.5.c.(5), ESOP Plans - Employer Securities Investments - Valuation.

H.9. Exemptions From Prohibited Transactions - ERISA Section 408

Certain exemptions from the prohibited transaction provisions are included in Section 408 of ERISA. A number of these statutory exemptions are discussed below. Failure to comply with the various conditions of these statutory exemptions means that the transaction is a prohibited transaction in violation of ERISA Section 406.

Examiners should note that there is a parallel set of prohibitions in Section 4975 of the Internal Revenue Code for most types of prohibited transactions described in ERISA Section 406. IRC Section 4975(d), however, contains a number of exemptions from the prohibited transactions detailed in Section 4975. Although similar, ERISA Section 406 and IRC Section 4975 are not identical.

In addition to violations of ERISA Section 406, examiners should also cite violations of IRC Section 4975 if applicable. Refer to subsection M, Compliance with the Internal Revenue Code for coverage of these provisions.

H.9.a. Exemptions and Opinions

H.9.a.(1). Class and Individual Exemptions

ERISA Section 408(a) authorizes the DOL to issue both class and Individual exemptions. These exemptions are in addition to the exemptions provided by ERISA Section 408 . While class exemptions are applicable to any party that meets the conditions, Individual exemptions provide relief only for the party(ies) requesting the exemption. The DOL has issued more than 35 class exemptions and hundreds of Individual exemptions. A number of the Prohibited Transaction Exemptions most relevant to banks and trust departments are cited throughout this manual and appear in Appendix E.

Before an exemption may be granted, ERISA requires that the DOL find that the exemption is:

- administratively feasible;
- in the interests of the plan and its participants and beneficiaries;
- protective of the rights of plan participants and beneficiaries.

A bank requesting an exemption from the DOL must supply the information required by DOL ERISA Regulation 2570.30 - .52. Regulation 2570.30 - .52 replaced ERISA Procedure 75-1, which is cited in many of the rulings dated prior to 1990. A publication, *Exemption Procedures Under Federal Pension Law*, explains how to obtain ERISA exemptions and is available from the Division of Public Affairs, Pension and Welfare Benefits Administration, U.S. Department of Labor, 200 Constitution Avenue, NW, Washington D.C. 20210; phone (202) 219-8921; web site: www.dol.gov.

H.9.a.(2). Advisory Opinions

The DOL also is authorized to answer inquiries regarding ERISA-related matters in the form of information letters and advisory opinions. A bank submitting such an inquiry must supply the information outlined in ERISA Procedure 76-1.

H.9.b. Ancillary Services Statutory Exemption

ERISA Section 406(a)(1)(C) prohibits a party in interest from providing services to an employee benefit plan. Congress provided two statutory exemptions, ERISA Sections 408(b)(2) for necessary services, and 408(b)(6), for what are termed "ancillary services" by banks and financial institutions. No exemptions, however, are provided from the fiduciary responsibility or co-fiduciary liability sections of ERISA Sections 404 and 405,

respectively.

ERISA Section 408(b)(2) [see also IRC Section 4975(d)(2)] permits a plan to receive office space, or legal, accounting or other services from a party in interest. The office space or service must be necessary for the establishment or operation of the plan; it must be furnished under a contract or arrangement which is reasonable; and no more than reasonable compensation may be paid by the plan [see DOL ERISA Regulations 2550.408b-2 for important guidance on the scope of this exemption]. The exemption provides relief only from the prohibitions of ERISA Section 406(a), and not from Section 406(b).

ERISA Section 408(b)(6) permits fiduciary banks to receive reasonable compensation for the provision of ancillary services, provided the bank has adopted internal safeguards to ensure that the provision of such services is consistent with sound banking and financial practices, and provided that specific guidelines are adopted addressing the extent to which the services will be provided. Examples of services that could be provided include securities lending, loan origination and servicing, EDP services and use of own-bank demand deposits. Section 408(b)(6) provides an exemption from ERISA Sections 406(a) as well as 406(b)(1) and 406(b)(2) (but not ERISA Section 406(b)(3)); therefore, it may provide an exemption in cases that would not be covered by ERISA Section 408(b)(2) [see DOL ERISA Regulation 2550.408b-6; see also DOL ERISA Regulation 2550.408c-2.

Refer to ERISA Section 408(b)(4) and related DOL Regulation 2550.408(b)(4) concerning exemptions governing the use of own-bank interest-bearing deposits, PTE 81-6 and PTE 82-63 concerning requirements governing securities lending and AO 92-24A addressing float management (a component of reasonable compensation) for demand deposits.

H.9.c. Receipt of Services by IRAs and Keogh Plans Exemption

The DOL's Prohibited Transaction Class Exemption 93-33 (PTE 93-33) permits banks to provide certain banking services at reduced or no cost to Individuals for whose benefit IRAs or Keogh plans are established, and their family members. PTE 93-33 provides relief from ERISA Section 406(a)(1)(D) and 406(b), and from the sanctions resulting from application of IRC Section 4975, including the loss of exemption of an IRA. PTE 93-33 amended and superseded Prohibited Transaction Class Exemption 93-2.

The exemption allows banks to take deposit balances of IRAs and Keoghs into account when determining eligibility for reduced fees for services. While the term "services" is not defined, the services must be of the type the bank could offer consistent with applicable federal and state banking law, and must be provided by the bank or an affiliate in the ordinary course of the bank's business to customers who qualify for reduced or no cost banking services but who do not maintain IRAs or Keoghs with the bank. Services may include incidental products of a *de minimis* value provided by third parties.

Other conditions of the exemption include:

- for the purpose of determining eligibility to receive services at reduced or no cost, the deposit balance required by the bank for the IRA or Keogh must be equal to the lowest balance required for any other type of account which qualifies for the reduced or no cost services.

- the rate of return on the IRA or Keogh plan must be no less favorable than the rate of return on an identical investment that could have been made by a customer of the bank who does not receive reduced or low cost services.

PTE 93-33 was amended on April 21, 1994 to permit banks to include securities investments (except investments offered solely to IRAs and Keoghs) in determining eligibility for reduced fees.

The DOL more recently issued Prohibited Transaction Class Exemption 97-11 (PTE 97-11) which provides a similar exemption to broker dealers.

H.9.d. Collective Investment Funds (CIFs) Statutory Exemption

The investment of employee benefit plans in a CIF operated by a party in interest of the plan is a prohibited transaction. ERISA Section 408(b)(8) [see also IRC Section 4975(d)(8)] provides a statutory exemption for any transaction between a plan and a bank's CIF, if the investment is a sale or purchase of an interest in the fund, specifically authorized in the governing plan or by an independent fiduciary, and if the bank receives no more than reasonable compensation. Section 408(b)(8) provides relief from ERISA Sections 406(a)(1)(A), 406(a)(1)(D), 406(b)(1) and 406(b)(2).

The DOL has issued a class exemption, Prohibited Transaction Class Exemption 91-38 (PTE 91-38) which provides relief from ERISA Sections 406(a), 406(b)(2) and 407(a) for (i) transactions between parties in interest with respect to a plan, and a CIF that is maintained by the bank and in which an employee benefit plan is invested, and (ii) acquisitions of employer securities or employer real property by the CIF, provided that the party in interest is not the bank that maintains the CIF or any other CIF maintained by the bank or an affiliate. The transaction must meet one of the following criteria:

- The plan, along with all other employee benefit plans maintained by the same employer, may not hold more than 10 percent of the total of all interests in the CIF. (For transactions occurring between October 23, 1980 and June 30, 1990, the plans could not hold more than 5 percent of the total of all interests); or
- The CIF is a specialized fund that invests substantially all of its assets in short-term obligations (one year or less).

The PTE requires that the terms of the transaction be not less favorable than terms generally available in an arm's length transaction between unrelated parties and that the bank adhere to certain recordkeeping procedures.

The PTE covers other transactions under additional conditions:

- transactions between employers participating in a multiple employer plan and CIFs;
- acquisitions, sales, or holding of employer securities and employer real property by CIFs that do not meet the conditions of the general exemption;
- certain transactions with persons who are parties in interest with respect to a plan solely by virtue of being providers of services;
- the furnishing of certain goods to or leasing of real property by a CIF from a party in interest of a plan participating in the CIF;
- provision of services to a CIF in which a plan has an interest by the bank maintaining the CIF in connection with the management of real property owned by the CIF;
- provision of services, facilities and any goods incidental to such services and facilities by a place of public accommodation owned by a bank sponsored CIF to a party in interest with respect to a plan which has an interest in the CIF;
- excess holding of qualifying employer securities or qualifying employer real property (other than through a CIF).

Refer to Section 7, Collective Investment Funds for a general discussion of Collective Investment Funds.

H.9.e. Deposits, Interest-Bearing Statutory Exemption

ERISA Section 408(b)(4) provides a statutory exemption for the investment of plan assets in bank deposits which bear a reasonable interest rate, where the bank is a fiduciary or other party in interest of the plan. The exemption provides relief from ERISA Sections 406(a)(1), 406(b)(1) and 406(b)(2) but not from ERISA Section 406(b)(3).

The exemption may be utilized with respect to own-bank plans, or, for other plans if the transaction is authorized by the plan or an independent fiduciary. Own-bank deposits, when used as investments for plans covering a bank's employees must bear a reasonable rate of interest.

Investment in own-bank interest-bearing deposits by outside plans must satisfy the following requirements [also see IRC 4975(d)(4)(B)]:

- Use of the deposits must be expressly authorized by the plan or an independent fiduciary.
- The deposits must bear a reasonable rate of interest.
- The express authorization must identify the bank by name. [See Labor Regulation 2550.408b-4]

H.9.f. Employee Stock Ownership Plans (ESOPs) - Loans to Plans Statutory Exemption

Bank examiners may encounter ESOPs sponsored by a bank or its holding company, or ESOPs sponsored by outside organizations for which the bank serves as trustee or plan administrator. In most ESOPs, the purchase of employer securities is financed through loans guaranteed by one or more parties in interest, known as "leveraging." Leveraged ESOPs involve the potential for abuse due to the possible involvement of insiders and the stock's potential lack of marketability. Moreover, the guarantee of a loan to an ESOP by a party in interest is a prohibited transaction.

ERISA Section 408(b)(3) [see also IRC Section 4975(d)(3)] provides an exemption from the prohibited transaction provisions of ERISA Sections 406(a), 406(b)(1) and 406(b)(2) for loans to an ESOP that are guaranteed by a party in interest [see also DOL ERISA Regulation 2550.408b-3] and loans which are issued by a bank that is a party in interest.

The exemption requires a loan to a plan to be:

- primarily for the benefit of the participants and beneficiaries of the plan (see DOL ERISA Regulation 2550.408b-3(c) for the tests to determine whether a loan is made primarily for the benefit of the participants and beneficiaries [also see IRC Section 4975(d)(3)(A)]); and
- charged a reasonable interest rate (see DOL ERISA Regulation 2550.408b-3(g)).

When an ESOP purchases employer securities with the proceeds of a loan from an insider or a party in interest, the price paid for the securities must be a fair market price established by persons who are not parties in interest. An independent appraisal is often required by IRS Regulations. *This is an area where abuse of ESOPs has often been noted*. When an ESOP purchases employer securities at prices in excess of their fair market value, the question arises whether the transaction was primarily for the benefit of the participants and beneficiaries of the plan. Refer to the discussion in subsection H.5.c.(5). ESOP Plans - Employer Securities Investments - Valuation.

A loan that is exempt under Section 408(b)(3) must be non-recourse against the plan, and the plan may pledge as collateral only qualifying employer securities (as defined under ERISA Section 407) acquired with the proceeds of the exempt loan or pledged as collateral on a prior exempt loan repaid with the proceeds of the current exempt loan.

ESOPs are further described in subsection D.2.e., Employee Stock Ownership Plans (ESOPs).

H.9.g. Loans to Plan Participants Statutory Exemption

Most employee benefit retirement plans (pension, profit-sharing, 401(k), etc.) permit the plan to make loans to its own plan participants. Four sets of overlapping conditions, all of which must be complied with, must be satisfied when a plan engages in this type of activity. The four conditions are:

1. ERISA statutory and regulatory requirements,
2. Plan authorization and conditions,
3. IRS statutory and regulatory requirements, and
4. Consumer protection laws.

Under the terms of some trust or agency agreements, a bank may neither be responsible for administering participant loan programs, nor for participant loan record keeping. Often, the plan administrator is responsible for participant loan programs. In situations where a bank is the plan's trustee, but: (1) it is not responsible under the terms of its appointment for administering a participant loan program, and (2) it does not have access to loan documentation, or other information which would reasonably permit it to determine that either the program or the participant loans are in compliance with applicable IRS regulations, it should not be cited for violations pertaining to the operation of the participant loan program.

H.9.g.(1). ERISA Requirements for Loans to Plan Participants

Section 408(b)(1) of ERISA permits loans to plan participants, even though participants are parties in interest and may also be fiduciaries of the plan. Loans must meet four requirements including the following:

- Originated in accordance with specific plan provisions [see Section 408(b)(1)(C) and IRC 4975(d)(1)(C)]. Labor Department Regulation 2550.408b-1(d)(2) requires that certain features of the participant loan program be included in the plan document or other official documents of the plan (such as the Summary Plan Description). Required features of a participant loan program include:
    - Identification of loan program administrator(s);
    - Procedures for loan applications;
    - Basis for loan approvals or denials;
    - Limits (if any) on amounts/types of loans;
    - Determination of what constitutes a reasonable rate of interest;"
    - Types of acceptable collateral; and
    - Events constituting default, and steps that will be taken in the event of default.
      Examiner Note:
        - A defaulted loan is taxable in the year of default. A 1099-R must be issued (to the borrower and the IRS) to report the distribution. Refer to IRS requirements dealing with when default occurs (refer to subsection H.9.g.(3). IRS Statutory and Regulatory Requirements for Loans to Plan Participants).
        - If defaulted loans are present, check the IRS/DOL Annual Return/Report (Form 5500) for the plan

  This section of the DOL regulation was effective for participant loans granted or renewed on or after the last day of the first plan year beginning on or after January 1, 1989.

- Available to participants and beneficiaries on a reasonably equivalent basis [refer to Section 408(b)(1)(A) and (B), and IRC 4975(d)(1)(A) and (B)]. Department of Labor ERISA Regulation 2550.408b-1(b)

and (c) states that loans must be available on a non-discriminatory basis to all eligible plan participants and beneficiaries, regardless of race, color, religion, age, sex, or national origin. In addition, the minimum loan amount set in the plan document may not exceed $1,000. The plan can set a maximum dollar amount and/or a maximum percentage of a participant's vested interest in the plan which may be borrowed.

- Charge a reasonable rate of interest [see Section 408(b)(1)(D) and IRC 4975(d)(1)(D)]. Reasonable is explained in DOL ERISA Regulation 2550.408b-1(e) as a rate commensurate to the rates charged by persons lending money for loans under similar circumstances.

- Provide adequate security or collateral [see Section 408(b)(1)(E) and IRC 4975(d)(1)(E)]. If a loan is secured by a participant's vested interest in a plan, the maximum loan amount is based on 50% of the vested interest. Anything in excess requires additional collateral. See DOL ERISA Regulation 2550.408b-1(f).

Labor Department Regulation 2550.408b-1 addressing Loans to Plan Participants and Beneficiaries, explains the meaning and implementation of the statutory provisions. Except as noted in the plan provisions above, the regulation was effective for loans granted or renewed beginning October 19, 1989.

H.9.g.(2). Plan Authorization and Conditions for Loans to Plan Participants

As noted above, ERISA Section 408(b)(1)(C) permits ERISA plans to make loans to plan participants and beneficiaries only if authorized by the plan document or some other related official document. Granting loans that do not comply with the plan's conditions would result in a violation of ERISA Section 404(a)(1)(D).

H.9.g.(3). IRS Statutory and Regulatory Requirements for Loans to Plan Participants

A loan made by an ERISA plan is considered taxable income (distribution) to the plan participant unless it meets a number of IRS provisions. In addition, if a participant or beneficiary assigns or pledges any portion of his or her interest in a plan as security for a loan, the portion of the Individual's interest assigned or pledged is treated as a distribution from the plan to the Individual, refer to IRS Regulation 401(a)-13. If any taxable distributions occur, the plan participants must receive a year-end Form W2-P and appropriate notification must be provided to the IRS and state tax authority.

The IRS participant loan requirements are governed by Section 72(p) of the Internal Revenue Code. Section 72(p) was added in 1982 and its provisions have been amended numerous times since the establishment of this section. Two different standards apply to participant loans:

- Loans used to *acquire* the principal residence of the participant must be repaid by normal retirement age, as defined by the plan [see IRC Section 72(p)(2)(B)].
  Previous tax law provisions permitted these loans to be used to acquire, build, or substantially renovate the principal residence of the participant or dependent family member. However, these provisions were revoked in 1986.

- For all other loans dated August 13, 1982, or later, there are specific limitations on the term, maturity, renewals, repayment, principal

amounts, and amounts of any new loans. Failure to comply with the following requirements results in the loan being treated as a taxable distribution.

- The loan agreement must provide that the term not exceed five years.
- Principal of the loan must be repaid in not less than quarterly installments [see IRC Section 72(p)(2)(C)].
- Extensions, renewals, and rollovers are prohibited. A taxable distribution results if these transactions occur.
- The maximum amount eligible for a tax-free loan is based on the participant's vested interest in the plan:

Participant's Vested Interest	**Tax-Free Loan Limit**
$ 10,000 or less	Full Vested Amount
$ 10,000 - Under $ 20,000	$ 10,000
$ 20,000 - Under $ 100,000	50% of Vested Amount
$ 100,000 and more	$ 50,000

- The maximum amount of any new loan is reduced by the excess (if any) of the highest outstanding balance of loans from the plan during the one-year period ending on the day before the date on which the new loan was made over the outstanding balance of loans from the plan on the date the loan was made. The effect is to reduce the $50,000 maximum limit for a participant loan by the amount paid on any outstanding loan during the one-year period immediately preceding the making of the new loan.

Default occurs at the time of failure to make the payments. The employee benefit plan may permit a grace period which can be no longer than the last day of the calendar quarter following the calendar quarter in which the missed payment was due. If default occurs:

- The amount of the deemed distribution is the entire outstanding balance of the loan at the time of such failure to make payments.
- The participant will be taxed on the amount of the deemed distribution, unless the participant's account includes after-tax contributions, in which case all or a part may not be taxable.
- The 10% premature distribution tax will apply to the amount of the deemed distribution if the participant has not reached age 59 1/2.
- A Form 1099R needs to be issued to the participant and the IRS (and, if applicable, to the state tax department).

The Internal Revenue Service amended Section 72(p) effective July 31, 2000, by adding Section 72(p)-1. This new section provides question and answer guidance, together with examples, on how participant loans which are deemed distributions are to be accounted for by employee benefit plans. Section 72(p)-1 appears in Appendix E.

The IRC also requires spousal consent when a participant's accrued benefit is used to secure a participant loan from the plan. **IRC Section 417(a)(4)** prohibits the use of accrued benefits to secure participant loans unless: (1) written spousal consent is obtained within 90 days preceding the date on which the loan is to be secured, and (2) the plan provides for spousal consent. IRC Section 417 appears in Appendix E.

H.9.g.(4). Consumer Protection Laws and Loans to Plan Participants

Participant loans are viewed as consumer credit: credit extended for personal, family or household purposes. Since participant loans are consumer loans, consumer protection laws apply to participant loans originated by an employee benefit plan's participant loan program in the same manner as they apply to a corporate fiduciary's own consumer loans. Although less frequently the case, Individual trust accounts originating loans may meet the definition of a creditor for consumer protection purposes. In such cases, the loans extended by Individual trust accounts must also satisfy the requirements of applicable consumer protection laws. Business purpose loans, on the other hand, are generally exempted from the requirements of consumer protection laws.

Trust examiners are not expected to have the technical expertise to conduct consumer compliance reviews, nor are they expected to conduct consumer compliance examinations while performing a trust examination. Trust examiners may review previous Compliance Examination reports, as well as internal/external audit reports, to ascertain whether the institution has demonstrated adequate compliance with consumer protection laws and regulations. Where deemed necessary, trust examiners may discuss the advisability of performing a consumer compliance examination with field supervisors.

H.9.h. Provision of Investment Advice to Participants and Beneficiaries

The Pension Protection Act added new sections 408(b)(14) and 408(g) to ERISA. The new sections provide relief for any transaction in connection with the provision of investment advice to a participant directed individual account. The relief covers the advice itself; the acquisition, sale, or holding of a security or other property in connection with the advice; and the receipt, direct or indirect, of fees or other compensation by the fiduciary or an affiliate in connection with the advice.

In order to qualify for the statutory exemption in 408(b)(14) the provision of investment advice must comply with the requirements detailed in Section 408(g). Section 408(g) requires that the investment advice be provided by a "fiduciary adviser" under an "eligible investment advice arrangement." An "eligible investment advice arrangement" is defined as a nondiscretionary investment advisory arrangement where either:

- Direct or indirect compensation received by the fiduciary advisor does not vary depending on the nature of the advice, i.e. a flat or level fee arrangement; or
- Advice is provided exclusively on the basis of a computer model

meeting certain specified requirements.

The DOL in Field Assistance Bulletin (FAB) 2007-01 stated that the level fee requirement applies only to the fiduciary adviser, and not to an affiliate of the fiduciary adviser, unless the affiliate is also a fiduciary adviser to the plan.

A "fiduciary adviser" is a:

- A bank or similar institution, but only if the advice is provided through a trust department that is subject to periodic examination and review by Federal or state banking authorities;
- A registered investment adviser;
- An insurance company qualifed to do business under the laws of a State;
- A registered broker-dealer;
- Affiliates of the above; and
- An employee, agent, or registered representative of the above.

When an individual acts as an employee, agent, or registered representative of an entity that provides investment advice - both the individual and the entity are considered fiduciary advisers. See FAB 2007-01.

In addition the following general requirements apply:

- The fiduciary adviser must provide appropriate disclosures, including those required by Federal securities laws;
- Any sale, acquisition, or holding must be at the sole direction of the recipient of the advice;
- Compensation received by the fiduciary adviser or an affiliate must be reasonable; and
- Terms must be at least as favorable as in an arm's-length transaction.

If a computer model is used, the model must:

- Apply generally accepted investment theories that take into account the historic returns of different asset classes over defined periods of time;
- Take into account relevant information about the participant, such as age, life expectancy, risk tolerance, assets, sources or income, etc;
- Use prescribed objective criteria to provide advice to participants;
- Not be biased in favor of investments offered by the fiduciary adviser or its affiliates; and
- Take into account all the investment options under the plan and may not be inappropriately weighted towards any investment option

An "eligible investment expert" must certify that the computer model meets the specific requirements prior to the first use and at the time of each material modification of the model. The DOL may establish qualifications for an "eligible investment expert."

The "eligible investment advice arrangement" must be audited annually by an independent auditor. The independent auditor must:

- Have appropriate technical training or experience and proficiency;
- Must represent in writing that he/she has the required training and expertise; and
- Issue a written report of its findings to each fiduciary that has authorized participation in the arrangement.

Section 408(g)(6) requires the following disclosures:

- The role of any party that has a material affiliation or contractuaul relationship with the financial adviser in the development of the investment advice program or in the selection of investment options available under the plan;
- Past performance and historical rates of return of the investment options available;
- All fees or other compensation, including payments by third-parties, that the fiduciary adviser or its affiliates will receive;
- Any material affiliation or contractual relationship of the fiduciary adviser or its affiliates in any security or other property;
- When and how any participant information will be used;
- Types of services provided by the fiduciary adviser in connection with the provision of investment advice; and
- The participant may arrange separately for the provision of advice by another adviser that has no material affiliation with, and receives no fees or other compensation in connections with, a security or other property

Disclosures must be clear and conspicuous and calculated to be understood by the average plan participant. The DOL and the SEC will develop a model disclosure form. Fiduciary advisers are required to:

- Ensure that all disclosure materials are accurate;
- Provide disclosure to recipients of advice at no charge, at least annually; and
- Provide disclosures to recipients of any material changes to the disclosures at no charge and at a time reasonably contemporaneous with such changes.

Fiduciary advisers must keep for a period of at least six years the records necessary to determine whether they have complied with the requirements for the exemption. If, however, the records are lost or destroyed due to circumstances beyond their control, a prohibited transaction will not be deemed to have occurred solely on account of the records having been lost or destroyed.

H.9.h.1. Responsibilies of Plan Sponsors

Plan sponsors and other authorizing fiduciaries have a fiduciary responsibility for the prudent selection and periodic review of a fiduciary adviser. Plan sponsors and other authorizing fiduciaries, however, are not responsible for monitoring the specific investment advice of a fiduciary adviser. The Pension Protection Act does provide limited relief from fiduciary liability for plan sponsors entering into an "eligible investment advice arrangement" if 1) the terms of the arrangement require the fiduciary adviser to comply with the requirements of ERISA Section 408(b)(14) and 2) the fiduciary adviser acknowledges acting as a plan fiduciary.

On February 2, 2007, the DOL issued Field Assistance Bulletin (FAB) 2007-01 in which DOL provided guidance regarding processes and criteria for selecting and monitoring an investment adviser. In FAB 2007-01 the DOL opined that the selection of an investment adviser should be based on an objective process designed to obtain the information necessary to assess the qualifications of the adviser, the quality of services, and the reasonableness of fees. The process must avoid self-dealing, conflicts of interest, and other improper influence. Selection criteria should include:

  - Experience and qualifications, including required registrations

and licenses;
- Willingness of an adviser to assume fiduciary status; and
- Extent to which advice will be based upon generally accepted investment theories

Monitoring criteria should include the periodic review of:

- Changes in the information made to select the adviser;
- Compliance with contractual provisions;
- Utilization of investment advice in comparison with its cost; and
- Participant comments and complaints

Note that while plan sponsors and authorizing fiduciaries are not normally required to monitor the specific investment advice given by the fiduciary adviser, they may have to review specific advice in response to comments or complaints by plan participants.

H.9.h.2 Prior DOL Guidance Concerning the Provision of Investment Advice

In FAB 2007-01, the DOL reiterated that prior guidance regarding the provision of investment advice remains valid. Prior guidance issued by DOL includes Interpretive Bulletin 96-1 and Advisory Opinion 2001-09A, the SunAmerica Letter. In addition, certain guidance relating to the receipt of fees by fiduciaries would be applicable to situations where a fiduciary adviser receives fees. For example, the Frost and Country Bank advisory opinions, AO97-15A and AO2005-10A, respectively, apply to the receipt of fees by fiduciary advisers. Therefore, plan sponsors could opt to provide investment advice or education under prior DOL exemptions or guidance.

H.9.i. Block Trades

The Pension Protection Act added new Section 408(b)(15) to ERISA, which provides an exemption for block trades of stock between a plan and a non-fiduciary party in interest. Section 408(b)(15) defines a block trade as any trade of at least 10,000 shares or with a market value of at least $200,000 which will be allocated across two or more unrelated client accounts of a fiduciary. The interest of a plan, or grourp of plans sponsored by the same employer, can not be greater than 10% of the aggregate size of the block trade. The terms of the transaction must be at least as favorable to the plan as in an arm's-length transaction. The compensation associated with a block trade can not exceed the compensation associated with an arm's-length transaction with an unrelated party.

H.9.j. Alternate Execution Systems

The Pension Protection Act added new Section 408(b)(16) to ERISA which provides an exemption for any transaction involving the purchase or sale of securities, or other property, between a plan and a party in interest if the transaction is executed through an electronic communication network, alternative trading system, or similar execution system or trading venue if certain requirements are satisfied.

The execution system must be subject to regulation by the applicable regulatory agency or by a foreign regulatory agency. The

execution system must either:

- Be designed to match purchases and sales at the best price available through the system in accordance with SEC rules or those of another relevant government authority; or
- Neither the execution system nor the parties to the transaction may take into account the identity of the parties in the execution of trades.

The price and compensation associated with the purchase or sale cannot be greater than in an arm's-length transaction with an unrelated party. If the party in interest has an ownership interest in the system, advance authorization by the plan sponsor or other independent fiduciary is required. A plan fiduciary must be provided with 30 days prior notice before using the system.

H.9.k. Service Providers and Their Affiliates

The Pension Protection Act added Section 408(b)(17) to ERISA. Section 408(b)(17) provides an exemption for the transactions described in Section 406(a)(1)(A), (B), and (D), (e.g. the sale, exchange, or leasing of property; the lending of money or other extension of credit; or the transfer of plan assets to, or use by or for the benefit of a party in interest), if the transactions are between the plan and a non-fiduciary party in interest that provides services to a plan or is related to a service provider to a plan. Such transactions are exempt only if the plan receives no less, or pays no more, than adequate consideration.

Adequate consideration means:

(i) in the case of a security for which there is a generally recognized market -

> (I) the price of the security prevailing on a national securities exchange which is registered under Section 6 of the Securities Exchange Act of 1934, taking into account factors such as the size of the transaction and marketability of the security, or
>
> (II) if the security is not traded on such a national securities exchange, a price not less favorable to the plan than the offering price for the security as established by the current bid and asked prices quoted by persons independent of the issuer and of the party in interest, taking into account factors such as the size of the transaction and marketability of the security, and

(ii) in the case of an asset other than a security for which there is a generally recognized market, the fair market value of the asset as determined in good faith by a fiduciary or fiduciaries in accordance with regulations prescribed by the Secretary.

H.9.l. Foreign Exchange Transactions

The Pension Protection Act added Section 408(b)(18) to ERISA. Section 408(b)(18) exempts any foreign exchange transaction between a bank or a broker-dealer (or an affiliate of either) and a plan for which the bank or broker-dealer is a trustee, custodian, fiduciary, or other party in interest if the following requirements are satisfied:

- The bank or broker-dealer does not have investment discretion or provide investment advice with respect to the transaction;
- The transaction is in connection with the purchase, holding, or sale of securities or other investment assets, i.e. it can not be a stand-alone transaction;
- The terms are no less favorable than an arm's-length transaction between unrelated parties; and
- The exchange rate cannot deviate by more than 3% from interbank bid and ask rates for transactions of comparable size and maturity, as displayed by an independent service that reports exchange rates.

H.9.m. Cross-Trading

The Pension Protection Act added Section 408(b)(19) to ERISA. Section 408(b)(19) provides an exemption from ERISA Sections 406(a)(1)(A) and 406(b)(2) for transactions involving the purchase or sale of a security between a plan and any other account managed by the same investment manager if the following requirements are satisfied:

- The transaction is a purchase or sale, for no consideration other than cash payment against prompt delivery of a security for which market quotations are readily available;
- The transaction is effected at the independent current market price of the security (within the meaning of SEC Rule 270.17a-7(b));
- No brokerage commission, fee (except for customary transfer fees, which are disclosed), or other remuneration is paid in connection with the transaction;
- Cross-trading must be authorized in advance by a plan fiduciary other than the investment manager and the plan fiduciary must receive disclosures detailing the conditions under which cross-trades will occur. The authorization and disclosures must be in writing in a document separate the other written agreements between the parties. In addition, the investment manager must provide authorizing plan fiduciaries a copy of the investment manager's written policies and procedures governing cross-trading;
- Each plan participating in the transaction has assets of at least $100 million. If the assets of a plan are invested in a master trust containing the assets of plans maintained by employers in the same controlled group, the master trust must have assets of at least $100 million;
- The investment manager provides to the plan fiduciary who authorized cross trading a quarterly report detailing all cross trades executed by the investment manager in which the plan participated during the quarter, including the following information, as applicable: (i) the identity of each security bought or sold; (ii) the number of shares or units traded; (iii) the parties involved in the cross-trade; and (iv) trade price and the method used to establish the trade price
- The investment manager does not base its fee schedule on the plan's consent to cross trading, and no other service (other than the investment opportunities and cost savings available through a cross trade) is conditioned on the plan's consent to cross trading;
- The investment manager has adopted, and cross- trades are effected in accordance with, written cross- trading policies and procedures that are fair and equitable to all accounts participating in the cross- trading program, and that include a

description of the manager's pricing policies and procedures, and the manager's policies and procedures for allocating cross trades in an objective manner among accounts participating in the cross-trading program; and
- The investment manager has designated an individual responsible for periodically reviewing such purchases and sales to ensure compliance with the investment manager's written policies and procedures, and following the review, the responsible individual must issue an annual written report no later than 90 days following the period to which it relates and signed under penalty of perjury to the plan fiduciary who authorized cross trading describing the steps performed during the course of the review, the level of compliance, and any specific instances of non- compliance. The written report must also indicate to the authorizing fiduciary that the plan has the right to terminate its participation in the cross-trading program at any time.

On February 9, 2007, the Department of Labor issued Interim Final Rule 2550.408b-19, which describes the general requirements for and the content of an investment manager's written cross-trading policies and procedures. The interim final rule requires that cross-trading policies:

- Must be fair and equitable to all accounts and reasonably designed to ensure compliance with Section 408(b)(14);
- Clear and concise and written so as to be understood by the average plan fiduciary; and
- Sufficiently detailed so as to facilitate the periodic review of the cross-trading program by the compliance officer.

The interim rule specifically requires that cross-trading policies include:

- A description for determining whether a cross-trade benefits the parties to the transaction;
- A description of how the investment manager will determine that cross-trades are effected at the "independent market price ";
- A description of how the investment manager will ensure compliance with the $100 million minimum asset size requirement;
- A description of how the investment manager will mitigate potential conflicts of interests involving the parties to a cross-trade;
- A requirement that the investment manager allocate cross-trades among accounts in an objective and equitable manner, including a description of allocation methods and how they are chosen;
- The identity of the compliance officer, including a description of the compliance officer's qualifications; and
- A description of the scope of the review to be conducted by the compliance officer.

H.9.n. Inadvertent Prohibited Transactions

The Pension Protection Act added Section 408(b)(20) to ERISA. Section 408(b)(20) provides limited exemptive relief for transactions with parties in interest that are corrected within 14 days of discovery, or when date when the transaction should have reasonably been discovered, if:

- The transaction is the acquisition, holding, or disposition of securities or commodities;
- The transaction is not a transaction between a plan and plan sponsor that involves employer securities or employer real estate; and

- The fiduciary or other party in interest did not know, nor reasonably should have known, that the transaction was prohibited.

Under Section 408(b)(20) means :

- To undo the transaction to the extent possible and in any case to make good to the plan or affected account and losses from the transaction; and
- To restore to the plan or affected account any profits made through the use of assets of the plan.

H.10. Exculpatory and Indemnification Provisions - ERISA Section 410(a)

An exculpatory clause is a provision in a plan document or trust instrument that attempts to exculpate, or excuse, persons from certain actions. Sometimes these are called an immunity provision. These clauses may attempt to relieve trustees from liabilities from certain described actions and permit a trustee to adhere to a lesser standard than otherwise required by applicable law.

Section 410(a) of ERISA states that any provision in an agreement or instrument which purports to relieve a fiduciary from responsibility or liability for any responsibility, obligation, or duty ... shall be void as against public policy. The only exception is to recognize that fiduciaries may allocate and delegate responsibilities under ERISA Section 405 (refer to subsection H.6, Co-Fiduciary Liability - ERISA Section 405).

An indemnification agreement is one where one person or organization agrees to protect another against loss. In Interpretive Bulletin 75-4, the Labor Department permits indemnification agreements which leave the fiduciary fully responsible and liable for its actions, but allows another party to satisfy any liability incurred by the fiduciary in the same manner as fiduciary liability insurance (see below). The plan itself may not provide this indemnification; if it does, it is as ineffective as an exculpatory clause.

H.11. Fiduciary Liability Insurance - ERISA Section 410(b)

Section 410(b) of ERISA permits, but does not require, fiduciaries to be covered by fiduciary liability insurance. This type of coverage would protect the plan against errors or omissions of fiduciaries. The insurance may be purchased by the plan, out of plan assets, or by other interested parties. Coverage might be for the fiduciary or the plan sponsor/employer.

If the plan purchases the insurance coverage, the policy must be payable to the plan. The policy must also provide that the insurance company may take recourse (seek reimbursement) against the fiduciaries in the event of a breach of fiduciary liability. If the plan purchases the coverage, a party in interest (such as a fiduciary) may not be the beneficiary of the policy. If the insurance is purchased by a party other than the plan, the recourse provision is not required.

Individual fiduciaries may also purchase fiduciary liability insurance which would protect them against personal fiduciary liability. Such protection is often purchased by banks to protect their directors, officers, and employees. Reference is made to the insurance coverage in Section 10 of this Manual.

H.12. Bonding Requirements - ERISA Section 412

Section 412(a) of ERISA requires that, in general, each fiduciary or other person who is responsible for plan assets must be bonded. Bonding protects the plan against fraud or dishonesty. Corporate fiduciaries with $1,000,000 or more in capital are exempted from these provisions. Section 611(b) of the Pension Protection Act of 2006 added an exemption for broker/dealers registered under the Securities Exchange Act of 1934 and subject to the fidelity bonding requirement of a self-regulatory organization. As a result, the bonding requirements effectively apply to bank directors and officers who serve as individual fiduciaries. The amount of the bond is 10% of the assets handled, with a minimum of $1,000 and a maximum of $500,000. If, however, a plan holds employer securities, then the maximum bond is $1,000,000. See Section 622(a) of the Pension Protection Act of 2006. However, if a plan holds Administrators, officers, and employees

of unfunded plans are exempt from the bonding requirements.

The bond may have no deductible and must name the plan as the insured party. A pledge of assets, even if U.S. Government securities, is not an acceptable substitute for the bonding coverage. Bankers blanket bond policies normally do not provide this fiduciary bonding coverage. There is no requirement for errors and omissions insurance.

I. Disclosures to Employees and Beneficiaries

In enacting ERISA in 1974, Congress found that there was a dearth of information available to the average plan participant. In most cases, participants had no legal right to such information. As a result, ERISA requires several participant disclosures to inform participants of their rights and obligations under a plan. Two of the most common are described below.

A table located in subsection J.2. provides an overview of the major ERISA reporting and disclosure requirements.

I.1. Summary Plan Description

Section 102(a)(1) of ERISA governs the Summary Plan Description (SPD). This is a plain-language summary of the plan. The SPD is provided to all plan participants and is required to be sufficiently accurate so as to inform participants of their rights and duties under the plan. The SPD must be written in a manner calculated to be understood by that plan's average plan participant. If a substantial portion of the plan participants speak a language other than English, the SPD must contain a prominent notice in that other language stating how to obtain assistance.

SPDs must be prepared for all pension and welfare plans covered by Title I of ERISA. The requirement applies to plans with fewer than 100 participants, as well as to large plans. Preparation and distribution of the SPD is normally the responsibility of the plan administrator, not the bank fiduciary. Only in the event that the bank is responsible for preparing, distributing, or filing the SPD does it need to have copies of the disclosures. Nonetheless, if the bank has a copy, it may provide a good summary of the plan's various provisions.

While there is no specified format for the SPD, the requirements for the content of the SPD, explained in Department of Labor Regulation 2520.102-3, have as their objective supplying the plan participant with a full picture of how the plan operates and whom to contact with questions or complaints. In general, the SPD should include:

- Plan Identification. This includes the name and address of the sponsor, the plan's tax identification number (EIN), and the type of plan.
- Plan Administrator/Trustee. This identifies (name, address, telephone) the person(s) or organization operating the plan for the plan sponsor, as well as the plan's trustee(s).
- Plan Information. Eligibility qualifications to join the plan must be provided, as well as a description of circumstances that would lead to disqualification, ineligibility, forfeiture, loss, or suspension of benefits.
- Pension Benefit Guaranty Corporation (PBGC) Coverage. A statement must indicate whether plan benefits are guaranteed by PBGC and, if not, why not.
- Participant Rights. A statement must be included in the SPD which indicates which rights a participant or beneficiary has under ERISA and the plan. DOL regulations provide a model statement which may be used.
- Benefit Claims. A procedure for claiming benefits must be included in the SPD.

In general, plan participants must be provided an SPD at least once every five years. If no changes are made to a plan, an SPD must be distributed at least every ten years. If major changes to a plan are made, a summary of the changes or an updated SPD must be distributed

within seven months after the end of the plan's fiscal year in which changes occur. Changes need not be sent to retirees and their beneficiaries if the changes do not affect them.

The summary plan description was also previously filed with the Labor Department under Section 104(a) of ERISA four months after the plan became subject to the Act. Whenever material changes were made in the plan, a summary of the changes, or an updated SPD, was filed with the Labor Department within seven months after the end of the (plan's) fiscal year in which the changes occurred.

Effective August 5, 1997, with the passage of the Taxpayer Relief Act of 1997, plan administrators were no longer required to file SPDs, summary material modifications (SMMs) or updated SPDs with the Labor Department. Under the new law, plan administrators must furnish copies of SPDs and other plan documents to the department upon request. In addition, new civil penalties of up to $100 per day (not to exceed $1,000 per request) may be assessed against administrators who fail to furnish the requested information to the department within 30 days.

I.2. Summary Annual Report

Section 104(b) of ERISA requires each plan to furnish a Summary Annual Report (SAR) to its participants *and* beneficiaries. The SAR is intended to provide interested parties with a concise summary of the plan's financial position and operating results. The requirement applies to plans with fewer than 100 participants, as well as to large plans.

DOL has issued two report formats, one for pension plans and another for welfare benefit plans. See Labor Regulation 2520.104b-10. Both contain basic plan descriptions and explain how the plan is funded, but the plan administrator may omit any part of the model SAR that doesn't apply to a particular plan.

For non-insurance funded plans, the model pension SAR provides for a valuation of plan assets at the beginning and end of the plan year, amounts of administrative expenses and benefit disbursements, and information about transactions with parties in interest. The model welfare benefit SAR provides information about relevant insurance policies and, if assets are invested outside insurance funding vehicles, financial information similar to that in the pension SAR. Both contain a notice that the participant is entitled to more details, and how to obtain the additional information.

SARs must be distributed to applicable participants two months after the Annual Report (Form 5500) is filed. The Form 5500 is normally filed seven months after the plan's fiscal year-end, so SARs are due to be distributed nine months after the plan year-end. Any extension in filing Form 5500 automatically extends the distribution date for the SPD. SARs are not filed with the government.

J. REPORTING TO GOVERNMENT AGENCIES

Under Title I of the Employee Retirement Income Security Act (ERISA), Title IV of ERISA, and the Internal Revenue Code, pension and other employee benefit plans are generally required to file returns/reports annually concerning, among other things, a plan's financial condition and operations. Many of these reporting requirements are satisfied by filing the IRS/DOL/PBGC Form 5500. Private pension plans must also file a reports with the PBGC. The two reports most often encountered by examiners are summarized below. For a summary of ERISA reporting requirements refer to subsection J.2.

J.1. Annual Return/Report of Employee Benefit Plan (Form 5500)

Section 103(a)(1)(A) of ERISA requires an annual report to be prepared for each ERISA plan. ERISA Section 104(a)(1) requires the annual report to be filed with the government. The annual report is a combined IRS-DOL-PBGC filing using the Form 5500. Although Form 5500 is an IRS form, it is not a tax form and the information disclosed on Form 5500 is public information. Information on Individual Form 5500 filings can be obtained from the freeERISA web site: http://www.freeERISA.com. Registration is required to use the site, which is available without charge. Users can access Form 5500 filings either by providing the filer's name or the filer's Employee Identification Number (EIN).

Not every employee benefit account file sampled will contain a Form 5500, since it is the

administrator and sponsor of an employee benefit plan who are required to report. However, the bank as trustee may be responsible for the preparation and filing of the report. In such cases, a copy of the form should be retained in the trustee's files and available for review by examiners. Although the examiner's responsibilities do not include validating the accuracy of Form 5500, examiners should criticize the account if transactions that took place during the year are not reflected on the Form 5500, or if such transactions are not reported accurately. Limited penalties may be applicable for false statements of fact or knowingly concealing information. See DOL ERISA Regulation 2520.103-1(a)(1) and -1(b)(2)(i), and ERISA Section 103(b)(3).

Form 5500, along with instructions for its preparation, is available on the Internet at: www.dol.gov/ebsa/5500main.html

Form 5500: This is the annual report form that pension benefit plans, welfare benefit plans, Direct Filing Entities (DFEs) and fringe benefit plans must file. The Form 5500, Annual Return/Report for Employee Benefit Plans was substantially revised for the 1999 reporting year. Beginning with the 1999 reporting year, one Form 5500 will be used for all filers. Prior to 1999, there were several alternative Form 5500s, such as the 5500-C and 5500-R. For the 1999 filing year and thereafter, Form 5500 consists of a relatively simple main form containing basic identifying information and a checklist that guides filers to more detailed schedules that must be filed according to the filer's specific type of plan. Form 5500 contains **12** Individual schedules. Each schedule focuses on a particular subject area and/or filing requirement. Filers must complete only those schedules applicable to the filer's specific type of plan. Refer to the Profile of Form 5500 Components table for a summary of the type of information collected for each schedule and a description of the changes made to each schedule.

The revised Form 5500 was structured to streamline annual reporting requirements for plans using simple tax qualification structures and financial operations. Generally, welfare plans will complete fewer items than pension plans, and small plans (those with fewer than 100 participants) will complete fewer items than large plans. (Note: In determining whether a plan has 100 or more participants at the beginning of its plan year, *all* participants in the plan are counted, not just vested participants.)

Many plans with only one participant can continue to file Form 5500EZ.

Who Must File: Generally, unless exempted, a return/report must be filed every year for every pension benefit plan, welfare benefit plan, fringe benefit plan, and Direct Filing Entity (see below).

Pension benefit plans required to file include both defined benefit plans and defined contribution plans. A return/report is due whether or not the plan is qualified and even if benefits no longer accrue, contributions were not made this plan year, or contributions are no longer made. The following are among the pension benefit plans for which a return/report must be filed:

- Profit-sharing, stock bonus, money purchase, 401(k) plans, etc.
- Annuity arrangements under Code section 403(b)(1)
- Custodial accounts established under Code section 403(b)(7) for regulated investment company stock.
- Individual retirement accounts (IRAs) established by an employer under Code section 408(c).
- Pension benefit plans maintained outside the United States primarily for nonresident aliens if the employer who maintains the plan is:
    1. a domestic employer, or
    2. a foreign employer with income derived from sources within the United States if contributions to the plan are deducted on its U.S. income tax return.
- Church pension plans electing coverage under Code section 410(d).
- Pension benefit plans that cover residents of Puerto Rico, the U.S. Virgin Islands, Guam, Wake Island, or American Samoa.
- Plans that satisfy the Actual Deferral Percentage requirements of Code section 401(k)(3)(A)(ii) by adopting the SIMPLE provisions of section 401(k)(11).

The following pension benefit plans are **not** required to file Form 5500:

- An unfunded excess benefit plan.
- An annuity or custody account arrangement under Code section 403(b)(1) or (7) not established or maintained by an employer as described in 29 CFR 2510.3-2(f).
- A Savings Incentive Match Plan for Employees of Small Employers (SIMPLE) that involves SIMPLE IRAs under Code section 408(p).
- A simplified employee pension (SEP) or a salary reduction SEP described in Code section 408(k) that conforms to the alternative method of compliance in 29 CFR 2520.104-48 or 2520.104-49.
- A church plan not electing coverage under Code section 410(d).
- A pension plan that is a qualified foreign plan within the meaning of Code section 404A(e) that does not qualify for the treatment provided in Code section 402(e)(5).
- An unfunded pension plan for a select group of management or highly compensated employees that meets the requirements of 29 CFR 2520.104-23, including timely filing of a registration statement with the DOL.
- An unfunded dues financed pension plan that meets the alternative method of compliance provided by 29 CFR 2520.104-27.
- An Individual retirement account or annuity not considered a pension plan under 29 CFR 2510.3-2(d).
- A governmental plan.

Welfare benefit plans provide benefits such as medical, dental, life insurance, apprenticeship and training, scholarship funds, severance pay, disability, etc. All welfare benefit plans covered by ERISA, except the following, are required to file Form 5500:

- A welfare benefit plan that covered fewer than 100 participants as of the beginning of the plan year and is unfunded, fully insured, or a combination of insured and unfunded.
- A welfare benefit plan that is maintained outside the United States primarily for persons substantially all of whom are nonresident aliens.
- A governmental plan.
- An unfunded or insured welfare plan for a select group of management or highly compensated employees which meets the requirements of 29 CFR 2520.104-24.
- An employee benefit plan maintained only to comply with workers' compensation, unemployment compensation, or disability insurance laws.
- A welfare benefit plan that participates in a group insurance arrangement that files a Form 5500 on behalf of the welfare benefit plan as specified in 29 CFR 2520.103-2.
- An apprenticeship or training plan meeting all of the conditions specified in 29 CFR 2520.104-22.
- An unfunded dues financed welfare benefit plan exempted by 29 CFR 2520.104-26.
- A church plan under ERISA section 3(33).
- A welfare benefit plan solely for:
    1. an Individual or an Individual and his or her spouse, who wholly owns a trade or business, whether incorporated or unincorporated; or
    2. partners or the partners and the partners' spouses in a partnership.

Plans must file Form 5500 by the last day of the 7th calendar month after the end of the plan year (not to exceed 12 months in length).

Direct Filing Entities (DFEs)

The term direct filing entity includes common/collective trusts (CCTs), pooled separate accounts (PSAs), group insurance arrangements (GIAs), master trust investment accounts (MTIAs) and 103-12 investment entities (103-12 IEs) for which a form 5500 is properly filed. Only one Form 5500 should be filed for each DFE year for all plans participating in the DFE. The DFE Form 5500, including all required schedules and attachments, must report information for the DFE year (not to exceed 12 months in length) that ends with or within the participating plan's year. The DFE Form 5500 filing is an integral part of the annual report of each participating plan and the plan administrator may be subject to penalties for failing to file a complete annual report unless both the DFE Form 5500 and the plan's Form 5500 are properly filed.

For reporting purposes, common/collective trust (CCT) and pooled separate account (PSA) are, respectively: (1) a trust maintained by a bank, trust company, or similar institution or (2) an

account maintained by an insurance carrier, which are regulated, supervised, and subject to periodic examination by a state or Federal agency in the case of a CCT, or by a state agency in the case of a PSA, for the collective investment and reinvestment of assets contributed thereto from employee benefit plans maintained by more than one employer or controlled group of corporations.

A master trust investment account (usually referred to as a master trust) is a trust for which a regulated financial institution serves as trustee or custodian (regardless of whether such institution exercises discretionary authority or control with respect to the management of assets held in trust), and in which assets of more than one plan sponsored by a single employer or by a group of employers under common control are held. The assets of a master trust are considered for reporting purposes to be held in one or more investment accounts (MTIAs). An MTIA may consist of a pool of assets or a single asset. Each pool of assets held in a master trust must be treated as a separate MTIA if each plan that has an interest in the pool has the same fractional interest in each asset in the pool as its fractional interest in the pool, and if each such plan may not dispose of its interest in any asset in the pool without disposing of its interest in the pool. A master trust may also contain assets that are not held in such a pool. Each such asset must be treated as a separate MTIA..

DOL Regulation 2520.103-12 provides an alternative method of reporting for plans that invest in an entity (other than an MTIA, CCT, or PSA), whose underlying assets include plan assets within the meaning of 29 CFR 2510.3-101 of two or more plans that are not members of a related group of employee benefit plans. Such an entity that correctly files a Form 5500 constitutes a 103-12 Investment Entity (103-12 IE).

A group insurance arrangement (GIA), for reporting purposes, provides benefits to the employees of two or more unaffiliated employers (not in connection with a multiemployer plan or a collectively-bargained multi-employer plan), fully insures one or more welfare plans of each participating employer, uses a trust or other entity as the holder of the insurance contracts, and uses a trust as the conduit for payment of premiums to the insurance company.

Schedule D, DFE/Participating Plan Information, is a new schedule added to Form 5500 to standardize the format of DFE reporting requirements. DOL's goal is to ensure adequate reporting of the approximately $2 trillion in plan assets held in PSAs, CCTs, MTIAs and 103-12 IEs.

DFEs, other than GIAs, must file Form 5500 no later than 9 ½ months after the end of the DFE year. A Form 5500 filed for a DFE must report information for the DFE year (not to exceed 12 months in length) that ends with or within the participating plans year. GIAs must file by the last day of the 7th calendar month after the end of the plan year (not to exceed 12 months in length) that began in 1999. A 1999 Transition Rule permits DFEs with a fiscal year ending in 1999 to file 1999 DFE Form 5500s on or before October 16, 2000. Under a separate 1999 Transition Rule, the new requirements that large plans report their percentage interests in the assets of CCTs and PSAs on their Schedule H if the CCT or PSA chooses not to file as a DFE was deferred until returns/reports for plan years beginning in 2000.

Filing Requirements

The Form 5500 schedules that a plan must file are generally determined by the type of plan, pension, welfare, DFE or Fringe Benefit, and, for pension and welfare plans, whether it is a small or a large plan (i.e. whether the plan has fewer than 100 participants). The Quick Reference Chart summarizes which schedules are required for each type of plan. Three schedules that examiners should be aware of are detailed below.

Schedule A: Insurance Information - This schedule must be attached if any benefits under a defined benefit, defined contribution, or welfare benefit plan are provided by an insurance company, insurance service, or other similar organization. This includes investments with insurance companies such as Guaranteed Investment Contracts (GICs).

Schedule B: Actuarial Information - The employer or plan administrator of a defined benefit plan that is subject to minimum funding standards (see IRC Section 412 and Part 3 Title I of ERISA) must file this attachment. An enrolled actuary must sign Schedule B. See Income Tax

Regulation Section 301.6059-1(d) for qualifications of an enrolled actuary. The form summarizes the actuarial assumptions used to calculate the participant's defined benefit.

Schedule B includes the amount of a defined benefit plan's unfunded vested liability; the number of plan participants; transactions with insiders; and limited partnership valuations, as well as similarly difficult to value assets.

For the bank's own employee pension plans, the unfunded vested liability represents a contingent liability of the bank. See Bank Sponsored Employee Benefit Plans in subsection K.3, Unfunded Vested Liability regarding the examination treatment of unfunded vested pension liabilities.

Schedule C: Service Provider and Trustee Information - All persons receiving, directly or indirectly, $5,000 or more in compensation for all services rendered to the plan during the plan year must be described on this attachment. Examples of service providers include, but are not limited to: accountants, lawyers, brokers, custodians, trustees, and actuaries.

Form 5500EZ: In general, this form is intended for one participant pension plans.

Profile Of Form 5500 Components
Source: In Brief: 1999 Form 5500, U.S. Department of Labor - PWBA

Form Component	Type of Information Collection	Description
Form 5500	Overview information on type of annual return/report, type of plan, and schedules attached.	Basic information identifying the filer with checklist for attached schedules
Schedule A	Information on contracts with insurance companies for plans and certain DFEs	Revised by adding questions to collect better data on type and value of insurance contracts
Schedule B	Actuarial information on defined benefit pension plans.	Minor revisions to update for 1999 requirements.
Schedule C	Information on service providers for large plans and certain DFEs .	Limited to 40 highest paid service providers, eliminated list of trustees, and limited termination notice to accountants and enrolled actuaries.
Schedule D	Information on participation in certain pooled investment/insurance arrangements (CCTs , PSAs , MTIAs , 103-12 IEs and GIAs).	New standardized form for reporting information about Direct Filing Entities (DFEs) and participating plans.
Schedule E	Information on ESOP plans.	No material revisions.
Schedule G	Information on nonexempt transactions and loans, leases and fixed income investments in default/uncollectible for large plans and certain DFEs .	Streamlining current schedules of loans, leases, fixed income obligations in default/uncollectible and nonexempt transactions. (Note: Schedules of assets and reportable (5%) transactions are required to be filed, but not on computer scannable forms.)
Schedule H	Financial statements and related information for large plans and DFEs .	New schedule streamlining large plan financial questions on current Form 5500 and consolidating them into a

		separate schedule.
Schedule I	Financial statements and related information for small plans.	New schedule streamlining small plan financial questions on current Form 5500-C/R and consolidating them into a separate schedule.
Schedule P	Tax exempt pension trust filers to start IRS statue of limitations.	No material revisions.
Schedule R	Information on pension plans including plan distributions and funding requirements.	New schedule revising pension plan questions on current Form 5500 and Form 5500-C/R and consolidating them into a single schedule.
Schedule T	Information on pension plan tax qualification requirements.	New schedule revising tax qualification questions on current Form 5500 and Form 5500-C/R and consolidating them into a separate schedule that can be filed in accordance with the 3-year testing cycle under Rev. Proc. 93-42.
Schedule SSA	Information required by Social Security Administration for pension plans on separated participants with rights to future benefits.	No material revisions.

Not required.	Not required.	Not required.
Accountant's Report	Must attach.[5]	Not required.	Must attach.[4]	Not required.	Must attach for a GIA or 103-12 IE.

[1] Source: In Brief: 1999 Form 5500, U.S. Department of Labor - PWBA. This chart provides only general guidance. Not all rules and requirements are reflected. Refer to specific Form 5500 instructions and regulations for complete information.

[2] DFE (Direct Filing Entity) includes: bank common and collective trusts (CCTs) and insurance company pooled separate accounts (PSAs) (29 CFR 2520.103-3 and 103-4) that choose to file information on behalf of their participating plans; master trust investment accounts (MTIAs) (29 CFR 2520.103-1(e); investment entities filing under 29 CFR 2520.103-12 (103-12 IEs); and group insurance arrangements (GIAs) filing under 29 CFR 2520.103-2 and 104-43.

[3] Schedules of assets and reportable (5%) transactions also must be filed with the Form 5500 if Schedule H, lines 4i or 4j are Yes, but use of scannable form not required.

[4] Unfunded, fully insured and combination unfunded/insured welfare plans covering fewer than 100 participants at the beginning of the plan year that meet the requirements of 29 CFR 2520.104-20 are exempt from filing an annual report. Such a plan with 100 or more participants must file an annual report, but is exempt under 29 CFR 2520.104-44 from the accountant's report requirement and completing Schedule H, but MUST complete Schedule G, Part III, to report any nonexempt transactions.

[5] Not required for certain plans eligible for limited pension plan reporting.

J.2. Pension Benefit Guarantee Corp (PBGC) Annual Premium Filing (Form PBGC-1)

The Pension Benefit Guaranty Corporation (PBGC) was established as a federal corporation under The Employee Retirement Income Security Act of 1974. The PBGC is responsible for

providing pension benefits to participants and beneficiaries of covered plans when plan sponsors can no longer fund the plan, generally in the case of bankruptcy. The agency insures only private-sector defined benefit plans. Public sector and religious organization pension plans are not covered; neither does the agency insure defined contribution plans of any kind. As of December 2006, the PBGC was the guarantor of pension benefits for more than 44 million American active workers and retirees participating in more than 30,000 private-sector defined benefit pension plans. The two major categories of plans covered by the agency are single-employer and multi-employer pension plans. Multi-employer plans are generally collectively bargained/union plans which are funded by one or more companies in a common industry. As of September 30, 2006, the single-employer program accounted for virtually all of the PBGC's deficit. It held total assets in these plans of $61 billion, and was responsible for a present value of future benefits estimate of $80 billion. PBGC's liabilities are not backed by the full faith and credit of the federal government, nor does it receive any funds from tax revenues. Rather, the PBGC is self-funding, deriving its revenue from premiums on covered plans paid by plan sponsors, assets acquired from terminated plans, recoveries from terminated sponsors, and earnings from invested assets.

Under the single-employer program, PBGC pays monthly retirement benefits up to a guaranteed maximum. The guaranteed maximum payment for a single life annuity in plans terminating in 2007 is: $4,125.00 a month at age 65, $3,258.75 a month at age 62, and $1,856.251 a month at age 55. Benefit increases and new benefits are only partially covered if plan amendments covering the increases were adopted less than five years as of the date a plan terminated. Under the multiemployer Program, the agency provides financial assistance in the form of loans to plans facing insolvency. As a requirement for financial assistance, plans must discontinue benefits in excess of the PBGC's guaranteed level.

Annual Premium Filing (Form PBGC-1)

Form PBGC-1: This form is filed on an annual basis by all defined benefit plans and is not dependent on the size of the plan. Large plans, plans with 500 or more participants, must file an estimated flat premium form.

Form 1-ES: This form discloses the number of participants and the estimated amount of premium payment due the PBGC. If an employer wants to terminate the plan, the PBGC must be notified in advance and must approve any distributions of plan assets to participants. PBGC forms are available on the Internet through PBGC's home page at http://www.pbgc.gov/

K. Bank Sponsored Employee Benefit Plans

K.1. ERISA Applicability

The following summary gives the major provisions of ERISA applicable to banks sponsoring pension or profit-sharing plans for their own employees. Review of these major points should enable the examiner to determine whether a bank is in substantial compliance with ERISA. Some of the summary points represent a consolidation of many sections but, where practicable, citations are given indicating which sections of ERISA may be applicable.

Form of Plan

Employee pension benefit plans are to be in writing [ERISA Section 402(a)(1)] and, with certain exceptions, must meet ERISA's minimum participation and vesting standards. [See also ERISA Section 402(b), refer to subsection H.3, Establishment of Plan - ERISA Section 402].

Operation of Plan

1. At least one trustee must be appointed to operate the plan [ERISA Section 403(a), refer to subsection H.4, Trustee Requirements - ERISA Section 403]. The trustee need not be a bank. Usually, directors, officers, or employees of the plan sponsor (employer) are named as Individual trustees.

   In general, ERISA requires that all assets of employee benefit plans be held in trust. Exemptions exist for fully insured plans and regulations provide that welfare plans under which benefits are paid directly from the general assets of the employer (unfunded plans) are exempt from the trust requirements. Insured plans are those where the funding agency is an insurance company. Contributions are paid to the insurer which in turn pays all benefits to eligible participants based upon instructions from the plan's retirement or administrative committee. These plans range from fully guaranteed retirement benefits to immediate participation guarantee contracts in which the basic guarantee is limited to providing lifetime annuities for those employees who have actually retired.

2. A trust agreement detailing the responsibilities and duties of the trustee should be in writing [ERISA Section 403(a)]. The trust agreement may be included with the plan as an all-inclusive document, but normally this is not the case. Trust agreements are not necessary if the plan's assets are solely insurance policies or annuity contracts issued by insurance companies [ERISA Section 403(b)].

3. The plan must be operated solely in the interests of the plan participants and beneficiaries. In practice, this means that the plan must operate according to the plan

documents and fiduciary principles, with diversified investments made prudently [ERISA Section 404, refer to subsection H.5.b., Requirements]. ERISA prohibits transactions involving conflicts of interest (ERISA Section 406(a)) and self-dealing (ERISA Section 406(b)). Refer to subsection H.7., Prohibited Transactions - ERISA Section 406.

K.2. Trust Powers

If a bank sponsors an employee benefit plan for its own employees, it may name Individuals as trustees. This is commonly done in smaller institutions, where one or more directors and/or officers are named as Individual trustees. Where the bank itself is named as trustee for its own employee benefit plan (and does not serve in any fiduciary capacity for any other institution, parent company, affiliate, or Individual), it is not required to have trust powers unless trust powers are required by state law for such purposes. In such cases the FDIC does not view the bank as operating a trust department, and does not require the bank to apply for Corporation consent to serve as its own trustee. These plans are typically reviewed at safety and soundness examinations, and no trust report is prepared. Any apparent violations of ERISA are scheduled in the safety and soundness report. Referrals of violations (if any) to the Department of Labor are prepared according to instructions found in Appendix A. Refer to subsection B. of Section 10 of this Manual for further discussion of situations which may require FDIC consent to exercise trust powers under Part 333 of FDIC's Rules and Regulations.

K.3. Unfunded Vested Liability

For the bank's own employee defined benefit pension plans, the unfunded vested liability represents a contingent liability of the bank. The unfunded vested liability figure from Form 5500 Schedule B should be noted on the optional own-bank employee benefit account page in the Trust examination report. If the bank contemplates terminating its pension plan or if the bank itself is in such a position that it may be closed, the amount of the unfunded vested liability should be shown as a contingent liability in the trust examination report and carried forward to any concurrent safety and soundness examination report.

K.4. Capital Treatment for ESOPs

In issue number 89-10, the Emerging Issues Task Force (EITF) of the Financial Standards Accounting Board (FASB) reached a consensus that ESOP debt should be reflected on the plan sponsor's balance sheet if the ESOP has no other sources of funds except contributions from the sponsor, dividends on the sponsor's stock, or proceeds from sales of the stock with which to service the debt.

When a bank sponsors a leveraged ESOP which invests in bank stock, there is no immediate increase in regulatory capital for the bank. While the number of shares issued has increased because of the purchase by the ESOP, this increase is offset by the corresponding liability incurred by the bank in guaranteeing the ESOP loan. As the loan is paid down, a commensurate decrease in the ESOP-guarantee liability occurs, providing an increase in bank capital.

The FASB EITF indicated that the consensus reached in issue number 89-10 did not address the push down of ESOP debt to a subsidiary's balance sheet in the situation where the participants are employees of the subsidiary. Security Exchange Commission (SEC) Staff Accounting Bulletin Topic 5.J provides that holding company debt should be pushed down to a subsidiary if the subsidiary will: (1) assume the holding company's debt, (2) retire all or part of the holding company's debt with the proceeds from a debt or equity offering, or (3) guarantee or pledge its assets as collateral for the holding company's debt.

When a bank sponsors a leveraged ESOP which invests in the stock of its own holding company, a case-by-case determination must be made as to the proper Report of Condition treatment of the impact on the bank's capital. A number of issues are involved, including whether the bank or the holding company guarantees the ESOP's debt, sources of funds to repay the debt, etc.

K.5. Fees - Permissibility vs. Prohibited Transactions

Banks are permitted to charge servicing fees to their own plans and to plans administered on

behalf of their holding company. Labor Department Advisory Opinion 79-49 provides that the provision of services by a fiduciary to its own employee benefit plans is not a prohibited transaction under ERISA Section 406(a) . This falls under the service provider exemption of ERISA Section 408(b)(2) . However, this exemption applies only if the fiduciary does not charge the plan a fee in excess of its direct expenses. If a fee in excess of direct expenses is charged, the transaction would violate ERISA.

Under Section 23B of the Federal Reserve Act, a holding company must be charged for services performed on its behalf by an affiliated bank (unless the bank would also, in good faith, waive fees for comparable transactions with nonaffiliated plans). Therefore, banks acting as custodian, trustee, or any other fiduciary capacity for employee benefit plans sponsored by their holding company, should charge the holding company for performing these services**.**

Banks which service holding company plans, or their own plans, should be guided by the ERISA requirement that servicing fees may not exceed their direct servicing expenses. The Labor Department has previously taken the position that banks which charge their own plan fees which exceed their "direct expenses," are in violation of ERISA Sections 406(b)(1) **and** 404(a)(1)(B) , **and** DOL Regulation 2550.408b-2(e)(1) . Banks which do so are also subject to a penalty under ERISA Section 502(1) , which is equal to 20 percent of any amount recoverable for the violation or breach of duty. Banks should also be aware that the DOL has taken the position that charging fees which are charged other trust customers is not considered a reimbursement of expenses. This is predicated on the concept that fees are formulated on a cost plus profit basis.

In reviewing own bank and holding company plans, examiners should determine whether management: (1) is aware of these requirements, and (2) can reasonably demonstrate that fees charged the plans are no more than "direct expenses." Also refer to a 1995 FDIC Legal Opinion on this matter located in Appendix C.

K.6. Assignment or Alienation of Plan Benefits

Examiners may encounter instances (either in trust department accounts, the bank's own employee benefit plan, or on the commercial side of the bank) where a participant has assigned their plan benefits as collateral for a loan. According to ERISA Section 206(d)(1) and IRC Section 401(a)(13), a plan will not be considered a qualified trust unless it provides that benefits under the plan may not be assigned or alienated. If a plan is disqualified, it may be required to forfeit favorable tax treatment. In addition, if a commercial lender originates a loan accepting an assignment of an employee benefit account, the lender may have difficulty securing the collateral if the borrower defaults.

There are three exceptions to the general rule prohibiting assignment and alienation of plan benefits. The three exceptions are discussed below.

- A plan may provide that once a participant begins receiving benefits under the plan, the participant may assign or alienate the right to future benefit payments if the assignment or alienation:
  - Is voluntary and revocable,
  - Does not in aggregate exceed 10% of any benefit payment, and
  - Is not for the purpose of defraying plan administration costs.

- A plan may provide for loans from the plan to a participant or a beneficiary to be secured by the participant's accrued nonforfeitable benefit provided that certain circumstances are met.

- A plan will not fail to satisfy the requirements of Section 401(a)(13) if payments are made to an alternate payee under a Qualified Domestic Relations Order (QDRO).

K.7. In-Kind Contributions

DOL Interpretive Bulletin 94-3 indicates that a prohibited transaction exists when the plan sponsor makes "in-kind" contributions to defined benefit plans and certain defined contribution and welfare benefit plans. Exceptions are noted for certain defined contribution and welfare benefit plans if the contribution would not reduce a present or future obligation of the plan sponsor to make cash contributions. Refer to subsections H.5.c.(1), Contributions, In-Kind and

H.7.f.(5), Loans to Common Borrowers - General.

L. Compliance with state laws

Section 514(a) of ERISA explicitly provides that, with certain exceptions, state laws dealing with employee benefit plans subject to ERISA are superseded by ERISA. From a practical standpoint, this means that only ERISA statutory, regulatory, and interpretive statements on a given issue apply to plans subject to ERISA. Even where FDIC requirements or state laws or regulations provide for a stricter standard, they do not apply to ERISA plans. ERISA further states in Section 514(b), that nothing shall be construed to exempt or relieve any person (or bank) from any law of any state which regulates insurance, banking, or securities. Refer to AO 94-41 for further discussion.

L.1. Escheat Provisions

When the plan document specifies the disposition of undeliverable benefits, those procedures control the trustee's actions. However, most plans will not address escheat guidelines. Thus, DOL concludes that ERISA preempts state escheat laws to the extent they apply to employee benefit plan payments when escheating is not addressed in state banking laws. In states where escheating is not addressed in state banking law, and the bank (as trustee or plan sponsor) remits unclaimed property to the state, an apparent violation of ERISA Section 404(a) would exist. Section 404(a) requires the trustee to hold and conserve plan assets for the exclusive purpose of providing benefits and defraying reasonable plan expenses. In states where escheat provisions are addressed in state banking law, examiners should not cite an apparent ERISA violation. However, the examiner should ensure that the bank is in compliance with state escheat laws. Refer to AO 94-41.

L.2. Special Treatment for Multiple Employer Welfare Arrangements (MEWAs)

The term Multiple Employee Welfare Arrangement (MEWA) is defined in Section 3(40)(A) of ERISA. A special provision exists for MEWA plans which are fully insured. In 1983, Congress added Section 514(b)(6) to ERISA to explicitly disclose that State insurance regulations apply to fully insured MEWA plans. Fully insured MEWA plans and unfunded MEWA plans are relatively rare (refer to subsection D.2.g., Welfare benefit Plans for further details).

M. Compliance with the Internal Revenue Code

A prohibited transaction cited under ERISA Section 406 represents, in almost every instance, a parallel violation of Section 4975 of the Internal Revenue Code (IRC). Whenever examiners cite a violation of ERISA Section 406, the corresponding violation of IRC Section 4975 should also be noted. The result is that a prohibited transaction under ERISA creates tax penalties levied by the IRS.

There are some differences between ERISA and IRC provisions. Different terminology is used, such as the party in interest of ERISA is a disqualified person in IRC. The two definitions can differ in unusual situations. As a result, examiners should note that a few ERISA prohibited transactions may not result in tax penalties under IRC Section 4975. Section 4975 of IRC, titled Tax on Prohibited Transactions appears in Appendix E.

N. Referrals of ERISA Violations to the Department of Labor (DOL)

In 1980, the federal financial institution agencies entered into an agreement with the DOL to refer violations of ERISA, meeting certain specific criteria, to that agency. The Labor Department in turn is obligated by law to refer certain matters to the Internal Revenue Service. A copy of the 1980 Interagency Agreement is located in Appendix E. The referral agreement covers only apparent violations cited in FDIC examination reports. Apparent violations cited in State examination reports are not forwarded by the FDIC to the Labor Department.

In compliance with the interagency agreement, the Corporation may forward the following types of apparent violations to the Labor Department:

- Where the federal financial institution does not serve as plan administrator or plan sponsor, as those terms are defined in ERISA Section 3(16), possible violations of:
    - Title I, Part 4, Section 404, relating to fiduciary duties (including transactions directed by named fiduciaries or qualified investment managers), except where the transaction amounts, individually or in combination with other questionable transactions, constitute less than $100,000;
    - Title I, Part 4, Sections 406 and 407(a), relating to prohibited transactions, except where the

threat of loss to the plan participants is de minimis;
  - Title I, Part 4, Section 411, relating to prohibition against certain persons holding certain positions;
  - Title I, Part 4, Section 412, relating to the bonding requirements as applicable to the financial institution itself.

- Where the financial institution, in respect to a plan, also serves as plan administrator or plan sponsor, the agencies shall provide written notification of possible violations of the ERISA sections listed above, plus written notification of possible violations of Title I, Part 1 of ERISA relating to reporting and disclosure.

Examiners may cite ERISA violations of a bank's own employee benefit plan(s) in the safety and soundness examination report if the bank does not operate a trust department. Employee benefit plans operated by the bank are subject to review and examination by FDIC examiners. A substantial number of ERISA violations referred to the Labor Department come from other than trust examination reports.

A separate page in the trust examination report, ERISA Employee Benefit Account - Recommendation for Referral to Labor Department, is used to provide relevant information about the employee benefit plan(s) affected and to facilitate the referral of the violation(s) to the Labor Department. This page should also be used if ERISA violations warranting referral are scheduled in the safety and soundness examination report. This separate page, when used, is either submitted as part of the Confidential Section of the examination report, or submitted separately to the Regional Office along with the report of examination. Instructions for completing the ERISA referral schedule can be found in Appendix A.

O. Account Documentation and IRS Determination Letters

O.1. Account Documentation in General

As with other types of trusts and agencies serviced by the trust department, corporate sponsored employee benefit accounts should be fully documented. At a minimum, the department should have on file properly executed copies of the:

- Governing plan document together with all subsequent amendments.

- Trust instrument or agency agreement, if separate from the plan document, together with all subsequent amendments.

  Even if the department services accounts only in an agency capacity, such as a custodian, it is still desirable that copies of the governing plan document and agency agreement be on file. Retaining such documentation enables bank personnel to assure that responsibilities are executed in accordance with plan or agreement provisions.

- Certified resolution(s) of the sponsoring firm's board of directors adopting the plan, trust agreement, and subsequent amendments to either.

- Documents evidencing the appointment of other parties authorized, in accord with plan provisions, to direct the trustee to:
  - Make benefit payments (normally, the plan administrator), and/or

  - Select trust investments (normally, an outside investment manager) [see ERISA Section 405].

- Internal Revenue Service determination letter if the:
  - Bank is acting as plan administrator, or

  - Account is invested in a CIF restricted to employee benefit accounts operating under Revenue Ruling 81-100.

O.2. IRS Letter of Determination

If requested, the IRS will review a plan and make a determination as to whether it meets the various standards to make it eligible for tax deductions. The opinion letter issued by the IRS is called a Letter of Determination. While there is no requirement imposed by ERISA or the IRS to

obtain a Letter of Determination, it is prudent for the plan sponsor to do so. Failure to obtain a letter, however, is not a violation.

Letters of Determination are usually obtained for new plans and for amendments to existing plans. Each amendment to an existing plan does not normally trigger a request for a new Letter of Determination. A number of minor changes will occur before a new Letter of Determination is required. On the other hand, if a major change occurs, the plan sponsor will often seek a new Letter from the IRS.

A sample Determination Letter appears in Appendix E. For further information, consult IRS Publication 794. Relevant information from this publication appears in Appendix E.

P. Voluntary Correction Programs

Employee Benefit Plan Voluntary Correction Programs

The Internal Revenue Service, US Department of Labor, and Pension Benefit Guaranty Corporation have adopted voluntary correction programs which permit employee benefit plan sponsors and other plan officials to correct certain categories of errors and misfilings with either no, or reduced, penalties, while preserving the plan's tax qualification.

1. **Internal Revenue Service**
   The IRS retirement plan correction program (Employee Plans Compliance Resolution System, covered under Revenue Procedure 2003-44), helps employer sponsors protect participant benefits and keep their plans within the requirements of the Internal Revenue Code. This revenue procedure combined and revised a series of previous IRS remedial programs for correcting plan qualification defects. The program covers qualified retirement plans, Section 403(b) arrangements, SEPs, and SIMPLE IRAs, for a variety of plan qualification failures and violations, including: operational failures, for failure to comply with terms of plan documents; plan document failures, in which retirement plan provisions violate IRS qualification requirements; demographic failures, in which IRS nondiscrimination requirements are not met in the plan document; and the diversion or misuse of plan assets.

   - **Self Correction Program**
     Under the Self Correction Program certain plan errors can be corrected without IRS involvement. No notification of IRS is required, no fees or penalties are assessed, and the plan and its participants retain tax benefits.

   - **Voluntary Correction Program**
     The Voluntary Correction Program may be used for plan errors which not eligible for self correction. Errors are corrected and the tax benefits of the plan are preserved for plan participants with IRS assistance.

   - **IRS Plan Audits**
     Errors corrected under either the Self Correction or Voluntary Correction programsare not treated as errors when the IRS audits these plans. For other errors found during IRS examinations, the **Audit Closing Agreement Program** permits their correction and tax benefit preservation at fees which are lower than would be incurred if the plan had not a participated in the Voluntary Correction Programs.

2. **U.S. Department of Labor**
   The Employee Benefits Security Administration has two voluntary self-correction programs for plan administrators who need help in meeting ERISA requirements: the Delinquent Filer Voluntary Compliance Program promotes, through the assessment of reduced civil penalties, plan administrator compliance with annual reporting obligations under Title I of the Employee Retirement Income Security Act of 1974; theVoluntary Fiduciary Compliance Program allows plan participants and beneficiaries and certain other persons engaging prohibited transactions under the Employee Retirement Income Security Act of 1974 to self correct the violations, and avoid potential civil actions by the DOL.

   - **Delinquent Filer Voluntary Compliance Program**
     The Delinquent Filer Voluntary Compliance Program assists plan administrators who have filed Form 5500 late, or not filed it at all, to comply with the filing requirements and pay reduced civil penalties. The IRS has agreed to provide penalty relief under the Code for delinquent Form 5500 Annual Returns/Reports filed for Title I plans where

the conditions of this program have been satisfied.

- **Voluntary Fiduciary Correction Program**
  The Voluntary Fiduciary Correction Program (PTE 2002-51 and PTE 2002-51 Amendment) affords plan sponsors and officials the opportunity to self-correct 15 specific transactions, involving delinquent participant contributions and other violations, prohibited under ERISA. The DOL also relieves these individuals from the payment of excise taxes associated with the transactions covered under the class exemption.

3. **Pension Benefit Guaranty Corporation**
PBGC provides incentives to self-correct late filings, or other errors involving missed premium deadlines and underpaid premiums.

- **Underpaid Premium Correction Program**
  Voluntarily self-corrected underpayments made before PBGC sends a notice of premium delinquency or a premium audit, reduces the monthly penalty rate by 80 percent (from 5 percent to 1 percent of the unpaid premium). Premium penalties may be waived for reasonable cause or in other appropriate circumstances.

- **Participant Notice Voluntary Correction Program**
  Missed or improperly prepared reports or notices are assessed lower penalties where the failure is quickly corrected or involves a small plan. Information penalties are waived for reasonable cause or in other appropriate circumstances. Self correction is considered a mitigating factor for plans participating in this program.

Q. Catch-up Contributions

The Economic Growth and Tax Relief Reconciliation Act of 2001 (EGTRRA) amended IRC Sections 402 and 414, creating a new category of elective retirement plan contributions, referred to as "catch-up" contributions. It also added IRC Section 414(v) which, effective for plan years beginning after December 31, 2001, permits individuals age 50 or older to make additional pre-tax salary deferrals ("catch up" contributions) to certain eligible plans: 401(k) plans, SIMPLE IRA plans, simplified employee pensions (SEPs), Section 403(b) arrangements, and Section 457 governmental plans. Eligible plans must be amended to permit catch-up contributions. Final regulations implementing "catch-up" contribution rules were issued under IRS Revenue Bulletin 2003-37 .

Catch-up contributions are elective retirement plan salary deferrals which would otherwise exceed plan imposed limitations. Catch-up contributions are also exempted from certain IRC statutory limits (IRC 401(a)(30), 401(k)(11), 402(h), 402A(c)(2), 403(b), 404(h), 408(k), 408(p), 415, and 457). Employers are not required to match catch-up contributions, and may incorporate plan language explicitly omitting catch-up contributions from existing employer-matching salary deferral programs. The IRC also does not require employers to provide for catch-up contributions in any of its plans. However, if an employer permits catch-up contributions in any one of its eligible plans, it must "universally" permit them in each of the eligible plans it sponsors. This "universality" provision ensures employers may not favor one category of employee vs. another (non-union vs. unionized, etc.). A temporary exclusion for collectively bargained plans is permitted, but only until the expiration of existing union agreements. Thereafter, all plans must be treated "universally." Although plan participants may elect to make "catch-up" contributions to a multiple number of eligible employer sponsored plans, the aggregate of their catch-up deferrals may not exceed annual statutory limits.

Under the IRC, deferrals are not considered "catch-up" contributions until the end of the plan's year. This is so because it cannot be determined until the end of a plan year whether or not the elective deferral will exceed plan limits. Further, although the catch-up limit is applied on a calendar year basis, the implementing regulations provide guidance on how the contributions may be calculated for retirement plans operating on a fiscal year basis.

Catch-up limits for all eligible plans except SIMPLE 401(k) and IRA plans:

Tax Year	Catch-up Limit*
2002	

	$1,000
2003	$2,000
2004	$3,000
2005	$4,000
2006	$5,000

Catch-up limits for SIMPLE 401(k) and IRA plans:

Tax Year	Catch-up Limit*
2002	$500
2003	$1,000
2004	$1,500
2005	$2,000
2006	$2,500

*For taxable years beginning after 2006, catch-up limits will be adjusted for inflation in increments of $500.

A. Introduction

Corporate trust and agencies are accounts where the bank serves as trustee, agent, or global custodian. Corporate trust and agency services normally concern services performed in connection with the issuance, redemption, transfer, or recordkeeping for debt or equity securities.

Trustee under a bond indenture or trustee for an issue of trust preferred securities are typically the only trust relationships administered by a corporate trust department. For example, under a bond indenture, one trustee is appointed for a given bond issue, but several agents or co-agents may provide various related services to the same issue. It is not uncommon for a single indenture to name both the trustee for the issue and the related corporate agents, such as a paying agent for the issue.

The most common corporate agency activities include stock or bond transfer agent, registrar for stock or bond issues, paying agent for bond interest or stock dividends, dividend reinvestment agent, and escrow

agent.

Unlike personal and employee benefit accounts, where the interest of the beneficiary is the primary concern, banks serving in a corporate trust capacity serve two different constituencies. On the one hand, the issue of the security covered under the indenture hires the indenture trustee and pays the trustee's fees. The indenture trustee and other agents owe the issuer of the security effective and efficient administration of the duties assigned under the indenture. On the other hand, a fundamental duty of the indenture trustee is to monitor the issuer's compliance with the terms of the indenture and to take all necessary actions to protect the interests of the bondholders. In fact, the principal reason for appointing a trustee under a bond indenture is for the protection of those purchasing the securities issued under the indenture.

B. Types of Accounts

B.1. Corporate Trustee

B.1.a. General

Departments that serve as corporate trustee assume the greatest amount of responsibility and potential risk among the various types of corporate trust and agency accounts discussed in this chapter. The responsibilities of the trustee may include some or all of the following: the issuance of bonds, the maintenance of bondholder records, transfer of recorded ownership, the payment of principal and interest, and payment of remaining principal at maturity.

The issuer could be a corporation, state, municipality, quasi-public authority, school, church, or any incorporated organization, which chooses to finance its needs through the issuance of bonds. Bonds may also be distinguished by whether they are secured or unsecured. Examples of secured bonds include mortgage bonds, secured notes and equipment trust certificates. More complex types of issues are securitized or asset-backed securities which are discussed in the section Asset-backed/Securitized Debt Issues. Unsecured bonds are called debentures. Some bond issues are subject to the Trust Indenture Act of 1939 (amended by the Trust Indenture Reform Act of 1990) and others are not. Refer to Sub-section D, Compliance with the Trust Indenture Act of 1939 for additional information on the Trust Indenture Act.

Bonds issued may be sold to the general public, a limited investor group, or a single investor such as an insurance company or governmental agency. Bonds are now typically issued in registered, as opposed to bearer, form. They come in a wide variety of other distinguishing features, such as single or serial maturities; fixed or floating rates of interest; call provisions; convertibility into other types of securities; and sinking fund provisions for payment of principal.

B.1.b. Indenture

The document creating the corporate trust is called a trust indenture, a trust agreement, an indenture, or simply an agreement. The indenture defines the:

- Purpose(s) and/or nature of the debt to be created,
- Nature and description of the bonds to be issued,
- Parameters of administration during the life of the bonds,
- Nature, method, and place of repayment of principal and interest,
- Relationship between the corporation (borrower or obligor), the bank (trustee and/or agent) and lender(s) (bondholder(s)),
- Duties of the respective parties to the indenture,
- Description of the collateral (if any),
- Events of default,
- Actions to be taken in the event of default.

Indentures tend o be of uniform construction and design, but may be tailored to include unique provisions. Associated with the indenture is the instrument

that perfects a lien on collateral, if any, securing the bonds. These instruments are called the trust mortgage, deed of trust, collateral trust, equipment trust, etc., depending on the type of collateral.

B.1.c. Duties of Trustee

The primary duty of the trustee under the indenture is to perform the duties specified by the indenture. These normally include the following:

- Arranging for the printing and issuance of the bonds,
- Maintaining required records, accounts and documentation,
- Paying principal and interest,
- Holding beneficial title to collateral (if any),
- Safeguarding and appraising collateral (if any),
- Investing idle cash (if permitted or directed under the indenture),
- Ensuring the issue is in compliance with legal requirements,
- Monitoring for events of default under the indenture during the life of the bonds,
- Protecting the interests of bondholders in the event of a default.

B.2. Stock Transfer Agent

Transfer agents usually perform three functions. First, they issue stock certificates, which constitute an increase in shares outstanding (e.g., original issues, stock dividends and splits, etc.). Second, they maintain records identifying the owners of the shares of stock, how many shares are owned, and which certificates are owned. Third, they cancel and reissue certificates to reflect changes in ownership.

In connection with the latter, certificates and accompanying documents are checked for authenticity and appropriateness; canceled; and replaced by new certificates. The transfer agent sends both the canceled certificates and the newly issued certificates to the registrar for verification. This involves only an in-house transmittal when the institution acts both as transfer agent and registrar. After registration, the newly issued certificates are sent to the registered owners or their representatives and appropriate disposition (destruction, return of canceled certificates to the issuer, or cancellation and retention in a safeguarded area) is made of the canceled certificates.

Refer also to the discussion on registered transfer agents.

B.3. Stock Registrar

A stock registrar performs the critical duty of guarding against the over- or under-issuance of a security, sometimes referred to as a record difference, out-of-proof or out-of-balance condition. In addition to checking original issues, the registrar checks each transfer made by the transfer agent: to ensure the genuineness of the certificates presented for transfer; to make certain that the old certificates have been canceled; and to ensure that the number of shares represented by the new certificates does not exceed the number of shares represented by the old (canceled) certificates. In the case of bonds, the indenture trustee normally performs this function. New York Stock Exchange rules permit one institution to act as both transfer agent and registrar for listed securities other than its own.

Much less frequently, banks may be appointed solely as the outside registrar of a stock issue, without the more typical dual appointment as transfer agent and registrar.

Refer also to the discussion on registered transfer agents.

B.4. Bond Registrar (Transfer Agent for Registered Bonds)

I n the case of bonds, the bond registrar usually performs the duties of both transfer agent and registrar. usually, the indenture trustee performs the function of bond registrar. On rare occasions, however, there may be a separate bond registrar for an issue.

At one time, corporate, government bonds, and other debt securities were issued primarily in bearer form. Unlike stock issues, which were in registered form, the issuer did not know who held the bonds. The bondholder "clipped" interest coupons attached to the bond and sent them to the trustee or paying agent as interest became due. Eventually, the bond itself matured or was called prior to maturity, and was sent to the trustee for payment.

Today, however, most bond issues are registered for both principal and interest. Under Section 149 of the Internal Revenue Code, in order to qualify for the Federal tax exemption for interest with respect to state, county, and municipal bonds, such bonds must be in registered form. A transfer agent is, therefore, needed to maintain records of ownership. Since bond issues often have a 20 or 30 year maturity, some bearer bonds, (and associated coupons) may still be encountered by examiners.

For bond issues, the entity that performs transfer agent services is termed the bond registrar. A bond registrar performs all of the functions of the stock transfer agent and the stock registrar.

While unusual, banks are sometimes appointed solely as registrar of a bond issue, without the associated bond trustee duties.

Also refer to the discussion of registered transfer agents.

B.5. Mutual Fund Transfer Agent

A mutual fund transfer agent performs the functions of both the stock *transfer agent* and stock registrar. It maintains ownership records, transfers shares, and ensures the number of shares is kept in balance. A mutual fund's transfer agent is identified in the mutual fund's prospectus.

Two characteristics of mutual fund transfer operations are very different from stock or bond transfers. Mutual funds normally do not issue certificates to evidence ownership. Instead, entries on the books of the mutual fund or its transfer agent identify the owners and record the number of shares owned. In addition, open-end mutual funds do not have a limit on the number of shares issued and outstanding. Therefore, the "registrar function" faces a situation where the total number of shares outstanding is constantly changing (increasing or decreasing, depending upon the volume of purchases or redemptions).

Despite the general statements in the above paragraph, there are exceptions to both. Some mutual funds allow the issuance of share certificates on special request, such as when a customer wants to pledge fund shares as collateral for a loan. While most mutual funds are open-end, with no set number of shares issued and outstanding, "closed-end" mutual funds do have such limits. There are, however, fewer closed-end mutual funds than open-end funds.

Every mutual fund transfer agent must be a registered transfer agent. In addition, operations of mutual funds are subject to the Investment Company Act of 1940.

B.6. Registered Transfer Agents

Some institutions transfer securities, which are either listed on a national stock exchange or, more commonly, are registered under Federal securities laws. Section 17A of the Securities and Exchange Act of 1934 and Part 341 of the FDIC Rules and Regulations, require FDIC-supervised institutions that transfer these types of securities (including securities of a parent company or an affiliate) to register with the Corporation as a transfer agent. State nonmember banks serving solely as transfer agent for their own registered stock must also register as a transfer agent, whether or not the bank exercises trust powers and regardless of which department performs the transfer function. Registration as a transfer agent is also required when the institution is merely named as transfer agent for these securities, but has contracted with a third-party organization to actually perform all of the transfer processing and recordkeeping, a situation referred to as a private label arrangement.

As part of the registration process, each institution must obtain a FINS (Financial Industry Numbering System) Number from the Depository Trust Company in New York City. The FINS Number is a standardized numbering system used to identify each institutional party (banks, broker-dealers, transfer agents, etc.) to a securities transaction.

As of November 30, 2003, 92 FDIC-supervised institutions were registered as transfer agents. The FDIC utilizes a separate examination report for registered transfer agents and the Registered Transfer Agent Examination Report of Examination is completed for all such banks.

Examiners should note that, if a bank is a registered transfer agent, all bond and stock issues (regardless of which department of the bank transfers the securities) must b processed according to the SEC's operational regulations for registered transfer agents. This includes municipal and industrial revenue/development bond issues (which are not subject to securities registration and, were it not for the bank's registration as a transfer agent, would not otherwise be subject to securities transfer regulations).

Stocks must be registered under Federal securities laws, if they meet one of the following two criteria:

- As of January 1, 1998, equity securities must be registered under Section 12(g) of the Securities and Exchange Act of 1934 and SEC regulation 17 C.F.R. Section 240.12g when an issuer has (i) $10 million or more in total assets and (ii) more than 500 shareholders. Refer to 12 C.F.R. Part 335 of the FDIC Rules and Regulations.
- Prior to January 1, 1998, the applicable exemption threshold governing the registration of equity securities is (i) less than $1 million in total assets and (ii) 500 or fewer shareholders.

Less frequently, examiners will encounter corporate bond issues listed on a national securities exchange or mutual funds where the bank has been named a transfer agent. These also require registration as a transfer agent.

B.7. Fiscal or Paying Agent

As the fiscal agent for a corporation or a municipality, an institution makes interest payments on coupon bonds (often referred to as bearer bonds) as the coupons are presented; redeems maturing bonds; or prepares and mails interest checks for registered bonds, or dividend checks for stock issues. A fiscal agent may also be called a dividend disbursing agent, coupon and bond paying agent, or some similar name indicative of its duties.

B.8. Dividend Reinvestment

Some corporations offer their stockholders the option of participating in dividend reinvestment programs, wherein dividends are automatically applied to the purchase of additional shares of the corporation's stock, either on the open market or directly from the corporation. On the dividend payment date, dividend payments are transferred by the dividend disbursing agent to the dividend reinvestment agent (often the same institution) who purchases shares of the corporation's stock. It may also be possible for stockholders to purchase additional shares through their dividend reinvestment agent. The dividend reinvestment agent usually holds the shares purchased until the participating stockholder requests physical delivery.

B.9. Other Corporate Agencies

An institution may also serve s an escrow agent or depository in connection with: defaults, mergers, consolidations, reorganizations, initial public offerings, tender offers, or other transactions requiring that securities or funds be deposited with a responsible third-party. The depository may also receive and record the claims of creditors.

Banks are often appointed as:

- Conversion agent (where debt securities are "converted" into equity securities),
- Exchange agent (involving exchange of one class of securities for another, or exchange of bearer bonds for registered bonds),
- Subscription agent (usually involving an invitation to equity security holders to subscribe to a new issuance of additional debt or equity), and
- Authenticating agent (commonly used when the indenture trustee is not located in a major money market city -- the bond registrar is also able to exercise limited authority to authenticate bonds on exchange or transfer).

Lesser-known services are offered to corporations in connection with the voluntary or involuntary liquidation of business enterprises. A business concern, which finds itself in

financial difficulties but is not insolvent, may turn over its assets to a trust institution as assignee for the benefit of creditors. A business in financial difficulties, which can not reschedule its payments owed to creditors, may have a court appointed receiver operate the business until such time as the assets can be liquidated or it becomes evident that bankruptcy can be averted. The duty of a trustee in bankruptcy is to realize as much cash as possible from the sale of the assets of a bankrupt business and, under the supervision of the court, to apply the amount realized to the claims of creditors. Few institutions accept trusteeships in bankruptcy because of the undesirable and unprofitable nature of this type of business.

B.10. Asset-backed/Securitized Debt Issues

In recent years, it has become more common for debt securities to be secured by various types of self-liquidating collateral. These asset-backed or securitized debt issues may be secured by a variety of assets, including commercial loans, second mortgage loans, automobile loans, and credit card receivables. The trustee must ensure that the collateral, a pool of loans for example, is properly serviced, payments are properly allocated to principal and interest, and delinquencies are identified and resolved. Accepting such responsibilities is a major undertaking involving considerable potential risk. The pre-acceptance review of such appointments is crucial: to identify the quality of the loans involved; to ensure the bank's ability to monitor the loans and servicer; to evaluate the complexity of the deal structure; and, if necessary, to arrange for back-up services.

Servicing of the loan pool cannot be delayed. There have been instances where major problems have arisen when the loan servicer went out of business or was otherwise unable to properly service the underlying loans. In such cases, the bank trustee must promptly ensure continued servicing, which may involve considerable unanticipated, and perhaps unreimbursed, costs.

The trustee is responsible for ensuring that adequate backup arrangements exist to handle such a situation if it should arise. The trustee itself can arrange to be the backup servicer, or it can use a third party servicer. Considerations for selecting a backup data processing and/or loan servicer are similar to those used to select other third party data processing servicers.

Either a "hot site" or a "cold site" can serve as backup. A "hot site" is dedicated exclusively to servicing the collateral; no other work is performed. The advantage is instant availability. Maintaining such a site, however, which may never be used, is extremely expensive. A "cold site" performs other work (such as the bank's own data processing center). Costs are much lower, but a cold site's capacity to service additional loans must be assured.

In each case, the trustee must ensure that the backup servicer:

- Has hardware and software compatible with that used by the original servicer; and
- Has adequate capacity to continue with its own work as well as service the loan portfolio.

As in any data processing servicing arrangement, a written contract should be in place. Further guidance on considerations in selecting a data processing servicer is contained in the Serviced Institution Control Guidelines chapter of the *FFIEC IT Examination Handbook.*

B.11. Municipal Trustee Issues

B.11.a. Secondary Market Disclosures for Municipal Issues

In 1995, the SEC Rule 15c2-12 [17 CFR 240.15c2-12] significantly changed the requirements governing the public disclosure and availability of financial information related to issuers of municipal debt securities. The rule was designed to prevent fraudulent, deceptive or manipulative acts or practices in connection with the underwriting of municipal securities by brokers, municipal securities dealers, and "participating underwriters". With some limited exemptions, it applies to the underwriting of municipal securities with an aggregate principal amount of $1,000,000 or more. The disclosure and financial requirements of "participating underwriters" are contained in Section 15c-2-12(b). A "participating underwriter" is prohibited from purchasing or

selling municipal securities in connection with an offering, unless there is a written agreement or contract for the benefit of holders of these securities to provide directly, or "indirectly through an indenture trustee or a designated agent" required information. [Section 15c2-12(b)(5)]. Therefore, as indenture trustee for a municipal issue, a bank may be responsible for providing the required financial information, if the indenture trustee has entered into a contract to provide the required information for an issuer or underwriter.

The required information that must be provided to each nationally recognized municipal securities information repository (NRMSIR), and to the appropriate state information depository, if an, includes the following:

(1) annual financial information for each obligated person for whom this information is presented in the final official statement issued in conjunction with the underwriting of the issue.

(2) notice of any of the following events with respect to securities in the offering, if material:

- principal and interest delinquencies
- non-payment related defaults
- unscheduled draws on debt service reserves reflecting financial difficulties
- substitution of credit or liquidity providers, or their failure to perform
- adverse tax opinions or events affecting the tax-exempt status of the security
- modifications of the rights of security holders
- bond calls
- defeasances
- release, substitution, or sale of property securing repayment of the securities
- rating changes

(3) notice of the failure of any person required to provide annual financial information by the date specified in the written agreement or contract in a timely manner

Notification to the Municipal Securities Rulemaking Board may be substituted for the requirements to notify the NRMSIR's for items (2) and (3) above.

In addition, SEC Rule 15c2-12(b)(5)(i) requires the written contract for the benefit of holders of securities to indicate those to whom annual financial information and notices of material events will be provided. The written contract also must cover the following: (1) the type of financial information and operating data to be provided annually; (2) the accounting principles used to complete the financial statements, including any requirement for audited statements; (3) the date on which annual financial information will be provided and to whom.

The NRMSIR's, are private information vendors. As of June 21, 2004, there were four NRMSIR's and three state information depositories. The NRMSIR's were the following: Bloomberg

Municipal Repositories, DPC Data, Inc., FT Interactive Data and Standard & Poor's Securities Evaluations, Inc.. The State Information Depositories (SID's) have been established for Texas, Michigan, and Ohio, are In addition, the Municipal Securities Rule Board (MSRB) also operates the Municipal Securities Information Library and Continuing Disclosure Information systems, which provide similar information.

For those concerned with disclosure obligations for municipal securities, the "preliminary note" to SEC Rule 15-c2-12 refers the reader to the following: Securities Act Release No. 7049 and Securities Exchange Act Release No. 33741, FR-42 (March 9, 1994). SEC Rule 15-c2-12 replaces the voluntary industry standards promulgated by the American Bankers Association's Corporate Trust Committee, which were known as Disclosure Guidelines for Corporate Trustees.

B.11.b. Defeasement Activities With Municipal Bonds

A defeasement is a type of municipal debt financing which enables the issuing government entity to reduce the amount of interest it pays on outstanding bonds. For example, an entity that has outstanding bonds carrying high interest rates issues new debt at a lower (current) rate. The proceeds are used to buy State and Local Government Series U.S. Treasury securities (SLGS), which pay enough interest to pay the interest on the old outstanding bonds. SLGS are offered for sale to issuers of state and local government tax-exempt debt to assist in complying with yield restrictions or arbitrage rebate provisions of the Internal Revenue Code. The SLGS program was established in 1972 and approximately eight percent of municipal securities are subject to advance refunding, according to the July 1, 2004, "Report on Transactions in Municipal Securities" by the SEC. The securities can be sold, but typically mature when the old bonds reach their call date, providing a steady source of funds to retire the old debt. This process allows municipalities to pay less on a current basis. SLGS cannot be transferred by sale, exchange, assignment, pledge or otherwise.

Defeasement financings are *also referred to as arbitrage bonds*. The use of arbitrage for new bond issues was limited by the Tax Reform Act of 1986. Under the Act, annual calculations must be made of all earnings to report income in excess of allowable yields. Earnings of impermissible arbitrage must be placed in a rebate fund for payment to the IRS every five years. Failure to comply can cause an otherwise tax-exempt municipal bond issue to become taxable retroactively to the date of issuance

Although compliance with the requirements for defeasement financing under the Tax Reform Act of 1986 is generally the responsibility of the issuer, the trustee is often responsible for establishing and maintaining the rebate fund. While other parties should make the rebate calculations, the trustee is responsible for ensuring that the proper actions are taken to protect the interests of the bondholders.

B.12. Global Custody

Global custody refers to the cross-border safeguarding, settlement, servicing, and reporting of investor securities on a worldwide basis. This line of business has experienced significant growth over the last 20 years as a result of the continuing expansion of the international flow of capital and investment. The customers of global custody services are holders of large

pools of investment assets, mainly securities. These customers include institutional investors, insurance companies, public entities, mutual funds, banks and trust organizations.

The main services provided by global custodians are:

- The safekeeping of cash and securities
- The settlement of securities trades
- The servicing of securities held in custody

Accurate and timely reconciliation of customer cash and securities positions is essential to maintaining control over customer assets. Effective reconciliation procedures and timely follow-up of open items are essential for the proper management of safekeeping services.

Securities trades are normally processed through a broker, who in turn, notifies the global custodian of the details of a trade. The settlement process is more complicated than the normal process in the United States due to international variances.

Servicing of securities in global custody involves the following functions: (1) collection of income; (2) monitoring and processing corporate actions; (3) proxy voting; (4) processing tax reclamations; (5) foreign currency exchange; (6) cash management; and (7) international securities lending. The first three functions are similar to those performed in domestic custody accounts. The last four functions involve other risks due to the additional aspects of international income tax collections, which may vary, and the risks associated with currency fluctuations.

B.12.a. Subcustodians

Subcustodians often are used by the global custodian to provide local securities safekeeping services, to act as local settlement agents and to provide related services in local overseas markets. Subcustodians provide the local operational, regulatory and legal expertise applicable to their particular region. Due to the key role of subcustodians in the global custody business, effective management of the subcustodian network is essential for successful management of global custody.

The selection and oversight of subcustodians is crucial to a well-managed global custody operation. Before selecting a subcustodian, the global custodian should perform a due diligence review of the credit-worthiness and operational and informational systems capabilities of the subcustodians available in a given regional market. In addition to a rigorous initial screening of subcustodians, the global custodian should monitor the performance and credit quality of each of its subcustodians on an ongoing basis including periodic on-site visits to the subcustodian. The use of technology and telecommunications is also a very important element of an effective subcustodian network. Building a technological bridge between the clients, their global custodian, and the subcustodian network is a key component of a prudently managed global custody program.

B.13. Trust Preferred Securities - Trustees

Trust preferred securities represent preferred stock issued by a trust, usually a Delaware statutory trust, created for the sole purpose of investing the proceeds from the sale of preferred stock and common stock in a subordinated bond or debenture. The trust created is a subsidiary that

invests in the subordinated debt of the trust's parent company. The parent will purchase the common stock issued by the trust, usually representing at least 3% of the trust. The only asset of the trust is the subordinated bond or debenture from the parent and the only income received is the interest payments received on the subordinated debt, which is used to pay dividends on the preferred stock issued by the trust.

Under the Trust Indenture Act of 1939, the sale of subordinated debt in conjunction with the issuance of preferred securities requires the appointment of an indenture trustee. The duties of the indenture trustee for the subordinated debt do not differ from the duties of other indenture trustees. The trust formed to issue the preferred and common stock usually requires a Delaware trustee, in the case of a Delaware trust, and the appointment of a property trustee. The property trustee is the holder of record, for the benefit of the holders of the preferred securities, of the subordinated debt. In the event of default, the property trustee, whose duties are essentially those of an indenture trustee, acts to protect the interests of the holders of the preferred stock. A property trustee is required to exercise the care, skill of a prudent person. In addition, the trust agreement provides that the property trustee is a trustee for the purposes of the Trust Indenture Act.

The parent normally will issue a guarantee for the benefit of those holding the preferred securities. There will be a preferred security guarantee trustee, usually the same as the indenture trustee, to enforce the guarantee if necessary. The parent's guarantee, however, is unsecured and subordinated to other creditors with respect to existing and future senior debt. In contrast to many bond indentures that contain restrictions on the issuance of senior debt or requirements to maintain minimum liquidity levels, the indenture governing the issuance of preferred stock and the related trust agreement contain no or very few restrictions on the parent company's financial activities.

C. Account Administration and Controls

The administration of corporate trusteeships and agencies generally requires fewer discretionary decisions and actions than do personal or employee benefit trust accounts. However, they do require a higher level of documentation, automated services, and an in-depth knowledge of securities, security-related laws, industry practices, etc. Duties and actions are specified in the indenture and the corporate trustee/agent is limited to the provisions of the indenture. It assumes or performs additional duties and functions at its own risk.

As in all areas of fiduciary administration, the bank should have adequate written policies and procedures governing account acceptance conflicts of interest, internal operations, auditing, and profitability.

C.1. Pre-Acceptance Reviews

One of the most important aspects of good corporate trust administration occurs before accounts are accepted. This is the decision-making process of whether or not to accept a corporate trusteeship or agency account. Many financings are driven by timing considerations, often the result of perceived market windows or regulatory deadlines. Nonetheless, the due diligence review must not be neglected. Factors to be considered include:

- the financial strength of the obligor, both currently and anticipated over the life of the bond issue;
- the size and character of the issue;
- the integrity of the issuer;
- the existence of, and potential for, conflicts of interest;
- the environmental liability potential;
- the capacity and capability of the corporate trust department to perform its duties and fulfill all responsibilities based on a thorough analysis of the requirements of the indenture;
- the probability of profitable administration to the department. In regard to profitability,

the "cash float" of principal, interest, or dividends held as bank deposits was often an integral consideration in past fee structures. With greater emphasis on cash management, this is less of a factor today; and

- operational considerations, such as the capability of the information systems to properly handle the administrative requirements of an issue.

C.2. Appointment Documentation

Complete documentation for each trust indenture is of utmost importance. In this regard, a listing of documentation items is included on the Corporate Trust Line Sheet, included in Appendix B - Examination Aids. In general, banks should not accept accounts without obtaining the necessary appointment documentation.

Some of the same types of documentation required for a commercial loan should be maintained in conjunction with the administration of a corporate trust, for example, a corporate resolution authorizing the debt, in this case a security. In corporate trust appointments, the absence of required documentation may seem inconsequential, but could have a major impact at a later date.

Appointment documentation is governed by the type of appointment being accepted (bond trustee, transfer agent, paying agent, etc.), the characteristics of the securities issue (bonds, stocks, convertible securities, etc.), and the issuing organization (corporations, local government agency, state government agency, etc). Some issuers are from regulated industries, such as banking, broadcasting, utilities, or communications, where regulators may impose other requirements.

C.3. Conflicts of Interest

The trustee must also exercise prudent judgment and avoid potential conflicts of interest that might prevent it from acting under the duty of loyalty. For issues subject to the Trust Indenture Act of 1939, prohibited conflicts must be identified in the indenture. Section 310(b) of the Trust Indenture Act (15 U.S.C. Section 77jjj(b)) establishes procedures for the disqualification of an indenture trustee in instances involving conflicts of interest. Section 311 of the Act (15 U.S.C. Section 77kkk) addresses situations in which the indenture trustee is a creditor of the issuer of the securities. For securities not subject to the Trust Indenture Act, the existence of conflicts of interest is an equally important consideration. Indenture trustees have been held liable for losses suffered by bondholders in cases where it was determined that the indenture trustee acted in a way that placed its own interest ahead of that of the bondholders.

A bank should avoid accepting an appointment as indenture trustee for a securities issue of a corporation with which it also has a creditor relationship. In such cases, when an obligor defaults under an indenture where a bank is both a creditor and the indenture trustee, doubts may arise concerning whether the bank placed its own interests (by attempting to improve the bank's credit position or chances of repayment) ahead of its responsibility to protect the interests of all bondholders. Similarly, when a bank acts as trustee for more than one debt issue (or more than one debt tranche) of an issuer, questions about the indenture trustee's impartiality may also arise.

Conflicts of interest are permissible for issues subject to the Trust Indenture Act of 1939, provided the issue is not in default. Once default occurs, however, unless a "curing" of the default occurs within the 90 day period set in Section 310(b) of the Trust Indenture Act, the trustee is required to resign. Refer to subsection D - Compliance with the Trust Indenture Act of 1939 for a more detailed discussion of conflicts of interest.

Generally, conflicts of interest place the bank in a position of increased risk, especially when a default occurs. Therefore, potential and actual conflicts of interest should be identified and resolved prior to acceptance, and monitored for the length of time the security remains outstanding. Some banks make prior arrangements to resign in favor of another trustee in the event of default. Often, the successor trustee requires indemnification for the original trustee's acts.

C.4. Environmental Liability

Trust departments that serve as trustee for bond issues secured by real estate should have policies addressing the environmental risks related to real estate. These policies should

cover the types of environmental audits and other procedures to be followed in order to ascertain whether any proposed real estate collateral for corporate trust issues is contaminated. Prior to beginning the foreclosure process on real estate, a determination should be made, through an environmental audit or otherwise, that the property subject to foreclosure is free of environmental contamination. Failure to take reasonable precautions before taking title to potentially contaminated real estate could subject the trustee to considerable liability. Refer to subsection F.7.b in Section 3, Environmental Liability, for more information about environmental risk.

C.5. Administration and Controls

C.5.a. General

The bank's corporate trust department is frequently operated separately from the personal trust department, often maintaining separate books and records. The corporate trust function may be located in a different area than the rest of the trust department. It is not uncommon for personal and employee benefit accounts to use one data processing system, while corporate trust activities use another. Examiners should review the organization, including recordkeeping systems, of corporate trust services during the pre-examination planning process.

C.5.b. Operational Issues

While appropriate processes, procedures and controls differ somewhat between bond trusteeships and corporate agency appointments, the following operational considerations apply to most appointments

Tickler Systems

Corporate trust administration, in the absence of default, involves various administrative and operational duties that are periodic and time sensitive, such as monitoring compliance with bond covenants, paying interest and principal, and administering funds and collateral. Ticklers, whether manual or automated, should be set up for all periodic events to ensure that all administrative and compliance responsibilities are completed within required timeframes. The tickler system should identify items that are past due, such as the failure to pay interest and principle, the failure to obtain annual certificates of compliance, failure to obtain insurance certificates, etc. Such events may, depending upon the terms of the indenture, call for acceleration of the payments due, and should be closely by senior management. Senior management is responsible for determining how the trustee should proceed in instances of delinquent compliance with bond covenants.

Unissued and Cancelled Securities Certificates

Appropriate inventory controls should be placed on supplies of blank certificates. The supply of blank certificates should be limited to the quantity needed, to be issued as part of the original distribution of the securities or as replacement certificates for loss, missing or stolen securities. Access to the certificates should be limited to appropriate personnel. A listing of the certificate numbers should be kept and periodically reconciled to the certificates held in inventory. Any breaks in inventory should be reported and investigated.

The trustee should also have appropriate controls over cancelled securities certificates. The fraudulent use of cancelled securities certificates presents significant problems and potential cost to investors, creditors and broker-dealers. Securities certificates that have not been properly cancelled can be used to defraud the public and financial institutions. Stolen certificates that were not properly cancelled have been subsequently sold to investors and used as collateral for loans. Pursuant to SEC Rule 17AD-19, written procedures for the cancellation, storage, transportation, destruction, or other disposition of certificates should provide for the following:

- Controlling access to any cancelled certificate facility
- Physically marking certificates with the word "cancelled" in a clear and

conspicuous manner, unless the transfer agent's procedures require the certificate to be destroyed within 3 business days of cancellation. Tiny perforations that do not **deface** the certificates are not consistent with the rule.

- Maintaining a secure storage area for cancelled certificates
- Maintaining a retrievable database of all of its cancelled, destroyed, or otherwise disposed of certificates. The information required to be maintained includes the CUSIP number, certificate number, denomination, registration, issue date, and cancellation date.
- Requiring that the physical transportation of cancelled certificates be conducted in a secure manner and that a record of the certificate transported be maintained. When cancelled certificates are transported, the trustee should receive notice that the certificates were delivered. In the case of non-delivery, the trustee should investigate the circumstances regarding the non-delivery. If the non-delivery is not resolved, the certificates transported should be reported to the Securities Information Center (SIC) as lost, missing, or stolen securities, as required by SEC Rule 17f-1, which is applicable to all banks (not just trust departments) that accept or handle certificates.
- Requiring that authorized personnel of the transfer agent, supervise, witness and document the destruction of certificates.

When performing the bond registrar function, the trustee, or outside registrar if one has been appointed, should ensure that proper controls are in place to prevent physical under- or over-issuances of securities. A trustee, or outside registrar, responsible for a physical over-issuance of securities, may be required to buy-in the excess securities issued. If the bank is a registered transfer agent, the registrar function must comply with the SEC operational requirements of 17 C.F.R. Section 240.17Ad.

Administration of Funds

Most corporate rust appointments, whether as trustee under a bond indenture or under a corporate agency agreement, involve the disbursement of funds for principal, interest, or dividends. In addition, the corporate trustee or agent may have to administering various related funds, such as sinking and reserve funds. Banks should have processes and procedures for independently validating the accuracy of funds held for interest, principal and other disbursements. Procedures should provide for the validation of principal, interest and dividend payments for outstanding, as well as called or matured issues. In large departments, such validation normally would be accomplished by separating the administrative function from the operational function. The administrative review should act as a check on operations, by verifying the accounting records relating to an issue. In smaller departments the audit function can validate the accounting records relating to corporate trust appointments. Out-of-balance issues should be identified, reported to management, and receive prompt attention until resolved.

For all issues, records should accurately indicate the amount of principal, interest and dividend payments that are due and have not been paid. Funds held for the payment of interest or dividends (payable on different coupon or dividend dates) should be segregated Payments may be segregated by establishing separate control accounts for each payment, increases control over funds held for distribution and facilitates the reconciliation and escheatment of unclaimed funds. The maintenance of separate payment accounts prevents for interest and dividends also prevents payment errors.

Reconcilements

Examiners should review the trust department's reconciliation procedures. Disbursement accounts should be reconciled after each payment date. The standard bond printout, listing the current principal outstanding, outstanding bonds that are due but not presented, and the amount of cash on hand held for mature but not presented bonds, should be periodically reconciled to the departments operational records. Principal outstanding can be validated by

comparing the department's automated records with the issue's legal documents. The trustee's records can also be compared to the obligor's records. The obligor of an issue also tracks the principal amount outstanding and few obligors will transfer funds to the trustee in excess of what the issuer owes for interest or principal.

Escheatment

Controls over returned mail should ensure that returned interest, dividend and principal payments are properly accounted for and protected from theft, misuse or misapplication. Unless allowed by state law, issuers are not entitled to a return of unclaimed interest and dividend payments. Instead, unclaimed funds are subject to state escheat and unclaimed property laws. Without appropriate processes and procedures to govern the administration and disbursement of funds, corporate trustees and agents face the risk of violating state escheat and unclaimed property laws. Without proper accounting controls, escheatable funds can not be identified and may be misused to cover unrelated operational losses or reported as miscellaneous income. Refer to subsection E2.b - Escheatment Litigation for a discussion of cases involving the failure to escheat funds to the proper authorities.

C.5.c. Bond Trusteeships

When an institution is appointed bond trustee, it normally also serves as bond registrar (transfer agent) and paying agent. Refer to the material under those captions, as well as to material under the Corporate Agencies caption that follows this material.

Proper administration of the underlying collateral is vital, including the identification and control of environmental risk where real property is concerned. Extreme care must be taken by the trustee regarding the timing of collateral foreclosure so that the interests of all parties to the indenture are fairly served. A trustee's failure to appropriately protect the interests of bondholders before, and subsequent, to default, can result in liability and loss to the trustee. Proper maintenance of the collateral, including periodic verification or continuance of Uniform Commercial Code (UCC) filings, is required. The trustee should ensure that the initial filings were in the appropriate jurisdiction and should verify that a continuance is filed, if under UCC Article 9. Should the trustee prematurely foreclose on collateral, the obligor may incur liability. If foreclosure is inordinately delayed, bondholder interests may suffer severe loss of value.

Many bond trusteeships involve the maintenance of separate funds, used for sinking funds, construction, building maintenance, etc. The assets of these funds are invested according to the provisions of the bond indenture. The bank trustee usually has little or no discretion in such investments. Proper separation of the various funds, investment of their assets, and administration of these funds are essential.

The trustee must not only provide reports and recordkeeping for the issuer, but also must protect the interests of the bondholders. The reporting of distributions, and interest and dividend payments, to both tax authorities and security holders is also required of the trustee. These responsibilities are important since the trustee can be held liable if the bonds default and subsequent loss is attributable to the trustee's negligence. The acts of omission as well as commission by the trustee are critical in the event of default.

Many bond issues are complex and impose numerous duties on the indenture trustee. For instance, credit enhancements such as letters of credit and municipal bond insurance may have their own requirements which the trustee must monitor. The risks of managing such issues must be adequately addressed by the bank and reviewed by the examiner. For example, letters of credit may be issued for a 10-year period covering a bond with a 30-year maturity. The indenture may provide for mandatory early redemption, if no

letter of credit covers the issue, or if the creditworthiness of the letter of credit issuer drops below a certain quality. The trustee must monitor the status of the letter of credit and its issuer to ensure compliance with the indenture.

In recent years, bond issues have become more complex. Moreover, interest rates, for instance, may be indexed to other indices. Derivative securities have also become common. These increasingly complex securities present new types of risks to bond trustees, who must know their responsibilities and have adequate policies and procedures in place to manage the risks.

C.5.d. Default Administration

In the case of a default, the indenture trustee is responsible for protecting the interests of the bondholders. There are two types of default: technical and substantive.

Technical default occurs when the issuer does not comply with specific covenants in the agreement. However, the failure to comply, in and of itself, does not cause nonperformance. Examples of technical default include failure to: provide periodic financial statements, provide audited financial statements, demonstrate compliance with specific provisions of the indenture, etc. However, the manner in which the indenture trustee responds is important. Unlike many large corporate issuers that have sophisticated compliance systems to ensure that bond covenant requirements are satisfied, smaller, less sophisticated issues may often fall into technical default. In such cases the trustee must act in a timely manner to bring the issuer back into compliance wit the bond covenants. The trustee should promptly inform the issuer of the noncompliance and give the issuer a deadline for curing the technical default, for example 30 to 90 days, or more if circumstances make a longer deadline reasonable. In the event that the issuer fails to cure the technical default by the deadline given, the trustee should notify the issuer that a default will be declared if the issuer does not cure the technical default by a certain date, for example within 30 days. If the issuer still has not cured the technical default by the given deadline, the trustee should declare a default and consult the bondholders to determine whether to waive the default or accelerate the payment of principal. Trustees that fail to act in an appropriate and timely manner when technical defaults occur risk being held liable for inaction or negligence, in the event of a subsequent substantive default

In contrast to technical defaults, substantive events of default include the failure to make required interest, principal or sinking fund payments; the bankruptcy or insolvency of the obligor; or a cross default on other obligations, such as loans or other bonds. The trustee should take timely and appropriate actions to ensure that bondholders realize the maximum amount of repayment of principal and interest due. Failure on the part of the trustee to act on the bondholder's behalf, could result in bondholder claims that the trustee, through negligence, caused monetary losses and seek reimbursement of those losses.

In administering defaulted bonds, the trustee should employ legal counsel and request bondholder involvement. Bondholders should be promptly informed of substantive default events. The trustee should communicate with any bondholder committee nominated by all the bondholders and seek direction from the that committee. Within reason, when principal is at risk, trustees should defer to the bondholders of the defaulted issue. Any modification in the bond indenture and other governing documents should not be made without the consent of bondholders. A decision to waive the default should be made by the bondholders.

The trustee must act quickly to secure any collateral, if the defaulted issue is secured. Securing the collateral, however, might entail complications if the collateral is a business or some other facility requiring professional management or contaminated real estate. The trustee is not required to

seek all remedies or pay out of its own funds the expenses related to those remedies. In most cases, the trustee should obtain an indemnification agreement from the bondholders before pursuing certain remedies, along with a commitment that it will be reimbursed for expenses incurred.

C.5.e. Corporate Agencies

The administration of corporate agencies does not involve discretionary actions, but does require accurate recordkeeping, prompt posting of accounting records, timely reporting, and a staff thoroughly trained in related laws, regulations, and standard industry practices. The performance of agencies requires technical expertise, open communication between interested parties, and an efficient operating system. As in all other aspects of fiduciary operations, the corporate agency function should be fully covered by written policies approved by the trust committee and board of directors.

Unlike the long-term relationships of bond trusteeships, corporate agency accounts are often moved to another institution: if the bank does not perform to the expectations of the securities issuer, if the bank's performance results in investor complaints to the issuer, or if the bank does not offer the full range of services expected by the issuer. The importance of pre-acceptance reviews is just as valid for corporate agencies as it is for bond trusteeships.

When the bank is serving as a paying agent, the obligor deposits the necessary funds with the bank, which prepares and issues checks in payment of the interest, dividends or bonds. When bonds are fully registered, an interest check is sent to the holder of record. In the case of coupon bonds, the coupons must be presented for payment. Coupons are received in several ways, but normally flow through the banking system and the related clearinghouse process.

Many stock transfer appointments also involve the administration of dividend reinvestment plans and/or stock purchase plans. The proper administration of the funds received, accurate recordkeeping, the prompt execution of orders, and the issuance of accurate investor statements are all important operational imperatives. Section 344.6(f) of the FDIC Rules and Regulations requires that periodic plans (such as stock purchase plans or dividend reinvestment plans) provide the customer not less than once every three months a written statement showing: (1) the funds and securities in the custody or possession of the bank, (2) all service charges and commissions paid by the customer in connection with a transaction, and (3) all other debits and credits of the customer's account involved in the transaction. If the customer requests it, the bank must provide the information listed in Section 344.5 of the FDIC's regulations, except in those cases where the customer does not remunerate the broker/dealer.

As with bond trusteeships, the bank must not only provide reports to the obligor, but also must provide investors with periodic statements and provide tax authorities and security holders with reports of interest and dividend payments.

D. Compliance with the Trust Indenture Act of 1939

D.1. General

Certain bond issues, and their administration, must comply with the Trust Indenture Act of 1939 (TIA) [15 USC 77aaa - bbbb], as amended. Only bonds issued by corporations are potentially subject to the TIA; municipal bond issues (including industrial development and industrial revenue issues) are not covered. Bonds issued by banks are exempt from the TIA. All Trust Preferred Securities are subject to the TIA.

The TIA requires the use of an independent trustee in connection with the public offering of debt securities. The TIA generally provides that debt securities may be issued only pursuant to a trust indenture governing the responsibility and liability of the trustee.

The Trust Indenture Reform Act of 1990 [PL 101-550 Title IV, 104 Stat. 2721] simplified the information required in an indenture. It also eliminated the automatic disqualification of banks as indenture trustee when the bank has director interlocks with the issuer, or has served as underwriter for the issuer. The 1990 law requires the trustee to resign in circumstances when an issuer defaults and the trustee is a lender to the issuer.

The full text of the Trust Indenture Act and implementing SEC regulations appear in Appendix F of this Manual. Some regulatory filings must be submitted electronically. Refer to subsection K.3. Electronic Submission of Forms and Notices, located in Section 3.

D.2. Applicability

Exemptions for various types of securities are contained in Section 304. In addition, certain SEC rules issued provide further guidance concerning the exemptions in Section 304. Two important exemptions are:

- non-indenture securities totaling less than $5,000,000, when issued within a consecutive twelve-month period (TIA Section 304 (a)(8) and 17 CFR 260.4a-1 of SEC Rules)
- securities that have been or will be issued under an indenture which limits the aggregate principal outstanding at any one time to $10,000,000; the exemption is limited to securities issued within a 36-month period by the same issuer (TIA Section 304 (a)(9) and 17 CFR 260.4a-3 of SEC Rules)

The exemptions described above are *aggregate* exemptions. For example, an issue of $10 million or less would have to be qualified with the SEC if, under the indenture, additional bonds aggregating more than $10 million may be issued for public distribution. TIA Sections 304(a) through (e), as well as the SEC Rules noted above, may be found in Appendix F.

D.3. Compliance

The TIA imposes stringent duties on the issuer and the trustee of indenture securities. The requirements for registration and exemption under the Act are provided by Section 305, as well as implementing regulations.

The TIA generally requires that the indenture include certain provisions. For example, the issue must be administered according to its indenture. Specific provisions regarding conflicts of interest are detailed in Section 310. An annual report to bondholder is required by Section 313. Actions required in the event of default are covered by Section 315.

Other important areas covered in the TIA include: (1) the appointment of the bond trustee, (2) conflicts of interest, (3) the administration of the issue, and (4) actions in the event of default. These are briefly summarized below.

D.3.a. Trustee Appointment Requirements

- There must be one or more trustees, at least one of whom shall be a corporation appropriately organized and subject to Federal or State supervision or examination. [§ 310(a)(1)]
- The trustee must have at all times a combined capital and surplus of not less than $150,000. [§ 310(a)(2)]

D.3.b. Conflicts of Interest

- The indenture must provide that, in the case of a event of default, if a conflicts of interest exists, the trustee must eliminate the conflict of interest within 90 days or resign. If the trustee fails to comply, it must (within 10 days after the expiration of the 90-day period) transmit notice of such failure to the bondholders. [§ 310(b)(i) and (ii)]
- Section 310(b) specifies in detail prohibited relationships between the trustee and either an obligor or an underwriter, if:
    1. it acts as trustee under more than one *indenture* (not issue) of the same obligor (with some exceptions) [§ 310(b)(1)];
    2. it, or any of its directors, or executive officers, is:

- an underwriter for the obligor with respect to the indenture securities [§ 310(b)(2)];
- a director, officer, partner, employee, appointee, or representative of the obligor, or an underwriter for the obligor with respect to the indenture securities (with exceptions) [§ 310(b)(4)];

3. it directly or indirectly controls, or is directly or indirectly controlled by, or is under direct or indirect common control with, an underwriter for the obligor with respect to the indenture securities [§ 310(b)(3)];
4. more than certain specified percentages of the trustee's voting securities are beneficially owned by the obligors, underwriters, and their respective officials [§ 310(b)(5)];
5. an issue is in default and the trustee is the beneficial owner of, or holds as collateral security, more than specified percentages -

    - of the security in default [§ 310(b)(6)], or
    - of certain categories of the issuer's securities [§ 310(b) (7)], or

6. an issue is in default and the trustee holds, in specified fiduciary capacities, 25 percent or more of the outstanding securities [described in item (5) above] [§ 310(b)(9)]; or
7. the bank-trustee is, or becomes, a creditor of the obligor (with exceptions) [§ 310(b)(10)]

- If the trustee is (or becomes) a creditor of the obligor within three months prior to default, it must set aside any repayment received during this period, or after default, in a special account to be divided pro rata between the trustee bank and the bondholders (with some exceptions) [§ 311]

D.3.c. Trustee Administration of Issue

- Bondholder annual reports. If certain events have occurred (primarily involving the debt issue, but also including changes in the conflicts of interest described above), the trustee must send a report to the bondholders at intervals of not more than 12 months. If no changes have occurred, no report is required [§ 313(a)]
- Bondholder periodic reports. If: (1) changes have occurred in the bond issue's collateral, or (2) the trustee claims large reimbursable advances, a report must be sent to bondholders within 90 days of such occurrence [§ 313(b)]

D.3.d. Administrative Filings With Trustee by Issuer

- The obligor must file with the trustee: (1) an annual certification as to compliance with the indenture, (2) copies of annual reports, and (3) other information and documents. These must also be filed with the SEC [§ 314(a)(1), (2), and (4)]. The content of the various reports is specified by Sections 314(b) through (e).
- The obligor must provide the trustee with lists (names and addresses) of the bondholders, and the trustee must maintain such lists [§ 312(a)]. The trustee must provide such lists to any three or more bondholders upon written request [§ 312(b)].

D.3.e. Actions in the Event of Default

The indenture must contain provisions setting out the duties and responsibilities of the trustee prior to, in case of, and after, default [§ 315].

E. Other Compliance

Laws and regulations in the corporate trust area are technical and require a high level of knowledge and training. In addition to the Trust Indenture Act of 1939, other laws and regulations exist that are supplemented by standard industry practices and the specific rules established by the various stock exchanges on which the securities are listed.

E.1. Lost, Stolen and Counterfeit Securities

E.1.a. Registration

Pursuant to SEC Rule 17f-1 [17 CFR 240.17f-1], a central database for the collection and dissemination of information about lost, stolen, and counterfeit securities has been established. In general, all insured banks and every registered transfer agent must register with the Securities Information Center (SIC) as either a direct or indirect inquirer. The rule also imposes certain reporting and inquiry requirements.

E.1.b. Reporting

Pursuant to SEC Rule 17f-1, banks and registered transfer agents must report to the SIC instances of missing, lost, stolen, or counterfeit securities. Securities certificates that are subsequently recovered must also be reported. The rule does not include securities that have been escheated, called for redemption, subject to litigation, or when the issuer is in bankruptcy. Bond coupons are also not considered securities certificates for this rule. Reports are required for all corporate securities having a CUSIP number, municipal securities, and bearer U.S. Government securities. Reports must be confirmed in writing on SEC Form X-17F-1A.

In the corporate trust function, the most likely application of this reporting requirement is when the bank, in its bond or stock transfer function:

- Is notified by a security holder of lost or stolen securities certificates. This occurs when the security holder requests a replacement certificate. Normally, the transfer agent creates an internal "stop transfer" order and issues a replacement certificate. The security holder is usually required to furnish an indemnification bond as a part of this process. The indemnification bond protects the bank in the event a lost or stolen certificate received in good faith is presented for transfer later and the bank is required to honor the certificate by purchasing replacement securities in the open market.
- During the securities transfer process, the transfer agent identifies:
  - counterfeit certificates, or
  - valid certificates previously reported as lost or stolen, or
  - valid certificates listed as paid or canceled on the transfer agent's books.
- The bank determines that securities certificates are missing from the bank's blank certificate inventory.

It is important to note that the rule was amended in 2004 and clarifies that the rule covers the life span of a certificate, from the time it is printed to the time destroyed.

The bank should file a report with SIC in each of these situations. Under Section 353.3(d)(2) of the FDIC Rules and Regulations, the filing of suspicious activity reports is not required for lost, missing, counterfeit or stolen securities, if the bank files a report as required by the reporting requirements of 17 CFR 240.17f-1.

E.1.c. Inquiries

Banks are required to make routine inquiries of the SIC by the end of the fifth business day after a certificate comes into its "possession or keeping". Furthermore, inquiries must be made of the SIC before the certificate is sold, used as collateral, or sent to another reporting institution. Normally, the inquiry requirement does not apply to the corporate trust function. There are

provisions in the Rule governing situations where certificates are received from sources other than customers. Refer to SEC Rule 17f-1(d)(1), which appears under the Miscellaneous Statutes and Regulations tab in Volume III of FDIC's loose-leaf regulations service.

E.2. State Escheat Laws

While escheatment laws primarily involve deposits, banks acting as bond trustee, securities transfer agent, and paying agent must comply with state abandoned property laws for checks and securities certificates which are undeliverable, as well as for book-entry accounts for which the owner cannot be located. Funds on deposit to pay unclaimed dividends, bond coupons not presented for payment, bonds not presented for payment, as well as funds in suspense accounts, may be subject to state escheat laws. However, institutions should establish and implement adequate procedures to ensure compliance with the applicable law.

Administratively, each state has its own dormancy period. Over the years, these have tended to become shorter. In addition, every state establishes rules as to where abandoned property must be sent. States also set their own publication and notification requirements, have their own individual forms to be completed, and set their own dates for transmitting escheated funds. Due to the different administrative and legal requirements of each state, it has been difficult both for bank personnel and for examiners to verify compliance with escheat laws

E.2.a. Legal Background

Escheat laws vary from state to state and may not exist in some states. One state may claim that its escheat laws apply to dormant funds which are concurrently claimed by another state. One state might clam the property based on the location of the trustee/transfer agent bank (or broker/dealer), while another state might claim the same property based on the physical or legal headquarters of the issuing organization. Yet another state might issue rules based on the stock exchange where the security was traded. It was possible for several states to claim the same funds. Bank trustees and transfer agents were often faced with conflicting claims.

In *Delaware v. New York*, 113 S. Ct. 1550 (1993), the U.S. Supreme Court resolved the differences among state laws concerning the right to receive unclaimed securities distributions. In that decision, the Court provided the following rules for resolving such disputes:

- We therefore resolve disputes among States over the right to escheat intangible personal property in the following three steps. First, we must determine the precise debtor-creditor relationship as defined by the law that creates the property at issue. Second, because the property interest in any debt belongs to the creditor rather than the debtor, the primary rule gives the first opportunity to escheat to the state of "the creditor's last known address as shown by the debtor's books and records." Finally, if the primary rule fails because the debtor's records disclose no address for a creditor or because the creditor's last known address is in a state whose laws do not provide for escheat, the secondary rule awards the right to escheat to the state in which the debtor is incorporated. 113 S. Ct. at 1556
- For purposes of the second rule under the *Delaware v. New York* standard, the Court held that "intermediaries" such as banks or securities firms who hold unclaimed securities distributions in their own name on behalf of the beneficial owners of such distributions are the relevant "debtors" with respect to the application of state law. In reaching this conclusion, the Court stated:

  From an issuer's perspective, the only creditors are registered shareholders, those whose names appear on the issuer's records. Issuers cannot be considered debtors once they pay dividends, interest, or other distributions to record owners; payment to a record owner discharges all of an issuer's

obligations. 113 S. Ct. at 1559.

E.2.b. Escheatment Litigation

Two high profile lawsuits occurred during the latter part of the 1990's and resulted in significant media and regulatory attention being placed on the escheatment practices of corporate trust departments. In 1995, a former officer in the corporate trust department of the Bank of America, San Francisco, California, filed a lawsuit against the bank. The state of California, the city and county of San Francisco and 300 local governments later joined the suit in 1997. The plaintiffs claimed that between 1977 and 1995, the bank or its predecessor, Security Pacific, mismanaged the proceeds of several bond issues for which it was serving as paying agent. The bank was accused of escheating insufficient amounts of unclaimed funds, charging excessive fees on bond trust accounts and destroying or losing critical records. Other allegations included claims that the bank mishandled payments for bonds that had been called so that it could maximize the earnings realized on the float of such funds and that it made unauthorized investments in order to generate higher fees. The case was settled out of court for $187 million.

The second lawsuit began when New York State auditors discovered in 1994 that the amount of unclaimed funds at Bankers Trust Corporation, New York, New York, had declined significantly from the prior year. Auditors became suspicious when bank employees thwarted their attempts to obtain records explaining the reduction in the amount of unclaimed funds o the bank's books. The FBI, the Manhattan U.S. Attorney's office and the Federal Reserve took over the investigation in November 1998. According to newspaper reports, three former executives were indicted on various Federal charges that they systematically diverted $19.1 million of unclaimed customer's funds to the bank's own accounts. The funds were used to bolster the department's financial results, cover budget shortfalls, and even pay for the office Christmas party. The bank settled with Federal and New York State authorities in March 1999 by paying $63.5 million in fines and returning the $19.1 million in unclaimed funds that it acknowledged diverting to revenue.

E.3. Other Laws and Regulations

There are various other laws, regulations, rules and practices that affect the administration of accounts in a corporate trust department, such as bankruptcy laws, the rules and regulations of the various securities exchanges where securities are listed, Municipal Securities Dealer Regulations (refer to the Corporation's handbook covering municipal securities dealer activities) and the standardized operating procedures within the securities industry.

A. Introduction to Pooled Investments

Pooled investment vehicles include common trust funds and employee benefit collective funds (both generically referred to as collective investment funds); proprietary mutual funds and other pooled investments. Because of their similarities, reference to collective investment funds (CIF's) within this manual will refer to both common trust funds and employee benefit collective funds, unless otherwise noted. Unlike CIF's, proprietary mutual funds are SEC registered securities that can be distributed to a wider variety of investors. Other pooled investments refers to less common or emerging account types such as master deposit accounts and private equity funds.

All pooled investment vehicles are designed to facilitate investment by combining fiduciary funds of various trust department accounts. Although the operation of CIF's runs counter to the accepted common law duty of the trustee not to commingle trust funds, legislation has been passed in every state authorizing banks to establish and administer CIF's.

The administration of pooled investment vehicles must follow principles of prudent management; comply with applicable laws, regulations, and regulatory opinions; and maintain proper documentation, recordkeeping, and accounting. For each type of pooled investment vehicle, proper management entails compliance with specific aspects of the laws and implementing regulations promulgated by Internal Revenue, Securities and Exchange Commission, Office of the Comptroller of the Currency (OCC), Department of Labor (DOL), and ERISA . Any apparent violations of applicable laws and regulations expose the institution to a substantial risk of loss, due to the cost of corrective action including possible regulatory sanctions and penalties. Inadequate management of pooled investment vehicles could also harm the trust clients and create potential liabilities to the trust department and the bank.

As with individual trust accounts, bank management and the trust committee are required by the Statement of Principles of Trust Department Management to provide adequate oversight of pooled investments. At a minimum, management and the trust committee should document the performance of an annual administrative and investment review - including assuring that the funds are administered in accordance with governing law.

B. Common and Collective Funds (CIF's)

B.1 General Information on CIF's

A CIF is a trust fund maintained by a bank exclusively for the collective investment of assets from several trust accounts administered by a trust department. They are not available to the general investing public. CIF's are sometimes operated on a multiple-bank basis within a bank holding company. In such cases, the largest trust department in the holding company typically makes its CIF's available to fiduciary accounts in smaller, affiliated trust departments (where permitted by the trust instrument, terms of the account, and local law).

Before a particular account purchases a participation in a CIF, it must be determined that the account's governing agreement permits CIF's and that the particular CIF is a suitable investment for the account. The trust committee, or alternatively designated individual or committee, should direct the account's participation in a common trust fund.

B.2. Common Trust Fund and Employee Benefit Collective Fund

CIF's are divided into two general categories depending on the types of trust accounts qualified to invest in the CIF and the source of their federal tax-exemption.

Common Trust Fund

A common trust fund is a fund that is typically held by personal trust accounts. As these funds obtain exemption from Federal tax under IRC Section 584, they are also referred to as "IRC 584 funds". Additionally, common trust funds are operated under OCC Regulation 9.18(a)(1). For this reason, these funds are many times also referred to as "(a)(1)" funds.

Employee benefit trust accounts are not permitted to be commingled with personal trust accounts in a common trust fund. However, a common trust fund may apply the tax- exemption afforded by IRC Section 584 to the collective investment of employee benefit trust accounts only. This is permissible only as long as all of the accounts invested in the common trust fund are employee benefit trust accounts. In this case, no employee benefit agency accounts or personal trust accounts may be invested in the common trust fund. Due to these restrictions, this application of IRC 584 is rare.

The collective investment of charitable trust accounts is discussed in Subsection H.1, Charitable Trust Usage Of Collective Investment Funds.

Employee Benefit Collective Investment Fund

When not used generically, the term collective investment fund is normally applied to funds established for the collective investment of employee benefit trust and agency accounts, as permitted under OCC Regulation 9.18(a)(2). Consequently, employee benefit collective investment funds are sometimes referred to as "(a)(2) funds". These funds generally obtain exemption from Federal tax under IRS Revenue Ruling 81-100, and are also referred to as "RR 81-100 funds".

Under IRC Section 584, no agency accounts, including employee benefit agency accounts, are allowed. Therefore, RR 81-100 is the method employed by most banks operating employee benefit collective investment funds.

Note that operating a CIF for the purpose of managing employee benefit accounts is subject to ERISA "party-in-interest" concerns - prohibited

transactions. The Department of Labor (DOL) has issued two class exemptions to address this issue. Refer to Subsection G - ERISA Considerations for information.

B.3. Importance of Tax-Exempt Status

If the CIF is operated in conformance with applicable rules and regulations, the CIF qualifies for Federal income tax-exemption. CIF's draw their tax-exempt status from either Section 584 of the Internal Revenue Code or IRS Revenue Ruling (RR) 81-100. Each source of exemption imposes different requirements on the fund, and it is essential that examiners understand the requirements of each and their differences; and how they impact the operations of a given fund.

A bank may request a written opinion from the IRS on whether its CIF qualifies for tax-exempt treatment under the Internal Revenue Code. As in the case of employee benefit plans, there is no IRS requirement that banks apply for a determination of the tax-exempt status of CIF's. However, obtaining this opinion provides assurance that the CIF was drafted in compliance with Federal tax laws, and that it qualifies for tax-exempt treatment.

If a CIF was later found not to qualify for tax-exempt treatment, all CIF capital gains and ordinary income might become subject to taxation. With respect to personal trust accounts, taxation might occur both at the CIF level and again at the participant level (double taxation). Employee benefit accounts would only experience taxation at the CIF level, since the participating employee benefit plans are themselves exempt from taxation. The loss of favorable tax treatment could cause the bank to incur a liability to the participants in a collective investment fund, whose proportional interests in the fund are directly impacted by any loss in value due to the loss of a fund's tax-exempt status.

IRC Section 584 and RR 81-100 are discussed in Subsection C - CIF Tax-Exempt Status - IRC Section 584 and IRS Revenue Ruling 81-100.

B.4. Importance of Securities Law Exemptions

CIF's are exempt from securities registration and regulation as a security and as a mutual fund only when operated in compliance with specific exemptions under Federal securities laws. Funds operated without the benefit of these exemptions must register under the Securities Act of 1933, and operate as mutual funds, under the Investment Company Act of 1940. With the repeal of Section 20 of the Banking Act of 1933, banks now have more flexibility in underwriting and operating mutual funds. The increased flexibility comes from the Gramm-Leach-Bliley Act of 1999, which is explained in Subsection K - Proprietary Mutual Funds. To understand the nuances of the exemption one must ensure that the concept of "bona fide fiduciary" as interpreted by the SEC is followed. Subsection D - Registration under Securities Acts provides more information.

B.5. "Bona Fide Fiduciary" Rule

CIF's are established by banks to facilitate the administration of accounts held under "bona fide fiduciary" appointments (as defined under Federal securities laws). CIF's operating rules strictly limit fund participation to "bona fide fiduciary" appointments, and employee benefit trust and agency accounts. A bank's CIF investment expertise cannot be offered either to personal agency accounts or to non-trust department customers.

"Bona fide fiduciary" appointments have been interpreted by the SEC under Federal securities laws to be limited to the traditional "personal trust" appointments of: trustee, executor, administrator, guardian, and Custodian under a Uniform Gift to Minors Act. The SEC holds that the exercise of trust powers must involve duties beyond those that are merely incidental to money management. Examples of accounts involving such incidental money management include investment agency relationships, IRA accounts, and mini-trusts. The absence of a genuine underlying fiduciary purpose has consistently been interpreted, by the SEC, as falling outside the confines of a trust relationship. Further, the staff of the SEC has repeatedly ruled that so called mini-trusts established under standardized, revocable, or minimum asset level contracts, constitute little more than investment management agency accounts (refer to the SEC interpretive letter in Appendix

G). Therefore, these types of accounts are not permitted to participate in a bank collective investment fund.

The sole exception to the "bona fide fiduciary" rule applies to CIF's operated for employee benefit accounts. In these situations (discussed later in this section) banks are permitted to invest funds held as trustee or agent in CIF's.

B.6. OCC Regulation 9.18 Requirements

OCC Regulation Section 9.18 provides the regulatory requirements for the operation of common and collective investment funds. Refer to Subsection E - OCC Regulation 9.18 and Appendix G for further information. Although not an FDIC regulation, state nonmember banks operating CIF's granted tax-exempt status pursuant to IRC Section 584, must comply with Regulation 9.18, because Section 584 requires compliance with this regulation. Compliance with Regulation 9.18 is not required for funds operated by FDIC regulated state nonmember banks which do not rely on IRC 584 for tax-exemption (typically employee benefit collective investment funds receiving tax-exemption under RR 81-100). However, State Law and general standards of practice make OCC Regulation 9.18 or other similar guidelines applicable to RR 81-100 funds as well. Many states have promulgated laws regarding CIF's. Due primarily to the need to comply with Federal securities and tax laws, State laws are generally similar to Regulation 9.18.

OCC Regulation 9.18 covers the written plan, fund management including use of outside adviser, fund valuation, admission and withdrawal, audit and financial reports, and self-dealing/ conflicts of interest among other things.

B.7. Basic Terms and Accounting Concepts

- Plan - The governing instrument of a fund. This is in effect a trust agreement, and is often entitled a declaration of trust or a group trust.
- Units - Units represent investments in a CIF and, like shares of a mutual fund, units represent a proportional ownership interest in all the investments held by the fund.
- Participants - Individual accounts investing in the fund are called participants.
- Valuation Date - The CIF valuation date is set by the Plan. It can vary from daily to quarterly, but it cannot be less frequently than quarterly (for CIF's maintained for personal trust accounts). Participants may only gain admission to (purchase units) and withdrawal (sell units) from a CIF on or before a CIF's valuation date.
- Principal value of a unit - This is the amount a participant pays or receives when investing in or selling a unit of a CIF. The principal value of a unit is determined by dividing the total number of CIF units into the CIF's total market value on a valuation date.
- Income value of a unit - This is the amount of income accrued by each unit during a valuation period. Methods used for calculating both the principal value and income value of each unit must be outlined in each CIF's plan.
- Fund and Participant Accounting Systems - Trust departments operating CIF's must operate two parallel accounting systems for each CIF. First, each CIF portfolio must have an adequate "fund accounting system" operated on an accrual method of accounting, reflecting the CIF's securities transactions and income earned. Secondly, all participants in each CIF must have a "participant accounting system" to reflect each participant's holdings in the CIF, (including: the number of units bought and sold, original cost per unit, all capital gains and losses per unit, balance of units held, income earned and distributed per unit, etc.).

B.8. Benefits and Limitations of CIF's To Fund Participants and To The Bank

Benefits of CIF's to participants and bank include:

- CIF's offer the advantage of investment diversification, which is often difficult to

achieve when investing small amounts of fiduciary funds individually.

- Smaller accounts benefit because they are able to regularly invest in CIF units that typically do not require large outlays of cash. This improves the diversification of their account and reduces uninvested cash balances.
- Given the size of the transactions, it is more efficient for the trustee to make and supervise investments for CIF's.
- CIF's allow management to concentrate investment decision-making and research efforts by permitting it to manage fewer, but larger, portfolios.
- CIF securities transaction costs and brokerage commissions are reduced, since larger purchases and sales can be effected more economically. Also, to the extent a participant invests in a CIF, securities commissions are eliminated, because no fees or charges may be assessed on the purchase or sale of CIF units under OCC Regulation 9.18.

Limitations of CIF's for the participants include:

- Adverse tax consequences can arise when unrealized capital gains are allowed to accumulate in the fund. New participants become subject to the taxable treatment of unrealized gains when they enter the fund. All capital gains are passed through for tax purposes to the participants in a fund during the taxable period in which the gains are realized. The pass-through applies to new participants, whether or not they experience any appreciation in their units.
- Participating accounts are faced with reduced liquidity. Since participants may only withdraw from a fund as of a valuation date, this could be as infrequent as monthly or quarterly, participants may experience liquidity problems arising from the inability to sell CIF units.
- The inability to divest of CIF units except at valuation dates may inadvertently "lock in" all participants during a period of falling prices. The longer the interval between valuation dates, the greater the potential impact on all participants.

Limitations of CIF's for the bank include:

- Most of the costs involved in establishing a common trust fund must be borne by the bank, including legal fees for drafting the original agreement and any subsequent modifications, and any reorganization expenses.
- Banks also experience greater pressure on fund performance, as the CIF's performance results are easily compared with performance attained by various industry benchmarks or outside mutual funds with similar investment objectives.

B.9. Typical Fund Categories

CIF's must be maintained by the type of qualifying accounts (personal trust accounts vs. employee benefit trust and agency accounts), as well as for the fund objective, such as fixed income or equity. The following are the more common types of CIF's which may be found in a trust department:

- Equity Fund - These funds usually consist primarily, or wholly, of common stocks. They are designed to achieve market appreciation while producing some current income.
- Diversified or Balanced Fund - Typically, such funds have a balance of equity and fixed income securities providing asset diversification by asset type. Such funds seek capital appreciation with a regular stream of income.
- Fixed Income Fund - Portfolios of these funds are composed predominately, or wholly, of bonds, preferred stocks, mortgages, and other assets from which the income return is fixed.

- Municipal Bond or Tax-Exempt Bond Fund - These CIF's are comprised of state and municipal obligations which provide income exempt from both Federal and State taxes for residents of the state issuing the securities.

- Real Estate Investment Fund - Portfolios of these funds are invested primarily in real estate.

- Mortgage Fund - These funds consist predominately of mortgages.

- Short Term Investment Fund (STIF) - These funds are CIF equivalents to a money market mutual fund. They are established for the temporary investment of trust cash. Their primary objective is to provide high liquidity and a continuous stream of income at current rates of return. OCC Regulation 9.18(b)(4), "Valuation" in subsection E.7, contains specific requirements for proper STIF administration.

- Covered Call Option Fund - These funds permit the writing of covered call options. Refer to subsection F.2. Specialty CIF's for information on OCC guidance.

- Foreign Securities Investment Fund - These CIF's are primarily composed of foreign securities. They may consist predominately of equities or fixed income investments, or may be structured as balanced funds. Subsection F.2. Specialty CIF's contains information on OCC regulatory requirements, including interpretations regarding the use of Foreign Securities Investment Funds by ERISA accounts.

- Index Fund - These funds are invested in securities tied to a particular securities index, such as Standard & Poor's, the New York Stock Exchange Index, or the Dow Jones Industrials. Refer to subsection F.2. Specialty CIF's for investment related information in operating this type of fund.

- Guaranteed Investment Contract ("GIC") Fund - These CIF's are primarily, or fully, invested in GIC's, which are usually issued by insurance companies. Refer to subsection F.2.e. for investment information and GIC valuation requirements.

C. CIF Tax-Exempt Status - IRC Section 584 and IRS Revenue Ruling 81-100

Each CIF is considered a separate tax entity, having its own tax identification number and administrative requirements. To maintain its tax-exempt status, CIF's must be operated in conformity with IRS regulations. The primary IRS regulations granting CIF's tax-exempt status are Internal Revenue Code Section 584 and IRS Revenue Ruling 81-100, described separately below. Each imposes different requirements that significantly affect both the CIF's operation and which accounts are allowed to invest in the CIF. Nondeposit trust companies are permitted to operate common trust funds under IRC Section 581. Additional information on IRC Section 581 is located in Appendix G.

C.1. Internal Revenue Code Section 584

IRC Section 584 primarily pertains to the operation of common trust funds for personal accounts (personal trusts, estates, guardianships, and accounts created under a Uniform Gifts to Minor Act). There are four key points to consider when reviewing a fund granted tax-exempt status under Section 584:

1. IRC Section 584 provides that any common trust fund that obtains its tax-exempt status from this section of the Code must comply with OCC Regulation 9.18.

2. Therefore, FDIC-supervised banks operating common trust funds drawing tax-exemption from Section 584 must comply with OCC Regulation 9.18.

3. There are no state or local laws exempting state banks from compliance with this provision, as compliance is mandatory to achieve CIF tax-exemption under Section 584.

4. Personal agency accounts and IRAs may not participate in ANY common trust fund, due to restrictions contained in Federal securities laws.

Failure to comply with IRC Section 584 requirements jeopardizes the tax-exempt treatment afforded common trust funds. Therefore, any loss of the fund's tax favored treatment could expose the bank to liability. Tax liability could occur at the fund level and the participant

level. The latter would occur due to regulatory sanctions and penalties and/or pending participant actions, such as lawsuits. The fund participants' proportional interest in the fund are directly impacted by any loss in the fund's value. The bank may be responsible for absorbing the tax consequences incurred by participants.

There are forms that must be filed annually with the IRS. U.S. Treasury Regulation Section 1.6032.1 and IRC Section 6032 require banks operating common trust funds to file annual informational returns with the IRS for each fund established under IRC Section 584. The IRS has not developed a specific form for this purpose. However, Schedule K-1 of Form 1065 (Partner's Share of Income, Credits, Deductions) is typically used to satisfy the reporting requirement. The return must include, for each fund participant: the name; the address; and the proportional share of taxable income or losses, and capital gains or losses. This informational return is required, regardless of the taxable income earned during the reporting period. The aforementioned Treasury regulation requires banks to file a full copy of the common trust fund's declaration of trust at least once with the return. If the plan is amended, the bank must resubmit the plan and its amendments with the informational return.

As noted in the earlier discussion of common trust funds, banks may in some instances rely on the tax- exempt treatment afforded by IRC Section 584 when establishing funds exclusively for employee benefit trusts and certain other tax-exempt fiduciary accounts administered in the capacity of trustee. If an IRC 584 fund is established for employee benefit trusts, the fund would be required to comply with OCC Regulation 9.18, and employee benefit trusts could not be commingled with personal trust accounts in common trust fund. Reasons for this distinction relate to SEC decisions regarding securities registration.

IRC Section 584 appears in its entirety in Appendix G. Also, Subsection P.3 - Federal Tax Laws contains additional information on IRC Section 584.

C.2. IRS Revenue Ruling 81-100

IRS Revenue Ruling 81-100 applies to the collective investment of employee benefit trust and agency accounts. The qualifying accounts are from employee benefit plans which obtain their tax-exempt status from Section 401 of the Internal Revenue Code. RR 81-100 also technically permits IRA accounts which obtain their tax-exempt status from Section 408 of the Internal Revenue Code.

Under Federal securities laws, bank CIF's must qualify for exemption from securities registration and exemption from investment company registration (i.e., registration as a mutual fund). Therefore, **IRA accounts should not be allowed to participate in any CIF**. Examiners should note the differences in purpose between IRC and SEC regulations and opinions. Federal tax laws do permit IRAs to be invested in collective investment funds, see IRC Sections 408(a)(5) and 408(e)(6). Due to the SEC's restrictive interpretation of: (1) an "exempted security" under Section 3(a)(2) of the Securities Act of 1933, and (2) "investment company" (mutual fund) exemptions under Sections 3(c)(1), (3), and (11) of the Investment Company Act of 1940, IRAs are effectively barred from CIF's and, for all practical purposes, may only be collectively invested in mutual funds operated under the Investment Company Act of 1940. Therefore, examiners should review collective investment funds that allow the investment of funds held by IRA accounts, determine if the bank is complying with securities law, and cite apparent violations where applicable. Refer to Subsection D - Registration Under Securities Acts and the December 6, 1994, SEC ORDER on The Commercial Bank of Salem, Oregon in Appendix G for additional details.

Some banks have used exemptions afforded under Regulation D of the Securities Act of 1933 to collectively invest otherwise non-permissible accounts, such as IRAs, without registration. Regulation D places restrictions on the number and sophistication of investors. Refer to Subsection N.5. Regulation D Exempted Securities Offerings for details.

For all practical purposes, only employee benefit accounts whose tax-exemptions derive from IRC Section 401 may invest in RR 81-100 funds. These funds are typically established in a form identical to that outlined by OCC Regulation 9.18(a)(2), even though

compliance with OCC regulations is not mandatory. Therefore, no violation should be cited unless local law requires state nonmember banks to comply with 9.18(a)(2). OCC Regulation 9.18, however, generally addresses items considered as standard industry practice and, therefore, serves as a guide to the prudent operation of employee benefit CIF's. The operation of such funds under OCC guidelines, or guidelines substantially similar, should be recommended. Refer to Subsection E - Regulation 9.18 for more information.

RR 81-100 requires that**:**

1. Participating employee benefit plans adopt the "group trust" as a part of the plan ("group trust" refers to the collective investment fund declaration of trust discussed in Subsection P.3 - Federal Tax Laws);

2. "Group trusts" prohibit collective investment fund assets from being diverted to any purpose other than the exclusive benefit of participating plan beneficiaries;

3. "Group trusts" prohibit the assignment of any collective investment fund assets by any of the participating plans; and

4. "Group trusts" must be established and maintained as domestic U.S. trusts.

Failure to comply with RR 81-100 jeopardizes a collective investment fund's tax-exempt status. The loss of favorable tax treatment could cause the bank to incur a liability to the participants in a collective investment fund, whose proportional interests in the fund are directly impacted by any loss in value due to the loss of a fund's tax-exempt status.

No informational returns are required for employee benefit collective investment funds operated in accordance with RR 81-100, and that derive their tax-exemption under IRC Section 501(a). However, Department of Labor regulations define collective investment funds used for the collective investment and reinvestment of funds contributed to an employee benefit plan as Direct Filing Entities (DFE). DFE's are required to file reports with the Department of Labor. Refer to Section 5.J.1 of this manual for more information concerning Department of Labor reporting requirements.

Revenue Ruling 81-100 is reprinted in its entirety in Appendix G. Also, Subsection P.3 - Federal Tax Laws contains additional information on RR 81-100.

D. Registration Under Securities Acts

CIF's maintained by banks are generally exempt from the requirements of the Securities Act of 1933 (1933 Act) and the Investment Company Act of 1940 (1940 Act). However, if a bank does not strictly meet the exemption requirements, the bank would be required to register the CIF as a security under the 1933 Act and as an investment company (mutual fund) under the 1940 Act. Banks generally seek to avoid registration of their CIF's, due to the additional regulatory requirements imposed with registration.

The following items explain the exemption rules and how banks may violate the acts depending on which types of participant accounts are allowed or if different account types are commingled.

D.1. Securities Act of 1933 (1933 Act)

The 1933 Act provides for the registration of securities sold in interstate commerce to the investing public and requires issuers of such securities to make full and fair disclosure in connection with the offering of such securities.

Exemptions under the 1933 Act:

Section 3(a)(2) of the 1933 Act exempts from the registration requirements and other provisions of the act:

- Any interest or participation in any common trust fund or other similar fund that is excluded from the definition of the term "investment company" under Section 3(c)(3) of the Investment Company Act of 1940. This generally exempts any CIF maintained by a bank for the collective investment and reinvestment of assets contributed by the bank in its capacity as trustee, executor, administrator, or guardian.

- Any interest or participation in a single or collective trust fund maintained by a bank for stock bonus, pension, or profit sharing plans which meet the requirements for qualification under Section 401 of the Internal Revenue Code of 1954.
- Any interest or participation in a single or collective trust fund maintained by a bank for a governmental plan as defined in section 414(d) of the Internal Revenue Code of 1954 within certain described parameters.

Implications of Admitting Certain Participants Into a CIF - 1933 Act:

- IRAs: Funds permitting participation by IRAs would not be exempt under Section 3(a)(2), because IRAs qualify under Section 408 of the Internal Revenue Code. The participation of IRAs in a CIF would therefore trigger securities registration requirements under the 1933 Act. If the CIF was not registered, the participation of IRA accounts would constitute an apparent violation of the 1933 Act. See further discussion of IRAs below under Investment Company Act of 1940 subheading.
- Keogh Plans: The exemption provisions of 3(a)(2) do not cover CIF's that allow participation by some or all employees who are categorized under 401(c)(1) of the Internal Revenue Code pertaining to Keogh plans (HR-10 Plans). Keogh plans may not normally be invested in CIF's without the CIF having to register under Federal securities laws. However, a small number of specialized Keogh accounts may qualify for a limited exemption and therefore be able to invest in a bank CIF. To qualify, the plan accounts and plan sponsor must comply with a narrowly defined intrastate exemption or SEC Rule 180 "Sophisticated Investor Rule". Refer to Section H.2. Keogh Account Usage of Collective Investment Funds for details.
- Government Plans: Various governmental organizations' plans receive their tax-exempt status from different Internal Revenue Code sections (such as IRC 401, 403, 457, and other sources). Plan participation in employee benefit CIF's is generally permissible without causing the bank's CIF to have to register under the 1933 Act. However there are instances where examiners should inquire further about the respective plan's qualifications. This includes state and local government entities which may obtain their plan's tax-exempt status from other sources and may not meet other 1933 Act standards. Refer to information in Section H.3 Government Plan Usage of Collective Investment Funds to ensure that CIF registration under the 1933 Act is not required.
- Traditional Agency Accounts: Banks may never collectively invest a traditional investment management agency account in a CIF. See Subsection B.2 Common Trust Fund and Subsection E.3. Regulation 9.18(a)(1) for further explanation. However, agency accounts are permitted to invest in mutual funds that are registered under the 1933 Act.
- Employee Benefit Agency Accounts: Employee benefit agency accounts are permitted in Regulation 9.18(a)(2), "RR 81-100" CIF's. See Subsection B.2. Employee Benefit Collective Investment Fund for additional information.
- Regulation D Exemption: Although difficult to apply, some banks have used exemptions afforded under Regulation D to collectively invest in otherwise non-permissible accounts, such as IRAs, without registration. Regulation D places restrictions on the number and sophistication of investors. Refer to Subsection N.5. Regulation D Exempted Securities Offerings for details.

D.2. Investment Company Act of 1940 (1940 Act)

The Investment Company Act of 1940 (1940 Act) provides for the registration and regulation of investment companies. Under the 1940 Act, an investment company is an issuer, which holds itself out as being primarily engaged in the business of investing, reinvesting, or trading in securities. In assessing the extent to which the provisions of the 1940 Act may have applicability to the trust activities of banks, reference should be made

to the following exemptions contained in the 1940 Act.

Exemptions under the 1940 Act:

- Section 3(c)(3) of the 1940 Act does not apply to "any common trust fund or similar fund maintained by a bank exclusively for the collective investment and reinvestment of moneys contributed thereto by the bank in its capacity as a trustee, executor, administrator, or guardian."
- Section 3(c)(11) of the 1940 Act exempts from the definition of an investment company: " employee's stock bonus, pension, or profit-sharing trust which meets the requirements for qualification under Section 401 of the Internal Revenue Code of 1986 or any governmental plan described in section 3(a)(2)(C) of the Securities Act of 1933; or any collective trust fund maintained by a bank consisting solely of assets of such trusts or governmental plans ".

Implications of Admitting Certain Participants Into a CIF - 1940 Act:

- IRAs: The bank CIF exclusion under the 1940 Act does not include IRAs, which fall under Section 408 of the Internal Revenue Code. Due to the SEC's restrictive interpretation of an exempted security under Section 3(a)(2) of the Securities Act of 1933, and investment company exemptions under Sections 3(c)(1), (3), and (11) of the 1940 Act; IRAs are effectively barred from CIF's and, for all practical purposes, may only be collectively invested in registered mutual funds operated under the 1940 Act. Therefore, examiners should question any CIF that allows the investment of funds held by IRA accounts and must determine if the bank is violating both the 1933 Act and 1940 Act. Refer to the December 6, 1994, SEC ORDER on The Commercial Bank of Salem, Oregon in Appendix G for additional particulars.
- Commingling of employee benefit and personal accounts: The SEC has interpreted the phrase "common trust fund" as applying only to those accounts administered by banks in their traditional capacity as trustee, executor, administrator or guardian for individuals. Therefore, the commingling of both employee benefit and personal accounts fails to qualify under the 3(c)(3) exemption because employee benefit plans are by definition not personal trust accounts. Furthermore, the commingling of both employee benefit and personal trust accounts fails to qualify under the 3(c)(11) exemption because personal trust accounts are not covered by Section 401 of the Internal Revenue Code.

  Examiners should ensure that employee benefit and personal accounts are not invested in the same CIF, due to the registration requirements that would result. Failure to qualify under the above exemptions due to the commingling of personal and employee benefit accounts in a CIF subjects the CIF to registration and regulation as a mutual fund (investment company) under the 1940 Act.

  The SEC has taken the position that employee benefit accounts administered in the capacity of trustee may not be commingled in common trust funds established for personal trust accounts. The SEC has consistently made a distinction between personal trusts and employee benefit trusts under securities laws. Consequently, it is irrelevant that both OCC Regulation 9.18 and IRC Section 584 appear to permit accounts administered in the capacity of trustee to be commingled without reference to the type of accounts being invested (personal vs. employee benefit plan). These accounts are not permitted to be commingled in a CIF.

  In the November 1, 1991, No-Action Letter to Santa Barbara Bank and Trust found in Appendix G, the SEC replied to an inquiry concerning Federal securities law restrictions against commingling assets of employee benefit plans, IRAs, and personal trust accounts. The SEC stated that this would require registration of a CIF as a mutual fund under the 1940 Act, and that interests in the CIF would then have to be registered as securities under the Securities Act of 1933.

Appendix D provides additional information on the A pplicability of Federal Securities Law to Banks and Bank Sponsored Securities Activities , including three separate sections on collective trust funds.

E. OCC Regulation 9.18

The complete text of OCC Regulation 9 - Section 9.18, regarding the operation of collective investment funds, can be found in Appendix G. The following is a synopsis of significant parts of Section 9.18.

E.1. Section 9.18 Applicability to State Nonmember Banks

State nonmember banks need to comply with Section 9.18 for funds granted tax-exempt status pursuant to IRC Section 584. Funds granted tax-exempt status pursuant to Revenue Ruling 81-100 , such as employee benefit CIF's, are generally not subject to Section 9.18 requirements**.** However, state law often requires that all CIF's comply with Section 9.18 or comply with a similarly written state provisions. Even where not required by law, the standards set forth in Section 9.18 should be followed by state nonmember banks as industry best-practices for all funds.

E.2. 1997 Revision of Section 9.18

The OCC revised its national bank fiduciary regulations in 1997. At the time, several OCC fiduciary precedents and trust interpretive letters had been issued under the prior version of the regulation. The OCC opined that the precedents and interpretations in these interpretation letters have become industry practice or simply articulate sound fiduciary principals.

At the same time, the OCC opined that whether a CIF plan needs to be amended to accommodate the changes in the revised regulation, depends upon the language in the existing plan. If the language specifically states the requirements of the old regulation, management should continue to operate the plan in compliance with the original plan - unless the plan is amended. If the plan's language merely makes general reference to 12 CFR 9.18, an amendment may not be necessary. However, banks operating short-term investment funds should amend their plans to reflect the new valuation provision in the revised regulation. Any amendment should be approved by the bank's board or its designee. Expenses incurred in amending a plan are considered the cost of establishing or organizing a CIF, and, therefore, may not be charged to the fund (Section 9.18(b)(10)). Refer to Appendix G for OCC Bulletin 97-22 (Excerpts) for further information regarding the implementation of the revised Section 9.18 to pre-existing CIF's.

E.3. Section 9.18(a)(1)

Section 9.18(a)(1) provides that banks may operate a fund maintained exclusively for the collective investment of monies contributed by the bank in its capacity as trustee. Section 9.18(a)(1) funds are commonly referred to as common trust funds and are defined in Subsection B.2. Common Trust Fund. In the administration of funds created pursuant to Section 9.18(a)(1), bank procedures should provide that no units of participation may be held by an agency account.

The 1997 revision to Section 9.18(a)(1) eliminated the 10% limit on a participant's interest in a common trust fund, and the 10% limit on investment of a common trust fund in the obligations of one issuer. The revised regulation also eliminated the requirement that a bank maintain, in cash and readily marketable assets, a percentage of common trust fund assets as necessary to provide for the liquidity needs of the common trust funds.

E.4. Section 9.18(a)(2)

Section 9.18(a)(2) states the general permissibility of banks to operate a fund consisting solely of assets of retirement, profit sharing, stock bonus, or other trusts that are exempt from Federal income tax. Section 9.18(a)(2) funds are often referred to as Collective Investment Funds (as previously described in Subsection B.2.). In the administration of funds created pursuant to Section 9.18(a)(2), bank procedures should not allow participation by any trust accounts which are subject to Federal income tax.

E.5. Section 9.18(b)(1) The Written Plan

A CIF must be established and maintained in accordance with a written plan. The plan may cover multiple funds. The plan must be approved by resolution of the bank's board of directors or a committee authorized by the board. (Although not required by 9.18, it is

recommended that legal counsel examine the plan.) A copy of the plan must be made available to any person for inspection at the main office of the bank during banking hours.

Section 9.18(b)(1) sets forth the required minimum content of the written plan establishing a CIF:

i. Investment powers and policies with respect to the fund,

ii. Allocation of income, profits, and losses,

iii. Fees and expenses that will be charged to the fund and to participating accounts,

iv. Terms and conditions governing the admission and withdrawal of participating accounts,

v. Audits of participating accounts,

vi. Basis and method of valuing assets in the fund,

vii. Expected frequency for income distribution to participating accounts,

viii. Minimum frequency for valuation of fund assets,

ix. Amount of time following a valuation date during which the valuation must be made,

x. Bases upon which the bank may terminate the fund, and

xi. Any other matters necessary to define clearly the rights of participating accounts.

Items (iii) and (vii) are 1997 additions to Section 9.18. Plans that were approved and in operation prior to the 1997 revisions (unless the plan is amended) are not required to maintain such provisions. .

E.6. Section 9.18(b)(2) Fund Management

Under Section 9.18(b)(2), a bank administering a CIF shall have exclusive management thereof, except as a prudent person might delegate responsibilities to others. The ability of management to delegate certain responsibilities to others under the prudent person standard was added in 1997. Management, however, is responsible for conducting a due diligence review prior to delegation, having board or designee approval of the delegation, ensuring an written agreement sets forth duties and responsibilities, and closely monitoring the activities and performance of the third party. In OCC Bulletin 97-22, the OCC recommended that a bank review, with their attorney, the securities laws and tax implications prior to any delegation of investment responsibility. Delegating investment advise is discussed in Subsection F.1 - Use of Outside Investment Advisers.

E.7. Section 9.18(b)(4) Valuation

Section 9.18(b)(4) requires that the fund be valued at least once every three months. Funds must be valued at market value or, if such valuation is not readily ascertainable, at a fair value determined by the trustee.

The current regulation grants a valuation frequency exception for 9.18(a)(2) funds (retirement, pension, profit sharing, stock bonus, or other trusts exempt from Federal taxation) that invest primarily in real estate or other assets that are not readily marketable. For these types of funds, the bank is only required to determine the value of the fund's assets at least once each year. **Note***:* Section 9.18(b)(4), "Valuation", is currently being revised to provide increased flexibility when valuing assets that are illiquid, difficult to value, or not readily marketable. The anticipated change will allow these assets to be valued once per year within all funds (without the existing restrictions on fund type). The valuation of the fund's readily marketable assets will still be required to be valued at least once every three months. Refer to www.occ.treas.gov for most current regulatory information on this issue.

There are specific valuation guidelines for Short-term Investment Funds (STIF's). The assets of a STIF may be valued at cost (as opposed to fair market value), if the STIF maintains a dollar weighted average portfolio maturity of 90 days or less, the bank uses straight line accrual between the cost and anticipated principal receipt on maturity, and the

bank holds fund's assets until maturity under usual circumstances [Section 9.18(b)(4)(ii)(B)]. Revisions to Section 9.18 made substantial changes with respect to the operation of STIF's. One significant change is the elimination of the requirement that a STIF invest at least 80% of the STIF's assets in instruments payable on demand or that have a maturity date not exceeding 91 days from date of purchase. The revised regulation also eliminated the requirement that at least 20% of the fund's assets must be cash, demand obligations, and assets that will mature at the fund's next business day.

E.8. Section 9.18(b)(5) Admission and Withdrawal Under Section 9.18(b)(5), participants should be admitted to or withdrawn from a fund only on the basis of the valuation described in Section 9.18(b)(4), and on such valuation date. The admission or withdrawal must be under prior request or notice on or before the valuation date. The bank may require notice of up to one year for withdrawals from funds with assets that are not readily marketable. No admission or withdrawal request or notice can be canceled or countermanded after the valuation date. Distributions to withdrawing participants may be made in cash, ratably in kind, a combination of cash and ratably in kind, or in any other manner consistent with the applicable state law.

In OCC Interpretive Letters #920 and #936, the OCC stated that while Section 9.18(b)(4) addresses the frequency of valuing a CIF, that requirement does not mandate a similar frequency for admissions and withdrawals. The confusion, the OCC writes, results from the fact that the regulation provides that admissions and withdrawals may only be on the basis of the valuation. The Interpretive Letters are located in Appendix G.

E.9. Section 9.18(b)(6)(i) Annual Audit

Section 9.18(b)(6)(i) requires that each CIF be audited at least once during each 12-month period by auditors responsible only to the bank's board of directors. [If permitted by state law, Section 9.18(b)(10) permits the plan to pay reasonable expenses incurred to operate the fund. The regulation does not define reasonable or specify which expenses may be paid. The OCC had interpreted the prior regulation to permit the recapture of the audit costs associated with independent outside auditors, but not internal audit costs.]

There are no regulatory requirements as to the scope of the audit. Therefore, as long as the audit appears reasonably complete, examiners should express no objection. As mentioned previously, CIF's that obtain tax-exempt status under RR 81-100 are not necessarily subject to Section 9.18 requirements except if required to do so under state law or regulation. Nonetheless, audits are strongly recommended by the Corporation, and examiners should criticize any CIF that is not audited annually. When OCC Regulation 9.18 sets specific requirements, a reasonable equivalent should be in place for a CIF subject to RR 81-100.

Both internal and external audits are acceptable, if the audit scope is adequate. Items typically addressed in a CIF audit:

- Sufficient tests to permit the auditor to provide an opinion on financial data required by OCC Regulation 9.18(b)(6)(ii).
- Confirmation or verification of the fund's assets, together with a reconciliation of pending transactions.
- Reconciliation of any cash positions in deposit or money-market funds.
- General compliance with OCC Regulation 9.18, especially as to: advertising restrictions [Section 9.18(b)(7)] and prohibited transactions regarding self-dealing and conflicts of interest [Section 9.18(b)(8) and Section 9.12(b)].
- General compliance with any applicable state laws or regulations.
- Conformance with the plan document, particularly as to: limitations on the types of eligible participants and limitations on permissible investments.
- Review of any transactions with bank insiders or investments in their related interests.
- Review of any fees paid by the CIF to the bank, its insiders, and their related

interests.

- A test to ensure that income receivable from investments is posted to the CIF, and that proper accruals are used in distributing net income.

E.10. Section 9.18(b)(6)(ii) Financial Report

Section 9.18(b)(6)(ii) requires each CIF to issue an annual report that is intended both for the bank and the beneficiaries of participating accounts. At least once during each 12 month period, a financial report of the fund based on the audit (Section 9.18(b)(6)(i) above) must either be furnished, or made available, at no charge to each person who would receive an accounting from each participating trust account. It may also be provided to prospective customers.

The financial report must contain a list of investments at both cost and current market value, a summary of investment changes for the period reflecting purchases (with costs) and sales (with profit or loss), income and disbursements since the last report, and notation of any investments in default. The report may not contain predictions of future fund performance, but may include historical performance data.

Additionally, Part 344 of the FDIC Rules and Regulations - Recordkeeping and Confirmation Requirements For Securities Transactions requires an annual financial report for all CIF's (even RR 81-100 Employee Benefit CIF's). Part 344.6(e) states that for collective investment fund accounts: " The bank shall at least annually give or send to the customer a copy of a financial report of the fund, or provide notice that a copy of such report is available and will be furnished upon request to each person to whom a regular periodic accounting would ordinarily be rendered with respect to each participating account. This report shall be based upon an audit made by independent public accountants or internal auditors responsible only to the board of directors of the bank."

E.11. Section 9.18(b)(7) Advertising of Collective Investment Funds

Advertising of common trust funds established for personal trust accounts (9.18(a)(1) funds) is prohibited under OCC Section 9.18(b)(7), except in connection with the advertisement of general fiduciary services. The advertising restrictions of this section do not apply to employee benefit collective investment funds (9.18(a)(2) funds) typically organized under RR 81-100. Be advised that advertising of any collective investment fund may jeopardize its exemption from securities laws, thereby requiring registration.

E.12. Section 9.18(b)(8) Self-Dealing and Conflicts of Interest

Section 9.18(b)(8) requires banks administering CIF's to comply with Self-Dealing and Conflicts of Interest requirements. The following is a summary of CIF self-dealing and conflict of interest rules (with links to the specific Regulation 9 sections):

- The bank may not have an interest in the CIF, except in its fiduciary capacity. (This includes a prohibition on any creditor relationship between the bank and the fund or its participants. This section has been interpreted to extend to overdrafts.) [9.18(b)(8)(i)]

- The bank may not make a loan on the security of the participant's interest in the fund. [9.18(b)(8)(ii)]

- The bank may not lend, sell, or otherwise transfer assets of a fiduciary account to the bank, insiders, or affiliates. [9.12(b) as referenced by Section 9.18(b)(8)]

- Defaulted investment exception: A bank may purchase a defaulted fixed income investment from a fund for its own account. If it does so, the purchase price must be at the greater of: market value, or cost plus accrued unpaid interest. [9.18(b)(8)(iii)]

- No fund assets may be invested in the bank's stock or obligations. [Section 9.12(a) as referenced by Section 9.18(b)(8)]

See entire text of Section 9.18(b)(8) and Section 9.12 in Appendix G for further information.

Own-Bank Deposits in a Short-Term Investment Fund (STIF): OCC Interpretive Letter

#969 states that a bank may use own-bank deposits for fiduciary assets awaiting investment or distribution collectively in a STIF administered by the bank. However, the activities must comply with conditions set forth in the letter and Section 9.10 and Section 9.12 of the regulation. The activity must be "lawfully authorized by the instrument creating the relationship, or by court order or by local law". Refer to Interpretive Letter #969 in Appendix G for further information.

Underperforming CIF's: In addition to the specific conflicts of interest principles addressed in Section 9.18, banks confront other conflicts of interest in the administration of CIF's. One of the most difficult is management's continued use of a CIF that consistently underperforms general market indices. The costs of establishing and maintaining CIF's, together with marketing or public relations, and potential litigation considerations, may influence management's decision to continue to invest customer assets in CIF's. Sound fiduciary investment practice, on the other hand, might require that account assets invested in an underperforming CIF be sold and investments made in more productive investment vehicles. CIF performance must be evaluated in the same manner as other investments. CIF performance should be compared with mutual fund performance indices and overall market indices (S&P 500, Dow Jones Industrials, etc.). Examiners should not recommend either the continuation or termination of a particular fund. However, management's failure to routinely evaluate and document fund performance should be criticized. Funds that have underperformed general market indices should receive management's (including the board of directors) close scrutiny, and be covered by a strategic plan to improve performance.

E.13. Section 9.18(b)(9) Management Fees

Section 9.18(b)(9) permits a bank administering a CIF to charge a reasonable fund management fee only if the fee is permitted under applicable law (and complies with fee disclosure requirements, if any) in the state in which the bank maintains the fund. The amount of the fee must be commensurate with value of legitimate services of tangible benefit.

Through various interpretive letters, the OCC has provided some clarification to Section 9.18(b)(9) regarding what constitutes reasonable fees commensurate with the value of services provided. OCC Interpretive Letter #829, responds to a bank inquiry regarding applying different management fees to common participants commensurate with the amount and type of participant services provided. Interpretive Letter #829 addressed charging different fees to various 401(k) employee benefit plans participating in the bank's CIF's based on the complexity of the 401(k) plans' administrative characteristics.

E.14. Section 9.18(b)(10) Expenses

Section 9.18(b)(10) permits a bank administering a CIF to charge reasonable expenses incurred in operating the CIF, to the extent not prohibited by applicable state law. The section specifies that the bank shall absorb the expenses of establishing or reorganizing a CIF.

OCC Interpretive Letter #919, located in Appendix G, provides guidance for permissible expense recovery from participants in model-driven funds and index funds. Model-driven funds are collective investment funds that seek to outperform a specified index or benchmark based on a pre-determined investment strategy. The Interpretive Letter indicated that model-driven funds may charge participants the cost of entering or exiting a fund just as index funds do, provided the fund's governing document authorizes such changes.

E.15. Section 9.18(b)(11) and (12) Prohibition Against Certificates / Good Faith Mistakes

Sections of 9.18(b)(11) and 9.18(b)(12) prohibit issuing certificates or documents representing an interest in the CIF and provide an opportunity for bank's to promptly correct good faith mistakes, respectively.

E.16. Section 9.18(c) Other Collective Investments

Section 9.18(c) prescribes other permissible instances when banks may collectively invest assets that it holds as fiduciary. Under certain circumstances, 9.18(c) address

commingling single loans or obligations, variable amount notes (vans), mini-funds, trust funds of corporations and closely-related settlors, and other, special exemption funds subject to OCC approval.

F. Investment Management Issues

F.1. Use of Outside Investment Advisors

OCC Regulation 9.18(b)(2) requires that the bank hold exclusive management over collective investment funds, except as a prudent person might delegate responsibilities to others. However, if management delegates investment responsibility, as allowed under the 1997 revised OCC regulation, the CIF may lose its exemption from Federal securities law (Section 3(a)(2) of the 1933 Act) and exemption from Federal taxation (IRC 584, for common trust funds).

The OCC has stated that management may delegate investment responsibility so long as it is done prudently. Per the OCC, this includes conducting a due diligence review of the investment advisor prior to delegation and closely monitoring the investment advisor's performance after delegation. The Board or its designee should approve the delegation and ensure that an agreement outlining each party's duties and responsibilities is in place. Management should review the securities law and tax law implications of the delegation with legal counsel prior to the delegation of investment management responsibilities.

F.1.a. CIF's Tax-Exempt Under IRC 584 (Subject to OCC Regulation 9.18)

In the past, the OCC has permitted the use of outside investment advisors if:

1. such delegation is proper under governing law or if the surrender of control and management results in strict liability of the trustee for the acts of its delegate,
2. the arrangement is governed by a written agreement,
3. the adviser can perform only the functions the bank could perform,
4. the CIF is subject to the jurisdiction of the OCC (no definition of OCC jurisdiction over state nonmember bank CIF's has been rendered),
5. the trustee bank establishes specific investment guidelines to be followed by the investment advisor,
6. the trustee bank frequently reviews the investment advisor's activities, and
7. the trustee bank can terminate the contractual relationship at will.

F.1.b. CIF Tax-Exempt by Revenue Ruling 81-100

There is no explicit coverage of outside investment advisors for CIF's that are tax-exempt subject to RR 81-100. Examiners should look first to ERISA, as these funds are restricted to tax-qualified employee benefit plans, and then to OCC precedents. State law or regulations may also contain applicable guidance.

ERISA concepts:

- In general, ERISA would appear to permit the use of a **non-affiliated** investment advisor, so long as the fees were reasonable.
- ERISA Section 406(b)(3), however, appears to **prohibit** the use of an **affiliated** investment advisor for a fee in connection with a transaction involving the assets of the plan. If the affiliated investment advisor charged **no fee, no violation would occur**.
- Prohibited Transaction Class Exemptions (PTE's) 80-51 & 91-38 (located in Appendix E) do not address the use of investment advisors for RR 81-100 funds.

OCC precedent:

- In the past, the OCC has issued approval for the use of an outside investment advisor for an employee benefit CIF consisting primarily of a diversified portfolio of guaranteed investment contracts (GIC's). The approval was conditioned upon a number of items.

- Each participating account, either in its governing instrument or in a separate authorization agreement, specifically authorized the investment in the fund, the employment of the advisor (outside investment advisor) by the trustee of the unrelated fund, and the amount of fees to be paid to the advisor for the GIC Fund.

- Approval of this arrangement also required that any investment advisor fee charged to the fund be listed as a separate line item on participating account statements, and in the annual financial statement of the fund.

F.2. Specialty CIF's

The following subsections provide information for several types of special investment funds. (This is not meant to be an all-inclusive list).

F.2.a. Short-Term Investment Fund (STIF)

STIF's are the CIF equivalents to a money market mutual fund, typically used for the temporary investment of trust cash. Their primary objective is to provide high liquidity and a continuous stream of income at current rates of return. Refer to OCC Regulation 9.18(b)(4) discussion in Subsection E.7 for STIF valuation and management rules.

F.2.b. Covered Call Option Fund

The OCC requires that each participating account provide specific investment authority regarding use of the bank's covered call option fund. However if the fund was established under Revenue Ruling 81-100, the incorporation may be by reference. The fund should also provide a specific method for valuing options.

F.2.c. Foreign Securities Investment Fund

The OCC requires that each participating account contain specific authority to invest in the bank's Foreign Security Investment Funds, unless the funds are established under Revenue Ruling 81-100, which requires incorporation by reference. In prior statements, the OCC also indicated that where custody of the securities is maintained outside the jurisdiction of the District Court of the United States, the requirements of Section 404(b)(I) of ERISA must be met (i.e., no fiduciary may maintain the "indicia of ownership" of any assets of the plan outside of the jurisdiction of District Courts of the United States). If the securities are not held in foreign branches of U.S. chartered banks, the bonding requirements of ERISA 412 must also be met.

F.2.d. Index Collective Investment Fund

The assets of such funds are structured to replicate the performance of a recognized financial index, e.g., the S&P 500. The OCC indicates that the index funds may not include own-bank securities or securities of an affiliated holding company, even though the securities of such companies may be included in the financial index.

F.2.e. Guaranteed Investment Contract (GIC) Fund

GIC funds are comprised primarily of guaranteed investment contracts issued by insurance companies, as well as equivalent bank products (refer to the Glossary Section of this manual). Since GIC's are perceived to be guaranteed, they are extremely popular with 401(k) plans and their participants, as they appear to provide a no-risk investment. The only guaranteed portion of a GIC, however, is its interest rate and other contractual provisions. Repayment of the principal is dependent on the

financial condition of the GIC's issuer. The failure of several large insurance companies (which issued GIC's), made it clear that there is credit risk in GIC's. In addition, the value of any fixed-rate investment product is affected by changes in prevailing interest rates.

OCC Regulation 9.18(b)(4) requires that CIF investments be valued at a reasonable fair market value. If a market value is not readily ascertainable, the investments should be valued at fair value determined in good faith by the trustee. Determining a fair value for GIC's is difficult because these investments are not actively traded on a secondary market or exchange, and do not have quoted market values. The OCC, however, has stated that the unsupported use of the contract price or book value does not meet the requirements of Regulation 9.18. In the December 21, 1995, letter to the law firm of Mayer, Brown & Platt, the OCC gave permission to value GIC's at contract/face value **if** (1) only defined contribution plan assets are in the CIF, **and** (2) the CIF's assets consist solely of: "benefit responsive" GIC's, short-term government securities, and money market instruments. This position follows an approach taken by AICPA Statement of Position ("SOP") #94-4. Examiners should closely review the valuation methodology employed for any GIC or similar investment vehicles used in CIF's.

G. ERISA Considerations

ERISA Section 406 prohibited transaction rules are applicable when employee benefit plan assets are invested in CIF's. In addition, DOL advisory opinion states that investment of plan assets in a CIF maintained by a bank trustee causes the assets of the CIF to be treated as assets of the plan. ERISA 408(b)(8) and PTE 91-38 (discussed below) provide exemptions for certain ordinary activities and transactions.

G.1. ERISA 408(b)(8) Exemption

ERISA Section 408(b)(8) provides an exemption from the prohibitions outlined in ERISA Section 406 for any transaction between an employee benefit plan or its participating accounts and the bank CIF if:

- the transaction is a sale or purchase of an interest in the fund,
- the bank or trust company receives not more than reasonable compensation, and
- the transaction is expressly permitted by the instrument under which the plan is maintained, or by a fiduciary (other than the bank or trust company or affiliate thereof) who has authority to control and manage the assets of the plan.

G.2. DOL PTE 91-38 Exemption

Transactions between a bank CIF that holds plan assets and plan related parties (such as the bank or an affiliate) are subject to ERISA Section 406 prohibitions and Internal Revenue Code 4975; but Department of Labor (DOL) PTE 91-38 provides an exemption under certain conditions.

In PTE 91-38, the DOL grants a class exemption for bank-maintained CIF's, in which employee benefit plans have an interest, to engage in certain transactions with plan-related parties provided specified conditions are met. For example; to qualify for the exemption under PTE 91-38, the plan must hold less than a 5 to 10% interest in the total assets of the CIF.

The proper application of PTE 91-38 precludes a violation of ERISA 406(a), transactions between plan and party in interest. However, if the CIF enters into a transaction with the bank or affiliate insider, there would be a violation of ERISA 406(b)(1), transactions between plan and fiduciary (and thereby triggering a violation of IRC 4975 tax on prohibited transactions). There is no exemption from this section of ERISA. For example, if the CIF purchased loans from the bank, the CIF would be in violation of 406(b)(1) and could possibly be in violation of 406(a) if the conditions for relying on PTE 91-38 were not met.

H. Other Participant Account Limitations

H.1. Charitable Trusts usage of Collective Investment Funds

Banks are appointed to manage charitable trusts established by associations which qualify as tax-exempt charitable organizations under IRC Section 501(a), and Charitable Remainder Trusts created by individuals under IRC Section 664. This is slightly different from bank managed "pooled income funds" organized by outside organizations (discussed separately under section N.4).

Issues to be considered when contemplating the collective investment of charitable accounts:

- Collective investment of charitable trusts must be confined to CIF's whose tax-exempt status is derived from IRC Section 584. IRC Section 584 permits the collective investment of funds held by a bank in the capacity of trustee for an individual, and in the capacity of trustee for employee benefit accounts. Charitable trusts fall outside the scope of RR 81-100which are limited to participation in CIF's for employee benefit plans administered by banks in the capacities of both trust or agency.

- Charitable accounts for which a bank acts as "agent" may not be invested in collective funds of any type**.** Remember it is impermissible under Federal securities laws to collectively invest personal agency accounts.

- Collective investment of charitable trusts must comply with OCC Regulation 9.18. The Internal Revenue Code, by virtue of IRC Section 584, requires CIF's obtaining tax-exempt status under that section of the Code to comply with OCC Regulation 9.18.

- In the past, the OCC opined that charitable trusts may be collectively invested with other fiduciary accounts in CIF's operated in accordance with either Section 9.18(a)(1) or Section 9.18(a)(2). The CIF operated for the collective investment of charitable trusts must conform to IRC Section 584 requirements. This includes Section 9.18(a)(2) CIF's, which are normally operated in accordance with RR 81-100. As a practical matter, Section 9.18(a)(2) CIF's are confined to employee benefit plans and operated in accordance RR 81-100. It would therefore be unusual for charitable trusts to be invested in a Section 9.18(a)(2) CIF.

- The OCC also ruled, pursuant to Section 9.18(c)(5), that it was permissible to collectively invest funds in a CIF consisting solely of charitable trusts without the need to comply with all of the requirements contained in Section 9.18(b). This interpretation would not extend, however, to CIF's whose participation included charitable trusts along with personal trusts, executorships, guardianships, etc., because the collective investment of these personal trusts would have to comply with OCC Regulation 9.18 in its entirety.

Under the revised OCC Regulation 9.18, banks establishing CIF's for charitable trusts and relying on Section 9.18 (c)(5) for exemption from the provisions of 9.18(b) must submit a written plan to the OCC. The content of the written plan is enumerated in the text of Regulation 9.18(c)(5). The OCC has opined that state nonmember banks operating charitable collective funds are also required to submit the fund's plan to the OCC to qualify for special exemption under 9.18(c)(5).

H.2. Keogh Accounts Usage of Collective Investment Funds

Keogh plans, also referred to as HR-10 plans, are self-employed retirement plans that are qualified under IRC Section 401(c)(1). As with IRA accounts, owing to a narrow interpretation of the Securities Act of 1933 (Act) by the SEC, Keogh plans may not normally be invested in CIF's without the CIF having to register under Federal securities laws.

It is possible, nevertheless, through the careful application of either: (1) Section 3(a)(11) of the Securities Act of 1933 - Intrastate Exemption, or (2) SEC Rule 180-Sophisticated Investor Exemption, to invest Keogh plans in CIF's without registering either the Keogh plans, or the CIF's, as securities under Section 5 of the Act.

H.2.a. Intrastate Exemption for Keogh Accounts

CIF's seeking Section 3(a)(2)(C)(ii) exemption from registration, must also comply with the requirements of Section 3(a)(11) ("intrastate exemption" requiring all fund participants to reside in the same state as the fund's issuer).

- Section 3(a)(11) of the Act provides an intrastate exemption from registration for any security which is offered and sold only to residents within a single state, and where the securities issuer is also a resident, and doing business, within the same state.
- For the intrastate exemption to be available: (a) all commingled fund participants (including all beneficiaries of the Keogh plans) and (b) the bank operating the CIF, must be intrastate.

While the foregoing suggests that Keoghs may be commingled with other employee benefit plan accounts, this is not the case. The commingling of intrastate Keogh plans with interstate employee benefit plans precludes the Section 3(a)(11) registration exemption for the Keogh plans. On January 15, 1981, the SEC's Division of Corporation Finance opined that intrastate Keogh plans may be commingled with other types of interstate employee benefit plans (pension, profit sharing, etc.) without the interests of the non-Keogh plans having to be registered under the Act. However, the Keogh plans themselves would have to be registered unless specifically exempted by statute, or by Commission rule, or order. (SEC Release No. 33-6281, 17 C.F.R. 231.6281)

Examples of SEC interpretations of the exemptions afforded by Sections 3(a)(2) and 3(a)(11) of the Act include:

1. In National Bank of Fairfax, the bank wanted to invest Keogh accounts of both resident and nonresident employers. The National Bank of Fairfax Self-Employed Retirement Plan and Trust would only have been available to self-employed individuals and their employees. The Plan provided two methods for investing Keogh accounts under its single "umbrella" plan:

    a. If an employer was a resident of Virginia, its plan would be collectively invested in the CIF. This method would comport with the exemption requirements of Section 3(a)(11).

    b. If an employer was not a resident of Virginia, the CIF required funds relating to the non-resident plan to be segregated into a separate trust account. The separate trust account would be operated under the same terms and conditions as the accounts maintained for Virginia residents. In doing so, the bank sought to apply the registration exemption afforded by Section 3(a)(2).

    In response to the bank's inquiry, the SEC denied the issuance of a No-Action Letter, stating that it was not the intent of Section 3(a)(2) to provide specific exemptions for Keogh plans and, therefore, the Section 3(a)(2) exemption would not be available for the creation of separate trust accounts for nonresident accounts. The National Bank of Fairfax's December 29, 1976, request for No-Action letter and the SEC's response appears in Appendix G.

2. The Citizens and Southern National Bank of Georgia also requested a No-Action letter from the SEC to permit application of Section 3(a)(2) and 3(a)(11) registration exemptions for the commingling of two employee benefit collective investment funds maintained by the bank.

   a. The C&S Pooled Profit Sharing and Pension Trust held only employee benefit accounts, exclusive of Keogh accounts. These accounts were sponsored by both Georgia and non-Georgia employers.

   b. The Commingled Retirement Trust Fund held funds of Keogh plans of Georgia residents.

   The bank sought the SEC's approval to commingle these two funds without registration based on SEC Release 33-6281.

   The SEC replied that Release 33-6281 was intended to permit commingling without the corporate plans losing their registration exemption under SEC Section 3(a)(2). However, the exemption granted the Keogh accounts under Section 3(a)(11) would be lost if the two funds were combined, requiring the interests of the Keogh plans to be registered. The Citizens and Southern National Bank of Georgia, September 25, 1981, request for a No-Action letter and the SEC's response are included in Appendix G.

H.2.b. "Sophisticated Investor Rule" Exemption for Keogh accounts

SEC Rule 180 (17CFR Section 230.180) provides what is often termed the "sophisticated investor rule" exemption. Details on this exemption are discussed in the overview of securities laws Section P.1.b. SEC Rule 180 (Sophisticated Investor Rule) and in Appendix G, 17 C.F.R. Section 230.180 "Sophisticated Investor Rule".

H.3. Government Plan Usage of Collective Investment Funds

Government employee benefit plans as defined in the Internal Revenue Code include plans of the government of the United States, the government of any state or political subdivision, or plans of any agency or instrumentality thereof. Many of these plans qualify for tax-exemption under IRC Sections 401, 403, or 457. However, not all government plans are qualified under these sections of the Code. Due to the fact that some state and local plans cannot meet all the qualifications for tax-exemption, particularly vesting requirements as embodied in Section 401, the Code was amended to provide special tax treatment for such plans by adding Section 414(d). Further, under some local law restrictions, it is not permissible for some government plans to be established under formal trust arrangements.

Securities registration and investment company exemptions for bank CIF's used to collectively invest government plans are contained in: Section 3(a)(2)(C) of the Securities Act of 1933, Section 3(a)(12)(C)(iii) of the Securities and Exchange Act of 1934, and Sections 3(c)(11)(A) and (B) of the Investment Company Act of 1940. Therefore, ample securities law exemptions exist for the collective investment of government plans. SEC No-Action Letters, including those covering government plan participation in CIF's, are located in Appendix G.

Regardless of the form of tax qualification used, and regardless of the presence or absence of a formalized trust agreement, government plans may be collectively invested by banks consistent with the requirements of OCC Regulation 9.18(a)(2) and Revenue Ruling 81-100. Government plans may be invested in CIF's together with corporate-sponsored employee benefit plans, or in CIF's confined to government plans. Those plans not established under trusts must, however, be held: (a) under some form of fiduciary arrangement and (b) in the custody of the organization authorized under local law.

It should be noted that some governmental plans do not obtain an exemption from Federal income taxation. Instead, they rely on an "exclusion" from taxation allowed through the

concept of "intergovernmental constitutional immunity". If a governmental plan has not obtained tax-exempt status by meeting the requirements of the Internal Revenue Code, evidence must exist that the plan is appropriately relying on the exclusion from taxes allowed though "intergovernmental constitutional immunity."

The following SEC No-Action Letters permit the inclusion of government plans (including IRC Section 457 qualified plans of state and local government employees) with corporate employee benefit plans without triggering registration under: the Securities Act of 1933, the Securities Exchange Act of 1934, or the Investment Company Act of 1940 : The Provident Bank (1991), The Idaho First National Bank (1988), and Fidelity Management Trust Company (1989), all located in Appendix G.

I. Investing in CIF's of other institutions

I.1. Affiliated Institutions

When permitted in the governing instrument and allowed by state law, banks may invest funds of fiduciary accounts in affiliate bank CIF's. The OCC has permitted such investments in the past. The SEC has also addressed this issue in a 1989 No-Action Letter to Old Kent Financial Corporation (located in Appendix G). In that No-Action Letter, the SEC permitted banks under the holding company of Old Kent Financial Corporation to use the common and collective funds of other affiliated banks under the holding company.

When banks invest fiduciary funds in affiliate institution CIF's, examiners should ensure that:

1. the CIF plan of operation or governing document authorizes use of the CIF by accounts of affiliated banks,
2. the board of the affiliated bank has authorized the use of the originating bank's plan,
3. the affiliated bank maintains documentation for all admission and withdrawal decisions for each fiduciary account invested in the originating bank's fund,
4. the originating bank is notified on or before the fund valuation date, and the appropriate committee of the originating bank approves all affiliate bank admissions and withdrawals in compliance with 12 C.F.R. 9.18(b)(5), and
5. the originating bank furnishes the annual financial report, or notice of its availability, to each fiduciary account invested in its CIF's).

I.2. Non-Affiliated Institutions

Examiners may also encounter situations where banks wish to invest fiduciary funds in CIF's of non-affiliated banks. In the past, the OCC permitted employee benefit CIF's (Section 9.18(a)(2) funds) maintained by a trustee in accordance with RR 81-100 to be invested in a CIF maintained by an unrelated trustee. However, the OCC staff indicated that personal trust CIF's (Section 9.18(a)(1) funds) deriving tax- exemptions pursuant to IRC 584 cannot accept participations from non-affiliated institutions.

Although the OCC has permitted the investment of fiduciary funds in non-affiliated institution CIF's, the SEC declined to issue a No-Action Letter to Northern Trust Corporation on this same issue. Northern Trust Corporation had been seeking permission for non-affiliated CIF's to invest in CIF's operated by Northern Trust Company (a subsidiary bank). Northern Trust Corporation had previously applied for and obtained OCC approval to conduct this activity. However, the SEC did not concur that the activity would be permissible without registering the Northern Trust CIF's as securities. The 1989 SEC No-Action letters to Northern Trust Corporation (Northern Trust I and Northern Trust II) are located in Appendix G.

Consequently, even where permissible under local law and the governing document, banks should not invest customer funds in non-affiliated bank CIF's or accept investments from non-affiliated bank CIF's. Banks wishing to do so should be advised to first seek an SEC No-Action ruling on the proposed activity. Failure to obtain such a ruling could result in an SEC enforcement action, fines, and losses to the participating accounts, which would

inevitably be borne by the bank.

J. CIF's investing in CIF's within the same department

The OCC has permitted CIF's to be invested in other CIF's operated by the same department. Investing equity or fixed income fund cash awaiting permanent investment in a short term investment fund (STIF) would be a practical use of this provision. This is not the only application, and there is no limitation on which funds can take advantage of the provision.

K. Proprietary Mutual Funds

K.1. Considerations When Engaging in Mutual Fund Activity

There are numerous regulatory and costly administrative burdens associated with the operation of a proprietary mutual fund. The operation of a mutual fund requires knowledge of SEC and IRC rules and regulations. Furthermore, banks have the added burden of complying with applicable banking laws. Strong management oversight is required. Since a large volume of activity is required to effectively operate a fund and there is the potential for the receipt of lucrative fees, banks operating proprietary mutual funds must address a number of potentially abusive conflicts of interest.

Examples of the general considerations involved in operating a mutual fund:

- Mutual funds must be registered with the SEC, as both a security under the Securities Act of 1933, and as a mutual fund (mutual funds are investment companies under Federal securities laws) under the Investment Company Act of 1940.
- To operate on a tax-exempt basis and pass all income and capital gains through to investors, mutual funds must also comply with various tax laws, including Subchapter M of the Internal Revenue Code.
- The mutual fund would be organized under a trust and the bank (or related organization) would be trustee.
- State law would govern the establishment of trust.
- To be economically viable, a mutual fund must obtain a critical mass of assets to realize the necessary economies of scale.
- To profitably offer such products, the mutual fund sponsors must be compensated through a sufficient volume of business (generally portfolio size rather than number of investors).

Banks may act in a number of capacities for any mutual fund, including: custodian, transfer agent, and, investment adviser or investment manager. Each of these activities has its own unique risks and may expose the bank to different conflicts of interest. Also, the Gramm-Leach-Bliley Act (GLBA) of 1999 permits banks to engage in previously prohibited securities related activities, such as underwriting. A greater range of potential activities also increases the potential for conflicts of interest.

Refer to Appendix D discussion of Applicability of Federal Securities Laws to Banks and Bank Sponsored Securities Activities for specific requirements that would be applicable to proprietary mutual fund activities. Specific subsections include Bank as Investment Advisor, Bank as Investment Company, and Collective Trust Funds. Non-bank subsidiaries must, however, register with the SEC, if they engage in any of these activities.

State law may require registration as a custodian, investment advisor, or any other securities activities. FDIC regulated banks acting as mutual fund transfer agents must register and comply with Part 341 of the FDIC's Rules and Regulations.

K.2. Structure of Bank Financial Activities Under the Gramm-Leach-Bliley Act of 1999 (GLBA)

Effective March 12, 2000, the GLBA repealed Section 20 of the Banking Act of 1933. Banks may now underwrite and distribute proprietary and third-party mutual funds. This activity must be done through one of the following entities:

- Financial Holding Company (FHC). A FHC may engage in any activity and may acquire and retain shares of any company engaged in any activity that is determined by the Federal Reserve Board to be "financial in nature" or "incidental" to such financial activity. Or, a FHC may engage in an activity that is complementary to a financial activity and does not pose a substantial risk to the soundness of the financial institution. Activities that are financial in nature include providing financial, investment and economic advisory services, including advising an investment company. It also includes underwriting, dealing in, or making a market in securities (Section 4(k)(4) of the Bank Holding Company Act of 1956).

  A FHC that acquires any company or commences any of the above activities shall provide to the Federal Reserve Board written notice describing the activity conducted by the FHC. Notice must be provided not later than 30 calendar days after commencing the activity.

  A "bank holding company" is also allowed to engage in the "expanded financial activities" of a FHC. However, there are minimum capital, management, and community reinvestment standards that must be met. Also, this requires pre-notification to the Federal Reserve Board. Specific details are found in Section 4(l) of the Bank Holding Company Act. The entire Bank Holding Company Act text is located in the FDIC's Laws, Regulations and Related Acts.

- Financial Subsidiary. The activities that may be conducted by a subsidiary of a national bank have also been revised. A national bank may control a "financial subsidiary", or hold an interest in one, only if the subsidiary engages in activities that are financial in nature or incidental to a financial activity. Activities that are financial in nature include those described in the FHC subheading, above.

The GLBA added Section 46 to the Federal Deposit Insurance Act (FDI Act) to govern financial subsidiaries of state banks. Under the final rule, the FDIC adopted a streamlined certification process for insured state nonmember banks to follow before they may conduct activities as principal through a financial subsidiary. State nonmember banks self-certify that they meet the requirements for carrying out these activities. The self-certification process allows banks to conduct the new activities immediately. There is be no delay for administrative approval or review, although the FDIC continues to evaluate these activities as part of the normal supervisory process.

To commence financial subsidiary activities under Section 46(a), the insured state nonmember bank must certify that it is well-managed; that it and all of its insured depository institution affiliates are well-capitalized; and that the insured state nonmember bank is in compliance with the capital deduction requirement. In addition, an insured state nonmember bank may not commence any new activity under Section 46(a), or directly or indirectly acquire control of a company engaged in any such activity, if the bank or any of its insured depository institution affiliates received a rating of less than satisfactory in its most recent CRA examination. Any insured state nonmember bank controlling or holding an interest in a financial subsidiary also must comply with Sections 23A and 23B of the Federal Reserve Act, as amended by the GLBA and meet the financial and operational safeguards required by Section 5136A(d) of the Revised Statutes of the United States (12 U.S.C. 24a(d)), unless otherwise determined by the FDIC.

If the financial subsidiary of the insured state nonmember bank engages in the public sale, distribution or underwriting of stocks, bonds, debentures, notes, or other securities activity of a type permissible for a national bank solely through a financial subsidiary, the state nonmember bank and the financial subsidiary must comply with certain provisions requiring the separation of the financial subsidiary from the bank. These provisions require that the financial subsidiary be physically separate and distinct in its operations from the operations of the bank; that the financial subsidiary conduct its securities business pursuant to independent policies and procedures designed to inform customers and prospective customers of the financial subsidiary that the financial subsidiary is a separate organization from the insured state nonmember bank and that the insured state nonmember bank is not responsible for and does not guarantee the obligations of the financial subsidiary. In addition, the bank must adopt policies and procedures, including

appropriate limits on exposure, to govern its participation in financing transactions underwritten by its financial subsidiary. Further, the bank may not express an opinion on the value or the advisability of the purchase or sale of securities underwritten or dealt in by its financial subsidiary, unless the bank notifies the customer that the entity underwriting, making a market, distributing or dealing in the securities is a financial subsidiary of the bank.

The mutual fund, as a registered investment company under the Investment Company Act of 1940, would be under the supervision of the SEC. The SEC is required to share its supervisory findings with Federal banking agencies, upon request, and does not limit the FDIC's examining authority of affiliates as outline in Section 10(b)(4) of the Federal Deposit Insurance Act.

K.3. Investment Company Act of 1940

The Investment Company Act of 1940 (1940 Act) governs the activities of companies principally engaged in the business of investing, reinvesting, and trading securities, and whose own securities are held by the public. Mutual funds and other registered investment companies are subject to SEC operational regulations designed to protect the interests of investors and the public. The Act prohibits such companies from changing the nature of their business, or their investment policies, without the approval of their shareholders.

Among the most significant sections of the Investment Company Act of 1940 are the following:

- Section 9 bars persons convicted of securities fraud within the past 10 years from serving as officers or directors;
- Section 10 prevents underwriters, investment bankers or brokers from constituting more than a minority of such companies' board of directors;
- Section 13 prohibits such companies from changing the nature of their business or their investment policies without the approval of holders of a majority of their voting securities;
- Section 15 requires that management contracts (and material changes thereto) be approved by a majority of the holders of outstanding voting securities of such registered company;
- Section 17 prohibits transactions between such registered companies and their directors, officers, affiliated companies, principal underwriters, and promoters, except where the SEC grants an exemption based on a finding of the fairness of such transactions and no overreaching by the parties. It also identifies a bank as one of the acceptable custodians for a registered investment company. The GLBA amended Section 17(a) to allow loans from affiliates to mutual funds (effective May 12, 2001). The amendment is especially important to banks offering proprietary mutual funds. The original Section 17(a) prohibited affiliates from selling, purchasing, or borrowing money or property from mutual funds, but did not cover loans from affiliates to mutual funds. In addition, the SEC interpreted Section 18(f) of the 1940 Act to prohibit mutual funds from borrowing money except from a bank. The borrowing limit is one-third of the assets of the fund. Under the current regulations this could pose potential problems for banks offering proprietary mutual funds. The GLBA amended Section 17(f), custody of securities, to allow for a bank or its affiliates to serve as a custodian for proprietary mutual funds (registered investment companies).
- Section 18 prohibits registered "closed-end" investment companies from issuing senior securities, except under conditions and terms specified in that Section; and
- Section 20 prohibits "circular ownership" of such investment companies and "cross-ownership" of their securities under the terms listed in Section 20(c).
- Included among other provisions of the Investment Company Act are sections involving sales and repurchases of securities issued by investment companies (Section 22), periodic payment plans (Section 27), and face-amount certificate

companies (Section 28). Also, the GLBA allows a bank or its affiliate to serve as a custodian for a proprietary "unit investment trust" (Section 26).

L. Conversion of CIF's to Mutual Funds

L.1. General Overview

Competitive pressures and changing securities laws contribute to banks converting CIF's into proprietary mutual funds. The banking industry has long taken the position that mutual funds offer greater advantages to both the bank and trust beneficiaries. But there are also risks, such as abusive conflicts of interest and increased reputational risk.

- One of the **incentives for converting** a CIF to a proprietary mutual fund is purely financial. There is a lucrative array of fees available under a mutual fund arrangement that is not available from bank sponsored CIF's. However, the desire for increased revenue must not take precedence over the fiduciary responsibility of the bank. Such a conflict must be resolved in favor of the account beneficiaries. If the desire for financial reward is dominant, the conflict could become abusive.
- One of the **potential disadvantages** to a bank is the public availability of the proprietary mutual fund's performance - a factor not generally confronted with CIF's. If a proprietary mutual fund performs poorly over an extended period of time, the bank's reputation may be harmed, especially if the poor performance continues without appropriate corrective action.

Conversions of existing CIF's to mutual funds typically take one of two forms. In both cases, the CIF terminates activity and is replaced by the mutual fund operation. The first type involves the liquidation-to-cash of a CIF's assets, with a simultaneous rollover of the cash proceeds into a mutual fund. The second type involves a one-time "in-kind" transfer of assets at market value from a CIF to a mutual fund.

Mutual funds may be sponsored by a non-bank affiliate of a state nonmember bank. However, they are currently predominantly sponsored by a non-affiliated third party institution (including mutual fund companies and brokerage houses). In either case, the bank usually provides investment advisory, custodial, transfer agent, and other fee related services to the fund.

L.2. Tax Considerations of Conversion

L.2.a. Common Trust Fund Conversions

Prior to 1996, the conversion of common trust funds established for personal trust accounts was treated as a taxable transaction under the IRC. Years of lobbying Congress to enable a tax-free "in-kind" transfer were finally successful in August 1996, when IRC Section 584 was amended by Section 1805 of the "Small Business Job Protection Act of 1996". This legislation added new paragraph IRC Section 584(h), which permits tax-free conversions of Personal Trust CIF's (A-1 Funds). The conversion can be into one or more mutual funds. The basis of the mutual fund shares distributed to participant trusts must be equal to the basis of the common trust fund interests exchanged. In the event that the conversion involves more than one mutual fund, the basis of the common trust fund interests exchanged should be allocated proportionately to the mutual fund shares received. The amendment was effective for transfers after December 31, 1995.

This amendment makes the conversion tax-free for Federal taxation purposes only. Therefore, there may be remaining state income tax consequences. There are also accounting and other tax issues related to the rebating of fees, the amortization of bond premiums, and capital gain distributions, to name a few, that must be considered in conjunction with the conversion decision.

A copy of the 1996 amendment to IRC Section 584 is located in Appendix G.

L.2.b. Collective Investment Fund Conversion

Conversions of collective investment funds maintained for employee benefit accounts subject to ERISA do not face the same tax problems as those faced by common trust funds. Tax relief is granted because, although conversion is a taxable event, the participants can only be tax-exempt entities and, therefore, no tax liability is incurred.

L.3. Supervisory Concerns of Conversion

The board of directors should specifically authorize or ratify the conversion of a CIF to a mutual fund. The advice of qualified legal counsel experienced in securities laws and fiduciary matters should be obtained to ensure that the conversion complies with all applicable laws and fiduciary obligations. The qualifications of the firms and individuals providing legal counsel should be documented and retained to support the adequacy of the decision-making process. At a minimum, the conversion decision-making process should address the following issues:

Fiduciary issues:

a. The board's due diligence process should include a review of (1) customers' needs and how the conversion meets these needs, (2) any potential legal and other risks, (3) a stated reason to support the conversion, and (4) a method for obtaining customer approval (see points (c) and (d) below).

b. The bank should address all related fiduciary issues in its written policies, including conflict of interest issues concerning the need for, and prudence of, converting CIF's into mutual funds, and the reasonableness of the ongoing investment.

   Internal policy should require investments in proprietary funds to be evaluated on the same basis as any other investment product and proprietary funds should meet a bank's own minimum investment selection standards.

   There is an additional concern when banks operate both proprietary mutual funds and CIF's. The investment of trust accounts in proprietary mutual funds that under perform own bank CIF's is troubling, since banks that operate proprietary mutual funds have additional monetary incentives (which are unavailable in CIF's) to invest trust accounts in the funds. In such cases, the fiduciary should document the rationale for investing trust accounts in proprietary mutual funds when CIF's with similar or identical investment objectives and strategies are available.

   Even when permitted by statute, these transactions should be made in good faith. The fact that such investments are allowed (permissive authority) does not relieve the fiduciary of its "duty of care and skill" in the investment selection process. A failure to properly address all conflict of interest and investment prudence issues casts doubt on whether the fiduciary has satisfied the traditional fiduciary duty of undivided loyalty, and could lead to litigation and loss.

c. When necessary under local law or the governing instrument, banks should obtain the consent of CIF participants to convert their CIF units into mutual funds. Under IRC Section 584(h), "substantially all" (which was undefined at the time of this writing) CIF assets must be transferred into the mutual fund.

d. Accounts not participating in the conversion due to customer non-consent, prohibition within governing instruments, or prohibition under local law, should be provided reasonable investment alternatives consistent with the governing account instrument.

e. Investment in the mutual fund should also meet the tests of loyalty and prudent investment management.

One such test is to compare the consistency of the mutual fund's investment objectives with the governing instruments of the accounts converted. When converting from a CIF to a mutual fund the investment objective could change, and what was once a suitable investment for an account may become inappropriate. Another consideration is when a proprietary mutual fund's performance lags comparable, but unaffiliated, alternative investments.

Refer to Subsection F.4.a of Section 3 for additional guidance regarding proprietary mutual fund investments.

Regulatory issues:

a. Where required, the bank should: (1) obtain the consent of its State regulatory supervisor to convert CIF's into mutual funds, and/or (2) provide it formal pre-conversion notification. At the time of this writing, institutions supervised by the FDIC, FRB, and OCC were not required to obtain the consent of state authorities or notify state authorities of planned CIF conversions.

b. The bank should comply with all securities law requirements, including the registration of the mutual fund. If a bank subsidiary is involved in operating a mutual fund, it should also register as an investment adviser and, as needed, as a broker/dealer, in addition to the mutual fund registration.

c. The bank should determine whether it is permitted to receive both fiduciary fees and proprietary mutual fund servicing fees under local law and the governing instruments. Fiduciary fees and mutual fund servicing fees should be reasonable, and consistent with local law and the governing instrument.

   One of the more complex issues involving the operation of proprietary mutual funds is the charging of fees. Virtually all states have enacted statutes expressly authorizing a bank fiduciary to invest trust assets in the shares of a mutual fund for which the bank, or affiliate, performs services and receives reasonable compensation. Some states require that the fiduciary offset its mutual fund fee or its trust administration fees by an amount that corresponds to the bank's compensation for performing investment advisory and/or other services for the mutual fund. If permitted to receive fees for both trust fiduciary services and for the services performed for the proprietary mutual fund, all fees should be reasonable and disclosed to the customer, especially upon the conversion of a common trust fund to a mutual fund. There may also be other state requirements regarding disclosures, as well as investment restrictions.

d. The bank should provide participating accounts an initial prospectus of the mutual fund, and all necessary disclosures under Federal and State securities and banking laws. Participating accounts should continue to receive any prospectus and other disclosures required under these laws.

L.4. ERISA Considerations of Conversion

The conversion of a CIF to a mutual fund does cause ERISA concerns - in particular problems related to the prohibited transactions restrictions in Section 406 of ERISA. Section 406(a) of ERISA prohibits transactions between a plan and a party-in-interest. Section 406(b) prohibits transactions between a plan and a fiduciary with respect to a plan. Therefore, whenever plan assets are transferred to a mutual fund to which a fiduciary or party-in-interest provides services, or whenever a fiduciary or party-in-interest receives compensation as a result of a plan's investment in a mutual fund, the prohibited transaction rules should be considered.

There are two outstanding ERISA class exemptions to help guide such conversion activity.

1. Cash-to-Cash - Pursuant to Section 408 of ERISA, the Department of Labor issued Prohibited Transaction Class Exemption (PTE) 77-4 which provides an exemption from the prohibited transaction rules of ERISA, and the Internal Revenue Code, for the purchase of shares of a mutual fund for which the bank or its affiliates act as investment advisor. In applying PTE 77-4, the DOL requires banks to: (1) obtain the approval of an independent fiduciary, (2) provide disclosures to participating accounts, (3) obtain written consent for the conversion, and (3) adjust fees to ensure a double fee is not charged to accounts invested in proprietary mutual funds. These are in addition to the general supervisory concerns addressed in Subsection L.3. In Advisory Opinion 94-35, the DOL interpreted class exemption PTE 77-4 to apply only to "cash" (cash-to-cash) conversions which liquidate CIF assets and purchase shares of the mutual fund with the proceeds from the liquidation. In other words, the prohibited transaction exemption would not be applicable to conversions of "in kind" (asset to asset) transfers.

2. In-kind - Pursuant to Section 408 of ERISA, the Department of Labor issued PTE 97-41, which permits an employee benefit plan (the Client Plan) to purchase shares of a registered investment company (the Fund) that also serves as a fiduciary of the Client Plan. The investment advisor for the Fund may be a bank or plan advisor registered under the Investment Advisors Act of 1940. The exemption pertains to the exchange for plan assets transferred in-kind to the Fund from a CIF maintained by the Bank or Plan Advisor. It involves a complete withdrawal of a Client Plan's assets from the CIF.

   In applying PTE 97-41, the DOL requires banks to follow minimum guidelines. Additional information is found in Section 5 of the manual, Subsection H.7.f(10). These are in addition to the general supervisory concerns addressed in Subsection L.3.

The failure to convert the CIF within the confines of the proper exemption generally results in the purchase of proprietary mutual fund shares being considered a prohibited transaction under Section 406 of ERISA.

M. Mutual Fund and CIF Merger Rules

Sections 17(a)(1) and (2) of the Investment Company Act of 1940 restrict merger activities of registered mutual funds with affiliated funds (registered mutual funds or unregistered CIF's). To provide guidance in this area, the SEC issued Rule 17a-8, Mergers of Affiliated Companies (17 CFR 270.17a-8).

M.1. SEC Rule 17a-8

SEC Rule 17a-8, Mergers of Affiliated Companies permitted the merger of affiliated funds, if the funds were affiliated solely because they had common investment advisers, officers, and/or directors. However, the SEC expanded Rule 17a-8 in 2002 to include all affiliated funds regardless of the nature of their affiliation. In addition, the amended rule provides an updated set of requirements that need to be met in order to qualify for Sections 17(a)(1) and (2)exclusion. Mergers that do not meet Rule 17a-8 must be presented to the SEC for review on a case-by-case basis.

The purpose of the change was to expand the scope of Rule 17a-8 to more funds and thereby reduce the burden of obtaining Commission approval for mergers that presented little risk of overreaching.

SEC Rule 17a-8 governs mergers between affiliated mutual funds and also mergers between mutual funds and unregistered bank CIF's. The updated rule provides the following:

Board review

Mutual fund boards must thoroughly review merger transactions and their terms. Each mutual fund's board - including a majority of disinterested directors - must determine that the merger is in the best interests of the

mutual fund and will not dilute the interests of shareholders. Directors must request and evaluate any information reasonably necessary to their determinations, and give appropriate weight to all pertinent factors in making their findings under the rule, and in fulfilling the overall duty of care they owe to the fund's shareholders. According to the SEC, in making their determination, boards should consider relevant factors including:

- Any fees or expenses that will be borne directly or indirectly by the fund in connection with the merger;
- Any effect of the merger on annual fund operating expenses and shareholder fees and services;
- Any change in the fund's investment objectives, restrictions, and policies that will result from the merger; and
- Any direct or indirect federal income tax consequences of the merger to fund shareholders.

Shareholder approval

The acquired fund must have shareholder approval, if the merger materially alters the investment held by the fund shareholders.

SEC Rule 17a-8 as amended, requires a majority of the shareholders of the acquired fund to approve the merger if:

- Any policy of the acquired fund that under Section 13 of the Exchange Act could not be changed without a vote of a majority of its outstanding voting securities is materially different from a policy of the acquiring fund;
- The acquiring fund's advisory contract is materially different from that of the acquired fund, except for the identity of the funds as parties to the contract;
- After the merger, directors of the acquired fund who are not interested persons of the acquired fund and who were elected by its shareholders will not comprise a majority of the directors of the acquiring fund who are not interested persons of the acquiring fund; or
- After the merger, the acquiring fund will be authorized to pay charges under a plan that provides for use of fund assets for distribution ("rule 12b-1 plan") that are greater than charges authorized to be paid by the acquired fund under such a plan.

Unregistered CIF

Rule 17a-8 was expanded to permit mutual funds to merge with affiliated CIF's, provided that the survivor is a registered investment company. The SEC had written no-action letters to mutual funds seeking to merge with CIF's. When the SEC revised Rule 17a-8, it warned that mutual funds engaging in mergers on or after the compliance date of the final rule (October 25, 2002) should not rely on the no-action letters, but must either comply with the final rule or obtain an exemption from the SEC.

The SEC also requires that the board of directors of a mutual fund that merges with a CIF, in making its determination that the interests of the fund's shareholders will not be diluted as a result of the merger, approve the procedures for valuation of the securities (or other assets) that the unregistered entity will convey to the fund. These procedures must provide for the preparation of a report by an independent evaluator that sets forth the fair market value of the assets for which market quotations are not readily available. The independent evaluator's report must be included in the records of the merger.

Record Retention

Rule 17a-8 contains a requirement that each investment company that survives the merger preserve written records that document the merger and its terms. The records must include, among other things, the minute books setting forth the determinations of the funds' boards and the bases for those determinations, any

supporting documents provided to the directors in connection with the merger, and documentation of the prices at which securities were transferred in the merger.

The recordkeeping requirement ensures that examiners have adequate information to assess the merging funds' compliance with the rule.

N. Other Pooled Investment Vehicles

Below are examples of other types of pooled investment vehicles. The information presented is generic, since each institution can design the product to meet the needs of its clients.

N.1. Master Deposit Accounts

A master deposit account is a single interest-bearing deposit account in which the temporary funds of individual trust accounts are commingled. The master deposit account is often a money market deposit account of the fiduciary institution. Only deposits are involved, no other types of assets are held in a master deposit account. The number of trust accounts invested in and the balance of the master deposit account may vary from day-to-day. This is not a common or collective investment fund. The concerns with a master deposit account include, management's ability to:

- identify the amount of funds attributable to each trust account invested in the master deposit account,
- ensure that the funds of each trust account is not left in the master deposit account as a long term investment,
- determine how FDIC insurance applies to the trust account invested in the master deposit account, and
- identify conflicts of interest.

N.2. Wrap Accounts, Also Known as Asset Allocation Programs

This may be considered a pooled investment vehicle, even though assets of individual accounts are not necessarily pooled. By definition, these are accounts where a money manager (trust department) invests and manages a group of investments for a set annual fee. The term wrap comes from the idea that the customer pays a single fee for services, rather than a fee for individual trades. The fee may be a flat fee or based upon the market value of the individual account. There are two general types of wrap accounts - "traditional", comprised of a combination of securities in order to achieve a specific investment goal, and "mutual fund", comprised of a combination of mutual funds in order to achieve a specific investment goal. In a wrap account, a customer's funds are invested according to pre-established guidelines, often in the form of an asset allocation model.

For example, a client's objective may be aggressive growth and the institution has developed an asset allocation program using mutual funds or stocks to achieve this objective. The model is periodically adjusted. When the model is adjusted the client's holdings are automatically adjusted to match the model.

The pooling aspect occurs because there are a number of accounts in the program. Since all of the accounts invested in the program are adjusted at the same time, it may appear that management has created a nonregistered mutual fund made up of discretionary accounts. The appearance is further enhanced if the customer does not have the ability to adjust the investment mix, or if the wrap account agreement delegates full investment authority to the fiduciary.

Many departments employ asset allocation models to administer the majority of their discretionary trusts in order to gain economies of scale in asset management. The mere existence of asset allocation models does not indicate that the department is offering wrap accounts and could therefore be operating a nonregistered mutual fund.

SEC regulation 270.3a-4 provides guidance on wrap accounts and a "non-exclusive" safe harbor against inadvertently operating a nonregistered mutual fund.

Key provisions of the safe harbor include:

- provisions for individualized management of client accounts
- specific initial and ongoing client contact
- the ability of the client to impose reasonable restrictions on investments
- quarterly account statements
- client retention of ownership of the securities

If the provisions are met such accounts offered by the department will not be deemed a mutual fund. There are also exceptions if all provisions of the "non-exclusive" safe harbor are not met.

N.3. Private Equity Fund of Funds

A private equity fund of funds typically invests directly in private companies in one of several formats. A fund of funds is a general partnership that aggregates investor capital and provides professional selection and management of a portfolio of private equity funds. The formats include venture capital, buyouts, and mezzanine investments. Each fund will have its own investment objective, like a mutual fund, and a fund manager. Individuals often choose these funds when they want to passively invest in private equities.

Most private equity funds are not registered with the SEC under the Investment Company Act of 1940 (1940 Act). They are exempt from registering under the 1940 Act provided they meet specific restrictions. The exemptions from registration are found in Sections 3(c)(1) 100-Person Fund and 3(c)(7)-Qualified Purchaser Fund of the 1940 Act.

- The 100-Person fund is limited to 100 or fewer beneficial owners (partners) and may not be made available to the general public. One of the beneficial owners will be the general partner, for example the bank, and the remaining will be limited partners. It is also limited to "accredited investors". An "accredited investors" is generally defined as a person having a net worth of at least $1 million or income for two years of at least $200,000. Even though not required to register under the 1940 Act, the private equity fund is still subject to the Act's limitation on performance-based compensation (fees) does apply.

- The Qualified-Purchaser fund does not have the 100-person limit, but may only be purchased by "qualified purchasers" and may not be made available to the general public. Generally, the term "qualified" means an individual or married couple having at least $5 million in investments. Certain trusts, even with smaller amounts under management, may also invest, provided that investments are made by a "qualified purchaser" and the trust was not formed for the purpose of participating in the fund. This fund type is limited to 500 partners.

In 1999, the SEC issued guidance on a number of issues involving Sections 3(c)(1), 3(c)(7), and 2(a)(51)(A) of the 1940 Act. The SEC Letter Regarding Private Investment Companies (Private Collective Funds) under ICA of 1940 is located in Appendix G.

N.4. Bank Managed "Pooled Income Funds" Organized by Outside Organizations

"Pooled Income Funds" are defined under IRC Sections 642(c)(3) and 642(c)(5). These pooled funds consist of charitable gifts from donors which are maintained in a commingled investment fund by organizations described in IRC Section 170(b)(1)(A), including churches, educational institutions, hospitals, etc. The securities law exemptions for these funds are contained in: Section 3(a)(4) of the Securities Act of 1933, Section 3(a)(12)(A)(v) of the Securities Exchange Act of 1934, and Section 3(c)(10)(B) of the Investment Company Act of 1940.

Banks may be appointed as administrator or investment manager for these funds. The funds are not treated as bank CIF's under Federal tax and securities laws, nor operated under CIF requirements. Banks should not operate "Pooled Income Funds" as their own CIF's. To be operated in compliance with, and fall under the exemptions of, Federal tax and securities laws, these funds must be established, sponsored, and held in trust by the outside organization under a written governing instrument. Banks may, however, "manage" the portfolios of the pooled funds for outside organizations in the capacities of

administrator, investment advisor, or investment manager.

An assessment of the management of "Pooled Income Funds" typically includes a

1. determination of management's familiarity with applicable laws,

2. review of the fund's governing documents and management's conformance with applicable provisions,

3. review of documentation attesting to the charitable organization's qualification under IRC 501(a) and/or its authority to offer the funds under IRC Section 170(b)(1)(A), and

4. review of the organization's corporate authority, or bylaws, enabling it to establish such a fund.

Banks lacking such documentation, or awareness of applicable laws, should be advised to obtain the documentation and seek qualified counsel. As with all other fiduciary matters, banks lacking expertise should be cautioned against continuing to offer these services until they obtain ample working knowledge of the product offered.

N.5. Regulation D Exempted Securities Offerings

[Rules Governing the Offer and Sale of Securities Without Registration Under the Securities Act of 1933 (the Act)]

The SEC adopted Regulation D under the Securities Act of 1933 (17 C.F.R. 230.501 to 508) to facilitate the application of both the nonpublic offering exemption under Section 4(2) of the Act, and the "small offering" exemption under Section 3(b) of the Act. Regulation D (described in more detail below) is intended to be a basic element in a uniform system of Federal and State limited offering exemptions consistent with the provisions of Sections 18 and 19(c) of the Act (involving state jurisdiction over securities transactions, and Federal and State coordinated regulation). In those states that have adopted Regulation D, or any version of it, compliance with state law is also required.

Regulation D affords banks the opportunity to offer pooled investment funds without having to register the funds as securities under the act. However, banks need to be aware that the funds themselves (1) continue to be viewed as securities by the SEC, and (2) may still come under the definition of a mutual fund ("investment company") under the Investment Company Act of 1940 (1940 Act).

The regulation provides an exemption from the Act's Section 5 securities registration requirements under very specialized circumstances.

- The regulation exempts issuers from registering certain securities offerings. It is available only to the issuer of the securities. It is not available to any affiliate of the issuer, or any other person engaged in selling of the securities. Caution: The exemptions apply only to the transactions in which the securities are offered or sold by the issuer, not to the securities themselves.

- It prohibits the offer or sale of these securities by means of any general solicitation or advertising.

- It limits the resale of the securities without registration. Use of the regulation is not available to any issuer for any chain of transactions which, although technically in compliance with the regulation, is viewed by the SEC as a method or scheme for evading registration under the Act. Issuers which continuously sell investment products under Regulation D, and which establish a new investment product each time the current product reaches regulatory limits, may be viewed by the SEC as evading securities registration laws.

Securities offered and sold outside the U.S. in accordance with Regulation S (17 C.F.R. 230.901 to 904 - rules governing securities transactions made outside the U.S.) do not have to be registered under the Act. Transactions in accordance with Regulation S, even where coincident with Regulation D transactions, are not counted towards the number of

purchasers under Regulation D.

Properly applied, Regulation D permits securities issuers (including banks) to issue a security which:

1. does not have to be registered under Federal securities laws, and
2. does not have to be established and operated as a Regulation 9.18 CIF.

Therefore, some banks have used the exemptions afforded under Regulation D to collectively invest accounts which would not otherwise be permissibly invested in Regulation 9.18 CIF's, including, but not limited to, agency accounts and IRAs.

To avoid both securities registration and mutual fund treatment under Federal securities laws, Regulation D must be applied in concert with investment company exemptions allowed under Section 3(c)(1) of the 1940 Act:

- For purposes of the exemption categories in SEC Rule 505 (limited offers and sales of securities not exceeding $5 million) and Rule 506 (limited offers and sales without regard to the dollar amount of offering), Regulation D limits ownership to 35 investors plus an unlimited number of "Accredited Investors".
- Section 3(c)(1) of the 1940 Act limits ownership to 100 investors.
- Therefore, banks wishing to avail themselves of these exemptions must limit investors to no more than 100, with no more than 35 of that number being non "Accredited Investors."

In addition to restrictions on the number and sophistication of investors, Regulation D imposes numerous restrictions and requirements upon the issuer. Fluency with: Federal securities laws, current and past SEC positions on securities and mutual fund exemptions, Internal Revenue Code exemptions relating to pooled funds, trusts, and qualified employee benefit plans, Regulation 9.18, and applicable local securities and tax laws, is of paramount importance for any potential issuer of securities under these regulations.

The operation of such investment products requires a high degree of technical sophistication. Consequently, examiners encountering investment pools that have purportedly been established under Regulation D should review the following:

- Management's due diligence analysis of the product. Banks that have not performed a due diligence analysis should be cautioned.
- Outstanding legal opinions. Prior to establishing such funds, bank management should seek and obtain the written advice of qualified securities counsel. Examiners should recommend that management obtain a legal opinion from counsel familiar with such matters before selling additional participations in existing funds and before creating any additional funds.
- SEC No-Action Letter. Only by obtaining a letter can management be certain that their product conforms to Federal securities law requirements and meets with SEC approval.

Failure to comply with Federal securities laws may result in fines and other enforcement action by the SEC. Further, failure to qualify under both securities and tax laws could result in significant monetary losses to the fund, its investors, and ultimately, the bank.

O. Bank as Investment Adviser to CIF's and Mutual Funds

O.1. Interagency Policy Statement

font face="arial, helvetica, sans-serif" size="2">A bank may serve as the investment advisor for affiliated or non-affiliated pooled investment vehicles (CIF's, mutual funds, or other pooled investments). If a bank is advising registered mutual funds, the bank must register and comply with the Investment Advisors Act of 1940. Additional information is provided in Appendix D, Bank as Investment Adviser.

Transactions between a bank and its advised funds are restricted by the following regulations: 23A and 23B of the Federal Reserve Act, OCC Regulation 9, the Investment Company Act of 1940, the Investment Advisors Act of 1940, and ERISA. The regulatory restrictions and prohibited transactions address conflict of interest and self-dealing.

On January 5, 2004, The Federal Bank Regulatory Agencies issued a joint Interagency Policy on Banks/Thrifts Providing Financial Support to Funds Advised by the Banking Organization or its Affiliates. The purpose of the Policy Statement was to alert bank directorate and management to the safety and soundness implications and legal impediments to a bank providing financial support to investment funds advised by the bank, its subsidiaries or affiliates. The Policy Statement was issued in response to the elevated market volatility risk, credit risk, and interest rate risk present in advising money market mutual funds and other investment funds. The Policy Statement, located in Appendix G, provides risk management policy and procedural guidance for bank investment advisory activities.

P. Overview of Federal Laws

The operation of bank's pooled investment vehicles is directly linked to Federal securities, internal revenue, and banking laws. Failure to operate in conformity with the laws may jeopardize or cause the loss of securities and/or tax-exemptions to the collective fund or other pooled investment, its units of participation and, ultimately, its investors (trust accounts). Any losses sustained by investors by reason of a bank's failure to comply with these laws, whether through negligence or incompetence, would be the responsibility of the bank, both as a fiduciary, and as the issuer and operator of the pooled investment vehicle. Excerpts and summaries of some of the major applicable Federal securities and tax laws, regulations, and rulings follow.

P.1. Federal Securities Law

Federal securities laws empower the SEC to investigate any person or institution, including banks, suspected of violating Federal securities laws and SEC rules and regulations. The SEC has the authority to issue cease and desist orders, bring action in Federal courts to issue injunctions, impose monetary penalties on securities laws violators, and to bar individuals from serving as officers or directors of public companies. The SEC also has the authority to revoke licenses and impose civil money penalties in administrative proceedings against broker/dealers, municipal securities broker/dealers, government securities broker/dealers, transfer agents, and clearing agencies. Failure to adhere to Federal securities laws governing the operation of common trust funds, and tax and banking laws tied to securities law compliance, may not only result in the loss of a fund's exempt status under these laws, but also fines and censures against banks and bank officers administering the funds.

P.1.a Securities Act of 1933 (1933 Act):

One of the primary purposes of the Securities Act of 1933 (1933 Act) is the regulation of interstate securities transactions. The 1933 Act accomplishes this by: defining what constitutes a security; requiring the registration and regulation of securities; and, regulating interstate securities transactions. Unless a specific exemption is available, a "security" must be registered under the 1933 Act. Among other types of investments, a mutual fund, or the sale of participations in a pooled portfolio of investments, is regulated as a "security."

Section 3(a)(2)	Exempted Securities
	Section 3(a)(2) [Common Trust Funds - 9.18(a)(1) Funds - Personal Trust Accounts] Funds maintained by a bank for the investment of assets contributed thereto by the bank in its capacity as trustee, executor, administrator, or guardian.

_Section 3(a)(2)(A)
[Collective Investment Funds - 9.18(a)(2) Funds - Employee Benefit Plans]
Funds maintained by a bank which interest is issued in connection with a stock bonus, pension, or profit sharing plan, which meets the requirements for qualification under Section 401 of the IRC.

_Section 3(a)(2)(C)(ii)
[Collective Investment Funds - 9.18(a)(2) Funds - Keogh Plans]
Funds, exempted by the Commission, which interest is issued in connection with a stock bonus, pension, or profit sharing plan which covers employees who are employees within the meaning of Section 401(c) of the IRC.

_Section 3(a)(4) Exempted Security

[Non-Bank-Operated Commingled Investment Funds]
"Pooled Income Funds" maintained by charitable organizations operated in conformance with IRC Section 642(c)(5).

_Section 3(a)(11) Intrastate Exemption

[Collective Investment Funds - 9.18(a)(2) Funds - Keogh Plans]
Intrastate exemption for securities sold only to persons of a single state by an issuer incorporated and doing business in the same state.

_Section 3(b) Small Offering Exemption

SEC jurisdiction for ruling on securities registration exemptions for issues not exceeding $5,000,000.

_Section 4(2) Exempted Transactions

Securities registration exemption for transactions by an issuer not involving any public offering.

_Section 5 Registered Securities

Registration requirement for securities sold interstate.

_Section 18 State Jurisdiction Over Securities Transactions

Affirmation of state jurisdiction over securities and persons involved in securities transactions (preserving so-called "Blue Sky" laws

supervising securities broker/dealers, and securities transactions at the state level).

Section 19(c) Coordination of Federal and State Securities Regulation

Declaration of policy to cooperate and coordinate securities regulation with state authorities.

P.1.b. SEC Rule 180 (Sophisticated Investor Rule) under the 1933 Act :
17 C.F.R. 230.180 SEC Rule 180 provides what is often termed the "sophisticated investor" exemption for Keogh accounts. To qualify, the employer (plan sponsor):

a. must be a law firm, accounting firm, investment banking firm, pension consulting firm, or investment advisory firm, the nature of whose business requires a familiarity with financial matters which would reasonably be expected to permit the employer to adequately represent its employees, or

b. must obtain expert financial advice before adopting the plan from an entity which is independent of the bank operating the CIF.

In addition, to qualify for the exemption, the Keogh plan must only cover employees of a single employer or employees of interrelated partnerships. For more information, refer to Keogh Account information in Section H.2 and Appendix G, 17 C.F.R. Section 230.180- "Sophisticated Investor Rule".

P.1.c. Regulation D under the 1933 Act:
17 C.F.R. 230.501 to 508 : Regulation D
[Summary of Rules Governing the Offer and Sale of Securities Without Registration Under the Securities Act of 1933]

The rule provides exemption from Section 5 securities registration requirements for issuers of small nonpublic offerings. It also prohibits the offer or sale of securities by means of any general solicitation or advertising, and provides for limited resale of the securities (by the issuers) without registration.

The securities themselves, while exempt from securities registration when offered for sale by the issuer: (1) continue to be viewed as securities by the SEC and (2) may still come under the definition of a mutual fund ("investment company") under the Investment Company Act of 1940 (1940 Act).

To avoid both securities registration and mutual fund treatment under Federal securities laws, Regulation D must be applied in concert with investment company exemptions allowed under the 1940 Act (Section 3(c)(1) of the 1940 Act). More information can on Regulation D can be found in Subsection N.5. Regulation D Exempted Securities Offerings.

For purposes of the exemption categories in SEC Rule 505 (limited offers and sales of securities not exceeding $5 million) and Rule 506 (limited offers and sales without regard to the dollar amount of offering), Regulation D limits ownership to 35 investors plus an unlimited number of "Accredited Investors". However, Section 3(c)(1) of the 1940 Act limits ownership to 100 investors. Therefore, banks wishing to avail themselves of these exemptions must limit investors to no more than 100, with no more than 35 of that number being non "Accredited Investors".

Section 230.504 Exemption for Securities Offerings Not Exceeding $1 million

Section 230.505 Exemption for Securities Offerings Not Exceeding $5 million

Section 230.506 Exemption for Securities Offerings Without Regard to Dollar Amount of Offering

P.1.d. Securities and Exchange Act of 1934:

The Securities Exchange Act of 1934 (1934 Act) regulates the interstate trading of securities in the marketplace. The 1934 Act also provides for ongoing public dissemination of securities disclosures, the regulation and supervision of securities exchanges and marketplaces, and the regulation and supervision of securities brokers and dealers.

Section 3(a)(12) Exempted Securities

Section 3(a)(12)(A)(iii)

[Common Trust Funds - 9.18(a)(1) Funds - Personal Trust Accounts] Funds maintained by a bank for the investment of assets contributed thereto by the bank in its capacity as trustee, executor, administrator, or guardian.

Section 3(a)(12)(A)(iv) and (C)(i)

[Collective Investment Funds - 9.18(a)(2) Funds - Employee Benefit Plans] Funds maintained by a bank which interest is issued in connection with a stock bonus, pension, or profit sharing plan which meets the requirements for qualification under Section 401 of the IRC.

Section 3(a)(12)(C)(iii)

[Collective Investment Funds - 9.18(a)(2) Funds - Government Plans] Funds maintained by

a bank which interest is issued in connection with a governmental plan as defined in Section 414(d) the IRC.

Section 3(a)(12)(C)(iii)(I)

[Collective Investment Funds - 9.18(a)(2) Funds - Keogh Plans] Funds, exempted by the Commission, which interest is issued in connection with a stock bonus, pension, or profit sharing plan which covers employees who are employees within the meaning of Section 401(c) of the IRC.

Section 3(a)(12)(A)(v) Exempted Security

[Non-Bank-Operated Commingled Investment Funds] "Pooled Income Funds" maintained by charitable organizations operated in conformance with IRC Section 642(c)(5).

P.1.e. Investment Company Act of 1940:

The Investment Company Act of 1940 (1940 Act) provides for the regulation of "investment companies," including mutual funds. Investment companies are issuers of securities which are engaged in the business of investing, trading, and holding securities. The sale of interests in a pool of investments may, under the 1940 Act, require the registration and regulation of the "investment company," or issuer of securities.

Section 3(c) Investment Company Exemption

Section 3(c)(1)

Any issuer whose outstanding securities are beneficially owned by not more than 100 persons, and which refrains from making a public offering of its securities.

Section 3(c)(3)

[Common Trust Funds - 9.18(a)(1) Funds - Personal Trust Accounts]
Any bank which maintains a common trust fund for the investment of assets contributed thereto by the bank in its capacity as trustee, executor, administrator, or guardian.

Section 3(c)(11)(A)

[Collective Investment Funds - 9.18(a)(2) Funds - Employee Benefit Plans]
Any bank which maintains a collective trust fund for the investment of assets which are derived solely from a stock bonus, pension, or profit sharing plan which meets the requirements for qualification under Section 401 of the IRC of 1986, or any governmental plan described in Section 3(a)(2)(C) of the Securities Act of 1933, or both.

Section 3(c)(11)(B)

[Collective Investment Funds - 9.18(a)(2) Funds - Government Plans]
Funds maintained by a bank which interest is issued in connection with a governmental plan as exempted from securities registration by Section 3(a)(2)(C) of the Securities Act of 1933.

Section 3(c)(10)(B)

[Non-Bank-Operated Commingled Investment Funds]
"Pooled Income Funds" maintained by charitable organizations operated in conformance with IRC Section 642(c)(5).

P.1.f. Investment Advisers Act of 1940:

The Investment Advisers Act of 1940 (Advisers Act) requires the registration and supervision of investment advisers, including those who advise "investment companies" as defined in the Investment Company Act of 1940. Prior to the passage of the Gramm-Leach-Bliley Act of 1999 (GLBA), banks were expressly exempted from the Advisers Act. Refer to Section 202 for the revised definitions in the Investment Advisors Act.

Section 202(a)(2) Definition of a Bank

A bank is defined as a banking institution organized under the laws of the United States, a member of the Federal Reserve System, or any banking institution or trust company doing business under the laws of any state or of the United States, a substantial portion of its business consisting of receiving deposits or exercising fiduciary powers similar to those

permitted to national banks.

Section 202(a)(11) Investment Adviser Exemption

Pre-GLBA, the definition of investment adviser did not include a bank, or any holding company, as defined in the Bank Holding Company Act of 1956, which is not an investment company.

Post-GLBA,, the revised definition of an investment advisor now includes banks and bank holding companies that provide investment advice to registered mutual funds. However, the bank exemption allowing for investment advisory services to individuals and those other than mutual funds (registered investment companies) continues to be intact (no registration required).

Note: Per Office of Thrift Supervision (OTS), the bank exemption of this particular section does not apply to thrifts.

P.2. Federal Banking Law

P.2.a. Banking Act of 1933:

The Banking Act of 1933 (codified into various sections of Title 12 of the U.S. Code), commonly referred to as the Glass-Steagall Act (Act), was intended to separate commercial banking activities from investment banking and securities activities. It generally prohibited banks from directly engaging in securities activities. However with the passage of the GLBA many of the prohibitions have been removed.

Section 16 Codified to 12 U.S.C. Section 24 Seventh

Prohibits a national bank from underwriting, buying or selling securities for its own account. National banks are permitted to invest in marketable debt obligations for their own account, which are not in excess of 10% of its capital and surplus.

This section is applicable to state member banks by virtue of the Federal Reserve Act. State nonmember banks are not subject to this section, but are subject to similar restrictions under Section 21 of the Act.

Section 21 Codified to 12 U.S.C. Section 378

This section is the only provision of the Act that is directly applicable by its terms to state nonmember banks.

It makes it unlawful for organizations engaged in the issuing, underwriting, selling, or distributing of securities to engage in the business of receiving deposits. These restrictions also apply to banks. In *Board of Governors of the Federal Reserve System v. Investment Company Institute,* the Supreme Court ruled, however, that the restrictions do not apply to non-banking affiliates of banks (450 U.S. 46, 58, 59 n.24 (1981)). This section allows state nonmember banks to purchase or sell securities for their own accounts. However, Section 24 of the Federal Deposit Insurance Act (12 U.S.C. Section 1831a) made state nonmember banks generally subject to the same limitations as apply to national banks, thereby limiting their advantage over national and state member banks.

Section 32 **Codified to 12 U.S.C. Section 78**

The Gramm-Leach-Bliley Act repealed Section 20 of the Banking of Act of 1933. Refer to Appendix D for additional details.

This section did not apply to state nonmember banks.

P.2.b. Title 12 C.F.R. 9.18

Regulation 9.18

National Banks derive their powers from the National Bank Act, enacted in 1863. The trust powers of national banks are set forth in 12 U.S.C. Section 92a. Initially, national banks were conferred the authority to act in a fiduciary capacity under Section 11(k) of the Federal Reserve Act of 1913. As early as 1927, banks were sponsoring collective investment funds. However, formal Federal bank regulation of bank-sponsored funds was not introduced until the Federal Reserve Board issued Regulation F in 1937. The modern equivalent of collective funds emerged a year earlier when Congress amended Federal tax laws, first granting tax-exemption to the funds. In 1956, the IRS extended the scope of CIF tax-exemption to include CIF's of retirement plans qualified under IRC Section 401. Regulation 9.18 emerged as the successor to Regulation F, when the Congress transferred CIF supervisory authority from the Federal Reserve Board to the OCC in 1962. The operation of CIF's in state nonmember banks rely on IRC Section 584 to achieve tax-exemption and must comply with OCC regulations. These CIF's are usually limited to personal trust CIF's, as compliance with OCC regulations is not mandatory for state nonmember banks operating employee benefit CIF's in compliance with RR 81-100.

P.3. Federal Tax Laws

P.3.a. Internal Revenue Code (IRC)

IRC Section 581 **Definition of "Bank"**

Defines a "bank" for the purposes of IRC Sections 582 and 584. By virtue of this section of the IRC, both banks and nondeposit trust companies are permitted to operate common trust funds.

IRC Section 584 **Common Trust Funds**

Describes requirements and procedures for the operation of bank operated common trust funds. This section primarily pertains to the operation of common trust funds for personal accounts (personal trusts, estates, guardianships, and accounts created under a Uniform Gifts to Minor Act).

Section 584 provides that any CIF which obtains its tax-exempt status from that section of the Code must comply with OCC Regulation 9.18. As a result, FDIC-supervised banks operating CIF's in accordance with the tax-exemption in IRC Section 584 must comply with OCC Regulation 9.18. State or local laws do not exempt state banks from compliance with this provision, as compliance is mandatory to achieve CIF tax-exemption under Section 584.

Banks may also rely on the tax-exempt treatment afforded CIF's by Section 584 when establishing funds exclusively for employee benefit and certain other tax-exempt fiduciary accounts administered in the capacity of trustee.

RR 81-100 **Collective Investment Funds**

This Revenue Ruling applies to the collective investment of trust and agency accounts of employee benefit plans which obtain their tax-exempt status from Section 401 of the Internal Revenue Code, or IRA accounts which obtain their tax-exempt status from Section 408 of the Internal Revenue Code.

IRAs are effectively barred from CIF's and, for all practical purposes, may only be collectively invested in registered mutual funds.

These CIF's are typically established in a form identical to that outlined by OCC Regulation 9.18(a)(2). However, unlike mandatory compliance with OCC Regulation 9.18(a)(1) with respect to personal trust CIF's (by virtue of IRC Section 584), there exists no similar Federal requirement that FDIC-supervised banks comply with OCC Regulation 9.18(a)(2). Unless local law requires state nonmember banks to comply with 9.18(a)(2), that regulation should be regarded as a prudent industry standard and as guidance in the operation of employee benefit CIF's, but not obligatory.

The Revenue Ruling requires: each participating employee benefit plan to adopt the group trust (CIF declaration of trust) itself as part of the plan; that the group trust prohibit CIF assets from being diverted to any purposes other than the exclusive benefit of participating plan beneficiaries; that the group trust prohibit assignment of any CIF assets by any of the participating plans; and that the group trust be established and maintained as a domestic U.S. trust.

IRC Section 642(c) Pooled Income Fund

Pooled funds comprise charitable gifts from donors which are maintained in a commingled investment fund by organizations described in IRC Section 170(b)(1)(A), including churches, educational institutions, and hospitals.

Securities law exemptions for these funds are contained in: Section 3(a)(4) of the Securities Act of 1933; Section 3(a)(12)(A)(v) of the Securities Exchange Act of 1934; and Section 3(c)(10)(B) of the Investment Company Act of 1940. Banks may be appointed as administrator or investment manager of these funds, which are not treated as bank CIF's under Federal tax and securities laws.

IRC Section 761 Partnership

A partnership is defined to include groups, pools, or other unincorporated organizations

through which a business is conducted, including investment activities (such as bank operated CIF's).

IRC Section 6032 Tax Returns for Bank Common Trust Funds

U.S. Treasury Regulation Section 1.6032.1 and IRC Section 6032 require banks (as defined in IRC Section 581) operating CIF's to file annual informational returns with the IRS for each fund established under Section 584 of the IRC. No specific form has been created by the IRS for this purpose. However, Schedule K-1 of Form 1065 (Partner's Share of Income, Credits, Deductions) is typically used to satisfy the reporting requirement.

The return is required to include for each fund participant: name, address, their proportional share of taxable income or losses, and capital gains or losses. This informational return is required, regardless of the taxable income earned during the reporting period. The aforementioned Treasury regulation also requires banks to file a full copy of the CIF's declaration of trust, and any amendments thereto, at least once with the return.

Employee benefit CIF's operated in accordance with RR 81-100, and which derive their tax-exemption under IRC Section 501(a), are not required to file any informational returns with the IRS. However, collective investment funds maintained by a bank, trust company, or similar institution, for the collective investment and reinvestment of assets contributed thereto from employee benefit plans maintained by more than one employer or controlled group of corporations are defined by the Department of Labor as Direct Filing Entities (DFE). Such collective investment funds are required to file DOL Form 5500. The DFE Form 5500 is also an integral part of the annual report of each participating plan. As a result, the administrator of a plan may be subject to penalties for failing to file a complete annual report unless both the DFE Form

5500 and the plan's Form 5500 are properly filed.

Refer to Subsection 5.J.1.and Subsection 5.I.2. for information regarding various reporting requirements.

P.4. State Statutes

Common law places restrictions on commingling. All states and the District of Columbia now have enabling legislation which permits operation of collective funds. In many states, the Uniform Common Trust Fund Act is the *basis* of the enabling legislation that authorizes the operation of CIF's. State law may also include additional requirements, such as a requirement to furnish periodic accountings to a particular court and/or the state supervisory authority.

Trust Examination Manual

Section 8- Compliance/Conflicts of Interest, Self-Dealing and Contingent Liabilities

Table of Contents

Conflicts of interest are discussed throughout the Manual in relation to the other major sections. Conflicts of interest, including self-dealing, are major sources of Contingent Liabilities. These topics are therefore discussed together in this section.

A fiduciary has a duty to avoid conflicts of interest and self-dealing. However, total avoidance is not always possible. Furthermore, while the terms conflicts of interest and self-dealing are somewhat self-descriptive, they should not automatically be equated with exploitation or abuse by the fiduciary. For example, the use of own-bank deposits as a trust investment is by definition a conflict of interest and self-dealing, since the bank is investing funds held as a fiduciary with itself. Yet this action, in itself, is not necessarily abusive or detrimental to the interests of account beneficiaries. Before such investments are determined to be abusive or detrimental, an analysis of the facts surrounding the investment must be made by the examiner.

This section of the Manual is organized into the following parts:

A. Conflicts of Interest
  1. Definition
  2. Management of Conflicts
  3. Management Documentation Standards
B. Self-Dealing
C. Contingent Liabilities
D. Material Nonpublic Information
  1. General Overview and Management Actions
  2. Potential Consequences of Inappropriate Administration
E. Common Instances of Conflict of Interests and Self-Dealing
  1. Fees Other than for the Administration of an Account
    a. Investment in Proprietary Mutual Funds
    b. Receipt of 12b-1 Fees
    c. Receipt of Other Fees from Mutual Funds
  2. Securities-Related Activities
    a. Soft Dollars
    b. Use of Own-Bank or Affiliated Brokerage Service

c. Securities Trading Practices

d. Proprietary Pooled Investment Vehicles

e. Use of Only One Fund Family

f. Research Analyst Affiliate Relationships

g. Proxy Voting

h. Trading During Blackout Periods

i. Advertising Investment Performance

3. Use of Own-Bank or Affiliate Bank Deposits

a. General Overview

b. ERISA, Deposit Insurance, and Pledging

c. Suitability of Own-Bank Deposits

4. Investment in Own-Bank or Affiliate Company Securities

5. Sale or Purchase of Trust Assets to or From the Bank, Bank Insiders, Agents, or Affiliates

6. Investment in Securities Underwritten by Own-Bank or Affiliates

7. Relationships with Outside Service Providers

8. Inter-Account Transactions

9. Multi-Account Transactions

10. Contravention of Terms of the Governing Instrument

a. Ambiguous Language

b. Changing Circumstances

c. Unauthorized Commingling of Assets

d. Nonconforming Investments

e. Failure to Invest

f. Acts Without Consent or Approval of a Co-Fiduciary

11. Privacy

a. Privacy and On-line Banking

12. Prohibitions Against Tying Arrangements

A. Conflicts of interest

A.1. Definition

Conflicts of interest arise when a fiduciary's duty of loyalty to another opposes with other interests of that fiduciary. Chief Judge Cardozo of the Court of Appeals of the State of New York, in an often quoted passage from his opinion in *Meinhard v. Salmon*, 249 N.Y. 458, 164 N.E. 545, 546 (1928), described a fiduciary's duty of loyalty as follows:

"Many forms of conduct permissible in a workaday world for those acting at arm's-length, are forbidden to those bound by fiduciary ties. A trustee is held to something stricter than the morals of the market place. Not honesty alone, but the punctilio of an honor the most sensitive, is then the standard of behavior. As to this there has developed a tradition that is unbending and inveterate. Uncompromising rigidity has been the attitude of courts of

equity when petitioned to undermine the rule of undivided loyalty b the 'disintegrating erosion' of particular exceptions. Only thus has the level of conduct for fiduciaries been kept at a level higher than that trodden by the crowd."

The courts have long held that fiduciary transactions not made at arms-length may be set aside at the request of a beneficiary. This presumes the beneficiary was harmed by such transaction and, therefore, the fiduciary assumes the consequences of that harm. Consequently, a fiduciary effectively underwrites transactions involving conflicts of interest.

A.2. Management of Conflicts

The prudent administration of conflicts of interest includes management's (1) recognition that conflicts of interest exist or potentially exist and (2) assurance that there are sufficient procedural and supervisory guidelines to safeguard against breaches of the fiduciary's duty of loyalty. The type and complexity needed and the depth of the written policies governing conflicts of interest depend upon the nature of trust activities conducted and the likelihood that conflicts of interest will materialize. A typical policy may address any number of the following areas:

- Standards governing employee ethics
- Self-dealing and other conflicts of interest such as:
    - Receipt of fees beyond the trustee's fee
    - Securities related activities
    - Own-bank (and affiliate institution) deposits
    - A dministration of the discretionary purchase, sale, and retention of securities issued by the bank, its affiliates, insiders and their interests
    - Discretionary purchase, sale, or transfer of assets between trust accounts and the bank, its affiliates, or insiders and their interests
    - I nvestment in securities underwritten by own-bank or affiliates
    - R elationships with outside service providers
    - Inter-account and Multi-account transactions
    - Contravention of the terms of the governing agreement
    - Privacy

The use of material nonpublic (inside) information

With the exception of an ethics policy, each of these points is addressed later in this section. An ethics policy typically provides guidance with respect to the acceptance of gifts; serving as (an individual) fiduciary under an appointment in which the bank serves as the corporate fiduciary, extensions of credit from discretionary trusts to directors, officers, and employees of the bank and its affiliates, etc. At a minimum, the Board of Directors should receive prior notification of such activities. The ethics policy should also include guidelines for compliance with state and federal bribery statutes. The FDIC has established guidelines pursuant to the Bank Bribery Amendments Act of 1985 to assist bank employees, officers, agents and attorneys in complying with the law. These guidelines are located in the FDIC Statement of Policy, "Guidelines for Compliance with the Federal Bank Bribery Law".

A.3. Management Documentation Standards

The absence of risk in a transaction does not lessen or mitigate a conflict of interest. For example, investments in own-bank deposits may seem to involve little risk and appear to be an innocuous conflict of interest, but, as can be seen in Subsection 8.E.3, there are numerous considerations in making such an assessment. Where more onerous situations are encountered, fiduciaries must exercise extreme caution in properly discharging their duties. Examples include the purchase or retention of own-institution stock or the sale of a trust asset to a bank insider. Investments of this nature should not be made unless (1) lawfully authorized by the instrument creating the trust relationship, or (2) a court order, local law, or prior written approval has been obtained from all interested parties. The latter option is not always available, as interested parties may include: the unborn, minors or others lacking the legal capacity to approve a transaction, or beneficiaries (whose interests are contingent in some manner) who cannot be identified at the time of the transaction. Furthermore, while retention of such securities when received in- kind may be allowable under a general power of retention (*a*s opposed to retention that is directed by the

instrument or court order), a trustee should exercise caution when making the decision to retain.

Complete documentation supporting management's actions with respect to transactions involving real or potential conflicts of interest, including the prudence of such transactions, is essential and should be readily available. The documentation should include a statement supporting the permissibility of the given transaction, as well as the prudence and suitability for the account involved. It is not unusual for banks to seek court approval for particularly sensitive transactions involving self-dealing or conflicts of interest. Certainly, opinions of counsel provide both guidance and supporting documentation. However, counsel's opinion alone cannot insulate a bank from litigation and loss if management has acted improperly or imprudently.

B. Self-Dealing

Self-dealing always involves a conflict of interest, but not all conflicts of interest involve self-dealing. Self-dealing occurs when a fiduciary is a party to a transaction with itself or its affiliates. For example, in the sale of bank assets to a trust for which the bank is trustee, the bank is both the seller and the purchaser, and so is in fact dealing with itself. Other instances of self-dealing include transactions involving own-bank stock or other own-bank obligations, own-bank deposits, the sale of assets between trust accounts, and the purchase of securities underwritten by the bank, an affiliate or a subsidiary. Dealing with bank insiders is a conflict of interest, but is not self-dealing, though the potential for abuse is no less serious.

A clear statement of law regarding self-dealing was expressed by the U.S. Supreme Court in *Michoud v. Girod*, 11 L.Ed. 1076, 1099:

"The general rule stands upon our great moral obligation to refrain from placing ourselves in relations which ordinarily excite a conflict between self-interest and integrity. . . . It therefore prohibits a party from purchasing on his own account that which his duty or trust requires him to sell on account of another, and from purchasing on account of another that which he sells on his own account. In effect, he is not allowed to unite the two opposite characters of buyer and seller, because his interests, when he is the seller or buyer on his own account, are directly conflicting with those of the person on whose account he buys or sells."

These types of transactions may be set aside (considered null and void), after being brought to the attention of the trustee by the beneficiary or the beneficiary's agent. Generally, a court of law will decide these matters. If set aside, a trustee may be liable for damages resulting from, among other things, depreciation, loss of income, or the cost of lost opportunity. The prohibition against self-dealing applies with equal force to affiliates.

As an additional remedy, a beneficiary may ask a court to remove the administrator of a trust or will i the administrator acted under a severe conflict of interest or engaged in intentional self-dealing.

C. Contingent Liabilities

Certain definite principles and rules governing fiduciaries' actions have been laid down by statutes and court decisions (Common Law). A violation of any of these principles or rules of conduct, or the failure to carry out the terms of the trust instrument or a court order, may constitute a breach of trust and create a contingent liability. Whether a contingent liability becomes an actual liability, in which actual losses are incurred, depends upon the actions of account beneficiaries, the bank, and courts of law.

A breach of trust is a violation by the fiduciary of any duty that a fiduciary owes to a beneficiary. Breaches may occur either by an act of commission or omission. When a breach of trust occurs, the fiduciary is generally charged with: any loss or depreciation in the value of trust assets associated with the breach; any profit earned by the trustee as a result of the breach; or any profit which would have been earned by the account had the breach not occurred. For example, any gains made from trading errors belong to the beneficiary. Conversely, a fiduciary is not liable for any loss or depreciation in the value of trust assets not associated with a breach of trust. This precept recognizes that, when invested, trust principal is at risk and that a fiduciary is not a guarantor of investment results.

One of the primary purposes of examining the trust activities of FDIC-supervised banks is to determine whether the administration of trust accounts has resulted in liabilities against the bank. The liabilities identified are those attributable to the bank, as a result of its actions as a fiduciary, and are not the liabilities of the individual accounts administered. To reflect the degree of likelihood that a contingent

liability may result in a charge to capital accounts of the commercial department, the terms Potential Loss and Estimated Loss are used.

The classification system begins with Contingent Liabilities, increases to Potential Losses, and finally, to Estimated Losses. Note that while the wording of the definitions may appear to suggest an overlap of liabilities, there are no overlapping liabilities among these classifications. While the liabilities assigned to the administration of a particular account may include all three classifications (Contingent Liabilities, Potential Losses, and Estimated Losses), that portion of the liability which is assigned an Estimated Loss classification is not also contained in Potential Losses and/or Contingent Liabilities. Likewise, that portion of the liability that is assigned Potential Loss, is not also contained in Contingent Liabilities. The definition of each category of liability follows:

- Contingent Liabilities represent an estimation by the examiner o the gross possible liability of the institution resulting from the purchase of nonconforming investments for trust accounts, unwarranted retention of nonconforming assets, self-dealing, questionable practices and procedures, or other acts of omission or commission which appear not to comply with the terms of the governing trust instruments or applicable provisions of law, and which on accounting may be subject to objection by interested parties. Until appropriate consents, waivers or releases of liability are obtained from interested parties or no liability is determined to exist by a court of competent jurisdiction, the liabilities are regarded as contingent.

  The Contingent Liability category recognizes the possibility that department actions or omissions of action may, depending on:(1) account circumstances, (2) management's corrective measures, (3) ongoing litigation, and/or (4) future, or as yet unknown events, make uncertain whether losses will ever be sustained by the bank.

- Potential Losses represent the examiner's estimate of those portions of the contingent liabilities that may develop into losses to the institution. The amount of losses indicated is potential rather than definite and fixed, pending resolution of the dispute or settlement of the accounts.

  The Potential Losses category acknowledges that losses have an increased likelihood of being sustained. However, due to some measure of uncertainty, such as: ongoing negotiations with beneficiaries or their counsel, a decision not yet rendered by a court, management's ability to appeal a lower court's ruling, etc., it is not yet certain that losses will be sustained.

- Estimated Losses represent the amount of losses that, in the examiner's opinion, appear certain to be sustained by the institution as a result of its fiduciary activities.

  The Estimated Losses category recognizes the reasonable certainty that a known dollar amount of losses will be, or has been, sustained. In such cases, management has: (1) exhausted all of its legal appeals, or (2 agreed to reimburse an account, or (3) is in some manner, beyond its scope of influence or control, being compelled to reimburse an account or pay a known dollar amount of surcharges, penalties, or damages.

  Examiners are reminded that Estimated Losses should be reflected as a reduction in Part 325 capital in the commercial Report of Examination.

Contingent liabilities are based upon: (1) known facts and circumstances, and (2) the likelihood that the fiduciary will be required to make a monetary reimbursement to an account due to the fiduciary's improper actions, whether intentional or negligent. To effectively and accurately identify potential liabilities, contingent liabilities should not be arbitrary or based on speculation, hunches, or guesswork, but based on all pertinent facts available to the examiner. In determining the existence of contingent liabilities, unlike the assessment of Substandard, Doubtful, and Loss in the commercial Report of Examination, the examiner is not being asked to determine the value of an asset. Rather, it is the examiner's duty to determine whether: (1) the fiduciary acted imprudently or negligently in the administration of a fiduciary account, (2) the fiduciary's imprudent or negligent administration caused demonstrable harm to the account, i.e. the account suffered monetary losses or a depreciation in the value of some of its assets, (3) interested parties have or are expected to petition either the fiduciary or the courts for reimbursement for the harm caused by the fiduciary's imprudence or negligence, or (4) the fiduciary has agreed to reimburse such accounts for the harm the fiduciary has caused as a result of negligent or imprudent administration.

Note: In many cases, the imprudent or negligent administration of an account, including breach of trust,

does not result in contingent liability, potential losses or estimated losses, because the account affected will not have suffered any demonstrable harm by reason of the fiduciary's actions. Examiners must distinguish these instances from those where the fiduciary's actions have caused, or likely will cause demonstrable harm to the account, i.e., actual monetary harm such as the loss of investment principal or the loss of income. Only when the fiduciary's imprudent or negligent administration causes such demonstrable harm will a contingent liability exist. For example, the purchase and/or retention of a non-conforming asset that has not resulted in a monetary loss to an account, is reversible without any monetary losses, and for which no legal action is threatened or pending should not be scheduled as a contingent liability since the account has not suffered any demonstrable harm. Such matters should be described in detail in the Report of Examination, but without any contingent liability assigned. Only those instances where a fiduciary's imprudent or negligent actions have, or are likely to cause an account to suffer monetary losses should be assigned an associated contingent liability.

Examiners should avoid speculating over such questions as: returns on investment, lost opportunities, or what verdict a jury might render. Such speculation is neither the purpose nor the intent of identifying contingent liabilities in the report of examination. The examiner's responsibility is, to the extent possible, to provide a reasonable determination of contingent liabilities.

A meaningful supervisory analysis of the bank's condition is not provided by simply extending the entire dollar value of an investment, the entire dollar value of an account, or the outstanding balance of corporate bonds as contingent liabilities, in place of a reasonable and demonstrable assessment of dollar damages or harm to an account. Nevertheless, where a market value cannot be obtained for an asset because it is of such poor quality, clearly speculative, or of very limited marketability, it is reasonable to extend the book value (cost) of the asset as a contingent liability.

In some situations, a determination of the dollar amount of contingent liabilities cannot be made. Examiners should not refrain from criticizing weaknesses or faulty account administration due to an inability to determine a dollar value of liability. These may include situations where: (1) practices are in contravention of the governing instrument, fiduciary principles, or common law precedents, or (2) the dollar value of damages or potential court surcharges cannot be ascertained because they will not occur until some unknown future date. An example of such a situation would be the structuring of an investment portfolio in a manner favoring current income beneficiaries over remainder men, thus foregoing opportunities for capital appreciation by concentrating investments in fixed income securities. Under these circumstances, the examiner should fully discuss administrative and investment deficiencies, warn management of the inherent risk of loss posed by such practices, and recommend corrective action.

Examiners should be careful when scheduling contingent liabilities arising from pending litigation against the bank in its fiduciary capacity. All litigation should be discussed in some manner in the Report of Examination. The assignment of contingent liabilities with respect to litigation should be based upon: (1) fiduciary management's candid assessment, including the opinion of legal counsel, of the issues subject to the litigation, (2) a sound analysis of the facts and circumstances, and (3) outstanding Division of Supervision Safety and Soundness policies.

D. Material nonpublic information

D.1. General Overview and Management Actions

Insider trading, while not defined by the Federal securities laws, refers to the purchase or sale of securities while in possession of material information that is not available to the general public. Information is generally considered to be material when sufficient to induce a person to either buy or sell a security based on that information, e.g., the information is important to making an investment decision with respect to that security.

Banks may come into possession of material, nonpublic information in a number of ways:

- through information developed as apart of normal lending relationships with large commercial customers;
- by a director or officer sitting on the Board of Directors of an outside company;
- through the financing of tender offers, leveraged buy-outs, and management buyouts; or
- when serving as advisor for private placements and mergers and acquisitions.

In general, trust accounts maintained in FDIC-supervised banks do not invest in corporations for which the commercial department has extended credit. The commercial

department generally lends to local firms, while most trust investments involve either large, national firms or smaller firms that are located outside of the bank's trade area. However, it is possible that a bank could lend to and invest in the same company. This may occur should the bank originate or participate in loans to a national company headquartered in, or with a major facility in, the bank's trade area.

The prohibition against making investment decisions based on material inside information also applies to investments in small publicly traded companies. A bank insider may be aware of material nonpublic information by operation of the first two factors above. Examiners need to be aware of such instances.

Of particular concern is the availability to bank insiders of material inside information concerning the condition of and outlook for the bank itself, or the bank's parent company. It is difficult for a bank insider to be unaware of material changes in his or her own organization. Therefore, the investment in, and trading of, own-bank or parent holding company stock or debt instruments is worthy of particular scrutiny.

Financial institutions should adopt policies and procedures, appropriate to its own circumstances, to prevent the flow of material, nonpublic information from the commercial department to the trust department. Policies and procedures should be established prohibiting the use of material, nonpublic information, when deciding whether to buy or sell securities.

Appropriate procedures may include:

- Denying trust personnel access to commercial credit files;
- Prohibiting trust personnel from attending internal commercial loan meetings;
- Prohibiting bank personnel from serving simultaneously on a trust investment committee and a commercial lending committee; and
- Physically separating trust department personnel from commercial lending personnel.

D.2. Potential Consequences of Inappropriate Administration

The Insider Trading and Securities Fraud Enforcement Act of 1988, which added Section 20A to the Securities Exchange Act of 1934 [15 USC 78t-l], exposes a bank to substantial civil money penalties if an employee is caught trading on insider information and the "control person" has not taken adequate steps to prevent insider trading. Criminal penalties for insider trading have also been substantially increased, both in jail terms and monetary fines. Both the bank and the individual supervising trading activity are also subject to civil penalties should an employee be caught trading on insider information. As such, the bank, in addition to having appropriate written policies and procedures, should also be able to demonstrate that trading activities are adequately supervised and monitored and that its employees have been apprised of the penalties, both civil and criminal, for trading on material, nonpublic information. Adherence to the letter and spirit of Section 344.9 of the FDIC Rules and Regulations will aid the bank in meeting its monitoring responsibilities.

SEC Section 240.14e-3 places similar requirements on the purchase or sale of securities based on material, nonpublic information with respect to tender offers. Refer to the FDIC loose-leaf regulations service under the Miscellaneous Statutes and Regulations tab for further guidance.

SEC Section 240.10b-5 relates to the Employment of Manipulative and Deceptive Devices and provides that it is unlawful for any person to directly or indirectly use any mechanism, make an untrue statement or omission, or engage in any act which would be fraudulent in connection with the purchase or sale of any security. This regulation can be applied to the use of material inside information in making investment decisions for accounts. For instance, if the bank acts on material inside information in making investment decisions, then the actions could be considered manipulative and deceptive and in contravention of SEC Rule 10b-5.

Notwithstanding that trading on material, nonpublic information constitutes an illegal act subject to severe civil and criminal penalties, it is important to keep in mind that the bank,

in exercising its discretionary investment authority, has a fiduciary obligation to keep itself apprised of material *public* information with respect to securities it buys and sells. Policies and procedures should therefore be constructed in a manner to prevent unauthorized individuals from having access to material, nonpublic information, but not be designed in such a manner as to impede the flow of legitimate material public information or restrict the institution's ability to meet the needs of its customers by prohibiting all interaction between the trust department and the commercial department.

E. Common Instances of Conflict of Interests and Self-Dealing

The most frequently encountered instances of conflicts of interest and self-dealing (hereafter referred to as conflicts) are discussed below. The coverage given is not all-inclusive, but presents issues common to the vast majority of trust institutions. If examiners encounter problems during the review of any conflicts of interest they should be guided by the previous discussion of Contingent Liabilities.

Examiners might encounter a possible conflict situation considered to be an industry practice. Any such situation should be viewed in light of all available information. However, merely because it is an industry practice does not necessarily mean that a fiduciary duty, law or regulation has *not* been violated. For example, it was the practice of many banks in the 1960s to allocate brokerage business based on demand deposit relationships; however, in 1969 the Justice Department determined this practice to be in restraint of trade and threatened to sue for injunctive relief unless the practice was discontinued. It had been alleged that such banks often gave little or no consideration to the strength and integrity of the broker, the ability to execute orders efficiently, or the quality of research provided. Refer to Asset Management Section, Broker Selection on Basis of Deposits for further discussion.

E.1. Fees Other than for Account Administration

With an increased emphasis on profitability, many fiduciaries have sought and will continue to seek additional sources of revenue. With this focus there is the potential that the fiduciary may fail to act in the best interest of beneficiaries. The fiduciary may be tempted to place its interests before those of the beneficiaries, when it benefits from the investment of trust assets, hence the conflict of interest.

One way to augment revenue is through the receipt of fees beyond the customary trustee fee (fee for account administration). The additional fee is often associated with a mutual fund investment, but with changes in the industry it could occur in other investments as well. Set forth below are some typical situations currently being encountered regarding mutual funds. However, the examiner should be alert to and explore any type of fees a bank receives other than the usual and customary fee for the administration of an account. Such fee(s) should be reviewed with the knowledge of all surrounding circumstances, considering the fiduciary principles and any applicable laws and regulations.

E.1.a. Investment in Proprietary Mutual Funds

Receipt of additional fees beyond the traditional trustee fee is often encountered when investing in proprietary mutual funds. For example, the fiduciary or an affiliate receives a fee for serving as investment advisor to a proprietary fund. The receipt of this additional fee is not necessarily prohibited.

Some states have enacted legislation that makes certain conflict activities such as this permissible. The laws often govern whether both a trust account fee and a mutual fund investment advisor fee can be charged. They also may identify certain customer disclosure requirements and require the fee to be reasonable. Refer to Appendix C for a recap of state statutes authorizing fiduciary investment in proprietary mutual funds.

In receiving this additional fee, a trustee should do the following.

- Ensure that all applicable legal and regulatory requirements are met. If reasonableness is an element of the governing law, the reasonableness of fees associated with the investment in a proprietary mutual fund is a critical issue that a fiduciary should resolve prior to using such funds as discretionary investment vehicles.

- Determine that the investment is authorized by the governing trust instrument, is appropriate for the purpose of the account and/or the needs of the beneficiaries, and is prudent.

Guidance on investing in proprietary mutual funds is found in proprietary mutual funds. Additional conflicts regarding the use of proprietary mutual funds are discussed in Subsection 8.E.2.d.

E.1.b. Receipt of 12b-1 Fees

The receipt of 12b-1 fees from mutual funds is not unusual. The existence of this fee is disclosed in a fund's prospectus. The receipt of 12b-1 fees and how they affect ERISA and non-ERISA accounts is discussed in the Asset Management section of the Manual, Section E, and the Employee Benefit section of the manual Subsection 5.H.7.f(13). Also refer to Appendix D and the Southeastern Growth Fund, Inc. request for a No-action letter, regarding the rebating of 12b-1 fees.

Department of Labor Advisory Opinion 2003-09A, dated June 25, 2003, indicated that a trust company's receipt of 12b-1 fees from mutual funds, the investment advisers of which are affiliates of the trust company, for services in connection with investment by employee benefit plans in the mutual fund, would not violate section 406(b)(1) and 406(b)(3) of ERISA when the decision to invest in such funds is made by an employee benefit plan fiduciary or participant who is independent of the trust company and its affiliates. The opinion also allows for the use of proprietary funds of an affiliate, so long as the trustee does not provide investment advice to the participants and the participants are free to choose non-proprietary funds.

The receipt of 12b-1 fees are required to be disclosed in the prospectus of all mutual funds. However, even if adequate disclosure is given and no regulations are violated in connection with these fees, trust departments must continually perform due diligence procedures to ensure that all investments are chosen with the interest of the beneficiaries in mind. Furthermore, trust departments must be aware of state laws regulating securities.

One issue expected to receive the scrutiny of Congress and the SEC is the charging of 12b-1 fees by mutual funds who have closed their funds to new investors. Since the purposes of 12b-1 fees are to promote and distribute the funds to new investors, the need to charge these fees to existing investors is questioned

E.1.c. Receipt of Other Fees from Mutual Funds

General Overview

There is the increasing potential for fiduciaries to receive other fees from mutual funds beyond the traditional 12b-1 fee. These are often incentive based fees and may include payments structured as reimbursement for services (e.g. sub accounting fees, shareholder service fees, or shareholder administration fees) or payment for the bulk transferring of business to another mutual fund provider.

A reimbursement for service arrangement offers compensation in the form of fees to the fiduciary that invests assets in a particular fund. Information on this type of fee is found in the mutual fund's prospectus. The fee is structured as a payment reimbursing the fiduciary for performing standard recordkeeping and accounting functions, on behalf of the mutual fund, for the fiduciary accounts invested in the mutual fund. Generally, there is a master or omnibus account (sub-transfer agent) with the mutual fund's transfer agent and the sub-accounting is on the bank's recordkeeping system. There is typically an electronic interface between the omnibus account and the fiduciary's recordkeeping system for individual client accounts. It may also cover ancillary services such as responding directly to questions or requests

from customers whose funds have been invested in the mutual fund, forwarding shareholder communication, etc.

Regardless of the source of the fee, the decision to pace a fiduciary asset in a particular investment should be consistent with governing laws. Many states have modified laws to allow such fees, but have placed certain restrictions requiring compliance with standards of prudence, such as the quality of the investment and its suitability for an account. State laws may also require that fees be reasonable. State law, however, may not define what constitutes a reasonable fee. Whether or not state law requires fees to be reasonable or defines what is reasonable, management should consider the reasonableness of the fees received. State law often provides a good framework within which to evaluate the administration of this conflict of interest. Other pertinent issues include the permissibility of such fees under the governing document (the document may be silent) and whether the investment is in the best interest of a particular trust account. Documentation supporting all of these issues should be maintained by the fiduciary.

Caution: There is no uniform law requiring that such arrangements be disclosed to trust customers, but disclosure is encouraged. State statues may require disclosure and there are ERISA requirements to be considered. (See next subsection) In some states, the disclosure requirement is met by providing the client with a copy of the fund's prospectus, which includes a reference to shareholder service fees. Some states also require annual disclosure of the fee arrangement.

From a risk management perspective, it is essential that the fiduciary conduct a thorough due diligence review prior to receiving such fees from any mutual fund provider. The due diligence process should include the following: (These procedures also are contained in Board of Governors of the Federal Reserve System, Division of Banking Supervision and Regulation SR99-7, "Supervisory Guidance Regarding the Investment of Fiduciary Assets in Mutual Funds and Potential Conflicts of Interest", March 26, 1999.)

- Reasoned Legal Opinion - Receipt of a legal opinion or citations of law that address the legality of this form of compensation. This includes Federal and State regulations. Examples of issues to be addressed include permissibility of the investment and compensation under applicable laws, trust agreement, or court order, as well as any applicable disclosure requirements or reasonableness standard for fees found in the governing law.
- Policies and Procedures - Policies and procedures should be developed to specifically address the acceptance of fees and other compensation from any mutual fund. Ideally, the policies would address who has the authority to accept the fee and what type of analysis and documentation are required to support the investment decision when such fees are received. It should also address monitoring the receipt of the fee to ensure compliance with governing law(s), and reporting compliance with the established policies to the appropriate authority.
- *Analysis and Documentation of Investment Decisions* - Minimum investment criteria should be established to support the investment decision-making process. Refer to Section 3.F.4 for discussion of the asset management aspects of investing in mutual funds.

ERISA Accounts

Receipt of any such fee for employee benefit accounts subject to ERISA would appear to be a violation of Sections 406(b)(1) and 406(b)(3). ERISA Section 406(b)(1) prohibits a fiduciary from dealing with plan assets in its own interests or for its own account. ERISA Section 406(b)(3) provides that a fiduciary with respect to a plan shall not "receive any consideration for his own personal account from any party dealing with such plan in connection with a transaction involving the assets of the plan."

The Department of Labor (DOL) has not issued any definitive statement on the subject of the retention of "sub-accounting fees" by fiduciaries. Trust management should be encouraged to obtain a favorable ruling from the DOL prior to accepting any such fees for accounts subject to ERISA. DOL has, however, issued Advisory Opinions (AO) 97-15A and 97-16A, respectively referred to as the "Frost" and "Aetna" opinions, which provide useful guidance. These AO's are discussed in detail in Subsection H.7.f.(13). Mutual Funds, Receipt of 12b-1 Fees, located in Section 5.

- In AO 97-15A, "Frost", the DOL took the position that a bank with discretionary authority to invest in a mutual fund that pays the bank a 12b-1 fee would appear to violate ERISA Section 406(b)(1) because it involves a conflict of interest. Even if a fiduciary does not administer or control investments in a plan, but has authority to delete or substitute mutual funds, the fiduciary may be able to cause 12b-1 fees to be paid to itself. In both situations, however, DOL took the position that if the fees were used to offset the plan's liability to the trustee (e.g., reduced the expense of administering the plan and thus not retaining the fees), the fiduciary would not violate Sections 406(b)(1) or (b)(3).

- In AO 97-16A, "Aetna", the DOL restated that the mere receipt of a fee or other compensation from a mutual fund in connection with a plan's investment would not in and of itself violate Section 406(b)(1) or (b)(3) if a service provider did not advise or otherwise exercise authority or control to cause a plan to invest in a mutual fund. Service providers, however, retaining the authority to delete or substitute the mutual funds made available to plan participants might be deemed to exercise the necessary discretionary authority to cause the payment of fees to themselves. Once again, he DOL took the position that if the fees were used to offset the plan's liability to the trustee, the fiduciary would not violate Sections 406(b)(1) and (b)(3).

It is important to note, however, that the practice of receiving fees for "secondary" shareholder services from proprietary mutual funds has not been determined by the DOL to violate any of the prohibitions of DOL PTE 77-4. "Secondary" shareholder services could include transfer agent, custodial, administrative, and accounting services provided to the mutual fund for which the plan fiduciary also serves as an investment advisor.

In those cases where an institution, as a plan fiduciary, improperly accepts mutual fund servicing fees, examiners should recommend that the fees either be returned to the individual accounts invested in the mutual funds providing the fees or that the servicing fees be used to offset plan expenses.

E.2. Securities-Related Activities

There is the potential that conflicts that are not readily evident may occur with various securities-related transactions. Included in this section are some of the more common situations that may be encountered. For each, there are unique reasons to consider it a conflict, but the underlying concept is that the bank receives a benefit from the transaction and the benefit is usually in a form other than cash/fees.

E.2.a Soft Dollars

The term soft dollars refers to an arrangement in which a discretionary money manager (for example, a trust department or investment advisor) receives, in addition to transaction execution, investment research services from a broker/dealer in exchange for the brokerage commissions from executing transactions for discretionary client accounts. Hence, the money manager receives investment research that is purchased with the funds of discretionary client accounts, i.e. those accounts which actually pay the broke/dealer's commission. Hard dollars, on the other hand, involve the money manager purchasing investment research services with its own

funds. In a soft dollar arrangement, the money manager is said to be paying up, i.e. paying more than the actual cost of executing a transaction.

Soft dollar arrangements present a conflict of interest since the money manager personally benefits from transactions involving trust assets. The purchase of investment research services with the commission dollars of a beneficiary or client, even if used for the benefit of the beneficiary or client, could be viewed as also benefiting the money manager in that the money manager is relieved of the obligation to produce the research himself or to purchase it with hard dollars. This is not to imply, however, that soft dollar arrangements are necessarily improper, since broker/dealers often provide an important service in producing and distributing investment research. Congress acknowledged as much when it added Section 28(e) to the Securities and Exchange Act of 1934, which permits money managers to consider the provision of investment research, as well as trade execution services, in evaluating the cost of brokerage services without violating their fiduciary responsibilities. Section 28(e) provides a safe harbor that permits, in certain circumstances, money managers to use commissions paid by discretionary accounts to acquire investment research as well as trade execution services. Excluded from the safe harbor provisions are transactions in futures or transactions done on a principal basis.

The acquisition of investment research services paid for by the commission paid by non-discretionary accounts, i.e. non-managed accounts, is **not** protected by Section 28(e). Non-discretionary accounts do not benefit from the investment research provided by the broker/dealer. The purchase of investment research services with the commissions paid by non-discretionary accounts should be explicitly permitted in the written agreement governing these accounts and disclosed to all interested parties.

A fiduciary exercising investment discretion is under the general duty to obtain best execution, which generally includes considerations such as the most favorable price for the securities, the lowest commission, the prompt and accurate execution of orders, the prompt and accurate confirmation of orders, and the prompt and accurate delivery of securities or proceeds. Prior to1975, when brokerage commissions were fixed and nonnegotiable this was not an issue. Since the advent of fully negotiable brokerage commissions on May 1, 1975, a fiduciary exercising discretion has been legitimately able to pay more than the lowest available brokerage commission if it also receives research services. As noted above, this limited safe harbor protection is provided by Section 28(e)(1) of the Securities Exchange Act of 1934.

The identification of soft dollars compensation is difficult. While brokerage commissions are generally readily identifiable, problems have arisen when non-research items have been claimed to represent research. The SEC has issued an interpretative release focusing on whether the product or service provides lawful and appropriate assistance to the money manager's investment decision making. If the service provided has a "mixed use" - meaning research and non research components (such as computer hardware) - the money manager should make a reasonable allocation of the cost according to its use. The portion of the service used in the investment decision-making process can be paid with commission dollars, while those services that provide administrative or other non-research assistance should be paid with hard dollars. Refer to Appendix D - Securities Exchange Act of 1934 Release No. 34-23170 Section 28(e) and Soft Dollars.

Potential conflicts of interest related to use of soft dollars include:

- Investment advisers may choose broker-dealers based on a business-related association. Additionally, the choices may be made solely on the basis of soft dollar products and services, to the exclusion of execution quality. The resulting trades could have both higher commissions and lower quality trade execution.

- Soft dollar arrangements could encourage increased transaction orders to pay for more soft dollar products and services. These arrangements might cause advisers to "over-consume" research because of the indirect nature of the transaction.

- Fiduciaries might be tempted to purchase products and services with only marginal research applications, such as periodical subscriptions, computer terminals or communication services, such as telephone, fax, etc.

- The lack of adequate controls could allow mixed uses for soft dollars, including products and services not used for research and not protected by safe harbor provisions of the Securities and Exchange Act of 1934. When different types of products are bundled together, management must be aware of any tendency to over-pay for the research portion of the bundled services, in order to pay with commission dollars.

- Products and services purchased with soft dollars are often bundled together in such a way that a manager does not know what he/she is paying for each service.

Before an institution begins to receive soft dollar benefits, policies and procedures governing the proper use and monitoring of soft dollars transactions should be in place. Management must be able to demonstrate that soft dollar benefits constitute bona fide investment research. In complex operations, this may be done with a budget that identifies the soft dollar benefits to be received and how they will be used. General guidelines for the use of soft dollars include:

- A fiduciary may retain soft dollar services and materials from a broker (or other source) for investment transactions generated by discretionary accounts, if the soft dollar payments are (1) not prohibited by the governing account instrument and (2) comply with the SEC's safe harbor requirements.

- A fiduciary may not retain soft dollar payments from a broker (or other source) for investment transactions generated by nondiscretionary accounts, since a nondiscretionary account cannot justify paying higher brokerage commissions to receive investment research which would not benefit the account. Nondiscretionary accounts may, however, agree to soft dollar transactions if specifically permitted in the instrument, or by the grantor, or, after full disclosure, by all account beneficiaries.

- A fiduciary must disclose specific types of products, research, or services obtained with soft dollars so that customers understand what is obtained with the commissions. This is required whether or not the product is subject to the safe harbor provisions of Section 28(e).

There are also specific requirements for different types of fiduciary accounts. Refer to Subsection 5.H.7.f.(19). for employee benefit accounts subject to ERISA. Also refer to the SEC's Release No. 3423170 in Appendix D for additional information on soft dollar arrangements.

E.2.b. Use of Own-Bank or Affiliated Brokerage Service

A conflict of interest arises when a fiduciary uses its own or an affiliate brokerage service to execute the trust department's securities transactions. It may also arise if a discount broker located in the commercial department is used (typically the third-party provider of non-deposit products). The problem is not the payment of commissions, provided they meet the concept of best execution and follow the concepts outlined in Section 3. The problem concerns other fee sharing arrangements, such as splitting of commissions

or the payment of rent based upon the volume of transactions.

FDIC General Counsel's Opinion No. 6, states, in part, "If the bank intends to utilize the contractual arrangement with the broker/dealer for transactions executed in connection with trust department accounts, the bank should not receive any additional compensation from the broker/dealer with regard to those transactions, i.e., the bank trust department should not share in any commission associated with the transaction. To do so would raise possibilities of a breach of fiduciary obligation toward the bank's trust account customers." Several FDIC Advisory Opinions address some limited situations in which it might be proper to share in such commissions. However, in background discussions, those opinions generally stress that best execution objections can be raised when only one broker is used, and the bank may be open to a charge of churning, if it has discretion and the commission-splitting arrangement is dependent upon the volume of trades. See FDIC Advisory Opinions 83-14, 83-15, 83-17, 83-18, 84-10, and 85-10 for further guidance.

Since the bank may profit indirectly through paying brokerage fees to an affiliate, the use of an affiliated brokerage service raises many of the same issues discussed in Subsection 8.E.1 - Fees Other than for the Administration of an Account. Also, the use of an affiliated brokerage service would appear to constitute a prohibited transaction under Section 406(b) of ERISA. While there is an apparent exception allowing reasonable transaction fees, the Department of Labor, in practice, has approved this exception only under very narrow conditions. Refer to the discussion in Subsection 5.H.7.f.(1) and Prohibited Transaction Class Exemption (PTE) 86-128.

The use of an own-bank or affiliated municipal brokerage department raises additional issues. It is a conflict for the fiduciary to direct discretionary transactions to an own-bank or affiliated municipal securities broker. This is particularly the case, when securities are purchased from the dealer's inventory (securities in which the dealer has taken a market position). When securities are purchased from the dealer's inventory, rather than on the open market, the possibility exists that the securities are being sold at above market prices, or that securities which cannot otherwise be sold profitably on the open market are being sold to the trust department. The purchase of any security at an above market price is an abusive self-dealing practice. Arrangements should be made for the reimbursement of any losses suffered by accounts that purchased any security at an above market price. Realized losses and depreciation should be extended as Contingent Liabilities. Refer also to the discussion of underwritten securities later in this section.

A ppropriate policies and procedures should be in place prior to entering into a brokerage service arrangement, regardless of whether the bank's brokerage services, an affiliated brokerage firm or a discount broker providing nondeposit products will be used. Other considerations include:

- Whether brokerage services must be performed on a nonprofit basis, requiring documentation of transaction costs;
- Whether best execution is being obtained; and
- Whether accounts are protected from potential churning.

In view of these and other fiduciary and legal requirements, the bank should be able to conclusively demonstrate, preferably through the opinion of competent legal counsel that any such use conforms to all applicable laws and regulations and that no fiduciary duty has otherwise been violated.

E.2.c. Securities Trading Practices

Problems arise when an employee puts his/her interests ahead of the interests of the beneficiaries in executing trades. A classic example is front running, which is an illegal practice whereby an individual knows that a block trade will influence the price of the security; the individual places his trade to

profit from the effects of the block trade. Policies or procedures should prohibit such transactions. Furthermore, policies and procedures should prevent employees from trading under the auspices of the bank, e.g., the employee should not be allowed to use the trust department's accounts with brokerage firms to effect personal trades.

Another potential conflict arises when trading errors result in a potential profit or loss to the beneficiary of a trust or participant in a defined-contribution retirement plan such as a 401(k). Given that a fiduciary must put the beneficiary's interests first, losses resulting in trading errors must be absorbed by the bank, and any profits must flow through to the account or beneficiaries thereof. Part 406(b)of ERISA prohibits a fiduciary from dealing with the assets of the plan in his own interest or for his own account; consequently, any gains acquired by a fiduciary resulting from trading errors would result in an apparent error of the regulation.

Market Timing Trading in Mutual Funds

Market timing is the frequent purchase and redemption of mutual fund shares, exchange-traded funds (EFTs), or variable annuity or life contract, in an attempt to take advantage of a lag between a change in value of a fund or contract, and the reflection of that change in the fund or contract's share price. For example, time zone arbitrage is the buying of mutual funds that own securities in a foreign market at the previous day's net asset value, knowing that subsequent events occurred since that market closed will likely assure a profit. This practice may dilute the value of shares held by long-term shareholders; interfere with the management of the portfolio; and increase brokerage and administrative costs.

Management of defined-contribution plans such as 401(k)s must be aware of market timing trades by plan participants. An indication of such trading may be frequent trades. By allowing a few participants to benefit by taking temporary profits, participants interested in long-term gains may be armed.

An illegal form of market timing trading is late trading, which allows individuals to purchase mutual fund shares after 4:00 p.m. Eastern Time at the net asset value (NAV) for that day, when regulations require those shares to be priced at the NAV of the next day's close. Traders profit by trading on positive or negative after-hours news of major holdings of the mutual funds.

To address these and other concerns, the SEC issued the final rule for Disclosures Regarding Market Timing and Selective Disclosures of Portfolio Holdings. The effective date of the rule is May 28, 2004, with implementation on or after December 5, 2004. The rule requires mutual funds, EFTs, and variable annuity or life contracts to describe their policies and procedures for deterring frequent purchases and redemptions of the shares. The rule also allows a fund to reserve the right to reject a purchase or exchange request for any reason, as long as the fund discloses this ability in the prospectus. The fund disclosure must state whether the restrictions on frequent purchases and redemptions will be uniformly applied to trades occurring in omnibus accounts at intermediaries, such as investment advisers, broker dealers, transfer agents, third party administrators, and insurance companies. In disclosing the entities making frequent purchases and redemptions, mutual funds will be required to identify the group rather than the individual group member for 401(k) plans; this will be disclosed in the Statement of Additional Information (SAI), rather than in the prospectus.

The rule requires mutual funds and managed separate accounts that offer variable annuities, other than money market funds, to explain their use of fair value pricing. The rule states that funds are to use fair value pricing any time that market quotations for their portfolio securities are not readily available, including when they are unreliable. For domestic large cap funds, fair value pricing will be used under very limited circumstances, such as when the

stock exchange closes early or trading is halted in a specific security. Conversely, for mutual funds that have securities which are traded overseas, then the use will be more common. Disclosures for either circumstance will be included in the prospectus.

For fund of funds, the SEC requires the disclosure to refer the investor to the underlying fund prospectuses.

Banks should have policies and procedures which address trading in mutual fund shares. Management must review and understand mutual fund prospectuses to determine what practices related to trading are allowed. Furthermore, for employee benefit accounts, managers should have programs to detect and prevent plan participants from engaging in market timing trading. The management of bank-sponsored proprietary mutual funds must prohibit any practice that could prove detrimental to the shareholders.

E.2.d. Proprietary Pooled Investment Vehicles

Conflicts involving the use of proprietary investment products are frequently tied to the generation of additional fee income. When a bank, as fiduciary, invests fiduciary assets in proprietary products, a key consideration is whether the bank is acting in the best interest of the beneficiary or in its own interest. A common example is the continued use of a poor-performing proprietary investment product in order to maintain a critical mass of assets under management. In doing so, the fiduciary benefits from economies of scale and earns additional fee income at the expense of the beneficiary, who sacrifices the potentially higher return that could be obtained from investing in better performing mutual funds. This is a particularly sensitive situation if trust accounts own a majority of the shares of a proprietary mutual fund.

Important guidance regarding investment in proprietary mutual funds is found in Asset Management, Section 3, and in the Employee Benefit section, Subsection H.7.f.(11). Subsection 7.F.12 - Section 9.18(b)(8) Self-Dealing and Conflicts of Interest, Subsection 7.K - Proprietary Mutual Funds, and Subsection 7.L - Conversion of Collective Investment Funds to Mutual Funds discuss potential conflicts of interest regarding duties of loyalty and prudent investment management. Special coverage of this topic may also be found in state law.

E.2.e. Use of Only One Fund Family

Fiduciaries sometimes offer only one family of funds as its mutual fund investment option. Management may feel that it is easier to obtain reliable information and that they receive specialized attention due to the volume of the department's aggregate investment. This rationale is used in addition to the fee incentives previously discussed. Management may feel that these benefits compensate for the continued inclusion of a poor-performing fund as an investment option. However, the benefits of the use of only one fund family does not justify holding a poorly performing investment; and may represent a conflict of interest if the department is placing its interest, i.e. easing the administration of an account, ahead of the interest of the beneficiaries. To the appearance of such conflicts, management should ensure that all investments meet the trust department's approved investment criteria. Refer to Section 3 - Mutual funds, for a discussion of the investment selection process.

E.2.f. Research Analyst Affiliate Relationships

Potential conflicts of interest arise in a trust department affiliated with an investment company that conducts securities research. The conflicts occur when research analysts work for firms that have investment banking or other business relationships with issuers of the recommended securities, or when the analyst or firm owns securities of the recommended issuer. The recommendations must not be influenced by the relationships that affiliates have with the company being analyzed, including relationships related to

investment banking and trust activities. In 2002, the SEC approved rule changes made by the New York Stock Exchange (NYSE) and the National Association of Securities Dealers (NASD) which are designed to improve the objectivity of investment research provided by research analysts. Provisions in these rule changes include:

- Research analysts may not be subject to the supervision or control of the firm's investment banking department.
- Disclosures are required of any investment banking relationship with any company that was subject to an investment report.
- Research analysts employed by members of the NYSE or NASD may not receive compensation based on specific banking services transactions.
- The manager or co-manager of a subject company's offering may not publish research about the issuer for 40 days following an initial public offering and 10 days following a secondary offering.
- Member firms must disclose in research reports whether the firm or its affiliates, including banks and trust departments, own 1 percent or more of the common equity securities of the company being analyzed.
- Research analysts have prohibitions on purchasing or receiving pre-IPO shares, trading in recommended securities 30 days prior and 5 days after issuance of a report, and trading contrary to the analyst's own recommendations.

While these regulations only apply to registered investment advisors, the above rules provide guidelines for the conduct of research analyst affiliates. Please refer to NASD Rule 2711, Amendment to Research Analysts and Reports.

E.2.g. Proxy Voting

As discussed in Chapter 3, Asset Management, trust department management should establish policies regarding casting proxy votes for shares of stock held in a discretionary capacity. The purpose of these policies is to ensure proxies are voted in the best interest of the clients, and that all conflicts of interest are disclosed. An example of a conflict of interest is when a Trust Department votes on proxies for shares of stock of a corporation that it holds in discretionary accounts, and at the same time performs investment banking or other services for this corporation.

In 2003, the SEC adopted new rule 206(4)-6 [17 CFR 275.206(4)-6] and amended rule 204-2 [17 CFR 275.204-2 [17CFR 275.204-2] under the Investment Advisers Act of 1940 relating to proxy voting. These rues and rule amendments require advisors registered with the SEC to adopt policies and procedures to ensure that the adviser votes proxies in the best interest of clients, to disclose to clients information about those policies and procedures, to disclose to clients how they may obtain information on how the adviser has voted their proxies, and to provide clients with information about how their proxies are voted. Furthermore, the rules require advisers to maintain certain records relating to proxy voting.

Violations of the proxy voting regulations in the Investment Advisers Act of 1940 can result in substantial civil penalties. For example, on August 19, 2003, the SEC imposed a civil money penalty of $750,000 on Deutsche Asset Management, Inc., the investment advisory unit of Deutsche Bank AG, for failing to disclose a material conflict of interest in its voting of client proxies for the 2002 merger between Hewlett-Packard Company (HP) and Compaq Computer Corporation.

E.2.h. Trading During Blackout Periods

The term blackout period refers to an interval of time of more than 3 consecutive business days during which employees may not adjust the investments in their employee benefit pension plans, e.g. 401(k) plans. These blackout periods occur most frequently when the plan is undergoing certain changes, such as modification of investment options or replacement of plan record keepers. During a blackout period, the participants cannot make changes to the investments. The fiduciaries have effectively taken control away from the participants resulting in potential conflicts of interest; fiduciaries may be held liable if something goes wrong.

One of the most newsworthy conflicts of interest that caused substantial injury to beneficiaries occurred in 2001 at Enron Corporation. During a blackout period in which the pension plan trustee was changed, employees were not allowed to sell their Enron stock held in their 401(k) plans, and the stock lost much of its value. Corporate insiders, who had information regarding the deteriorating condition of the company, were able to sell their stock outside of the plan at much higher prices than employees who were required to wait until the blackout period ended.

In the wake of the Enron scandal, Congress passed the accounting reform bill known as the Sarbanes-Oxley Act of 2002 (Sarbanes-Oxley). Section 306(a) of the Act makes it "unlawful for any director or executive officer of an issuer of any equity security (other than an exempted security), directly or indirectly to sell, or otherwise acquire or transfer any equity security of the issuer (other than an exempted security) during any blackout period with respect to such equity security if such director or officer acquires such equity security in connection with his or her service or employment as a director or executive officer."

Section 306(b) of Sarbanes-Oxley requires a thirty-day advance notice of any blackout period. The notice must be written in a manner calculated to be understood by the average plan participant and include the following:

- The reasons for the blackout period,
- An explanation of the investments and other rights affected;
- A statement informing the participants and beneficiaries that they should evaluate their investment selections in light of their inability to direct or diversify their investment choices during the blackout period.
- The name, address and telephone number of the plan administrator or other person responsible for answering questions about the blackout period.
- Such other matters the Department of Labor may require by regulation.

Sarbanes-Oxley provides three exceptions to the 30-days' advance notice requirement:

- The first exception applies when a fiduciary, acting with care, skill, prudence and diligence, determines that deferral of a blackout period would undermine the plan's exclusive purpose of providing benefits to participants and their beneficiaries and of defraying reasonable expenses of administering the plan.
- A second exception applies when the inability to provide the notice timely is caused by unforeseeable events or events out of the control of the plan administrator.
- A final exception applies if the blackout occurs in connection with a merger, acquisition, divestiture, or similar transaction involving the plan where individuals either become or cease to be plan participants.

Fiduciaries must document all exceptions to the 30-days' advance notice requirement.

Please refer for more information to Section 306 of Sarbanes-Oxley.

E.2.i. Advertising Investment Performance

Trust Departments that publicize the investment performance of their discretionary accounts must ensure the advertisements do not contain misleading, inaccurate, or exaggerated claims. Even factually correct statements may be inappropriate, if these statements lead clients or potential customers to believe extraordinarily strong performance achieved in the past can be expected in the future. Types of misleading advertisements include:

- Publicizing superior returns achieved over a period of time, implying that investors can be reasonably assured that these returns can be expected in the future.
- Identifying selective stocks that have performed well, without identifying all the stocks in the portfolio being managed or when these stocks were purchased.
- Comparing stocks to a dissimilar index. For example, a portfolio may contain numerous high-tech or small cap stocks and the advertisements will compare results to an index of large cap stocks, such as the S & P 500.
- Advertising performance without identifying the risks involved. All ads promoting investment performance should indicate that future recommendations may not be profitable or equal past performance.

SEC Rule 206(4)-1 under the Investment Advisors Act of 1940 prohibits the distribution of several types of advertising considered fraudulent or misleading. Additionally, the SEC Rule 482 under the Securities Act of 1933 and Rule 34b-1 under the Investment Company Act of 1940 require disclosures when mutual fund performance is presented in sales material. While these rules only apply to Registered Investment Advisors, these rules can be used as guidelines in developing policies and procedures designed to preclude misleading advertising. Furthermore, management must be careful not to portray itself as an investment advisor.

E.3. Use of Own-Bank or Affiliate Bank Deposits

E.3.a. General Overview

When a fiduciary allows investments in proprietary investment products, there is an inherent conflict between the best interests of the account beneficiary and the interest of the fiduciary. Investments in own-bank and affiliate-bank deposits (hereafter referred to as own-bank deposits) provide a benefit to the commercial department, by generating revenue from fiduciary deposits. For example, the commercial department may purchase a short-term investment, such as selling Federal funds, or a medium-term investment, such as a loan or a security. The choice depends upon the aggregate size and maturity of fiduciary deposits. Own-bank deposits may be used on a deposit by deposit basis or on a pooled basis, such as in sweep or master deposit accounts. Refer to the master deposit account discussion in Section 7.

Investment in own-bank deposits is a common practice, legally permitted by almost all states. Many governing agreements include standardized language allowing the fiduciary to invest in own-bank deposits. The language may be narrow and reference only time deposits, or very broad and allow any type of deposit. Fiduciaries often claim that a low risk tolerance and the relative safety of principal are valid considerations when choosing federally insured deposits as trust investments. There are, however, many alternative investment options that provide current income with comparable safety. Therefore, investment decisions based purely on these factors should be evaluated critically.

If management uses own-bank deposits as an investment option for the trust accounts it administers, basic guidelines and monitoring procedures should

be established. These include appropriate policies, the monitoring of historical trends, and documentation that management has satisfactorily resolved the inherent conflict of interest posed by such investments. Written policies should address the use of own-bank demand and interest-bearing deposits. Documentation should include a review of alternative investment vehicles, the competitiveness of the interest rates paid o own-bank deposits, and appropriate approvals for such investments. Management should document that the bank has acted in the best interests of the account beneficiaries.

There are no specific guidelines addressing the propriety of various deposit terms, such as the maturity of the deposit, the rate of interest, the dollar size of own-bank deposits, or the percentage of total account assets invested in own-bank deposits. Therefore, examiners must determine whether the deposit(s):

- Are permitted under local and Federal law;
- Are permitted under the governing instrument;
- Met the objectives and needs of the account at the time of the investment;
- Provide the best investment alternative, considering alternate investment options available; and
- Provide a documented competitive rate of return.

E.3.b. ERISA, Deposit Insurance, and Pledging

In assessing such conflicts, there are issues to be considered beyond the broad concepts of permissibility under state statue and the governing agreement. Such issues include ERISA prohibitions, Federal deposit insurance, and pledging requirements. Management should have knowledge of and appropriate policies for each of these areas.

1. ERISA Considerations

Section 408(b)(4) provides an exemption from the prohibited transactions provisions of Section 406(a) that would otherwise prohibit the investment of plan assets in the deposits of a bank that is also a fiduciary to a plan. Therefore, both own-bank pension plans and the pension plans of other institutions may invest in such deposits provided that "(A) the plan covers only employees of such bank or other institution and employees of affiliates of such bank or other institution, or (B) such investment is expressly authorized by a provision of the plan or by a fiduciary (other than such bank or institution or affiliate thereof) who is expressly empowered b the plan to so instruct the trustee with respect to such investment." Refer to Section 5, Subsection H.9 for additional discussion.

Therefore, investing employee benefit funds in own-bank interest-bearing deposits is a conflict that is not prohibited, but must be carefully managed to ensure that the interests of beneficiaries are protected. Even if authorized by the governing instrument and/or permitted by statute, such transactions must be made in good faith, e.g., permissive authority does not relieve the fiduciary of its duty of care and skill in the investment selection process. This requires interest rates to be competitive, and the fiduciary o have considered alternative investments and determined that the investment are both prudent and proper in light of the investment options available.

2. Deposit Insurance

Another consideration is the overall volume of discretionary investments in own-bank deposits held by an account. Generally, the amount of own-bank deposits held by an individual account (non-municipal account) should not exceed Federal deposit insurance coverage, unless the excess is adequately secured by other means. Section 24 of the FDI Act prohibits the pledging of bank assets to secure investments in non-public deposits, unless specifically approved via a Part 362 application.

In general, deposit insurance of fiduciary and other trust department accounts operates on a pass-through basis, with coverage provided to each beneficiary of each account. In most employee benefit accounts, deposit insurance is provided to the plan participant. It should, therefore, be uncommon for uninsured deposits to exist as long as each beneficiary's interest in fiduciary deposits does not exceed $100,000. The fiduciary institution must, however, adhere to certain requirements and there are some exceptions to the general rules. See Section 10 - Deposit Insurance of Trust Funds of the manual for further discussion.

3. Pledging Requirements

The pledging of bank assets to secure private deposits, generally for amounts not covered by FDIC insurance, is not a permissible activity for national banks, except for funds awaiting investment or distribution. In order for a state nonmember bank to pledge assets to secure private deposits, the bank must file an application for approval under Part 362 of the FDIC's Rules and Regulations.

E.3.c. Suitability of Own-Bank Deposits

In establishing policies and procedures, management considers if the pattern of use of own-bank deposits exposes the institution to claims that the deposits in general were not made in good faith or were not chosen with the requisite care and skill. This is especially important if fiduciary funds are swept daily to a own-bank interest bearing deposit account. For individual accounts, the policies and procedures should focus on the amount of own-bank time deposits, non-interest bearing demand deposits, the reasonableness of the interest rate received and whether these deposits are allowed by the governing instrument and state law..

1. Maturity and Size/Volume

To demonstrate that management is effectively monitoring this activity, policy and procedures should set parameters to guide the length of time own-bank deposits may be used and the level invested, such as a dollar amount or percentage of account assets. These parameters may be general in nature, but should include all own-bank deposit products used. There should be a method to report and monitor exceptions, with the level of detail depending upon the extent of use. For example, if an own-bank deposit product is used for daily sweeps, monitoring would be more extensive than for the infrequent use of time deposits. The monitoring of sweep activity should be on the same basis as the monitoring of similar investments with a third party.

Unless authorized by the governing instrument, court order or local law, trust funds should not be permanently invested in own-bank deposits. In general, discretionary funds that are awaiting investment or distribution should not be invested in own-bank time deposits. The short-term nature of deposits does not relieve fiduciary institutions from their duty of loyalty,

or the principles of care and skill when making investment decisions.

2. Uninvested Funds, Demand Deposits

Management must establish a formal system of monitoring uninvested funds. T he combined income and principal cash of all the department's accounts are generally deposited into one account. The key consideration is not the aggregate amount on deposit, but rather, the reasonableness of the uninvested balances of the individual accounts, considering both the individual account's liquidity requirements and the fiduciary's duty to make trust property productive.

To properly manage the conflict inherent in own-bank demand deposits, the amount held in demand balances of each account should be restricted to the minimum necessary. There have been a number of lawsuits in the past based on the fiduciary's management of demand deposits and its concurrent use of the funds for lending and investments, together with the benefit gained on the float of demand deposits. For employee benefit accounts subject to ERISA, of particular note is the Labor Department's position regarding Float Management; refer to Section 5, Subsection H.7.f.(3) and Advisory Opinion 93-24A.

3. Reasonableness of Interest Rates Paid

After taking into consideration the amount, term and type of deposit, management should be able to demonstrate that own-bank deposits pay a competitive rate of interest. In assessing the reasonableness of the interest rates offered on own-bank deposits, management should not rely solely on comparisons with interest rates offered by local depository institutions. Management should endeavor to obtain the *highest prudent rate of return possible*. Generally, national money market rates, as well as the interest rates offered by depository institutions nationwide, should be considered as a comparative benchmark when making such investment decisions. This is especially important when management uses own-bank deposits as a cash sweep vehicle.

The decision to use own-bank interest-bearing deposits should take into consideration the term of the deposit and the competitiveness of the interest rate paid. Each decision to invest in own-bank deposits must be properly supported and documented in the bank's records. Management must demonstrate that a valid basis existed for the use of own-bank or affiliated bank deposits.

E.4. Investment in Own-Bank or Affiliate Company Securities

Section 23A and 23B of the Federal Reserve Act are made applicable to the activities of insured state nonmember banks by Section 18(j) of the FDI Act. These statutes are primarily directed toward the prevention of abusive relationships between banks and their affiliates in the area of commercial banking. These sections do, however, have applicability to several types of fiduciary activities.

Careful review of the definition of "affiliate" in each section, and the differences in the definition between the two sections, is necessary when reviewing trust related transactions. Section 23B specifically excludes banks from its definition of affiliates. The term "bank" is defined in both sections 23A and 23B to include trust companies. Thus, bank-to-bank transactions and bank-to-trust company transactions are outside the scope of Section 23B. Examiners should be alert to the applicability of these statutes in all types of transactions with affiliates.

Fiduciaries are required to take an active shareholder role with respect to the companies whose securities it holds in a discretionary capacity. By exercising their shareholder right to vote in an informed and responsible manner they are afforded the opportunity to influence the management of those firms. Fiduciaries cannot readily claim a passive investor defense for not actively performing their role as shareholder. Doing so would evidence both imprudence and negligence as a fiduciary. Based upon the foregoing discussion, a fiduciary is required to vote own-bank stock held in a discretionary capacity, which places the fiduciary in a position of divided loyalty - it must place the interests of the account beneficiaries ahead of its own interest (which may not be the same), thus presenting a conflict of interest.

The voting of own-bank stock is further complicated when the fiduciary possesses, but is prevented from using, inside information (refer to Material Nonpublic Information). The fiduciary's ability to vote own-institution securities may also be influenced or restricted by local law or Federal law (e.g., ERISA, and Title 12 USC Section 61 with respect to National Banks).

In order to avoid the appearance of divided loyalty, many management teams have made a decision not to invest discretionary fiduciary funds in own-bank or affiliated company securities. However, many have not taken this same strong stance on securities that are received in-kind.

There are a number of actions that management may take to manage such conflicts of interest. The measures center primarily on the investment decision making and voting processes.

- Investment Decision - Management should fully document its rationale for retaining own-bank stock or obligations. For example, did management made the decision to purchase the shares or were the shares received in-kind. If shares are received in-kind, management should use diligence in selling such assets at an early date, unless the trust instrument, court order, or local law authorizes their retention. Typically, the retention of such securities is directed by the governing instrument or specific authority to retain such investments is obtained from all interested parties. Since state laws vary considerably with respect to the retention of own-institution stock received in-kind, it is important that the examiner be aware of the applicable state law.

- Voting Responsibility - When co-fiduciaries or others hold specific legal authority to exercise voting rights over such securities, management should permit such individuals or entities to vote the securities. When no other individuals or entities hold such authority, trust management should vote the securities exclusively in the best interests of the account beneficiaries, and document the rationale for how it voted the shares. Failure to exercise voting rights or continued voting with management (without exception or reason) can be viewed as a breach of trust. The reasons supporting a decision not to vote fiduciary shares should be fully documented. In order to ensure that shares are being voted independently, several trust departments have contracted with independent third parties to review all proxies and vote them in the best interest of the beneficiaries.

E.5. Sale or Purchase of Trust Assets to or From the Bank, Bank Insiders, Agents, or Affiliates

The sale or purchase of assets between an account and the bank, bank insiders, agents, or affiliates is an inherent conflict of interest. Inevitably, management is confronted with the dilemma of serving two diametrically opposed interests, one interest seeking the highest sales price and the other seeking the lowest sales price. Such transactions pose serious risk to both the account and the fiduciary, and should be scrutinized as to permissibility and fairness. The fiduciary, as arbiter and beneficiary of these transactions, may also be compelled to stand behind them as guarantor. Below are examples of such transactions, with suggested risk management procedures.

- Own-bank or affiliate repurchase agreements - Refer to Section 3 for a discussion of this activity.

Management purchasing own-bank, parent or affiliate stock held in an account. Such transactions may, or may not, be permitted under local law and the governing instrument. If permitted, the transactions should always be effected through non-affiliated third party brokers. Such transactions should always be covered by adequate written policies and documented as to the legal authority to engage in the transaction. Written approvals should also be obtained from all interested parties. Caution: this option is not always available, as interested parties may include the unborn, minors or others lacking the legal capacity to approve transactions, or beneficiaries who cannot be identified at the time of the transaction.

- Sale of assets to an account. This type of transaction must always receive careful evaluation by trust management. In addition to permissibility and fairness considerations, management must document the necessity for purchasing assets from itself or insiders when, as investment manager, it has numerous investment alternatives. When the legal authority to engage in the transaction is absent, and/or documentation as to the fairness and necessity of the transaction is either lacking or insufficient, such transactions should be scheduled for criticism. Consideration should be given to scheduling a Contingent Liability as discussed in the previous portion of this Section under Contingent Liabilities.

Section 23B(b)(1) of the Federal Reserve Act provides certain restrictions on fiduciary purchases of securities or other assets from an affiliate of the bank or its subsidiary. This provision is not directed toward transfers of trust departments (the "fiduciary book of business"), but is noted here because it is contained in Section 23B and it impacts the conduct of trust department business. Such purchases are prohibited unless permitted by the governing trust instrument, governing law, or court order. It is important to note that the term "permitted" is used in the statute, suggesting that Congress did not intend to require that express authorization for such purchases be incorporated into trust agreements.

E.6. Investment in Securities Underwritten by Own-Bank or Affiliates

Banks purchasing, as a fiduciary, securities for which the bank or an affiliate of the bank serves as an underwriter, is engaging in a self-dealing transaction. This traditionally occurred with municipal bonds. With the enactment of the Gramm-Leach-Bliley Act in 1999, the potential for such self-dealing transactions will increase, due to increased securities underwriting activity by financial subsidiaries of banks and bank holding companies.

Underwriting syndicates are composed of dealers that buy newly issued securities from issuers at a fixed price and sell them to the general public. Therefore, banks or bank affiliates participating in an underwriting syndicate have a vested interest in selling at a profit the securities underwritten. Failure to sell the securities in the open market at a price at least equal to the price paid by syndicate members (or the underwriting bid) constitutes a loss to the broker/dealer. Undivided syndicates are composed of dealers that share in the overall profits or losses on the sale of all securities sold by the entire syndicate.

The following policies and procedures should be in place to govern such purchases.

- Use of the same investment decision criteria for purchases of securities underwritten by the fiduciary or by its affiliates as is used when purchasing securities from non-interested parties (e.g., the normal investment criteria associated with any purchase decision).
- Compliance with the applicable law(s) and regulations governing such purchases. In particular, consideration to the relevant aspects of Section 23(b)(1)(B) and 23(b)(2) of the Federal Reserve Act.
- Assurance that the fiduciary is not making a market for the security and did in fact purchase the security at open market value.

Examiners should also be aware that the purchase of securities underwritten by the bank, its affiliates, or a member of an undivided syndicate in which the bank or affiliate is a member during the existence of the syndicate, is an apparent violation of Section 23B(b)(1)(B) of the Federal Reserve Act. Section 23B(b)(1)(B) states that a member bank "whether

acting as principal or fiduciary shall not knowingly purchase or otherwise acquire, during the existence of any underwriting or selling syndicate, any security if a principal underwriter of that security is an affiliate of such bank." However, Section 23B(b)(2), as amended by Section 738 of the GLBA, provides an explicit statutory exception "if the purchase or acquisition of such securities has been approved, before such securities are initially offered for sale to the public, by a majority of the directors of the bank based on a determination that the purchase is a sound investment for the bank irrespective of the fact that an affiliate of the bank is a principal underwriter of the securities."

Consequently, if a trust department held full investment discretion over an account and purchased securities during the existence of a syndicate, the transaction would not be a violation of Section 23B as long as a majority of the Board (who are neither officers nor employees of the bank) approved the transaction prior to the initial offering. Nevertheless, the transaction would be considered a conflict of interest and self-dealing. Any abusive situations or apparent violations of Section 23B should be discussed with management and appropriately noted in the Report of Examination.

E.6.a. Other Transfers and Agency Relationships between Affiliates

Instances may be encountered where, in lieu of an outright sale transaction, fiduciary business has effectively been transferred via written agreement. If a trust department enters into an agency relationship with certain affiliated entities, Section 23B(a)(2)(B) may apply. This requires the relationship to be on terms comparable to those existing for similar relationships where no affiliation exists. As previously noted, bank-to-bank and bank-to-trust company transactions are not covered by Section 23B. Where a sale transaction has not occurred, but an agency relationship has arisen, the discussion on Outside Contracting for Fiduciary Services in section G of this manual also applies.

In FDIC Legal Opinion on FRB Section 23B Fees and Affiliated Employee Benefit Plans, dated March 10, 1995, the FDIC has opined that a bank holding company's profit sharing plan may be an affiliate of the bank within that holding company. The opinion indicates that plans meeting certain prerequisites would be subject to both sections 23A and 23B. Therefore, dealings between a bank and such a plan, or a trust department and such a plan, should be reviewed in light of this opinion. (In particular, the definition of "affiliate" and "covered transaction" in Section 23A(b)(1) and (7) and 23B(d)(1) and (3) should be reviewed for purposes of this determination). Also, refer to Compliance - Employee benefits, Prohibited Transactions, for additional comments on this subject.

E.7. Relationships with Outside Service Providers

As with all other fiduciary activities, management's selection of outside service providers should be based exclusively upon the best interest of account beneficiaries, and not on the ancillary services or benefits that service providers may provide to the bank or trust department. Basing such relationships upon such ancillary services represents a breach of the duty of loyalty and a conflict of interest. Trust department management should support the reasonableness of the trust department's relationships with the outside service providers through a properly documented due diligence analysis. Refer to Section 10 - Outside Contracting for Fiduciary Services for further discussion.

Banks may have standing relationships or commitments with securities brokers, mutual funds, insurance agents, real estate agents, accountants, etc. Such relationships may include some form of rebate or reimbursement, whereby the bank receives a financial incentive for directing business to the service provider. The rebates and reimbursements may take various forms. Some may be based on a percentage of broker commissions (e.g., equity trades), or a percentage of the total dollar value of transactions executed (e.g., fixed income securities or mutual fund purchases). Some rebates may b hidden as a reduction in the price of a good or service due to the volume of assets invested, the number of items held in safekeeping, or the extent of services purchased. An example of the later would be to use the bank's external audit firm to perform audits for closely held businesses held in trust accounts or in the preparation of taxes for the trust customers, with the bank receiving a reduction in the cost of its annual audit and the trust customers

assessed a full fee.

Regardless of the form of such compensation, the following guidelines should govern such financial reimbursement arrangements. The arrangement must be (1) in the best interests of the account beneficiaries and (2) permitted by applicable laws and the governing instrument. With respect to agencies and revocable trusts, prior written approval should be obtained after a full disclosure of the financial arrangement s made to the customer. Periodic account statements should provide either a line item disclosure of the fees associated with such arrangements or a disclosure of the total annual fees associated with an account's usage of such services. Account statements should not report income, or gains/losses, on a "net" (net of applicable fees) basis. Net reporting is considered misleading and deceptive, and should be criticized by the examiner.

E.8. Inter-Account Transactions

Inter-account transactions occur when assets are sold directly from one account to another, bypassing a non-affiliated third party broker. While attractive from the standpoint of reducing or eliminating commissions paid to third parties, the fiduciary must demonstrate that the transactions' terms were as advantageous to all parties, involved had these transactions been conducted through a third party. Management must:

- Comply with Applicable Laws and Regulations - Applicable regulations include Section 344.8 of the FDIC's Rules and Regulations, which requires investment managers to have written policies governing the crossing of buy and sell orders on a fair and equitable basis.
- Establish Adequate Written Polices.
- Develop Procedures to Monitor and Report Inter-Account Transactions - Inter-Account transactions should be reported to the appropriate supervisory level. Management should be alert to situations where trust officers may be engaging in such transactions in an effort to dispose of assets, either because they were erroneously or improperly purchased, or because they have depreciated in value. The sale of assets between accounts under these circumstances would constitute a breach of trust and result in a Contingent Liability on the part of the bank. It may also involve a violation of FDIC Section 344.8(a)(4).

An example of a situation where an inter-account transaction would be appropriate is the transfer of assets between related accounts. For example, the sale of an interest in a closely held business from one trust account to another related trust account (where the accounts share the grantor, beneficiaries, remaindermen, etc., *and* (1) where the sale is directed or authorized by the grantor, or the governing instrument, or (2) where the written approval of all beneficiaries and, if necessary, remaindermen, is obtained, or (3) where the transaction is approved by a court of law). Also, as noted above, the department should have written policies governing this type of transaction. As with all conflicts of interest, fiduciaries should seek to avoid inter-account transactions, and limit them to instances that provide demonstrable benefits to all accounts involved.

E.9. Multi-Account Transactions

Multi-account transactions are intrinsically neither good nor bad. When permissible under local law or the governing instrument, they can, and in some instances, would be expected to occur in the normal course of business. In a typical multi-account transaction, the fiduciary purchase or sell shares in large blocks and allocate the shares purchased or sold among accounts. If the block was purchased at different prices from more than one broker, management must take extraordinary care to ensure that all aspects of the allocation, including the price of the security, number of shares, and commissions charged is fair for all parties.

Management must ensure that all accounts are treated fairly in the allocation process and that proper policies are in place to govern such transactions. Accounts, by virtue of their size or other consideration, must not be permitted to benefit unfairly at the expense of other accounts. FDIC Section 344.8(a)(3) requires investment managers to have written policies governing fairness in the execution of multi-account securities transactions.

E.10. Contravention of Terms of the Governing Instrument

Failing to act according to the terms of the agreement or deviating from the governing terms of the agreement without proper authority may give rise to a contingent liability. The contravention may be due to circumstances beyond the fiduciary's control, such as an unforeseen event, or may be due to breaches of the fiduciary's duties. The latter might involve an investment decision or a failure to consult with a co-fiduciary. Contraventions due to unforeseen circumstances are an inherent risk of fiduciary activity. However, contraventions caused by the failure of the fiduciary to properly administer an account are unacceptable.

E.10.a. Ambiguous Language

Contraventions may occur when the terms of the instrument are ambiguous. In such instances, the fiduciary *may be* permitted to consider circumstances and conditions outside of the instrument to determine the settler's intent. One method of limiting such risks is to carefully review the governing agreement prior to accepting an account in order to ensure that the language of the agreement is precise and that all of the fiduciary's powers and duties are clearly defined in the agreement. This applies to both revocable and irrevocable trusts, since, due to future events, a revocable trust may become irrevocable.

E.10.b. Changing Circumstances

Frequently circumstances regarding either the settlor, the beneficiary or conditions affecting the administration of the trust will result in contraventions of the governing instrument. An example is the receipt of instructions from the settlor that contradict the terms of the original agreement. Management must be cautious when following the settlor's directions subsequent to the creation of the governing agreement. Unless the instrument permits the revocation or the modification of the agreement, the terms may not be changed. If the trust is revocable, it should be amended to permit the otherwise impermissible act. Another example occurs when required actions become impossible, illegal, or due to a change of circumstance, defeat the original purpose of the trust. For example, older trusts were written with very restrictive investment directions, such as only permitting investments in the direct obligations of the United States. Years later the trust, which may be small, may need to generate income and principal growth for an incapacitated remainderman. A mutual fund investing in U.S. Government and Agency securities may be a suitable investment, except for the very restrictive investment provisions of the original trust agreement. In the absence of an emergency, the trustee should first obtain authorization from a court of competent jurisdiction before deviating from the terms of a trust. A trustee who deviates from the letter of the trust without the sanction of the court and/or beneficiary does so at the peril of afterward having to provide evidence that the deviation was both necessary and appropriate.

E.10.c. Unauthorized Commingling of Assets

There should be no unauthorized commingling of assets by a fiduciary. In the following instances, however, commingling is allowed:

- State law permits a trustee to deposit uninvested funds belonging to several fiduciary accounts into a single deposit account.
- Assets are held in a special form of partnership, called a nominee, to facilitate the purchase, sale, and collection of income. Most governing agreements (personal, agency, and employee benefit) allow for assets to be held in a nominee name.
- Funds are invested in collective investment funds. Most modern trust agreements allow for this type of investment.

In all other respects, unless specifically permitted by law, assets of each fiduciary account should be kept separate from both the assets of other fiduciary accounts and the assets of the bank. In carrying out this responsibility, the bank should identify all assets with the name of the

fiduciary account. For example, mortgages, deeds, stocks, and registered securities should be in the name of the bank as fiduciary for the account. If the bank is acting in a agency or custodial capacity, registration would be in the name of the principal, unless otherwise directed or authorized by the governing agreement. Such authorization, however, is common.

E.10.d. Nonconforming Investments

Accounts must not hold nonconforming assets. For personal trust accounts, nonconforming investments are those that do not conform to state law, the terms of the governing instrument, or, in the case of employee benefit plans subject to ERISA, investments that do not conform with the plan documents (refer to Subsection 5.H.3.), do not meet the prudence and diversification requirements of ERISA, or which result from transactions prohibited by ERISA (refer to Subsection 5.H.7.).

E.10.e. Failure to Invest

All funds, including income and principal cash, should be made productive, unless the trust instrument, local law, court order, or a party empowered to direct investments provides otherwise. A fiduciary's failure to invest may result in liability for the loss of income. When required to invest in a particular investment vehicle, the failure to do so will result in liability for the loss of any increase in value if the investment appreciates. Any decision to leave cash uninvested should be properly documented

E.10.f. Acts Without Consent or Approval of a Co-Fiduciary

When there is more than one trustee, the general rule is that they cannot exercise the powers conferred upon them unless they agree. As such, co-fiduciaries should execute the duties of their office in their joint capacity. *Where discretion is required*, as distinguished from purely ministerial acts, the *joint action of the trustees is required unless the trust instrument or applicable statute provides otherwise*. The decision to purchase, sell, or distribute (invade principal) trust property involves the exercise of discretion requiring the joint action of the co-fiduciaries, and should have the written approval. Absence of documentation evidencing joint approval may expose the bank to the risk of loss in the event actions are subsequently challenged.

In certain instances, Section 405 of ERISA makes a fiduciary liable for the wrongful acts of co-fiduciaries. Refer to Subsection 5.H.6.a. for a discussion on how proper allocation procedures will permit one fiduciary to insulate itself the actions of co-fiduciaries..

E.11. Privacy

Conflicts of interest related to privacy include breaches of loyalty due to the sale of confidential information to third-parties and to maintain control over trust property. The first breach may occur when the sale of non-public customer information to increase fiduciary revenue supersedes the beneficiaries' need or desire for confidentiality. The second breach may occur when the fiduciary fails to adequately safeguard confidential information. The current concern in this area focuses on information aggregators. Information aggregators assemble client information, often financial in character, from various on-line sources and present the client's information in a single convenient interface. The activity is sometimes referred to as screen scraping, and is addressed in the next subsection. Regardless of the cause of the breach, adequate policies and procedures are required to control conflicts arising from consumer privacy issues. Refer to Section 10 of the Manual for a discussion of the required contents of a privacy program.

E.11.a. Privacy and On-line Banking

When a fiduciary offers on-line access to client information, the potential exists that an unauthorized entity or person may access the information. Even when done with the permission of the client, such on-line access can expose the fiduciary to liability for failing to properly safeguard confidential information. Essentially, the client provides the information aggregator with pin numbers and passwords to all their financial accounts and the aggregator enters each entities system, collects the client's data, and presents it to the

client in a combined format. In many cases, trust and agency agreements do not allow the sharing of information with parties other than the beneficiaries. Methods for managing the risk to the fiduciary include:

- Separating fiduciary customer information from general customer information on on-line systems, e.g., separate pin and password to access fiduciary information;
- Informing customers of the potential risks of screen scraping and adding language to written on-line user agreements to address this activity;
- Modifying the language of governing documents (trust and agency agreements) to allow for this activity;
- Including cautionary disclosures on the fiduciary's website which request customers to notify the fiduciary if they have provided an information aggregator with on-line access to account information; and/or
- Establishing procedures for monitoring screen scraping activity.

E.12 Prohibitions against Tying Arrangements

Trust departments and banks must be aware of potential conflicts of interest when they condition the price or availability of one product on a requirement that the customer also obtain another product from the bank or an affiliate of the bank. Although Section 106 of the Bank Holding Amendments of 1970 prohibits this type of activity, the regulations specifically permit tying arrangements if the customer is required to obtain a "traditional bank product" such as a "loan, discount, deposit or trust service". Section 106 also prohibits a bank from preventing a customer from obtaining a product or service from a competitor, unless the condition is imposed in a credit transaction to ensure the soundness of the credit. Tying arrangements are prohibited by the Sherman and Clayton Anti-trust Acts; however, these acts require showing that a practice harms the public, while Section 106 has no such requirement.

The difficulty for a bank or its trust department is understanding what is a traditional bank product. The Board of Governors of the Federal Reserve System has provided the following specific examples of traditional bank products as guidance:

- All types of extensions of credit, including loans, lines of credit, and backup lines of credit;
- Lines of credit and financial guarantees;
- Lease transactions that are the functional equivalent of an extension of credit;
- Credit derivatives where the bank or affiliate is the seller of credit protection;
- Acquiring, brokering, arranging, syndicating and servicing loans or other extensions of credit;
- All forms of deposit accounts, including demand, negotiable order of withdrawal (NOW), savings and time deposit accounts;
- Safe deposit box services;
- Escrow services;
- Payment and settlement services, including check clearing, check guarantee, ACH, wire transfer, and debit card services;
- Payroll services;
- Traveler's check and money order services;
- Cash management services;
- Services provided as trustee or guardian, or as executor or administrator of an estate;
- Discretionary asset management services provided as fiduciary;
- Custody services (including securities lending services); and
- Paying agent, transfer agent and registrar service.

Several other types of arrangements are allowed under Section 106. The regulations do not prohibit a bank from imposing conditions in order to enhance the credit of its borrowers, such as requesting additional collateral, requiring insurance on collateral or restricting a

borrower's total debt, even at a competing institution. Section 106 also does not restrict non-bank affiliates from requiring a customer to use bank's services. Furthermore, a bank may require a customer, in accepting bank services, to choose from a combination of traditional and non-traditional products, so long as the customer can fulfill its obligation to the bank solely through traditional products.

Some specific examples of violations are cited by the Federal Reserve. A bank may not require a borrower to do any of the following in order to obtain a loan:

- Purchase an insurance product from the bank or an affiliate of the bank (a prohibited tie);
- Obtain corporate debt or equity underwriting services from an affiliate of the bank (a prohibited tie);
- Sell the bank or an affiliate of the bank a piece of real estate unrelated to the requested loan (a prohibited reciprocity arrangement); or
- Refrain from obtaining insurance products or securities underwriting services from a competitor of the bank or from the competitor of an affiliate of the bank (a prohibited exclusive dealing arrangement).

As tying arrangements can be very complicated, it is imperative that management establish policies and procedures to ensure that bank employees comply with the anti-tying prohibitions of Section 106. The procedures should include education and training, particularly for personnel that have direct contact with customers for purposes of marketing and selling the bank's products, especially in the bundling of traditional and non-traditional products. Trust department employees should be aware that securities underwriting, insurance products and securities advisory services are not considered traditional banking services for the purposes of Section 106. Furthermore, employees should be free to seek legal advice in the event of a potential violation of Section 106.

FDIC FEDERAL DEPOSIT INSURANCE CORPORATION

Section 9- Earnings, Volume Trends and Prospects

Table of Contents

This section discusses the evaluation of the current operating results of a trust department and its impact on the bank's profitability. In reviewing the trust department's earnings performance, the examiner must evaluate past earnings trends and assess the effect on profitability of anticipated future business growth. The evaluation of earnings also considers senior bank and trust department management's views about trust department profitability, including the emphasis placed on establishing reasonable goals and objectives for profitability, expressed either in terms of an expected level of profitability or the growth of new business).

This section of the Manual is organized into the following parts:

A. General

B. Policies

C. Accounting for income, expenses and losses

1. Income
2. Expenses
3. Loses

D. Evaluating profitability

E. Budgets

F. Direct and indirect trust expenses

G. Regulatory reporting

1. Call Report - Report of Income
2. Call Report - Fiduciary Schedule RC-T
3. Annual Report of Trust Assets - Schedule E (Trust Income Statement)

H. FDIC implementation of 1998 uniform interagency trust rating system

I. Alternate earnings rating standards for smaller institutions

A. General

In recent years banks have become increasingly aware of, and focused on, the contribution of noninterest income to profitability. Recurring fee income can enhance profitability, and it is often less volatile than interest income. Trust department income can be an important component of noninterest income. As individuals increasingly accumulate financial assets to store wealth, trust departments have experienced vigorous growth in assets under management. The profitability of these departments has heightened the attention of management. This trend has also resulted in a proliferation of nonbank financial and fiduciary

service providers, greatly increasing the competition faced by banks offering trust and other fiduciary services.

The Corporation recognizes that not every trust department will be profitable. Many small trust departments are operated primarily as a community service. Trust services are also offered in order to retain more profitable relationships elsewhere in the bank.

Although various reasons for offering trust services exist, the FDIC expects each bank operating a trust department to be aware of the department's contribution, or cost, to the operating earnings of the bank. Banks operating trust departments should regularly measure and evaluate the impact of both direct and indirect trust income and expenses on their overall profitability. Some form of accounting system should be implemented to provide the basis for an analysis of the department's income and expense data. Management may use those results to determine which services should be continued or discontinued, whether fees should be adjusted, and which types of accounts should be emphasized in new business development efforts.

B. Policies

The shareholders of a bank operating a trust department have the right to expect a reasonable return on their investment. This requires profit motivation from the board of directors, and a fee structure which covers the costs of providing trust and fiduciary services and provides a reasonable return. A trust department's fee structure should be reviewed and approved periodically by the trust committee, or some other senior operating committee. Trust management should establish a business plan, with realistic goals, that takes into consideration the department's size and resources. Business plans and budgets that are integrated with those of the entire bank have a greater likelihood of communicating trust profitability goals, objectives, and expectations to bank management and personnel. However, in banks with very small trust departments, policies or plans covering overall bank operating performance may satisfactorily embody the trust department's budget, fee schedule, or business plan. In these situations, examiners should avoid criticizing a bank for not establishing separate trust operating policies, or for not integrating these policies with the institution's operating plan.

Trust policies should also include management's position on fee discounting, fee concessions and waivers, and compensating balances. Policies should clearly describe those to whom discounts will be allowed, the purpose for granting discounts, the types of services for which fees may be discounted, and the method by which the trust department may be compensated by the bank for such discounts. Trust policies should require that all discounts, concessions, or compensatory arrangements be documented and approved by the trust committee, or some other operating committee. The policies should also indicate who is authorized to grant such discounts. Policies which permit trust personnel to unilaterally approve discounts, concessions, or waivers without the informed approval of a senior operating committee pose control weaknesses. Such policies permit individual staff members to alter approved fee schedules without the directorate's knowledge and approval. They also provide individuals with the ability to waive account fees to mask account problems and errors that should be brought to management's attention.

Another aspect of rating trust profitability is the department's prospects for future growth. Examiners should evaluate the control and management of the trust department growth and new business development prospects. An essential element in a successful business plan is marketing, which should identify the segments of the fiduciary services market where the department will concentrate its new business development efforts. In marketing the department's services, management must ensure that the bank has the expertise, staff, and facilities to satisfactorily manage the volume and types of new business sought.

Examiners should evaluate the reasonableness of the marketing plan. While no one approach will suit every bank and market, there are some areas which are common to most departments. The marketing plan should include a definition of the market area for trust services (which may differ from the market identified for commercial and retail banking products). The characteristics of the market area, including demographics, geographic or legal impediments (e.g., there may be difficulties in marketing some products in an adjoining state), and existing trust competition should be considered in estimating the growth potential of various services. Sources of new business (existing bank customers, new customers based on demographics, professional referrals, etc.) should be evaluated. Finally, the means of generating new business should be addressed. These may take the form of presentations to attorneys or public groups, direct mailings and statement fliers, lobby posters and brochures, and print and broadcast advertising. The bank's strengths and capabilities must be factored into any plan, particularly one which

projects large or rapid growth, or contemplates offering new products.

C. Accounting for income, expenses and losses

Each trust department should have a system for measuring and monitoring its income and expenses. The system does not necessarily need to be elaborate to provide sufficient information for management, but it should be commensurate with the department's size and growth trends. Systems should track direct income and expenses and, to the extent possible, include indirect expenses, as well.

C.1. Income

Fee and other direct income of a particular department are usually measured using either a cash or an accrual accounting method. Fees charged to trust accounts are usually the primary component of direct rust revenue. These fees are often based on the size (market value) of the account, but may take into consideration the type and complexity of the assets under management, the volume of transactions in the account, the customer's total relationship with the bank, and other factors. Less often, fees may be assessed as a percentage of the income earned by an account. Other direct income may include sweep fees, 12b-1 fees, etc. (Note: Gross income from the trust department is reported as a separate line item of noninterest income on the quarterly Report of Income) Other common contributors to trust income are:

- Indirect income - Indirect income may include intracompany income credits, such as credits for deposits, allocated to the trust department in recognition of income earned in other areas of the bank's operations as a result of the business relationship developed by the trust department. Indirect income is more difficult to measure than direct income. While it is generally recognized that a trust department generates other, often more profitable, business for an institution, many institutions do not attempt to estimate the profits that client relationships developed in the trust department produce in other areas of the institution.

- Bank calculated credit for deposits - A credit for deposits is based upon deposit balances maintained in the commercial bank by accounts in the trust department. Both interest bearing and non-interest bearing deposits should be included in the calculation to obtain a realistic estimate of contribution of the department's deposits to commercial bank profitability. Typically, the calculation considers how the bank is investing the funds deposited by the department, determines (or estimates) the average interest rate the assets acquired when investing trust department deposits are earning, and subtracts the interest paid for each type of deposit (plus deposit insurance premiums and administrative costs) in arriving at the net rate earned. The net rate is then applied to the average balances for each type of deposit account to determine or estimate the dollar value of credit for deposits.

The role played by trust department deposits in bank profitability should not be ignored when evaluating the profitability of the department. Credit for deposits remains a key element in determining a trust department's contribution to bank profitability. Furthermore, specialized trust activities such as corporate trusts and agencies (refer to subsection B. in Section 6), frequently rely on trust deposit balances to achieve trust profitability in the highly competitive market for these services. Consequently, the volume and anticipated float duration of corporate trust deposits plays a vital role in the structuring of corporate trust and agency fees and commissions. With respect to the deposits of personal and employee benefit accounts, however, a high level of trust deposits, and a correspondingly higher credit for deposits, may be indicative of a breach of prudent fiduciary practice, since investments in own-bank deposits is both a conflict of interest and self-dealing. Refer to subsection E.3. Use of Own-Bank or Affiliate Bank Deposits, located in Section 8 for specific conflict of interest issues relating to trust deposits.

Since banks may include a credit for deposits in calculating the profitability of trust services, examiners should evaluate the reasonableness of the methodology and assumptions used to calculate the credit for deposits. An analysis that includes a credit for deposits should not be limited to own-bank demand deposits, but should include all trust-generated own-bank deposits in determining the credit for deposits, since all deposits, including savings and time deposits, can be invested to provide a positive return to the institution.

With the advent of the automated sweeping of uninvested funds (refer to subsection F.1.b. Sweep Arrangements, located in Section 3) into overnight investments, the volume of idle demand deposits, as well as the associated credits for deposits, has significantly diminished in many trust departments. Nevertheless, departments with a high volume of corporate trust activity may still carry significant uninvested cash balances. The investment of these funds for the department's benefit, in the form of relatively risk-free overnight investments, should not be criticized unless the fiduciary is required to invest the funds for the benefit of the obligor under terms of the governing instrument or corporate trust indenture**.**

C.2. Expenses

Departmental expenses generally fall into two categories, direct and indirect. Direct expenses are identifiable costs directly chargeable to, for and under the control of the fiduciary and related services function. These expenses include: salaries, bonuses, hourly wages, overtime pay and incentive pay associated with officers and employees, expenses associated with employee benefits, such as contributions to employee benefit plans, health and life insurance costs, social security and unemployment taxes, relocation expenses and other fringe benefits, expenses associated with occupancy, such as maintenance, service and repairs, telephones and utilities, insurance coverage, real estate or property taxes, depreciation/amortization, lease/retail payments for premises and equipment, any leasehold improvements charged directly to expense, fees paid directly for external or internal audits of the fiduciary and related services, trust examination fees, employee training, fees directly paid for outside legal counsel and/or consultants, and, expenses paid directly for advertising and business development activities.

Indirect expenses are those expenses charged to the fiduciary and related services activity from other departments of the institution. Indirect expenses are generally reflected in the institution's retail accounting system and include any allocation for the proportionate share of corporate expenses that are not directly charged to a particular department or function. If the institution's internal accounting system is unable to provide the information, the institution may use a reasonable alternate method to estimate indirect expenses. Indirect expenses include: the proportionate share of data processing expenses, building rent or depreciation, utilities, real estate taxes, and insurance, internal and external audits of trust activities, in-house and/or outside legal expenses, non-trust employee incentives, business development activities, charitable contributions, and corporate overhead, such as allocated expenses for corporate planning and/or financial staff, board of director/committee fees, training, temporary personnel and professionals, travel, entertainment, stationary and postage, and automobile expenses. Reporting methods for indirect expenses should remain consistent from period to period.

Settlements, surcharges and other losses should not be included in direct or indirect expenses, but should be reported separately. Refer to discussion of losses below.

It is not unusual for a given type of expense to be incurred on both a direct and an allocated basis. Salaries are likely to be the largest direct expense category in most trust departments. Examples of expenses likely to be incurred, other than salaries, are listed in the Direct and Indirect Trust Expenses table located in subsection F.

In larger departments, cost accounting systems may provide a sophisticated means of measuring trust department profitability. Elaborate systems can measure costs by product line, type of account, individual administrator, type of transaction, or other areas or functions within a department. An effective cost accounting system may also help establish a fiduciary services pricing structure based upon the cost of services provided, such as the amount of labor required to provide particular services or to execute transactions, the number of transactions processed, portfolio valuations and investment advisory services, etc.

Even in small departments, the major expense category, salaries, can be estimated by determining the percentage of each staff member's time devoted to trust activities. In the same way, employee benefits may be allocated to the trust department by taking the total amount of benefits for the bank as a whole and dividing it by total salaries. This percentage can then be applied against the previously determined trust salary figure. Data processing and auditing costs can often be identified, or easily allocated to the trust department as well.

C.3. Losses

An important consideration in any evaluation of trust department profitability is the level of settlements, surcharges and other losses. Persistent or a large volume of losses usually indicates underlying account or asset administration problems, or other operational weaknesses. Management should have reliable systems that identify all settlements, surcharges, and other losses. Settlements, surcharges and other losses should be reported to the trust committee, or some other senior operating committee. Losses may be attributable to the following:

- Settlements

  Formal and informal agreements to reimburse trust accounts, customers, or beneficiaries, but which are reached without a court decree.

- Surcharges

  Amounts that the fiduciary is required by court decree to pay trust accounts, customers, or beneficiaries. Surcharges are normally associated with negligence, failure to perform fiduciary duties, or misconduct.

- Fee Waivers and Concessions

  The most common form of fee loss. Many departments will waive or rebate previously charged fees and commissions. While some fee waivers may be based on banking relationships, some fee waivers may also be a way to adjust an account in response to customer complaints for: operating, administrative, or investment errors, the failure to invest funds promptly, the failure to file timely tax returns, losses attributable to the failure to renew a insurance policy or losses attributable to inadequate insurance coverage of property losses, etc

- Operational Errors

  E rrors from trade processing, lost or stolen securities, miscalculation of fees or taxes, pricing discrepancies or other losses that are realized in the reporting period attributable to the fiduciary and related services.

Other sources of losses from fiduciary activities include: defalcations; uncollectible fees; and civil money penalties imposed by regulatory agencies; etc.

In analyzing settlements, surcharges and losses, examiners should recognize that the gross amount of the loss may be offset, in many cases, by insurance coverage. Further, trust accounting systems may account for settlements, surcharges and losses on either a gross or net basis. On a gross basis, the entire amount is reported as loss, and any recovery, such as from insurance proceeds, is reported as an income item. On a net basis, insurance proceeds and other recoveries are netted against the loss, with only the net figure reflected. Either approach is satisfactory if applied on a consistent basis. However, when trust policies permit any form of netting, examiners should determine whether trust management is reporting gross losses to senior management, or "netting" the losses as a method of masking, or hiding, the actual amount of trust losses.

Examiners should be aware that many institutions do not recognize settlements, surcharges, and losses as a component of trust department profitability. Instead, they are shown as losses and recoveries in the bank's general accounting system. Thus, the review of trust profitability should consider the possibility that significant settlements, surcharges and losses may not appear in the trust accounting system at all. It is imperative that the trust department's reporting systems inform senior management and the directorate of the actual dollar amount and nature of trust losses. If not, senior management and the Board may remain unaware of serious operational and administrative deficiencies. Such Internal control weaknesses should be brought to senior management's attention and discussed in the report of examination.

Trust departments with greater than $100 million in fiduciary assets must report fiduciary settlements, surcharges, losses, and recoveries in Memorandum item 4 of Call Report of Condition Schedule RC-T. Institutions complete Memorandum item 4 only for the

December 31st filing, and are required to report settlements surcharges, losses and recoveries on a gross basis, i.e. before insurance payments. Recoveries reported may be for current or prior years' losses, and are reported only when the recovery is actually realized, i.e. payment is received. The filing of an insurance claim does not support the realization of a recovery for RC-T purposes.

D. Evaluating Profitability

While earnings can largely be determined through a review of the trust department's accounting system, several other factors should be evaluated concurrently. These are:

- The emphasis placed by senior management on profitability, in terms of establishing profitability objectives and monitoring operating results;
- The bank's size and demographics of geographical market (e.g., a young population is not likely to produce many estates; trust department or commercial bank size may impose natural limitations on absolute levels of profitability; and geographic location may dictate the level of competition for fiduciary services);
- The degree of dependence on nonrecurring fees (e.g., estates or other court appointed accounts);
- Special circumstances, such as major declines in the securities markets, or the loss of a major local employer; and
- Unusual circumstances regarding the composition of business, fee schedules, settlements, charge-offs or other compromise actions, or adverse publicity.

In evaluating earnings, emphasis should be placed not only on the existing levels of profitability, but also on recent earnings trends, the department's new business development efforts, and competitive factors. Such n analysis will permit examiners to determine the likelihood that current earnings performance will continue.

E. Budgets

Budgets are encouraged for all trust departments, and should be expected in larger, more complex trust departments. Management should document the reasonableness of the assumptions used in the budget process. Budgets should be established, approved, and periodically reviewed by senior management. Significant deviations between actual and budgeted performance should be brought to the attention of senior management.

Examiners should evaluate policies regarding the operating performance and earnings prospects of the trust department. In situations where management has no clear policy in these matters, or where record keeping is inadequate, the examiner should make appropriate comments in the report of examination.

F. Direct and indirect trusts expenses

Other than salaries, expenses likely to be incurred by trust departments are listed below:

Category	Direct Trust Expenses	Allocated Expenses: (Trust function's proportionate share):
Employee Benefits	• Contributions to employee benefit plans (pension, profit-sharing, 401(k), ESOP, etc.). • Health and life insurance. • Social Security and unemployment taxes. • Employee relocation expenses. • All other "fringe" benefits.	• N/A
	• Trust department processing performed on trust department equipment or by outside data processing servicers. • Lease or rental of trust EDP	• Data processing expense for applications performed by other areas of the bank or its affiliates.

Data Processing	equipment. • Depreciation or amortization for trust EDP equipment. • Repairs and maintenance, service or maintenance contracts. • Non-capitalized purchases of software. • Related supplies etc.	
Occupancy	• Ordinary repairs and maintenance, service or maintenance contracts. • Telephone and utilities. • Insurance coverage. • Real estate and other property taxes. • Depreciation r amortization, lease and rental payments for premises and equipment (exclusive of EDP). • Leasehold improvements charged directly to expense and not booked as assets.	• Building rent or depreciation, utilities, real estate taxes, and insurance.
Audit	• Fees paid for external audits of trust activities.	Estimated costs for: • Internal and external audits of trust activities. • Audits performed by the bank's parent holding company.
Legal	• Fees paid for outside legal counsel, whether as a retainer or for specific legal services.	• Institution's in-house and/or outside legal costs.
Marketing	• All expenses paid by, or directly chargeable to, the trust function for advertising and other business development activities	• Incentives paid to non-trust employees. • Institution's business development activities, whether performed in-house or by outside contractors.
Corporate Overhead	• N/A	• Non-trust audit and examination fees. • Salaries and benefits of executive management. • Board of directors, trust committee (and related subcommittees) fees. • Public relations and institutional marketing. • Charitable contributions. • Customer parking. • Holding company overhead. • Functions such as personnel, corporate planning, and corporate financial staff.

Other expenses which would likely be found in a trust department operation are:

- Stationery, postage, travel and entertainment, vault and security costs, automobile expenses, etc.
- Applicable state trust examination fees.
- Temporary staffing expenses, including those for attorneys, accountants, consultants, investment advisors or managers, and other professionals who are not salaried officers or employees of the institution.
- Training and testing expenses, as well as dues, fees, and other expense associated with memberships in clubs and organizations.

G. Regulatory reporting

Trust institutions are required to report certain data concerning the profitability of trust and fiduciary services. Because these reports provide a standardized set of data prepared in a uniform manner, they should be used whenever possible to aid examiner efficiency and eliminate needless requests for earnings data. Nonetheless, examiners should review the reasonableness and accuracy of the trust and fiduciary services profitability data reported. If significant errors in the reported data are found, the institution should be requested to promptly file amended reports correcting the errors.

G.1. Call Report - Report of Income

Gross fiduciary income is reported as a separate noninterest income line item (5a) of the Report of Income on both the small-bank report (FFIEC Form 041) and the large-bank report (FFIEC Form 031).

Through year-end 2000, gross fiduciary income was reported as a separate line item of noninterest income only by large bans (i.e. banks with $100 million or more in total bank assets), which filed FFIEC Form 031. Smaller banks and trust companies aggregated trust income with other fee income.

G.2. Call Report - Fiduciary Schedule RC-T

Beginning in December 2001, a new schedule, RC-T, "Fiduciary and Related Services," was added to the Call Report of Condition. Schedule RC-T includes information on Fiduciary and Related Services Income, as well as a memorandum item which covers Fiduciary Settlements, Surcharges, and Losses. Fiduciary and Related Services Income data, as well as the Fiduciary Settlements, Surcharges, and Losses data are confidential and, therefore, not available to the public on an individual-bank basis. Not all institutions, however, are required to report data on fiduciary income, expenses and losses. Only those institutions with greater than $100 million in fiduciary assets, as of the previous year-end, and those that do not meet the fiduciary income test , i.e. institutions where gross fiduciary and related services income exceeds ten percent of revenue (net interest income plus noninterest income), are required to report income, expense and loss data in Schedule RC-T.

Trust companies, large institutions (i.e. those with more than $250 million in total fiduciary assets), and institutions that do not meet the fiduciary income test are required to complete certain line items of Schedule RC-T on a quarterly basis. Banks with total fiduciary-related assets between $100 and $250 million must complete all applicable line items of Schedule RC-T only as of the December 31st year-end Call Report submission. The trust asset thresholds are based on total fiduciary assets as of the previous year-end.

In reviewing Schedule RC-T for accuracy, examiners must be familiar with the instructions for completing Schedule RC-T. The instructions for completing Schedule RC-T are available on FDIC website, http://www.fdic.gov/regulations/resources/call/crinst/602rc-t.pdf. Particular note is made of the following:

- Fiduciary and related services income should be reported on the basis of the various lines of trust business reported in the Fiduciary and Related Assets section of Schedule RC-T.

- Direct and indirect fee income is reported in Items 12 through 18 of Schedule RC-T. The total of these items must equal the amount reported in Item 5.a., i.e. Income from Fiduciary Services, of the Call Report of Income.

- Item 18 (Other fiduciary & related services income) is used to report investment advisory fees when the assets are not held by the institution.

- Item 20 (Expenses) includes all direct and indirect expenses attributable to the fiduciary and related services reported in RC-T.

- Item 21 (Net losses from fiduciary and related services) must equal the net totals from Memorandum # 4 (Fiduciary settlements, surcharges, and other losses).

- Item 22 (Intracompany income credits for fiduciary and related services). Three basic types of income credits should be reported at this item: any credit for own-bank deposits calculated by the bank; allocations of income received from elsewhere in the bank; and credits received for other intracompany services and transactions.

G.3. Annual Report of Trust Assets - Schedule E (Fiduciary Income Statement)

Prior to the implementation of Call Report Schedule RC-T, institutions reported fiduciary income, expenses and losses in Schedule E of the Annual Report of Trust Assets. Schedule E was implemented in 1996, and, as is the case with the income, expense and loss data reported in Call Report Schedule RC-T, the information reported in Schedule E is confidential and not available on an individual institution basis. Aggregate Schedule E data, however, is available to the public via the FFIEC publication "Trust Assets of Financial Institutions." Schedule E aggregate reports can accessed via the FDIC's website at http://www2.fdic.gov/structur/trust/index.asp .

H. FDIC implementation of 1998 Uniform Interagency Trust Rating System

The 1998 Uniform Interagency Trust Rating System (UITRS) [refer to subsection A. in Appendix B] was implemented under Division of Supervision Regional Director Memorandum transmittal number 98-102, which was issued on December 31, 1998. Guidelines for the Corporation's implementation of the new rating system, including instructions for the preparation of the Earnings examination schedule, and an alternative rating system for small trust departments, were outlined in this Regional Director memorandum.

The 1998 UITRS permits agencies to adopt their own guidelines governing the assignment of an Earnings rating for institutions total assets of less than $100 million, as reported on Schedule A, Line 18, Column F of the FFIEC Annual Report of Trust Assets (FFIEC 001). [Note that with the discontinuation of the Annual Report of Trust Assets at the end of the 2000 reporting year, the $100 million threshold is calculated by adding total fiduciary assets reported on line 9 of Call Report Schedule RC-T to total custody and safekeeping assets reported on line 10 of RC-T.] The Corporation issued the following guidelines in its December 31, 1998 memorandum:

- Required Examination Coverage **-** Trust earnings must be reviewed, analyzed and evaluated at each trust examination.
- Mandatory Ratings - Trust earnings are to be routinely rated only at:
  - Institutions with $100 million or more in trust assets (based on the latest FFIEC Annual Report of Trust Assets) and
  - Trust company subsidiaries of nonmember banks.
- Alternative Ratings Assignment for Small Trust Institutions - Trust earnings must be rated in small ("community") trust institutions when one o the following is present:
  - The trust department has $90 million or more in total fiduciary and custody and safekeeping assets, as reported in Call Report Schedule RC-T, and its recent growth indicates that it is reasonable to believe that it will exceed the $100 million asset threshold by the end of the current calendar year.
  - The trust department has dropped below $100 million asset threshold in the past year, but is reasonably expected to exceed $100 million in the near future.
  - Trust department earnings are a significant to the bank's overall earnings (gross trust fees are 50 percent or more of net bank income).

When trust earnings are rated in smaller trust institutions, the revised UITRS provides a different set of standards for evaluating the adequacy of trust earnings. In these cases, the examiner should primarily focus on the following management oversight and approval issues, rather than numerical profitability:

- A reasonable method of measuring trust income and expense, commensurate with the volume and nature of fiduciary services offered,
- Appropriate reporting of trust profitability, not less than annually, to the board of directors or an appropriate committee thereof, and

- Approvals, from the board of directors or an appropriate committee thereof, for the offering of fiduciary services.

I. Alternate earnings rating standards for smaller institutions

The 1998 Uniform Interagency Trust Rating System (UITRS) [refer to subsection A. in Appendix B], provides minimum standards and ratings definitions for rating the earnings component of smaller institutions under an alternate rating system. As discussed above, the Corporation adopted the alternate earnings rating approach for smaller institutions in 1998.

Minimum Standards for Smaller Institutions:

Alternate ratings are assigned based on the level of implementation of four minimum standards by the board of directors and management. These standards are:

- Standard No. 1--The institution has reasonable methods for measuring income and expense commensurate with the volume and nature of the fiduciary services offered.
- Standard No. 2--The level of profitability is reported to the board of directors, or a committee thereof, at least annually.
- Standard No. 3--The board of directors periodically determines that the continued offering of fiduciary services provides an essential service to the institution's customers or to the local community.
- Standard No. 4--The board of directors, or a committee thereof, reviews the justification for the institution to continue to offer fiduciary services even if the institution does not earn sufficient income to cover the expenses of providing those services.

Alternate Ratings Definitions for Smaller Institutions:

A **rating of 1** may be assigned where an institution as **implemented all four minimum standards**. If fiduciary earnings are lacking, management views this as a cost of doing business as a full service institution and believes that the negative effects of not offering fiduciary services are more significant than the expense of administrating those services.

A **rating of 2** may be assigned where an institution has **implemented, at a minimum, at least three of the four standards**. This rating may be assigned if the institution is not generating positive earnings or where formal earnings information may not be available.

A **rating of 3** may be assigned if the institution has **implemented at least two of the four standards**. While management may have attempted to identify and quantify other revenue to be earned by offering fiduciary services, it has decided that these services should be offered as a service to customers, even if they cannot be operated profitably.

A **rating of 4** may be assigned if the institution has **implemented only one of the four standards**. Management has undertaken little or no effort to identify or quantify the collateral advantages, if any, to the institution from offering fiduciary services.

A **rating of 5** may be assigned if the institution has **implemented none of the standards**.

FDIC FEDERAL DEPOSIT INSURANCE CORPORATION

Trust Examination Manual

Section 10- Other Trust Matters

Table of Contents

This section contains an overview of Federal regulations and other matters related to fiduciary activities.

A. Trust powers

B. FDIC consent to exercise trust powers

1. FDIC Part 333 Consent Requirement
2. FDIC Part 303 Applications for Consent
3. Unauthorized Trust Activities

C. Mergers, acquisitions, and transfers of fiduciary business

1. Federal Deposit Insurance Act Section 18(c)(1)
2. Affiliates - Federal Reserve Act Sections 23A and 23B
3. Applicable State Law
4. FDIC Consent
5. Nonstatutory Considerations

D. Methods used to deliver fiduciary services

1. Trust Branches and Trust Service Offices
2. Interstate Trust Branch Offices
3. Trust Companies
4. Trust Referral Arrangements
5. Private Banking Services

E. Examination authority of subsidiaries and affiliates

1. FDI Act Section 10 and the Gramm-Leach-Bliley Act
2. Bank Service Corporation Act

F. GLBA provisions for fiduciary activities

1. SEC Registration Requirements

a. Registered Broker

1. Regulation R

a. Trust & Fiduciary Exception

1. Chiefly Compensated

2. Trade Execution Requirements

b. Custody & Safekeeping Exception

1. Exemption for Employee Benefit, IRA, and Other Accounts

2. Exemption for Accommodation Trades

3. Subcustodians

c. Networking Exception

1. Referral Fees

2. Bonus Programs

d. Exemption for Referrals of High Net Worth/Institutional Customers

e. Sweeps Account Exception/Money Market Fund Exemption

f. Exemption for Transactions in Regulation S Securities

g. Exemption for Securities Lending Transactions

b. Registered Dealer

c. Investment Advisers

2. Privacy Issues Faced by the Fiduciary

a. Applicability to Trust Operations

b. Applicability to Fiduciary Customers/Consumers

G. Outside contracting for fiduciary services

1. Applicable Regulations

2. Due Diligence Reviews

3. Written Agreements With Agents

2. Deposits of Estates

3. Deposits of Irrevocable Trust Accounts

4. Deposits of Trust Agency Accounts

5. Deposits of Employee Benefit Accounts

6. Deposits of Certain Retirement Accounts

M. Applicability of consumer regulations to fiduciary activities

A. Trust Powers

Trust powers are granted to state-chartered banks under state law, which is usually administered through a bank's chartering authority. It is state law, therefore, which defines activities constituting fiduciary or trust powers. The FDIC always defers to state law in these matters.

State statutes and Corporation regulations do not always uniformly identify what functions constitute "fiduciary" activities requiring trust powers. Some state statutes define "trust activity" as serving in a (state's) legally defined capacities of trustee, executor or administrator of estates, or guardian of the estate of a minor or incompetent. However, the term "trust activity" is not as clear when a bank is performing an agency function which may, or may not, require trust powers. Some banks administer "managed agency accounts" wherein there is no "trust" relationship, yet the bank often assumes full control of cash and assets, including investment discretion. In these cases, the bank's responsibilities exceed those exercised in passive, or directed personal trust accounts, or in court directed estates and guardianships. While a bank may claim it is not acting in a "trust" capacity for such accounts, its activities may require trust powers under state law.

The term "fiduciary capacity" is neither universally defined, nor does it have identical meaning among the states in setting their requirements for trust powers. The term "fiduciary" is broadly defined. It can be almost any party performing a financial or other service for another party. For example, some banks operate corporate trust departments in which they do not serve as "trustee" for any account, but perform extensive financial services which require trust powers. Some states distinguish between "court" and "private" accounts, and require such things as a faithful performance bond or uninvested cash pledge for designated court accounts. Furthermore, the term "trustee" per se, is not always a determinative, since banks have been authorized to serve as "trustee" over certain types of accounts (IRA's) without having been granted trust powers.

It is also necessary to clarify the types of "agency functions" which are considered "trust activities" requiring state authorization. Many commercial banks are permitted to provide escrow, safekeeping, custodian, or similar directed-agency services, without having a trust department or regulatory authorization to perform trust powers. This may include physical custody of assets, record keeping, collecting and remitting income, performing some administrative actions (as in escrow services), or similar activities. Whether any such activities are permitted without "trust powers" is wholly dependent

upon state law.

B. FDIC Consent to exercise trust powers

In 1958, the Corporation articulated its basis for requiring consent to exercise trust powers (refer to Appendix C, FDIC Memorandums Regarding Consent to Exercise Trust Powers, dated June 30, 1958), and established conditions for grandfathering consent. Banks granted trust powers by State statute or charter prior to December 1, 1950, regardless of whether or not such powers have ever been exercised, are not required to file an application with the Corporation for consent to exercise trust powers. Such consent is grandfathered with the approval for Federal deposit insurance.

Banks approved for Federal deposit insurance after December 1, 1950, are required to file an application to exercise trust powers, unless such filing was made simultaneously with the application for Federal deposit insurance.

B.1. FDIC Part 333 Consent Requirement

The Corporation does not grant trust powers, but only gives its consent to exercise such powers as granted by state authorities. Section 333.2 of the FDIC Rules and Regulations prohibits an insured state nonmember bank from changing the general character of its business without the Corporation's prior written consent. The test to determine when a change in character of business has occurred is left to the discretion of the Corporation. For trust powers, this normally occurs when a fiduciary relationship is created under the laws of the governing state authority. Therefore, it is general policy that unless a bank is exempted through the circumstances described in the background section above, it must file a formal application with the Corporation to obtain prior written consent before it may exercise trust powers.

It should also be noted that the statute applies only to banks. Separately chartered and capitalized uninsured trust company subsidiaries of banks need not apply for FDIC consent to exercise trust powers. Also, state nonmember institutions that acquire or start registered investment adviser subsidiaries do not have to apply for FDIC consent to exercise trust powers under Section 24 of the FDI Act or Part 362 of the FDIC Rules and Regulations.

B.2. FDIC Part 303 Applications for Consent

Part 303 of the FDIC Rules and Regulations governs the administrative handling of applications for consent to exercise trust powers. Application procedures are set forth in Part 303, the Manual of Examination Policies (Manual), and the Case Managers Procedures Manual (CM Manual). Banks eligible for expedited processing under Part 303 (as defined therein) may file an abbreviated application. Application forms for both expedited and non-expedited processing can be downloaded or requested from an FDIC Regional Office .

Applications are reviewed in the context of the financial institution's ability to satisfactorily perform trust activities. In reviewing any such application, the statutory factors set forth in Section 6 of the Federal Deposit Insurance Act are considered along with the factors discussed in the Manual of Examination Policies and CM Manual applications sections.

B.3. Unauthorized Trust Activities

Commercial banks may be found performing fiduciary services without having obtained full or limited trust powers, or the Corporation's consent to exercise such powers. In these cases, the examiner should determine what services are being performed, and review all written customer agreements. If a bank is acting in any capacity requiring trust powers, the examiner should:

- Cite an apparent violation of state law for performing fiduciary services without trust powers (if applicable);
- Cite an apparent violation of FDIC Section 333.2 for changing the character of its business without the Corporation's prior written consent; and,
- Advise management of the following:
  - that it must discontinue accepting any additional appointments;
  - that it should (upon advice of counsel) discontinue performing fiduciary services, if it can do so without jeopardizing its accounts or incurring additional liability upon itself;

- that it must apply to its state authority for trust powers (if applicable); and
- that it must also apply to the Corporation for consent to exercise the powers.

Refer to the applications section of the Manual of Examination Policies for further information.

C. Mergers, acquisitions, and transfers of fiduciary business

Purchases, sales, or transfers of fiduciary business between banks and other entities can involve complex legal issues. Several statutes may govern such transactions, depending on individual case-specific circumstances. Mergers, acquisitions, and transfers are predominantly a safety and soundness issue and inquiries from bank management and examiners on this subject should generally be referred to the applicable FDIC Regional Office. The five items discussed below are intended to provide an appreciation of the regulations and risk management process that management should follow in mergers, acquisitions, or transfers of a "fiduciary book of business".

C.1. Federal Deposit Insurance Act Section 18(c)(1)

Section 18(c)(1) of the Federal Deposit Insurance Act is sometimes referred to as the Bank Merger Act (BMA). In general, the BMA is applicable whenever insured deposits are involved in a "merger" transaction. However, in instances where a trust department, or fiduciary "book of business", is "purchased" outright and is not involved in a "merger" transaction, it is not clear whether the Act is applicable. A critical determinant may be whether "deposits," as defined in Section 3 of the FDI Act, are part of an assumption or merger transaction. The Corporation's "Statement of Policy; Bank Merger Transactions" should be reviewed in determining BMA applicability. Where applicable, the BMA requires the prior written approval of the FDIC for any merger, consolidation, or purchase and assumption transaction. Refer to the Manual, Applications for Mergers, for further discussion of the application process.

C.2. Affiliates - Federal Reserve Act Sections 23A and 23B

Sections 23A and 23B of the Federal Reserve Act are made applicable to the activities of insured state nonmember banks by Section 18(j) of the FDI Act. These statutes are primarily directed toward the prevention of abusive relationships between banks and their affiliates in the area of commercial banking. These sections do, however, have applicability to purchases and sales of trust departments between affiliated entities.

Careful review of the definition of "affiliate" in each section, and the differences in the definition between the two sections, is necessary when reviewing trust related transactions. Section 23B specifically excludes banks from its definition of affiliates. The term "bank" is defined in both sections 23A and 23B to include trust companies. Thus, bank-to-bank transactions and bank-to-trust company transactions are outside the scope of Section 23B.

1. Applicability to Purchases and Sales of Trust Departments between a Bank and its Affiliates

   In transactions where assets are purchased from an affiliate, Section 23A(a)(4) applies. It requires the transaction to be on terms and conditions consistent with safe and sound banking practices. Such provisions are designed to ensure inter-affiliate transactions occur on a commercially reasonable basis; and that compensation between the parties, where warranted, is reasonable.

   In transactions where assets are sold to an affiliate, Section 23B applies in some cases. This Section requires the transaction to occur on terms, and under circumstances, such as those prevailing for non-affiliated entities. As previously noted, bank-to-bank and bank-to-trust company transactions are not covered by Section 23B.

   It is important to note that, in transactions where a trust department or fiduciary business is purchased or sold, the "asset" involved is an intangible expected future flow of fee income arising from the underlying trust accounts. Incidental assets, such as premises and equipment used to conduct business, may also be involved in such transactions.

The following chart illustrates the applicability of Federal Reserve Act Section 23B to several types of transactions involving purchases or sales of fiduciary activities:

Application of FRB Section 23B [Re: Compensation] on the Purchase (or sale) of a trust department to (or From) Another Institution:						
FROM:	**TO:**					
	OWN BANK	**OWN BANK SUB**	**AFFILIATED INSURED BANK-SUB**	**BHC NONBANK SUB**	**NON-AFFIL INSURED BANK**	**NON-AFFIL UN-INS ENTITY**
OWN BANK	N/A	No	No	**YES**	No	No
OWN BANK SUB	No	No	No	**YES**	No	No
BHC SUBSIDIARY	**YES**	**YES**	**YES**	No	No	No
NON-AFFILIATED UNINSURED ENTITY	No	No	No	No	No	No

Expanded discussions of Federal Reserve Act Sections 23A and 23B are provided in Section 8.E.4 Conflicts of Interest and Section 4.3 of the Manual of Examination Policies.

C.3. Applicable State Law

State nonmember banks, and other companies, must obtain authority to exercise trust powers from the applicable state in which they operate. Applicable state law may also address certain types of transactions involving consolidations of trust business. These provisions, if any, will ordinarily be found under a state's organization and merger statutes. State law will also typically address transfers, or substitutions, of fiduciaries. In some jurisdictions, and with some types of accounts, court approval may be required. Provisions related to this will usually be found in state statutes dealing with trusts. Where questions arise, the Regional Office or appropriate state authority should be contacted for guidance.

C.4. FDIC Consent

As discussed at the beginning of this section, if the acquiring or resulting entity is a state nonmember bank, application to the Corporation for consent to exercise trust powers may be necessary in merger or other acquisition transactions. FDIC consent is nontransferable. Therefore, the act of purchasing a trust department from a bank which has such consent does not convey that consent to the purchaser. Consent must be applied for unless the acquiring bank already has such consent. In all instances where the acquiring entity is a state nonmember bank, examiners should ensure the transaction was

in compliance with FDIC Parts 303 and 333.

C.5. Nonstatutory Considerations

In addition to adherence to various Federal and state statutes, a host of other concerns attend the purchase, sale, or transfer of trust activities or accounts from one fiduciary to another. While several of these issues are discussed in depth elsewhere in this manual, they are listed here to facilitate a review of transactions involving institutional transfers of trust business. These issues necessarily emphasize the impact such transactions have on the safety and soundness of the institutions involved:

1. Compensation

   The valuation of trust departments for purposes of a sale is not a well-defined process. Conventional business valuation methods may employ the use of average gross income generated by the activity, times some multiple, to arrive at a price or value. Present value analysis of expected cash flows from fees may also be used. In analyzing either a purchase or sale, the examiner should request and evaluate documentation of the basis for the sales price and terms. In some instances, no compensation may be warranted. In other instances, the lack of adequate compensation could be a Federal Reserve Act 23A or 23B issue (for non-exempt parties) or a general safety and soundness concern.

2. Written Agreement

   Trust transfers and sales should be subject to a written agreement. The agreements should address:

   - the effective date of the transaction;
   - indemnification between the parties relevant to fiduciary actions, and in the event of future contingencies;
   - provision allowing a due diligence process;
   - division of fees between buyer and seller during transition;
   - compensation, or a sales price, as discussed above;
   - specific identification of accounts to be transferred;
   - duties and responsibilities of each party in effecting the transfer of accounts and records;
   - duties and responsibilities of each party in effecting the transfer of underlying assets;
   - termination and modification provisions; and
   - escape clauses, as necessary, to address such contingencies as failure to obtain regulatory approval.

3. Capabilities of the Fiduciary

   The entity acquiring the trust business should be legally qualified to do so. State authority and FDIC consent to exercise the types of powers associated with the acquired business should be in place. Moreover, management should possess the skills necessary to administer the new accounts. Management should have evaluated the need for additional trust personnel, data processing capabilities, bank premises, and other facilities to accommodate the new business well in advance of the acquisition.

4. Resultant Earnings

   Depending on the circumstances, pro forma projections of earnings may be requested as part of the FDIC application process. Regardless, management is expected to have evaluated the impact of such transfers on the bank's earnings. Economies of scale are often cited as a reason for acquiring or selling trust departments. While this is a legitimate factor, such economies are not guaranteed and may not materialize in every consolidation. Moreover, they do not always translate into improved bank earnings.

5. Capital Adequacy and Accounting Considerations

Engaging in fiduciary activities subjects an institution's capital to additional risk. Capital adequacy can be adversely affected by the acquisition of significant new accounts or new business lines if not properly managed. Related deposit growth from the acquisition may also place strains on capital.

Trust activities may be referred to as "off balance sheet" activities, in as much as there typically is no book value assigned to the business. In instances where a bank purchases or sells a group of trust accounts from another entity for some value, the bank will need to properly account for the transaction on its books. Where the bank purchases only fiduciary activities, the purchase price should normally be recorded on its statement of condition as "goodwill" or "trust department intangibles." This value: (1) should be amortized in accordance with generally accepted accounting principles, but (2) it should not be included in Tier 1 capital computations. In some instances, the purchase may also involve tangibles, such as fixed assets in which trust activities are conducted. Those assets should be accounted for in the usual fashion. In all cases, underlying trust account assets continue to be the property of the respective trusts. As such, they are not subject to purchase or sale between the buying and selling institutions. Where a bank sells its trust business, it will typically not have a basis, or book value, for the business. Consequently, the entire price it receives should be reported on its income statement as a nonrecurring income item and under "other operating income" on the Call Report.

6. Notification to Account Parties

   Written notification to the respective account parties on each account transferred is mandatory from a prudence standpoint. In some states, state law may require such notification or otherwise address this issue.

7. Successor Fiduciary Issues

   To the extent that the purchasing entity becomes a successor fiduciary of the acquired trust accounts, several well-recognized duties accrue. These are discussed both in Compliance - Personal and Charitable Accounts, and Compliance - Employee Benefit Accounts, Fiduciary Responsibilities.

   In addition to ensuring the prompt and orderly transfer of assets held in trust between fiduciaries, and ensuring the uninterrupted administration of the accounts, successors are obliged under general common law tenets to scrutinize the acts of their predecessors. Successor fiduciaries should seek redress for any wrongs committed by previous fiduciaries. This is considered an essential due diligence procedure. In doing so, successor fiduciaries should: (1) obtain and review an accounting from the previous fiduciary for each account acquired, and (2) request an indemnification from the prior fiduciary for all actions taken during its administration of an account.

8. Fidelity and Indemnity Coverage

   Purchasing entities should alert their carriers early to the acquisition of new business. Bank management should ensure that coverage is afforded, including coverage for acts of all prior fiduciaries "discovered" following their acquisition of an account.

D. Methods used to deliver fiduciary services

The trust department, as a separate and visibly distinct department of the bank, remains the most prevalent method for banks to deliver fiduciary services. However, the recent trend toward consolidation within the financial services sector has led to diverse restructuring and merger activity. In some instances, banks previously lacking trust product lines may have acquired them through mergers. In other cases, the "trust" line of business may have been purchased or sold by a bank. In some cases, trust services being provided by several individual banks owned by the same holding company may have

been consolidated within one bank, or within a separately chartered trust company. In still other instances, a bank may have contracted with an unrelated outside party, to provide such services on-premises. Conversely, the bank under examination may provide such services to other banks. To effectively assess the risk such relationships pose to the institution, the examiner may find it helpful to understand the organization, the legal structure of the delivery system, the reasonableness of the relationship, and the reasonableness of the compensation to the bank.

D.1. Trust Branches and Trust Service Offices

In some instances banks may wish to establish "branch" offices of their trust departments. Where the trust branch is to be located within an existing *intrastate* branch of the bank, there are usually no legal barriers and no further legal hurdles. When a trust branch office is proposed at a location where the institution *does not have an existing branch*, the procedure is more complex.

If a trust branch (or "trust service office"), in the course of conducting its business, is an office where "deposits are received, or checks paid, or money lent" - (1) such office is considered by the FDIC as a "domestic branch" under Section 3 of the FDI Act, and (2) the bank must apply to the FDIC (and state) for permission to establish and operate a new branch.

This is due largely to the statutory definition of the term "deposit". Section 3(l) of the FDI Act defines the term deposit to include trust funds, *w*hether held in the trust department, or held or deposited in any other department of the bank or savings association. The broad inclusion (within the statutory term "deposit") of virtually all trust monies which may be on hand anywhere in the bank, in any form, has implications. It will generally mean that the conduct of trust activities which involve accepting funds will also be considered to be branch banking or accepting deposits. This necessitates that banks either conduct trust activities in existing branches, or that they apply for a branch, if they intend to accept funds (other than non-cash assets) at the "trust branch" or "trust service office."

D.2. Interstate Trust Branch Offices

State nonmember banks, and other companies, must obtain authority to exercise trust powers from the applicable state in which they operate. States may limit the authority of out-of-state entities to engage in fiduciary activities within their borders. Therefore, banks or other state-chartered entities which legally offer trust services in one state, typically need to obtain separate approval from another state before conducting trust business there.

In contrast with the foregoing, both the OCC and OTS have issued similar opinions effectively permitting national banks and federal savings associations to operate trust businesses on an interstate basis. A national bank with trust powers (under 12 USC 92a) may engage in trust activities to the same extent that state banks, trust companies, or other corporations in competition with national banks, are permitted to engage in. If a state permits the foregoing state licensed entities to compete with national banks in trust activities, but prohibits out-of-state companies from doing so, Section 92a may be used to preempt state law. This effectively permits national banks to engage in trust activities in any state in which its branches are located.

In 1996, the Conference of State Bank Supervisors (CSBS), the FDIC, and the Federal Reserve Board signed an interstate banking and branching agreement for state-chartered banks. This agreement, revised in December 1997, allows states to adopt laws permitting interstate operation of trust businesses. This permits state chartered entities to be competitive, and complement the interstate activities in the commercial banking arena.

CSBS assisted in the drafting of the "Nationwide Cooperative Agreement for Supervision and Examination of Multi-State Trust Institutions" that was executed in June 1999. To date, 42 states have signed the agreement, which lays out the framework for the supervision and regulation of multi-state trust institutions. The agreement is on CSBS's web site at http://www.csbs.org/government/agreements/agreements.asp.

D.3. Trust Companies

-Trust Companies

The term "trust company" can be misleading. In some states, a bank must have trust powers in order to have "trust" in its name. In other instances, banks have incorporated the term into their name, even when the bank does not have trust powers. Thus, the term may simply denote an insured bank.

In other instances, trust activities may be conducted from a separate corporate entity, or "trust company". In many cases, trust companies are subsidiaries of bank holding companies, but there are a few that are direct subsidiaries of insured banks. In other cases, the trust company may be owned by the parent company or it may be a truly independent "stand alone" trust company and have no parent organization.

FDIC-Insured Trust Companies

Trust companies may be an insured bank which does almost all of its business as a trust institution. They qualify for deposit insurance under 12 C.F.R. § 303.14, which states that a single non-trust deposit of at least $500,000 would meet the statutory standard of Section 3(a)(2)(A) of the Federal Deposit Insurance Act. An institution with a single non-trust deposit of at least $500,000 will be considered "... in the business of receiving deposits, other than trust funds ..." and, thus, qualifies for Federal deposit insurance. These institutions may receive a bank charter from the state or the OCC, or a federal savings bank charter from the OTS. These insured trust banks are examined the same as other insured banks.

Non-FDIC-Insured Trust Companies

Most trust companies are not insured by the FDIC. These companies are chartered and regulated by the state or by the OCC. Trust companies which are owned by a bank holding company are also subject to supervision by the Federal Reserve Board. Trust companies that are owned by banks are subject to examination and supervision by the parent bank's primary regulator.

A trust company that is a direct subsidiary of an FDIC-supervised bank is viewed as a separately-chartered and separately-capitalized entity. As such, its trust powers are granted solely by the chartering agency, and the trust company is not required to seek the FDIC's consent to exercise trust powers. In like manner, the trust company's parent bank is not required to have the FDIC's consent to exercise trust powers if all of its trust activities are conducted by the separately-chartered subsidiary trust company.

Instructions for Call Report Schedule RC-T states that the schedule should be completed on a fully consolidated basis, i.e., including any trust company subsidiary (or subsidiaries) of the reporting institution.

As noted under Section E. Examination Authority , trust companies that are direct subsidiaries of FDIC-supervised banks may be examined by the FDIC. However, such examinations are not required under GM-1 requirements. However, they may be examined if the supervisory Regional Office determines that their activities have a material and substantive impact on the parent bank. Also, refer to coverage of the Gramm-Leach-Bliley Act (GLBA) concerning examinations of affiliates. Examination reports furnished by the trust company's primary regulatory agency may also be reviewed for normal monitoring of the trust company's activities .

If an examination of a trust company that is a direct subsidiary of an FDIC-supervised bank is performed, examiners should determine that its activities are generally consistent with the Statement of Principles of Trust Department Management. If examiners suspect that the uninsured trust company is being utilized to generate deposits for the parent bank in an unauthorized fashion, the activity should be investigated and compared with the Section 3(o) of the FDI Act definition of a domestic branch and applicable State Law. Consult with the respective Regional Office, if corrective action is needed.

D.4. Trust Referral Arrangements

Some institutions ("host banks") have entered into third-party agreements with unaffiliated trust institutions and registered investment advisers for the offering of fiduciary services to "host bank" customers. The "host bank" does not need trust powers because the fiduciary relationship is between the client and the third party and typically receives a one time or annual referral fee based on the assets of the referred clients. While the "host bank" does

not have any investment or fiduciary powers, it may retain administrative responsibilities and receive administration fees in addition to the referral fee. All trust referral arrangements, regardless of whether the bank retains any administrative duties, should be governed by a written agreement that outlines the responsibilities of all parties.

Additionally, the client should be sufficiently informed of the general terms of this relationship with reasonable and meaningful disclosures. For example, disclosures should be given upon the establishment of an account and periodically (but not less frequently than annually) thereafter. The disclosures should be sufficient to identify to the client the party that is administering the client's account. If the third-party is responsible for making such disclosures, the host bank should ensure that the disclosures are provided, and, if appropriate disclosures have not been made, should take the necessary actions to provide the disclosures.

Some banks have entered into arrangements whereby customers are referred to third-parties who are not located on bank premises. Such arrangements can include referrals by trust department personnel that may involve the sale of non-deposit products (NDPs). The bank may receive a fee or other monetary benefit for making such referrals.

The Interagency Statement on Retail Sales of Nondeposit Investment Products applies to trust activity under the following two circumstances:

- When non-institutional customers direct investments for their fiduciary accounts, such as self-directed IRA and KEOGH plans in trustee or custodial accounts. For such accounts, the three minimum disclosures from the Interagency Statement apply.
- When the customer has sole investment discretion for an agency account. For such accounts, the entire statement would be applicable.

The above two circumstances were outlined in Regional Director Memorandum "Nondeposit Investment Products (NDIP) and Recordkeeping Requirements Questions and Answers, issued June 23, 1998. The memorandum states that self-directed employee benefit accounts such as 401(k) accounts are not subject to the Interagency Statement, as ERISA laws considers them to be fiduciary accounts. The Statement also does not apply to custodial accounts (other than self-directed retirement accounts) where the institution is performing ministerial acts such as collecting interest and dividend payments for securities held in the accounts and handling the delivery or collection of securities or funds in connection with a transaction.

Determining whether a bank offering such trust products on the premises of another bank is in fact, operating a "domestic branch" can be difficult. One critical determinant may be whether the bank offering trust products is "receiving deposits." A variety of contractual provisions may also impact the final determination, including the use of the host-bank as a "correspondent bank" to accept trust customer deposits. In some instances, it has been held that banks may contract with other banks to act as their agent in conducting certain limited activities, including the taking of deposits, without being deemed to be operating a branch. Refer to FDIC Advisory Opinions 93-57 and 95-22 for additional information.

But, the process of "offering trust services" goes beyond the receipt of deposits. In the absence of established examination policies, examiners should ascertain the facts, document the contractual provisions and practical operation of the arrangement, and forward the information to the Regional Office for its determination.

D.5. Private Banking Services

The USA PATRIOT Act, Section 312, provides the following definition of a "private banking account" as it applies to the Act. - The term 'private banking account' means an account (or any combination of accounts) that--(i) requires a minimum aggregate deposit of funds or other assets of not less than $1,000,000; (ii) is established on behalf of 1 or more individuals who have a direct or beneficial ownership interest in the account; and (iii) is assigned to, or is administered or managed by, in whole or in part, an officer, employee, or agent of a financial institution acting as a liaison between the financial institution and the direct or beneficial owner of the account.

Generally, a bank might offer "private banking" services to a select group of its more wealthy customers - high net worth individuals and their corporate interests. Such services will usually provide the customer with all conventional banking products at one location and through one bank officer, or a team of such officers, thus eliminating the need for the customer to physically visit several separate departments. Typically, a private banking department will provide an array of personal and financial services, including estate and financial planning, trust and investment advisory services, personal loans, and maintenance of deposit relationships. Many private banking clients choose this method of financial management for the personalized service and confidentiality provided.

Private banking services have increased in popularity in recent years as more banks have begun to rely on the income generated by this service. The structure and sophistication of private banking services varies by bank size and business structure. Examiners are also reminded that smaller institutions may offer similar services to certain customers while not designating it as private banking. Without the implementation of appropriate oversight, policies, and risk management systems, management may expose itself to increased reputational and legal risks inherent in this business.

D.5.a. Management Oversight - Private Banking

As with all significant business lines, senior management has a responsibility to formulate a sound risk management and control environment. A business plan outlining the targeted client base, range of services provided, and financial risk objectives and tolerance levels should be implemented. The scope and depth of coverage typically vary depending upon the size and complexity of services offered. However, management has a responsibility to define acceptable targets and review for compliance with such targets.

D.5.b. Policies - Private Banking

As with other areas of the bank, suitable written policies provide a basis upon which to operate. If appropriate policies and internal controls have not been implemented, there may be cause for concern. Management may expose the institution to reputational and legal risks, if compliance with USA PATRIOT Act and Anti-Money Laundering regulations are lacking. A sound private banking operation will typically have written customer due diligence guidelines to assist in the prevention of illicit acts.

Some standard customer due diligence guidance includes:

- obtaining identification and basic background information on clients,
- describing the clients' source of wealth and lines of businesses,
- requesting references and handling referrals, and
- identifying suspicious transactions.

The USA PATRIOT Act requirements for a customer identification program promotes a risk-focused approach { Section 1.H.2 USA Patriot Act Compliance}. For example, Section 312 of the Act requires private banking accounts involving foreign persons to be considered for enhanced due diligence.

- Section 312(a)(i)(1): IN GENERAL- Each financial institution that establishes, maintains, administers, or manages a private banking account or a correspondent account in the United States for a non-United States person, including a foreign individual visiting the United States, or a representative of a non-United States person shall establish appropriate, specific, and, where necessary, enhanced, due diligence policies, procedures, and controls that are reasonably designed to detect and report instances of money laundering through those accounts.
- Section 312(a)(i)(3): Minimum Standards For Private Banking Accounts- If a private banking account is requested or maintained by,

or on behalf of, a non-United States person, then the due diligence policies, procedures, and controls required under paragraph (1) shall, at a minimum, ensure that the financial institution takes reasonable steps--`(A) to ascertain the identity of the nominal and beneficial owners of, and the source of funds deposited into, such account as needed to guard against money laundering and report any suspicious transactions under subsection (g); and `(B) to conduct enhanced scrutiny of any such account that is requested or maintained by, or on behalf of, a senior foreign political figure, or any immediate family member or close associate of a senior foreign political figure that is reasonably designed to detect and report transactions that may involve the proceeds of foreign corruption.

D.5.c. Risk Management - Private Banking

Management should be able to identify, measure, monitor and control the reputational, fiduciary, legal, credit and operational risks inherent in private banking. This should include relationship documentation and due diligence standards, controls over the flow of client funds , adequate management information systems, and procedures to identify and report suspicious activity.

State law in most cases continues to require that a separate set of books and records for trust services be maintained. (This is required by the Statement of Principles of Trust Department Management, also.) This will hold even though they may be located in several areas of the bank, and not integrated with the records of the trust department. Examiners will thus need to ascertain the particulars of recordkeeping for all trust activities in banks under examination. Examiners should also ensure that the fiduciary assets of private banking activities are reported in the bank's Call Report Schedule RC-T.

D.5.d. Segregation of Duties, Compliance and Audit - Private Banking

Many successful private banking operations employ the principle of segregation of duties in order to maintain an effective internal control environment. The effective segregation of duties enhances compliance with policies and procedures by facilitating the identification and correction of errors and the detection and investigation of irregularities. The compliance program should be independent of management to enhance its effectiveness. Reviewing for compliance with customer due diligence guidelines, bank policies, and other laws and regulations is an essential part of a compliance program. Lastly, an effective independent audit function can provide assurance that the internal control structure of the private banking function is being maintained and operated adequately.

E. Examination authority of subsidiaries and affiliates

An expanded discussion of the Corporation's authority to conduct examinations of affiliates is contained in Section 4.3 of the Manual of Examination Policies (Manual) and the Case Manager's Procedures Manual (CM Manual). Relevant statutory provisions are discussed below.

E.1. FDI Act Section 10 and the Gramm-Leach-Bliley Act

Section 10(b) of the FDI Act empowers examiners to make a thorough examination of insured institutions and their affiliates, while Section 10(c) of the Act gives the Corporation limited authority to examine other entities which may not be affiliated with the financial institution in question. An assessment of whether a review of affiliated entities is needed should be determined during the pre-examination risk-scoping process. Examiners must support the need for affiliate examinations and must undertake no affiliate examination without prior approval from the Regional Office.

Prior to initiating formal procedures seeking to exercise statutory authority to examine third parties, it is expected that informal, voluntary avenues (simply asking the bank to request the third party to provide data) will have been exhausted. In all cases, the examiner should consult with the Regional Office on such matters.

The enactment of the Gramm-Leach-Bliley Act (GLBA) provides additional guidance on the review of affiliates. The GLBA reserves the FDIC's authority under Section 10 of the FDI Act to examine affiliates and subsidiaries of insured depository institutions to the extent it is necessary for the FDIC to determine the relationship between the institution and the affiliate and the effect the relationship has on the depository institution. However, before conducting an examination, visitation, or investigation of a functionally regulated subsidiary or an affiliate of a bank, the examiner should communicate with the functional regulator. Examiners should determine whether a review of an affiliate's activities is necessary during the pre-examination risk-scoping process. Contact with the functional regulator should be made in accordance with Regional Office guidance.

E.2. Bank Service Corporation Act

Section 7 of the Bank Service Corporation Act provides statutory authorization for primary federal regulators of the banks which are principal investors of the service corporation to examine service corporations. To the extent that an entity is definable as a bank service corporation, the statute provides that the entity may be examined, not only by regulators of banks owning the entity, but also by regulators of non-shareholder banks serviced by the entity. The Act can be referenced at www.fdic.gov under Miscellaneous Statutes and Regulations. While the Act has specific applicability to corporations providing data processing services for banks, it may also apply when other types of services, such as fiduciary, are being provided. However, the narrow definition of bank service corporation (especially in regard to ownership) serves to substantially limit the Act's scope.

F. Gramm-Leach-Bliley Act (GLBA) Provisions for fiduciary activities

F.1. SEC Registration Requirements

The passing of the GLBA in 1999 permits institutions to adopt a financial holding company structure, wherein financial institutions are permitted to conduct securities and insurance activities through affiliated entities.

The GLBA rules also affect various securities activities which may be present in a bank or bank trust department. If bank's activities do not meet specified exemptions or exceptions from the definition of "broker," the bank must register as a broker or dealer with the Securities and Exchange Commission (SEC) and would be subject to applicable SEC regulations. The exemption and exceptions and possible registration for banks as 'broker', 'dealer', and 'investment adviser' are discussed below and in Appendix D. If the bank is claiming an exemption or exception under the broker or dealer designations, recordkeeping requirements established by the Federal bank regulaory agencies must be met. These recordkeeping rules are expected to be finalized in late 2008.

Appendix D - Securities Law contains further examination guidance, statutory excerpts, and SEC rules related to bank securities activities.

F.1.a. Registered Broker

Section 201 of the GLBA repealed the blanket exemption of banks from the definition of "broker" under the Securities Exchange Act of 1934 and replaced it with 11 specific exceptions from the Exchange Act definition of "broker." Under the statute, banks that engage in securities activities must either satisfy the conditions for one of the specific GLBA exceptions or other exemptions provided by Regulatin R (discussed below) or conduct those activities through a registered broker-dealer subsidiary or affiliate. For this reason, the broker exceptions are referred to as the "push-out" rules, since an institution that can not qualify for an exception or exemption must "push-out" its securities activities to a registered entity. The exception-related activities are detailed GLBA and can be found in Appendix D, Bank as Broker.

On October 13, 2006, the Financial Services Regulatory Relief Act of 2006 (FSRRA) was signed into law. Among other things, the FSRRA required the Federal Reserve and the SEC to jointly issue a regulation implementing the GLBA broker exception rules. In doing so, the Federal Reserve was required to consult FDIC, OCC, and OTS. In addition to implementing certain of the GLBA exceptions from the definition of "broker," which required further

guidance, the joint rule, designated as Regulation R, provided additional administrative exemptions from the definition of the term "broker" as defined in the Exchange Act. The joint FRB/SEC final Regulation R was published in the Federal Register on October 3, 2007. See Exchange Act Release No. 34-566501:File No. S7-22-06 (353KB PDF file - PDF Help)

F.1.a.1. Regulation R

Regulation R details the requirements for a bank to qualify for a number of the GLBA exceptions and other administrative exemptions from the definition of "broker," including the trust & fiduciary exception; the custody and safekeeping exemption; the networking exception; and the sweep accounts exception. Other administrative exemptions provided in Regulation R include exemptions for transactions in Regulation S securities, non-custodial securities lending activities, referrals of high net worth/institutional clients under a third-party networking arrangement, as well as certain exemptions from the Exchange Act's Section 3(a)(4)(C)(i) trade execution requirements. These are discussed in greater detail below.

F.1.a.1.a. Trust & Fiduciary Exception

The Trust & Fiduciary exception allows a bank, in its capacity as trustee or fiduciary, to effect securities transactions for the accounts it administers if the following conditions are satisfied:

- Transactions are effected in the bank's trust department or other department that is regularly examined for compliance with fiduciary principles and standards;
- The bank does not publicly solicit brokerage business; and
- The bank is "chiefly compensated" for its trust and fiduciary activities on the basis of:
    - An administrative or annual fee; or
    - A percentage of assets under management; or
    - A flat or capped per order processing fee equal to not more than the cost incurred; or
    - A combination of the above; and .
- Trades are effected in compliance with Exchange Act Section 3(a)(4)(C), which requires trades to be effected:
    - By a registered broker-dealer; or
    - Via a cross trade or substantially similar trade either within the bank or between the bank and an affiliated fiduciary in a manner that is not contrary to fiduciary principles; or
    - In some other manner that the SEC permits.

Fiduciary capacity, for the purposes of Regulation R, is defined by the Office of the Comptroller's Part 9 definition. Fiduciary capacity includes acting as trustee, executor, administrator, registrar of stocks and bonds, transfer agent, guardian, assignee, receiver, or custodian under a uniform gift to minors act, or as an investment adviser if the bank receives a fee for its investment advice, or in any capacity in which the bank possesses investment discretion on behalf of another.

The prohibition on solicitation of brokerage business restricts the extent to which a bank can advertise that is effects securities transactions. In its advertisements, a bank may only

indicate that it effects securities transactions in connection with its trust and fiduciary services. The fact that a bank effects securities transactions cannot be made more prominent that the material advertising the bank's provision of trust and fiduciary services.

F.1.a.1.a.1 Chiefly Compensated

Regulation R defines what it means to be "chiefly compensated" for trust and fiduciary services on the basis of an annual/administrative fee, a percentage of assets under management, a flat or capped per order processing fee equal to no more than the cost of executive, or a combination of these. Whether a bank satisfies the chiefly compensated requirement depends on the amount of "relationship" compensation in relation to total compensation. Thus, the ratio of relationship compensation, discussed below, to total compensation, either for each trust and fiduciary account or on a bank-wide basis, must equal or exceed a specific percentage. The chiefly compensation ratio calculation is discussed in more detail below.

Chiefly Compensated Test

The chiefly compensated test consists of calculating the ratio of relationship compensation to total compensation for the preceding year and the year preceding that year. The ratio for each year is expressed as a percentage and the percentages for the two years are averaged. Thus, whether a bank satisfies the chiefly compensated test is determined by calculating the moving average of the relationship compensation to total compensation percentages for the two immediately preceding years. Banks may use either a calendar or fiscal year as the basis for the yearly percentages to be calculated. The two year moving average must be computed within 60 days following the end of that year. Since the compliance period begins in the first fiscal year commencing after September 30, 2008, the first calculation of chiefly compensated test will occur by March, 2011, for banks using a calendar year. While the calculation is only required within the two months following the end of the year, banks are encouraged to monitor the percentage throughout the year in order to be able to identify and address any problems that might emerge.

Banks have two options regarding the basis on which the chiefly compensated test is calculated. The test may be determined on an account-by-account basis. Under the account-by-account methodology, the bank would determine the ratio

of relationship compensation to total trust and fiduciary compensation attributable to each account for each trust and fiduciary account, except for those accounts that Regulation R requires or allows to be excluded from the test. The bank meets the chiefly compensated test if the chiefly compensated percentage for each account is greater than 50%.

The second option allows a bank to determine compliance with the chiefly compensated test on a bank-wide basis. Under the bank-wide methodology, the bank would calculate a single percentage for each year. The single percentage would include total relationship compensation from all trust and fiduciary accounts required to be included in the computation and the total compensation received by the bank in connection with its provision of trust and fiduciary services. Under this method, the bank satisfies the chiefly compensated test if the percentage is greater than or equal to 70%. Relationship and total compensation are addressed below.

Relationship Compensation

Relationship compensation is any compensation a bank receives that is attributable to a trust or fiduciary account, or to trust and fiduciary activities if calculated on a bank-wide basis, that consists of:

- Annual or administrative fees, including, but not limited to, fees:
  - For personal services, tax preparation, or real estate settlement services; or
  - For disbursing funds from, or for recording receipt of payments to, a trust or fiduciary account; or
  - In connection with securities lending or borrowing transactions; or
  - For custody fees.

Administrative fees also include various fees in connection with investments in mutual funds. The fees do not have to be paid to the bank by the mutual fund, but can be paid by a third-party, such as the fund's distributor, transfer agent, administrator or an advisor to the fund. Such fees include:

- Fees for personal services;
- Fees for the maintenance of shareholder accounts;
- Fees based on a percentage of assets under management for the following services:
  - Transfer or sub-transfer agent services;
  - Aggregating and processing purchase and redemption orders;
  - Providing account statements to beneficial owners;
  - Processing dividend payments;

- Providing sub-accounting services;
- Forwarding communications to beneficial owners; and
- Receiving, tabulating, and transmitting proxies.

12b-1 fees are considered relationship compensation since they comprise fees that are based on a percentage of assets under management. The receipt of 12b-1 fees, like the receipt of all compensation related to securities transactions, must be consistent with the fiduciary principles and standards governing the bank's trust and fiduciary accounts.

Finally, flat or capped per order processing fees that do not exceed the cost incurred in effecting securities transactions qualify as relationship compensation. These fees may include the fee charged by the executing broker-dealer and the addition of the fixed or variable cost incurred by the bank in effecting the transaction. Banks, however, may not include a profit margin to the cost charged to the customer and still have the fees qualify as relationship compensation. Banks, therefore, are expected to document any fixed or variable costs allocated to transactions in order to support that such allocations include only the actual cost incurred by the bank in effecting the transaction.

It is important to note that relationship compensation is not limited to compensation received by the bank for securities-related transactions, but include all forms of compensation related to the administration of trust and fiduciary accounts, regardless of whether the amounts are paid by the trust or fiduciary account or by a third party.

Total Compensation

The ratio of relationship compensation to total compensation determines whether a bank satsifies the "chiefly compensated" requirement for the Trust & Fiduciary exception from the definition of broker in the Exchange Act. Total compensation encompasses all compensation attributable to a trust or fiduciary account or to the trust and fiduciary business of a bank if the determination is made on a bank-wide basis. However, as discussed below, some forms of compensation are specifically excluded by Regulation R. Total compensation does not include any revenues that are not derived from the provision of trust or fiduciary services. Examples of compensation that should not be included as either relationship compensation or total compensation are:

- Providing bank-office services to third parties;
- The sale of an office or assets of the trust

department;

- Internal credits, such as a credit for deposits of trust funds in the commercial bank; or
- "Soft Dollar" credits.

Excluded Compensation

Regulation R provides for the exclusion of various revenues from both relationship compensation and total compensation. Of particular importance is the exclusion of any compensation that is received in connection with another transaction for which the bank is relying on an exception or exemption other than the Trust & Fiduciary exception. For example, Regulation S provides an exemption for transactions in securities issued in an offshore transaction under SEC Regulation S. A bank purchasing such Regulation S securities and relying on the Regulation S exemption could not include compensation from those transaction in calculating the "chiefly compensated" ratio.

Similarly, revenues derived from trust and fiduciary accounts held at a foreign branch are excluded if:

- Held at a non-shell foreign branch; and
- The bank has a reasonable cause to believe that the trust and fiduciary accounts of the foreign branch that are held by or for the benefit of U.S. persons constitute less than 10% of the foreign branch's trust and fiduciary accounts.

A non-shell foreign branch is one that is located outside the U.S.; provides services to residents of the foreign jurisdiction where it is located; and the day-to-day decision-making is not done by an office or branch in the U.S. A bank would have a reasonable cause to believe that an accountholder is not a U.S. person if the person's principal mailing address is outside the U.S. or the foreign branch's records indicate that the accountholder is a non-U.S. person. The exclusion of revenues from accounts held at a foreign branch only applies if the bank utilizes the bank-wide method for calculating the ratio of relationship compensation to total compensation.

Under both the account-by-account and bank-wide methods, compensation from short-term accounts, i.e. those open for less than three months in the relevant year, is not included in total compensation. Compensation from acquired accounts, i.e. accounts that the bank acquired from another entity as part of a merger, consolidation, acquisition, purchase of assets or similar transaction, can be excluded for the first twelve months.

Regulation R also provides for a De Minimis

Exclusion where those banks using the account-by-account method can exclude the revenues from the lesser of 1% or 500 accounts in determining compliance with the chiefly compensated requirement. In order to do so, the bank must maintain records demonstrating that the securities transactions by or on behalf of the account were undertaken in the exercise of its trust or fiduciary duties and the bank must not have used the exclusion in the preceding year.

Finally, a transferred account will not cause a bank to fail the chiefly compensated test if the account or its securities is transferred to a registered broker dealer or an unaffiliated entity that is not required to be registered as a broker within three months following the end of the relevant year.

F.1.a.1.a.2 Trade Execution Requirements

The Trust & Fiduciary exception, as well as the other GLBA/Regulation R exceptions and exemptions, require that securities transactions be executed in accordance with the Exchange Act's execution requirements, which generally require securities transactions to be executed by a registered broker-dealer or in a cross trade. Regulation R, however, provides several exemptions from the Exchange Act's trade execution requirement. Regulation R permits banks to effect certain transactions directly through the NSCC, the issuer's transfer agent, or an insurance company, if certain requirements are met.

Regulation R permits transactions in "covered securities" to be effected through the NSCC, directly with the transfer agent, or with an insurance company or separate account that is excluded from the definition of transfer agent in the Exchange Act. A "covered security" is a registered mutual fund or a variable insurance contract funded by a separate account that is registered. The following two requirements must be satisfied:

- The security is not traded on a national securities exchange or through the facilities of a national securities association or an interdealer quotation system; and
- The security is distributed by a registered broker-dealer, or the sales charge is no more than the amount permissible for a security sold by a registered broker-dealer under Investment Company Act of 1940 rules.

Regulation R also provides an exemption whereby transactions in employer securities for employee benefit plans can be effected directly with the transfer agent provided that:

- No commission is charged;
- The transaction is solely for the benefit of an employee benefit plan account;
- The security is obtained directly from:
  - The employer; or
  - An employee benefit plan of the employer.
- The security is transferred only to:
  - The employer; or
  - An employee benefit plan of the employer.

F.1.a.1.b. Custody & Safekeeping Exception

GLBA provides an exception from the definition of broker for banks that provide custody and safekeeping services. GLBA specifically provides that a bank will not be considered a broker if it engages in the following custodial and safekeeping activities:

- Providing safekeeping and custody services to customers with regard to securities, including the exercise of warrants and other rights on behalf of bank customers;
- Facilitating the transfer of funds or securities as a custodian or clearing agent in connection with the clearance and settlement of its customers' transactions in securities;
- Facilitating lending or financing transactions or investing cash in connection with its safekeeping, custody, and securities transfer services;
- Holding securities pledged by a customer to another person or securities subject to repurchase agreements involving a customer, or facilitating the pledging or transfer of such securities by book entry or as otherwise provided by law, provided that the bank maintains records separately identifying the securities and the customer; or
- Serving as a custodian or provider of other related administrative services to any individual retirement account, pension, retirement, profit sharing, bonus, thrift savings, incentive, or other similar benefit plan.

In addition to the statutory exceptions, Regulation R provides two exemptions whereby a bank can take orders for the purchase and sale of securities from custody account customers. One exemption allows a bank, as part of its customary banking activities, to accept orders for

securities transactions from employee benefit plan accounts, individual retirement accounts, and similar accounts. The second exemption allows a bank to accept orders for securities transactions from custody account customers on an accommodation basis.

The exemptions discussed below apply to accounts for which the bank acts as a custodian. Regulation R defines an account for which a bank acts as a custodian as an account that is:

- An employee benefit account;
- An individual retirement account or similar account;
- An account established by a written agreement between the bank and the customer that sets forth the terms that will govern the fees payable to, and rights and obligations of, the bank regarding the safekeeping or custody of securities; or
- An account for which the bank acts as a directed trustee.

Whether a bank serves as custodian for securities or other assets of an account depends on the services the bank provides to the account with respect the securities or assets, rather than the label used to identify the account or the bank's services in the agreement between the bank and the customer. Thus, a bank that acts as an escrow agent or paying agent and that provides custody and safekeeping services to the account is considered an account for which the bank acts as custodian, notwithstanding the fact that the account is not called a custody or safekeeping account.

F.1.a.1.b.1. Exemption for EB, IRA, and Similar Accounts

A bank may accept orders for securities transaction from custody accounts for employee benefit plans, individual retirement plans and similar accounts provided that:

- The bank does not advertise that it accepts orders, except as part of advertising its other custody and safekeeping services;
- No bank employee is compensated based on whether a securities transaction is executed or on the quantity, price, or type of security involved;
- The bank is not a trustee or fiduciary, other than a directed trustee;
- The bank is not acting as a carrying broker; and
- The bank complies with the trade execution requirements in Exchange Act Section 3(a)(4)(C)(i).

Banks may not advertise that custody accounts are securities brokerage accounts or are a substitute for a brokerage account. While the bank cannot be a trustee or fiduciary and still rely on the custody exemption, there is an exception made for banks that serve as directed trustees. A bank that serves as a directed trustee is eligible for the custody exemption provided it complies with the other requirements of the exemption. A directed trustee is a trustee that does not hold any investment discretion over an account.

Within common securities industry usage, the terms "carrying broker" and "clearing broker" are virtually identical and often are used interchangeably. In certain instances, the terms mean a broker that, as part of an arrangement with a second broker (an "introducing" or "corresponding" broker), allows the second broker to be subject to lesser regulatory requirements (e.g. under the net capital provisions of Exchange Act Rule 15c3-1 and the customer protection provisions of Exchange Act Rule 15c3-3). Technically, however, a "carrying broker" is a broker that holds funds and securities on behalf of customers, whether its own customers or customers introduced by another broker-dealer, and a "clearing broker" is a member of a registered clearing agency.

The preamble to the final Regulation R discusses factors that the SEC would consider in determining if a bank was acting as a carrying broker. The SEC indicated that it would consider the existence of shared clients between a broker-dealer and bank and the reason why clients of the broker-dealer have established custody accounts at a bank. The existence of shared customers where the broker-dealer causes its customers to establish custody accounts at a bank could result in a determination that the bank was acting as a carrying broker for the broker-dealer. If, however, the clients of the broker-dealer independently decide to open a custody account at a bank, then the bank would likely not be viewed as acting as a carrying broker for the broker-dealer. Banks may share systems and platforms with a broker-dealer, for example an affiliated broker-dealer with which a common BSA/AML compliance system is used. Other examples of permissible arrangements include legal and compliance functions, accounting and finance functions (such as payroll and expense account reporting), and administrative functions (such as human resources and internal audit). Moreover, banks may perform limited back office functions for a broker-dealer without being deemed as acting as a carrying broker. A broker-dealer cannot delegate to a bank functions that require registration with a self-regulatory organization (SRO) and the broker-dealer must retain control of its property, cash, and securities.

In addition to bank custodians, non-custodial, non-fiduciary third-party administrators and record keepers for employee benefit plans may rely on the EB/IRA custody exemption provided that:

- Both the custodian bank and the third-party administrator/record keeper comply with the requirements of the exemption; and
- The administrator/record keeper does not execute cross trades other than:
  - Crossing or netting open-end mutual funds not traded on an exchange; or
  - Crossing or netting orders for accounts held at the custodian bank that contracted with the third-party administrator/record keeper.

F.1.a.2.b.2. Exemption for Accommodation Trades

For custody accounts that are not maintained by an employee benefit plan, individual retirement accounts, or other similar accounts, a bank may accept orders for securities transactions as an accommodation to the customer provided:

- Any fee charged or received by the bank does not vary based on:
  - Whether the bank accepted the order; or
  - The quantity or price of the securities bought or sold.
- Advertisements do not state that the bank accepts orders for securities transactions;
- Sales literature does not state that the bank accepts orders, except as part of describing other aspects of its custodial and safekeeping services;
- The bank does not provide investment advice or research, make recommendations, or solicit transactions. However, the bank may:
  - Advertise or provide sales literature as allowed in the exemption;
  - Respond to customer inquiries about custody and safekeeping services by providing -
    - Advertisements and sales literature;
    - Prospectus or sales literature prepared by a registered investment company; or
    - Materials based on the above.
- The bank complies with the compensation and trade execution requirements of the EB/IRA exemption.

The requirement that the bank not provide investment advice or research, make recommendations, or solicit transactions does not prohibit a bank from cross-marketing its trust and fiduciary services to custody account customers. Banks may cross-market investment advisory services to custody customers by:

- Providing non-account specific information via newsletters, websites, etc.;
- Providing examples of research, including stock specific research that the bank provides to other persons for marketing purposes.

A bank, however, may not provide personalized investment research regarding securities held in a custody account. Lists and menus of securities that can be purchased or sold is not considered investment advice.

If a customer has both a trust or fiduciary account and a custody account at the bank, the bank may provide investment advice and research to the customer in connection with the trust or fiduciary account. The bank is not responsible for how the trust or fiduciary accountholder uses such advice or research.

F.1.a.1.b.3. Subcustodians

A bank that acts as a subcustodian for an account for which another bank acts as custodian may rely on either the EB/IRA exemption or the Accommodation Trade exemption, depending on the type of account at the custodial bank, provided that:

- Both the subcustodian and the custodian bank comply with the requirements of the respective exemption; and
- The subcustodian does not execute cross trades, other than -
  - Crossing or netting open-end mutual funds not traded on an exchange; or
  - Crossing or netting orders for accounts of the custodian.

F.1.a.1.c. Networking Exception

The networking exception permits non-licensed employees to receive compensation for the referral of a retail customer to a registered broker-dealer without causing the bank to be considered a broker-dealer under the Exchange Act. Regulation R defines "referral" as "as action taken by one or more bank employees to direct a customer of the bank to a broker-dealer for the purchase or sale of securities for the customer's account." Normally, a non-licensed individual is not allowed to receive incentive compensation in

relation to a securities transaction. The networking exception allows non-licensed bank employees to receive a referral fee, which will not be considered incentive compensation, provided that the fee received is a nominal, one-time cash fee of a fixed dollar amount and the payment is not contingent on whether the referral results in a transaction. In addition to limiting referral fees to a nominal amount, the regulation also addresses bank bonus plans and the circumstances under which such plans can include securities-related activities without being considered incentive compensation for purposes of the Exchange Act. Referral fees and bonus programs are discussed in detail below.

F.1.a.1.c.1. Referral Fees

Nominal

Regulation R defines the term nominal referral fee as a payment to a bank employee personally involved in making the referral that does not exceed:

- Twice the average of the minimum and maximum hourly wage established by the bank for the current or prior year for the job family that includes the employee; or
- 1/1000th of the average of the minimum and maximum annual salary established by the bank for the current or prior year for the job family that includes the employee; or
- Twice the actual hourly wage established by the bank for the current or prior year for the job family that includes the employee; or
- 1/1000th of the actual annual salary established by the bank for the current or prior year for the job family that includes the employee; or
- $25

Banks are not limited to using a single definition for determining whether a referral fee is nominal. Banks may use different methodologies for different lines of business or operating units. Banks may also change the methodologies used within a given year. An employee's "job family" means a group of jobs or positions involving similar responsibilities, or requiring similar skills, education, or training, that a bank, ...uses...for purposes of hiring, promotion, and compensation. Examiners should review these job families in order to ensure that they are not being used to evade the "nominal referral fee" requirement.

The $25 definition of "nominal" will be adjusted for inflation beginning on April 1, 2012 and every 5 years thereafter.

Non-Contingent

A fee is non-contingent if it does not depend on whether:

- The referral results in the purchase or sale of a security; or
- The referral results in an account being opened with a broker-dealer; or
- The referral results in multiple transactions.

A referral fee can, however, be contingent on whether the customer:

- Keeps an appointment with the broker-dealer; or
- Meets base-line qualification criteria for referral, such as minimum net worth, etc.

F.1.a.1.c.2. Bonus Programs

Incentive compensation is compensation intended to encourage a bank employee to refer customers to a broker-dealer or give a bank employee an interest in the success of a securities transaction at a broker dealer. Regulation R provides, however, that incentive compensation does not include a bonus or similar plan that is:

- Paid on a discretionary basis. A bonus plan is discretionary if the amounts paid are not fixed in advanced and employees do not have an enforceable right to the bonus before it is declared by the board;
- Based on multiple factors or variables;
- Include multiple significant factors or variables that are not related to securities transactions at a broker-dealer;
- Referrals by employees are not a factor; and
- Referrals by any other person are not a factor.

Bonus programs can also be based on the overall profitability or revenue of:

- The bank, on a stand-alone or consolidated basis;
- An affiliate or operating unit of a bank, if they do not predominately engage in making referrals to a broker-dealer; or
- A broker-dealer, if:
  - Overall profitability or revenue is only one of multiple factors or variables used to determine compensation;
  - Referrals are not a factor; and
  - Referrals by other employees is not a factor.

In assessing bonus programs for compliance with Regulation R, examiners will consider the following factors:

- Whether the factors and variables of the bonus plan relate to activities actually being conducted;
- The resources being devoted to the activities being conducted; and
- Whether the business lines or activities materially contribute to the amount of bonus payments.

Over time, it is expected that factors and variables related to securities transactions will not predominate the determination of the amount of bonus payments awarded.

F.1.a.1.d. Exemption for Referral of High Net Worth/Institutional Customers

Regulation R provides an additional exemption for referrals by non-licensed bank employees of high net worth (HNW) or institutional customers to a third-party broker-dealer. Unlike referrals of retail customers, payments can be more than nominal in amount and may be contingent in nature. To receive payments under this exemption bank employees must meet the following requirements:

- Not be licensed;
- Be predominately engaged in banking activities other than making referrals to broker-dealers;
- Not be subject to any statutory disqualification; and
- Encounter customers in the ordinary course of the employee's duties.

Regulation R defines a HNW customer as either:

- A natural person who, either individually or jointly with a spouse, has a net worth of at least $5 million, excluding equity in his/her primary residence; or
- Any revocable, living trust, where the settlor is a natural person meeting the $5 million net worth requirement.

For purposes of determining whether a natural person meets the $5 million net worth test, the assets of a person include: (1) any assets held individually; (2) if the person is acting jointly with his or her spouse, any assets of the person’s spouse (whether not such assets are held jointly); and (3) if the person is not acting jointly with his or her spouse, fifty percent of any assets held jointly with such person’s spouse and any assets in which such person shares with such person’s spouse a community property or similar shared ownership interest.

Regulation R defines an institutional customer as a corporation, partnership, limited liability company, trust, or other non-natural person with at least:

- $10 million in investments; or
- $20 million in revnues; or
- $15 million in revenues if the referral is for investment banking services.

The final rule defines “investment banking services” to include, without limitation, acting as an underwriter in an offering for an issuer, acting as a financial adviser in a merger, acquisition, tender-offer or similar transaction, providing venture capital, equity lines of credit, private investment-private equity transactions or similar investments, serving as placement agent for an issuer, and engaging in similar activities. The phrase “other similar services” would include, for example, acting as an underwriter in a secondary offering of securities and acting as a financial adviser in a divestiture.

The dollar thresholds detailed above will be adjusted for inflation beginning on April 1, 2012 and every 5 years thereafter.

When making a referral of a HNW/Institutional customer the bank must disclose the following:

- The name of the broker-dealer; and
- The fact that the bank employee participates in an incentive program where the employee may receive a fee of more than a nominal amount that may be contingent on whether the referral results in a transaction.

The disclosures must be provided either:

- In writing prior to or at the time of the referral; or
- Orally prior to or at the time of referral, provided that the bank provides the required information in writing within 3 days of the referral.

Banks may, however, contract with the broker-dealer to provide the required disclosures, provided the agreement is in writing. When provided by the broker-dealer, the disclosures must be provided:

- Prior to or at the time the customer begins the process of opening an account; or
- If the customer already has an account at the broker-dealer, prior to the time the customer places an order.

The bank must have a reasonable basis for believing that the customer is a HNW or institutional customer at the time of the referral for natural persons or before the referral is paid

to the employee for a non-natural person.

The exemption imposes the following obligations on the broker-dealer with which the bank contracts for third-party brokerage services:

- Determine whether the referring bank employee is subject to a statutory disqualification;
- Have a reasonable basis to believe that the customer referred is a HNW/institutional customer;
- If the referral fee is contingent, perform a suitability analysis of the transaction before execution;
- If the referral fee is non-contingent, determine that the customer:
    - Has the capability to evaluate investment risk and make independent decisions; and
    - Is exercising independent judgment based on individual assessment; or
    - Perform a suitability analysis of all transactions requested by the customer contemporaneously with the referral.

The broker-dealer is required to determine whether the referring employee is subject to a statutory disqualification prior to paying the first referral and once a year thereafter as long as the employee remains eligible to receive such referral fees. The rule requires that, before a higher-than-nominal referral fee is paid to a bank employee under the HNW/institutional customer exemption, the bank provide the broker-dealer the name of the employee and such other identifying information that the broker-dealer may need to determine whether the employee is subject to statutory disqualification. The bank should provide at least annually its broker-dealer partner any changes to the identifying information initially provided.

A bank or broker-dealer would have a “reasonable basis to believe” that a customer is a high net worth customer or institutional customer if, for example, the bank or broker-dealer obtains a signed acknowledgment from the customer (or, in the case of an institutional customer, from an appropriate representative of the customer) that the customer meets the applicable standards to be considered a high net worth customer or an institutional customer, and the bank employee making the referral or the broker-dealer dealing with the referred customer does not have information that would cause them to believe that the information provided by the customer (or representative) is false.

The broker-dealer is required to inform the customer if the customer does not meet the suitability criteria. The broker-dealer must also

notify the bank if it determines that the customer is not a HNW or institutional customer and if it determines that a referring employee is subject to a statutory disqualification.

For purposes of the HNW/Institutional Customer exemption the term "referral fee" is defined as a predetermined dollar amount, or a dollar amount determined by a predetermined formula that does not vary based on:

- The revenue generated by or the profitability of the securities transactions of customers; or
- The quantity, price, or identity of the securities transactions conducted over time by the customer; or
- The number of customer referrals made.

A referral fee can be based on a fixed percentage of the revenues received by a broker-dealer for investment banking services provided to the customer.

The exemption provides that a bank that acts in good faith and that has reasonable policies and procedures in place to comply with the requirements of the exemption will not be considered a “broker” under Section 3(a)(4) of the Exchange Act solely because the bank fails, in a particular instance, to determine that a customer is an institutional or high net worth customer; provide the customer the required disclosures; or provide the broker-dealer the required information concerning the bank employee receiving the referral fee within the time periods prescribed. If the bank is seeking to comply and takes reasonable and prompt steps to remedy the error, such as by promptly making the required determination or promptly providing the broker-dealer the required information, the bank will not lose the exemption from registration in these circumstances. Following any required remedial action, the bank must make reasonable efforts to reclaim the portion of the referral fee paid to the bank employee for a referral that does not, following any required remedial actions, meet the requirements of the exemption and that exceeds the amount the bank otherwise would be permitted to pay.

F.1.a.1.e. Sweep Account Exception/Money Market Fund Exemption

The Sweep Account Exception allows a bank to effect transactions as part of a program for the investment or reinvestment of deposit funds in a no-load money market fund. Regulation R defines a no-load fund as a fund that does not charge an upfront sales load or a deferred sales load, and where total charges against the net assets for sales, sales promotion, personal

services or the maintenance of shareholder accounts does not exceed 25 basis points. Under the statutory exception, a bank may also sweep deposit funds on behalf of another bank into a no-load money market fund. Regulation R provides an exemption under which a bank may, on behalf of both bank customers or other banks, invest or reinvest funds in a money market fund that is not a no-load fund, as defined in the regulation.

In order to effect transactions in a no-load money market fund the bank must:

- Provide the customer, directly or indirectly, another product or service that would not cause the bank to register as a broker dealer;
- Provide the customer with a prospectus for the fund not later than at the time the customer authorizes the transactions; and
- Not refer to or characterize the fund as a no-load fund

F.1.a.1.f. Exemption for Transactions in Regulation S Securities

Regulation S is an SEC regulation that governs the conditions under which securities offered to investors outside the U.S. are exempt from registration under the Securities Act of 1933. A Regulation S security is an equity security issued by a public company located in the U.S. to non-U.S. persons in an offshore transaction.

Regulation R exempts a bank effecting transactions in Regulation S securities from the definition of broker to the extent that the bank, acting as an agent:

- Effects a sale of an eligible security to a purchaser who is not in the U.S.; or
- Effects, by or on behalf of a person who is not a U.S. person, a resale of an eligible security after its initial sale with a reasonable belief that the security was sold outside the U.S. to a purchaser who is not in the U.S. or a broker-dealer. If the resale is made prior to any applicable distribution compliance period under Rule 903(b)(2) or (b)(3) of Regulation S, the resale must comply with Rule 904 of Regulation S; or
- Effects, by or on behalf of a registered broker-dealer, a resale of an eligible security after its initial sale with a reasonable belief that the eligible security was initially sold outside the U.S. to a purchaser who is not in the U.S. If the resale is made prior to any applicable distribution compliance period under Rule 903(b)(2) or (b)(3) of Regulation S, the resale must comply with Rule 904 of

Regulation S

An eligible security is a security that:

- Is not being sold from the inventory of the bank or an affiliate of the bank; and
- Is not being underwritten by the bank or an affiliate of the bank on a firm commitment basis, unless the bank acquired the security from an unaffiliated distributor that did not purchase the security from the bank or an affiliate of the bank.

A purchaser is a person who purchases an eligible security and who is not a U.S. person.

F.1.a.1.g. Exemption for Securities Lending Transactions

Regulation R provides an exemption from the definition of broker for banks that, as an agent, engage in securities lending transactions or securities lending services. A bank may engage is these activities with or on behalf of persons the bank reasonably believes to be:

- A qualified investor as defined in the Securities Exchange Act of 1934; or
- An employee benefit plan that owns or invests on a discretionary basis not less than $25 million in investments.

A "securities lending transaction" is a transaction in which the owner of a security lends the security temporarily to another party pursuant to a written securities lending agreement under which the lender retains the economic interests of an owner and has the right to terminate the transaction and recall the loaned securities on terms agreed by the parties.

Regulation R defines "securities lending services" as:

- Selecting and negotiating with a borrower and executing, or directing the execution of the loan with the borrowers:
- Receiving, delivering, or directing the receipt or delivery of loaned securities;
- Receiving, delivering, or directing the receipt or delivery of collateral;
- Providing mark-to-market, corporate action, recordkeeping or other services incidental to the administration of the securities lending activity;
- Investing, or directing the investment of, cash collateral; or
- Indemnifying the lender of securities with respect to various matters.

F.1.b. Registered Dealer

Bank Dealer Exceptions to Registration with the SEC for Certain Securities Activities

Section 202 of the GLBA amended the definition of "dealer" by repealing the Securities Exchange Act exclusion for banks from dealer registration and regulation.

The SEC has issued a final rule concerning the bank dealer exceptions to the Securities Exchange Act of 1934 ("Exchange Act"), as amended in Section 202 of the GLBA. See 68 Federal Register 8686 (February 24, 2003). Also refer to Appendix D, Bank as Dealer. The compliance date of the rule is September 30, 2003. Exchange Act section 3(a)(5) defines a "dealer" as a person that is "engaged in the business of buying and selling securities" for its own account through a broker or otherwise, and exempts persons, whether banks or non-banks, who do not buy or sell securities "as part of a regular business". Banks do not need to register with the SEC and the National Association of Securities Dealers unless they act as dealers and do not qualify under any of the exceptions under Section 202 of GLBA. The SEC has recently issued a Staff Compliance Guide to Bank on Dealer Statutory Exceptions and Rules, which is available on the SEC Division of Market Regulation's website and in Appendix D of this manual.

GLBA replaced the former uniform bank exception for securities dealer registration under the Exchange Act with four specific exceptions. These statutory exceptions are:

Investment transactions : permits banks to buy and sell securities for investment purposes for the bank and in its customers' trustee and fiduciary accounts.

Permissible securities transactions : permits banks to buy and sell exempted securities, certain Canadian government obligations, and Brady bonds.

Identified banking products : permits banks to buy and sell certain "identified banking products," as defined in Section 206 of GLBA.

Asset-backed transactions : permits banks through a grantor trust or other separate entity to issue and sell to qualified investors certain asset-backed securities representing obligations predominately originated by a bank, an affiliate of a bank other than a broker-dealer, or a syndicate in which the bank is a member for some types of products.

The SEC's bank dealer rule addresses certain interpretive issues arising from these statutory exceptions for bank dealer activities. In addition, it addresses certain additional exemptions that involve bank dealer activities that also could be covered as broker activities. These additional exemptions provided under the SEC's bank dealer rule include:

Riskless principal transactions . This exemption permits banks to engage in a limited number (up to 500) of "riskless principal" transactions per calendar year without registering with the SEC as dealers. A "riskless principal" transaction is one in which, after having received an order to buy from a customer, a bank purchases the security from another person to offset that contemporaneous sale. Alternatively, a riskless principal transaction is one in which after having received an order to sell from a customer, a bank sells the security to another person to offset that contemporaneous purchase.

- How to count transactions for purposes of this exemption: Transactions with two customers where the bank acts as a

riskless principal between them count as one transaction. However, if a bank acts as a riskless principal between one counterparty and multiple counterparties by arranging multiple transactions, each of the transactions on the side that involves the largest number of transactions would count as separate transactions against the annual transaction-limit.

- How counting will be affected by banks' brokerage activities: The Exchange Act also permits banks to engage in certain "broker" activities without registering with the Commission. At the time the "dealer" provisions become effective, however, the "broker" provisions still will be subject to a Commission order delaying their effectiveness. One of the "broker" exceptions - known as the de minimis exception - permits banks to engage in no more than 500 brokerage transactions per year that are not otherwise exempt without registering with the Commission. When banks utilize this exception after the compliance date is set for the broker rules, banks' riskless principal transactions **and** brokerage transactions effected under the de minimis exception will count toward the same 500-transaction limit. In other words, banks may be able to engage in any combination of brokerage transactions under the de minimis exception and riskless principal transactions under Rule 3a5-1, so long as the total number of these transactions does not exceed 500 per year. Until the broker rules are effective, however, banks may use the entire 500-transaction limit for riskless principal transactions.

Securities lending transactions . This exemption permits banks to engage in, or effect, securities lending transactions with certain counterparties. A "securities lending transaction" is a transaction in which the owner of a security lends the security temporarily to another party under a written securities lending agreement. Through this agreement, the lender retains the economic interests of an owner of the securities. Subject to the terms agreed upon by the parties, including an agreement to loan the securities for a fixed term, the lender also has the right to terminate the transaction and to recall the loaned securities.

F.1.c. Investment Advisers

Section 217 of the GLBA amends certain sections of the Investment Advisers Act of 1940 (Advisers Act) to require any bank or bank holding company which serves as an investment adviser to a registered investment company (i.e. open-end mutual fund) to register under the Advisers Act. A bank or bank holding company can also register a separately identifiable department or division (SIDD). Under the GLBA, regulatory agencies and the Commission are required to provide each other with the results of any examinations or inspections conducted with respect to the investment

advisory activities. Refer to Appendix D, Bank as Investment Advisor, for additional information.

F.2. Privacy Issues Faced by the Fiduciary

Privacy applies to all financial institutions. It is an emerging area of concern, therefore, rules and regulations applicable to financial institutions are continuing to evolve and will for some time. In order to assess privacy issues in the context of fiduciary activity, a few fundamental concepts and terms/definitions are necessary. Part 332 of the FDIC's Rules and Regulations is the privacy regulation applicable to state nonmember banks. The regulation contains extensive definitions of terms, and numerous examples to illustrate the definition. Some of the defined terms include:

- A "financial institution" is any institution the business of which is to engage in financial activities as described in section 4(k) of the Bank Holding Company Act of 1956. Industry publications have stated this, in general terms, means "any institution the business of which is engaged in financial services". The definition includes providing investment advisory services and issuing and selling of interests in pooled assets.

- Privacy rules pertain to "nonpublic personal information" which is defined as personally identifiable financial information. It includes information provided by the consumer to obtain a product or a service and/or information gleaned from transactions with the consumer or performed for the consumer. It excludes "publicly available" information. Information is "publicly available" if a financial institution has a reasonable basis to believe that the information is lawfully made available to the general public from one of the categories of sources listed in Part 332.

- It only covers "personal" information. Therefore, it only applies to consumers, not to business or institutional customers.

- A consumer is defined as an individual, who obtains from a financial institution, financial products or services used primarily for personal, family, or household purposes. The definition also includes the legal representatives of such an individual.

    - Federal banking authorities have excluded beneficiaries of trusts and participants of employee benefit plans that the bank either sponsors, or for which it acts as trustee or fiduciary. The rationale is that the trust/plan itself is the customer and not an individual, and therefore the rules do not apply.

    - An investment management agency relationship with a business or a trust would not fall under this regulation.

    - However, in the case of an individual who selects a financial institution as custodian of securities or assets, as in an IRA, the individual is viewed as a consumer. Another example is an investment management agency with an individual(s).

    - Refer to Section 332.3(e) for the complete definition of "consumer" and Section 332.3(i) for the complete definition of "customer relationship."

- A financial institution is prohibited from disclosing "nonpublic personal information" about a consumer to nonaffiliated third parties unless the institution satisfies various notice and opt-out requirements, and the consumer has not elected to opt-out. A nonaffiliated third party means any person except: (i) a bank affiliate; or (ii) a person employed jointly by the bank and any company that is not a bank affiliate. The company the person works for is considered a nonaffiliated third party. Also, an affiliate that is an affiliate solely by virtue of its direct or indirect ownership in an entity conducting merchant banking or insurance company activities (as defined in Section 4(k) of the Bank Holding Company Act of 1956) is considered a nonaffiliated third party.

- A financial institution is required to disclose to all of its customers the institution's privacy policies and practices with respect to information sharing with both affiliates

and nonaffiliated third parties. This is discussed below in item F.2.b.

- Federal privacy guidelines do not supersede more stringent State regulations. Nor do they preempt the Fair Credit Reporting Act.

F.2.a. Applicability to Trust Operations

A financial institution is required to develop guidelines for the safeguarding of customer information. The guidelines are applicable to trust operations. These guidelines pertain to the administration and physical safeguarding of customer records and information. There are three elements to consider when establishing policies and procedures with regard to privacy. First, the fiduciary is to insure the security and confidentiality of customer records. Second, the fiduciary is to protect against any *anticipated* threats or hazards to the security or integrity of such records. Third, the fiduciary is to protect against unauthorized access to, or use of, such records or information that could result in substantial harm or inconvenience to any customer. This includes: the fiduciary's use of information; the re-disclosure and reuse of information (Section 332.11); and the use of information by contractually obligated third party service providers (Section 332.13). The guidelines will be unique to each institution and dependent upon the size and complexity of the operation. To develop an effective risk management program to govern privacy, the following will be required:

1. Identification and assessment of risk;
2. Development of written plans and procedures to manage the risk;
3. Implementation and testing of compliance with established policies; and
4. Adjustments to the policies, as needed, based upon findings and changes in the operating environment.

The Board of Directors should approve the written policies and periodically receive reports on the implementation and effectiveness of the policies. Management should continually evaluate the operating environment to determine needed changes to, and monitor compliance with, the policies.

F.2.b. Applicability to Fiduciary Customers/Consumers

The privacy regulation contains customer and consumer disclosure requirements. There is no preset method for disclosure. However, alternative methods are available to satisfy disclosure requirements, including the use of short-form initial disclosures; toll-free telephone numbers, hand-delivered disclosures, etc. The disclosures may be provided in paper or electronic format. The only requirement is that "each consumer should reasonably be expected to receive the notice"**.** Verbal notification is prohibited. However, regardless of the method used, detailed guidelines govern the type of information to be contained in disclosures, as summarized below:

1. Typically, a fiduciary must disclose the privacy policy at the initiation of the relationship and annually thereafter. However, Sections 332.14 and 332.15 identify exceptions to this rule. Annually has been defined to mean at least once in any 12 consecutive months during which the relationship exists. A fiduciary may define any 12-consecutive-month period so long as it is applied consistently.
2. Disclosures are to be "clear and conspicuous". Section 332.3(b) provides a detailed definition of "clear and conspicuous". There is also guidance for web site notices. There is no predefined disclosure language or form.
3. There are minimum requirements (Section 332.6) governing the content of annual and periodic disclosure statements. In general, the

disclosure statement includes the following information: categories of nonpublic information that are collected; the categories of information that are disclosed; the categories of affiliated and nonaffiliated third parties to whom the information is disclosed; and the categories of information disclosed about former customers. A statement of the categories of information disclosed, and to whom it is disclosed, is also required if "nonpublic personal information" is disclosed to nonaffiliated third parties. At this point, the consumer's right to "opt-out" must also be disclosed. Finally, all statements must also include the fiduciary's policy and practices with respect to protecting the confidentiality and security of "nonpublic personal information."

4. The "opt-out" information must also be "clear and conspicuous". In general, the notice must include language to the effect that the fiduciary reserves the right to disclose nonpublic personal information to nonaffiliated third parties, that the consumer has the right to opt-out of the disclosure, and a "reasonable" means by which the customer may opt-out. Significantly, the "opt-out" requirement typically does not pertain to the disclosure of nonpublic personal information to a nonaffiliated third party that performs services or functions on behalf of the fiduciary. Instead, at a minimum, the contractual agreement with the third party should prohibit the third party from disclosing, or using the information, other than to carry out its duties.

G. Outside Contracting for fiduciary services

Increasingly, financial institutions are contracting with affiliates and third parties to facilitate the offering of trust services to their customers. These contracts can be for services ranging from trust data processing, custody, investment management, and complete fiduciary services. Many small trust departments have historically outsourced data processing, tax preparation, and certain specialized asset management tasks.

Outsourcing is one method for obtaining expertise not internally available, improving services, and managing costs. However, outsourcing may also expose the department to additional risk. This includes security of customer information, and the availability of information and management reporting systems. Management should identify the key risks associated with outsourcing arrangements, and implement appropriate oversight programs to monitor each service provider's controls, performance, and financial condition on a continuing basis.

Today, it may be possible for banks to delegate virtually the entire process of providing and administering trust services, while retaining the appearance of, and some of the income from, providing such services. The Corporation neither endorses nor prohibits an institution's full delegation of services and duties to outside service providers. Rather, this practice is considered a business risk decision. In doing so, bank management is expected to *fully investigate and document beforehand* the inherent challenges and legal obstacles to providing fiduciary services in this manner. Bank management is also expected to *demonstrate its continuous monitoring* of service provider activities, the quality of services provided its customers, and any associated business or legal risk. The Corporation's approach in evaluating business plans to extend trust services in this manner is to consider the merits of each business plan on a case-by-case basis.

Once a decision has been made to employ an outside service provider, the selection process itself must be prudent. Before selecting an agent, the board and senior management should first investigate and acquire a suitable working knowledge of the business or service to be contracted. Management should then perform and document its due-diligence review of prospective agents. These activities may later aid the bank in demonstrating that care and prudence were exercised in selecting an agent to assist in, or perform, fiduciary duties. Significantly, although fiduciaries may be permitted under law to delegate duties to agents, they retain responsibility for the *careful selection* of such agents (refer to section 9 of the Uniform Prudent Investor Act). And while the initial selection process is important, management has a continuing responsibility to ensure the service provider's suitability after the relationship has been established.

States still operating under the Prudent Man Rule may prohibit the out-outsourcing of account administrations, fiduciary and/or investment management responsibilities. Refer to Prudent Man Rule in

Appendix C.

G.1. Applicable Regulations

When establishing a relationship with a third party or affiliate, management must be conversant with all applicable regulations. For relationships with affiliates, Section 23A and 23B of the Federal Reserve Act may apply. Section 23B requires all transactions between a financial institution and a non-bank affiliate to be conducted on a basis comparable to that of similar transactions between nonaffiliated entities. Management must also ensure that state law permits the delegation of services to third parties. For those states that have enacted the Prudent Investor Act, management is typically granted broad delegation power. This power is further addressed below. In all instances, contracts between the bank and third parties should meet the requirements of Section 30 of the FDI Act; namely, that the contract does not adversely affect the safety and soundness of the institution.

G.2. Due Diligence Reviews

Prior to designating a servicing agent for its fiduciary activities, the serviced institution should document its exercise of reasonable caution in selecting agents. Compatibility and performance should be considered in conjunction with the cost of the services to be provided. The scope of the due diligence may depend upon the type and significance of outsourcing activity. However, detailed below are common considerations in any due diligence review. The listing does not supersede provisions of law or regulation, nor does it preclude additional concerns which may occur in some situations.

1. An assessment should be made of the servicing organization's ability to handle the volume and nature of trust accounts and assets to be serviced. Obtaining a list of servicer references and contact names is a common practice.

2. The financial strength and viability of the servicing organization should be considered. In this regard, the strength provided by a parent holding company or similar organization may also be considered. This would entail a review of financial statements and audit reports, and a search of pending or threatened financial or legal claims.

3. If investment management is being outsourced, then a review of the servicer's investment performance (over a minimum of 5 to 10 years, or several investment cycles) should be reviewed. SEC advisers Form ADV, if required, may provide some insight on the registered investment advisers investment philosophy.

4. Audit or supervisory evaluations of the servicing organization, if available. Depending upon the outsourced function, management may obtain AICPA Statement of Auditing Standards SAS 70 Reports, if conducted, or other available reports.

5. A review of certain policies, procedures, and controls of the servicing organization should be made. Knowledge of a service provider's business strategies, privacy policies, service philosophies, and quality control initiatives may be beneficial in choosing a firm whose standards correspond to the bank's standards.

6. Evidence supporting the maintenance of fidelity insurance coverage by the servicing organization should be obtained.

G.3. Written Agreements With Agents

Once a service provider is chosen, a written agreement should be drafted that governs the arrangement. The institution's legal counsel should be involved in the drafting and/or review of the contract when critical functions are being outsourced. The contract should be flexible, yet clearly outline the expectations and responsibilities of all parties. The contract should specify the scope and risks of the outsourced activity, all relevant terms, conditions and responsibilities, and the liabilities of each party. The minimum provisions which should be included are:

- the duties and responsibilities of each party; and
- compensation and any cost sharing arrangements.

Institutions should be strongly encouraged to include the following in written servicing agreements:

- Minimum service levels, dispute resolution procedures , termination clauses - It is prudent for the contract to include bankruptcy clauses, and warranties allowing for termination for cause without penalty by the serviced institution. Examiners should be alert for contracts with extended termination dates between the bank and affiliated entities which may be used to create "value" on the books of the affiliate. Contracts should be reasonable in length, given services performed.
- Documentation Standards - The files and computer records relating to the serviced bank should be identified as accounts of the serviced bank, and not that of the servicer, to facilitate audits, examinations, preparation required regulatory reports (e.g. Call Report Schedule RC-T), and any similar reporting requirements. Additionally, the confidentiality of shared information and client data should be addressed.
- Audit Provisions - The contract should include the right of the serviced entity to obtain SAS 70 Reports, or other third-party reviews and audits. Or, the contract may allow for the serviced entity to conduct audits of the service provider's operations. Some contracts may also allow for receipt of the servicing entities audit reports, or those sections of audits which apply to the serviced institution.
- Supervisory Access - The rights of the institution's supervisory authorities to access information of the institution and the operations of the servicer.
- File Recovery at Termination - Clauses in the contract should address the return of hardcopy and electronic files to the serviced institution, or its designee.
- Liability Clauses - An indemnity provision in the agreement should set forth the liability of each party.
- Insurance Coverage - There should be a provision requiring sufficient fidelity and liability insurance coverage on the activity by both parties.

In all instances, contracts between the bank and third parties should meet the requirements of Section 30 of the Federal Deposit Insurance Act; namely, contracts must not adversely affect the safety and soundness of the institution.

G.4. Periodic Monitoring of Agent's Condition and Performance

In addition to performing an initial review of the servicing agent, management has a responsibility to monitor and periodically update its documentation on the condition and activities of the servicing organization, while ensuring that the provisions of the agreement are being met. At a minimum, the institution's monitoring program should incorporate:

- Conducting, or reviewing results of, independent audits of the service provider's operation;
- Verifying and reviewing the adequacy of the service provider's contingency plans; and
- Developing contingency plans in the event of deteriorating performance or other problems encountered with the service provider.
- Monitoring the investment performance of the servicer, if the servicer provides investment management services.

G.5. Client Disclosures

Since it is possible for an institution to delegate virtually the entire process of providing and administering trust services, the question arises as to how much disclosure should be made to clients regarding such arrangements. An institution that delegates virtually all of

its responsibilities would be expected to disclose more than those which only outsource ancillary services. Regardless, disclosures should provide clients with sufficient information to make informed decisions, and to maintain a rapport commensurate with the fiduciary relationship itself. State laws may also dictate the extent of disclosures made to clients.

G.6. Delegation of Investment Management Services

Some departments do not have the expertise or staffing resources to provide investment management services. These institutions either do not offer investment management services to their clients, or have delegated this function to a third party. To some degree, the legality of delegating fiduciary investment management authority is dependent on state law. FDIC-supervised financial institutions located in states in which fiduciary investments are governed by the Prudent Man Rule or by a Legal List, may not delegate the servicing of their fiduciary accounts to another institution, unless state law explicitly provides for such a delegation. FDIC-supervised financial institutions located in states in which fiduciary investments are governed by the Prudent Investor Act**,** may delegate the servicing of their fiduciary accounts to another trust department or other entity.

Those firms that have delegated investment management responsibilities to others may use Registered Investment Advisers as defined under the Investment Advisers Act of 1940. Registered Investment Advisers are paid to provide investment advice, and generally must register with the SEC or the state securities agency where their principal place of business is located. Generally, those who manage client assets of $25 million or more must register with the SEC, while all others register with their respective state agency.

The SEC adopted a rule amendment under the Investment Advisors Act of 1940 to exempt certain investment advisers that provide advisory services through the Internet from the prohibition on Commission registration. The rule amendments permit these advisers, whose businesses are not connected to any particular state, to register with the Commission instead of with state securities authorities. The final rule (Release No. IA-2091) became effective January 20, 2003.

All registered advisers are required to file a "Form ADV," which is an application to apply for registration or amend registration. Form ADV consists of two parts. Part I contains general and personal information about the applicant. Part II contains information on the nature of the applicant's business, including: operations, services offered, fees charged, type of clients advised, educational and business backgrounds of associated persons, and other business activities of the applicant. The ADV is a public document, and registered investment advisers should provide a copy of the form to their clients. Therefore, if the department utilizes the services of a registered adviser, management should have a copy of the most recent Form ADV on hand. Additionally, management should have a contract with the adviser outlining the responsibilities of both parties. The receipt and periodic review of such documents is an integral task of the due diligence process.

G.7. Use of a Registered Securities Broker as Custodian

Increasingly, departments are utilizing the services of registered securities brokers as custodian for the assets of trust department accounts. While this practice was previously prohibited under Corporation guidelines and long-standing precedents of the OCC, the revised OCC Regulation 9 no longer contains such prohibitions. As such, other regulatory agencies have reportedly permitted institutions to utilize similar arrangements. If such an arrangement is encountered, the examiner should expect to see an appropriate due diligence program to manage associated risks. Bank management has the responsibility to ensure that the legal agreement with the broker offers sufficient protections to the bank and its trust beneficiaries. Please refer to Section 2.J. Use of Broker Dealer for Securities Safekeeping for more information.

H. Servicing Contract Accounts

The trust department may engage in contracts to provide services for outside companies, such as accepting a role (agent, custodian, trustee, etc.) from outside organizations marketing employee benefit plans, IRAs, investment plans, trusteeship of prototype trusts, and other similar products. Since these types of arrangements inherently contain additional risk exposure, management should ensure that they

are fulfilling all their responsibilities under written agreements and fiduciary laws. Many of the same due diligence efforts discussed above would be applicable to the institution providing such services.

I. Enforcement Actions

Trust department activities are subject to supervisory enforcement actions just as any other activity or department of the bank. The underlying rationale for all "enforcement actions" or supervisory initiatives is to obtain correction or improvement of a perceived problem, condition, or weakness. The examiner's careful selection and judicious recommendation for the use of such actions continues to be paramount in preserving the effectiveness of these tools.

I.1. Types of Enforcement Actions

I.1.a. Informal Actions

Informal actions include: memorandums of understanding, board resolutions, written agreements, and capital directives. Examiners should consider an informal action for those departments exhibiting supervisory concern, but where the problems do not pose a threat to trust beneficiaries or the safety and soundness of the institution. An informal administrative action should be considered, but is not mandatory, for any department rated a composite "3". The relative significance of weaknesses, management's recognition of the weaknesses and its willingness to take corrective measures, together with the extent of corrections made during the course of an examination, should be all evaluated when considering an informal action. However, at a minimum, an informal action may be necessary where significant weaknesses remain uncorrected from prior examinations.

I.1.b. Formal Actions

Section 8 of the FDI Act gives the FDIC Board of Directors broad enforcement powers including: Termination of Insurance Actions (Section 8(a)), Cease and Desist Actions (Sections 8(b) and 8(c)), and Suspension and Removal procedures (Section 8(e)). Problem trust departments are those which are assigned a composite rating of "4" or "5" under the Uniform Interagency Trust Rating System. It is expected that such departments will normally be subject to some type of formal enforcement action designed to return the department to an acceptable condition. If a formal action is not undertaken, examiner comments should describe alternative actions taken and justify their reasonableness.

I.2. Enforcement Action Resources

There are various resources available to the examiner if the examination findings indicate some type of enforcement action may be necessary. Examiners are reminded that they should be in contact with the Regional Office when considering such action. Detailed below are some resources available for review.

- Manual of Examination Policies (Manual) - Section 13 provides expanded guidance on the use of informal and formal enforcement actions.
- Formal and Informal Action Procedures Manual (FIAP Manual) - Contains procedural guidance when departmental conditions indicate some type of enforcement action is warranted.
- Case Manager Procedures Manual (CM Manual) - For use at the Regional Office; it contains procedures to guide in the review and processing of enforcement actions.

I.3. Civil Money Penalties

In connection with examinations of fiduciary activities, infractions of certain laws may be detected for which the assessment of civil money penalties (CMPs) is authorized. A full discussion of criteria and procedures for recommending such penalties is provided in Section 14 of the Manual. In addition, further guidance, as well as the scoring matrix to be used in CMP decisions, is provided in the Formal and Informal Action Procedures Manual (FIAP Manual).

J. Criminal Activities

The examination of trust activities within a financial institution may disclose apparent violations of criminal

law, or suspicious activities related to money laundering and the Bank Secrecy Act. When such conduct involves the institution, either as a victim or potential victim, or where the bank is used to facilitate criminal activity, it is the examiner's responsibility to ensure that proper action is taken and that reporting procedures are followed. The prescribed action and reporting procedures are set forth in Section 9.2 of the Manual of Examination Policies. In addition, FDIC Part 353: Suspicious Activity Reports sets forth reporting procedures for FDIC-supervised banks with respect to known, attempted, or suspected crimes.

K. Insurance of fiduciary activities

Insurance is a fundamental part of a department's risk management program. Once management has identified and analyzed potential risk areas, and reviewed its internal control structure, it may determine the appropriate method to deal with particular risks. The transfer of risk through insurance is one method commonly used. The specific needs of a department will dictate the type of coverage that should be obtained, as well as the level of such coverage. Examiners should refer to Section 4.4 of the Manual of Examination Policies for a general discussion of insurance management. In addition to coverage of trust activities under the bank's blanket bond and excess coverage, the following types of insurance are sometimes obtained by trust departments:

K.1. Errors and Omissions (Trust Department Surcharge Liability)

This form of coverage usually covers four types of losses:

- Loss from a claim made against the insured by reason of any alleged negligent act, error, or omission while discharging duties enumerated in the policy. These duties generally consist of administering estates or trusts; managing real and personal property; acting as a custodian; rendering investment advice; or acting as stock transfer agent, registrar, dividend disbursing agent, escrow agent, or trustee under a bond indenture.
- Loss from any claim made against the insured arising out of any alleged failure to act prudently under the Employee Retirement Income Security Act of 1974, or in an insured capacity as a fiduciary for any employee benefit account. It is important to note that for employee benefit accounts to be covered, specific language indicating their inclusion must be present in either the policy or a rider.
- Expenses incurred in the defense of any claim, as long as the coverage for that claim exists under the policy.
- Payments made to reimburse any officer, director, or employee for reasonable expenses and attorney fees incurred defending any claims as an individual. Insurance policies normally will provide for bank reimbursement only if the bank has indemnified the individual. In cases where the bank does not indemnify the director, officer, or employee, there is generally no coverage for the costs incurred by that individual.

K.2. Real Estate and Mortgages

Blanket real estate insurance covers all real estate owned by trust accounts, and real estate pledged on mortgages held by the department. This coverage can be less expensive than purchasing individual policies when numerous parcels are held. The blanket policy covering mortgaged real estate usually provides coverage where the mortgagee fails to keep the property insured. During the examination, there is no need to check individual insurance policies for mortgaged real estate loans where a blanket policy covering losses arising out of mortgaged real estate is in force in an adequate amount. However, examiners should check compliance with any covenants of the policy requiring the bank to perform duties to keep the protection effective.

K.3. Other Desirable Insurance

Although insurance is not the only consideration, thought should be given to exposure arising from employment of agents by the department. In dealing with a variety of assets and accounts, the department often employs others to perform tasks critical to proper account administration. These agents may not be covered by the bank's insurance policies. Therefore, the department should be certain that both account beneficiaries and itself are properly protected by appropriate third party bonding.

L. Deposit insurance of trust funds

Deposit insurance regulations are contained in Part 330 of FDIC Rules and Regulations. The publication

"The Financial Institution Employee's Guide to Deposit Insurance" (http://www.fdic.gov/deposit/deposits/financial/index.html), provides another reference source. Questions arising during examinations regarding specific circumstances, may be referred to the FDIC Call Center at 1-877-ASKFDIC (877-275-3342). For TDD the toll free phone number is 1-800-925-4618. The hours of operation of the FDIC Call Center are Monday thru Friday from 8 a.m. to 8 p.m. Eastern Time.

From the examiner's perspective, questions concerning deposit insurance generally arise in connection with deposits held as trust account assets. It is generally accepted that, to the extent trust monies are invested in bank deposits, they should be kept within insurance limits. Fundamental principles of deposit insurance for certain types of accounts are provided below, but examiners are cautioned that the complexities of the subject preclude exhaustive coverage here. Bank management and clients should consult with their attorneys, tax advisers, or other private professional advisers, as appropriate, to determine the coverage of their trust accounts under the deposit insurance regulations.

Deposit insurance is based on ownership rights and capacities, as disclosed in the records of the insured depository institution. The precise documentation of account ownership in the records of the depository institution is critical. Deposit records include, but are not limited to, signature cards, passbooks, and account ledgers and computer records that relate to the bank's deposit taking function. With the exception of deposit accounts in the certain retirement accounts ownership category, the maximum coverage is $100,000 per depositor. For those employee benefit accounts and trust accounts that qualify for pass-through deposit insurance, $100,000 per employee benefit plan participant or trust beneficiary. The maximum coverage for deposit accounts of certain retirement accounts is $250,000. Coverage is per institution: the deposits in each individually-insure bank or savings institution are separately insured, even if the institutions are affiliated through common ownership by a bank holding company. However, deposits at separate branch offices operated under a single charter are not separately insured.

Various types of deposits are eligible for coverage, such as savings accounts, certificates of deposit, checking accounts, money market accounts, retirement accounts, official checks, outstanding drafts, etc. For purposes of deposit insurance coverage, deposits are categorized according to eight ownership categories: Single Ownership Accounts; Joint Ownership Accounts; Revocable Trust Accounts; Irrevocable Trust Accounts; Accounts of a Corporation, Partnership, or Unincorporated Association; Certain Retirement Accounts and Employee Benefit Plan Accounts; and Government Accounts. The discussion below centers on those account ownership categories typically encountered in a trust examination.

L.1. Deposits of Revocable Trusts

On January 13, 2004, the FDIC adopted new rules for the insurance coverage of revocable trust accounts, also referred to as living trusts. (See FDIC Rules and Regulations Section 330.10, "Revocable Accounts.") The new rules took effect on April 1, 2004. The owner, i.e. the grantor, of a revocable trust will be insured up to $100,000 per beneficiary if all the following requirements are met:

• The beneficiary is the grantor’s spouse, child, grandchild, parent, or sibling. Stepparents, stepchildren, adopted children and similar relationships also qualify. Beneficiaries that are in-laws, cousins, nieces and nephews, and charitable organizations do not qualify;
• The beneficiary’s interest in the trust vests upon the death of the grantor of the trust; and
• The deposit account must be titled at the bank in a manner that indicates that the deposit account is held by a trust.

The amount of coverge is based on the actual interest of each qualifying beneficiary. Unless the trust states otherwise, the FDIC will assume that each beneficiary, including beneficiaries with a life estate, has an equal interest in the trust.

The new rules differ from the old rules in that the FDIC will ignore conditions that may limit a beneficiary’s right to his/her interest in the trust. Prior to the new rule, beneficiaries with contingent interests in a trust were not eligible for per-beneficary coverage. Also, the new rule elimiated the requirement that the bank maintain account records of the names of the trust beneficiaries. Now, the bank need only indicate in the title of the deposit account that

it is held by a trust. The rule for payable on death (POD) accounts, however, still requires that the names of the beneficiaries of a POD account be identified in the bank's records.

If the trust has more than one grantor, deposit insurance coverage would be up to $100,000 for each qualifying beneficiary for each grantor, provided that the beneficiary's interest in the trust vests upon the death of the last surviving grantor.

The trust interest of a non-qualifying beneficiary is insured as the grantor's single ownership funds. In the case of single ownership funds, the grantor's funds would be added to any other single ownership funds of the grantor, with the total amount of single ownership funds insured up to $100,000.

L.2. Deposits of Estates

Deposits of an estate (made by an executor or administrator) are considered to fall in the "single ownership" category of deposits. (See FDIC Rules and Regulations Section 330.6, "Single Ownership Accounts.") These deposits are separately insured to the decedent, but would be added to any other deposits denominated in the name of the deceased which have not yet been marshaled by the executor. The decedent's funds are, of course, separately insured from any funds owned and deposited in the same insured institution by the estate's executors or administrators, or the estate's beneficiaries. The fiduciary capacity of the executor or administrator must be disclosed on the institution's records.

L.3. Deposits of Irrevocable Trust Accounts

The interests of a beneficiary in all deposit accounts established by the same grantor and held at the same insured bank under an irrevocable trust are added together and insured up to $100,000, if all of the following requirements are met:

• The insured bank's deposit account records disclose the existence of the trust relationship;
• The beneficiaries and their interests in the trust must be identifiable from the bank deposit account records or from the trust's records;
• Each beneficiary's interest in the trust must be non-contingent, as defined in Section 330.1 of the FDIC's Rules and Regulations; and
• The trust must be valid under state law.

Section 330.1 defines a non-contingent trust interest as a trust interest capable of determination without evaluation of contingencies except for those covered by the present worth tables and rules of calculation for their use set forth in § 20.2031--7 of the Federal Estate Tax Regulations (26 CFR 20.2031--7) or any similar present worth or life expectancy tables which may be adopted by the Internal Revenue Service. Note that, unlike the rules covering revocable trusts, the beneficiary of an irrevocable trust does not have to be related to the grantor.

If the grantor retains an interest in the trust, the amount of the grantor's retained interest would be added to any single ownership accounts owned by the grantor at the same bank and the total insured up to $100,000. For such a situation to exist, the grantor of the trust must still be alive.

The following are situations where an irrevocable trust would not be insured on a per beneficiary basis, in which case the deposits of the trust as a whole would only be insured up to $100,000.

• The trust agreement does not name the beneficiaries or provide any means of identifying the beneficiaries;
• The trust agreement provides that a beneficiary will receive no assets unless certain conditions are satisfied;
• The trust agreement provides that a trustee may invade the principal of the trust, with the result that the assets available for other beneficiaries may be reduced or eliminated; or
• The trust agreement provides that the trustee or a particular beneficiary may exercise discretion in allocating assets among the beneficiaries, with the result that the future

distribution to each beneficiary is impossible to determine.

L.4. Deposits of Accounts Held by an Agent, Nominee, Guardian, Custodian, or Conservator

Funds held in the name of an agent, nominee, custodian, guardian or conservator on behalf of a principal are insured as the funds of the principal. The funds are added together with any other funds the principal owns in the same right and capacity at the insured institution, either directly or through an agent, and insured to the same extent as if the funds had been deposited directly by the principal.

Funds held by an agent, nominee, guardian, custodian, conservator or loan servicer on behalf of two or more persons jointly, shall be treated as a joint ownership accounts. See Section 330.9, "Joint Ownership Accounts," for details on coverage of joint ownership accounts.

L.5. Deposits of Employee Benefit Accounts

Employee benefit plan account deposits are deposits of a pension plan, profit sharing plan or other employee benefit plan described in Section 3(3) of the Employee Retirement Income Security Act (ERISA). Deposits of employee benefit plans are insured to a maximum of $100,000 for each participant's non-contingent interest in the plan, provided that the recognition of deposit ownership requirements of Section 330.5 are satisfied. (See FDIC Rules and Regulations Section 330.14, "Retirement and Other Employee Benefit Plan Accounts") This coverage is known as "pass-through" insurance because the insurance coverage passes through the plan administrator, who for purposes of Section 330.14 is the "depositor" with respect to these accounts, to each participant's interest. Coverage for a plan's deposits is not based on the number of participants, but rather on each participant's share of the plan.

The value of a participant's non-contingent interest in the deposit of a defined contribution employee benefit plan is the employee's account balance as of the date of default of the insured depository institution, regardless of whether the amount was derived, in whole or in part, from contributions of the employee and/or the employer to the account. The value of a participant's non-contingent interest in a defined benefit employee benefit plan is the present value of the employee's interest in the plan, evaluated in accordance with the method of calculation ordinarily used under such plan, as of the date of default of the insured depository institution. In the case of an overfunded plan, an employee benefit plan's deposits that can not be attributed to the interests of the plan's participants will be aggregated and insured up to a maximum of $100,000. Similarly, desposits of an employee benefit plan that represent contingent interests will be aggregated and insured to a maximum of $100,000. A non-contingent interest is an interest capable of determination without evaluation of contingencies except for those covered by the present worth tables and rules of calculation for their use set forth in § 20.2031--7 of the Federal Estate Tax Regulations (26 CFR 20.2031--7) or any similar present worth or life expectancy tables which may be adopted by the Internal Revenue Service.

L.6. Deposits of Certain Retirement Accounts

Deposits of certain retirement accounts are deposits owned by one person and titled in the name of that person's retirement account. See Section 330.14, "Retirement and Other Employee Benefit Plan Accounts." The following types of retirement plan deposits qualify for coverage as certain retirement accounts:

- All types of IRAs including traditional IRAs, Roth IRAs, Simplified Employee Pension (SEP) IRAs, and Savings Incentive Match Plans for Employees (SIMPLE) IRAs;
- All Section 457 deferred compensation plan accounts, such as eligible deferred compensation plans of state and local governments, regardless of whether they are self-directed;

- Self-directed defined contribution plan accounts, such as self-directed 401(k) plans, self-directed SIMPLE IRAs held in the form of 401(k) plans, self-directed defined contribution money purchase plans, and self-directed defined contribution profit-sharing plans; and
- Self-directed Keogh plan accounts (or H.R. 10 plan accounts) designed for self-employed individuals.

The above listed retirement accounts owned by the same person in the same FDIC-insured bank are added together and the total is insured up to a maximum of $250,000.

For deposit insurance purposes, a "self-directed" account means that plan participants have the right to direct how the assets of their account are invested, including the right to invest funds in deposits of an FDIC-insured bank. If a plan has as its default investment option deposit accounts at a particular FDIC-insured institution, the FDIC considers such a plan to be self-directed for deposit insurance purposes. If a plan's only investment vehicle is a deposit account(s) of a particular bank so that the participants have no choice as to how to invest the assets in their account, such a plan would not be considered self-directed. However, if a plan is a single employer/employee plan, then the fact that there is only a single investment option, e.g. a deposit in an FDIC-insured institution, would not cause the deposits on such a plan to not be insured.

Coverdell Education Savings Accounts (formerly known as Education IRAs), Health Savings Accounts, and Medical Savings Accounts are not included in the Certain Retirement Accounts ownership category. Nor are 403(b) plans (annuity contracts for certain employees of public Schools, tax-exempt organizations and ministers) included in the Certain Retirement Accounts ownership category.

M. Applicability of consumer regulations to fiduciary activities

Unless specifically exempted, the activities of trust accounts are subject to compliance with applicable laws. Consumer law is one category of such laws. Thus, a particular trust account which engages in a regulated activity, such as lending, may be required to comply with consumer lending laws. Responsibility for compliance will generally rest with the financial institution, or other party, acting in the capacity of trustee.

Primary regulatory responsibility for reviewing the institution's compliance with these laws (both for its own account, as well as in its role as trustee) rests with Division of Supervision and Consumer Protection (DSC). Examiners may review the activity to determine: (a) if particular statutes are applicable to specific accounts under review and, (b) if so, that basic procedures are in place to effect compliance. If performed, the scope of the review should allow an assessment of whether any contingent liability attaches. Where significant activity or problems are encountered, the matter should also be referred to DSC - Consumer Protection and Compliance.

Foremost among these regulations will be the Federal Reserve Board's Regulation Z (Truth in Lending) at 12 CFR 226. The regulation may apply if a trust account meets the definition of a creditor, as noted at Section 226.2(a)(17) of the regulation. The fundamental provisions of the definition require that the creditor regularly (more than 25 times per year, or five times if secured by dwellings) extends consumer credit (for personal, family, or household purposes) that is subject to a finance charge, and payable in more than four installments. As noted in the Official Staff Commentary for Section 226.2(a)(17)(i), item 7, each trust is considered a separate entity for purposes of applying criteria in the definition.

Activities of trusts can also fall within the purview of other consumer regulations, such as Equal Credit Opportunity, FRB Regulation B. For an overview of compliance regulations and statutes, refer to the Compliance Examination Handbook.

In some instances, personal, charitable, or corporate trust accounts may be found to be subject to the above regulations. More frequently, applicability will occur with employee benefit plans. A discussion of compliance issues in employee benefit plans may also be found in subsection H.9.g.(4). Consumer

Protection Laws and Loans to Plan Participants, located in Section 5.

First Day Letter

Introduction

This appendix is intended to serve the examiner in gathering and recording information for the trust examination. Examiners have the discretion of using all, part, or none of these tools. Nevertheless, their use, particularly by inexperienced trust examiners, is encouraged.

The trust examination report is in narrative form. Its core pages only contain a few schedules. Normally, most other documents or information supporting report comments and conclusions should be placed in examination work papers. The information contained in this appendix offers examiners a means for both examining trust departments and documenting their work papers.

Uniform Interagency Trust Rating System (UITRS)

The UITRS was originally adopted in 1978 and was revised in 1998. The 1998 revision of the UITRS is appears later in this appendix. It has been adopted by each of the Federal financial institution regulatory agencies. Both the Trust Manual and examination report have been designed around its structure. Examiners should review each of the five UITRS rating guidelines and summaries when assigning ratings and preparing comments for the report.

Trust Examiner's First Day Letter

The first day letter requests management to provide specific information. A copy of this letter is reproduced in this appendix. Use of this letter is optional, and it may be modified by deleting or adding information at the discretion of the Examiner-in-Charge. In addition, the distribution of the letter should be coordinated with the state banking authority if that agency will participate in the examination. It should be prepared during the pre-

examination work phase, and submitted to trust management, together with the "Trust Officer's Questionnaire" [FDIC Form 6350/11 (7-95)], prior to beginning the examination.

In the automated version of the first day letter, deletion of an entire question (from the beginning of the question # to the end of the question) will automatically renumber questions and repaginate the entire letter.

Uniform Interagency Trust Rating System

The information that follows was published 10-13-98 in the Federal Register (63 FR 54711) and was distributed by FDIC in FIL 115-98 dated 10-21-98.

Introduction

The Uniform Interagency Trust Rating System (UITRS) was adopted on September 21, 1978 by the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), and the Board of Governors of the Federal Reserve System (FRB), and in 1988 by the Federal Home Loan Bank Board, predecessor agency to the Office of Thrift Supervision (OTS). Over the years, the UITRS has proven to be an effective internal supervisory tool for evaluating the fiduciary activities of financial institutions on a uniform basis and for identifying those institutions requiring special attention.

A number of changes have occurred in both the banking industry and the Federal supervisory agencies' policies and procedures which prompted a review and revision of the 1978 rating system. The revisions to the UITRS:

- Realign the UITRS rating definitions to bring them in line with the Uniform Financial Institutions Rating System (UFIRS).
- Reduce the component rating categories from six to five, combining the Account Administration and Conflicts of Interest components into a new Compliance component.
- Require Earnings to be rated only in institutions with more than $100 million in total trust assets, and in all non-deposit trust companies. An earnings rating is not required for the remaining institutions; however, each Federal supervisory agency has the option of requiring the earnings of these institutions to be rated using the alternate rating definitions where applicable.
- Explicitly refer to the quality of risk management processes in the management component, and the identification of risk elements within the composite and component rating definitions.

These revisions are intended to promote and complement efficient examination processes. The revisions update the rating system but retain its basic framework. Consequently, the revised rating system will not result in additional regulatory burden to institutions or require additional policies or processes.

The UITRS considers certain managerial, operational, financial and compliance factors that are common to all institutions with fiduciary activities. Under this system, the supervisory agencies endeavor to ensure that all institutions with fiduciary activities are evaluated in a comprehensive and uniform manner, and that supervisory attention is appropriately focused on those institutions exhibiting weaknesses in their fiduciary operations.

Overview

Under the UITRS, the fiduciary activities of financial institutions are assigned a composite rating based on an evaluation and rating of five essential components of an institution's fiduciary activities. These components address the following: the capability of management; the adequacy of operations, controls and audits; the quality and level of earnings; compliance with governing instruments, applicable law (including self-dealing and conflicts of interest laws and regulations), and sound fiduciary principles; and the management of fiduciary assets.

Composite and component ratings are assigned based on a 1 to 5 numerical scale. A 1 is the highest rating and indicates the strongest performance and risk management practices

and the least degree of supervisory concern. A 5 is the lowest rating and indicates the weakest performance and risk management practices and, therefore, the highest degree of supervisory concern. Evaluation of the composite and components considers the size and sophistication, the nature and complexity, and the risk profile of the institution's fiduciary activities.

The composite rating generally bears a close relationship to the component ratings assigned. However, the composite rating is not derived by computing an arithmetic average of the component ratings. Each component rating is based on a qualitative analysis of the factors comprising that component and its interrelationship with the other components. When assigning a composite rating, some components may be given more weight than others depending on the situation at the institution. In general, assignment of a composite rating may incorporate any factor that bears significantly on the overall administration of the financial institution's fiduciary activities. Assigned composite and component ratings are disclosed to the institution's board of directors and senior management.

The ability of management to respond to changing circumstances and to address the risks that may arise from changing business conditions, or the initiation of new fiduciary activities or products, is an important factor in evaluating an institution's overall fiduciary risk profile and the level of supervisory attention warranted. For this reason, the management component is given special consideration when assigning a composite rating.

The ability of management to identify, measure, monitor, and control the risks of its fiduciary operations is also taken into account when assigning each component rating. It is recognized, however, that appropriate management practices may vary considerably among financial institutions, depending on the size, complexity, and risk profiles of their fiduciary activities. For less complex institutions engaged solely in traditional fiduciary activities and whose directors and senior managers are actively involved in the oversight and management of day-to-day operations, relatively basic management systems and controls may be adequate. On the other hand, at more complex institutions, detailed and formal management systems and controls are needed to address a broader range of activities and to provide senior managers and directors with the information they need to supervise day-to-day activities.

All institutions are expected to properly manage their risks. For less complex institutions engaging in less risky activities, detailed or highly formalized management systems and controls are not required to receive strong or satisfactory component or composite ratings.

The following two sections contain the composite rating definitions, and the descriptions and definitions for the five component ratings.

Composite Ratings

The five composite ratings are defined as follows:

Composite 1
Administration of fiduciary activities is sound in every respect. Generally all components are rated 1 or 2. Any weaknesses are minor and can be handled in a routine manner by management. The institution is in substantial compliance with fiduciary laws and regulations. Risk management practices are strong relative to the size, complexity, and risk profile of the institution's fiduciary activities. Fiduciary activities are conducted in accordance with sound fiduciary principles and give no cause for supervisory concern.

Composite 2
Administration of fiduciary activities is fundamentally sound. Generally no component rating should be more severe than 3. Only moderate weaknesses are present and are well within management's capabilities and willingness to correct. Fiduciary activities are conducted in substantial compliance with laws and regulations. Overall risk management practices are satisfactory relative to the institution's size, complexity, and risk profile. There are no material supervisory concerns and, as a result, the supervisory response is informal and limited.

Composite 3

Administration of fiduciary activities exhibits some degree of supervisory concern in one or more of the component areas. A combination of weaknesses exists that may range from moderate to severe; however, the magnitude of the deficiencies generally does not cause a component to be rated more severely than 4. Management may lack the ability or willingness to effectively address weaknesses within appropriate time frames. Additionally, fiduciary activities may reveal some significant noncompliance with laws and regulations. Risk management practices may be less than satisfactory relative to the institution's size, complexity, and risk profile. While problems of relative significance may exist, they are not of such importance as to pose a threat to the trust beneficiaries generally, or to the soundness of the institution. The institution's fiduciary activities require more than normal supervision and may include formal or informal enforcement actions.

Composite 4

Fiduciary activities generally exhibit unsafe and unsound practices or conditions, resulting in unsatisfactory performance. The problems range from severe to critically deficient and may be centered around inexperienced or inattentive management, weak or dangerous operating practices, or an accumulation of unsatisfactory features of lesser importance. The weaknesses and problems are not being satisfactorily addressed or resolved by the board of directors and management. There may be significant noncompliance with laws and regulations. Risk management practices are generally unacceptable relative to the size, complexity, and risk profile of fiduciary activities. These problems pose a threat to the account beneficiaries generally and, if left unchecked, could evolve into conditions that could cause significant losses to the institution and ultimately undermine the public confidence in the institution. Close supervisory attention is required, which means, in most cases, for mal enforcement action is necessary to address the problems.

Composite 5

Fiduciary activities are conducted in an extremely unsafe and unsound manner. Administration of fiduciary activities is critically deficient in numerous major respects, with problems resulting from incompetent or neglectful administration, flagrant and/or repeated disregard for laws and regulations, or a willful departure from sound fiduciary principles and practices. The volume and severity of problems are beyond management's ability or willingness to control or correct. Such conditions evidence a flagrant disregard for the interests of the beneficiaries and may pose a serious threat to the soundness of the institution. Continuous close supervisory attention is warranted and may include termination of the institution's fiduciary activities.

Component Ratings

Each of the component rating descriptions is divided into three sections: a narrative description of the component; a list of the principal factors used to evaluate that component; and a description of each numerical rating for that component. Some of the evaluation factors are reiterated under one or more of the other components to reinforce the interrelationship among components. The listing of evaluation factors is in no particular order of importance.

Management

Description

This rating reflects the capability of the board of directors and management, in their respective roles, to identify, measure, monitor and control the risks of an institution's fiduciary activities. It also reflects their ability to ensure that the institution's fiduciary activities are conducted in a safe and sound manner, and in compliance with applicable laws and regulations. Directors should provide clear guidance regarding acceptable risk exposure levels and ensure that appropriate policies, procedures and practices are established and followed. Senior fiduciary management is responsible for developing and implementing policies, procedures and practices that translate the board's objectives and risk limits into prudent operating standards.

Depending on the nature and scope of an institution's fiduciary activities, management practices may need to address some or all of the following risks: reputation, operating or transaction, strategic, compliance, legal, credit, market, liquidity and other risks. Sound management practices are

demonstrated by: active oversight by the board of directors and management; competent personnel; adequate policies, processes, and controls that consider the size and complexity of the institution's fiduciary activities; and effective risk monitoring and management information systems. This rating should reflect the board's and management's ability as it applies to all aspects of fiduciary activities in which the institution is involved.

Factors Evaluated

The management rating is based upon an assessment of the capability and performance of management and the board of directors, including, but not limited to, the following evaluation factors:

- The level and quality of oversight and support of fiduciary activities by the board of directors and management, including committee structure and adequate documentation of committee actions.
- The ability of the board of directors and management, in their respective roles, to plan for, and respond to, risks that may arise from changing business conditions or the introduction of new activities or products.
- The adequacy of, and conformance with, appropriate internal policies, practices and controls addressing the operations and risks of significant fiduciary activities.
- The accuracy, timeliness, and effectiveness of management information and risk monitoring systems appropriate for the institution's size, complexity, and fiduciary risk profile.
- The overall level of compliance with laws, regulations, and sound fiduciary principles.
- Responsiveness to recommendations from auditors and regulatory authorities.
- Strategic planning for fiduciary products and services.
- The level of experience and competence of fiduciary management and staff, including issues relating to turnover and succession planning.
- The adequacy of insurance coverage.
- The availability of competent legal counsel.
- The extent and nature of pending litigation associated with fiduciary activities, and its potential impact on earnings, capital, and the institution's reputation.
- The process for identifying and responding to fiduciary customer complaints.

Ratings .

A rating of 1 indicates strong performance by management and the board of directors and strong risk management practices relative to the size, complexity and risk profile of the institution's fiduciary activities. All significant risks are consistently and effectively identified, measured, monitored, and controlled. Management and the board are proactive, and have demonstrated the ability to promptly and successfully address existing and potential problems and risks.

A rating of 2 indicates satisfactory management and board performance and risk management practices relative to the size, complexity and risk profile of the institution's fiduciary activities. Moderate weaknesses may exist, but are

not material to the sound administration of fiduciary activities, and are being addressed. In general, significant risks and problems are effectively identified, measured, monitored, and controlled.

A rating of 3 indicates management and board performance that needs improvement or risk management practices that are less than satisfactory given the nature of the institution's fiduciary activities. The capabilities of management or the board of directors may be insufficient for the size, complexity, and risk profile of the institution's fiduciary activities. Problems and significant risks may be inadequately identified, measured, monitored, or controlled.

A rating of 4 indicates deficient management and board performance or risk management practices that are inadequate considering the size, complexity, and risk profile of the institution's fiduciary activities. The level of problems and risk exposure is excessive. Problems and significant risks are inadequately identified, measured, monitored, or controlled and require immediate action by the board and management to protect the assets of account beneficiaries and to prevent erosion of public confidence in the institution. Replacing or strengthening management or the board may be necessary.

A rating of 5 indicates critically deficient management and board performance or risk management practices. Management and the board of directors have not demonstrated the ability to correct problems and implement appropriate risk management practices. Problems and significant risks are inadequately identified, measured, monitored, or controlled and now threaten the continued viability of the institution or its administration of fiduciary activities, and pose a threat to the safety of the assets of account beneficiaries. Replacing or strengthening management or the board of directors is necessary.

Operations, Internal Controls & Auditing

Description

This rating reflects the adequacy of the institution's fiduciary operating systems and internal controls in relation to the volume and character of business conducted. Audit coverage must assure the integrity of the financial records, the sufficiency of internal controls, and the adequacy of the compliance process.

The institution's fiduciary operating systems, internal controls, and audit function subject it primarily to transaction and compliance risk. Other risks including reputation, strategic, and financial risk may also be present. The ability of management to identify, measure, monitor and control these risks is reflected in this rating.

Factors Evaluated

The operations, internal controls and auditing rating is based upon, but not limited to, an assessment of the following evaluation factors:

- Operations and Internal Controls, including the adequacy of:
  - Staff, facilities and operating systems;
  - Records, accounting and data processing systems (including controls over systems access and such accounting procedures as aging, investigation and disposition of items in suspense accounts);
  - Trading functions and securities lending activities;
  - Vault controls and securities movement;

        - Segregation of duties;
        - Controls over disbursements (checks or electronic) and unissued securities;
        - Controls over income processing activities;
        - Reconciliation processes (depository, cash, vault, sub-custodians, suspense accounts, etc.);
        - Disaster and/or business recovery programs;
        - Hold-mail procedures and controls over returned mail; and,
        - Investigation and proper escheatment of funds in dormant accounts.
    - Auditing, including :
        - The independence, frequency, quality and scope of the internal and external fiduciary audit function relative to the volume, character and risk profile of the institution's fiduciary activities;
        - The volume and/or severity of internal control and audit exceptions and the extent to which these issues are tracked and resolved; and
        - The experience and competence of the audit staff.

Ratings

A rating of 1 indicates that operations, internal controls, and auditing are strong in relation to the volume and character of the institution's fiduciary activities. All significant risks are consistently and effectively identified, measured, monitored, and controlled.

A rating of 2 indicates that operations, internal controls and auditing are satisfactory in relation to the volume and character of the institution's fiduciary activities. Moderate weaknesses may exist, but are not material. Significant risks, in general, are effectively identified, measured, monitored, and controlled.

A rating of 3 indicates that operations, internal controls or auditing need improvement in relation to the volume and character of the institution's fiduciary activities. One or more of these areas are less than satisfactory. Problems and significant risks may be inadequately identified, measured, monitored, or controlled.

A rating of 4 indicates deficient operations, internal controls or audits. One or more of these areas are inadequate or the level of problems and risk exposure is excessive in relation to the volume and character of the institution's fiduciary activities. Problems and significant risks are inadequately identified, measured, monitored, or controlled and require immediate action. Institutions with this level of deficiencies may make little provision for audits, or may evidence weak or potentially dangerous operating practices in combination with infrequent or inadequate audits.

A rating of 5 indicates critically deficient operations, internal controls or audits. Operating practices, with or without audits, pose a serious threat to the safety of assets of fiduciary accounts. Problems and significant risks are inadequately identified, measured, monitored, or controlled and now threaten the ability of the institution to continue engaging in fiduciary activities.

Earnings

Description

This rating reflects the profitability of an institution's fiduciary activities and its effect on the financial condition of the institution. The use and adequacy of budgets and earnings projections by functions, product lines and clients are reviewed and evaluated. Risk exposure that may lead to negative earnings is also evaluated.

An evaluation of earnings is required for all institutions with fiduciary activities. An assignment of an earnings rating, however, is required only for institutions that, at the time of the examination, have total trust assets of more than $100 million, or are a non-deposit trust company.

For institutions where the assignment of an Earnings rating is not required by the UITRS, the Federal supervisory agency has the option to assign an earnings rating using an alternate set of ratings. A rating will be assigned in accordance with implementing guidelines adopted by the supervisory agency. The definitions for the alternate ratings are included in the revised UITRS and may be found in the section immediately following the definitions for the required ratings.

Factors Evaluated

The evaluation of earnings is based upon, but not limited to, an assessment of the following factors:

- The profitability of fiduciary activities in relation to the size and scope of those activities and to the overall business of the institution.
- The overall importance to the institution of offering fiduciary services to its customers and local community.
- The effectiveness of the institution's procedures for monitoring fiduciary activity income and expense relative to the size and scope of these activities and their relative importance to the institution, including the frequency and scope of profitability reviews and planning by the institution's board of directors or a committee thereof.

For those institutions for which a rating of earnings is mandatory, additional factors should include the following:

- The level and consistency of profitability, or the lack thereof, generated by the institution's fiduciary activities in relation to the volume and character of the institution's business.
- Dependence upon non-recurring fees and commissions, such as fees for court accounts.
- The effects of charge-offs or compromise actions.
- Unusual features regarding the composition of business and fee schedules.
- Accounting practices that contain practices such as (1) unusual methods of allocating direct and indirect expenses and overhead, or (2) unusual methods of allocating fiduciary income and expense where two or more fiduciary institutions within the same holding company family share fiduciary services and/or processing functions.
- The extent of management's use of budgets, projections and other cost analysis procedures.

- Methods used for directors' approval of financial budgets and/or projections.
- Management's attitude toward growth and new business development.
- New business development efforts, including types of business solicited, market potential, advertising, competition, relationships with local organizations, and an evaluation by management of risk potential inherent in new business areas.

Ratings

A rating of 1 indicates strong earnings. The institution consistently earns a rate of return on its fiduciary activities that is commensurate with the risk of those activities. This rating would normally be supported by a history of consistent profitability over time and a judgment that future earnings prospects are favorable. In addition, management techniques for evaluating and monitoring earnings performance are fully adequate and there is appropriate oversight by the institution's board of directors or a committee thereof. Management makes effective use of budgets and cost analysis procedures. Methods used for reporting earnings information to the board of directors, or a committee thereof, are comprehensive.

A rating of 2 indicates satisfactory earnings. Although the earnings record may exhibit some weaknesses, earnings performance does not pose a risk to the overall institution nor to its ability to meet its fiduciary obligations. Generally, fiduciary earnings meet management targets and appear to be at least sustainable. Management processes for evaluating and monitoring earnings are generally sufficient in relationship to the size and risk of fiduciary activities that exist, and any deficiencies can be addressed in the normal course of business. A rating of 2 may also be assigned to institutions with a history of profitable operations if there are indications that management is engaging in activities with which it is not familiar, or where there may be inordinately high levels of risk present that have not been adequately evaluated. Alternatively, an institution with otherwise strong earnings performance may also be assigned a 2 rating if there are significant deficiencies in its methods used to monitor and evaluate earnings.

A rating of 3 indicates less than satisfactory earnings. Earnings are not commensurate with the risk associated with the fiduciary activities undertaken. Earnings may be erratic or exhibit downward trends, and future prospects are unfavorable. This rating may also be assigned if management processes for evaluating and monitoring earnings exhibit serious deficiencies, provided the deficiencies identified do not pose an immediate danger to either the overall financial condition of the institution or its ability to meet its fiduciary obligations.

A rating of 4 indicates earnings that are seriously deficient. Fiduciary activities have a significant adverse effect on the overall income of the institution and its ability to generate adequate capital to support the continued operation of its fiduciary activities. The institution is characterized by fiduciary earnings performance that is poor historically, or faces the prospect of significant losses in the future. Management processes for monitoring and evaluating earnings may be poor. The board of directors has not adopted appropriate measures to address significant deficiencies.

A rating of 5 indicates critically deficient earnings. In general, an institution with this rating is experiencing losses from fiduciary activities that have a significant negative impact on the overall institution, representing a distinct threat to its viability through the erosion of its capital. The board of directors has not implemented effective actions to address the situation.

Alternate Rating of Earnings

Description

Alternate ratings are assigned based on the level of implementation of four minimum standards by the board of directors and management. These standards are:

- Standard No. 1 - The institution has reasonable methods for measuring income and expense commensurate with the volume and nature of the fiduciary services offered.
- Standard No. 2 - The level of profitability is reported to the board of directors, or a committee thereof, at least annually.
- Standard No. 3 - The board of directors periodically determines that the continued offering of fiduciary services provides an essential service to the institution's customers or to the local community.
- Standard No. 4 - The board of directors, or a committee thereof, reviews the justification for the institution to continue to offer fiduciary services even if the institution does not earn sufficient income to cover the expenses of providing those services.

Ratings.

A rating of 1 may be assigned where an institution has implemented all four minimum standards. If fiduciary earnings are lacking, management views this as a cost of doing business as a full service institution and believes that the negative effects of not offering fiduciary services are more significant than the expense of administrating those services.

A rating of 2 may be assigned where an institution has implemented, at a minimum, at least three of the four standards. This rating may be assigned if the institution is not generating positive earnings or where formal earnings information may not be available.

A rating of 3 may be assigned if the institution has implemented at least two of the four standards. While management may have attempted to identify and quantify other revenue to be earned by offering fiduciary services, it has decided that these services should be offered as a service to customers, even if they cannot be operated profitably.

A rating of 4 may be assigned if the institution has implemented only one of the four standards. Management has undertaken little or no effort to identify or quantify the collateral advantages, if any, to the institution from offering fiduciary services.

A rating of 5 may be assigned if the institution has implemented none of the standards.

Compliance

Description

This rating reflects an institution's overall compliance with applicable laws, regulations, accepted standards of fiduciary conduct, governing account instruments, duties associated with account administration, and internally established policies and procedures. This component specifically

incorporates an assessment of a fiduciary's duty of undivided loyalty and compliance with applicable laws, regulations, and accepted standards of fiduciary conduct related to self-dealing and other conflicts of interest.

The compliance component includes reviewing and evaluating the adequacy and soundness of adopted policies, procedures, and practices generally, and as they relate to specific transactions and accounts. It also includes reviewing policies, procedures, and practices to evaluate the sensitivity of management and the board of directors to refrain from self-dealing, minimize potential conflicts of interest, and resolve actual conflict situations in favor of the fiduciary account beneficiaries.

Risks associated with account administration are potentially unlimited because each account is a separate contractual relationship that contains specific obligations. Risks associated with account administration include: failure to comply with applicable laws, regulations or terms of the governing instrument; inadequate account administration practices; and inexperienced management or inadequately trained staff. Risks associated with a fiduciary's duty of undivided loyalty generally stem from engaging in self-dealing or other conflict of interest transactions. An institution may be exposed to compliance, strategic, financial and reputation risk related to account administration and conflicts of interest activities. The ability of management to identify, measure, monitor and control these risks is reflected in this rating. Policies, procedures and practices pertaining to account administration and conflicts of interest are evaluated in light of the size and character of an institution's fiduciary business.

Factors Evaluated

The compliance rating is based upon, but not limited to, an assessment of the following evaluation factors:

- Compliance with applicable federal and state statutes and regulations, including, but not limited to, federal and state fiduciary laws, the Employee Retirement Income Security Act of 1974, federal and state securities laws, state investment standards, state principal and income acts, and state probate codes;
- Compliance with the terms of governing instruments;
- The adequacy of overall policies, practices, and procedures governing compliance, considering the size, complexity, and risk profile of the institution's fiduciary activities;
- The adequacy of policies and procedures addressing account administration;
- The adequacy of policies and procedures addressing conflicts of interest, including those designed to prevent the improper use of "material inside information";
- The effectiveness of systems and controls in place to identify actual and potential conflicts of interest;
- The adequacy of securities trading policies and practices relating to the allocation of brokerage business, the payment of services with "soft dollars" and the combining, crossing, and timing of trades;
- The extent and permissibility of transactions with related parties, including, but not limited to, the volume of related commercial and fiduciary relationships and holdings of corporations in which directors, officers, or employees of the institution may be interested;

- The decision making process used to accept, review, and terminate accounts; and,
- The decision making process related to account administration duties, including cash balances, overdrafts, and discretionary distributions.

Ratings .

A rating of 1 indicates strong compliance policies, procedures and practices. Policies and procedures covering conflicts of interest and account administration are appropriate in relation to the size and complexity of the institution's fiduciary activities. Accounts are administered in accordance with governing instruments, applicable laws and regulations, sound fiduciary principles, and internal policies and procedures. Any violations are isolated, technical in nature and easily correctable. All significant risks are consistently and effectively identified, measured, monitored and controlled.

A rating of 2 indicates fundamentally sound compliance policies, procedures and practices in relation to the size and complexity of the institution's fiduciary activities. Account administration may be flawed by moderate weaknesses in policies, procedures or practices. Management's practices indicate a determination to minimize the instances of conflicts of interest. Fiduciary activities are conducted in substantial compliance with laws and regulations, and any violations are generally technical in nature. Management corrects violations in a timely manner and without loss to fiduciary accounts. Significant risks are effectively identified, measured, monitored, and controlled.

A rating of 3 indicates compliance practices that are less than satisfactory in relation to the size and complexity of the institution's fiduciary activities. Policies, procedures and controls have not proven effective and require strengthening. Fiduciary activities may be in substantial noncompliance with laws, regulations or governing instruments, but losses are no worse than minimal. While management may have the ability to achieve compliance, the number of violations that exist, or the failure to correct prior violations, are indications that management has not devoted sufficient time and attention to its compliance responsibilities. Risk management practices generally need improvement.

A rating of 4 indicates an institution with deficient compliance practices in relation to the size and complexity of its fiduciary activities. Account administration is notably deficient. The institution makes little or no effort to minimize potential conflicts or refrain from self-dealing, and is confronted with a considerable number of potential or actual conflicts. Numerous substantive and technical violations of laws and regulations exist and many may remain uncorrected from previous examinations. Management has not exerted sufficient effort to effect compliance and may lack the ability to effectively administer fiduciary activities. The level of compliance problems is significant and, if left unchecked, may subject the institution to monetary losses or reputation risk. Risks are inadequately identified, measured, monitored and controlled.

A rating of 5 indicates critically deficient compliance practices. Account administration is critically deficient or incompetent and there is a flagrant disregard for the terms of the governing instruments and interests of account beneficiaries. The institution frequently engages in transactions that compromise its fundamental duty of undivided loyalty to account beneficiaries. There are flagrant or repeated violations of laws and regulations and significant departures from sound fiduciary principles. Management is unwilling or unable to operate within the scope of laws and regulations or within the terms of governing instruments and efforts to obtain voluntary compliance have been unsuccessful. The severity of

noncompliance presents an imminent monetary threat to account beneficiaries and creates significant legal and financial exposure to the institution. Problems and significant risks are inadequately identified, measured, monitored, or controlled and now threaten the ability of management to continue engaging in fiduciary activities.

Asset Management

Description

This rating reflects the risks associated with managing the assets (including cash) of others. Prudent portfolio management is based on an assessment of the needs and objectives of each account or portfolio. An evaluation of asset management should consider the adequacy of processes related to the investment of all discretionary accounts and portfolios, including collective investment funds, proprietary mutual funds, and investment advisory arrangements.

The institution's asset management activities subject it to reputation, compliance and strategic risks. In addition, each individual account or portfolio managed by the institution is subject to financial risks such as market, credit, liquidity, and interest rate risk, as well as transaction and compliance risk. The ability of management to identify, measure, monitor and control these risks is reflected in this rating.

Factors Evaluated

The asset management rating is based upon, but not limited to, an assessment of the following evaluation factors:

- The adequacy of overall policies, practices and procedures governing asset management, considering the size, complexity and risk profile of the institution's fiduciary activities.
- The decision-making processes used for selection, retention, and preservation of discretionary assets including adequacy of documentation, committee review and approval, and a system to review and approve exceptions.
- The use of quantitative tools to measure the various financial risks in investment accounts and portfolios.
- The existence of policies and procedures addressing the use of derivatives or other complex investment products.
- The adequacy of procedures related to the purchase or retention of miscellaneous assets including real estate, notes, closely held companies, limited partnerships, mineral interests, insurance, and other unique assets.
- The extent and adequacy of periodic reviews of investment performance, taking into consideration the needs and objectives of each account or portfolio.
- The monitoring of changes in the composition of fiduciary assets for trends and related risk exposure.
- The quality of investment research used in the decision-making process and documentation of the research.
- The due diligence process for evaluating investment advice received from vendors and/or brokers (including approved or focus lists of securities).
- The due diligence process for reviewing and approving brokers and/or counter parties used by the institution.

This rating may not be applicable for some institutions because their operations do not include activities involving the management of any discretionary assets. Functions of this type would include, but not necessarily be limited to, directed agency relationships, securities clearing, non-fiduciary custody relationships, transfer agent and registrar activities. In institutions of this type, the rating for Asset Management may be omitted by the examiner in accordance with the examining agency's implementing guidelines. However, this component should be assigned when the institution provides investment advice, even though it does not have discretion over the account assets. An example of this type of activity would be where the institution selects or recommends the menu of mutual funds offered to participant directed 401(k) plans.

Ratings .

A rating of 1 indicates strong asset management practices. Identified weaknesses are minor in nature. Risk exposure is modest in relation to management's abilities and the size and complexity of the assets managed.

A rating of 2 indicates satisfactory asset management practices. Moderate weaknesses are present and are well within management's ability and willingness to correct. Risk exposure is commensurate with management's abilities and the size and complexity of the assets managed. Supervisory response is limited.

A rating of 3 indicates that asset management practices are less than satisfactory in relation to the size and complexity of the assets managed. Weaknesses may range from moderate to severe; however, they are not of such significance as to generally pose a threat to the interests of account beneficiaries. Asset management and risk management practices generally need to be improved. An elevated level of supervision is normally required.

A rating of 4 indicates deficient asset management practices in relation to the size and complexity of the assets managed. The levels of risk are significant and inadequately controlled. The problems pose a threat to account beneficiaries generally, and if left unchecked, may subject the institution to losses and could undermine the reputation of the institution.

A rating of 5 represents critically deficient asset management practices and a flagrant disregard of fiduciary duties. These practices jeopardize the interests of account beneficiaries, subject the institution to losses, and may pose a threat to the soundness of the institution.

Trust Examination Request List

NAME OF INSTITUTION:

DATE OF EXAMINATION:

PRIOR EXAMINATION DATE:

EXAMINER-IN-CHARGE:

THE FOLLOWING ITEMS OR MATERIALS ARE REQUESTED TO EXPEDITE THE EXAMINATION OF YOUR INSTITUTION'S TRUST ACTIVITIES. THE ACCURACY AND TIMELINES OF DATA PROVIDED ARE VITAL TO THE SUCCESSFUL EXAMINATION OF YOUR INSTITUTION. PLEASE HAVE THE FOLLOWING AVAILABLE ON (INSERT DATE).

Please provide the following information as of (Insert Date).

If information requested is not applicable, please indicate with a NA.

Feel free to use your software provider's audit package to provide the requested information.

Regulatory and Legal Information

1. Trust Officer's Questionnaire (form provided), certified by the senior trust officer or other senior bank officer as of (Insert Date).

2. Current trust department statement of assets and liabilities or trust department statement of condition.

3. Information on pending fiduciary matters describing any threatened and/or pending litigation against the bank in connection with its fiduciary activities. Please include the following information:

   a. identification of accounts concerned;

   b. nature of, or basis for, the litigation;

   c. amount involved;

   d. present status of the action; and

   e. statement as to the probable outcome of the action, together with its cost to the bank.

4. Indicate if legal counsel is retained on an on-going basis to advise the Board of Directors, the trust committee(s), and the trust officer(s) on legal matters pertaining to fiduciary administration.

5. Indicate if written legal opinions are obtained and filed in connection with legal questions arising during the course of an account's administration.

6. Provide a copy of any communication with the Department of Labor, Securities and Exchange Commission, Internal Revenue Service, or National Association of Securities Dealers for the bank, its subsidiaries or affiliates since the previous examination.

7. Provide a copy of the customer complaint log since the last examination. If a complaint log is not maintained, provide a list of customer complaints filed since the last examination including the following information:

   a. name of complainant;

   b. date of complaint;

   c. description of the complaint

   d. resolution of the complaint

Organization

8. Provide an organization chart of the department.

9. Provide a copy of the department's current strategic plan, marketing plan, and budget.

10. Provide a list of all bank subsidiaries and affiliates, together with a brief synopsis of capitalization and activities engaged in by the subsidiary or affiliate. (Annual report will suffice.)

11. If there has been any acquisition of, or mergers with, other trust departments since the last examination, please provide the following:

    a. method for establishing the purchase price;

    b. extent of due diligence performed on trust accounts before acquisition or merger; and

    c. date of regulatory approval received from state or FDIC, if required.

12. Make available the Minutes of the Board of Directors and/or trust committee(s) pertaining to trust activities since (Insert Date).

13. Provide the following information with respect to each committee supervising trust (and transfer agent) activities:

    a. name of committee;

    b. principal functions of the committee;

    c. number of members authorized by the Board of Directors;

    d. annual fees paid, if any;

    e. attendance fee paid members;

    f. list of committee members;

    g. year of birth of committee members;

    h. principal business interests, or occupation of committee members;

    i. salary of committee members who are also officers of the bank.

14. Provide the following information with respect to principal officers:

    a. name and title;

    b. principal duties;

    c. year of birth;

    d. percent of time devoted to the trust institution;

    e. current salary and last year's bonus;

    f. if hired since the last examination, please provide a résumé of the officer or list education and degrees awarded, work history, names of other financial institutions where employed, title, and principal duties.

    g. proof of quarterly investment reports completed by applicable department/bank personnel since the previous examination pursuant to Section 344.9(d) of the FDIC's Rules and Regulations.

15. Provide aggregate number of junior officers and the total amount of their salaries.

16. Provide aggregate number of staff other than officers and the total amount of their salaries.

17. With respect to directors, officers, and employees of the bank, provide the following:

    a. a list of their direct obligations held in any account, indicating whether any such items are receiving special or preferential treatment, e.g., rates of interest, etc;

    b. a list of holdings of stock and/or obligations of their corporations held in any account; and

    c. a list of fiduciary accounts for which they serve as co-fiduciary; a list of fiduciary accounts for which they have any interest as either a donor or beneficiary (exclude interests in own bank employee benefit plans).

18. Provide a summary of insurance policies currently carried to cover fiduciary activities, including coverage for real estate properties held in trust.

General Account Administration

19. Make available a copy of the department's written policies and procedures. Please indicate the date on which the Board of Directors approved the policies.

20. Provide a copy of the bank and/or department's privacy policy and customer disclosures.

21. Provide a list of all accounts (e.g., account trial balance), listing for each: (Note: for items f, g and h please identify if shown at "book" or "market" value)

    a. account title and number;

    b. account officer;

    c. investment officer;

    d. principal cash;

    e. income cash;

    f. invested principal (summary total per account, not detail of assets or tax lots unless requested);

    g. invested income (summary total per account, not detail of asset or tax lots unless requested); and

    h. summary totals for cash and assets of all accounts (by major appointment category).

22. Provide a summary listing of assets by type and CUSIP number and the aggregate number of units held. The report should also provide the total "book" and "market" value of each asset.

23. Provide a copy of the account codes used to read the reports requested in items 2 1 and 22.

24. Provide a list of liabilities within accounts, such as borrowings, etc. Please indicate the dollar value of assets pledged by the account, if any, to collateralize such liabilities.

25. Provide a list of terminated accounts that have not been distributed, including the reasons therefore.

26. Provide a list of watch-listed accounts.

Operations/Audits

27. Provide copies of following reports, as they pertain to overall trust activity, since the previous examination.

    a. internal audits, including scope of account review;

    b. external audits' including scope of account review;

    c. FDICIA Risk matrix, if applicable; and

    d. SAS 70, if applicable.

28. Provide the most recent reconcilement(s) and supporting documentation of the department's

    a. demand deposit account(s);

    b. safekeeping and/or safekeeping exception report;

    c. brokerage accounts;

    d. suspense accounts;

e. house accounts; and

f. failed trades.

29. Provide a list of bank assets (indicate par and market values of each security):

    a. pledged with state authorities;

    b. pledged with the trust department; or

    c. otherwise segregated and earmarked to secure trust activities or uninvested trust cash.

30. Provide copies of the last year-end Call Report and the work papers for the preparation of Schedule RC-T. If the institution files Schedule RC-T data on a quarterly basis, also provide the last quarter's Call Report and the work papers for the preparation of Schedule RC-T.

31. Provide reports used to review the following:

    a. overdrafts;

    b. cash equivalent balances;

    c. large cash balances; and

    d. other cash balances available for investment.

32. Provide a listing of outside service providers and have copies of their contracts available for review. Examples include software service providers, pricing services, record keepers, proxy voting services, and so on.

33. Provide the date of the most recent business resumption (contingency) plan and the results of the last contingency plan test.

34. Please provide summary information on the following trust activities, if applicable

    a. electronic banking, including the use of web sites. Please provide web site addresses, if any:

    b. new trust products developed since last examination.

Investments

35. Provide a list of accounts with discretionary investment authority that hold own-bank or affiliated financial institution interest-bearing deposits. Please indicate interest rates paid and maturity. Report own bank and affiliated-institution deposits separately. Also report money market deposits and certificates of deposit separately.

36. Provide a copy of the following:

    a. a list of approved investments (buy/sell list), including mutual funds and cash equivalents;

    b. details of any asset allocation models used to select investments; and

    c. investments on any internal watch list.

37. Provide a copy of the last Rule 13f-1 quarterly report submitted to the Securities and Exchange Commission pursuant to Regulation 240.13f-1, if applicable. (Institutional investment managers that use the United States mail, or other means or instrumentality of interstate commerce, in the course of their business and that exercise investment discretion over $100 million or more in Section 13(f) securities must file Form 13F)

38. Provide the following information on broker-relationships:

   a. a list of brokers utilized and broker fees and commissions paid during the last three calendar years and year-to-date;

   b. a description of the procedures followed regarding the placement of brokerage business for fiduciary accounts;

   c. a description of the procedures followed to ensure that the most favorable execution and commission rates are obtained; and

   d. the last formal analysis of broker relationships.

39. Describe all payments, since the last examination, of soft dollars to securities brokers and dealers. Please state if written policies have been adopted to ensure compliance with the safe harbor provisions of Section 28(e) of the Securities Exchange Act of 1934.

40. List appointments where the institution has sole or joint responsibility for assets that are not in its possession, or those over which accounting control has not been established.

41. If the bank operates common or collective investment funds or other pooled investment vehicles, provide for each fund:

   a. if a new fund has been established or a previously established fund has been closed since the last FDIC examination, the rationale and analysis supporting the decision to open or close the fund;

   b. a copy of any amendments to governing instruments since the previous examination;

   c. a list of all participants, providing detail and summary totals for: number of participants, units held, and cost of units held;

   d. a copy of the last valuation for each fund;

   e. a copy of each fund's last annual report; and

   f. a list of assets held by each fund as of the last valuation date.

42. Provide a list of voting securities held in discretionary fiduciary accounts where the department holds, in the aggregate:

   a. 5% or more of the outstanding class of securities (if securities are registered pursuant to Section 12 of the Securities Exchange Act of 1934); and

   b. 25% or more of the outstanding class of securities, if not registered under Section 12.

43. Provide the following with respect to own bank, parent, or affiliate stock and/or obligations:

   a. a list of discretionary fiduciary accounts that hold such securities and/or obligations, together with the number of shares and/or face value of obligations held (*include all shares held in any account, including custodial and safekeeping, if management holds or exercises voting authority*);

   b. total number of shares held in all trust department accounts that were voted by management at the last stockholders meeting;

   c. total number of shares held in discretionary fiduciary accounts that were voted by others;

d. total number of shares voted at the last stockholders meeting;

e. total number of shares outstanding at the last stockholders meeting, and currently outstanding;

f. date of the last review of such holdings, if reviewed in the aggregate, by the trust committee;

g. if the stock is publicly traded, provide the date of the last activity in such stock, total shares traded, and the closing price;

h. if the stock is not publicly traded, provide the date of the last sale of such stock, the number of shares sold, and the execution price; and

i. current dividend (state whether annual or other basis is being quoted).

44. If the department does not have written policies on the following, identify current practices with respect to these areas:

a. purchase and/or retention of own bank, parent and/or affiliate stock and obligations; and

b. voting of own bank, parent, and/or affiliate stock held in any account.

45. Describe the department's policies regarding the voting of stock held in accounts, including common and collective investment funds. Indicate whether the department has solicited written instructions from beneficial owners as to the forwarding of proxy material and voting of securities held on their behalf.

46. Describe any receipt of fees from 12b-1, shareholder servicing, record keeping or any other arrangements with mutual fund companies. Please provide copies of any written solicitations for customer approval to use their accounts in such arrangements.

47. Describe any receipt of sweep fees. Please provide copies of any written solicitations for customer approval to use their accounts in such arrangements.

48. Provide the following information on real estate holdings within trust accounts:

a. a list of mortgaged property on which payments of principal, interest, or taxes are delinquent;

b. a list of any real property held by accounts on which taxes are delinquent;

c. a list of expired property insurance on mortgaged property, or other real property held as assets, unless liability thereon is covered by blanket insurance;

d. a statement of the department's policy/practice concerning employment of agents in the operation or management of real estate owned in fiduciary accounts. If such agents make cash collections, describe procedures for monitoring the receipt of the funds.

e. a list of pending foreclosures involving mortgages held as trust assets;

f. a list of real estate held by accounts on which there exist delinquencies in rental income; and

g. a list of real property held in any fiduciary account, that is leased to the bank, an affiliate, or to any director, officer, or employee.

Earnings

49. Provide the trust department income (by product line, if available) and expenses on a calendar basis for the last 3 years and for the year-to-date. Also, include

information on surcharges, losses, fees waived, charge-offs, and recoveries. Items of less than $100 may be grouped.

50. Provide a list of accounts on which no fees or commissions are charged, including the reasons therefore.

51. Provide a list of client fees billed but unpaid for six months or more.

52. Provide a copy of the current fee schedule. Describe briefly the procedures for approving exceptions to the schedule.

53. Describe the department's new business development efforts, including types of business solicited, minimum dollar size of accounts that will be accepted, nature of new business efforts, competition, market potential and projected growth.

Personal Trusts and Estates

54. Provide a list of accounts for which accountings have not been filed with courts, beneficiaries, or other parties holding authority to release the bank from liability.

55. Provide a list of estates that remain open for a period exceeding 18 months and where the institution has not filed an accounting.

Bank Sponsored Employee Benefit Plans

56. With respect to own bank, holding company, or subsidiary employee benefit plans carried within the department, please supply:

    a. the plan document and trust agreements, if new since the previous examination;

    b. amendments made to the plan since the last examination;

    c. the Form 5500 filed since the previous examination;

    d. the last year-end and most recent listing of assets;

    e. all audits conducted since the last examination;

    f. trustee and/or plan administrator committee minutes;

    g. information packet, initial and continuing education, provided to participants; and

    h. last investment analysis on reasonableness of available investment options.

Corporate Trust Accounts

57. Provide a list of transfer agent and/or registrar appointments.

58. Provide a list of transfer agent and/or registrar accounts that are out of proof.

59. List corporate trusteeship appointments. Please provide:

    a. face value of bonds originally issued;

    b. face value currently outstanding; and

    c. whether any appointment is subject to the Trust Indenture Act of 1939.

60. Provide a list of all corporate trusteeships that are in default. Please indicate:

    a. the date and nature of default;

    b. actions taken by the institution;

c. current status; and

d. face value of bonds outstanding.

61. Provide a list of corporate trusteeships that are receiving special administrative attention, and those in which obligors have not complied with indenture requirements.

Other Activities

62. If the department engages in customer securities lending activities, please provide the following:

    a. a copy of the securities lending agreement executed with trust department customers and counterparties; and

    b. a copy of the department's securities lending confirmation.

63. If the bank as principal or agent (a) underwrites, trades, or deals in municipal securities, or (b) provides investment or consultant services to issuers or purchasers of municipal securities, please provide the name of the individual supervising this activity.

64. If the bank as principal or agent trades or deals in U.S. Treasury securities, please provide the name of the individual supervising this activity.

65. If the bank or an affiliate conducts securities brokerage activities, please provide the name of the individual supervising this activity.

66. If the bank, any subsidiary, or any affiliate serves as investment advisor or investment manager for any mutual fund, or acts as sponsor, distributor, or custodian for any outside, own bank, subsidiary or affiliate operated mutual fund, please provide the name of the individual supervising this activity.

67. If the bank as principal or agent sells securities under agreement to repurchase, or purchases securities under agreement to resell (whether or not the trust department participates in the program on behalf of its customers), please provide the name of the individual supervising this activity.

Investment Of Trust Funds

Section 227

Investments Which a Trustee Can Properly Make

In making investments of trust funds the trustee is under a duty to the beneficiary -

a. In the absence of provisions in the terms of the trust or of a statute otherwise providing, to make such investments and only such investments as a prudent man would make of his own property having in view the preservation of the estate and the amount and regularity of the income to be derived;

b. in the absence of provisions in the terms of the trust, to conform to the statutes, if any, governing investments by trustees;

c. to conform to the terms of the trust, except as stated in § 165-168.

Comment:

a. Scope of the rule. Except as otherwise provided by the terms of the trust the trustee is under a duty to the beneficiary to use reasonable care and skill to preserve the trust property and to make it productive. This topic deals with the manner in which the trustee should perform these duties in making investments.

The rule stated in this Section is the so-called "prudent-man rule" first laid down by the Massachusetts court and followed in a number of States, even in the absence of a statute. In many States this rule has now been adopted by statute. In a few States, by statute or otherwise, the scope of trust investments is more limited.

Comment on Clause (a):

b. Requirement of care. The trustee does not use due care in making an investment unless he makes an investigation as to the safety of the investment and the probable income to be derived therefrom. Ordinarily this involves securing information from sources on which prudent men in the community customarily rely. He may take into consideration advice given to him by attorneys, bankers, brokers and others whom prudent men in the community regard as qualified to give advice, but he is not ordinarily justified in relying solely on such advice, but must exercise his own judgment.

c. Requirement of skill. The trustee is liable for a loss resulting from his failure to use the skill of a man of ordinary intelligence, although he may have exercised all the skill of which he was capable. On the other hand, if the trustee has a greater degree of skill than that of a man of ordinary intelligence, he is liable for a loss resulting from the failure to use such skill as he has.

So also, if a trustee, for example a corporate or professional trustee, procured his appointment as trustee by representing that he has greater skill than that of a man of ordinary knowledge, he is liable for a loss resulting from the failure to use such skill.

d. Corporate trustees. If the trustee is a bank or trust company, it must use in selecting investments the facilities which it has or should have, and it may properly be required to show that it has made a more thorough and complete investigation than would ordinarily be expected from an individual trustee.

e. Requirement of caution. In making investments not only is the trustee under a duty to use due care and skill, but he must use the caution of a prudent man. In the absence of provisions in the terms of the trust or statutory provisions, the investments which a trustee can properly make are those which a prudent man would make in investing property with a view to the safety of the principal and to the securing of an income reasonable in amount and payable with regularity.

In making investments, however, a loss is always possible, since in any investment there is always some risk. The question of the amount of risk, however, is a question of degree. No man of intelligence would make a disposition of property where in view of the price the risk of loss is out of

proportion to the opportunity for gain. Where, however, the risk is not out of proportion, a man of intelligence may make a disposition which is speculative in character with a view to increasing his property instead of merely preserving it. Such a disposition is not a proper trust investment, because it is not a disposition which makes the preservation of the fund a primary consideration.

It is not ordinarily the duty of a trustee to invest only in the very safest and most conservative securities available. Thus, assuming that United States government bonds are the safest and most conservative securities available but that the income yield thereon is lower than on other securities, it is not necessarily the duty of the trustee to invest the whole trust property, or even any part of it, in such bonds, even when no question of favoring one beneficiary over another is involved. The reason for this is that by the use of care, skill and caution, an investment can ordinarily be made which will yield a higher income and as to which there is no reason to anticipate a loss of principal.

The trustee, in considering the scope of investments that he should make, should take into consideration many circumstances, such as:

- the amount of the trust estate,
- the situation of the beneficiaries,
- the trend of prices and of the cost of living,
- the prospect of inflation and of deflation.

In some circumstances the amount and regularity of the income may be more important than the preservation of the principal; under other circumstances the preservation of the principal may be of primary importance. It is impossible to lay down a hard-and-fast rule as to what is a prudent investment, since much may depend upon the time and place of the administration of the trust and much may depend upon the character of the particular trust.

f. Kinds of investments. Ordinarily it is proper for a trustee to invest in government securities, such as bonds of the United States or of the State or of municipalities, in first mortgages on land, or in corporate bonds. In any case, however, whether the investment is proper depends upon the circumstances. Such investments are not proper if under all the circumstances they are not prudent investments. *See* Comment o.

Unless it is otherwise provided by the terms of the trust, the following are not proper trust investments:

1. purchase of securities for purposes of speculation, for example, purchase of shares of stock on margin or purchase of bonds selling at a great discount because of uncertainty whether they will be paid on maturity;
2. purchase of securities in new and untried enterprises;
3. employment of trust property in the carrying on of trade or business;
4. purchase of land or other things for resale.

g. Acquiring property for resale. Although a trustee cannot properly purchase property for resale, yet if he holds a mortgage in trust and the mortgage is foreclosed he can properly purchase the property on the foreclosure sale, if it is prudent to do so. Also, the trustee may be justified in taking real or personal property in payment of a debt that is not otherwise collectible.

h. Junior mortgages. Ordinarily second or other junior mortgages are not proper trust investments. It may be proper for the trustee, however, to take a second mortgage where this is a reasonable method of settling a claim, or where the trustee is authorized or directed to sell land and it is reasonably necessary to take a second mortgage in order to enable him to make the sale.

i. Unsecured Loan. An unsecured loan of trust funds may be improper because imprudent. Such a loan, however, is not necessarily imprudent. Thus, a trustee can properly make a general deposit of trust money in a bank, as a method of safekeeping.

A deposit in a bank at interest, as, for example, a deposit in a savings account, may be proper as a method of investing trust funds. Such a deposit was generally held to be prudent as an investment even before such deposits were at least partially insured by the Federal Deposit Insurance Corporation. In some States statutes have permitted such deposits to the extent to which they are insured.

j. Combining trust funds in making investments. The fact that in making investments trust funds of one trust are combined with funds of other trusts administered by the trustee does not make the investment improper, provided that it is in other respects proper. Thus, an investment of trust funds in a participating interest in one or more mortgages on land held by the trustee is a proper trust investment if the mortgage or mortgages were a proper trust investment.

   If the investment is otherwise proper, the mere fact that a corporate trustee advanced its own money in the first place and acquired the mortgage or mortgages for the purpose of distributing them among the trust estates administered by it, where only a short interval elapses between the purchase and the distribution, does not constitute such self-dealing as to make the transaction improper.

k. Common trust funds. By statute in almost all of the States, corporate trustees are permitted to invest trust funds in a common trust fund maintained by the trustee, subject to the restrictions specified in the statute.

   By the federal Revenue Act of 1936, common trust funds were exempted from taxation as corporations or associations, provided that the fund was maintained by a bank " (1) exclusively for the collective investment and reinvestment of moneys contributed thereto by the bank in its capacity as a trustee, executor, administrator, or guardian; and (2) in conformity with the rules and regulations, prevailing from time to time, of the Board of Governors of the Federal Reserve System pertaining to the collective investment of trust funds by national banks." See Internal Revenue Code of 1954, § 584.

   By § 17 of Regulation F, issued by the Board of Governors of the Federal Reserve System, provision is made for the establishment and maintenance by banks of common trust funds. [FDIC Note: this is now OCC Regulation 9.18.]

l. Investments outside the State. Investments outside the State in which the trust is administered are not ordinarily improper, although the fact that they are outside the State may be one element in considering whether the trustee is acting prudently. In earlier decisions, the courts were inclined to look with disfavor on investments outside the United States or even outside the State in which the trust was administered. It is quite otherwise today. Information with respect to such investments is today very often as easy to acquire and as full as information with respect to local securities; and, if such information would lead a reasonable man to think that the investment is a prudent one, it is proper for a trustee to make it. Thus, investments in mortgages on land outside the State or in securities of a corporation incorporated and carrying on business in another State, or in bonds of another State or of a foreign government, are not ordinarily improper.

m. Shares of stock. The purchase of shares of preferred or common stock of a company with regular earnings and paying regular dividends which may reasonably be expected to continue is a proper trust investment if prudent men in the community are accustomed to invest in such shares when making an investment of their savings with a view to their safety.

   The fact that shares of stock are non-voting in character, does not of itself make the investment in such shares by a trustee improper.

   In many States in which it was previously improper for a trustee to invest in shares of stock, statutes have permitted such investments. In several of the States such an investment is permitted only as to a specified proportion of the trust estate.

n. Investment trusts (Mutual Funds). In several States trustees are permitted, subject to certain restrictions, to invest in stocks or other securities of management type

investment companies. In many of the statutes the company, whether a trustee or corporation, must be qualified under the Investment Company Act of 1940. Apart from statute, it would seem to be not improper for a trustee to make such an investment, provided that it is a prudent one, and that such an investment does not involve any delegation by the trustee of his powers.

o. Matters to be considered in the selection among authorized investments. Although trustees may properly invest in a particular type of security, a trustee must use care and skill and caution in selecting an investment within the type. Among the matters which the trustee should consider in selecting a given investment, in addition to those relating to the safety of the fund invested and the amount and regularity of the income, are:

    1. the marketability of the particular investment;
    2. the length of the term of the investment, for example, the maturity date, if any, the callability or redeemability, if any;
    3. the probable duration of the trust;
    4. the probable condition of the market with respect to the value of the particular investment at the termination of the trust especially if at the termination of the trust the investment must be converted into money for the purpose of distribution;
    5. the probable condition of the market with respect to reinvestment at the time when the particular investment matures;
    6. the aggregate value of the trust estate and the nature of the other investments;
    7. the requirements of the beneficiary or beneficiaries, particularly with respect to the amount of the income;
    8. the other assets of the beneficiary or beneficiaries including earning capacity;
    9. the effect of the investment in increasing or diminishing liability for taxes;
    10. the likelihood of inflation.

    Whether the trustee has acted properly in making an investment depends upon the circumstances at the time when the investment is made and not upon subsequent events. If at the time when the trustee makes an investment it is an investment that a prudent man would make at that time, he incurs no liability although subsequently the investment depreciates in value.

    Ordinarily, if the trust is to terminate at a fixed time, as after the lapse of a certain period or when a designated person reaches a certain age, the trustee should not make an investment which cannot readily be disposed of and converted into cash at the time of the termination of the trust. Thus, if the trust is to terminate within a year or two, the trustee should not invest in a mortgage which will not mature until a considerable time after the creation of the trust, if it is probable that such a mortgage cannot readily be sold. On the other hand, the trustee need not necessarily invest in short term obligations, but can property invest in bonds which are proper trust investments, even though they may not mature until a long time after the termination of the trust, provided that they are of such a character that it is probable that they can readily be sold and converted into cash.

Comment on Clause (b):

p. Statutes. In many States there are statutes governing investments by trustees. In many States the prudent-man rule, stated in this Section, has been adopted by statute. In some States statutes are more restricted, allowing only such investments as government securities, first mortgages on land, and certain types of bonds. The modern [in 1959] trend of legislation is toward the adoption of the prudent-man rule.

    In some States statutes are merely permissive, designating the kind of securities in which it is proper for a trustee to invest, but without confining the trustee to such investments. In other States, no investments except those designated by statute are proper investments for a trustee, unless it is otherwise provided by the terms of the trust.

Statues confining trustees to certain types of investments are not construed as preventing the settlor from empowering the trustee to make investments not designated by the statute.

When discretion as to investments is conferred upon the trustee by the terms of the trust, it is a question of interpretation whether the settlor intends to enlarge the scope of investments permissible under the statutes, and if so to what extent. Where by statute trustees are confined to certain types of investments, but by the terms of the trust it is provided that the trustee may invest in securities "other than legal trust investments," the scope of the proper investments is enlarged and the trustee can properly invest in such securities as are permitted under the rule stated in Clause (a). The result is ordinarily the same if the trustee is authorized to make investments "in his discretion," or such investments as may to him appear to be expedient or advisable. By the terms of the trust the trustee may be permitted to invest in securities which are speculative or otherwise improper under the rule stated in Clause (a). The provisions of the trust instrument, however, are ordinarily strictly construed against an enlargement of the scope of permissible investments beyond those allowed under the rule stated in Clause (a).

An authorization by statute to invest in a particular type of security does not mean that any investment in securities of that type is proper. The trustee must use care and skill and caution in making the selection. Thus, if by statute trustees are authorized to invest in bonds of foreign governments, a trustee must use care and skill and caution in selecting the particular bonds.

Whether an investment is proper is determined by the terms of the statute in force at the time when the investment is made, and not by the statutory or other rules in force at the time of the creation of the trust unless it is otherwise provided by the terms of the trust.

Comment on Clause (c):

q. Terms of the trust. As a general rule a trustee can properly make such investments as are authorized by the terms of the trust and cannot properly make investments which are forbidden by the terms of the trust. In making investments, however, the trustee is not under a duty to the beneficiary to comply with a term of the trust with which it is impossible for him to comply, or to comply with a term of the trust which is illegal. The trustee is not under a duty to the beneficiary to comply with a term of the trust if he is directed or permitted by a proper court not to comply where owing to circumstances not known to the settlor and not anticipated by him compliance would defeat or substantially impair the accomplishment of the purposes of the trust; and under such circumstances the trustee may be subject to liability if he fails to apply to the court for permission to deviate from the terms of the trust.

r. Terms restricting investments. By the terms of the trust the scope of the investments which the trustee could otherwise properly make can be restricted both with respect to investments permitted by statute under Clause (b) and those which in the absence of statutory regulation would be permitted under the rules stated in Clause (a). Thus, although by a statute trustees are permitted to invest in railroad bonds or public utility bonds, by the terms of the trust the trustee may be forbidden to invest in public utility bonds. Similarly, although in the absence of a statute an investment in a certain type of bonds would be proper, by the terms of the trust the trustee can be forbidden to invest in bonds of that type.

s. Terms enlarging permissible investments. On the other hand, by the terms of the trust the scope of investments which the trustee could otherwise properly make can be enlarged. Thus, although by statute trustees are permitted to invest only in government securities or first mortgages on land, by the terms of the trust the trustee can be permitted to invest in bonds or in shares of private corporations or to make other investments not permitted by the statute. *See* Comment p. Similarly, although in the absence of a statute an investment in a certain type of bond would be improper, by the terms of the trust the trustee can be permitted to invest in bonds of that type, although there is an element of risk which would make the investment otherwise improper.

t. Permissive or mandatory terms of the trust. The terms of the trust as to investments may be either permissive or mandatory; that is, the trustee may be merely authorized or he may be directed to invest in certain securities or kinds of securities. If he is merely authorized to make certain investments, he has a privilege but not a duty to make such investments; if he is directed to make such investments, he has not merely a privilege but a duty to do so.

u. Interpretation of the terms of the trust. When discretion as to investments is conferred upon the trustee by the terms of the trust, it is a question of interpretation whether and to what extent the settlor intends to enlarge the scope of permissible investments. If by the terms of the trust the trustee is authorized to make investments "in his discretion," such an authorization does not ordinarily permit the trustee to make investments other than those which a prudent man would make under the rule stated in Clause (a). By the terms of the trust, however, the trustee may be permitted to invest in securities which are speculative or otherwise improper under the rule stated in Clause (a). The provisions of the trust instrument are ordinarily strictly construed against an enlargement of the scope of permissible investments beyond those allowed under the rule stated in Clause (a).

Even though by the terms of the trust the trustee is authorized to invest according to his absolute and uncontrolled discretion, he cannot properly lend trust money to himself individually or purchase securities from himself individually.

A provision in the terms of the trust authorizing the trustee to invest in "securities" is ordinarily interpreted as broad enough to include not merely secured obligations but also other investments such as shares of stock or debentures. An authorization to invest in securities, however, does not of itself empower the trustee to make an investment which would not be made by a prudent man dealing with his own property and having primarily in view the preservation of the trust estate and the amount and regularity of the income to be derived.

v. An authorization by the terms of the trust to invest in a particular type of security does not mean that any investment in securities of that type is proper. The trustee must use care and skill and caution in making the selection. Thus, if the trustee is authorized by the terms of the trust to invest in railroad bonds, he is guilty of a breach of trust if he invests in bonds of a railroad company in which a prudent man would not invest because of the financial condition of the company.

Where by the terms of the trust discretion is conferred upon the trustee to make certain investments, he is subject to liability if he abuses the discretion. Thus, if the trustee is permitted to invest in a particular security or type of security in his discretion and the circumstances are such that it would be beyond the bounds of a reasonable judgment to make the investment, the trustee is subject to liability if he makes it.

w. If by the terms of the trust the trustee is authorized or directed to invest in a particular security or a particular type of security, he may nevertheless be liable for making such an investment, where owing to circumstances not known to the settlor and not anticipated by him the making of such investment would defeat or substantially impair the accomplishment of the purposes of the trust. Thus, where by the terms of the trust the trustee was authorized to invest in shares of a particular company which at the time of the creation of the trust was in sound financial condition but which has since fallen into such financial difficulties that the shares have become highly speculative, the trustee is subject to liability if he invests in these shares.

x. Informal trusts. In the case of an informal trust, as where one hands over money to another to invest for him, the duty to invest and the propriety of investments are governed by the intention of the parties as shown by their words or other conduct as interpreted in the light of all the circumstances. Whether the trust is created by a formal instrument such as a will or deed, or is not so created, the duty of the trustee in making investments is to conform to the rules stated in this Section. The circumstances, however, surrounding informal trusts may more freely lend themselves to an interpretation of the terms of the trust as permitting a wider latitude in making investments, or may show an intention that the trustee should not make any

investments. If the trust is one created by will or deed of trust, the trust instrument must itself express a latitude to invest in securities that would not otherwise be proper trust investments.

y. Successive beneficiaries. An investment which would not otherwise be improper as a trust investment is improper where the trust is created for successive beneficiaries, if the investment would be unduly favorable to one beneficiary at the expense of the other.

z. General duties of trustee. In making investments, as in other matters relating to the administration of the trust, the trustee is under a duty to act solely in the interest of the beneficiary. It is a breach of trust for the trustee in making an investment to purchase property owned by him individually.

Delegation of Duties - In making investments, as in other matters relating to the administration of the trust, the trustee is under a duty not to delegate to others the doing of acts which the trustee can reasonably be required personally to perform. He cannot properly delegate to another power to select investments.

Uniform Prudent Investor Act

Uniform Prudent Investor Act

Prefatory Note

Over the quarter century from the late 1960's the investment practices of fiduciaries experienced significant change. The Uniform Prudent Investor Act (UPIA) undertakes to update trust investment law in recognition of the alterations that have occurred in investment practice. These changes have occurred under the influence of a large and broadly accepted body of empirical and theoretical knowledge about the behavior of capital markets, often described as "modern portfolio theory."

This Act draws upon the revised standards for prudent trust investment promulgated by the American Law Institute in its Restatement (Third) of Trusts: Prudent Investor Rule (1992) [hereinafter Restatement of Trusts 3d: Prudent Investor Rule; also referred to as 1992 Restatement].

Objectives of the Act. UPIA makes five fundamental alterations in the former criteria for prudent investing. All are to be found in the Restatement of Trusts 3d: Prudent Investor Rule.

(1) The standard of prudence is applied to any investment as part of the total portfolio, rather than to individual investments. In the trust setting the term "portfolio" embraces all the trust's assets. UPIA § 2(b).

(2) The tradeoff in all investing between risk and return is identified as the fiduciary's central consideration. UPIA § 2(b).

(3) All categoric restrictions on types of investments have been abrogated; the trustee can invest in anything that plays an appropriate role in achieving the risk/return objectives of the trust and that meets the other requirements of prudent investing. UPIA § 2(e).

(4) The long familiar requirement that fiduciaries diversify their investments has been integrated into the definition of prudent investing. UPIA § 3.

(5) The much criticized former rule of trust law forbidding the trustee to delegate investment and management functions has been reversed. Delegation is now permitted, subject to safeguards. UPIA § 9.

Literature. These changes in trust investment law have been presaged in an extensive body of practical and scholarly writing. See especially the discussion and reporter's notes by Edward C. Halbach, Jr., in Restatement of Trusts 3d: Prudent Investor Rule (1992); see also Edward C. Halbach, Jr., Trust Investment Law in the Third Restatement, 27 Real Property, Probate & Trust J. 407 (1992); Bevis Longstreth, Modern Investment Management and the Prudent Man Rule (1986); Jeffrey N. Gordon, The Puzzling Persistence of the Constrained Prudent Man Rule, 62 N.Y.U.L. Rev. 52 (1987); John H. Langbein & Richard A. Posner, The Revolution in Trust Investment Law, 62 A.B.A.J. 887 (1976); Note, The Regulation of Risky Investments, 83 Harvard L. Rev. 603 (1970). A succinct account of the main findings of modern portfolio theory, written for lawyers, is Jonathan R. Macey, An Introduction to Modern Financial Theory (1991) (American College of Trust & Estate Counsel Foundation). A leading introductory text on modern portfolio theory is R.A. Brealey, An Introduction to Risk and Return from Common Stocks (2d ed. 1983).

Legislation. Most states have legislation governing trust-investment law. This Act promotes uniformity of state law on the basis of the new consensus reflected in the Restatement of Trusts 3d: Prudent Investor Rule. Some states have already acted. California, Delaware, Georgia, Minnesota, Tennessee, and Washington revised their prudent investor legislation to emphasize the total-portfolio standard of care in advance of the 1992 Restatement. These statutes are extracted and discussed in Restatement of Trusts 3d: Prudent Investor Rule § 227, reporter's note, at 60-66 (1992).

Drafters in Illinois in 1991 worked from the April 1990 "Proposed Final Draft" of the Restatement of Trusts 3d: Prudent Investor Rule and enacted legislation that is closely modeled on the new Restatement. 760 ILCS § 5/5 (prudent investing); and § 5/5.1 (delegation) (1992). As the Comments to this Uniform Prudent Investor Act reflect, the Act draws upon the Illinois statute in several sections. Virginia revised its prudent investor act in a similar vein in 1992. Virginia Code § 26-45.1 (prudent investing) (1992). Florida revised its statute in 1993. Florida Laws, ch. 93-257, amending Florida Statutes § 518.11 (prudent investing) and creating § 518.112 (delegation). New York legislation drawing on the new Restatement and on a preliminary version of this Uniform Prudent Investor Act was enacted in 1994. N.Y. Assembly Bill 11683-B, Ch. 609 (1994), adding Estates, Powers and Trusts Law § 11-2.3 (Prudent Investor Act).

Remedies. This Act does not undertake to address issues of remedy law or the computation of damages in trust matters. Remedies are the subject of a reasonably distinct body of doctrine. See generally Restatement (Second) of Trusts §§ 197-226A (1959) [hereinafter cited as Restatement of Trusts 2d; also referred to as 1959 Restatement].

Implications for charitable and pension trusts. This Act is centrally concerned with the investment responsibilities arising under the private gratuitous trust, which is the common vehicle for conditioned wealth transfer within the family. Nevertheless, the prudent investor rule also bears on charitable and pension trusts, among others. "In making investments of trust funds the trustee of a charitable trust is under a duty similar to that of the trustee of a private trust." Restatement of Trusts 2d § 389 (1959). The Employee Retirement Income Security Act (ERISA), the federal regulatory scheme for pension trusts enacted in 1974, absorbs trust-investment law through the prudence standard of ERISA § 404(a)(1)(B), 29 U.S.C. § 1104(a). The Supreme Court has said: "ERISA's legislative history confirms that the Act's fiduciary responsibility provisions 'codif[y] and mak[e] applicable to [ERISA] fiduciaries certain principles developed in the evolution of the law of trusts.'" *Firestone Tire & Rubber Co. v. Bruch*, 489 U.S. 101, 110-11 (1989) (footnote omitted).

Other fiduciary relationships. The Uniform Prudent Investor Act regulates the investment responsibilities of trustees. Other fiduciaries - such as executors, conservators, and guardians of the property - sometimes have responsibilities over assets that are governed by the standards of prudent investment. It will often be

appropriate for states to adapt the law governing investment by trustees under this Act to these other fiduciary regimes, taking account of such changed circumstances as the relatively short duration of most executorships and the intensity of court supervision of conservators and guardians in some jurisdictions. The present Act does not undertake to adjust trust-investment law to the special circumstances of the state schemes for administering decedents' estates or conducting the affairs of protected persons.

Although the Uniform Prudent Investor Act by its terms applies to trusts and not to charitable corporations, the standards of the Act can be expected to inform the investment responsibilities of directors and officers of charitable corporations. As the 1992 Restatement observes, "the duties of the members of the governing board of a charitable corporation are generally similar to the duties of the trustee of a charitable trust." Restatement of Trusts 3d: Prudent Investor Rule § 379, Comment *b*, at 190 (1992). See also id. § 389, Comment *b*, at 190-91 (absent contrary statute or other provision, prudent investor rule applies to investment of funds held for charitable corporations).

Uniform Prudent Investor Act

Section 1. Prudent Investor Rule.

(a) Except as otherwise provided in subsection (b), a trustee who invests and manages trust assets owes a duty to the beneficiaries of the trust to comply with the prudent investor rule set forth in this [Act].

(b) The prudent investor rule, a default rule, may be expanded, restricted, eliminated, or otherwise altered by the provisions of a trust. A trustee is not liable to a beneficiary to the extent that the trustee acted in reasonable reliance on the provisions of the trust.

Comment

This section imposes the obligation of prudence in the conduct of investment functions and identifies further sections of the Act that specify the attributes of prudent conduct.

Origins. The prudence standard for trust investing traces back to *Harvard College v. Amory*, 26 Mass. (9 Pick.) 446 (1830). Trustees should "observe how men of prudence, discretion and intelligence manage their own affairs, not in regard to speculation, but in regard to the permanent disposition of their funds, considering the probable income, as well as the probable safety of the capital to be invested." Id. at 461.

Prior legislation. The Model Prudent Man Rule Statute (1942), sponsored by the American Bankers Association, undertook to codify the language of the *Amory* case. See Mayo A. Shattuck, The Development of the Prudent Man Rule for Fiduciary Investment in the United States in the Twentieth Century, 12 Ohio State L.J. 491, at 501 (1951); for the text of the model act, which inspired many state statutes, see id. at 508-09. Another prominent codification of the *Amory* standard is Uniform Probate Code § 7-302 (1969), which provides that "the trustee shall observe the standards in dealing with the trust assets that would be observed by a prudent man dealing with the property of another . . . ."

Congress has imposed a comparable prudence standard for the administration of pension and employee benefit trusts in the Employee Retirement Income Security Act (ERISA), enacted in 1974. ERISA § 404(a)(1)(B), 29 U.S.C. § 1104(a), provides that "a fiduciary shall discharge his duties with respect to a plan solely in the interest of the participants and beneficiaries and . . . with the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent man acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of like character and with like aims . . . ."

Prior Restatement. The Restatement of Trusts 2d (1959) also tracked the language of the *Amory* case: "In making investments

of trust funds the trustee is under a duty to the beneficiary . . . to make such investments and only such investments as a prudent man would make of his own property having in view the preservation of the estate and the amount and regularity of the income to be derived . . . ." Restatement of Trusts 2d § 227 (1959).

Objective standard. The concept of prudence in the judicial opinions and legislation is essentially relational or comparative. It resembles in this respect the "reasonable person" rule of tort law. A prudent trustee behaves as other trustees similarly situated would behave. The standard is, therefore, objective rather than subjective. Sections 2 through 9 of this Act identify the main factors that bear on prudent investment behavior.

Variation. Almost all of the rules of trust law are default rules, that is, rules that the settlor may alter or abrogate. Subsection (b) carries forward this traditional attribute of trust law. Traditional trust law also allows the beneficiaries of the trust to excuse its performance, when they are all capable and not misinformed. Restatement of Trusts 2d § 216 (1959).

Section 2. Standard of Care; Portfolio Strategy; Risk and Return Objectives.

(a) A trustee shall invest and manage trust assets as a prudent investor would, by considering the purposes, terms, distribution requirements, and other circumstances of the trust. In satisfying this standard, the trustee shall exercise reasonable care, skill, and caution.

(b) A trustee's investment and management decisions respecting individual assets must be evaluated not in isolation but in the context of the trust portfolio as a whole and as a part of an overall investment strategy having risk and return objectives reasonably suited to the trust.

(c) Among circumstances that a trustee shall consider in investing and managing trust assets are such of the following as are relevant to the trust or its beneficiaries:

(1) general economic conditions;

(2) the possible effect of inflation or deflation;

(3) the expected tax consequences of investment decisions or strategies;

(4) the role that each investment or course of action plays within the overall trust portfolio, which may include financial assets, interests in closely held enterprises, tangible and intangible personal property, and real property;

(5) the expected total return from income and the appreciation of capital;

(6) other resources of the beneficiaries;

(7) needs for liquidity, regularity of income, and preservation or appreciation of capital; and

(8) an asset's special relationship or special value, if any, to the purposes of the trust or to one or more of the beneficiaries.

(d) A trustee shall make a reasonable effort to verify facts relevant to the investment and management of trust assets.

(e) A trustee may invest in any kind of property or type of investment consistent with the standards of this [Act].

(f) A trustee who has special skills or expertise, or is named trustee in reliance upon the trustee's representation that the trustee has special skills or expertise, has a duty to use those special skills or expertise.

Comment

Section 2 is the heart of the Act. Subsections (a), (b), and (c) are patterned loosely on the language of the Restatement of Trusts 3d: Prudent Investor Rule § 227 (1992), and on the 1991 Illinois statute, 760 § ILCS 5/5a (1992). Subsection (f) is derived from Uniform Probate Code § 7-302 (1969).

Objective standard. Subsection (a) of this Act carries forward the relational and objective standard made familiar in the *Amory* case, in earlier prudent investor legislation, and in the Restatements. Early formulations of the prudent person rule were sometimes troubled by the effort to distinguish between the standard of a prudent person investing for another and investing on his or her own account. The language of subsection (a), by relating the trustee's duty to "the purposes, terms, distribution requirements, and other circumstances of the trust," should put such questions to rest. The standard is the standard of the prudent investor similarly situated.

Portfolio standard. Subsection (b) emphasizes the consolidated portfolio standard for evaluating investment decisions. An investment that might be imprudent standing alone can become prudent if undertaken in sensible relation to other trust assets, or to other nontrust assets. In the trust setting the term "portfolio" embraces the entire trust estate.

Risk and return. Subsection (b) also sounds the main theme of modern investment practice, sensitivity to the risk/return curve. See generally the works cited in the Prefatory Note to this Act, under "Literature." Returns correlate strongly with risk, but tolerance for risk varies greatly with the financial and other circumstances of the investor, or in the case of a trust, with the purposes of the trust and the relevant circumstances of the beneficiaries. A trust whose main purpose is to support an elderly widow of modest means will have a lower risk tolerance than a trust to accumulate for a young scion of great wealth.

Subsection (b) of this Act follows Restatement of Trusts 3d: Prudent Investor Rule § 227(a), which provides that the standard of prudent investing "requires the exercise of reasonable care, skill, and caution, and is to be applied to investments not in isolation but in the context of the trust portfolio and as a part of an overall investment strategy, which should incorporate risk and return objectives reasonably suitable to the trust."

Factors affecting investment. Subsection (c) points to certain of the factors that commonly bear on risk/return preferences in fiduciary investing. This listing is nonexclusive. Tax considerations, such as preserving the stepped up basis on death under Internal Revenue Code § 1014 for low-basis assets, have traditionally been exceptionally important in estate planning for affluent persons. Under the present recognition rules of the federal income tax, taxable investors, including trust beneficiaries, are in general best served by an investment strategy that minimizes the taxation incident to portfolio turnover. See generally Robert H. Jeffrey & Robert D. Arnott, Is Your Alpha Big Enough to Cover Its Taxes?, Journal of Portfolio Management 15 (Spring 1993).

Another familiar example of how tax considerations bear upon trust investing: In a regime of pass-through taxation, it may be prudent for the trust to buy lower yielding tax-exempt securities for high-bracket taxpayers, whereas it would ordinarily be imprudent for the trustees of a charitable trust, whose income is tax exempt, to accept the lowered yields associated with tax-exempt securities.

When tax considerations affect beneficiaries differently, the trustee's duty of impartiality requires attention to the competing interests of each of them.

Subsection (c)(8), allowing the trustee to take into account any preferences of the beneficiaries respecting heirlooms or other prized assets, derives from the Illinois act, 760 ILCS § 5/5(a)(4) (1992).

Duty to monitor. Subsections (a) through (d) apply both to investing and managing trust assets. "Managing" embraces monitoring, that is, the trustee's continuing responsibility for oversight of the suitability of investments already made as well as the trustee's decisions respecting new investments.

Duty to investigate. Subsection (d) carries forward the traditional responsibility of the fiduciary investor to examine information likely to bear importantly on the value or the security of an investment - for example, audit reports or records of title. E.g., *Estate of Collins*, 72 Cal. App. 3d 663, 139 Cal. Rptr. 644 (1977) (trustees lent on a junior mortgage on unimproved real estate, failed to have land appraised, and accepted an unaudited financial statement; held liable for losses).

Abrogating categoric restrictions. Subsection 2(e) clarifies that no particular kind of property or type of investment is inherently imprudent. Traditional trust law was encumbered with a variety of categoric exclusions, such as prohibitions on junior mortgages or new ventures. In some states legislation created so-called "legal lists" of approved trust investments. The universe of investment products changes incessantly. Investments that were at one time thought too risky, such as equities, or more recently, futures, are now used in fiduciary portfolios. By contrast, the investment that was at one time thought ideal for trusts, the long-term bond, has been discovered to import a level of risk and volatility - in this case, inflation risk - that had not been anticipated. Accordingly, section 2(e) of this Act follows Restatement of Trusts 3d: Prudent Investor Rule in abrogating categoric restrictions. The Restatement says: "Specific investments or techniques are not per se prudent or imprudent. The riskiness of a specific property, and thus the propriety of its inclusion in the trust estate, is not judged in the abstract but in terms of its anticipated effect on the particular trust's portfolio." Restatement of Trusts 3d: Prudent Investor Rule § 227, Comment f, at 24 (1992). The premise of subsection 2(e) is that trust beneficiaries are better protected by the Act's emphasis on close attention to risk/return objectives as prescribed in subsection 2(b) than in attempts to identify categories of investment that are per se prudent or imprudent.

The Act impliedly disavows the emphasis in older law on avoiding "speculative" or "risky" investments. Low levels of risk may be appropriate in some trust settings but inappropriate in others. It is the trustee's task to invest at a risk level that is suitable to the purposes of the trust.

The abolition of categoric restrictions against types of investment in no way alters the trustee's conventional duty of loyalty, which is reiterated for the purposes of this Act in Section 5. For example, were the trustee to invest in a second mortgage on a piece of real property owned by the trustee, the investment would be wrongful on account of the trustee's breach of the duty to abstain from self-dealing, even though the investment would no longer automatically offend the former categoric restriction against fiduciary investments in junior mortgages.

Professional fiduciaries. The distinction taken in subsection (f) between amateur and professional trustees is familiar law. The prudent investor standard applies to a range of fiduciaries, from the most sophisticated professional investment management firms and corporate fiduciaries, to family members of minimal experience. Because the standard of prudence is relational, it follows that the standard for professional trustees is the standard of prudent professionals; for amateurs, it is the standard of prudent amateurs. Restatement of Trusts 2d § 174 (1959) provides: "The trustee is under a duty to the beneficiary in administering the trust to exercise such care and skill as a man of ordinary prudence would exercise in dealing with his own property; and if the trustee has or procures his appointment as trustee by representing that he has greater skill than that of a man of ordinary prudence, he is under a duty to exercise such skill." Case law strongly supports the concept of the higher standard of care for the trustee representing itself to be expert or professional. See Annot., Standard of Care Required of Trustee Representing Itself to Have Expert Knowledge or Skill, 91 A.L.R. 3d 904 (1979) & 1992 Supp. at 48-49.

The Drafting Committee declined the suggestion that the Act should create an exception to the prudent investor rule (or to the diversification requirement of Section 3) in the case of smaller trusts. The Committee believes that subsections (b) and (c) of the Act emphasize factors that are sensitive to the traits of small trusts; and that subsection (f) adjusts helpfully for the distinction between professional and amateur trusteeship. Furthermore, it is always open to the settlor of a trust under Section 1(b) of the Act to reduce the trustee's standard of care if the settlor deems such a step appropriate. The official comments to the 1992 Restatement observe that pooled investments, such as mutual funds and bank common trust funds, are especially suitable for small trusts. Restatement of Trusts 3d: Prudent Investor Rule § 227, Comments *h*, *m*, at 28, 51; reporter's note to Comment *g*, id. at 83.

Matters of proof. Although virtually all express trusts are created by written instrument, oral trusts are known, and accordingly, this Act presupposes no formal requirement that trust terms be in writing. When there is a written trust instrument, modern authority strongly favors allowing evidence extrinsic to the instrument to be consulted for the purpose of ascertaining the settlor's intent. See Uniform Probate Code § 2-601 (1990), Comment; Restatement (Third) of Property: Donative Transfers (Preliminary Draft No. 2, ch. 11, Sept. 11, 1992).

Section 3. Diversification.

A trustee shall diversify the investments of the trust unless the trustee reasonably determines that, because of special circumstances, the purposes of the trust are better served without diversifying.

Comment

The language of this section derives from Restatement of Trusts 2d § 228 (1959). ERISA insists upon a comparable rule for pension trusts. ERISA § 404(a)(1)(C), 29 U.S.C. § 1104(a)(1)(C). Case law overwhelmingly supports the duty to diversify. See Annot., Duty of Trustee to Diversify Investments, and Liability for Failure to Do So, 24 A.L.R. 3d 730 (1969) & 1992 Supp. at 78-79.

The 1992 Restatement of Trusts takes the significant step of integrating the diversification requirement into the concept of prudent investing. Section 227(b) of the 1992 Restatement treats diversification as one of the fundamental elements of prudent investing, replacing the separate section 228 of the Restatement of Trusts 2d. The message of the 1992 Restatement, carried forward in Section 3 of this Act, is that prudent investing ordinarily requires diversification.

Circumstances can, however, overcome the duty to diversify. For example, if a tax-sensitive trust owns an underdiversified block of low-basis securities, the tax costs of recognizing the gain may outweigh the advantages of diversifying the holding. The wish to retain a family business is another situation in which the purposes of the trust sometimes override the conventional duty to diversify.

Rationale for diversification. "Diversification reduces risk . . . [because] stock price movements are not uniform. They are imperfectly correlated. This means that if one holds a well diversified portfolio, the gains in one investment will cancel out the losses in another." Jonathan R. Macey, An Introduction to Modern Financial Theory 20 (American College of Trust and Estate Counsel Foundation, 1991). For example, during the Arab oil embargo of 1973, international oil stocks suffered declines, but the shares of domestic oil producers and coal companies benefitted. Holding a broad enough portfolio allowed the investor to set off, to some extent, the losses associated with the embargo.

Modern portfolio theory divides risk into the categories of "compensated" and "uncompensated" risk. The risk of owning shares in a mature and well-managed company in a settled industry is less than the risk of owning shares in a start-up high-technology venture. The investor requires a higher expected return to induce the investor to bear the greater risk of disappointment associated with the start-up firm. This is compensated risk - the firm pays the investor for bearing the risk. By contrast, nobody pays the investor for owning too few stocks. The investor who owned only international oils in 1973 was running a risk that could have been reduced by having configured the portfolio differently - to include investments in different industries. This is uncompensated risk - nobody pays the investor for owning shares in too few industries and too few companies. Risk that can be eliminated by adding different stocks (or bonds) is uncompensated risk. The object of diversification is to minimize this uncompensated risk of having too few investments. "As long as stock prices do not move exactly together, the risk of a diversified portfolio will be less than the average risk of the separate holdings." R.A. Brealey, An Introduction to Risk and Return from Common Stocks 103 (2d ed. 1983).

There is no automatic rule for identifying how much diversification is enough. The 1992 Restatement says: "Significant diversification advantages can be achieved with a small number of well-selected securities representing different industries . . . . Broader diversification is usually to be preferred in trust investing," and pooled investment vehicles "make thorough diversification

practical for most trustees." Restatement of Trusts 3d: Prudent Investor Rule § 227, General Note on Comments *e-h*, at 77 (1992). See also Macey, supra, at 23-24; Brealey, supra, at 111-13.

Diversifying by pooling. It is difficult for a small trust fund to diversify thoroughly by constructing its own portfolio of individually selected investments. Transaction costs such as the round-lot (100 share) trading economies make it relatively expensive for a small investor to assemble a broad enough portfolio to minimize uncompensated risk. For this reason, pooled investment vehicles have become the main mechanism for facilitating diversification for the investment needs of smaller trusts.

Most states have legislation authorizing common trust funds; see 3 Austin W. Scott & William F. Fratcher, The Law of Trusts § 227.9, at 463-65 n.26 (4th ed. 1988) (collecting citations to state statutes). As of 1992, 35 states and the District of Columbia had enacted the Uniform Common Trust Fund Act (UCTFA) (1938), overcoming the rule against commingling trust assets and expressly enabling banks and trust companies to establish common trust funds. 7 Uniform Laws Ann. 1992 Supp. at 130 (schedule of adopting states). The Prefatory Note to the UCTFA explains: "The purposes of such a common or joint investment fund are to diversify the investment of the several trusts and thus spread the risk of loss, and to make it easy to invest any amount of trust funds quickly and with a small amount of trouble." 7 Uniform Laws Ann. 402 (1985).

Fiduciary investing in mutual funds. Trusts can also achieve diversification by investing in mutual funds. See Restatement of Trusts 3d: Prudent Investor Rule, § 227, Comment *m*, at 99-100 (1992) (endorsing trust investment in mutual funds). ERISA § 401(b)(1), 29 U.S.C. § 1101(b)(1), expressly authorizes pension trusts to invest in mutual funds, identified as securities "issued by an investment company registered under the Investment Company Act of 1940 . . . ."

Section 4. Duties at Inception of Trusteeship.

Within a reasonable time after accepting a trusteeship or receiving trust assets, a trustee shall review the trust assets and make and implement decisions concerning the retention and disposition of assets, in order to bring the trust portfolio into compliance with the purposes, terms, distribution requirements, and other circumstances of the trust, and with the requirements of this [Act].

Comment

Section 4, requiring the trustee to dispose of unsuitable assets within a reasonable time, is old law, codified in Restatement of Trusts 3d: Prudent Investor Rule § 229 (1992), lightly revising Restatement of Trusts 2d § 230 (1959). The duty extends as well to investments that were proper when purchased but subsequently become improper. Restatement of Trusts 2d § 231 (1959). The same standards apply to successor trustees, see Restatement of Trusts 2d § 196 (1959).

The question of what period of time is reasonable turns on the totality of factors affecting the asset and the trust. The 1959 Restatement took the view that "[o]rdinarily any time within a year is reasonable, but under some circumstances a year may be too long a time and under other circumstances a trustee is not liable although he fails to effect the conversion for more than a year."

Restatement of Trusts 2d § 230, comment *b* (1959). The 1992 Restatement retreated from this rule of thumb, saying, "No positive rule can be stated with respect to what constitutes a reasonable time for the sale or exchange of securities." Restatement of Trusts 3d: Prudent Investor Rule § 229, comment *b* (1992).

The criteria and circumstances identified in Section 2 of this Act as bearing upon the prudence of decisions to invest and manage trust assets also pertain to the prudence of decisions to retain or dispose of inception assets under this section.

Section 5. Loyalty.

A trustee shall invest and manage the trust assets solely in the interest of the beneficiaries.

Comment

The duty of loyalty is perhaps the most characteristic rule of trust law, requiring the trustee to act exclusively for the beneficiaries, as opposed to acting for the trustee's own interest or that of third parties. The language of Section 4 of this Act derives from Restatement of Trusts 3d: Prudent Investor Rule § 170 (1992), which makes minute changes in Restatement of Trusts 2d § 170 (1959).

The concept that the duty of prudence in trust administration, especially in investing and managing trust assets, entails adherence to the duty of loyalty is familiar. ERISA § 404(a)(1)(B), 29 U.S.C. § 1104(a)(1)(B), extracted in the Comment to Section 1 of this Act, effectively merges the requirements of prudence and loyalty. A fiduciary cannot be prudent in the conduct of investment functions if the fiduciary is sacrificing the interests of the beneficiaries.

The duty of loyalty is not limited to settings entailing self-dealing or conflict of interest in which the trustee would benefit personally from the trust. "The trustee is under a duty to the beneficiary in administering the trust not to be guided by the interest of any third person. Thus, it is improper for the trustee to sell trust property to a third person for the purpose of benefitting the third person rather than the trust." Restatement of Trusts 2d § 170, comment *q*, at 371 (1959).

No form of so-called "social investing" is consistent with the duty of loyalty if the investment activity entails sacrificing the interests of trust beneficiaries - for example, by accepting below-market returns - in favor of the interests of the persons supposedly benefitted by pursuing the particular social cause. See, e.g., John H. Langbein & Richard Posner, Social Investing and the Law of Trusts, 79 Michigan L. Rev. 72, 96-97 (1980) (collecting authority). For pension trust assets, see generally Ian D. Lanoff, The Social Investment of Private Pension Plan Assets: May it Be Done Lawfully under ERISA?, 31 Labor L.J. 387 (1980). Commentators supporting social investing tend to concede the overriding force of the duty of loyalty. They argue instead that particular schemes of social investing may not result in below-market returns. See, e.g., Marcia O'Brien Hylton, "Socially Responsible" Investing: Doing Good Versus Doing Well in an Inefficient Market, 42 American U.L. Rev. 1 (1992). In 1994 the Department of Labor issued an Interpretive Bulletin reviewing its prior analysis of social investing questions and reiterating that pension trust fiduciaries may invest only in conformity with the prudence and loyalty standards of ERISA §§ 403-404. Interpretive

Bulletin 94-1, 59 Fed. Regis. 32606 (Jun. 22, 1994), to be codified as 29 CFR § 2509.94-1. The Bulletin reminds fiduciary investors that they are prohibited from "subordinat[ing] the interests of participants and beneficiaries in their retirement income to unrelated objectives."

Section 6. Impartiality.

If a trust has two or more beneficiaries, the trustee shall act impartially in investing and managing the trust assets, taking into account any differing interests of the beneficiaries.

Comment

The duty of impartiality derives from the duty of loyalty. When the trustee owes duties to more than one beneficiary, loyalty requires the trustee to respect the interests of all the beneficiaries. Prudence in investing and administration requires the trustee to take account of the interests of all the beneficiaries for whom the trustee is acting, especially the conflicts between the interests of beneficiaries interested in income and those interested in principal.

The language of Section 6 derives from Restatement of Trusts 2d § 183 (1959); see also id., § 232. Multiple beneficiaries may be beneficiaries in succession (such as life and remainder interests) or beneficiaries with simultaneous interests (as when the income interest in a trust is being divided among several beneficiaries).

The trustee's duty of impartiality commonly affects the conduct of investment and management functions in the sphere of principal and income allocations. This Act prescribes no regime for allocating receipts and expenses. The details of such allocations are commonly handled under specialized legislation, such as the Revised Uniform Principal and Income Act (1962) (which is presently under study by the Uniform Law Commission with a view toward further revision).

Section 7. Investment Costs.

In investing and managing trust assets, a trustee may only incur costs that are appropriate and reasonable in relation to the assets, the purposes of the trust, and the skills of the trustee.

Comment

Wasting beneficiaries' money is imprudent. In devising and implementing strategies for the investment and management of trust assets, trustees are obliged to minimize costs.

The language of Section 7 derives from Restatement of Trusts 2d § 188 (1959). The Restatement of Trusts 3d says: "Concerns over compensation and other charges are not an obstacle to a reasonable course of action using mutual funds and other pooling arrangements, but they do require special attention by a trustee. . . . [I]t is important for trustees to make careful cost comparisons, particularly among similar products of a specific type being considered for a trust portfolio." Restatement of Trusts 3d: Prudent Investor Rule § 227, comment *m*, at 58 (1992).

Section 8. Reviewing Compliance.

Compliance with the prudent investor rule is determined in light of the facts and circumstances existing at the time of a trustee's

decision or action and not by hindsight.

Comment

This section derives from the 1991 Illinois act, 760 ILCS 5/5(a)(2) (1992), which draws upon Restatement of Trusts 3d: Prudent Investor Rule § 227, comment *b*, at 11 (1992). Trustees are not insurers. Not every investment or management decision will turn out in the light of hindsight to have been successful. Hindsight is not the relevant standard. In the language of law and economics, the standard is ex ante, not ex post.

Section 9. Delegation of Investment and Management Functions.

(a) A trustee may delegate investment and management functions that a prudent trustee of comparable skills could properly delegate under the circumstances. The trustee shall exercise reasonable care, skill, and caution in:

(1) selecting an agent;

(2) establishing the scope and terms of the delegation, consistent with the purposes and terms of the trust; and

(3) periodically reviewing the agent's actions in order to monitor the agent's performance and compliance with the terms of the delegation.

(b) In performing a delegated function, an agent owes a duty to the trust to exercise reasonable care to comply with the terms of the delegation.

(c) A trustee who complies with the requirements of subsection (a) is not liable to the beneficiaries or to the trust for the decisions or actions of the agent to whom the function was delegated.

(d) By accepting the delegation of a trust function from the trustee of a trust that is subject to the law of this State, an agent submits to the jurisdiction of the courts of this State.

Comment

This section of the Act reverses the much-criticized rule that forbad trustees to delegate investment and management functions. The language of this section is derived from Restatement of Trusts 3d: Prudent Investor Rule § 171 (1992), discussed infra, and from the 1991 Illinois act, 760 ILCS § 5/5.1(b), (c) (1992).

Former law. The former nondelegation rule survived into the 1959 Restatement: "The trustee is under a duty to the beneficiary not to delegate to others the doing of acts which the trustee can reasonably be required personally to perform." The rule put a premium on the frequently arbitrary task of distinguishing discretionary functions that were thought to be nondelegable from supposedly ministerial functions that the trustee was allowed to delegate. Restatement of Trusts 2d § 171 (1959).

The Restatement of Trusts 2d admitted in a comment that "There is not a clear-cut line dividing the acts which a trustee can properly delegate from

those which he cannot properly delegate." Instead, the comment directed attention to a list of factors that "may be of importance: (1) the amount of discretion involved; (2) the value and character of the property involved; (3) whether the property is principal or income; (4) the proximity or remoteness of the subject matter of the trust; (5) the character of the act as one involving professional skill or facilities possessed or not possessed by the trustee himself." Restatement of Trusts 2d § 171, comment *d* (1959). The 1959 Restatement further said: "A trustee cannot properly delegate to another power to select investments." Restatement of Trusts 2d § 171, comment *h* (1959).

For discussion and criticism of the former rule see William L. Cary & Craig B. Bright, The Delegation of Investment Responsibility for Endowment Funds, 74 Columbia L. Rev. 207 (1974); John H. Langbein & Richard A. Posner, Market Funds and Trust-Investment Law, 1976 American Bar Foundation Research J. 1, 18-24.

The modern trend to favor delegation. The trend of subsequent legislation, culminating in the Restatement of Trusts 3d: Prudent Investor Rule, has been strongly hostile to the nondelegation rule. See John H. Langbein, Reversing the Nondelegation Rule of Trust-Investment Law, 59 Missouri L. Rev. 105 (1994).

The delegation rule of the Uniform Trustee Powers Act. The Uniform Trustee Powers Act (1964) effectively abrogates the nondelegation rule. It authorizes trustees "to employ persons, including attorneys, auditors, investment advisors, or agents, even if they are associated with the trustee, to advise or assist the trustee in the performance of his administrative duties; to act without independent investigation upon their recommendations; and instead of acting personally, to employ one or more agents to perform any act of administration, whether or not discretionary . . . ." Uniform Trustee Powers Act § 3(24), 7B Uniform Laws Ann. 743 (1985). The Act has been enacted in 16 states, see "Record of Passage of Uniform and Model Acts as of September 30, 1993," 1993-94 Reference Book of Uniform Law Commissioners (unpaginated, following page 111) (1993).

UMIFA's delegation rule. The Uniform Management of Institutional Funds Act (1972) (UMIFA), authorizes the governing boards of eleemosynary institutions, who are trustee-like fiduciaries, to delegate investment matters either to a committee of the board or to outside investment advisors, investment counsel, managers, banks, or trust companies. UMIFA § 5, 7A Uniform Laws Ann. 705 (1985). UMIFA has been enacted in 38 states, see "Record of Passage of Uniform and Model Acts as of September 30, 1993," 1993-94 Reference Book of Uniform Law Commissioners (unpaginated, following page 111) (1993).

ERISA's delegation rule. The Employee Retirement Income Security Act of 1974, the federal statute that prescribes fiduciary standards for investing the assets of pension and employee benefit plans, allows a pension or employee benefit plan to provide that "authority to manage, acquire or dispose of assets of the plan is delegated to one or more investment managers . . . ." ERISA § 403(a)(2), 29 U.S.C. § 1103(a)(2). Commentators have explained the rationale for ERISA's encouragement of delegation:

ERISA . . . invites the dissolution of unitary trusteeship. . . . ERISA's fractionation of traditional trusteeship reflects the complexity of the modern pension trust. Because millions, even billions of dollars can be involved, great care is required in investing and safekeeping plan assets. Administering such plans-computing and honoring benefit entitlements across decades of employment and retirement-is also a complex business. . . . Since, however, neither the sponsor nor any other single entity has a comparative advantage in performing all these functions, the tendency has been for pension plans to use a variety of specialized providers. A consulting actuary, a plan administration firm, or an insurance company may oversee the design of a plan and arrange for processing benefit claims. Investment industry professionals manage the portfolio (the largest plans spread their pension investments among dozens of money management firms).

John H. Langbein & Bruce A. Wolk, Pension and Employee Benefit Law 496 (1990).

The delegation rule of the 1992 Restatement. The Restatement of Trusts 3d: Prudent Investor Rule (1992) repeals the nondelegation rule of Restatement of Trusts 2d § 171 (1959), extracted supra, and replaces it with substitute text that reads:

§ 171. Duty with Respect to Delegation. A trustee has a duty personally to perform the responsibilities of trusteeship except as a prudent person might delegate those responsibilities to others. In deciding whether, to whom, and in what manner to delegate fiduciary authority in the administration of a trust, and thereafter in supervising agents, the trustee is under a duty to the beneficiaries to exercise fiduciary discretion and to act as a prudent person would act in similar circumstances.

Restatement of Trusts 3d: Prudent Investor Rule § 171 (1992). The 1992 Restatement integrates this delegation standard into the prudent investor rule of section 227, providing that "the trustee must . . . act with prudence in deciding whether and how to delegate to others . . . ." Restatement of Trusts 3d: Prudent Investor Rule § 227(c) (1992).

Protecting the beneficiary against unreasonable

delegation. There is an intrinsic tension in trust law between granting trustees broad powers that facilitate flexible and efficient trust administration, on the one hand, and protecting trust beneficiaries from the misuse of such powers on the other hand. A broad set of trustees' powers, such as those found in most lawyer-drafted instruments and exemplified in the Uniform Trustees' Powers Act, permits the trustee to act vigorously and expeditiously to maximize the interests of the beneficiaries in a variety of transactions and administrative settings. Trust law relies upon the duties of loyalty and prudent administration, and upon procedural safeguards such as periodic accounting and the availability of judicial oversight, to prevent the misuse of these powers. Delegation, which is a species of trustee power, raises the same tension. If the trustee delegates effectively, the beneficiaries obtain the advantage of the agent's specialized investment skills or whatever other attributes induced the trustee to delegate. But if the trustee delegates to a knave or an incompetent, the delegation can work harm upon the beneficiaries.

Section 9 of the Uniform Prudent Investor Act is designed to strike the appropriate balance between the advantages and the hazards of delegation. Section 9 authorizes delegation under the limitations of subsections (a) and (b). Section 9(a) imposes duties of care, skill, and caution on the trustee in selecting the agent, in establishing the terms of the delegation, and in reviewing the agent's compliance.

The trustee's duties of care, skill, and caution in framing the terms of the delegation should protect the beneficiary against overbroad delegation. For example, a trustee could not prudently agree to an investment management agreement containing an exculpation clause that leaves the trust without recourse against reckless mismanagement. Leaving one's beneficiaries remediless against willful wrongdoing is inconsistent with the duty to use care and caution in formulating the terms of the delegation. This sense that it is imprudent to expose beneficiaries to broad exculpation clauses underlies both federal and state legislation restricting exculpation clauses, e.g., ERISA §§ 404(a)(1)(D), 410(a), 29 U.S.C. §§ 1104(a)(1)(D), 1110(a); New York Est. Powers Trusts Law § 11-1.7 (McKinney 1967).

Although subsection (c) of the Act exonerates the trustee from personal responsibility for the agent's conduct when the delegation satisfies the standards of subsection 9(a), subsection 9(b) makes the agent responsible to the trust. The beneficiaries of the trust can, therefore, rely upon the trustee to enforce the terms of the delegation.

Costs. The duty to minimize costs that is articulated in Section 7 of this Act applies to delegation as well as to other aspects of fiduciary investing. In deciding whether to delegate, the trustee must balance the

projected benefits against the likely costs. Similarly, in deciding how to delegate, the trustee must take costs into account. The trustee must be alert to protect the beneficiary from "double dipping." If, for example, the trustee's regular compensation schedule presupposes that the trustee will conduct the investment management function, it should ordinarily follow that the trustee will lower its fee when delegating the investment function to an outside manager.

Section 10. Language Invoking Standard of [ACT].

The following terms or comparable language in the provisions of a trust, unless otherwise limited or modified, authorizes any investment or strategy permitted under this [Act]: "investments permissible by law for investment of trust funds," "legal investments," "authorized investments," "using the judgment and care under the circumstances then prevailing that persons of prudence, discretion, and intelligence exercise in the management of their own affairs, not in regard to speculation but in regard to the permanent disposition of their funds, considering the probable income as well as the probable safety of their capital," "prudent man rule," "prudent trustee rule," "prudent person rule," and "prudent investor rule."

Comment

This provision is taken from the Illinois act, 760 ILCS § 5/5(d) (1992), and is meant to facilitate incorporation of the Act by means of the formulaic language commonly used in trust instruments.

Section 11. Application to existing trusts.

This [Act] applies to trusts existing on and created after its effective date. As applied to trusts existing on its effective date, this [Act] governs only decisions or actions occurring after that date.

Section 12. Uniformity of Application and Construction.

This [Act] shall be applied and construed to effectuate its general purpose to make uniform the law with respect to the subject of this [Act] among the States enacting it.

Section 13. Short Title.

This [Act] may be cited as the "[Name of Enacting State] Uniform Prudent Investor Act."

Section 14. Severability.

If any provision of this [Act] or its application to any person or circumstance is held invalid, the invalidity does not affect other provisions or applications of this [Act] which can be given effect without the invalid provision or application, and to this end the provisions of this [Act] are severable.

Section 15. Effective Date.

This [Act] takes effect . . . .

Section 16. Repeals.

The following acts and parts of acts are repealed:

List of States Adopting the Uniform Prudent Investor Act

(As of August 2004)

1. Alaska AS §§ 13.36.200 to 13.36.275.

2. Arizona West's Ariz. Rev. Stat. Ann. §§ 14-7601 to 14-7611.
3. Arkansas A.C.A §§ 24-3-417 to 24-3-426.
4. California West's Ann. Cal. Probate Code, §§ 16045 to 16054.
5. Colorado West's C.S.R.A. §§ 15-1.1-101 to 15-1.1-115.
6. Connecticut C.G.S.A. §§ 45a-541 to 45a-541/.
7. District of Columbia D.C. Code 1981, §§ 28-4701 to 28-4712.
8. Hawaii H.R.S §§ 554C-1 to 554C-12.
9. Idaho I.C. §§ 68-501 to 68-514.
10. Illinois West's 760 ILL Comp. Stat. §§ 5/5 and 5/5.1.
11. Indiana West's A.I.C. §§ 30-4-3.5-1 to 30-4-3.5-13.
12. Iowa West's Iowa Code Ann. § 633.4301 to 633.4310.
13. Kansas (a) West's Kan. Stat. Ann. § 17-5004.
14. Maine West's Me. Rev. Stat. Ann. tit. 18-A, § 7-302, 7-302 note.
15. Maryland West's Md. Code Ann., Est. & Trusts § 15-114. (substantially similar)
16. Massachusetts M.G.L.A c 203C, §§ 1 to 11.
17. Michigan M.C.L.A. §§ 700.1501 to 700.1512.
18. Minnesota West's Minn. Stat. Ann. § 501B.151, 501B.152.
19. Missouri West's Mo. Ann. Stat. §§ 456.900 to 456.913.
20. Montana West's Mont. Code Ann. § 72-34-114
21. Nebraska R.R.S. 1943, §§ 8-2201 to 8-2213.
22. Nevada West's Nev. Rev. Stat. § 164.050.
23. New Hampshire RSA 564 A:3:B
24. New Jersey West's N.J. Stat. Ann. § 3B:20-11.1 to 3B:20-11.12.
25. New Mexico West's N.M. Stat. Ann. §§ 45-7-601 to 45-7-612.
26. North Carolina G.S. §§ 36A-161 to 36A-173.
27. North Dakota West's N.D. Cent. Code § 59-02-08.1 to 59-02-08.11.
28. Ohio R.C. §§ 1339.52 to 1339.61.
29. Oklahoma West's 60 Okla. Stat. Ann. tit. 60 §§ 175.60 to 175.72.
30. Oregon West's Or. Rev. Stat. § 128.192 to 128.218.
31. Pennsylvania 20 Pa. C.S.A. §§ 7201 to 7214.
32. Rhode Island Gen. Laws 1956, §§ 18-15-1 to 18-15-13.

Uniform Principal and Income Act 1962 Act

Introduction

The 1962 version of the Act replaces the previous version, which had been approved in 1931. The revised Act provides, as did the original Act, that the settlor's intent is the guiding principle which should control the disposition of all receipts. But settlors have not always foreseen the multitude of problems that may have to be faced and even draftsmen have found it difficult to foresee all the possible kinds of receipts and disbursements. It is important, therefore, to set

forth some clear and uniform standards to assist those to whom the power of decision has been committed, that is, the trustees, and this Act attempts to provide these standards.

The aim of the revised Act is simplicity and convenience of administration of the estate. Of course, fairness to all beneficiaries both present and future has also been considered. As a result, the revised Act is made applicable to all trusts and estates whether in existence at the time the revised Act becomes law or not. A trustee who administers several trusts, it was thought, would have difficulty attempting to administer the various trusts under different rules for distribution of receipts and allocation of disbursements and it was thought better, therefore, to make the Act applicable to all trusts.

The original Act followed the so-called "Massachusetts Rule" of awarding cash dividends on corporate stock to income and stock dividends to principal, thereby rejecting the Pennsylvania Rule or some variation of it requiring apportionment between the two funds. The revised Act continues to follow the Massachusetts Rule but provides for some newer problems that have arisen since the original Act was promulgated.

Provision is now made for corporate distributions pursuant to a court decree such as a divestiture order in an anti-trust suit. Provision is also made for treatment of the distributions of a regulated investment company or estate investment trust. Since the original Act was promulgated development has occurred in methods of issuing bonds, notably the discount type of bond such as the Series E bond of the United States government and provision had been made for allocating the increment in value between principal and income.

The revised Act provides for an allocation of natural resources substantially different from that provided in the original Act but not substantially different from the rules adopted in many of the states producing natural resources. Because of the difficulty of apportioning receipts from extraction of natural resources among the income and principal beneficiaries it is provided in the revised Act that an arbitrary allocation should occur, that is, 27½% of the gross receipts shall be added to principal as a "depletion reserve," and the balance should be payable to the income beneficiary. Attempts to apportion the receipts on the relation of the amount of minerals extracted to the amount of minerals remaining in the ground have proved difficult of calculation and this method of allocation was accordingly rejected in favor of simplicity.

While the revised Act continues to deal specifically with a number of subjects, it also contains a "catchall" providing for disposition of receipts where there is no specific section in the Act dealing with the allocation. A form of "prudent man" rule has been adopted to handle this situation.

The Act, therefore, sets forth simple and workable rules of administration which are believed to be consistent with the wishes of settlors upon the subject treated unless the settlor specifically provides for a different treatment in his own trust instrument.

17. Severability
18. Repeal
19. Time of Taking Effect of This Act

Section 1
Definitions

As used in this Act:

1. "income beneficiary" means the person to whom income is presently payable or for whom it is accumulated for distribution as income;
2. "inventory value" means the cost of property purchased by the trustee and the market value of other property at the time it became subject to the trust, but in the case of a testamentary trust the trustee may use any value finally determined for the purposes of an estate or inheritance tax;
3. "remainderman" means the person entitled to principal, including income which has been accumulated and added to principal;
4. "trustee" means an original trustee and any successor or added trustee.

Section 2
Duty of Trustee as to Receipts and Expenditure

a. A trust shall be administered with due regard to the respective interests of income beneficiaries and remaindermen. A trust is so administered with respect to the allocation of receipts and expenditures if a receipt is credited or an expenditure is charged to income or principal or partly to each -

    1. in accordance with the terms of the trust instrument, notwithstanding contrary provisions of this Act;
    2. in the absence of any contrary terms of the trust instrument, in accordance with the provisions of this Act; or
    3. if neither of the preceding rules of administration is applicable, in accordance with what is reasonable and equitable in view of the interests of those entitled to income as well as of those entitled to principal, and in view of the manner in which men of ordinary prudence, discretion and judgment would act in the management of their own affairs.

b. If the trust instrument gives the trustee discretion in crediting a receipt or charging an expenditure to income or principal or partly to each, no inference of imprudence or partiality arises from the fact that the trustee has made an allocation contrary to a provision of this Act.

Section 3
Income; Principal; Charges

a. Income is the return in money or property derived from the use of principal, including return received as -

    1. rent of real or personal property, including sums received for cancellation or renewal of a lease;
    2. interest on money lent, including sums received as consideration for the privilege of prepayment of principal except as provided in section 7 on bond premium and bond discount;
    3. income earned during administration of a decedent's estate as provided in section 5;
    4. corporate distributions as provided in section 6;
    5. accrued increment on bonds or other obligations issued at discount as provided in section 7;
    6. receipts from business and farming operations as provided in section 8;
    7. receipts from disposition of natural resources as provided in sections 9 and 10;
    8. receipts from other principal subject to depletion as provided in section 11;
    9. receipts from disposition of underproductive property as provided in

section 12.

b. Principal is the property which has been set aside by the owner or the person legally empowered so that it is held in trust eventually to be delivered to a remainderman while the return or use of the principal is in the meantime taken or received by or held for accumulation for an income beneficiary. Principal includes -

   1. consideration received by the trustee on the sale or other transfer of principal or on repayment of a loan or as a refund or replacement or change in the form of principal;
   2. proceeds of property taken on eminent domain proceedings;
   3. proceeds of insurance upon property forming part of the principal except proceeds of insurance upon a separate interest of an income beneficiary;
   4. stock dividends, receipts on liquidation of a corporation, and other corporate distributions as provided in section 6;
   5. receipts from the disposition of corporate securities as provided in section 7;
   6. royalties and other receipts from disposition of natural resources as provided in sections 9 and 10;
   7. receipts from other principal subject to depletion as provided in section 11;
   8. any profit resulting from any change in the form of principal except as provided in section 12 on underproductive property;
   9. receipts from disposition of underproductive property as provided in section 12;
   10. any allowances for depreciation established under sections 8 and 13(a)(2).

c. After determining income and principal in accordance with the terms of the trust instrument or of this Act, the trustee shall charge to income or principal expenses and other charges as provided in section 13.

Section 4
When Right to Income Arises; Apportionment of Income

a. An income beneficiary is entitled to income from the date specified in the trust instrument, or, if none is specified, from the date an asset becomes subject to the trust. In the case of an asset becoming subject to a trust by reason of a will, it becomes subject to the trust as of the date of the death of the testator even though there is an intervening period of administration of the testator's estate.
b. In the administration of a decedent's estate or an asset becoming subject to a trust by reason of a will -

   1. receipts due but not paid at the date of death of the testator are principal;
   2. receipts in the form of periodic payments (other than corporate distributions to stockholders), including rent, interest, or annuities, not due at the date of the death of the testator shall be treated as accruing from day to day. That portion of the receipt accruing before the date of death is principal, and the balance is income.

c. In all other cases, any receipt from an income-producing asset is income even though the receipt was earned or accrued in whole or in part before the date when the asset became subject to the trust.
d. On termination of an income interest, the income beneficiary whose interest is terminated, or his estate, is entitled to

   1. income undistributed on the date of termination;
   2. income due but not paid to the trustee on the date of termination;
   3. income in the form of periodic payments (other than corporate distributions to stockholders), including rent, interest, or annuities, not due on the date of termination, accrued from day to day.

e. Corporate distributions to stockholders shall be treated as due on the day fixed by the corporation for determination of stockholders of record entitled to distribution or, if no

date is fixed, on the date of declaration of the distribution by the corporation.

Section 5

Income Earned During Administration of a Decedent's Estate

a. Unless the will otherwise provides and subject to subsection (b), all expenses incurred in connection with the settlement of a decedent's estate, including debts, funeral expenses, estate taxes, interest and penalties concerning taxes, family allowances, fees of attorneys and personal representatives, and court costs shall be charged against the principal of the estate.
b. Unless the will otherwise provides, income from the assets of a decedent's estate after the death of the testator and before distribution, including income from property used to discharge liabilities, shall be determined in accordance with the rules applicable to a trustee under this Act and distributed as follows:

    1. to specific legatees and devisees, the income from the property bequeathed or devised to them respectively, less taxes, ordinary repairs, and other expenses of management and operation of the property, and an appropriate portion of interest accrued since the death of the testator and of taxes imposed on income (excluding taxes on capital gains) which accrue during the period of administration;
    2. to all other legatees and devisees, except legatees of pecuniary bequests not in trust, the balance of the income, less the balance of taxes, ordinary repairs, and other expenses of management and operation of all property from which the estate is entitled to income, interest accrued since the death of the testator, and taxes imposed on income (excluding taxes on capital gains) which accrue during the period of administration, in proportion to their respective interests in the undistributed assets of the estate computed at times of distribution on the basis of inventory value.

c. Income received by a trustee under subsection (b) shall be treated as income of the trust.

Section 6

Corporate Distributions

a. Corporate distributions of shares of the distributing corporation, including distributions in the form of a stock split or stock dividend, are principal. A right to subscribe to shares or other securities issued by the distributing corporation accruing to stockholders on account of their stock ownership and the proceeds of any sale of the right are principal.
b. Except to the extent that the corporation indicates that some part of a corporate distribution is a settlement of preferred or guaranteed dividends accrued since the trustee became a stockholder or is in lieu of an ordinary cash dividend, a corporate distribution is principal if the distribution is pursuant to -

    1. a call of shares;
    2. a merger, consolidation, reorganization, or other plan by which assets of the corporation are acquired by another corporation; or
    3. a total or partial liquidation of the corporation, including any distribution which the corporation indicates is a distribution in total or partial liquidation or any distribution of assets, other than cash, pursuant to a court decree or final administrative order by a government agency ordering distribution of the particular assets.

c. Distributions made from ordinary income by a regulated investment company or by a trust qualifying and electing to be taxed under federal law as a real estate investment trust are income. All other distributions made by the company or trust, including distributions from capital gains, depreciation, or depletion, whether in the form of cash or an option to take new stock or cash or an option to purchase additional shares, are principal.
d. Except as provided in subsections (a), (b), and (c), all corporate distributions are income, including cash dividends, distributions of or rights to subscribe to shares or securities or obligations of corporations other than the distributing corporation, and the

proceeds of the rights or property distributions. Except as provided in subsections (b) and (c), if the distributing corporation gives a stockholder an option to receive a distribution either in cash or in its own shares, the distribution chosen is income.

e. The trustee may rely upon any statement of the distributing corporation as to any fact relevant under any provision of this Act concerning the source or character of dividends or distributions of corporate assets.

Section 7

Bond Premium and Discount

a. Bonds or other obligations for the payment of money are principal at their inventory value, except as provided in subsection (b) for discount bonds. No provision shall be made for amortization of bond premiums or for accumulation for discount. The proceeds of sale, redemption, or other disposition of the bonds or obligations are principal.
b. The increment in value of a bond or other obligation for the payment of money payable at a future time in accordance with a fixed schedule of appreciation in excess of the price at which it was issued is distributable as income. The increment in value is distributable to the beneficiary who was the income beneficiary at the time of increment from the first principal cash available or, if none is available, when realized by sale, redemption, or other disposition. Whenever unrealized increment is distributed as income but out of principal, the principal shall be reimbursed for the increment when realized.

Section 8

Business and Farming Operations

a. If a trustee uses any part of the principal in the continuance of a business of which the settlor was a sole proprietor or a partner, the net profits of the business, computed in accordance with generally accepted accounting principles for a comparable business, are income. If a loss results in any fiscal or calendar year, the loss falls on principal and shall not be carried into any other fiscal or calendar year for purposes of calculating net income.
b. Generally accepted accounting principles shall be used to determine income from an agricultural or farming operation, including the raising of animals or the operation of a nursery.

Section 9

Disposition Of Natural Resources

a. If any part of the principal consists of a right to receive royalties, overriding or limited royalties, working interests, production payments, net profit interests, or other interests in minerals or other natural resources in, on or under land, the receipts from taking the natural resources from the land shall be allocated as follows:

   1. If received as rent on a lease or extension payments on a lease, the receipts are income.
   2. If received from a production payment, the receipts are income to the extent of any factor for interest or its equivalent provided in the governing instrument. There shall be allocated to principal the fraction of the balance of the receipts which the unrecovered cost of the production payment bears to the balance owed on the production payment, exclusive of any factor for interest or its equivalent. The receipts not allocated to principal are income.
   3. If received as a royalty, overriding or limited royalty, or bonus, or from a working, net profit, or any other interest in minerals or other natural resources, receipts not provided for in the preceding paragraphs of this section shall be apportioned on a yearly basis in accordance with this paragraph whether or not any natural resource was being taken from the land at the time the trust was established. Twenty-seven and one-half per cent of the gross receipts (but not to exceed 50% of the net receipts remaining after payment of all expenses, direct and indirect, computed without allowance for depletion) shall be added to principal as an

allowance for depletion. The balance of the gross receipts, after payment therefrom of all expenses, direct and indirect, is income.

b. If a trustee, on the effective date of this Act, held an item of depletable property of a type specified in this section he shall allocate receipts from the property in the manner used before the effective date of this Act, but as to all depletable property acquired after the effective date of this Act by an existing or new trust, the method of allocation provided herein shall be used.
c. This section does not apply to timber, water, soil, sod, dirt, turf, or mosses.

Section 10
Timber

If any part of the principal consists of land from which merchantable timber may be removed, the receipts from taking the timber from the land shall be allocated in accordance with section 2(a)(3).

Section 11
Other Property Subject to Depletion

Except as provided in sections 9 and 10, if the principal consists of property subject to depletion, including leaseholds, patents, copyrights, royalty rights, and rights to receive payments on a contract for deferred compensation, receipts from the property, not in excess of 5% per year of its inventory value, are income, and the balance is principal.

Section 12
Underproductive Property

a. Except as otherwise provided in this section, a portion of the net proceeds of sale of any part of principal which has not produced an average net income of at least 1% per year of its inventory value for more than a year (including as income the value of any beneficial use of the property by the income beneficiary) shall be treated as delayed income to which the income beneficiary is entitled as provided in this section. The net proceeds of sale are the gross proceeds received, including the value of any property, received in substitution for the property disposed of less the expenses, including capital gains tax, if any, incurred in disposition and less any carrying charges paid while the property was underproductive.
b. The sum allocated as delayed income is the difference between the net proceeds and the amount which, had it been invested at simple interest at [4%] per year while the property was underproductive, would have produced the net proceeds. This sum, plus any carrying charges and expenses previously charged against income while the property was underproductive, less any income received by the income beneficiary from the property and less the value of any beneficial use of the property by the income beneficiary, is income, and the balance is principal.
c. An income beneficiary or his estate is entitled to delayed income under this section as if it accrued from day to day during the time he was a beneficiary.
d. If principal subject to this section is disposed of by conversion into property which cannot be apportioned easily, including land or mortgages (for example, realty acquired by or in lieu of foreclosure), the income beneficiary is entitled to the net income from any property or obligation into which the original principal is converted while the substituted property or obligation is held. If within 5 years after the conversion the substituted property has not been further converted into easily apportionable property, no allocation as provided in this section shall be made.

Section 13
Charges Against Income and Principal

a. The following charges shall be made against income:

    1. ordinary expenses incurred in connection with the administration, management, or preservation of the trust property, including regularly recurring taxes assessed against any portion of the principal, water rates, premiums on insurance taken upon the interests of the income beneficiary, remainderman, or trustee, interest paid by the trustee, and

ordinary repairs;
2. a reasonable allowance for depreciation on property subject to depreciation under generally accepted accounting principles, but no allowance shall be made for depreciation of that portion of any real property used by a beneficiary as a residence or for depreciation of any property held by the trustee on the effective date of this Act for which the trustee is not then making an allowance for depreciation;
3. one-half of court costs, attorney's fees, and other fees on periodic judicial accounting, unless the court directs otherwise;
4. court costs, attorney's fees, and other fees on other accountings or judicial proceedings if the matter primarily concerns the income interest, unless the court directs otherwise;
5. one-half of the trustee's regular compensation, whether based on a percentage of principal or income, and all expenses reasonably incurred for current management of principal and application of income;
6. any tax levied upon receipts defined as income under this Act or the trust instrument and payable by the trustee.

b. If charges against income are of unusual amount, the trustee may by means of reserves or other reasonable means Charge them over a reasonable period of time and withhold from distribution sufficient sums to regularize distributions.
c. The following charges shall be made against principal:

1. trustee's compensation not chargeable to income under subsections (a)(4) and (a)(5), special compensation of trustees, expenses reasonably incurred in connection with principal, court costs and attorney's fees primarily concerning matters of principal, and trustee's compensation computed on principal as an acceptance, distribution, or termination fee;
2. charges not provided for in subsection (a), including the cost of investing and reinvesting principal, the payments on principal of an indebtedness (including a mortgage amortized by periodic payments of principal), expenses for preparation of property for rental or sale, and, unless the court directs otherwise, expenses incurred in maintaining or defending any action to construe the trust or protect it or the property or assure the title of any trust property;
3. extraordinary repairs or expenses incurred in making a capital improvement to principal, including special assessments, but, a trustee may establish an allowance for depreciation out of income to the extent permitted by subsection (a)(2) and by section 8;
4. any tax levied upon profit, gain, or other receipts allocated to principal notwithstanding denomination of the tax as an income tax by the taxing authority;
5. if an estate or inheritance tax is levied in respect of a trust in which both an income beneficiary and a remainderman have an interest, any amount apportioned to the trust including interest and penalties, even though the income beneficiary also has rights in the principal.

d. Regularly recurring charges payable from income shall be apportioned to the same extent and in the same manner that income is apportioned under section 4.

Section 14
Application of Act

Except as specifically provided in the trust instrument or the will or in this Act, this Act shall apply to any receipt or expense received or incurred after the effective date of this Act by any trust or decedent's estate whether established before or after the effective date of this Act and whether the asset involved was acquired by the trustee before or after the effective date of this Act.

Section 15
Uniformity of Interpretation

This Act shall be so construed as to effectuate its general purpose to make uniform the law of

those states which enact it.

Section 16
Short Title

This Act may be cited as the Revised Uniform Principal and Income Act.

Section 17
Severability

If any provision of this Act or the application thereof to any person or circumstance is held invalid, the invalidity does not affect other provisions or applications of the Act which can be given effect without the invalid provision or application and to this end the provisions of this Act are severable.

Section 18
Repeal

The following acts and parts of acts are repealed:

Section 19

Uniform Principal and Income Act

Prefatory Note

This revision of the 1931 Uniform Principal and Income Act and the 1962 Revised Uniform Principal and Income Act has two purposes.

One purpose is to revise the 1931 and the 1962 Acts. Revision is needed to support the now widespread use of the revocable living trust as a will substitute, to change the rules in those Acts that experience has shown need to be changed, and to establish new rules to cover situations not provided for in the old Acts, including rules that apply to financial instruments invented since 1962.

The other purpose is to provide a means for implementing the transition to an investment regime based on principles embodied in the Uniform Prudent Investor Act, especially the principle of investing for total return rather than a certain level of "income" as traditionally perceived in terms of interest, dividends, and rents.

Revision of the 1931 and 1962 Acts

The prior Acts and this revision of those Acts deal with four questions affecting the rights of beneficiaries:

(1) How is income earned during the probate of an estate to be distributed to trusts and to persons who receive outright bequests of specific property, pecuniary gifts, and the residue?

(2) When an income interest in a trust begins (i.e., when a person who creates the trust dies or when she transfers property to a trust during life), what property is principal that will eventually go to the remainder beneficiaries and what is income?

(3) When an income interest ends, who gets the income that has been received but not distributed, or that is due but not yet collected, or that has accrued but is not yet due?

(4) After an income interest begins and before it ends, how should its receipts and disbursements be allocated to or between principal and income?

Changes in the traditional sections are of three types: new rules that deal with situations not covered by the prior Acts, clarification of provisions in the 1962 Act, and changes to rules in the prior Acts.

New rules. Issues addressed by some of the more significant new rules include:

(1) The application of the probate administration rules to revocable living trusts after the settlor's death and to other terminating trusts. Articles 2 and 3.

(2) The payment of interest or some other amount on the delayed payment of an outright pecuniary gift that is made pursuant to a trust agreement instead of a will when the agreement or state law does not provide for such a payment. Section 201(3).

(3) The allocation of net income from partnership interests acquired by the trustee other than from a decedent (the old Acts deal only with partnership interests acquired from a decedent). Section 401.

(4) An "unincorporated entity" concept has been introduced to deal with businesses operated by a trustee, including farming and livestock operations, and investment activities in rental real estate, natural resources, timber, and derivatives. Section 403.

(5) The allocation of receipts from discount obligations such as zero-coupon bonds. Section 406(b).

(6) The allocation of net income from harvesting and selling timber between principal and income. Section 412.

(7) The allocation between principal and income of receipts from derivatives, options, and asset-backed securities. Sections 414 and 415.

(8) Disbursements made because of environmental laws. Section 502(a)(7).

(9) Income tax obligations resulting from the ownership of S corporation stock and interests in partnerships. Section 505.

(10) The power to make adjustments between principal and income to correct inequities caused by tax elections or peculiarities in the way the fiduciary income tax rules apply. Section 506.

Clarifications and changes in existing rules. A number of matters provided for in the prior Acts have been changed or clarified in this revision, including the following:

(1) An income beneficiary's estate will be entitled to receive only net income actually received by a trust before the beneficiary's death and not items of accrued income. Section 303.

(2) Income from a partnership is based on actual distributions from the partnership, in the same manner as corporate distributions. Section 401.

(3) Distributions from corporations and partnerships that exceed 20% of the entity's gross assets will be principal whether or not intended by the entity to be a partial liquidation. Section 401(d)(2).

(4) Deferred compensation is dealt with in greater detail in a separate section. Section 409.

(5) The 1962 Act rule for "property subject to depletion," (patents, copyrights, royalties, and the like), which provides that a trustee may allocate up to 5% of the asset's inventory value to income and the balance to principal, has been replaced by a rule that allocates 90%

of the amounts received to principal and the balance to income. Section 410.

(6) The percentage used to allocate amounts received from oil and gas has been changed - 90% of those receipts are allocated to principal and the balance to income. Section 411.

(7) The unproductive property rule has been eliminated for trusts other than marital deduction trusts. Section 413.

(8) Charging depreciation against income is no longer mandatory, and is left to the discretion of the trustee. Section 503.

Coordination with the Uniform Prudent Investor Act

The law of trust investment has been modernized. See Uniform Prudent Investor Act (1994); Restatement (Third) of Trusts: Prudent Investor Rule (1992) (hereinafter Restatement of Trusts 3d: Prudent Investor Rule). Now it is time to update the principal and income allocation rules so the two bodies of doctrine can work well together. This revision deals conservatively with the tension between modern investment theory and traditional income allocation. The starting point is to use the traditional system. If prudent investing of all the assets in a trust viewed as a portfolio and traditional allocation effectuate the intent of the settlor, then nothing need be done. The Act, however, helps the trustee who has made a prudent, modern portfolio-based investment decision that has the initial effect of skewing return from all the assets under management, viewed as a portfolio, as between income and principal beneficiaries. The Act gives that trustee a power to reallocate the portfolio return suitably. To leave a trustee constrained by the traditional system would inhibit the trustee's ability to fully implement modern portfolio theory.

As to modern investing see, e.g., the Preface to, terms of, and Comments to the Uniform Prudent Investor Act (1994); the discussion and reporter's note by Edward C. Halbach, Jr. in Restatement of Trusts 3d: Prudent Investor Rule; John H. Langbein, The Uniform Prudent Investor Act and the Future of Trust Investing, 81 Iowa L. Rev. 641 (1996); Bevis Longstreth, Modern Investment Management and the Prudent Man Rule (1986); John H. Langbein & Richard A. Posner, The Revolution in Trust Investment Law, 62 A.B.A.J. 887 (1976); and Jeffrey N. Gordon, The Puzzling Persistence of the Constrained Prudent Man Rule, 62 N.Y.U. L. Rev. 52 (1987). See also R.A. Brearly, An Introduction to Risk and Return from Common Stocks (2d ed. 1983); Jonathan R. Macey, An Introduction to Modern Financial Theory (2d ed. 1998). As to the need for principal and income reform see, e.g., Joel C. Dobris, Real Return, Modern Portfolio Theory and College, University and Foundation Decisions on Annual Spending From Endowments: A Visit to the World of Spending Rules, 28 Real Prop., Prob., & Tr. J. 49 (1993); Joel C. Dobris, The Probate World at the End of the Century: Is a New Principal and Income Act in Your Future?, 28 Real Prop., Prob., & Tr. J. 393 (1993); and Kenneth L. Hirsch, Inflation and the Law of Trusts, 18 Real Prop., Prob., & Tr. J. 601 (1983). See also, Jerold I. Horn, The Prudent Investor Rule - Impact on Drafting and Administration of Trusts, 20 ACTEC Notes 26 (Summer 1994).

Uniform Principal and Income Act

[Article] 1

Definitions and Fiduciary Duties

Section 101. Short Title. This [Act] may be cited as the Uniform Principal and Income Act.

Section 102. Definitions. In this [Act]:

(1) "Accounting period" means a calendar year unless another 12-month period is selected by a fiduciary. The term includes a portion of a calendar year or other 12-month period that begins when an income interest begins or ends when an income interest ends.

(2) "Beneficiary" includes, in the case of a decedent's estate, an heir [, legatee,] and devisee and, in the case of a trust, an income beneficiary and a remainder beneficiary.

(3) "Fiduciary" means a personal representative or a trustee. The term includes an

executor, administrator, successor personal representative, special administrator, and a person performing substantially the same function.

(4) "Income" means money or property that a fiduciary receives as current return from a principal asset. The term includes a portion of receipts from a sale, exchange, or liquidation of a principal asset, to the extent provided in [Article] 4.

(5) "Income beneficiary" means a person to whom net income of a trust is or may be payable.

(6) "Income interest" means the right of an income beneficiary to receive all or part of net income, whether the terms of the trust require it to be distributed or authorize it to be distributed in the trustee's discretion.

(7) "Mandatory income interest" means the right of an income beneficiary to receive net income that the terms of the trust require the fiduciary to distribute.

(8) "Net income" means the total receipts allocated to income during an accounting period minus the disbursements made from income during the period, plus or minus transfers under this [Act] to or from income during the period.

(9) "Person" means an individual, corporation, business trust, estate, trust, partnership, limited liability company, association, joint venture, government; governmental subdivision, agency, or instrumentality; public corporation, or any other legal or commercial entity.

(10) "Principal" means property held in trust for distribution to a remainder beneficiary when the trust terminates.

(11) "Remainder beneficiary" means a person entitled to receive principal when an income interest ends.

(12) "Terms of a trust" means the manifestation of the intent of a settlor or decedent with respect to the trust, expressed in a manner that admits of its proof in a judicial proceeding, whether by written or spoken words or by conduct.

(13) "Trustee" includes an original, additional, or successor trustee, whether or not appointed or confirmed by a court.

Comment

"Income beneficiary." The definitions of income beneficiary (Section 102(5)) and income interest (Section 102(6)) cover both mandatory and discretionary beneficiaries and interests. There are no definitions for "discretionary income beneficiary" or "discretionary income interest" because those terms are not used in the Act.

Inventory value. There is no definition for inventory value in this Act because the provisions in which that term was used in the 1962 Act have either been eliminated (in the case of the underproductive property provision) or changed in a way that eliminates the need for the term (in the case of bonds and other money obligations, property subject to depletion, and the method for determining entitlement to income distributed from a probate estate).

"Net income." The reference to "transfers under this Act to or from income" means transfers made under Sections 104(a), 412(b), 502(b), 503(b), 504(a), and 506.

"Terms of a trust." This term was chosen in preference to "terms of the trust instrument" (the phrase used in the 1962 Act) to make it clear that the Act applies to oral trusts as well as those whose terms are expressed in written documents. The definition is based on the Restatement (Second) of Trusts § 4 (1959) and the Restatement (Third) of Trusts § 4 (Tent. Draft No. 1, 1996). Constructional preferences or rules would also apply, if necessary, to determine the terms of the trust.

Section 103. Fiduciary Duties; General Principles.

(a) In allocating receipts and disbursements to or between principal and income, and with respect to any matter within the scope of [Articles] 2 and 3, a fiduciary:

(1) shall administer a trust or estate in accordance with the terms of the trust or the will, even if there is a different provision in this [Act];

(2) may administer a trust or estate by the exercise of a discretionary power of administration given to the fiduciary by the terms of the trust or the will, even if the exercise of the power produces a result different from a result required or permitted by this [Act];

(3) shall administer a trust or estate in accordance with this [Act] if the terms of the trust or the will do not contain a different provision or do not give the fiduciary a discretionary power of administration; and

(4) shall add a receipt or charge a disbursement to principal to the extent that the terms of the trust and this [Act] do not provide a rule for allocating the receipt or disbursement to or between principal and income.

(b) In exercising the power to adjust under Section 104(a) or a discretionary power of administration regarding a matter within the scope of this [Act], whether granted by the terms of a trust, a will, or this [Act], a fiduciary shall administer a trust or estate impartially, based on what is fair and reasonable to all of the beneficiaries, except to the extent that the terms of the trust or the will clearly manifest an intention that the fiduciary shall or may favor one or more of the beneficiaries. A determination in accordance with this [Act] is presumed to be fair and reasonable to all of the beneficiaries.

Comment

Prior Act. The rule in Section 2(a) of the 1962 Act is restated in Section 103(a), without changing its substance, to emphasize that the Act contains only default rules and that provisions in the terms of the trust are paramount. However, Section 2(a) of the 1962 Act applies only to the allocation of receipts and disbursements to or between principal and income. In this Act, the first sentence of Section 103(a) states that it also applies to matters within the scope of Articles 2 and 3. Section 103(a)(2) incorporates the rule in Section 2(b) of the 1962 Act that a discretionary allocation made by the trustee that is contrary to a rule in the Act should not give rise to an inference of imprudence or partiality by the trustee.

The Act deletes the language that appears at the end of 1962 Act Section 2(a)(3) - "and in view of the manner in which men of ordinary prudence, discretion and judgment would act in the management of their affairs" - because persons of ordinary prudence, discretion and judgment, acting in the management of their own affairs do not normally think in terms of the interests of successive beneficiaries. If there is an analogy to an individual's decision-making process, it is probably the individual's decision to spend or to save, but this is not a useful guideline for trust administration. No case has been found in which a court has relied on the "prudent man" rule of the 1962 Act.

Fiduciary discretion. The general rule is that if a discretionary power is conferred upon a trustee, the exercise of that power is not subject to control by a court except to prevent an abuse of discretion. Restatement (Second) of Trusts § 187. The situations in which a court will control the exercise of a trustee's discretion are discussed in the comments to § 187. See also id. § 233 Comment *p.*

Questions for which there is no provision. Section 103(a)(4) allocates receipts and disbursements to principal when there is no provision for a different allocation in the terms of the trust, the will, or the Act. This may occur because money is received from a financial instrument not available at the present time (inflation-indexed bonds might have fallen into this category had they been announced after this Act was approved by the Commissioners on Uniform State Laws) or because a transaction is of a type or occurs in a manner not anticipated by the Drafting Committee for this Act or the drafter of the trust instrument.

Allocating to principal a disbursement for which there is no provision in the Act or the terms of the trust preserves the income beneficiary's level of income in the year it is allocated to principal, but thereafter will reduce the amount of income produced by the principal. Allocating to principal a receipt for which there is no provision will increase the income received by the income beneficiary in subsequent years, and will eventually, upon termination of the trust, also favor the remainder beneficiary. Allocating these items to principal

implements the rule that requires a trustee to administer the trust impartially, based on what is fair and reasonable to both income and remainder beneficiaries. However, if the trustee decides that an adjustment between principal and income is needed to enable the trustee to comply with Section 103(b), after considering the return from the portfolio as a whole, the trustee may make an appropriate adjustment under Section 104(a).

Duty of impartiality. Whenever there are two or more beneficiaries, a trustee is under a duty to deal impartially with them. Restatement of Trusts 3d: Prudent Investor Rule § 183 (1992). This rule applies whether the beneficiaries' interests in the trust are concurrent or successive. If the terms of the trust give the trustee discretion to favor one beneficiary over another, a court will not control the exercise of such discretion except to prevent the trustee from abusing it. Id. § 183, Comment *a.* "The precise meaning of the trustee's duty of impartiality and the balancing of competing interests and objectives inevitably are matters of judgment and interpretation. Thus, the duty and balancing are affected by the purposes, terms, distribution requirements, and other circumstances of the trust, not only at the outset but as they may change from time to time." Id. § 232, Comment *c.*

The terms of a trust may provide that the trustee, or an accountant engaged by the trustee, or a committee of persons who may be family members or business associates, shall have the power to determine what is income and what is principal. If the terms of a trust provide that this Act specifically or principal and income legislation in general does not apply to the trust but fail to provide a rule to deal with a matter provided for in this Act, the trustee has an implied grant of discretion to decide the question. Section 103(b) provides that the rule of impartiality applies in the exercise of such a discretionary power to the extent that the terms of the trust do not provide that one or more of the beneficiaries are to be favored. The fact that a person is named an income beneficiary or a remainder beneficiary is not by itself an indication of partiality for that beneficiary.

Section 104. Trustee's Power to Adjust.

(a) A trustee may adjust between principal and income to the extent the trustee considers necessary if the trustee invests and manages trust assets as a prudent investor, the terms of the trust describe the amount that may or must be distributed to a beneficiary by referring to the trust's income, and the trustee determines, after applying the rules in Section 103(a), that the trustee is unable to comply with Section 103(b).

(b) In deciding whether and to what extent to exercise the power conferred by subsection (a), a trustee shall consider all factors relevant to the trust and its beneficiaries, including the following factors to the extent they are relevant:

(1) the nature, purpose, and expected duration of the trust;

(2) the intent of the settlor;

(3) the identity and circumstances of the beneficiaries;

(4) the needs for liquidity, regularity of income, and preservation and appreciation of capital;

(5) the assets held in the trust; the extent to which they consist of financial assets, interests in closely held enterprises, tangible and intangible personal property, or real property; the extent to which an asset is used by a beneficiary; and whether an asset was purchased by the trustee or received from the settlor;

(6) the net amount allocated to income under the other sections of this [Act] and the increase or decrease in the value of the principal assets, which the trustee may estimate as to assets for which market values are not readily available;

(7) whether and to what extent the terms of the trust give the trustee the power to invade principal or accumulate income or prohibit the trustee from invading principal or accumulating income, and the extent to which the trustee has exercised a power from time to time to invade principal or accumulate income;

(8) the actual and anticipated effect of economic conditions on principal and income

and effects of inflation and deflation; and

(9) the anticipated tax consequences of an adjustment.

(c) A trustee may not make an adjustment:

(1) that diminishes the income interest in a trust that requires all of the income to be paid at least annually to a spouse and for which an estate tax or gift tax marital deduction would be allowed, in whole or in part, if the trustee did not have the power to make the adjustment;

(2) that reduces the actuarial value of the income interest in a trust to which a person transfers property with the intent to qualify for a gift tax exclusion;

(3) that changes the amount payable to a beneficiary as a fixed annuity or a fixed fraction of the value of the trust assets;

(4) from any amount that is permanently set aside for charitable purposes under a will or the terms of a trust unless both income and principal are so set aside;

(5) if possessing or exercising the power to make an adjustment causes an individual to be treated as the owner of all or part of the trust for income tax purposes, and the individual would not be treated as the owner if the trustee did not possess the power to make an adjustment;

(6) if possessing or exercising the power to make an adjustment causes all or part of the trust assets to be included for estate tax purposes in the estate of an individual who has the power to remove a trustee or appoint a trustee, or both, and the assets would not be included in the estate of the individual if the trustee did not possess the power to make an adjustment;

(7) if the trustee is a beneficiary of the trust; or

(8) if the trustee is not a beneficiary, but the adjustment would benefit the trustee directly or indirectly.

(d) If subsection (c)(5), (6), (7), or (8) applies to a trustee and there is more than one trustee, a cotrustee to whom the provision does not apply may make the adjustment unless the exercise of the power by the remaining trustee or trustees is not permitted by the terms of the trust.

(e) A trustee may release the entire power conferred by subsection (a) or may release only the power to adjust from income to principal or the power to adjust from principal to income if the trustee is uncertain about whether possessing or exercising the power will cause a result described in subsection (c)(1) through (6) or (c)(8) or if the trustee determines that possessing or exercising the power will or may deprive the trust of a tax benefit or impose a tax burden not described in subsection (c). The release may be permanent or for a specified period, including a period measured by the life of an individual.

(f) Terms of a trust that limit the power of a trustee to make an adjustment between principal and income do not affect the application of this section unless it is clear from the terms of the trust that the terms are intended to deny the trustee the power of adjustment conferred by subsection (a).

Comment

Purpose and Scope of Provision. The purpose of Section 104 is to enable a trustee to select investments using the standards of a prudent investor without having to realize a particular portion of the portfolio's total return in the form of traditional trust accounting income such as interest, dividends, and rents. Section 104(a) authorizes a trustee to make adjustments between principal and income if three conditions are met: (1) the trustee must be managing the trust assets under the prudent investor rule; (2) the terms of the trust must express the income beneficiary's distribution rights in terms of the right to receive "income" in the sense of traditional trust accounting income; and (3) the trustee must determine, after applying the rules in Section 103(a), that he is unable to comply with Section 103(b). In

deciding whether and to what extent to exercise the power to adjust, the trustee is required to consider the factors described in Section 104(b), but the trustee may not make an adjustment in circumstances described in Section 104(c).

Section 104 does not empower a trustee to increase or decrease the degree of beneficial enjoyment to which a beneficiary is entitled under the terms of the trust; rather, it authorizes the trustee to make adjustments between principal and income that may be necessary if the income component of a portfolio's total return is too small or too large because of investment decisions made by the trustee under the prudent investor rule. The paramount consideration in applying Section 104(a) is the requirement in Section 103(b) that "a fiduciary must administer a trust or estate impartially, based on what is fair and reasonable to all of the beneficiaries, except to the extent that the terms of the trust or the will clearly manifest an intention that the fiduciary shall or may favor one or more of the beneficiaries." The power to adjust is subject to control by the court to prevent an abuse of discretion. Restatement (Second) of Trusts § 187 (1959). See also id. §§ 183, 232, 233, Comment *p* (1959).

Section 104 will be important for trusts that are irrevocable when a State adopts the prudent investor rule by statute or judicial approval of the rule in Restatement of Trusts 3d: Prudent Investor Rule. Wills and trust instruments executed after the rule is adopted can be drafted to describe a beneficiary's distribution rights in terms that do not depend upon the amount of trust accounting income, but to the extent that drafters of trust documents continue to describe an income beneficiary's distribution rights by referring to trust accounting income, Section 104 will be an important tool in trust administration.

Three conditions to the exercise of the power to adjust. The first of the three conditions that must be met before a trustee can exercise the power to adjust - that the trustee invest and manage trust assets as a prudent investor - is expressed in this Act by language derived from the Uniform Prudent Investor Act, but the condition will be met whether the prudent investor rule applies because the Uniform Act or other prudent investor legislation has been enacted, the prudent investor rule has been approved by the courts, or the terms of the trust require it. Even if a State's legislature or courts have not formally adopted the rule, the Restatement establishes the prudent investor rule as an authoritative interpretation of the common law prudent man rule, referring to the prudent investor rule as a "modest reformulation of the Harvard College dictum and the basic rule of prior Restatements." Restatement of Trusts 3d: Prudent Investor Rule, Introduction, at 5. As a result, there is a basis for concluding that the first condition is satisfied in virtually all States except those in which a trustee is permitted to invest only in assets set forth in a statutory "legal list."

The second condition will be met when the terms of the trust require all of the "income" to be distributed at regular intervals; or when the terms of the trust require a trustee to distribute all of the income, but permit the trustee to decide how much to distribute to each member of a class of beneficiaries; or when the terms of a trust provide that the beneficiary shall receive the greater of the trust accounting income and a fixed dollar amount (an annuity), or of trust accounting income and a fractional share of the value of the trust assets (a unitrust amount). If the trust authorizes the trustee in its discretion to distribute the trust's income to the beneficiary or to accumulate some or all of the income, the condition will be met because the terms of the trust do not permit the trustee to distribute more than the trust accounting income.

To meet the third condition, the trustee must first meet the requirements of Section 103(a), i.e., she must apply the terms of the trust, decide whether to exercise the discretionary powers given to the trustee under the terms of the trust, and must apply the provisions of the Act if the terms of the trust do not contain a different provision or give the trustee discretion. Second, the trustee must determine the extent to which the terms of the trust clearly manifest an intention by the settlor that the trustee may or must favor one or more of the beneficiaries. To the extent that the terms of the trust do not require partiality, the trustee must conclude that she is unable to comply with the duty to administer the trust impartially. To the extent that the terms of the trust do require or permit the trustee to favor the income beneficiary or the remainder beneficiary, the trustee must conclude that she is unable to achieve the degree of partiality required or permitted. If the trustee comes to either conclusion - that she is unable to administer the trust impartially or that she is unable to achieve the degree of partiality required or permitted - she may exercise the power to adjust under Section 104(a).

Impartiality and productivity of income. The duty of impartiality between income and remainder beneficiaries is linked to the trustee's duty to make the portfolio productive of trust accounting income whenever the distribution requirements are expressed in terms of distributing the trust's "income." The 1962 Act implies that the duty to produce income applies on an asset by asset basis because the right of an income beneficiary to receive "delayed income" from the sale proceeds of underproductive property under Section 12 of that Act arises if "any part of principal ... has not produced an average net income of a least 1% per year of its inventory value for more than a year ... ." Under the prudent investor rule, "[t]o whatever extent a requirement of income productivity exists, ... the requirement applies not investment by investment but to the portfolio as a whole." Restatement of Trusts 3d: Prudent Investor Rule § 227, Comment *i,* at 34. The power to adjust under Section 104(a) is also to be exercised by considering net income from the portfolio as a whole and not investment by investment. Section 413(b) of this Act eliminates the underproductive property rule in all cases other than trusts for which a marital deduction is allowed; the rule applies to a marital deduction trust if the trust's assets "consist substantially of property that does not provide the spouse with sufficient income from or use of the trust assets ..." - in other words, the section applies by reference to the portfolio as a whole.

While the purpose of the power to adjust in Section 104(a) is to eliminate the need for a trustee who operates under the prudent investor rule to be concerned about the income component of the portfolio's total return, the trustee must still determine the extent to which a distribution must be made to an income beneficiary and the adequacy of the portfolio's liquidity as a whole to make that distribution.

For a discussion of investment considerations involving specific investments and techniques under the prudent investor rule, see Restatement of Trusts 3d: Prudent Investor Rule § 227, Comments *k-p.*

Factors to consider in exercising the power to adjust. Section 104(b) requires a trustee to consider factors relevant to the trust and its beneficiaries in deciding whether and to what extent the power to adjust should be exercised. Section 2(c) of the Uniform Prudent Investor Act sets forth circumstances that a trustee is to consider in investing and managing trust assets. The circumstances in Section 2(c) of the Uniform Prudent Investor Act are the source of the factors in paragraphs (3) through (6) and (8) of Section 104(b) (modified where necessary to adapt them to the purposes of this Act) so that, to the extent possible, comparable factors will apply to investment decisions and decisions involving the power to adjust. If a trustee who is operating under the prudent investor rule decides that the portfolio should be composed of financial assets whose total return will result primarily from capital appreciation rather than dividends, interest, and rents, the trustee can decide at the same time the extent to which an adjustment from principal to income may be necessary under Section 104. On the other hand, if a trustee decides that the risk and return objectives for the trust are best achieved by a portfolio whose total return includes interest and dividend income that is sufficient to provide the income beneficiary with the beneficial interest to which the beneficiary is entitled under the terms of the trust, the trustee can decide that it is unnecessary to exercise the power to adjust.

Assets received from the settlor. Section 3 of the Uniform Prudent Investor Act provides that "[a] trustee shall diversify the investments of the trust unless the trustee reasonably determines that, because of special circumstances, the purposes of the trust are better served without diversifying." The special circumstances may include the wish to retain a family business, the benefit derived from deferring liquidation of the asset in order to defer payment of income taxes, or the anticipated capital appreciation from retaining an asset such as undeveloped real estate for a long period. To the extent the trustee retains assets received from the settlor because of special circumstances that overcome the duty to diversify, the trustee may take these circumstances into account in determining whether and to what extent the power to adjust should be exercised to change the results produced by other provisions of this Act that apply to the retained assets. See Section 104(b)(5); Uniform Prudent Investor Act § 3, Comment, 7B U.L.A. 18, at 25-26 (Supp. 1997); Restatement of Trusts 3d: Prudent Investor Rule § 229 and Comments *a-e.*

Limitations on the power to adjust. The purpose of subsections (c)(1) through (4) is to preserve tax benefits that may have been an important purpose for creating the trust.

Subsections (c)(5), (6), and (8) deny the power to adjust in the circumstances described in those subsections in order to prevent adverse tax consequences, and subsection (c)(7) denies the power to adjust to any beneficiary, whether or not possession of the power may have adverse tax consequences.

Under subsection (c)(1), a trustee cannot make an adjustment that diminishes the income interest in a trust that requires all of the income to be paid at least annually to a spouse and for which an estate tax or gift tax marital deduction is allowed; but this subsection does not prevent the trustee from making an adjustment that increases the amount of income paid from a marital deduction trust to the spouse. Subsection (c)(1) applies to a trust that qualifies for the marital deduction because the spouse has a general power of appointment over the trust, but it applies to a qualified terminable interest property (QTIP) trust only if and to the extent that the fiduciary makes the election required to obtain the tax deduction. Subsection (c)(1) does not apply to a so-called "estate" trust. This type of trust qualifies for the marital deduction because the terms of the trust require the principal and undistributed income to be paid to the surviving spouse's estate when the spouse dies; it is not necessary for the terms of an estate trust to require the income to be distributed annually. Reg. § 20.2056(c)-2(b)(1)(iii).

Subsection (c)(3) applies to annuity trusts and unitrusts with no charitable beneficiaries as well as to trusts with charitable income or remainder beneficiaries; its purpose is to make it clear that a beneficiary's right to receive a fixed annuity or a fixed fraction of the value of a trust's assets is not subject to adjustment under Section 104(a). Subsection (c)(3) does not apply to any additional amount to which the beneficiary may be entitled that is expressed in terms of a right to receive income from the trust. For example, if a beneficiary is to receive a fixed annuity or the trust's income, whichever is greater, subsection (c)(3) does not prevent a trustee from making an adjustment under Section 104(a) in determining the amount of the trust's income.

If subsection (c)(5), (6), (7), or (8), prevents a trustee from exercising the power to adjust, subsection (d) permits a cotrustee who is not subject to the provision to exercise the power unless the terms of the trust do not permit the cotrustee to do so.

Release of the power to adjust. Section 104(e) permits a trustee to release all or part of the power to adjust in circumstances in which the possession or exercise of the power might deprive the trust of a tax benefit or impose a tax burden. For example, if possessing the power would diminish the actuarial value of the income interest in a trust for which the income beneficiary's estate may be eligible to claim a credit for property previously taxed if the beneficiary dies within ten years after the death of the person creating the trust, the trustee is permitted under subsection (e) to release just the power to adjust from income to principal.

Trust terms that limit a power to adjust. Section 104(f) applies to trust provisions that limit a trustee's power to adjust. Since the power is intended to enable trustees to employ the prudent investor rule without being constrained by traditional principal and income rules, an instrument executed before the adoption of this Act whose terms describe the amount that may or must be distributed to a beneficiary by referring to the trust's income or that prohibit the invasion of principal or that prohibit equitable adjustments in general should not be construed as forbidding the use of the power to adjust under Section 104(a) if the need for adjustment arises because the trustee is operating under the prudent investor rule. Instruments containing such provisions that are executed after the adoption of this Act should specifically refer to the power to adjust if the settlor intends to forbid its use. See generally, Joel C. Dobris, Limits on the Doctrine of Equitable Adjustment in Sophisticated Postmortem Tax Planning, 66 Iowa L. Rev. 273 (1981).

Examples. The following examples illustrate the application of Section 104:

Example (1) - T is the successor trustee of a trust that provides income to A for life, remainder to B. T has received from the prior trustee a portfolio of financial assets invested 20% in stocks and 80% in bonds. Following the prudent investor rule, T determines that a strategy of investing the portfolio 50% in stocks and 50% in bonds has risk and return objectives that are reasonably suited to the trust, but T also determines that adopting this approach will cause the trust to receive a smaller amount of dividend and interest income. After considering the factors in Section 104(b), T may transfer cash from principal to income

to the extent T considers it necessary to increase the amount distributed to the income beneficiary.

Example (2) - T is the trustee of a trust that requires the income to be paid to the settlor's son C for life, remainder to C's daughter D. In a period of very high inflation, T purchases bonds that pay double-digit interest and determines that a portion of the interest, which is allocated to income under Section 406 of this Act, is a return of capital. In consideration of the loss of value of principal due to inflation and other factors that T considers relevant, T may transfer part of the interest to principal.

Example (3) - T is the trustee of a trust that requires the income to be paid to the settlor's sister E for life, remainder to charity F. E is a retired schoolteacher who is single and has no children. E's income from her social security, pension, and savings exceeds the amount required to provide for her accustomed standard of living. The terms of the trust permit T to invade principal to provide for E's health and to support her in her accustomed manner of living, but do not otherwise indicate that T should favor E or F. Applying the prudent investor rule, T determines that the trust assets should be invested entirely in growth stocks that produce very little dividend income. Even though it is not necessary to invade principal to maintain E's accustomed standard of living, she is entitled to receive from the trust the degree of beneficial enjoyment normally accorded a person who is the sole income beneficiary of a trust, and T may transfer cash from principal to income to provide her with that degree of enjoyment.

Example (4) - T is the trustee of a trust that is governed by the law of State X. The trust became irrevocable before State X adopted the prudent investor rule. The terms of the trust require all of the income to be paid to G for life, remainder to H, and also give T the power to invade principal for the benefit of G for "dire emergencies only." The terms of the trust limit the aggregate amount that T can distribute to G from principal during G's life to 6% of the trust's value at its inception. The trust's portfolio is invested initially 50% in stocks and 50% in bonds, but after State X adopts the prudent investor rule T determines that, to achieve suitable risk and return objectives for the trust, the assets should be invested 90% in stocks and 10% in bonds. This change increases the total return from the portfolio and decreases the dividend and interest income. Thereafter, even though G does not experience a dire emergency, T may exercise the power to adjust under Section 104(a) to the extent that T determines that the adjustment is from only the capital appreciation resulting from the change in the portfolio's asset allocation. If T is unable to determine the extent to which capital appreciation resulted from the change in asset allocation or is unable to maintain adequate records to determine the extent to which principal distributions to G for dire emergencies do not exceed the 6% limitation, T may not exercise the power to adjust. See Joel C. Dobris, Limits on the Doctrine of Equitable Adjustment in Sophisticated Postmortem Tax Planning, 66 Iowa L. Rev. 273 (1981).

Example (5) - T is the trustee of a trust for the settlor's child. The trust owns a diversified portfolio of marketable financial assets with a value of $600,000, and is also the sole beneficiary of the settlor's IRA, which holds a diversified portfolio of marketable financial assets with a value of $900,000. The trust receives a distribution from the IRA that is the minimum amount required to be distributed under the Internal Revenue Code, and T allocates 10% of the distribution to income under Section 409(c) of this Act. The total return on the IRA's assets exceeds the amount distributed to the trust, and the value of the IRA at the end of the year is more than its value at the beginning of the year. Relevant factors that T may consider in determining whether to exercise the power to adjust and the extent to which an adjustment should be made to comply with Section 103(b) include the total return from all of the trust's assets, those owned directly as well as its interest in the IRA, the extent to which the trust will be subject to income tax on the portion of the IRA distribution that is allocated to principal, and the extent to which the income beneficiary will be subject to income tax on the amount that T distributes to the income beneficiary.

Example (6) - T is the trustee of a trust whose portfolio includes a large parcel of undeveloped real estate. T pays real property taxes on the undeveloped parcel from income each year pursuant to Section 501(3). After considering the return from the trust's portfolio as a whole and other relevant factors described in Section 104(b), T may exercise the power to adjust under Section 104(a) to transfer cash from principal to income in order to distribute to the income beneficiary an amount that T considers necessary to comply with Section 103(b).

Example (7) - T is the trustee of a trust whose portfolio includes an interest in a mutual fund that is sponsored by T. As the manager of the mutual fund, T charges the fund a management fee that reduces the amount available to distribute to the trust by $2,000. If the fee had been paid directly by the trust, one-half of the fee would have been paid from income under Section 501(1) and the other one-half would have been paid from principal under Section 502(a)(1). After considering the total return from the portfolio as a whole and other relevant factors described in Section 104(b), T may exercise its power to adjust under Section 104(a) by transferring $1,000, or half of the trust's proportionate share of the fee, from principal to income.

Section 105. Judicial Control Of Discretionay Power.

(a) The court may not order a fiduciary to change a decision to exercise or not to exercise a discretionary power conferred by this [Act] unless it determines that the decision was an abuse of the fiduciary's discretion. A fiduciary's decision is not an abuse of discretion merely because the court would have exercised the power in a different manner or would not have exercised the power.

(b) The decisions to which subsection (a) applies include:

(1) a decision under Section 104(a) as to whether and to what extent an amount should be transferred from principal to income or from income to principal.

(2) a decision regarding the factors that are relevant to the trust and its beneficiaries, the extent to which the factors are relevant, and the weight, if any, to be given to those factors, in deciding whether and to what extent to exercise the discretionary power conferred by Section 104(a).

(c) If the court determines that a fiduciary has abused the fiduciary's discretion, the court may place the income and remainder beneficiaries in the positions they would have occupied if the discretion had not been abused, according to the following rules:

(1) To the extent that the abuse of discretion has resulted in no distribution to a beneficiary or in a distribution that is too small, the court shall order the fiduciary to distribute from the trust to the beneficiary an amount that the court determines will restore the beneficiary, in whole or in part, to the beneficiary's appropriate position.

(2) To the extent that the abuse of discretion has resulted in a distribution to a beneficiary which is too large, the court shall place the beneficiaries, the trust, or both, in whole or in part, in their appropriate positions by ordering the fiduciary to withhold an amount from one or more future distributions to the beneficiary who received the distribution that was too large or ordering that beneficiary to return some or all of the distribution to the trust.

(3) To the extent that the court is unable, after applying paragraphs (1) and (2), to place the beneficiaries, the trust, or both, in the positions they would have occupied if the discretion had not been abused, the court may order the fiduciary to pay an appropriate amount from its own funds to one or more of the beneficiaries or the trust or both.

(d) Upon [petition] by the fiduciary, the court having jurisdiction over a trust or estate shall determine whether a proposed exercise or nonexercise by the fiduciary of a discretionary power conferred by this [Act] will result in an abuse of the fiduciary's discretion. If the petition describes the proposed exercise or nonexercise of the power and contains sufficient information to inform the beneficiaries of the reasons for the proposal, the facts upon which the fiduciary relies, and an explanation of how the income and remainder beneficiaries will be affected by the proposed exercise or nonexercise of the power, a beneficiary who challenges the proposed exercise or nonexercise has the burden of establishing that it will result in an abuse of discretion.

Comment

General. All of the discretionary powers in the 1997 Act are subject to the normal rules that govern a fiduciary's exercise of discretion. Section 105 codifies those rules for purposes of the

Act so that they will be readily apparent and accessible to fiduciaries, beneficiaries, their counsel and the courts if and when questions concerning such powers arise.

Section 105 also makes clear that the normal rules governing the exercise of a fiduciary's powers apply to the discretionary power to adjust conferred upon a trustee by Section 104(a). Discretionary provisions authorizing trustees to determine what is income and what is principal have been used in governing instruments for years; Section 2 of the 1931 Uniform Principal and Income Act recognized that practice by providing that "the person establishing the principal may himself direct the manner of ascertainment of income and principal...or grant discretion to the trustee or other person to do so...." Section 103(a)(2) also recognizes the power of a settlor to grant such discretion to the trustee. Section 105 applies to a discretionary power granted by the terms of a trust or a will as well as the power to adjust in Section 104(a).

Power to Adjust. The exercise of the power to adjust is governed by a trustee's duty of impartiality, which requires the trustee to strike an appropriate balance between the interests of the income and remainder beneficiaries. Section 103(b) expresses this duty by requiring the trustee to "administer a trust or estate impartially, based on what is fair and reasonable to all of the beneficiaries, except to the extent that the terms of the trust or the will clearly manifest an intention that the fiduciary shall or may favor one or more of the beneficiaries." Because this involves the exercise of judgment in circumstances rarely capable of perfect resolution, trustees are not expected to achieve perfection; they are, however, required to make conscious decisions in good faith and with proper motives.

In seeking the proper balance between the interests of the beneficiaries in matters involving principal and income, a trustee's traditional approach has been to determine the settlor's objectives from the terms of the trust, gather the information needed to ascertain the financial circumstances of the beneficiaries, determine the extent to which the settlor's objectives can be achieved with the resources available in the trust, and then allocate the trust's assets between stocks and fixed-income securities in a way that will produce a particular level or range of income for the income beneficiary. The key element in this process has been to determine the appropriate level or range of income for the income beneficiary, and that will continue to be the key element in deciding whether and to what extent to exercise the discretionary power conferred by Section 104(a). If it becomes necessary for a court to determine whether an abuse of the discretionary power to adjust between principal and income has occurred, the criteria should be the same as those that courts have used in the past to determine whether a trustee has abused its discretion in allocating the trust's assets between stocks and fixed-income securities.

A fiduciary has broad latitude in choosing the methods and criteria to use in deciding whether and to what extent to exercise the power to adjust in order to achieve impartiality between income beneficiaries and remainder beneficiaries or the degree of partiality for one or the other that is provided for by the terms of the trust or the will. For example, in deciding what the appropriate level or range of income should be for the income beneficiary and whether to exercise the power, a trustee may use the methods employed prior to the adoption of the 1997 Act in deciding how to allocate trust assets between stocks and fixed-income securities; or may consider the amount that would be distributed each year based on a percentage of the portfolio's value at the beginning or end of an accounting period, or the average portfolio value for several accounting periods, in a manner similar to a unitrust, and may select a percentage that the trustee believes is appropriate for this purpose and use the same percentage or different percentages in subsequent years. The trustee may also use hypothetical portfolios of marketable securities to determine an appropriate level or range of income within which a distribution might fall.

An adjustment may be made prospectively at the beginning of an accounting period, based on a projected return or range of returns for a trust's portfolio, or retrospectively after the fiduciary knows the total realized or unrealized return for the period; and instead of an annual adjustment, the trustee may distribute a fixed dollar amount for several years, in a manner similar to an annuity, and may change the fixed dollar amount periodically. No inference of abuse is to be drawn if a fiduciary uses different methods or criteria for the same trust from

time to time, or uses different methods or criteria for different trusts for the same accounting period.

While a trustee must consider the portfolio as a whole in deciding whether and to what extent to exercise the power to adjust, a trustee may apply different criteria in considering the portion of the portfolio that is composed of marketable securities and the portion whose market value cannot be determined readily, and may take into account a beneficiary's use or possession of a trust asset.

Under the prudent investor rule, a trustee is to incur costs that are appropriate and reasonable in relation to the assets and the purposes of the trust, and the same consideration applies in determining whether and to what extent to exercise the power to adjust. In making investment decisions under the prudent investor rule, the trustee will have considered the purposes, terms, distribution requirements, and other circumstances of the trust for the purpose of adopting an overall investment strategy having risk and return objectives reasonably suited to the trust. A trustee is not required to duplicate that work for principal and income purposes, and in many cases the decision about whether and to what extent to exercise the power to adjust may be made at the same time as the investment decisions. To help achieve the objective of reasonable investment costs, a trustee may also adopt policies that apply to all trusts or to individual trusts or classes of trusts, based on their size or other criteria, stating whether and under what circumstances the power to adjust will be exercised and the method of making adjustments; no inference of abuse is to be drawn if a trustee adopts such policies.

General rule. The first sentence of Section 105(a) is from Restatement (Second) of Trusts § 187 and Restatement (Third) of Trusts (Tentative Draft No. 2, 1999) § 50(1). The second sentence of Section 105(a) derives from Comment *e* to § 187 of the Second Restatement and Comment *b* to § 50 of the Third Restatement.

The reference in Section 105(a) to a fiduciary's decision to exercise or not to exercise a discretionary power underscores a fundamental precept, which is that a fiduciary has a duty to make a conscious decision about exercising or not exercising a discretionary power. Comment *b* to § 50 of the Third Restatement states:

> [A] court will intervene where the exercise of a power is left to the judgment of a trustee who improperly fails to exercise that judgment. Thus, even where a trustee has discretion whether or not to make any payments to a particular beneficiary, the court will interpose if the trustee, arbitrarily or without knowledge of or inquiry into relevant circumstances, fails to exercise the discretion.

Section 105(b) makes clear that the rule of subsection (a) applies not only to the power conferred by Section 104(a) but also to the evaluation process required by Section 104(b) in deciding whether and to what extent to exercise the power to adjust. Under Section 104(b), a trustee is to consider all of the factors that are relevant to the trust and its beneficiaries, including, to the extent the trustee determines they are relevant, the nine factors enumerated in Section 104(b). Section 104(b) derives from Section 2(c) of the Uniform Prudent Investor Act, which lists eight circumstances that a trustee shall consider, to the extent they are relevant, in investing and managing assets. The trustee's decisions about what factors are relevant for purposes of Section 104(b) and the weight to be accorded each of the relevant factors are part of the discretionary decision-making process. As such, these decisions are not subject to change for the purpose of changing the trustee's ultimate decision unless the court determines that there has been an abuse of discretion in determining the relevancy and weight of these factors.

Remedy. The exercise or nonexercise of a discretionary power under the Act normally affects the amount or timing of a distribution to the income or remainder beneficiaries. The primary remedy under Section 105(c) for abuse of discretion is the restoration of the beneficiaries and the trust to the positions they would have occupied if the abuse had not occurred. It draws on a basic principle of restitution that if a person pays money to someone who is not intended to receive it (and in a case to which this Act applies, not intended by the settlor to receive it in the absence of an abuse of discretion by the trustee), that person is entitled to restitution on the ground that the payee would be unjustly enriched if he were permitted to retain the payment. See Restatement of Restitution § 22 (1937). The objective is

to accomplish the restoration initially by making adjustments between the beneficiaries and the trust to the extent possible; to the extent that restoration is not possible by such adjustments, a court may order the trustee to pay an amount to one or more of the beneficiaries, the trust, or both the beneficiaries and the trust. If the court determines that it is not possible in the circumstances to restore them to the their appropriate positions, the court may provide other remedies appropriate to the circumstances. The approach of Section 105(c) is supported by Comment *b* to § 50 of the Third Restatement of Trusts:

> When judicial intervention is required, a court may direct the trustee to make or refrain from making certain payments; issue instructions to clarify the standards or guidelines applicable to the exercise of the power; or rescind the trustee's payment decisions, usually directing the trustee to recover amounts improperly distributed and holding the trustee liable for failure or inability to do so....

Advance determinations. Section 105(d) employs the familiar remedy of the trustee's petition to the court for instructions. It requires the court to determine, upon a petition by the fiduciary, whether a proposed exercise or nonexercise of a discretionary power by the fiduciary of a power conferred by the Act would be an abuse of discretion under the general rule of Section 105(a). If the petition contains the information prescribed in the second sentence of subsection (d), the proposed action or inaction is presumed not to result in an abuse, and a beneficiary who challenges the proposal must establish that it will.

Subsection (d) is intended to provide a fiduciary the opportunity to obtain an assurance of finality in a judicial proceeding before proceeding with a proposed exercise or nonexercise of a discretionary power. Its purpose is not, however, to have the court instruct the fiduciary how to exercise the discretion.

A fiduciary may also obtain the consent of the beneficiaries to a proposed act or an omission to act, and a beneficiary cannot hold the fiduciary liable for that act or omission unless:

> (a) the beneficiary was under an incapacity at the time of such consent or of such act or omission; or
>
> (b) the beneficiary, when he gave his consent, did not know of his rights and of the material facts which the trustee knew or should have known and which the trustee did not reasonably believe that the beneficiary knew; or
>
> (c) the consent of the beneficiary was induced by improper conduct of the trustee.

Restatement (Second) of Trusts § 216.

If there are many beneficiaries, including some who are incapacitated or unascertained, the fiduciary may prefer the greater assurance of finality provided by a judicial proceeding that will bind all persons who have an interest in the trust.

[Article] 2

Decendant's estate or

terminating income interest

Section 201. Determination and Distribution of Net Income. After a decedent dies, in the case of an estate, or after an income interest in a trust ends, the following rules apply:

(1) A fiduciary of an estate or of a terminating income interest shall determine the amount of net income and net principal receipts received from property specifically given to a beneficiary under the rules in [Articles] 3 through 5 which apply to trustees and the rules in paragraph (5). The fiduciary shall distribute the net income and net principal receipts to the beneficiary who is to receive the specific property.

(2) A fiduciary shall determine the remaining net income of a decedent's estate or a terminating income interest under the rules in [Articles] 3 through 5 which apply to trustees and by:

(A) including in net income all income from property used to discharge liabilities;

(B) paying from income or principal, in the fiduciary's discretion, fees of attorneys, accountants, and fiduciaries; court costs and other expenses of administration; and interest on death taxes, but the fiduciary may pay those expenses from income of property passing to a trust for which the fiduciary claims an estate tax marital or charitable deduction only to the extent that the payment of those expenses from income will not cause the reduction or loss of the deduction; and

(C) paying from principal all other disbursements made or incurred in connection with the settlement of a decedent's estate or the winding up of a terminating income interest, including debts, funeral expenses, disposition of remains, family allowances, and death taxes and related penalties that are apportioned to the estate or terminating income interest by the will, the terms of the trust, or applicable law.

(3) A fiduciary shall distribute to a beneficiary who receives a pecuniary amount outright the interest or any other amount provided by the will, the terms of the trust, or applicable law from net income determined under paragraph (2) or from principal to the extent that net income is insufficient. If a beneficiary is to receive a pecuniary amount outright from a trust after an income interest ends and no interest or other amount is provided for by the terms of the trust or applicable law, the fiduciary shall distribute the interest or other amount to which the beneficiary would be entitled under applicable law if the pecuniary amount were required to be paid under a will.

(4) A fiduciary shall distribute the net income remaining after distributions required by paragraph (3) in the manner described in Section 202 to all other beneficiaries, including a beneficiary who receives a pecuniary amount in trust, even if the beneficiary holds an unqualified power to withdraw assets from the trust or other presently exercisable general power of appointment over the trust.

(5) A fiduciary may not reduce principal or income receipts from property described in paragraph (1) because of a payment described in Section 501 or 502 to the extent that the will, the terms of the trust, or applicable law requires the fiduciary to make the payment from assets other than the property or to the extent that the fiduciary recovers or expects to recover the payment from a third party. The net income and principal receipts from the property are determined by including all of the amounts the fiduciary receives or pays with respect to the property, whether those amounts accrued or became due before, on, or after the date of a decedent's death or an income interest's terminating event, and by making a reasonable provision for amounts that the fiduciary believes the estate or terminating income interest may become obligated to pay after the property is distributed.

Comment

Terminating income interests and successive income interests. A trust that provides for a single income beneficiary and an outright distribution of the remainder ends when the income interest ends. A more complex trust may have a number of income interests, either concurrent or successive, and the trust will not necessarily end when one of the income interests ends. For that reason, the Act speaks in terms of income interests ending and beginning rather than trusts ending and beginning. When an income interest in a trust ends, the trustee's powers continue during the winding up period required to complete its administration. A terminating income interest is one that has ended but whose administration is not complete.

If two or more people are given the right to receive specified percentages or fractions of the income from a trust concurrently and one of the concurrent interests ends, e.g., when a beneficiary dies, the beneficiary's income interest ends but the trust does not. Similarly, when a trust with only one income beneficiary ends upon the beneficiary's death, the trust instrument may provide that part or all of the trust assets shall continue in trust for another income beneficiary. While it is common to think and speak of this (and even to characterize it in a trust instrument) as a "new" trust, it is a continuation of the original trust for a remainder beneficiary who has an income interest in the trust assets instead of the right to receive them outright. For purposes of this Act, this is a successive income interest in the same trust. The fact that a trust may or may not end when an income interest ends is not significant for

purposes of this Act.

If the assets that are subject to a terminating income interest pass to another trust because the income beneficiary exercises a general power of appointment over the trust assets, the recipient trust would be a new trust; and if they pass to another trust because the beneficiary exercises a nongeneral power of appointment over the trust assets, the recipient trust might be a new trust in some States (see 5A Austin W. Scott & William F. Fratcher, The Law of Trusts § 640, at 483 (4th ed. 1989)); but for purposes of this Act a new trust created in these circumstances is also a successive income interest.

Gift of a pecuniary amount. Section 201(3) and (4) provide different rules for an outright gift of a pecuniary amount and a gift in trust of a pecuniary amount; this is the same approach used in Section 5(b)(2) of the 1962 Act.

Interest on pecuniary amounts. Section 201(3) provides that the beneficiary of an outright pecuniary amount is to receive the interest or other amount provided by applicable law if there is no provision in the will or the terms of the trust. Many States have no applicable law that provides for interest or some other amount to be paid on an outright pecuniary gift under an inter vivos trust; this section provides that in such a case the interest or other amount to be paid shall be the same as the interest or other amount required to be paid on testamentary pecuniary gifts. This provision is intended to accord gifts under inter vivos instruments the same treatment as testamentary gifts. The various state authorities that provide for the amount that a beneficiary of an outright pecuniary amount is entitled to receive are collected in Richard B. Covey, Marital Deduction and Credit Shelter Dispositions and the Use of Formula Provisions, App. B (4th ed. 1997).

Administration expenses and interest on death taxes. Under Section 201(2)(B) a fiduciary may pay administration expenses and interest on death taxes from either income or principal. An advantage of permitting the fiduciary to choose the source of the payment is that, if the fiduciary's decision is consistent with the decision to deduct these expenses for income tax purposes or estate tax purposes, it eliminates the need to adjust between principal and income that may arise when, for example, an expense that is paid from principal is deducted for income tax purposes or an expense that is paid from income is deducted for estate tax purposes.

The United States Supreme Court has considered the question of whether an estate tax marital deduction or charitable deduction should be reduced when administration expenses are paid from income produced by property passing in trust for a surviving spouse or for charity and deducted for income tax purposes. The Court rejected the IRS position that administration expenses properly paid from income under the terms of the trust or state law must reduce the amount of a marital or charitable transfer, and held that the value of the transferred property is not reduced for estate tax purposes unless the administration expenses are material in light of the income the trust corpus could have been expected to generate. *Commissioner v. Estate of Otis C. Hubert*, 117 S.Ct. 1124 (1997). The provision in Section 201(2)(B) permits a fiduciary to pay and deduct administration expenses from income only to the extent that it will not cause the reduction or loss of an estate tax marital or charitable contributions deduction, which means that the limit on the amount payable from income will be established eventually by Treasury Regulations.

Interest on estate taxes. The IRS agrees that interest on estate and inheritance taxes may be deducted for income tax purposes without having to reduce the estate tax deduction for amounts passing to a charity or surviving spouse, whether the interest is paid from principal or income. Rev. Rul. 93-48, 93-2 C.B. 270. For estates of persons who died before 1998, a fiduciary may not want to deduct for income tax purposes interest on estate tax that is deferred under Section 6166 or 6163 because deducting that interest for estate tax purposes may produce more beneficial results, especially if the estate has little or no income or the income tax bracket is significantly lower than the estate tax bracket. For estates of persons who die after 1997, no estate tax or income tax deduction will be allowed for interest paid on estate tax that is deferred under Section 6166. However, interest on estate tax deferred under Section 6163 will continue to be deductible for both purposes, and interest on estate tax deficiencies will continue to be deductible for estate tax purposes if an election under Section 6166 is not in effect.

Under the 1962 Act, Section 13(c)(5) charges interest on estate and inheritance taxes to principal. The 1931 Act has no provision. Section 501(3) of this Act provides that, except to the extent provided in Section 201(2)(B) or (C), all interest must be paid from income.

Section 202. Distribution to Residuary and Remainder Beneficiaries.

(a) Each beneficiary described in Section 201(4) is entitled to receive a portion of the net income equal to the beneficiary's fractional interest in undistributed principal assets, using values as of the distribution date. If a fiduciary makes more than one distribution of assets to beneficiaries to whom this section applies, each beneficiary, including one who does not receive part of the distribution, is entitled, as of each distribution date, to the net income the fiduciary has received after the date of death or terminating event or earlier distribution date but has not distributed as of the current distribution date.

(b) In determining a beneficiary's share of net income, the following rules apply:

(1) The beneficiary is entitled to receive a portion of the net income equal to the beneficiary's fractional interest in the undistributed principal assets immediately before the distribution date, including assets that later may be sold to meet principal obligations.

(2) The beneficiary's fractional interest in the undistributed principal assets must be calculated without regard to property specifically given to a beneficiary and property required to pay pecuniary amounts not in trust.

(3) The beneficiary's fractional interest in the undistributed principal assets must be calculated on the basis of the aggregate value of those assets as of the distribution date without reducing the value by any unpaid principal obligation.

(4) The distribution date for purposes of this section may be the date as of which the fiduciary calculates the value of the assets if that date is reasonably near the date on which assets are actually distributed.

(c) If a fiduciary does not distribute all of the collected but undistributed net income to each person as of a distribution date, the fiduciary shall maintain appropriate records showing the interest of each beneficiary in that net income.

(d) A fiduciary may apply the rules in this section, to the extent that the fiduciary considers it appropriate, to net gain or loss realized after the date of death or terminating event or earlier distribution date from the disposition of a principal asset if this section applies to the income from the asset.

Comment

Relationship to prior Acts. Section 202 retains the concept in Section 5(b)(2) of the 1962 Act that the residuary legatees of estates are to receive net income earned during the period of administration on the basis of their proportionate interests in the undistributed assets when distributions are made. It changes the basis for determining their proportionate interests by using asset values as of a date reasonably near the time of distribution instead of inventory values; it extends the application of these rules to distributions from terminating trusts; and it extends these rules to gain or loss realized from the disposition of assets during administration, an omission in the 1962 Act that has been noted by several commentators. See, e.g., Richard B. Covey, Marital Deduction and Credit Shelter Dispositions and the Use of Formula Provisions 91 (4th ed. 1998); Thomas H. Cantrill, Fractional or Percentage Residuary Bequests: Allocation of Postmortem Income, Gain and Unrealized Appreciation, 10 Prob. Notes 322, 327 (1985).

[Article] 3

Apportionment at beginning

and end of income interest

Section 301. When Right to Income Begins and Ends.

(a) An income beneficiary is entitled to net income from the date on which the income

interest begins. An income interest begins on the date specified in the terms of the trust or, if no date is specified, on the date an asset becomes subject to a trust or successive income interest.

(b) An asset becomes subject to a trust:

(1) on the date it is transferred to the trust in the case of an asset that is transferred to a trust during the transferor's life;

(2) on the date of a testator's death in the case of an asset that becomes subject to a trust by reason of a will, even if there is an intervening period of administration of the testator's estate; or

(3) on the date of an individual's death in the case of an asset that is transferred to a fiduciary by a third party because of the individual's death.

(c) An asset becomes subject to a successive income interest on the day after the preceding income interest ends, as determined under subsection (d), even if there is an intervening period of administration to wind up the preceding income interest.

(d) An income interest ends on the day before an income beneficiary dies or another terminating event occurs, or on the last day of a period during which there is no beneficiary to whom a trustee may distribute income.

Comment

Period during which there is no beneficiary. The purpose of the second part of subsection (d) is to provide that, at the end of a period during which there is no beneficiary to whom a trustee may distribute income, the trustee must apply the same apportionment rules that apply when a mandatory income interest ends. This provision would apply, for example, if a settlor creates a trust for grandchildren before any grandchildren are born. When the first grandchild is born, the period preceding the date of birth is treated as having ended, followed by a successive income interest, and the apportionment rules in Sections 302 and 303 apply accordingly if the terms of the trust do not contain different provisions.

Section 302. Apportionment of Receipts and Disbursements When Decedent Dies or Income Interest Begins.

(a) A trustee shall allocate an income receipt or disbursement other than one to which Section 201(1) applies to principal if its due date occurs before a decedent dies in the case of an estate or before an income interest begins in the case of a trust or successive income interest.

(b) A trustee shall allocate an income receipt or disbursement to income if its due date occurs on or after the date on which a decedent dies or an income interest begins and it is a periodic due date. An income receipt or disbursement must be treated as accruing from day to day if its due date is not periodic or it has no due date. The portion of the receipt or disbursement accruing before the date on which a decedent dies or an income interest begins must be allocated to principal and the balance must be allocated to income.

(c) An item of income or an obligation is due on the date the payer is required to make a payment. If a payment date is not stated, there is no due date for the purposes of this [Act]. Distributions to shareholders or other owners from an entity to which Section 401 applies are deemed to be due on the date fixed by the entity for determining who is entitled to receive the distribution or, if no date is fixed, on the declaration date for the distribution. A due date is periodic for receipts or disbursements that must be paid at regular intervals under a lease or an obligation to pay interest or if an entity customarily makes distributions at regular intervals.

Comment

Prior Acts. Professor Bogert stated that "Section 4 of the [1962] Act makes a change with respect to the apportionment of the income of trust property not due until after the trust began but which accrued in part before the commencement of the trust. It treats such income

as to be credited entirely to the income account in the case of a living trust, but to be apportioned between capital and income in the case of a testamentary trust. The [1931] Act apportions such income in the case of both types of trusts, except in the case of corporate dividends." George G. Bogert, The Revised Uniform Principal and Income Act, 38 Notre Dame Law. 50, 52 (1962). The 1962 Act also provides that an asset passing to an inter vivos trust by a bequest in the settlor's will is governed by the rule that applies to a testamentary trust, so that different rules apply to assets passing to an inter vivos trust depending upon whether they were transferred to the trust during the settlor's life or by his will.

Having several different rules that apply to similar transactions is confusing. In order to simplify administration, Section 302 applies the same rule to inter vivos trusts (revocable and irrevocable), testamentary trusts, and assets that become subject to an inter vivos trust by a testamentary bequest.

Periodic payments. Under Section 302, a periodic payment is principal if it is due but unpaid before a decedent dies or before an asset becomes subject to a trust, but the next payment is allocated entirely to income and is not apportioned. Thus, periodic receipts such as rents, dividends, interest, and annuities, and disbursements such as the interest portion of a mortgage payment, are not apportioned. This is the original common law rule. Edwin A. Howes, Jr., The American Law Relating to Income and Principal 70 (1905). In trusts in which a surviving spouse is dependent upon a regular flow of cash from the decedent's securities portfolio, this rule will help to maintain payments to the spouse at the same level as before the settlor's death. Under the 1962 Act, the pre-death portion of the first periodic payment due after death is apportioned to principal in the case of a testamentary trust or securities bequeathed by will to an inter vivos trust.

Nonperiodic payments. Under the second sentence of Section 302(b), interest on an obligation that does not provide a due date for the interest payment, such as interest on an income tax refund, would be apportioned to principal to the extent it accrues before a person dies or an income interest begins unless the obligation is specifically given to a devisee or remainder beneficiary, in which case all of the accrued interest passes under Section 201(1) to the person who receives the obligation. The same rule applies to interest on an obligation that has a due date but does not provide for periodic payments. If there is no stated interest on the obligation, such as a zero coupon bond, and the proceeds from the obligation are received more than one year after it is purchased or acquired by the trustee, the entire amount received is principal under Section 406.

Section 303. Apportionment When Income Interest Ends.

(a) In this section, "undistributed income" means net income received before the date on which an income interest ends. The term does not include an item of income or expense that is due or accrued or net income that has been added or is required to be added to principal under the terms of the trust.

(b) When a mandatory income interest ends, the trustee shall pay to a mandatory income beneficiary who survives that date, or the estate of a deceased mandatory income beneficiary whose death causes the interest to end, the beneficiary's share of the undistributed income that is not disposed of under the terms of the trust unless the beneficiary has an unqualified power to revoke more than five percent of the trust immediately before the income interest ends. In the latter case, the undistributed income from the portion of the trust that may be revoked must be added to principal.

(c) When a trustee's obligation to pay a fixed annuity or a fixed fraction of the value of the trust's assets ends, the trustee shall prorate the final payment if and to the extent required by applicable law to accomplish a purpose of the trust or its settlor relating to income, gift, estate, or other tax requirements.

Comment

Prior Acts. Both the 1931 Act (Section 4) and the 1962 Act (Section 4(d)) provide that a deceased income beneficiary's estate is entitled to the undistributed income. The Drafting Committee concluded that this is probably not what most settlors would want, and that, with respect to undistributed income, most settlors would favor the income beneficiary first, the remainder beneficiaries second, and the income beneficiary's heirs last, if at all. However, it

decided not to eliminate this provision to avoid causing disputes about whether the trustee should have distributed collected cash before the income beneficiary died.

Accrued periodic payments. Under the prior Acts, an income beneficiary or his estate is entitled to receive a portion of any payments, other than dividends, that are due or that have accrued when the income interest terminates. The last sentence of subsection (a) changes that rule by providing that such items are not included in undistributed income. The items affected include periodic payments of interest, rent, and dividends, as well as items of income that accrue over a longer period of time; the rule also applies to expenses that are due or accrued.

Example - accrued periodic payments. The rules in Section 302 and Section 303 work in the following manner: Assume that a periodic payment of rent that is due on July 20 has not been paid when an income interest ends on July 30; the successive income interest begins on July 31, and the rent payment that was due on July 20 is paid on August 3. Under Section 302(a), the July 20 payment is added to the principal of the successive income interest when received. Under Section 302(b), the entire periodic payment of rent that is due on August 20 is income when received by the successive income interest. Under Section 303, neither the income beneficiary of the terminated income interest nor the beneficiary's estate is entitled to any part of either the July 20 or the August 20 payments because neither one was received before the income interest ended on July 30. The same principles apply to expenses of the trust.

Beneficiary with an unqualified power to revoke. The requirement in subsection (b) to pay undistributed income to a mandatory income beneficiary or her estate does not apply to the extent the beneficiary has an unqualified power to revoke more than five percent of the trust immediately before the income interest ends. Without this exception, subsection (b) would apply to a revocable living trust whose settlor is the mandatory income beneficiary during her lifetime, even if her will provides that all of the assets in the probate estate are to be distributed to the trust.

If a trust permits the beneficiary to withdraw all or a part of the trust principal after attaining a specified age and the beneficiary attains that age but fails to withdraw all of the principal that she is permitted to withdraw, a trustee is not required to pay her or her estate the undistributed income attributable to the portion of the principal that she left in the trust. The assumption underlying this rule is that the beneficiary has either provided for the disposition of the trust assets (including the undistributed income) by exercising a power of appointment that she has been given or has not withdrawn the assets because she is willing to have the principal and undistributed income be distributed under the terms of the trust. If the beneficiary has the power to withdraw 25% of the trust principal, the trustee must pay to her or her estate the undistributed income from the 75% that she cannot withdraw.

[Article] 4

Allocation of receipts during

administration of trust

[Part 1

Receipts from entities]

Section 401. Character of Receipts.

(a) In this section, "entity" means a corporation, partnership, limited liability company, regulated investment company, real estate investment trust, common trust fund, or any other organization in which a trustee has an interest other than a trust or estate to which Section 402 applies, a business or activity to which Section 403 applies, or an asset-backed security to which Section 415 applies.

(b) Except as otherwise provided in this section, a trustee shall allocate to income money received from an entity.

(c) A trustee shall allocate the following receipts from an entity to principal:

(1) property other than money;

(2) money received in one distribution or a series of related distributions in exchange for part or all of a trust's interest in the entity;

(3) money received in total or partial liquidation of the entity; and

(4) money received from an entity that is a regulated investment company or a real estate investment trust if the money distributed is a capital gain dividend for federal income tax purposes.

(d) Money is received in partial liquidation:

(1) to the extent that the entity, at or near the time of a distribution, indicates that it is a distribution in partial liquidation; or

(2) if the total amount of money and property received in a distribution or series of related distributions is greater than 20 percent of the entity's gross assets, as shown by the entity's year-end financial statements immediately preceding the initial receipt.

(e) Money is not received in partial liquidation, nor may it be taken into account under subsection (d)(2), to the extent that it does not exceed the amount of income tax that a trustee or beneficiary must pay on taxable income of the entity that distributes the money.

(f) A trustee may rely upon a statement made by an entity about the source or character of a distribution if the statement is made at or near the time of distribution by the entity's board of directors or other person or group of persons authorized to exercise powers to pay money or transfer property comparable to those of a corporation's board of directors.

Comment

Entities to which Section 401 applies. The reference to partnerships in Section 401(a) is intended to include all forms of partnerships, including limited partnerships, limited liability partnerships, and variants that have slightly different names and characteristics from State to State. The section does not apply, however, to receipts from an interest in property that a trust owns as a tenant in common with one or more co-owners, nor would it apply to an interest in a joint venture if, under applicable law, the trust's interest is regarded as that of a tenant in common.

Capital gain dividends. Under the Internal Revenue Code and the Income Tax Regulations, a "capital gain dividend" from a mutual fund or real estate investment trust is the excess of the fund's or trust's net long-term capital gain over its net short-term capital loss. As a result, a capital gain dividend does not include any net short-term capital gain, and cash received by a trust because of a net short-term capital gain is income under this Act.

Reinvested dividends. If a trustee elects (or continues an election made by its predecessor) to reinvest dividends in shares of stock of a distributing corporation or fund, whether evidenced by new certificates or entries on the books of the distributing entity, the new shares would be principal. Making or continuing such an election would be equivalent to deciding under Section 104 to transfer income to principal in order to comply with Section 103(b). However, if the trustee makes or continues the election for a reason other than to comply with Section 103(b), e.g., to make an investment without incurring brokerage commissions, the trustee should transfer cash from principal to income in an amount equal to the reinvested dividends.

Distribution of property. The 1962 Act describes a number of types of property that would be principal if distributed by a corporation. This becomes unwieldy in a section that applies to both corporations and all other entities. By stating that principal includes the distribution of any property other than money, Section 401 embraces all of the items enumerated in Section 6 of the 1962 Act as well as any other form of nonmonetary distribution not specifically mentioned in that Act.

Partial liquidations. Under subsection (d)(1), any distribution designated by the entity

as a partial liquidating distribution is principal regardless of the percentage of total assets that it represents. If a distribution exceeds 20% of the entity's gross assets, the entire distribution is a partial liquidation under subsection (d)(2) whether or not the entity describes it as a partial liquidation. In determining whether a distribution is greater than 20% of the gross assets, the portion of the distribution that does not exceed the amount of income tax that the trustee or a beneficiary must pay on the entity's taxable income is ignored.

Other large distributions. A cash distribution may be quite large (for example, more than 10% but not more than 20% of the entity's gross assets) and have characteristics that suggest it should be treated as principal rather than income. For example, an entity may have received cash from a source other than the conduct of its normal business operations because it sold an investment asset; or because it sold a business asset other than one held for sale to customers in the normal course of its business and did not replace it; or it borrowed a large sum of money and secured the repayment of the loan with a substantial asset; or a principal source of its cash was from assets such as mineral interests, 90% of which would have been allocated to principal if the trust had owned the assets directly. In such a case the trustee, after considering the total return from the portfolio as a whole and the income component of that return, may decide to exercise the power under Section 104(a) to make an adjustment between income and principal, subject to the limitations in Section 104(c).

Section 402. Distribution From Trust or Estate. A trustee shall allocate to income an amount received as a distribution of income from a trust or an estate in which the trust has an interest other than a purchased interest, and shall allocate to principal an amount received as a distribution of principal from such a trust or estate. If a trustee purchases an interest in a trust that is an investment entity, or a decedent or donor transfers an interest in such a trust to a trustee, Section 401 or 415 applies to a receipt from the trust.

Comment

Terms of the distributing trust or estate. Under Section 103(a), a trustee is to allocate receipts in accordance with the terms of the recipient trust or, if there is no provision, in accordance with this Act. However, in determining whether a distribution from another trust or an estate is income or principal, the trustee should also determine what the terms of the distributing trust or estate say about the distribution - for example, whether they direct that the distribution, even though made from the income of the distributing trust or estate, is to be added to principal of the recipient trust. Such a provision should override the terms of this Act, but if the terms of the recipient trust contain a provision requiring such a distribution to be allocated to income, the trustee may have to obtain a judicial resolution of the conflict between the terms of the two documents.

Investment trusts. An investment entity to which the second sentence of this section applies includes a mutual fund, a common trust fund, a business trust or other entity organized as a trust for the purpose of receiving capital contributed by investors, investing that capital, and managing investment assets, including asset-backed security arrangements to which Section 415 applies. See John H. Langbein, The Secret Life of the Trust: The Trust as an Instrument of Commerce, 107 Yale L.J. 165 (1997).

Section 403. Business and Other Activities Conducted By Trustee.

(a) If a trustee who conducts a business or other activity determines that it is in the best interest of all the beneficiaries to account separately for the business or activity instead of accounting for it as part of the trust's general accounting records, the trustee may maintain separate accounting records for its transactions, whether or not its assets are segregated from other trust assets.

(b) A trustee who accounts separately for a business or other activity may determine the extent to which its net cash receipts must be retained for working capital, the acquisition or replacement of fixed assets, and other reasonably foreseeable needs of the business or activity, and the extent to which the remaining net cash receipts are accounted for as principal or income in the trust's general accounting records. If a trustee sells assets of the business or other activity, other than in the ordinary course of the business or activity, the trustee shall account for the net amount received as principal in the trust's general accounting records to the extent the trustee determines that the amount received is no longer required in the

conduct of the business.

(c) Activities for which a trustee may maintain separate accounting records include:

(1) retail, manufacturing, service, and other traditional business activities;

(2) farming;

(3) raising and selling livestock and other animals;

(4) management of rental properties;

(5) extraction of minerals and other natural resources;

(6) timber operations; and

(7) activities to which Section 414 applies.

Comment

Purpose and scope. The provisions in Section 403 are intended to give greater flexibility to a trustee who operates a business or other activity in proprietorship form rather than in a wholly-owned corporation (or, where permitted by state law, a single-member limited liability company), and to facilitate the trustee's ability to decide the extent to which the net receipts from the activity should be allocated to income, just as the board of directors of a corporation owned entirely by the trust would decide the amount of the annual dividend to be paid to the trust. It permits a trustee to account for farming or livestock operations, rental properties, oil and gas properties, timber operations, and activities in derivatives and options as though they were held by a separate entity. It is not intended, however, to permit a trustee to account separately for a traditional securities portfolio to avoid the provisions of this Act that apply to such securities.

Section 403 permits the trustee to account separately for each business or activity for which the trustee determines separate accounting is appropriate. A trustee with a computerized accounting system may account for these activities in a "subtrust"; an individual trustee may continue to use the business and record-keeping methods employed by the decedent or transferor who may have conducted the business under an assumed name. The intent of this section is to give the trustee broad authority to select business record-keeping methods that best suit the activity in which the trustee is engaged.

If a fiduciary liquidates a sole proprietorship or other activity to which Section 403 applies, the proceeds would be added to principal, even though derived from the liquidation of accounts receivable, because the proceeds would no longer be needed in the conduct of the business. If the liquidation occurs during probate or during an income interest's winding up period, none of the proceeds would be income for purposes of Section 201.

Separate accounts. A trustee may or may not maintain separate bank accounts for business activities that are accounted for under Section 403. A professional trustee may decide not to maintain separate bank accounts, but an individual trustee, especially one who has continued a decedent's business practices, may continue the same banking arrangements that were used during the decedent's lifetime. In either case, the trustee is authorized to decide to what extent cash is to be retained as part of the business assets and to what extent it is to be transferred to the trust's general accounts, either as income or principal.

[Part 2

Receipts not normally apportioned]

Section 404. Principal Receipts. A trustee shall allocate to principal:

(1) to the extent not allocated to income under this [Act], assets received from a transferor during the transferor's lifetime, a decedent's estate, a trust with a terminating income interest, or a payer under a contract naming the trust or its trustee as beneficiary;

(2) money or other property received from the sale, exchange, liquidation, or change in form of a principal asset, including realized profit, subject to this [article];

(3) amounts recovered from third parties to reimburse the trust because of disbursements described in Section 502(a)(7) or for other reasons to the extent not based on the loss of income;

(4) proceeds of property taken by eminent domain, but a separate award made for the loss of income with respect to an accounting period during which a current income beneficiary had a mandatory income interest is income;

(5) net income received in an accounting period during which there is no beneficiary to whom a trustee may or must distribute income; and

(6) other receipts as provided in [Part 3].

Comment

Eminent domain awards. Even though the award in an eminent domain proceeding may include an amount for the loss of future rent on a lease, if that amount is not separately stated the entire award is principal. The rule is the same in the 1931 and 1962 Acts.

Section 405. Rental Property. To the extent that a trustee accounts for receipts from rental property pursuant to this section, the trustee shall allocate to income an amount received as rent of real or personal property, including an amount received for cancellation or renewal of a lease. An amount received as a refundable deposit, including a security deposit or a deposit that is to be applied as rent for future periods, must be added to principal and held subject to the terms of the lease and is not available for distribution to a beneficiary until the trustee's contractual obligations have been satisfied with respect to that amount.

Comment

Application of Section 403. This section applies to the extent that the trustee does not account separately under Section 403 for the management of rental properties owned by the trust.

Receipts that are capital in nature. A portion of the payment under a lease may be a reimbursement of principal expenditures for improvements to the leased property that is characterized as rent for purposes of invoking contractual or statutory remedies for nonpayment. If the trustee is accounting for rental income under Section 405, a transfer from income to reimburse principal may be appropriate under Section 504 to the extent that some of the "rent" is really a reimbursement for improvements. This set of facts could also be a relevant factor for a trustee to consider under Section 104(b) in deciding whether and to what extent to make an adjustment between principal and income under Section 104(a) after considering the return from the portfolio as a whole.

Section 406. Obligation to Pay Money.

(a) An amount received as interest, whether determined at a fixed, variable, or floating rate, on an obligation to pay money to the trustee, including an amount received as consideration for prepaying principal, must be allocated to income without any provision for amortization of premium.

(b) A trustee shall allocate to principal an amount received from the sale, redemption, or other disposition of an obligation to pay money to the trustee more than one year after it is purchased or acquired by the trustee, including an obligation whose purchase price or value when it is acquired is less than its value at maturity. If the obligation matures within one year after it is purchased or acquired by the trustee, an amount received in excess of its purchase price or its value when acquired by the trust must be allocated to income.

(c) This section does not apply to an obligation to which Section 409, 410, 411, 412, 414, or 415 applies.

Comment

Variable or floating interest rates. The reference in subsection (a) to variable or floating interest rate obligations is intended to clarify that, even though an obligation's interest rate may change from time to time based upon changes in an index or other market indicator, an obligation to pay money containing a variable or floating rate provision is subject to this section and is not to be treated as a derivative financial instrument under Section 414.

Discount obligations. Subsection (b) applies to all obligations acquired at a discount, including short-term obligations such as U.S. Treasury Bills, long-term obligations such as U.S. Savings Bonds, zero-coupon bonds, and discount bonds that pay interest during part, but not all, of the period before maturity. Under subsection (b), the entire increase in value of these obligations is principal when the trustee receives the proceeds from the disposition unless the obligation, when acquired, has a maturity of less than one year. In order to have one rule that applies to all discount obligations, the Act eliminates the provision in the 1962 Act for the payment from principal of an amount equal to the increase in the value of U.S. Series E bonds. The provision for bonds that mature within one year after acquisition by the trustee is derived from the Illinois act. 760 ILCS 15/8 (1996).

Subsection (b) also applies to inflation-indexed bonds - any increase in principal due to inflation after issuance is principal upon redemption if the bond matures more than one year after the trustee acquires it; if it matures within one year, all of the increase, including any attributable to an inflation adjustment, is income.

Effect of Section 104. In deciding whether and to what extent to exercise the power to adjust between principal and income granted by Section 104(a), a relevant factor for the trustee to consider is the effect on the portfolio as a whole of having a portion of the assets invested in bonds that do not pay interest currently.

Section 407. Insurance Policies and Similar Contracts.

(a) Except as otherwise provided in subsection (b), a trustee shall allocate to principal the proceeds of a life insurance policy or other contract in which the trust or its trustee is named as beneficiary, including a contract that insures the trust or its trustee against loss for damage to, destruction of, or loss of title to a trust asset. The trustee shall allocate dividends on an insurance policy to income if the premiums on the policy are paid from income, and to principal if the premiums are paid from principal.

(b) A trustee shall allocate to income proceeds of a contract that insures the trustee against loss of occupancy or other use by an income beneficiary, loss of income, or, subject to Section 403, loss of profits from a business.

(c) This section does not apply to a contract to which Section 409 applies.

[Part 3

Receipts normally apportioned]

Section 408. Insubstantial Allocations Not Required. If a trustee determines that an allocation between principal and income required by Section 409, 410, 411, 412, or 415 is insubstantial, the trustee may allocate the entire amount to principal unless one of the circumstances described in Section 104(c) applies to the allocation. This power may be exercised by a cotrustee in the circumstances described in Section 104(d) and may be released for the reasons and in the manner described in Section 104(e). An allocation is presumed to be insubstantial if:

(1) the amount of the allocation would increase or decrease net income in an accounting period, as determined before the allocation, by less than 10 percent; or

(2) the value of the asset producing the receipt for which the allocation would be made is less than 10 percent of the total value of the trust's assets at the beginning of the accounting period.

Comment

This section is intended to relieve a trustee from making relatively small allocations while preserving the trustee's right to do so if an allocation is large in terms of absolute dollars.

For example, assume that a trust's assets, which include a working interest in an oil well, have a value of $1,000,000; the net income from the assets other than the working interest is $40,000; and the net receipts from the working interest are $400. The trustee may allocate all of the net receipts from the working interest to principal instead of allocating 10%, or $40, to income under Section 411. If the net receipts from the working interest are $35,000, so that the amount allocated to income under Section 411 would be $3,500, the trustee may decide that this amount is sufficiently significant to the income beneficiary that the allocation provided for by Section 411 should be made, even though the trustee is still permitted under Section 408 to allocate all of the net receipts to principal because the $3,500 would increase the net income of $40,000, as determined before making an allocation under Section 411, by less than 10%. Section 408 will also relieve a trustee from having to allocate net receipts from the sale of trees in a small woodlot between principal and income.

While the allocation to principal of small amounts under this section should not be a cause for concern for tax purposes, allocations are not permitted under this section in circumstances described in Section 104(c) to eliminate claims that the power in this section has adverse tax consequences.

Section 409. Deferred Compensation, Annuities, and Similar Payments.

(a) In this section, "payment" means a payment that a trustee may receive over a fixed number of years or during the life of one or more individuals because of services rendered or property transferred to the payer in exchange for future payments. The term includes a payment made in money or property from the payer's general assets or from a separate fund created by the payer, including a private or commercial annuity, an individual retirement account, and a pension, profit-sharing, stock-bonus, or stock-ownership plan.

(b) To the extent that a payment is characterized as interest or a dividend or a payment made in lieu of interest or a dividend, a trustee shall allocate it to income. The trustee shall allocate to principal the balance of the payment and any other payment received in the same accounting period that is not characterized as interest, a dividend, or an equivalent payment.

(c) If no part of a payment is characterized as interest, a dividend, or an equivalent payment, and all or part of the payment is required to be made, a trustee shall allocate to income 10 percent of the part that is required to be made during the accounting period and the balance to principal. If no part of a payment is required to be made or the payment received is the entire amount to which the trustee is entitled, the trustee shall allocate the entire payment to principal. For purposes of this subsection, a payment is not "required to be made" to the extent that it is made because the trustee exercises a right of withdrawal.

(d) If, to obtain an estate tax marital deduction for a trust, a trustee must allocate more of a payment to income than provided for by this section, the trustee shall allocate to income the additional amount necessary to obtain the marital deduction.

(e) This section does not apply to payments to which Section 410 applies.

Comment

Scope. Section 409 applies to amounts received under contractual arrangements that provide for payments to a third party beneficiary as a result of services rendered or property transferred to the payer. While the right to receive such payments is a liquidating asset of the kind described in Section 410 (i.e., "an asset whose value will diminish or terminate because the asset is expected to produce receipts for a period of limited duration"), these payment rights are covered separately in Section 409 because of their special characteristics.

Section 409 applies to receipts from all forms of annuities and deferred compensation arrangements, whether the payment will be received by the trust in a lump sum or in installments over a period of years. It applies to bonuses that may be received over two or three years and payments that may last for much longer periods, including payments from an individual retirement account (IRA), deferred compensation plan (whether qualified or not

qualified for special federal income tax treatment), and insurance renewal commissions. It applies to a retirement plan to which the settlor has made contributions, just as it applies to an annuity policy that the settlor may have purchased individually, and it applies to variable annuities, deferred annuities, annuities issued by commercial insurance companies, and "private annuities" arising from the sale of property to another individual or entity in exchange for payments that are to be made for the life of one or more individuals. The section applies whether the payments begin when the payment right becomes subject to the trust or are deferred until a future date, and it applies whether payments are made in cash or in kind, such as employer stock (in-kind payments usually will be made in a single distribution that will be allocated to principal under the second sentence of subsection (c)).

The 1962 Act. Under Section 12 of the 1962 Act, receipts from "rights to receive payments on a contract for deferred compensation" are allocated to income each year in an amount "not in excess of 5% per year" of the property's inventory value. While "not in excess of 5%" suggests that the annual allocation may range from zero to 5% of the inventory value, in practice the rule is usually treated as prescribing a 5% allocation. The inventory value is usually the present value of all the future payments, and since the inventory value is determined as of the date on which the payment right becomes subject to the trust, the inventory value, and thus the amount of the annual income allocation, depends significantly on the applicable interest rate on the decedent's date of death. That rate may be much higher or lower than the average long-term interest rate. The amount determined under the 5% formula tends to become fixed and remain unchanged even though the amount received by the trust increases or decreases.

Allocations Under Section 409(b). Section 409(b) applies to plans whose terms characterize payments made under the plan as dividends, interest, or payments in lieu of dividends or interest. For example, some deferred compensation plans that hold debt obligations or stock of the plan's sponsor in an account for future delivery to the person rendering the services provide for the annual payment to that person of dividends received on the stock or interest received on the debt obligations. Other plans provide that the account of the person rendering the services shall be credited with "phantom" shares of stock and require an annual payment that is equivalent to the dividends that would be received on that number of shares if they were actually issued; or a plan may entitle the person rendering the services to receive a fixed dollar amount in the future and provide for the annual payment of interest on the deferred amount during the period prior to its payment. Under Section 409(b), payments of dividends, interest or payments in lieu of dividends or interest under plans of this type are allocated to income; all other payments received under these plans are allocated to principal.

Section 409(b) does not apply to an IRA or an arrangement with payment provisions similar to an IRA. IRAs and similar arrangements are subject to the provisions in Section 409(c).

Allocations Under Section 409(c). The focus of Section 409, for purposes of allocating payments received by a trust to or between principal and income, is on the payment right rather than on assets that may be held in a fund from which the payments are made. Thus, if an IRA holds a portfolio of marketable stocks and bonds, the amount received by the IRA as dividends and interest is not taken into account in determining the principal and income allocation except to the extent that the Internal Revenue Service may require them to be taken into account when the payment is received by a trust that qualifies for the estate tax marital deduction (a situation that is provided for in Section 409(d)). An IRA is subject to federal income tax rules that require payments to begin by a particular date and be made over a specific number of years or a period measured by the lives of one or more persons. The payment right of a trust that is named as a beneficiary of an IRA is not a right to receive particular items that are paid to the IRA, but is instead the right to receive an amount determined by dividing the value of the IRA by the remaining number of years in the payment period. This payment right is similar to the right to receive a unitrust amount, which is normally expressed as an amount equal to a percentage of the value of the unitrust assets without regard to dividends or interest that may be received by the unitrust.

An amount received from an IRA or a plan with a payment provision similar to that of an IRA is allocated under Section 409(c), which differentiates between payments that are required to be made and all other payments. To the extent that a payment is required to be

made (either under federal income tax rules or, in the case of a plan that is not subject to those rules, under the terms of the plan), 10% of the amount received is allocated to income and the balance is allocated to principal. All other payments are allocated to principal because they represent a change in the form of a principal asset; Section 409 follows the rule in Section 404(2), which provides that money or property received from a change in the form of a principal asset be allocated to principal.

Section 409(c) produces an allocation to income that is similar to the allocation under the 1962 Act formula if the annual payments are the same throughout the payment period, and it is simpler to administer. The amount allocated to income under Section 409 is not dependent upon the interest rate that is used for valuation purposes when the decedent dies, and if the payments received by the trust increase or decrease from year to year because the fund from which the payment is made increases or decreases in value, the amount allocated to income will also increase or decrease.

Marital deduction requirements. When an IRA is payable to a QTIP marital deduction trust, the IRS treats the IRA as separate terminable interest property and requires that a QTIP election be made for it. In order to qualify for QTIP treatment, an IRS ruling states that all of the IRA's income must be distributed annually to the QTIP marital deduction trust and then must be allocated to trust income for distribution to the spouse. Rev. Rul. 89-89, 1989-2 C.B. 231. If an allocation to income under this Act of 10% of the required distribution from the IRA does not meet the requirement that all of the IRA's income be distributed from the trust to the spouse, the provision in subsection (d) requires the trustee to make a larger allocation to income to the extent necessary to qualify for the marital deduction. The requirement of Rev. Rul. 89-89 should also be satisfied if the IRA beneficiary designation permits the spouse to require the trustee to withdraw the necessary amount from the IRA and distribute it to her, even though the spouse never actually requires the trustee to do so. If such a provision is in the beneficiary designation, a distribution under subsection (d) should not be necessary.

Application of Section 104. Section 104(a) of this Act gives a trustee who is acting under the prudent investor rule the power to adjust from principal to income if, considering the portfolio as a whole and not just receipts from deferred compensation, the trustee determines that an adjustment is necessary. See Example (5) in the Comment following Section 104.

Section 410. Liquidating Asset.

(a) In this section, "liquidating asset" means an asset whose value will diminish or terminate because the asset is expected to produce receipts for a period of limited duration. The term includes a leasehold, patent, copyright, royalty right, and right to receive payments during a period of more than one year under an arrangement that does not provide for the payment of interest on the unpaid balance. The term does not include a payment subject to Section 409, resources subject to Section 411, timber subject to Section 412, an activity subject to Section 414, an asset subject to Section 415, or any asset for which the trustee establishes a reserve for depreciation under Section 503.

(b) A trustee shall allocate to income 10 percent of the receipts from a liquidating asset and the balance to principal.

Comment

Prior Acts. Section 11 of the 1962 Act allocates receipts from "property subject to depletion" to income in an amount "not in excess of 5%" of the asset's inventory value. The 1931 Act has a similar 5% rule that applies when the trustee is under a duty to change the form of the investment. The 5% rule imposes on a trust the obligation to pay a fixed annuity to the income beneficiary until the asset is exhausted. Under both the 1931 and 1962 Acts the balance of each year's receipts is added to principal. A fixed payment can produce unfair results. The remainder beneficiary receives all of the receipts from unexpected growth in the asset, e.g., if royalties on a patent or copyright increase significantly. Conversely, if the receipts diminish more rapidly than expected, most of the amount received by the trust will be allocated to income and little to principal. Moreover, if the annual payments remain the same for the life of the asset, the amount allocated to principal will usually be less than the original inventory value. For these reasons, Section 410 abandons the annuity approach under the

5% rule.

Lottery payments. The reference in subsection (a) to rights to receive payments under an arrangement that does not provide for the payment of interest includes state lottery prizes and similar fixed amounts payable over time that are not deferred compensation arrangements covered by Section 409.

Section 411. Minerals, Water, and Other Natural Resources.

(a) To the extent that a trustee accounts for receipts from an interest in minerals or other natural resources pursuant to this section, the trustee shall allocate them as follows:

(1) If received as nominal delay rental or nominal annual rent on a lease, a receipt must be allocated to income.

(2) If received from a production payment, a receipt must be allocated to income if and to the extent that the agreement creating the production payment provides a factor for interest or its equivalent. The balance must be allocated to principal.

(3) If an amount received as a royalty, shut-in-well payment, take-or-pay payment, bonus, or delay rental is more than nominal, 90 percent must be allocated to principal and the balance to income.

(4) If an amount is received from a working interest or any other interest not provided for in paragraph (1), (2), or (3), 90 percent of the net amount received must be allocated to principal and the balance to income.

(b) An amount received on account of an interest in water that is renewable must be allocated to income. If the water is not renewable, 90 percent of the amount must be allocated to principal and the balance to income.

(c) This [Act] applies whether or not a decedent or donor was extracting minerals, water, or other natural resources before the interest became subject to the trust.

(d) If a trust owns an interest in minerals, water, or other natural resources on [the effective date of this [Act]], the trustee may allocate receipts from the interest as provided in this [Act] or in the manner used by the trustee before [the effective date of this [Act]]. If the trust acquires an interest in minerals, water, or other natural resources after [the effective date of this [Act]], the trustee shall allocate receipts from the interest as provided in this [Act].

Comment

Prior Acts. The 1962 Act allocates to principal as a depletion allowance, 27-1/2% of the gross receipts, but not more than 50% of the net receipts after paying expenses. The Internal Revenue Code no longer provides for a 27-1/2% depletion allowance, although the major oil-producing States have retained the 27-1/2% provision in their principal and income acts (Texas amended its Act in 1993, but did not change the depletion provision). Section 9 of the 1931 Act allocates all of the net proceeds received as consideration for the "permanent severance of natural resources from the lands" to principal.

Section 411 allocates 90% of the net receipts to principal and 10% to income. A depletion provision that is tied to past or present Code provisions is undesirable because it causes a large portion of the oil and gas receipts to be paid out as income. As wells are depleted, the amount received by the income beneficiary falls drastically. Allocating a larger portion of the receipts to principal enables the trustee to acquire other income producing assets that will continue to produce income when the mineral reserves are exhausted.

Application of Sections 403 and 408. This section applies to the extent that the trustee does not account separately for receipts from minerals and other natural resources under Section 403 or allocate all of the receipts to principal under Section 408.

Open mine doctrine. The purpose of Section 411(c) is to abolish the "open mine doctrine" as it may apply to the rights of an income beneficiary and a remainder beneficiary in receipts from the production of minerals from land owned or leased by a trust. Instead, such receipts are to be allocated to or between principal and income in accordance with the

provisions of this Act. For a discussion of the open mine doctrine, see generally 3A Austin W. Scott & William F. Fratcher, The Law of Trusts § 239.3 (4th ed. 1988), and *Nutter v. Stockton*, 626 P.2d 861 (Okla. 1981).

Effective date provision. Section 9(b) of the 1962 Act provides that the natural resources provision does not apply to property interests held by the trust on the effective date of the Act, which reflects concerns about the constitutionality of applying a retroactive administrative provision to interests in real estate, based on the opinion in the Oklahoma case of *Franklin v. Margay Oil Corporation*, 153 P.2d 486, 501 (Okla. 1944). Section 411(d) permits a trustee to use either the method provided for in this Act or the method used before the Act takes effect. Lawyers in jurisdictions other than Oklahoma may conclude that retroactivity is not a problem as to property situated in their States, and this provision permits trustees to decide, based on advice from counsel in States whose law may be different from that of Oklahoma, whether they may apply this provision retroactively if they conclude that to do so is in the best interests of the beneficiaries.

If the property is in a State other than the State where the trust is administered, the trustee must be aware that the law of the property's situs may control this question. The outcome turns on a variety of questions: whether the terms of the trust specify that the law of a State other than the situs of the property shall govern the administration of the trust, and whether the courts will follow the terms of the trust; whether the trust's asset is the land itself or a leasehold interest in the land (as it frequently is with oil and gas property); whether a leasehold interest or its proceeds should be classified as real property or personal property, and if as personal property, whether applicable state law treats it as a movable or an immovable for conflict of laws purposes. See 5A Austin W. Scott & William F. Fratcher, The Law of Trusts §§ 648, at 531, 533-534; § 657, at 600 (4th ed. 1989).

Section 412. Timber.

(a) To the extent that a trustee accounts for receipts from the sale of timber and related products pursuant to this section, the trustee shall allocate the net receipts:

(1) to income to the extent that the amount of timber removed from the land does not exceed the rate of growth of the timber during the accounting periods in which a beneficiary has a mandatory income interest;

(2) to principal to the extent that the amount of timber removed from the land exceeds the rate of growth of the timber or the net receipts are from the sale of standing timber;

(3) to or between income and principal if the net receipts are from the lease of timberland or from a contract to cut timber from land owned by a trust, by determining the amount of timber removed from the land under the lease or contract and applying the rules in paragraphs (1) and (2); or

(4) to principal to the extent that advance payments, bonuses, and other payments are not allocated pursuant to paragraph (1), (2), or (3).

(b) In determining net receipts to be allocated pursuant to subsection (a), a trustee shall deduct and transfer to principal a reasonable amount for depletion.

(c) This [Act] applies whether or not a decedent or transferor was harvesting timber from the property before it became subject to the trust.

(d) If a trust owns an interest in timberland on [the effective date of this [Act]], the trustee may allocate net receipts from the sale of timber and related products as provided in this [Act] or in the manner used by the trustee before [the effective date of this [Act]]. If the trust acquires an interest in timberland after [the effective date of this [Act]], the trustee shall allocate net receipts from the sale of timber and related products as provided in this [Act].

Comment

Scope of section. The rules in Section 412 are intended to apply to net receipts from the sale of trees and by-products from harvesting and processing trees without regard to the

kind of trees that are cut or whether the trees are cut before or after a particular number of years of growth. The rules apply to the sale of trees that are expected to produce lumber for building purposes, trees sold as pulpwood, and Christmas and other ornamental trees. Subsection (a) applies to net receipts from property owned by the trustee and property leased by the trustee. The Act is not intended to prevent a tenant in possession of the property from using wood that he cuts on the property for personal, noncommercial purposes, such as a Christmas tree, firewood, mending old fences or building new fences, or making repairs to structures on the property.

Under subsection (a), the amount of net receipts allocated to income depends upon whether the amount of timber removed is more or less than the rate of growth. The method of determining the amount of timber removed and the rate of growth is up to the trustee, based on methods customarily used for the kind of timber involved.

Application of Sections 403 and 408. This section applies to the extent that the trustee does not account separately for net receipts from the sale of timber and related products under Section 403 or allocate all of the receipts to principal under Section 408. The option to account for net receipts separately under Section 403 takes into consideration the possibility that timber harvesting operations may have been conducted before the timber property became subject to the trust, and that it may make sense to continue using accounting methods previously established for the property. It also permits a trustee to use customary accounting practices for timber operations even if no harvesting occurred on the property before it became subject to the trust.

Section 413. Property Not Productive of Income.

(a) If a marital deduction is allowed for all or part of a trust whose assets consist substantially of property that does not provide the spouse with sufficient income from or use of the trust assets, and if the amounts that the trustee transfers from principal to income under Section 104 and distributes to the spouse from principal pursuant to the terms of the trust are insufficient to provide the spouse with the beneficial enjoyment required to obtain the marital deduction, the spouse may require the trustee to make property productive of income, convert property within a reasonable time, or exercise the power conferred by Section 104(a). The trustee may decide which action or combination of actions to take.

(b) In cases not governed by subsection (a), proceeds from the sale or other disposition of an asset are principal without regard to the amount of income the asset produces during any accounting period.

Comment

Prior Acts' Conflict with Uniform Prudent Investor Act. Section 2(b) of the Uniform Prudent Investor Act provides that "[a] trustee's investment and management decisions respecting individual assets must be evaluated not in isolation but in the context of the trust portfolio as a whole ... ." The underproductive property provisions in Section 12 of the 1962 Act and Section 11 of the 1931 Act give the income beneficiary a right to receive a portion of the proceeds from the sale of underproductive property as "delayed income." In each Act the provision applies on an asset by asset basis and not by taking into consideration the trust portfolio as a whole, which conflicts with the basic precept in Section 2(b) of the Prudent Investor Act. Moreover, in determining the amount of delayed income, the prior Acts do not permit a trustee to take into account the extent to which the trustee may have distributed principal to the income beneficiary, under principal invasion provisions in the terms of the trust, to compensate for insufficient income from the unproductive asset. Under Section 104(b)(7) of this Act, a trustee must consider prior distributions of principal to the income beneficiary in deciding whether and to what extent to exercise the power to adjust conferred by Section 104(a).

Duty to make property productive of income. In order to implement the Uniform Prudent Investor Act, this Act abolishes the right to receive delayed income from the sale proceeds of an asset that produces little or no income, but it does not alter existing state law regarding the income beneficiary's right to compel the trustee to make property productive of income. As the law continues to develop in this area, the duty to make property productive of current income in a particular situation should be determined by taking into consideration the performance of

the portfolio as a whole and the extent to which a trustee makes principal distributions to the income beneficiary under the terms of the trust and adjustments between principal and income under Section 104 of this Act.

Trusts for which the value of the right to receive income is important for tax reasons may be affected by Reg. § 1.7520-3(b)(2)(v) *Example (1)*, § 20.7520-3(b)(2)(v) *Examples (1)* and *(2)*, and § 25.7520-3(b)(2)(v) *Examples (1)* and *(2)*, which provide that if the income beneficiary does not have the right to compel the trustee to make the property productive, the income interest is considered unproductive and may not be valued actuarially under those sections.

Marital deduction trusts. Subsection (a) draws on language in Reg. § 20.2056(b)-5(f)(4) and (5) to enable a trust for a spouse to qualify for a marital deduction if applicable state law is unclear about the spouse's right to compel the trustee to make property productive of income. The trustee should also consider the application of Section 104 of this Act and the provisions of Restatement of Trusts 3d: Prudent Investor Rule § 240, at 186, app. § 240, at 252 (1992). Example (6) in the Comment to Section 104 describes a situation involving the payment from income of carrying charges on unproductive real estate in which Section 104 may apply.

Once the two conditions have occurred - insufficient beneficial enjoyment from the property and the spouse's demand that the trustee take action under this section - the trustee must act; but instead of the formulaic approach of the 1962 Act, which is triggered only if the trustee sells the property, this Act permits the trustee to decide whether to make the property productive of income, convert it, transfer funds from principal to income, or to take some combination of those actions. The trustee may rely on the power conferred by Section 104(a) to adjust from principal to income if the trustee decides that it is not feasible or appropriate to make the property productive of income or to convert the property. Given the purpose of Section 413, the power under Section 104(a) would be exercised to transfer principal to income and not to transfer income to principal.

Section 413 does not apply to a so-called "estate" trust, which will qualify for the marital deduction, even though the income may be accumulated for a term of years or for the life of the surviving spouse, if the terms of the trust require the principal and undistributed income to be paid to the surviving spouse's estate when the spouse dies. Reg. § 20.2056(c)-2(b)(1)(iii).

Section 414. Derivatives and Options.

(a) In this section, "derivative" means a contract or financial instrument or a combination of contracts and financial instruments which gives a trust the right or obligation to participate in some or all changes in the price of a tangible or intangible asset or group of assets, or changes in a rate, an index of prices or rates, or other market indicator for an asset or a group of assets.

(b) To the extent that a trustee does not account under Section 403 for transactions in derivatives, the trustee shall allocate to principal receipts from and disbursements made in connection with those transactions.

(c) If a trustee grants an option to buy property from the trust, whether or not the trust owns the property when the option is granted, grants an option that permits another person to sell property to the trust, or acquires an option to buy property for the trust or an option to sell an asset owned by the trust, and the trustee or other owner of the asset is required to deliver the asset if the option is exercised, an amount received for granting the option must be allocated to principal. An amount paid to acquire the option must be paid from principal. A gain or loss realized upon the exercise of an option, including an option granted to a settlor of the trust for services rendered, must be allocated to principal.

Comment

Scope and application. It is difficult to predict how frequently and to what extent trustees will invest directly in derivative financial instruments rather than participating indirectly through investment entities that may utilize these instruments in varying degrees. If the trust participates in derivatives indirectly through an entity, an amount received from the entity will be allocated under Section 401 and not Section 414. If a trustee invests directly in derivatives to a significant extent, the expectation is that receipts and disbursements related to

derivatives will be accounted for under Section 403; if a trustee chooses not to account under Section 403, Section 414(b) provides the default rule. Certain types of option transactions in which trustees may engage are dealt with in subsection (c) to distinguish those transactions from ones involving options that are embedded in derivative financial instruments.

Definition of "derivative." "Derivative" is a difficult term to define because new derivatives are invented daily as dealers tailor their terms to achieve specific financial objectives for particular clients. Since derivatives are typically contract-based, a derivative can probably be devised for almost any set of objectives if another party can be found who is willing to assume the obligations required to meet those objectives.

The most comprehensive definition of derivative is in the Exposure Draft of a Proposed Statement of Financial Accounting Standards titled "Accounting for Derivative and Similar Financial Instruments and for Hedging Activities," which was released by the Financial Accounting Standards Board (FASB) on June 20, 1996 (No. 162-B). The definition in Section 414(a) is derived in part from the FASB definition. The purpose of the definition in subsection (a) is to implement the substantive rule in subsection (b) that provides for all receipts and disbursements to be allocated to principal to the extent the trustee elects not to account for transactions in derivatives under Section 403. As a result, it is much shorter than the FASB definition, which serves much more ambitious objectives.

A derivative is frequently described as including futures, forwards, swaps and options, terms that also require definition, and the definition in this Act avoids these terms. FASB used the same approach, explaining in paragraph 65 of the Exposure Draft:

> The definition of *derivative financial instrument* in this Statement includes those financial instruments generally considered to be derivatives, such as forwards, futures, swaps, options, and similar instruments. The Board considered defining a derivative financial instrument by merely referencing those commonly understood instruments, similar to paragraph 5 of Statement 119, which says that "... a derivative financial instrument is a futures, forward, swap, or option contract, or other financial instrument with similar characteristics." However, the continued development of financial markets and innovative financial instruments could ultimately render a definition based on examples inadequate and obsolete. The Board, therefore, decided to base the definition of a derivative financial instrument on a description of the common characteristics of those instruments in order to accommodate the accounting for newly developed derivatives. (Footnote omitted.)

Marking to market. A gain or loss that occurs because the trustee marks securities to market or to another value during an accounting period is not a transaction in a derivative financial instrument that is income or principal under the Act - only cash receipts and disbursements, and the receipt of property in exchange for a principal asset, affect a trust's principal and income accounts.

Receipt of property other than cash. If a trustee receives property other than cash upon the settlement of a derivatives transaction, that property would be principal under Section 404(2).

Options. Options to which subsection (c) applies include an option to purchase real estate owned by the trustee and a put option purchased by a trustee to guard against a drop in value of a large block of marketable stock that must be liquidated to pay estate taxes. Subsection (c) would also apply to a continuing and regular practice of selling call options on securities owned by the trust if the terms of the option require delivery of the securities. It does not apply if the consideration received or given for the option is something other than cash or property, such as cross-options granted in a buy-sell agreement between owners of an entity.

Section 415. Asset-Backed Securities.

(a) In this section, "asset-backed security" means an asset whose value is based upon the right it gives the owner to receive distributions from the proceeds of financial assets that provide collateral for the security. The term includes an asset that gives the owner the right to receive from the collateral financial assets only the interest or other current return or only the proceeds other than interest or current return. The term does not include an asset to which

Section 401 or 409 applies.

(b) If a trust receives a payment from interest or other current return and from other proceeds of the collateral financial assets, the trustee shall allocate to income the portion of the payment which the payer identifies as being from interest or other current return and shall allocate the balance of the payment to principal.

(c) If a trust receives one or more payments in exchange for the trust's entire interest in an asset-backed security in one accounting period, the trustee shall allocate the payments to principal. If a payment is one of a series of payments that will result in the liquidation of the trust's interest in the security over more than one accounting period, the trustee shall allocate 10 percent of the payment to income and the balance to principal.

Comment

Scope of section. Typical asset-backed securities include arrangements in which debt obligations such as real estate mortgages, credit card receivables and auto loans are acquired by an investment trust and interests in the trust are sold to investors. The source for payments to an investor is the money received from principal and interest payments on the underlying debt. An asset-backed security includes an "interest only" or a "principal only" security that permits the investor to receive only the interest payments received from the bonds, mortgages or other assets that are the collateral for the asset-backed security, or only the principal payments made on those collateral assets. An asset-backed security also includes a security that permits the investor to participate in either the capital appreciation of an underlying security or in the interest or dividend return from such a security, such as the "Primes" and "Scores" issued by Americus Trust. An asset-backed security does not include an interest in a corporation, partnership, or an investment trust described in the Comment to Section 402, whose assets consist significantly or entirely of investment assets. Receipts from an instrument that do not come within the scope of this section or any other section of the Act would be allocated entirely to principal under the rule in Section 103(a)(4), and the trustee may then consider whether and to what extent to exercise the power to adjust in Section 104, taking into account the return from the portfolio as whole and other relevant factors.

[Article] 5

Allocation of disbursements during

administration of trust

Section 501. Disbursements From Income. A trustee shall make the following disbursements from income to the extent that they are not disbursements to which Section 201(2)(B) or (C) applies:

(1) one-half of the regular compensation of the trustee and of any person providing investment advisory or custodial services to the trustee;

(2) one-half of all expenses for accountings, judicial proceedings, or other matters that involve both the income and remainder interests;

(3) all of the other ordinary expenses incurred in connection with the administration, management, or preservation of trust property and the distribution of income, including interest, ordinary repairs, regularly recurring taxes assessed against principal, and expenses of a proceeding or other matter that concerns primarily the income interest; and

(4) recurring premiums on insurance covering the loss of a principal asset or the loss of income from or use of the asset.

Comment

Trustee fees. The regular compensation of a trustee or the trustee's agent includes compensation based on a percentage of either principal or income or both.

Insurance premiums. The reference in paragraph (4) to "recurring" premiums is intended to distinguish premiums paid annually for fire insurance from premiums on title insurance, each of which covers the loss of a principal asset. Title insurance premiums would

be a principal disbursement under Section 502(a)(5).

Regularly recurring taxes. The reference to "regularly recurring taxes assessed against principal" includes all taxes regularly imposed on real property and tangible and intangible personal property.

Section 502. Disbursements From Principal.

(a) A trustee shall make the following disbursements from principal:

(1) the remaining one-half of the disbursements described in Section 501(1) and (2);

(2) all of the trustee's compensation calculated on principal as a fee for acceptance, distribution, or termination, and disbursements made to prepare property for sale;

(3) payments on the principal of a trust debt;

(4) expenses of a proceeding that concerns primarily principal, including a proceeding to construe the trust or to protect the trust or its property;

(5) premiums paid on a policy of insurance not described in Section 501(4) of which the trust is the owner and beneficiary;

(6) estate, inheritance, and other transfer taxes, including penalties, apportioned to the trust; and

(7) disbursements related to environmental matters, including reclamation, assessing environmental conditions, remedying and removing environmental contamination, monitoring remedial activities and the release of substances, preventing future releases of substances, collecting amounts from persons liable or potentially liable for the costs of those activities, penalties imposed under environmental laws or regulations and other payments made to comply with those laws or regulations, statutory or common law claims by third parties, and defending claims based on environmental matters.

(b) If a principal asset is encumbered with an obligation that requires income from that asset to be paid directly to the creditor, the trustee shall transfer from principal to income an amount equal to the income paid to the creditor in reduction of the principal balance of the obligation.

Comment

Environmental expenses. All environmental expenses are payable from principal, subject to the power of the trustee to transfer funds to principal from income under Section 504. However, the Drafting Committee decided that it was not necessary to broaden this provision to cover other expenditures made under compulsion of governmental authority. See generally the annotation at 43 A.L.R.4th 1012 (Duty as Between Life Tenant and Remainderman with Respect to Cost of Improvements or Repairs Made Under Compulsion of Governmental Authority).

Environmental expenses paid by a trust are to be paid from principal under Section 502(a)(7) on the assumption that they will usually be extraordinary in nature. Environmental expenses might be paid from income if the trustee is carrying on a business that uses or sells toxic substances, in which case environmental cleanup costs would be a normal cost of doing business and would be accounted for under Section 403. In accounting under that Section, environmental costs will be a factor in determining how much of the net receipts from the business is trust income. Paying all other environmental expenses from principal is consistent with this Act's approach regarding receipts - when a receipt is not clearly a current return on a principal asset, it should be added to principal because over time both the income and remainder beneficiaries benefit from this treatment. Here, allocating payments required by environmental laws to principal imposes the detriment of those payments over time on both the income and remainder beneficiaries.

Under Sections 504(a) and 504(b)(5), a trustee who makes or expects to make a principal disbursement for an environmental expense described in Section 502(a)(7) is

authorized to transfer an appropriate amount from income to principal to reimburse principal for disbursements made or to provide a reserve for future principal disbursements.

The first part of Section 502(a)(7) is based upon the definition of an "environmental remediation trust" in Treas. Reg. § 301.7701-4(e)(as amended in 1996). This is not because the Act applies to an environmental remediation trust, but because the definition is a useful and thoroughly vetted description of the kinds of expenses that a trustee owning contaminated property might incur. Expenses incurred to comply with environmental laws include the cost of environmental consultants, administrative proceedings and burdens of every kind imposed as the result of an administrative or judicial proceeding, even though the burden is not formally characterized as a penalty.

Title proceedings. Disbursements that are made to protect a trust's property, referred to in Section 502(a)(4), include an "action to assure title" that is mentioned in Section 13(c)(2) of the 1962 Act.

Insurance premiums. Insurance premiums referred to in Section 502(a)(5) include title insurance premiums. They also include premiums on life insurance policies owned by the trust, which represent the trust's periodic investment in the insurance policy. There is no provision in the 1962 Act for life insurance premiums.

Taxes. Generation-skipping transfer taxes are payable from principal under subsection (a)(6).

Section 503. Transfers From Income To Principal For Depreciation.

(a) In this section, "depreciation" means a reduction in value due to wear, tear, decay, corrosion, or gradual obsolescence of a fixed asset having a useful life of more than one year.

(b) A trustee may transfer to principal a reasonable amount of the net cash receipts from a principal asset that is subject to depreciation, but may not transfer any amount for depreciation:

(1) of that portion of real property used or available for use by a beneficiary as a residence or of tangible personal property held or made available for the personal use or enjoyment of a beneficiary;

(2) during the administration of a decedent's estate; or

(3) under this section if the trustee is accounting under Section 403 for the business or activity in which the asset is used.

(c) An amount transferred to principal need not be held as a separate fund.

Comment

Prior Acts. The 1931 Act has no provision for depreciation. Section 13(a)(2) of the 1962 Act provides that a charge shall be made against income for "... a reasonable allowance for depreciation on property subject to depreciation under generally accepted accounting principles ... ." That provision has been resisted by many trustees, who do not provide for any depreciation for a variety of reasons. One reason relied upon is that a charge for depreciation is not needed to protect the remainder beneficiaries if the value of the land is increasing; another is that generally accepted accounting principles may not require depreciation to be taken if the property is not part of a business. The Drafting Committee concluded that the decision to provide for depreciation should be discretionary with the trustee. The power to transfer funds from income to principal that is granted by this section is a discretionary power of administration referred to in Section 103(b), and in exercising the power a trustee must comply with Section 103(b).

One purpose served by transferring cash from income to principal for depreciation is to provide funds to pay the principal of an indebtedness secured by the depreciable property. Section 504(b)(4) permits the trustee to transfer additional cash from income to principal for this purpose to the extent that the amount transferred from income to principal for depreciation is less than the amount of the principal payments.

Section 504. Transfers From Income To Reimburse Principal.

(a) If a trustee makes or expects to make a principal disbursement described in this section, the trustee may transfer an appropriate amount from income to principal in one or more accounting periods to reimburse principal or to provide a reserve for future principal disbursements.

(b) Principal disbursements to which subsection (a) applies include the following, but only to the extent that the trustee has not been and does not expect to be reimbursed by a third party:

(1) an amount chargeable to income but paid from principal because it is unusually large, including extraordinary repairs;

(2) a capital improvement to a principal asset, whether in the form of changes to an existing asset or the construction of a new asset, including special assessments;

(3) disbursements made to prepare property for rental, including tenant allowances, leasehold improvements, and broker's commissions;

(4) periodic payments on an obligation secured by a principal asset to the extent that the amount transferred from income to principal for depreciation is less than the periodic payments; and

(5) disbursements described in Section 502(a)(7).

(c) If the asset whose ownership gives rise to the disbursements becomes subject to a successive income interest after an income interest ends, a trustee may continue to transfer amounts from income to principal as provided in subsection (a).

Comment

Prior Acts. The sources of Section 504 are Section 13(b) of the 1962 Act, which permits a trustee to "regularize distributions," if charges against income are unusually large, by using "reserves or other reasonable means" to withhold sums from income distributions; Section 13(c)(3) of the 1962 Act, which authorizes a trustee to establish an allowance for depreciation out of income if principal is used for extraordinary repairs, capital improvements and special assessments; and Section 12(3) of the 1931 Act, which permits the trustee to spread income expenses of unusual amount "throughout a series of years." Section 504 contains a more detailed enumeration of the circumstances in which this authority may be used, and includes in subsection (b)(4) the express authority to use income to make principal payments on a mortgage if the depreciation charge against income is less than the principal payments on the mortgage.

Section 505. Income Taxes.

(a) A tax required to be paid by a trustee based on receipts allocated to income must be paid from income.

(b) A tax required to be paid by a trustee based on receipts allocated to principal must be paid from principal, even if the tax is called an income tax by the taxing authority.

(c) A tax required to be paid by a trustee on the trust's share of an entity's taxable income must be paid proportionately:

(1) from income to the extent that receipts from the entity are allocated to income; and

(2) from principal to the extent that:

(A) receipts from the entity are allocated to principal; and

(B) the trust's share of the entity's taxable income exceeds the total receipts described in paragraphs (1) and (2)(A).

(d) For purposes of this section, receipts allocated to principal or income must be reduced by the amount distributed to a beneficiary from principal or income for which the trust receives a deduction in calculating the tax.

Comment

Electing Small Business Trusts. An Electing Small Business Trust (ESBT) is a creature created by Congress in the Small Business Job Protection Act of 1996 (P.L. 104-188). For years beginning after 1996, an ESBT may qualify as an S corporation stockholder even if the trustee does not distribute all of the trust's income annually to its beneficiaries. The portion of an ESBT that consists of the S corporation stock is treated as a separate trust for tax purposes (but not for trust accounting purposes), and the S corporation income is taxed directly to that portion of the trust even if some or all of that income is distributed to the beneficiaries.

A trust normally receives a deduction for distributions it makes to its beneficiaries. Subsection (d) takes into account the possibility that an ESBT may not receive a deduction for trust accounting income that is distributed to the beneficiaries. Only limited guidance has been issued by the Internal Revenue Service, and it is too early to anticipate all of the technical questions that may arise, but the powers granted to a trustee in Sections 506 and 104 to make adjustments are probably sufficient to enable a trustee to correct inequities that may arise because of technical problems.

Section 506. Adjustments Between Principal and Income Because Of Taxes.

(a) A fiduciary may make adjustments between principal and income to offset the shifting of economic interests or tax benefits between income beneficiaries and remainder beneficiaries which arise from:

(1) elections and decisions, other than those described in subsection (b), that the fiduciary makes from time to time regarding tax matters;

(2) an income tax or any other tax that is imposed upon the fiduciary or a beneficiary as a result of a transaction involving or a distribution from the estate or trust; or

(3) the ownership by an estate or trust of an interest in an entity whose taxable income, whether or not distributed, is includable in the taxable income of the estate, trust, or a beneficiary.

(b) If the amount of an estate tax marital deduction or charitable contribution deduction is reduced because a fiduciary deducts an amount paid from principal for income tax purposes instead of deducting it for estate tax purposes, and as a result estate taxes paid from principal are increased and income taxes paid by an estate, trust, or beneficiary are decreased, each estate, trust, or beneficiary that benefits from the decrease in income tax shall reimburse the principal from which the increase in estate tax is paid. The total reimbursement must equal the increase in the estate tax to the extent that the principal used to pay the increase would have qualified for a marital deduction or charitable contribution deduction but for the payment. The proportionate share of the reimbursement for each estate, trust, or beneficiary whose income taxes are reduced must be the same as its proportionate share of the total decrease in income tax. An estate or trust shall reimburse principal from income.

Comment

Discretionary adjustments. Section 506(a) permits the fiduciary to make adjustments between income and principal because of tax law provisions. It would permit discretionary adjustments in situations like these: (1) A fiduciary elects to deduct administration expenses that are paid from principal on an income tax return instead of on the estate tax return; (2) a distribution of a principal asset to a trust or other beneficiary causes the taxable income of an estate or trust to be carried out to the distributee and relieves the persons who receive the income of any obligation to pay income tax on the income; or (3) a trustee realizes a capital gain on the sale of a principal asset and pays a large state income tax on the gain, but under

applicable federal income tax rules the trustee may not deduct the state income tax payment from the capital gain in calculating the trust's federal capital gain tax, and the income beneficiary receives the benefit of the deduction for state income tax paid on the capital gain. See generally Joel C. Dobris, Limits on the Doctrine of Equitable Adjustment in Sophisticated Postmortem Tax Planning, 66 Iowa L. Rev. 273 (1981).

Section 506(a)(3) applies to a qualified Subchapter S trust (QSST) whose income beneficiary is required to include a pro rata share of the S corporation's taxable income in his return. If the QSST does not receive a cash distribution from the corporation that is large enough to cover the income beneficiary's tax liability, the trustee may distribute additional cash from principal to the income beneficiary. In this case the retention of cash by the corporation benefits the trust principal. This situation could occur if the corporation's taxable income includes capital gain from the sale of a business asset and the sale proceeds are reinvested in the business instead of being distributed to shareholders.

Mandatory adjustment. Subsection (b) provides for a mandatory adjustment from income to principal to the extent needed to preserve an estate tax marital deduction or charitable contributions deduction. It is derived from New York's EPTL § 11-1.2(A), which requires principal to be reimbursed by those who benefit when a fiduciary elects to deduct administration expenses on an income tax return instead of the estate tax return. Unlike the New York provision, subsection (b) limits a mandatory reimbursement to cases in which a marital deduction or a charitable contributions deduction is reduced by the payment of additional estate taxes because of the fiduciary's income tax election. It is intended to preserve the result reached in *Estate of Britenstool v. Commissioner*, 46 T.C. 711 (1966), in which the Tax Court held that a reimbursement required by the predecessor of EPTL § 11-1.2(A) resulted in the estate receiving the same charitable contributions deduction it would have received if the administration expenses had been deducted for estate tax purposes instead of for income tax purposes. Because a fiduciary will elect to deduct administration expenses for income tax purposes only when the income tax reduction exceeds the estate tax reduction, the effect of this adjustment is that the principal is placed in the same position it would have occupied if the fiduciary had deducted the expenses for estate tax purposes, but the income beneficiaries receive an additional benefit. For example, if the income tax benefit from the deduction is $30,000 and the estate tax benefit would have been $20,000, principal will be reimbursed $20,000 and the net benefit to the income beneficiaries will be $10,000.

Irrevocable grantor trusts. Under Sections 671-679 of the Internal Revenue Code (the "grantor trust" provisions), a person who creates an irrevocable trust for the benefit of another person may be subject to tax on the trust's income or capital gains, or both, even though the settlor is not entitled to receive any income or principal from the trust. Because this is now a well-known tax result, many trusts have been created to produce this result, but there are also trusts that are unintentionally subject to this rule. The Act does not require or authorize a trustee to distribute funds from the trust to the settlor in these cases because it is difficult to establish a rule that applies only to trusts where this tax result is unintended and does not apply to trusts where the tax result is intended. Settlors who intend this tax result rarely state it as an objective in the terms of the trust, but instead rely on the operation of the tax law to produce the desired result. As a result it may not be possible to determine from the terms of the trust if the result was intentional or unintentional. If the drafter of such a trust wants the trustee to have the authority to distribute principal or income to the settlor to reimburse the settlor for taxes paid on the trust's income or capital gains, such a provision should be placed in the terms of the trust. In some situations the Internal Revenue Service may require that such a provision be placed in the terms of the trust as a condition to issuing a private letter ruling.

[Article] 6

Miscellaneous Provisions

Section 601. Uniformity Of Application and Construction. In applying and construing this Uniform Act, consideration must be given to the need to promote uniformity of the law with respect to its subject matter among States that enact it.

Section 602. Severability Clause. If any provision of this [Act] or its application to any person or circumstance is held invalid, the invalidity does not affect other provisions or

applications of this [Act] which can be given effect without the invalid provision or application, and to this end the provisions of this [Act] are severable.

Section 603. Repeal. The following acts and parts of acts are repealed:

(1) ....

(2) ....

(3) ....

Section 604. Effective Date. This [Act] takes effect on ....

Section 605. Application Of [ACT] To Existing Trusts and Estates. This [Act] applies to every trust or decedent's estate existing on [the effective date of this [Act]] except as otherwise expressly provided in the will or terms of the trust or in this [Act].

List of States Adopting the Uniform Principal and Income Act

(As of August 5, 2004)

The following states have adopted the 1997 revision to the Uniform Principal and Income Act,

1. Alabama
2. Alaska
3. Arizona
4. Arkansas
5. California
6. Colorado
7. Connecticut
8. District of Columbia
9. Florida
10. Hawaii
11. Idaho
12. Indiana
13. Iowa
14. Kansas
15. Maine
16. Maryland
17. Montana
18. Missouri
19. Nebraska
20. Nevada
21. new Jersey

22. new Mexico
23. New York
24. North Carolina
25. North Dakota
26. Ohio
27. Oklahoma
28. Oregon
29. Pennsylvania
30. South Carolina
31. Tennessee
32. Texas
33. Utah
34. Virginia
35. Washington
36. West Virginia
37. Wyoming

The legislation has been introduced in Massachusetts and Michigan.

The following states have adopted the Uniform Principal and Income Acts of 1931 and 1962:

1. Alabama 1931 Code 1975, §§ 19-3-270 to 19-3-382
2. Alaska 1962 AS 13.38.010 to 13.38.140
3. Arizona 1962 A.R.S. §§ 14-7401 to 14-7413
4. Arkansas 1997 ACA §§ 28-70-101 to 28-70-603
5. California 1997 West's Ann. Cal. Civ. Code §§ 16320 to 16375
6. Colorado 1931 West's C.R.S.A. §§ 15-1-401 to 15-1-417
7. Connecticut 1997 PA-164 (no statute number available)
8. Florida 1962 West's F.S.A. §§ 738.01 to 738.15
9. Georgia 1962 OCGA §§ 53-12-210 to 53-12-219
10. Hawaii 1962 HRS §§ 557-1 to 557-16
11. Idaho 1962 I.C. §§ 68-1001 to 68-1016
12. Illinois 1962 S.H.A.760 ILCS 15/1 to 15/17
13. Indiana 1962 West's A.I.C. 30-4-5-1 to 30-4-5-11
14. Iowa 1997 I.C.A. §§637.101 to 637.601
15. Kansas 1962 K.S.A. 58-901 to 58-917
16. Kentucky 1962 K.R.S. §§386.191 to 386.349
17. Maryland 1962 Code, Estates & Trusts, §§ 14-201 to 14-214
18. Michigan 1962 M.L.C.A. §§ 555.51 to 555.68
19. Minnesota 1962 M.S.A. §§ 501B.59 to 501B.76
20. Mississippi 1962 Code 1972, §§ 91-17-1 to 91-17-31
21. Missouri 1962 V.A.M.S §§ 456.700 to 456.820
22. Montana 1962 M.C.A. §§ 72-34-401 to 72-34-416
23. Nebraska 1962 R.R.S.1943, §§ 30-3101 to 30-3115
24. Nevada 1962 N.R.S. 164.140 to 164.370
25. New Jersey 1962 N.J.S.A. §§ 3B:19A-1 to 3B19A-35
26. New Mexico 1962 NMSA 1978 §§ 46-3-1- to 46-3-15
27. New York 1962 McKinney's EPTL 11.2.1
28. North Carolina 1962 G.S. §§ 37-16 to 37-40
29. North Dakota 1997 NDCC 59-04.2-01 to 59-04.2-30

30. Ohio 1962 R.C.§§ 134.01 to 1340.13; 2190.66 to 2109.68
31. Oklahoma 1997 60 Okl.St.Ann. §§ 175.101 to 175.602
32. Oregon 1962 ORS 129.005 to 129.125
33. Pennsylvania 1931 20 Pa.C.S.A. §§ 8101 to 8112
34. South Carolina 1962 Code 1976§§ 62-7-401 to 62-7-421
35. South Dakota 1962 SDCL 55-13-1 to 55-13-17
36. Tennessee 1931 T.C.A. §§ 35-6-101 to 35-6-115
37. Texas 1962 V.T.C.A., Property Code §§ 113.101 to 113.111
38. Utah 1962 U.C.A.1953, 22-3-1- to 22-3-16
39. Vermont 1931 14 V.S.A. §§ 3301 to 3313
40. Virginia 1997 Code 1950, §§ 55-277.1 to 55.277.33
41. Washington 1962 West's RCWA 11.104.010 to 11.104.940
42. West Virginia 1931 Code, 36-6-1 to 36-6-17
43. Wisconsin 1962 W.S.A. 701.20
44. Wyoming 1962 W.S.1977, §§ 2-3-601 to 2-3-614

FDIC Memorandums Regarding Consent to Exercise Trust Powers

Federal Deposit Insurance Corporation

Washington 25

Office of Chief

Division of Examination

June 30, 1958

Memorandum to -

Supervising Examiners

Federal Deposit Insurance Corporation

Subject: Applications to the Federal Deposit Insurance Corporation For Consent to Exercise Trust Powers

On June 25, 1958, the Board of Directors approved a recommendation of the Deputy Chief, Division of Examination, and the General Counsel, pertaining to applications to the Federal Deposit Insurance Corporation for consent to exercise trust powers. This decision by the Board establishes the circumstances under which an application will be required.

The following is excerpted from the recommendation submitted to the Board of Directors:

> "1. That regulation Part 333 is *not applicable*, and this Corporation's written consent is not necessary, when an insured nonmember bank proposes to exercise trust powers which it had, either by statute or by charter, at the time of its admission to Federal deposit insurance, unless the record shows that at the time of its admission it was understood and agreed between the Corporation and the bank that it should not exercise such powers.
>
> > (Application Forms No. 2; No. 84, No. 84 revised December 15, 1948, and the corresponding forms for use by incorporators of proposed banks, do not provide such a contract.)
>
> "However, the regulation *is applicable* to such an insured nonmember bank, and this Corporation's written consent is necessary, if the bank may not exercise trust powers without first obtaining the consent of the State supervisory authority although it has trust powers, either by statute or charter. The term 'consent' should not be construed to include a situation where a bank can as a matter of right exercise trust powers by merely increasing its capital to the prescribed statutory amount, or by complying with the statutory requirements in respect to the filing of bonds or securities.
>
> "2. That regulation Part 333 is *applicable* to such an insured nonmember bank which has executed by itself, or by its incorporators and ratified by the bank, any of the above forms revised December 1, 1950, viz:
>
> > Form 84 revised December 1, 1950 - 'Application for Federal Deposit Insurance'

Form 82 revised December 1, 1950 - 'Application of Proposed Bank for Federal Deposit Insurance'

Form 85 revised December 1, 1950 Application to Establish Branch'

Form 85a revised December 1, 1950 'Application to Move Main Office or Branch'

Or amendments thereof which show the general character of the business exercised by the bank and which contain an agreement that the bank will not engage in any other business without the prior written consent of the Corporation, and such a bank may not exercise trust powers without the prior written consent of this Corporation."

In summary, if inquiry or application relating to the inauguration of the exercise of trust powers is received, the Supervising Examiner, before requiring formal application for consent, must determine by review of the District Office files whether regulation Part 333 is applicable. The review of the files should determine:

(1) If the consent of the State Supervisory Authority is necessary; or

(2) If an agreement that the bank will not engage in trust business without consent of the Corporation as indicated on FDIC Forms 82, 84, 85, or 85a, has been filed by the bank subsequent to December 1, 1950. The agreement referred to is in the form of a paragraph on the application forms placed in use as of December 1, 1950, and revised May 1, 1952, viz:

"It is understood that the Board of Directors of the Federal Deposit Insurance Corporation in applying the factors set out in Section 6 of the Federal Deposit Insurance Act to this Application, will consider it only with respect to the general character or types of business above stated and that the Bank will not engage in any other business without the prior written consent of the Corporation."

In the event application to the Corporation for consent to exercise trust powers is required from an insured bank, such application must be made on Forms 102, "Application to Federal Deposit Insurance Corporation," and 103, "Supplementary Information to Application to Federal Deposit Insurance Corporation for Consent to Exercise Trust Powers." Form 103 must also be used as a supplement to Form 82, "Application of Proposed New Bank for Federal Deposit Insurance," if applicant desires to exercise trust powers.

Applications at hand, regardless of date of receipt, will be processed in accordance with these instructions.

Edward H. DeHority

Deputy Chief

Division of Examination

June 16, 1958

Memorandum to --

The Special Committee

and

The Board of Directors

Question: Whether under regulation Part 333 banks which had trust powers when they became insured but did not exercise them, must obtain this Corporation's prior consent to the exercise of such powers. The regulation reads as follows:

§ 333.1 Classification of General character of business. State nonmember insured banks are divided into five categories for the purpose of classifying their general character or type of business, viz: commercial banks, banks and trust companies, savings banks (including mutual and stock), industrial banks, and cash depositories.

§ 333.2 Change in general character of business. No State nonmember insured bank (except a District bank) or branch thereof shall hereafter cause or permit any change to be made in the general character or type of business exercised by it after the effective date of this part without the prior written consent of the

Corporation.

§ 333.101 Prior consent not required. The extension by any State nonmember insured bank of its business to include personal, character or instalment loans, or the extension by an industrial bank of its business to include the business of a commercial bank, is not a change in the general character or type of business requiring the prior written consent of the Corporation.

Historical:

The first two sections of the regulation, namely, § 333.1 and § 333.2, were adopted by the Board on August 30, 1946. The memorandum to the Special Committee and the Board recommending its adoption points out that when a bank applies for insurance, the Board gives consideration to the factors prescribed in the Federal Deposit Insurance Act and considers each factor in the light of the bank's powers at that time; that if the bank subsequently enlarges its corporate powers or changes the general character of its business, it may materially affect the basis upon which the Board considered the factors and the bank would be exercising different rights, powers, and types of business from that considered by the Board.

It referred to a memorandum of Mr. Oppegard's to Mr. Sailor dated July 25, 1945, a copy of which was attached to the memorandum, for a more complete discussion of the proposal. The gist of that memorandum was that when an insured nonmember bank changed its type of banking from one of the categories mentioned in the proposed regulation to include one or more of the other categories and the insurance risk was thus enlarged, the Corporation should have the power to determine whether it will accept such additional potential risk. It pointed out that this power was inherent in the statute and was consistent with other provisions therein which prohibited, in certain instances, consolidations, mergers, or assumptions of liabilities and transfer of assets without the prior written consent of the Corporation; the reduction or retirement of common or preferred capital stock, notes, or debentures, without such consent, and other statutory provisions, including the general authority to prescribe regulations, which clearly evidence the intention of Congress to give to the Corporation such powers as its Board of Directors deem necessary to protect the insurance fund.

The memorandum recommended:

1. That our examiners, in their report of examination upon the bank's application for deposit insurance show that the investigation, with respect to the factors set out in subsection (g) was made only for the type of bank shown in the application;
2. That the application form be revised to contain an agreement of the bank that it will not enlarge its powers, change its essential characteristics, convert to any other type or types of banking, or move its main office to another location without the prior written consent of this Corporation;
3. That the following statement be eliminated from the present application form: "The establishment of a trust department (is) (is not) contemplated."

The interpretative provision set out in § 333.101 of the regulation was adopted January 21, 1948. The memorandum in support of its adoption stated that it was consistent with the practice of the Comptroller of the Currency and the Board of Governors of the Federal Reserve System. We quote the following from the memorandum:

> "The Board of Governors of the Federal Reserve System requires of each state bank, as a condition for membership in that system, am agreement that it will not '... except with the permission of the Board of Governors of the Federal Reserve System, cause or permit any change to be made in the general character of its business or in the scope of its corporate powers exercised by it at the time of membership, ...' The Board of Governors has ruled, with respect to commercial banks taking on small loan business of the Morris Plan type, that '... While such extension of activities may to some extent constitute a change in the general character of the bank's business and in some cases) at least, involve a change in the scope of the corporate powers exercised by the bank, the change is not felt to be such as would come within the intent of the general condition of membership. Accordingly, banks desiring to engage in such activity will not be required to obtain the permission of the Board under the general conditions of membership...'"

In this connection it is pointed out that § 9 of the Federal Reserve Act, which relates to applications for membership by State banks in the Federal Reserve System, provides that the Federal Reserve Board may prescribe conditions under which a State bank may become a member of that System; whereas there is no like provision in the Federal Deposit Insurance Act in respect to nonmember banks applying for Federal deposit insurance.

Practice under the regulation:

In a memorandum of October 23, 1946 to the Chief of the Division of Examination, entitled "Administrative Procedure Act--Corporation's Rules and Regulations" various recommendations were made by legal counsel in respect to amending the procedural forms governing applications and memoranda presented to the Board. This memorandum included these recommendations in respect to Part 333, here discussed:

> "No definite standards can clearly be laid down as guides by which to determine when a state nonmember bank must make, and when it need not make, application for consent under Part 333 except such as are implicit in the regulation itself, namely, whether the proposal changes the general character or type of applicant's business. However, it may be said as a general rule that the regulation is applicable:
>
> 1. When the proposed type of business to be conducted requires an amendment of the institution's articles of incorporation; and
>
> 2. When the proposed type of business to be conducted requires the consent of the state supervising authority.
>
> Other applications will have to be handled on a case by case basis. The regulations should not be invoked to require consent when the bank merely takes on some additional functions which do not materially change its general character or type of business. The paramount consideration in each such case should be whether the proposal affects the insurance risk. As a general matter, if the proposal does not come within Ill and '21 above and does not materially affect the insurance risk, the regulation should not be invoked."
>
> In a memorandum of March 2, 1950 to Mr. Sailor, legal counsel referred to the above memorandum of October 23, 1946, and added the following:
>
> "And we will now add that, in our opinion, the regulation is not applicable where an insured nonmember bank merely proposes to exercise a power which it had at the time of its admission to deposit insurance (1) unless the record shows that, at the time of its admission to deposit insurance, it was understood or agreed by and between the bank and this Corporation that any specified power should not be exercised without the prior written consent of the Corporation; or (2) unless the power is one which is inconsistent with the purposes of the Federal deposit insurance law and its exercise is precluded by reason thereof. In my opinion, nonuse of a power for any particular period of time is not a criterion for invoking the provisions of Part 333 unless it can clearly be shown from the record that such nonuse constituted an abandonment of the power and it was the intention of the bank that our Board should disregard the power in passing upon its application for deposit insurance, and our Board did disregard the same in so doing."

This involved the Iowa Trust and Savings Bank, Oskaloosa, Iowa, which had trust powers in its charter but did not exercise them at the time of its admission to Federal deposit insurance.

Corporation forms used by the banks in applying for Federal deposit insurance:

1. Form 2 used by the banks in applying for membership in the temporary Federal deposit insurance fund under the Banking Act of 1933 (a majority of the banks became insured under this Act) contained this statement in respect to the operation of a trust department:

   "This Corporation does operate a trust department."

   The banks were required to insert in the blank space whether or not they were operating a trust department.

2. Form 84 used by banks in making application for Federal deposit insurance under the Banking Act of 1935 contained the same statement.

3. In Form 84 revised December 15, 1948 (being the first revised form in use after the adoption of Part 333) the above-quoted statement was stricken. We quote as follows from that form as pertinent here:

   "The *(Name of Bank) City or Town and State)* hereby makes application to the Federal Deposit Insurance Corporation to become an insured bank under the provisions of Section 12B of the Federal Reserve Act, as amended, hereinafter referred to as the Federal Deposit Insurance law. The general character or types of business now exercised by the Bank are as follows:

   (See Footnote*)

   It is understood that the Board of Directors of the Federal Deposit Insurance Corporation in applying the factors set out in subsection (g) of the Federal Deposit Insurance Law to this Application, will consider it only with respect to the general character or types of business above stated.

   *Here outline the nature and extent of the banking business conducted by the Bank. Show whether the business is that of a commercial bank, a bank and trust company, a trust company (without banking powers), a savings bank (stock), an industrial bank, or a cash depository."

4. In Form 84 revised December 1, 1950 (being the second revised form in use after the adoption of Part 333) the two paragraphs above quoted from Form 84 revised December 15, 1948, were amended to read as follows:

   "The *(Name of Bank) (Street Address) (City or Town and State)* hereby makes application to the Federal Deposit Insurance Corporation to become an insured bank under the provisions of the Federal Deposit Insurance Act. The general character or types of business now exercised by the Bank are: (Check all appropriate items)
   ( ) Commercial banking; ( ) Savings Banking; ( ) Industrial banking; ( ) Trust business;
   ( ) Cash depository; ( ) Others. Specify

   It is understood that the Board of Directors of the Federal Deposit Insurance Corporation in applying the factors set out in Section 6 of the Federal Deposit Insurance Act to this Application, will consider the Application only with respect to the general character or type of business above stated *and that the Bank will not engage in any other business without the prior written consent of the Corporation*." (Emphasis supplied.)

5. Form 82 revised (1950), being an application form for execution by prospective incorporators of a proposed bank, contains the same above provisions as Form 84 revised (1950), except the necessary modification to show that the incorporators are making the application for the proposed bank, and an additional form (Form 82A revised 12-1-50) for execution by the bank itself after its incorporation containing a resolution in which the board of directors of the bank --

   "hereby approves the said action of the prospective incorporators of the Bank in preparing and presenting to the Federal Deposit Insurance Corporation said Application, and hereby ratifies and confirms the same, with the same force and effect as if said Application had been made in behalf of the Bank by this Board;

6. Form 85 revised December 1, 1950, a form for use in making an "Application to Establish a Branch", and Form 85A revised December 1, 1950, a form for use in making an "Application to Move Main Office or Branch", both contain the same statements and agreement as are contained in Form 84 revised December, 1950, quoted above, in respect to the general character of the business exercised by the bank and the agreement that the bank will not engage in any other business without the prior written consent of the Corporation.

Discussion and Opinion:

We hereby confirm the opinion of the legal Division in its memorandum of October 23, 1946 to Mr. Sailor, Chief, Division of Examination, in which we stated that the regulation is not applicable where an insured nonmember bank merely proposes to exercise a power which it

had at the time of its admission to deposit insurance, unless the record shows that at the time of its admission it was understood and agreed by and between the bank and this Corporation that any of its specified powers should not be exercised without the prior written consent of the Corporation; and that nonuse of a power for any particular period of time is not a criterion for invoking the provisions of the regulation unless it can be clearly shown from the record that such nonuse constituted an abandonment of the power and it was the intention of the bank that our Board should disregard the power in passing upon its application for deposit insurance, and our Board did disregard the same in so doing.

It is quite obvious that Forms 2 and 84 provide no such agreement or understanding between the applicant bank and this Corporation; and we doubt that such an agreement can be predicated upon the provisions contained in application Form 84 revised December 15, 1948. The basis for that doubt is that it contains no affirmative statement by the bank that it will not engage in any other business without the prior consent of the Corporation. On the other hand, it does advise the bank that the Corporation in applying the statutory factors will consider the application only with respect to the general character or types of business stated therein. However, since there is a doubt about its sufficiency as a contract and as it was used for a period of only two years, we believe it should be placed in the same category as Forms 2 and 84.

We believe, however, that under Form 84 revised December 1, 1950. Form 82 revised December 1, 1950, Form 85 revised December 1, 1950, and Form 85A revised December 1, 1950, an enforceable contract exists between the bank and this Corporation whereby the bank has agreed not to exercise trust powers without the prior written consent of the Corporation, unless so indicated on the application.

For the purpose of the question presented, we shall therefore place banks in two categories, namely, those which became insured prior to the use of the above application forms revised December 1, 1950, and those which became insured under forms revised December 1, 1950.

It is our opinion that the banks in the first category which had, at the time of admission to Federal deposit insurance, either by statute or by charter provisions, trust powers but did not exercise the same at the time of their admission, may exercise such powers without first obtaining this Corporation's written consent, in the absence of any collateral agreement with the Corporation that the bank should not execute such powers without the Corporation's consent. We do believe, however, that in any State, where the bank although it has such powers under the statute may not exercise the same without obtaining the consent of the State supervisory authority, the bank should be required to obtain this Corporation's consent, i.e., that the regulation is applicable in such a case.

We believe that all banks in the second category which had the power, either by statute or by charter, to exercise trust powers but did not exercise them at the time of obtaining Federal deposit insurance should be required to obtain this Corporation's prior written consent to the exercise of such powers. As stated, we believe these application forms constitute an adequate contract between the Corporation and a commercial bank, that it "will not engage in any other business without the prior written consent of the Corporation ..." and that such "other business" would embrace the exercise of its trust powers.

Recommendation:

It is recommended that the Board of Directors approve the following interpretation and application of regulation Part 333 relating to the extension of corporate powers by insured nonmember banks, viz:

1. That regulation Part 333 is *not applicable*, and this Corporation's written consent is not necessary, when an insured nonmember bank proposes to exercise trust powers which it had, either by statute or by charter, at the time of its admission to Federal deposit insurance, unless the record shows that at the time of its admission it was understood and agreed between the Corporation and the bank that it should not exercise such powers.

   (Application Forms No. 2, No. 84, No. 84 revised December 15, 1948, and the corresponding forms for use by incorporators of proposed banks, do not provide such a contract.)

However, the regulation is applicable to such an insured nonmember bank, and this Corporation's written consent is necessary, if the bank may not exercise trust powers without first obtaining the consent of the State supervisory authority although it has trust powers, either by statute or charter. The term "consent" should not be construed to include a situation where a bank can as a matter of right exercise trust powers by merely increasing its capital to the prescribed statutory amount, or by complying with the statutory requirements in respect to the filing of bonds or securities.

2. That regulation Part 333 is applicable to such an insured nonmember bank which has executed by itself, or by its incorporators and ratified by the bank, any of the above forms revised December 1, 1950, viz:

Form 84 revised December 1, 1950 - "Application for Federal Deposit Insurance"

Form 82 revised December 1, 1950 - "Application of Proposed Bank for Federal Deposit Insurance"

Form 85 revised December 1, 1950 - "Application to Establish Branch"

Form 85A revised December 1, 1950 - "Application to Move Main Office or Branch"

or amendments thereof which show the general character of the business exercised by the bank and which contain an agreement that the bank will not engage in any other business without the prior written consent of the Corporation, and such a bank may not exercise trust powers without the prior written consent of this Corporation.

FDIC Legal Opinion on FRB Section 23B Fees and Affiliated Employee Benefit Plans

FDIC

Federal Deposit Insurance Corporation

Dallas Regional Office

1601 Bryan Street, Dallas, Texas 75201 (214) 220-3400 Legal Division

March 10, 1995

Memorandum to: Michael M. Sawyer

Review Examiner

From: Terry G. Youngblood

Counsel/Senior Litigator

Subject: * Bank & Trust Company

*, Texas

* Bank & Trust Company is the trustee of its holding company's profit sharing plan, and the trust department has been waiving fees for the profit sharing plan. An opinion has been requested as to whether or not this violates Section 23B(a)(1)(A).

As set forth in Advisory Opinion 93-53, the Federal Reserve has determined that a profit sharing plan is a company within the meaning of Section 23A. If the profit sharing plan is controlled by a person or persons who control the bank, the profit sharing plan is an affiliate of the bank.

Section 23A(b)(1)(C)(i) states that if a company is controlled by a group of shareholders who control the bank or its holding company, that company is an affiliate of the bank. At * Bank & Trust Company, the directors own 34 percent of the holding company, and if they act in concert they are deemed to control the bank pursuant to Section 23A(b)(3)(A)(i). By virtue of their control of the bank, they would also control the profit sharing plan because the bank is the trustee of the plan.

Likewise, Section 23A(b)(1)(C)(ii) states that if a majority of the directors or trustees of a bank constitutes a majority of the directors or trustees of a company, the other company is an affiliate of the bank. In the instant case, the directors of the bank are automatically the directors of the trustee of the profit sharing plan by virtue of the trust department's status as trustee, and the directors thereby control the profit sharing plan.

The profit sharing plan is therefore an affiliate of the bank within the meaning of Section 23A and Section 23B.

The trust department's failure [to] charge the profit sharing plan for services rendered is a violation of Section 23B(a)(1) unless the bank would in good faith waive fees for comparable transactions with nonaffiliated companies.

Page 3-E of the Report of Examination states that the trust department waives fees for a good customer of the commercial department, but this does not appear to be a comparable transaction because the profit sharing plan does not generate income for the commercial department of the bank.

Problems from Customer "Free-Riding" in Custody Accounts

FIL-76-93

November 4, 1993

Trust Accounts

To: Chief Executive Officer

Subject: Problems from Customer "Free-Riding" in Custody Accounts

The FDIC is alerting banks under its supervision to problems and potential risks from customers who are "free-riding" securities in trust department custody accounts. Free-riding occurs when customers buy and sell securities, usually on the same day, in amounts greatly exceeding the amount allowed under margin collateral requirements. Banks, as well as brokerage houses, have incurred losses when these customers failed to pay for their trades. The Securities and Exchange Commission has been investigating several banks and brokerage firms for possible problems in this area.

Free-riding often begins when a custodial account is opened with a bank trust department. The customer also establishes brokerage accounts for directing securities trade. The customer advises the broker-dealer that payment for the trades will be made through the custodial account.

The free-rider attempts to profit from short-term changes in market prices of securities without placing significant personal funds at risk. Free-riders frequently place a buy order for securities, anticipating a near-

term price increase and intending to pay for the securities with the proceeds from the sale of the same securities.

Banks that permit these transactions without requiring adequate margin collateral face significant risks when a customer's custody account does not contain enough money to complete a purchase order or enough securities to complete a sale order. The risks to bank include: (1) enforcement actions for violation of the Federal Reserve Board's margin lending standards in Regulation U (12 CFR221) or for aiding and abetting violations of Regulation X (12 CFR 224) or Regulation T (12 CFR 220); and (2) the loss of bank funds needed to complete the trades of customers who fail to pay.

Although the FDIC does not believe free-riding is a significant problem at FDIC-supervised banks at this time, the agency is recommending that banks review their policies and procedures for accepting custodial agency accounts and clearing securities transactions. These policies and procedures should:

- Set standards for the acceptance of new custodial accounts, including customer background and credit information;
- Require identification of broker-dealers sending securities to, and receiving funds from, customer accounts;
- Establish systems to track accounts involving numerous broker-dealers;
- Reject customer trades where acceptance would result in a violation of Regulation U; and
- Determine that each account has sufficient funds to perform any trade or, if margin credit is extended, that collateral requirements are met.

Banks also may wish to refer to the supervisory letter recently issued by the staff of the Federal Reserve Board discussing the Federal reserve's margin lending requirements as they apply to free-riding (SR93-13, dated March 16, 1993).

For more information, please contact John F. Harvey, the trust review examiner in the FDIC's Division of Supervision at 202-898-6762.

Supervision and Regulation

March 16, 1993

To the Officer in charge of supervision

at each Federal Reserve Bank

Subject: Violations of Federal Reserve Margin Regulations in Custodial Agency Accounts Resulting From "Free-Riding" Schemes

Federal Reserve examiners should be aware of recent targeted examinations and investigations by the Federal Reserve and the Enforcement Division of the Securities Exchange Commission (SEC), as well as court actions, that have found banks in violation of Regulation U (12 CFR 221) (Credit by Banks for the Purpose of Purchasing or Carrying Margin Stock) in connection with extensions of credit by bank trust departments, using bank or other fiduciary funds, to individuals involved in illegal "day trading" or "free-riding" schemes. These activities also involved the aiding and abetting of violations of two other securities credit regulations: Regulation T (12 CFR 220) (Credit by Brokers and Dealers) and Regulation X (12 CFR 224) (Borrowers of Securities Credit). Day trading and free-riding schemes involve the purchase and sale of stock on the same day (or within a very short period of time) and the funding of the purchases by the sales' proceeds.

Because of the illegal activities described below, banking organizations have been exposed to disciplinary proceedings, as well as to substantial credit risk. To date, several banks have sustained monetary losses in their trust departments as a result of their involvement in these schemes.

In the late 1980's, the SEC started to uncover illegal free-riding schemes and addressed them through injunctive actions filed against broker-dealers and banks in federal district court. In one case, SEC v. Hansen, et al., 726 F.Supp. 74 (S.D.N.Y. 1989), a bank was found to have violated Regulation U by knowingly participating in a free-riding scheme. This was the first case in which the SEC sued a bank for illegal securities clearance activities associated with a free-riding scheme. It appears that over the past several months these illegal schemes have resurfaced. Investigations and examinations by SEC and Federal Reserve staffs have detected similar violations by state member and national banks' trust departments, leading to follow-up enforcement actions. Thus, increased vigilance by Federal Reserve examiners is called for to ensure that state member banks' trust departments, as well as bank holding companies' nonbank subsidiaries and U.S. branches and agencies of foreign banks that conduct trust-related activities, take all steps necessary to prevent their customers from involving them in the customers' attempts at free-riding. Prompt enforcement action may be necessary to accomplish this in some situations.

Summary of Illegal Activities

The free-riding conduct in question typically involves individuals trading large amounts of securities without depositing the necessary money or appropriate collateral in their customer accounts. The customer seeks to free-ride--that is, purchase and sell the same securities and pay for the purchase with the proceeds of the sale. Often, free-riding schemes involve initial public offerings because broker-dealers are prohibited from financing these new issues. If the money to pay for the securities is not in the account when the securities are delivered in a delivery-versus-payment or receive-versus-payment (DVP) transaction, a bank or other financial institution that permits completion of the transaction creates a temporary overdraft in the customer's account. This overdraft is an extension of credit that is subject to Regulation U.

The typical device used by the perpetrators of a free- riding scheme is for a new customer to open a custodial agency account into which a number of broker-dealers will deliver securities or funds on a DVP basis. Although a deposit may be made into the custodial agency account, the amount of trading is greatly in excess of the original deposit causing the bank to extend its own credit to meet the payment and delivery obligations of the account. Thus, while the financial institution may be generating fees based on the activity of these accounts, it is subjecting itself to substantial losses should the market prices for the purchased securities fall or failed transactions otherwise occur. In addition, other liabilities under federal banking and securities laws may be involved.

Securities Credit Regulations

Regulation U. Because there is no exemption in Regulation U for trust activities in a bank or other financial institution,[1] any extension of credit in the course of settling customer securities transactions must comply with all of the provisions of Regulation U.[2] This includes the requirement that all extensions of credit that are secured by marginable stock be within the 50 percent margin limit set by Regulation U.

To avoid violations of the Board's securities credit regulations, the customer's account must hold sufficient funds on settlement date to pay for each transaction and the funds may not include the proceeds of their sale. If a financial institution is relying on the proceeds of the sale

of securities as its source of payment for accepting delivery of the securities, Board staff, the SEC, and the courts have viewed the institution as extending credit secured by the securities to the customer. Because Regulation U limits the amount of credit that can be extended in these cases to 50 percent of the securities' current market value if the securities qualify as margin stock and, generally, in a free-riding scheme a customer's account does not have funds to pay for all such purchases or a customer instructs the institution to pay for the purchase of securities with the proceeds from those securities' sale, a banking organization that has extended credit in a free-riding scheme has violated Regulation U.

Although the proscriptions of Regulation U apply only to transactions in margin stock, free-riding in nonmargin stocks in custodial agency accounts could, as described below, result in aiding and abetting violations by the banking organization of Regulations T and X, other securities laws, and raise financial safety and soundness issues.

Regulations T and X. Because the custodial agency accounts described above are used to settle transactions effected by the customer at broker-dealers, a banking organization that opens this type of account should have some general understanding of how Regulation T restricts the customer's use of the account at the institution. Regulation T requires the use of a cash account for customer purchases or sales on a DVP basis. Section 220.8(a) of Regulation T specifies that cash account transactions are predicated on the customer's agreement that he or she will make full cash payment for securities before selling them and does not intend to sell them before making such payment. Therefore, free-riding is prohibited in a cash account. A customer who instructs his or her agent bank or other financial institution to pay for a security in reliance on the proceeds of its sale in a DVP transaction is causing, or aiding or abetting, the broker-dealer to violate the credit restrictions of Regulation T. Regulation X, which generally prohibits borrowers from willfully causing credit to be extended in contravention of Regulations T or U, also applies to the customer in such cases.

As described above, banking organizations involved in free-riding schemes may be aiding and abetting violations of Regulation T by the broker-dealers delivering securities or funds to the institutions' customers' accounts. As long as the bank or other financial institution uses its funds to complete a customer's transactions, the broker-dealers may not discover that they are selling securities to the customer in violation of their obligations under Regulation T. A similar aiding and abetting violation of Regulation X could occur with respect to violations by the customers who have used the financial institution to induce their broker-dealers to violate Regulation T.

New Customer Inquiries and Warning Signals

Trust examiners, as well as commercial examiners, should make sure that all banking organizations follow appropriate written policies and procedures concerning the establishment of custodial agency accounts or any new account involving customer securities transactions. They should address, among other things, ways an institution can protect against free-riding schemes. One of the ways financial institutions can protect themselves is to obtain adequate background and credit information from new clients, including whether the customer intends to obtain bank credit to use the account for transactions as if it were a margin account at a broker-dealer. This type of activity requires more extensive monitoring than the typical DVP account in which no credit is extended. It would be prudent to inquire why a new customer is not utilizing the margin account services of its broker-dealers. Regulation U Form FR U-1 must be obtained and constantly updated if the account is to be used as a margin account.

It also would be advisable for the financial institution to obtain from the customer a list of broker-dealers that will be sending securities to or receiving funds from the account on a DVP basis. If it appears that a number of broker-dealers may be used on a DVP basis, the banking organization should obtain an undertaking from the customer, as part of the new account agreement, that all transactions with the broker-dealer will be in conformance with Regulations T and X and that the customer is aware that a cash account security is not to be sold until it is paid for. Similarly, in obtaining instructions for settling DVP transactions for a customer, the institution should clarify that it will not pay for the purchase of securities with the proceeds from the sale of those securities.

Examiners should also ensure that banking organizations monitor such accounts closely for an initial period to detect patterns typical of free-riding, including intraday overdrafts, and ensure that sufficient funds or margin collateral are on deposit at all times. Frequent

transactions in securities being offered in an initial public offering may suggest an avoidance of Regulations T and X. In the event it appears that a customer is attempting to free-ride, an institution immediately should alert the broker-dealers involved and take steps to minimize its own credit risk and legal liability.

At a minimum, examiners should also evaluate a trust institution's ability to ensure that it does not extend more credit on behalf of the banking organization to a customer than is permitted under Regulation U. Any overdraft related to a purchase or sale of margin stock is an extension of credit subject to the regulation, including overdrafts that are outstanding for less than a day. Board staff has published a number of opinions discussing the application of Regulation U to various transactions relating to free-riding in the Federal Reserve Regulatory Service. See, for example, Federal Reserve Regulatory Service, at 5-942.2 (1992); 5-942.18 (1990); and 5-942.15 (1989).

SEC and Federal Reserve Sanctions and Enforcement Actions
As noted earlier, the SEC has exercised its broad authority to enforce the Board's securities credit regulations. This has included the initiation of several enforcement actions in federal district court against banks involved in activities similar to those outlined above, as well as the preparation of other cases that are pending. In each completed case, the SEC obtained permanent injunctions against future violations from the banks involved. The SEC also required the banks to establish credit compliance committees to formulate written policies and procedures concerning the extension of purpose credit in their securities clearance business, establish training programs for bank personnel responsible for the conduct of their securities clearance business and submit to outside audits to ascertain whether the banks met their undertakings under the injunctions.

It should be noted that under section 21 of the Securities Exchange Act of 1934, the SEC may, and has stated an intention to, seek civil money penalties in addition to federal district court injunctive actions. Civil penalties and aiding and abetting liability may be assessed by the SEC against a banking organization if the customer or its broker-dealer is found in violation of Regulations X or T, and if the financial institution has knowledge of the facts and assists the scheme -- that is, by extending credit to finance the free-riding.

In addition, the Board may institute enforcement proceedings against the banking organizations supervised by the Federal Reserve and their institution-affiliated parties involved in these activities, including cease and desist, civil money penalty assessment, and removal and permanent prohibition actions.

Notification to State Member Banks
Reserve Bank staff should notify the state member banks, bank holding companies, and the U.S. branches and agencies of foreign banks in their Districts about the potential for violations of the Board's Regulation U and other securities credit regulations. A suggested notification letter is attached.

Please contact Scott Holz, Senior Attorney, or Angela Desmond, Senior Attorney, at (202) 452-2781, with any questions concerning the Board's margin regulations and free-riding arrangements, and Herbert A. Biern, Deputy Associate Director, at (202) 452-2620, for enforcement-related matters.

Stephen C. Schemering

Deputy Director

FFIEC Examination Council Supervisory Policy on Repurchase Agreements Of Depository Institutions With Securities Dealers And Others

Purpose
Depository institutions and others involved with the purchase of United States Government and Agency obligations under agreements to resell (reverse repurchase agreement), have sometimes incurred significant losses. The most important factors causing these heavy losses have been inadequate credit risk management and the failure to exercise effective control over securities collateralizing the transactions.

The following minimum guidelines address the need for managing credit risk exposure to

counterparties under securities repurchase agreements and for controlling the securities in those transactions, and should be followed by depository institutions that enter into repurchase agreements with securities dealers and others.

Depository institutions that actively engage in repurchase agreements are encouraged to have more comprehensive policies and controls to suit their particular circumstances. The examining staffs of the federal bank, thrift and credit union supervisory agencies will review written policies and procedures of depository institutions to determine their adequacy in light of these minimum guidelines and the scope of each depository's operations.

I. Credit Policy Guidelines

The apparent safety of short-term repurchase agreements which are collateralized by highly liquid, U.S. Government and federal agency obligations has contributed to an attitude of complacency. Some portfolio managers have underestimated the credit risk associated with the performance of the counterparty to the transaction, and have not taken adequate steps to assure control of the securities covered by the agreement.

All depository institutions that engage in securities repurchase agreement transactions should establish written credit policies and procedures governing these activities. At a minimum, those policies and procedures should cover the following:

A. Written policies should establish "know your counterparty" principles. Engaging in repurchase agreement transactions in volume and in large dollar amounts frequently requires the services of a counterparty who is a dealer in the underlying securities. Some firms which deal in the markets for U.S. Government and federal agency securities are subsidiaries of, or related to, financially stronger and better known firms. However, these stronger firms may be independent of their U.S. Government securities subsidiaries and affiliates and may not be legally obligated to stand behind the transactions of related companies. Without an express guarantee, the stronger firm's financial position cannot be relied upon in assessing the creditworthiness of a counterparty.

   It is important to know the legal entity that is the actual counterparty to each repurchase agreement transaction. A depository institution should know about the actual counterparty's character, integrity of management, activities, and the financial markets in which it deals. Depository institutions should be particularly careful in conducting repurchase agreements with any firm that offers terms that are significantly more favorable than those currently prevailing in the market.

   In certain situations depository institutions may use, or serve as, brokers or finders in order to locate repurchase agreement counterparties or particular securities. When using or acting as this type of agent the names of each counterparty should be fully disclosed. Depository institutions should not enter into undisclosed agency or "blind brokerage" repurchase transactions in which the counterparty's name is not disclosed.

B. Dealings with unregulated securities dealers. A dealer in U.S. Government and federal agency obligations is not necessarily a federally insured bank or thrift, or a broker/dealer registered with the Securities and Exchange Commission. Therefore, the dealer firm may not be subject to any federal regulatory oversight.

   A depository institution doing business with an unregulated securities dealer should be certain that the dealer voluntarily complies with the Federal Reserve Bank of New York's minimum capital guideline, which currently calls for liquid capital to exceed measured risk by 20 percent (that is, the ratio of a dealer's liquid capital to risk of 1.2: 1). This ratio can be calculated by a dealer using either the Securities and Exchange Commission's Net Capital Rule for Brokers and Dealers (Rule 15c3-1) or the Federal Reserve Bank of New York's Capital Adequacy Guideline for United States Government Securities Dealers. To ensure that an unregulated dealer complies with either of those capital standards, it should certify its compliance with the capital standard and provide the following three forms of certification:

   1. A letter of certification from the dealer that the dealer will adhere on a continuous basis to the capital adequacy standard;
   2. audited financial statements which demonstrate that as of the audit date the

dealer was in compliance with the standard and the amount of liquid capital; and

3. a copy of a letter from the firm's certified public accountant stating that it found no material weaknesses in the dealer's internal systems and controls incident to adherence to the standard.

A. Periodic evaluations of counterparty creditworthiness should be conducted by individuals who routinely make credit decisions and who are not involved in the execution of repurchase agreement transactions.

   Prior to engaging in initial transactions with a new counterparty, depository institutions should obtain audited financial statements and regulatory filings (if any) from its counterparties, and should insist that similar information be provided on a periodic and timely basis in the future. Recent failures of government securities dealers have typically been foreshadowed by delays in producing these statements. Many firms are registered with the Securities and Exchange Commission as broker/dealers and have to file financial statements and should be willing to provide a copy of these filings.

   The counterparty credit analysis should consider the financial statements of the entity that is to be the depository institution's counterparty as well as those of any related companies that could have an impact on the financial condition of the counterparty. When transacting business with a subsidiary, consolidated financial statements of a parent are not adequate. Repurchase agreements should not be entered into with any counterparty that is unwilling to provide complete and timely disclosure of its financial condition. As part of this analysis, the depository institution should make inquiry about the counterparty's general reputation and whether there have been any formal enforcement actions against the counterparty or its affiliates by state or federal securities regulators.

B. Maximum position and temporary exposure limits for each approved counterparty should be established based upon credit analysis performed. Periodic reviews and updates of those limits are necessary.

   Individual repurchase agreement counterparty limits should consider overall exposure to the same or related counterparty throughout the depository institution. Repurchase agreement counterparty limitations should include the overall permissible dollar positions in repurchase agreements, maximum repurchase agreement maturities and limits on temporary exposure that may result from decreases in collateral values or delays in receiving collateral.

C. Lending Limitations. Federally-chartered savings institutions and federal credit unions are subject to all federal regulations in this area. State-chartered banks or savings institutions should consult with their counsel and/or state banking or thrift authorities as to the applicability of state lending restrictions to repurchase transactions.

   Except as otherwise provided in applicable agency regulations and state law, it should be assumed that unless the depository institution's interest in securities held as collateral under a repurchase agreement is assured, a repurchase agreement transaction with any single counterparty will be subject to the lending limitations applicable to that institution. Conversely, the market value of securities sold under a repurchase agreement in excess of the amount of proceeds received by the depository institution could be viewed as an unsecured extension of credit to the repurchase agreement counterparty subject to the depository institution's lending limits.

   The application of lending limitations on loans by national banks to certain types of repurchase transactions is currently under review by the Comptroller of the Currency. Until this review is completed, national banks as a matter of prudent banking should treat repurchase agreements as if they are subject to the lending limit unless the bank has control of the underlying securities.

II. Guidelines for Controlling Repurchase Agreement Collateral

Repurchase agreements can be a useful asset and liability management tool, but repurchase

agreements can expose a depository institution to serious risks if they are not managed appropriately. It is possible to reduce repurchase agreement risk if the depository institution negotiates written agreements with all repurchase agreement counterparties and custodian banks. Compliance with the terms of these written agreements should be monitored on a daily basis. If prudent management control requirements of repurchase agreements are too burdensome for a depository institution, other asset/liability management tools should be used.

The marketplace perceives repurchase agreement transactions as similar to lending transactions collateralized by highly liquid government securities. However, experience has shown that the collateral securities will probably not serve as protection if the counterparty becomes insolvent or fails, and the purchasing institution does not have control over the securities. This policy statement provides general guidance on the steps depository institutions should take to protect their interest in the securities underlying repurchase agreement transactions (see "C. Control of Securities,") However, ultimate responsibility for establishing adequate procedures rests with management of the institution. Management should obtain a written legal opinion as to the adequacy of the procedures utilized to establish and protect the depository institution's interest in the underlying collateral.

General Requirements

A. A written agreement specific to a repurchase agreement transaction or master agreement governing all repurchase agreement transactions should be entered into with each counterparty. The written agreement should specify all the terms of the transaction and the duties of both the buyer and seller. Senior managers of depository institutions should consult legal counsel regarding the content of the repurchase and custodial agreements. The repurchase and custodial agreements should specify, but should not be limited to, the following:

- acceptable types and maturities of collateral securities;
- initial acceptable margin for collateral securities of various types and maturities;
- margin maintenance, call, default and sellout provisions;
- rights to interest and principal payments;
- rights to substitute collateral; and
- the persons authorized to transact business on behalf of the depository institution and its counterparty.

- Confirmations. Some repurchase agreement confirmations may contain terms that attempt to change the depository institution's rights in the transaction. The depository institution should obtain and compare written confirmations for each repurchase agreement transaction to be certain that the information on the confirmation is consistent with the terms of the agreement. The confirmation should identify specific collateral securities.
- Control of Securities. As a general rule, a depository institution should obtain possession or control of the underlying securities and take necessary steps to protect its interest in the securities. The legal steps necessary to protect its interest may vary with applicable facts and law and accordingly should be undertaken with the advice of counsel. Additional prudential management controls may include:
    1. Direct delivery of physical securities to the institution, or of book-entry securities by appropriate entry in an account maintained in the name of the depository institution by a Federal Reserve bank which maintains a book-entry system for U.S. Treasury securities and certain agency obligations (for further information as to the procedures to be followed, contact the Federal Reserve bank for the district in which the depository institution is located);
    2. delivery of either physical securities to, or in the case of book entry securities, making appropriate entries in the books of a third party custodian designated by the depository institution under a written custodial agreement which explicitly recognizes the depository institution's interest in the securities as superior to that of any other person; or
    3. appropriate entries on the books of a third party custodian acting pursuant to a tripartite agreement with the depository institution and the counterparty, ensuring adequate segregation and identification of either physical or book-entry securities.

Where control of the underlying securities is not established, the depository institution may be regarded only as an unsecured general creditor of the insolvent counterparty. In such instance, substantial losses are likely to be incurred. Accordingly, a depository institution should not enter into a repurchase agreement without obtaining control of the securities unless all of the following minimum procedures are observed: (1) it is completely satisfied as to the creditworthiness of the counterparty; (2) the transaction is within credit limitations that have been pre-approved by the board of directors, or a committee of the board, for unsecured transactions with the counterparty; (3) periodic credit evaluations of the counterparty are conducted; and (4) the depository institution has ascertained that collateral segregation procedures of the counterparty are adequate. Unless prudential internal procedures of these types are instituted and observed, the depository institution may be cited by its financial supervisory agency for engaging in unsafe or unsound practices.

All receipts and deliveries of either physical or book-entry securities should be made according to written procedures, and third party deliveries should be confirmed in writing directly by the custodian. It is not acceptable to receive confirmation from the counterparty that the securities are segregated in a depository institution's name with a custodian; the depository institution should, however, obtain a copy of the advice of the counterparty to the custodian requesting transfer of the securities to the depository institution. Where securities are to be delivered, payment for securities should not be made until the securities are actually delivered to the depository institution or its agent. The custodial contract should provide that the custodian takes delivery of the securities subject to the exclusive direction of the depository institution.

Substitution of securities should not be allowed without the prior consent of a depository institution. The depository institution should give its consent before the delivery of the substitute securities to the depository institution or a third party custodian. Any substitution of securities should take into consideration the following discussion of "margin requirements."

D. Margin Requirements. The amount paid by a depository institution under the repurchase agreement should be less than the market value of the securities, including the amount of any accrued interest, with the difference representing a predetermined margin. Factors to be considered in establishing an appropriate margin include the size and maturity of the repurchase transaction, the type and maturity of the underlying securities, and the creditworthiness of the counterparty. Margin requirements on U.S. Government and federal agency obligations underlying repurchase agreements should allow for the anticipated price volatility of the security until the maturity of the repurchase agreement. Less marketable securities may require additional margin to compensate for less liquid market conditions. Written repurchase agreement policies and procedures should require daily mark-to-market of repurchase agreement securities to the bid side of the market. Repurchase agreements should provide for additional securities or cash to be placed with the depository institution or its custodian bank to maintain the margin within the predetermined level.

Margin calculations should also consider accrued interest on underlying securities and the anticipated amount of accrued interest over the term of the repurchase agreement, the date of interest payment and which party is entitled to receive the payment. In the case of pass-through securities, anticipated principal reductions should also be considered when determining margin adequacy.

E. Prudent management procedures should be followed in the administration of any repurchase agreement. Longer term repurchase agreements require management's daily attention to the effects of securities substitutions, margin maintenance requirements (including consideration of any coupon interest or principal payments) and possible changes in the financial condition of the counterparty. Engaging in open repurchase agreement transactions without

maturity dates may be regarded as an unsafe and unsound practice unless the depository institution has retained rights to terminate the transaction quickly to protect itself against changed circumstances. Similarly, automatic renewal of short-term repurchase agreement transactions without reviewing collateral values and adjusting collateral margin may be regarded as an unsafe and unsound practice. If additional margin is not deposited when required, the depository institution's rights to sell securities or otherwise liquidate the repurchase agreement should be exercised without hesitation.

F. Overcollateralization. A depository institution should use current market values, including the amount of any accrued interest, to determine the price of securities that are sold under repurchase agreements. Counterparties should not be provided with excessive margin. Thus, the written repurchase agreement contract should provide that the counterparty must make additional payment or return securities if the margin exceeds agreed upon levels. When acquiring funds under repurchase agreements it is prudent business practice to keep at a reasonable margin the difference between the market value of the securities delivered to the counterparty and the amount borrowed. The excess market value of securities sold by a depository institution may be viewed as an unsecured loan to the counterparty subject to the unsecured prudential limitations for the depository institution and should be treated accordingly for credit policy and control purposes.

FFIEC Examination Council Supervisory Policy on Securities Lending

Purpose

Financial institutions are lending securities with increasing frequency. In some instances a financial institution may lend its own investment or trading account securities. More and more often, however, financial institutions lend customers' securities held in custody, safekeeping, trust or pension accounts. Not all institutions that lend securities or plan to do so have relevant experience. Because the securities available for lending often greatly exceed the demand for them, inexperienced lenders may be tempted to ignore commonly recognized safeguards. Bankruptcies of broker-dealers has heightened regulatory sensitivity to the potential for problems in this area. Accordingly, we are providing the following discussion of guidelines and regulatory concerns.

Securities Lending Market

Securities brokers and commercial banks are the primary borrowers of securities. They borrow securities to cover securities fails (securities sold but not available for delivery), short sales, and option and arbitrage positions. Securities lending, which used to involve principally corporate equities and debt obligations, increasingly involves loans of large blocks of U.S. government and federal agency securities.

Securities lending is conducted through open-ended "loan" agreements, which may be terminated on short notice by the lender or borrower. The objective of such lending is to receive a safe return in addition to the normal interest or dividends. Securities loans are generally collateralized by U.S. government or federal agency securities, cash, or letters of credit. At the outset, each loan is collateralized at a predetermined margin. If the market value of the collateral falls below an acceptable level during the time a loan is outstanding, a margin call is made by the lender institution. If a loan becomes over-collateralized because of appreciation of collateral or market depreciation of a loaned security, the borrower usually has the opportunity to request the return of any excessive margin.

When a securities loan is terminated, the securities are returned to the lender and the collateral to the borrower. Fees received on securities loans are divided between the lender institution and the customer account that owns the securities. In situations involving cash collateral, part of interest earned on the temporary investment of cash is returned to the borrower and the remainder is divided between the lender institution and the customer account that owns the securities.

Definitions Of Capacity

Securities lending may be done in various capacities and with differing associated liabilities. It is important that all parties involved understand in what capacity the lender institution is acting. For the purposes of these guidelines, the relevant capacities are:

Principal: A lender institution offering securities from its own account is acting as principal. A lender institution offering customers' securities on an undisclosed basis is also considered to be acting as principal.

Agent: A lender institution offering securities on behalf of a customer-owner is acting as an agent. For the lender institution to be considered a bona fide or "fully disclosed" agent, it must disclose the names of the borrowers to the customer-owners (or give notice that names are available upon request), and must disclose the names of the customer-owner to borrowers (or give notice that names are available upon request). In all cases the agent's compensation for handling the transaction should be disclosed to the customer-owner. Undisclosed agency transactions, i.e. "blind brokerage" transactions in which participants cannot determine the identity of the counterparty, are treated as if the lender institution were the principal. (See definition above.)

Directed Agent: A lender institution which lends securities at the direction of the customer-owner is acting as a directed agent. The customer directs the lender institution in all aspects of the transaction, including to whom the securities are loaned, the terms of the transaction (rebate rate and maturity/call provisions on the loan), acceptable collateral, investment of any cash collateral, and collateral delivery.

Fiduciary: A lender institution which exercises discretion in offering securities on behalf of and for the benefit of customer-owners is acting as a fiduciary. For purposes of these guidelines, the underlying relationship may be as agent, trustee, or custodian.

Finder: A finder brings together a borrower and a lender of securities for a fee. Finders do not take possession of the securities or collateral. Securities and collateral are delivered directly by the borrower and the lender without the involvement of the finder. The finder is simply a fully disclosed intermediary.

Guidelines

All financial institutions that participate in securities lending should establish written policies and procedures governing these activities. At a minimum, policies and procedures should cover each of the topics in these guidelines.

Recordkeeping

Before establishing a securities lending program, a financial institution must establish an adequate recordkeeping system. At a minimum, the system should produce daily reports showing which securities are available for lending, and which are currently lent, outstanding loans by borrower, outstanding loans by account, new loans, returns of loaned securities, and transactions by account. These records should be updated as often as necessary to ensure that the lender institution fully accounts for all outstanding loans, that adequate collateral is required and maintained, and that policies and concentration limits are being followed.

Administrative Procedures

All securities lent and all securities standing as collateral must be marked to market daily. Procedures must ensure that any necessary calls for additional margin are made on a timely basis.

In addition, written procedures should outline how to choose the customer account that will be the source of lent securities when they are held in more than one account. Possible methods include: loan volume analysis, automated queue, a lottery, or some combination of these methods. Securities loans should be fairly allocated among all accounts participating in a securities lending program.

Internal controls should include operating procedures designed to segregate duties and timely management reporting systems. Periodic internal audits should assess the accuracy of accounting records, the timeliness of management reports, and the lender institution's overall compliance with established policies and procedures.

Credit Analysis and Approval of Borrowers

In spite of strict standards of collateralization, securities lending activities involve risk of loss. Such risks may arise from malfeasance or failure of the borrowing firm or institution. Therefore, a duly established management or supervisory committee of the lender institution should formally approve, in advance, transactions with any borrower.

Credit and limit approvals should be based upon a credit analysis of the borrower. A review should be performed before establishing such a relationship and reviews should be conducted at regular intervals thereafter. Credit reviews should include an analysis of the borrower's financial statement, and should consider capitalization, management, earnings, business reputation, and any other factors that appear relevant. Analyses should be performed in an independent department of the lender institution, by persons who routinely perform credit analyses. Analyses performed solely by the person(s) managing the securities lending program are not sufficient.

Credit and Concentration Limits

After the initial credit analysis, management of the lender institution should establish an individual credit limit for the borrower. That limit should be based on the market value of the securities to be borrowed, and should take into account possible temporary (overnight) exposures resulting from a decline in collateral values or from occasional inadvertent delays in transferring collateral. Credit and concentration limits should take into account other extensions of credit by the lender institution to the same borrower or related interests. Such information, if provided to a institution's trust department conducting a securities lending program, would not be considered material inside information and therefore, not violate "Chinese Wall" policies designed to protect against the misuse of material inside information. Violation of securities laws would arise only if material inside information were used in connection with the purchase or sale of securities.

Procedures should be established to ensure that credit and concentration limits are not exceeded without proper authorization from management.

When a lender institution is lending its own securities as principal, statutory lending limits may apply. For national banks and federal savings associations, the limitations in 12 USC 84 apply. For state-chartered institutions, state law and applicable federal law must be considered. Certain exceptions may exist for loans that are fully secured by obligations of the United States government and federal agencies.

Collateral Management

Securities borrowers pledge and maintain collateral at least 100 percent of the value of the securities borrowed. The minimum amount of excess collateral, or "margin", acceptable to the lender institution should relate to price volatility of the loaned securities and the collateral (if other than cash).

Generally, the minimum initial collateral on securities loans is at least 102 percent of the market value of the lent securities plus, for debt securities, any accrued interest.Collateral must be maintained at the agreed margin. A daily "mark-to-market" or valuation procedure must be in place to ensure that calls for additional collateral are made on a timely basis. The valuation procedures should take into account the value of accrued interest on debt securities.

Securities should not be lent unless collateral has been received or will be received simultaneously with the loan. As a minimum step toward perfecting the lender's interest, collateral should be delivered directly to the lender institution or an independent third party trustee.

Cash as Collateral

When cash is used as collateral, the lender institution is responsible for making it income productive. Lenders should establish written guidelines for selecting investments for cash collateral. Generally, a lender institution will invest cash collateral in repurchase agreements, master notes, a short term investment fund, U.S. or Eurodollar certificates of deposits, commercial paper or some other type of money market instrument. If the lender institution is acting in any capacity other than as principal, the written agreement authorizing the lending relationship should specify how cash collateral is to be invested.

Investing cash collateral in liabilities of the lender institution or its holding company would be an improper conflict of interest unless that strategy was specifically authorized in writing by the owner of the lent securities. Written authorizations for participating accounts are further discussed later in these guidelines.

Letters of Credit as Collateral

Since May 1982, letters of credit have been permitted as collateral in certain securities lending transactions outlined in Federal Reserve Regulation T. If a lender institution plans to accept letters of credit as collateral, it should establish guidelines for their use. Those guidelines should require a credit analysis of the financial institution issuing the letter of credit before securities are lent against that collateral. Analyses must be periodically updated and reevaluated. The lender institution should also establish concentration limits for the institutions issuing letters of credit and procedures should ensure they are not exceeded. In establishing concentration limits on letters of credit accepted as collateral, the lender institution's total outstanding credit exposures from the issuing institution should be considered.

Written Agreements

Securities should be lent only pursuant to a written agreement between the lender institution and the owner of the securities specifically authorizing the institution to offer the securities for loan. The agreement should outline the lender institution's authority to reinvest cash collateral (if any) and responsibilities with regard to custody and valuation of collateral. In addition, the agreement should detail the fee or compensation that will go to the owner of the securities in the form of a fee schedule or other specific provision. Other items which should be covered in the agreement have been discussed earlier in these guidelines.

A lender institution must also have written agreements with the parties who wish to borrow securities. These agreements should specify the duties and responsibilities of each party. A written agreement may detail: acceptable types of collateral (including letters of credit); standards for collateral custody and control, collateral valuation and initial margin, accrued interest, marking to market, and margin calls; methods for transmitting coupon or dividend payments received if a security is on loan on a payment date; conditions which will trigger the termination of a loan (including events of default); and acceptable methods of delivery for loaned securities and collateral.

Use of Finders

Some lender institutions may use a finder to place securities, and some financial institutions may act as finders. A finder brings together a borrower and a lender for a fee. Finders should not take possession of securities or collateral. The delivery of securities loaned and collateral should be direct between the borrower and the lender. A finder should not be involved in the delivery process.

The finder should act only as a fully disclosed intermediary. The lender institution must always know the name and financial condition of the borrower of any securities it lends. If the lender institution does not have that information it and its customers are exposed to unnecessary risks.

Written policies should be in place concerning the use of finders in a securities lending program. These policies should cover the circumstances in which a finder will be used, which party pays the fee (borrower or lender), and which finders the lender institution will use.

Employee Benefit Plans

The Department of Labor has issued two class exemptions which deal with securities lending programs for employee benefit plans covered by the Employee Retirement Income Security Act (ERISA)--Prohibited Transaction Exemption 81-6 (46 FR 7527 (January 23, 1981), supplemented 52 FR 18754 (May 19, 1987)), and Prohibited Transaction Exemption 82-63 (47 FR 14804 (April 6, 1982) and correction published at 47 FR 16437 (April 16, 1982)). The exemptions authorize transactions which might otherwise constitute unintended "prohibited transactions" under ERISA. Any institution engaged in lending of securities for an employee benefit plan subject to ERISA should take all steps necessary to design and maintain its program to conform with these exemptions. Prohibited Transaction Exemption 81-6 permits the lending of securities owned by employee benefit plans to persons who could be "parties in interest" with respect to such plans, provided certain conditions specified in the exemption are met. Under those conditions neither the borrower nor an affiliate of the borrower can have

discretionary control over the investment of plan assets, or offer investment advice concerning the assets, and the loan must be made pursuant to a written agreement. The exemption also establishes a minimum acceptable level for collateral based on the market value of the loaned securities.

Prohibited Transaction Exemption 82-63 permits compensation of a fiduciary for services rendered in connection with loans of plan assets that are securities. The exemption details certain conditions which must be met.

Indemnification

Certain lender institutions offer participating accounts indemnification against losses in connection with securities lending programs. Such indemnifications may cover a variety of occurrences including all financial loss, losses from a borrower default, or losses from collateral default. Lender institutions that offer such indemnification should obtain a legal opinion from counsel concerning the legality of their specific form of indemnification under federal and/or state law.

A lender institution which offers an indemnity to its customers may, in light of other related factors, be assuming the benefits and, more importantly, the liabilities of a principal. Therefore, lender institutions offering indemnification should also obtain written opinions from their accountants concerning the proper financial statement disclosure of their actual or contingent liabilities.

Regulatory Reporting

Securities borrowing and lending transactions should be reported by commercial banks according to the Instructions for the Consolidated Reports of Condition and Income and by thrifts according to Thrift Financial Report instructions.

NE	1993 Rev. Stat. § 30-3205	Bill allows fee as investment advisor and as trustee if disclosures made	To all persons entitled to receive statements of account activity Initially by prospectus and at least annually thereafter by account statement or any other written means Disclose the basis of the compensation as investment advisor expressed as a	Consents Required Must be consented to in writing by all persons entitled to receive statements of account activity Miscellaneous Portfolio of

			percentage of the asset value, a percentage of the income earned, or the actual amount charged	investment company or trust must substantially consist of investments not prohibited by the governing instrument
NV	Nev. Rev. Stat. Ann. § 669.225	Allows fee as investment advisor and as trustee if disclosures made	To the person currently receiving the benefits of the fiduciary relationship By prospectus, statement of account, or otherwise Disclose the manner in which compensation is calculated	Mutual Fund Investment Restrictions Portfolio of investment company or trust must substantially consist of investments not prohibited by the governing instrument
NH	N.H. Rev. Stat. Ann. § 384:65	Two categories of permissible fees from mutual fund providers: (1) investment advisory fees that the fiduciary is entitled to receive as trustee reduced by the amount of any investment advisory fees paid to the fiduciary by the investment company or investment trust; and (2) investment advisory fees paid to the fiduciary from an investment company in lieu of any investment advisory fees that the fiduciary would otherwise be entitled to receive for the investment management of the trust account.	Written communications to trust account holders must reflect the purchase of such securities, the nature of the relationship, and whether such bank or affiliate received any fee for providing such services.	Fiduciary purchases of proprietary mutual fund stock must be expressly authorized by the trust instrument, a court order, the written consent of the grantor of the trust, or the written consent of the beneficiaries of the trust.
NJ	N.J.S. 3B: 14-23(W)	Allows for either investment advisor or trustee fee		Limits on Authorization No written objection is received prior to the initial investment, after all current income beneficiaries are provided 30 days written notice of the bank's intent to invest fiduciary assets

NM	1993 N.M. Laws 51 § 46-2A-1		Disclosure required	
NY	N.Y. Estate Powers & Trusts Law ("EPTL") § 11-2.2(b)(1)	fiduciary shall elect annually to receive either its fiduciary's commissions or its fee as investment advisor		Limits on Authorization Investment permitted unless trust document, will or order appointing the fiduciary provides otherwise
NC	1993 N.C. Sess. Laws § 32-27 (ratified 6-7-93)	Allows for reasonable fee as investment advisor and as a trustee	To all current income beneficiaries Conspicuously by statement, prospectus or otherwise Disclose the rate, formula or other method by which the remuneration for those services is determined. The trustee fee must also be disclosed.	
ND	N.D. Cent. Code §§ 4-9-105 and -107	Prudent Investor Rule: Fees to be "appropriate and reasonable" in relation to trust investments		
OH	Ohio Rev. Code Ann. § 1109.10(H)	Allows fees as investment advisor and as trustee	To all persons entitled to receive statements of account activity By prospectus, account statement, or any other means At least annually Disclosure of fee charged as a percentage of either asset value or income earned or actual amount charged. Disclosure in at least ten-point boldface type, that the mutual fund is not insured or guaranteed by the FDIC or any other governmental agency	In any periodic statements, mutual fund must report the net asset value of the shares comprising the investment of the trust fund in the affiliated investment company
OK	Okl. St. § 175.55	Allows for either trustee or investment advisor fee		

OR	Or. Rev. Stat. § 709.175	Does not specify whether fiduciary may receive reasonable compensation for investment advisor services		
PA	20 Pa. Cons. Stat. § 7314.1	Allows for trustee and investment advisor fees	To all persons to whom statements of the accounts are rendered By prospectus, account statement or otherwise Disclosure of the basis upon which compensation is calculated, expressed as a percentage of asset value or otherwise	Mutual Fund Investment Restrictions Portfolio of investment company must substantially consist of investments not prohibited by the governing instrument
RI	R.I. Gen. Laws § 18-15-5,-7,-9	Consistent with Prudent Investor Rule		
SC	S.C. Code Ann. § 62-7-302	Allows for trustee and investment advisor fees		
SD	S.D. Codified Laws Ann. Section 55-1A-9	Allows for trustee and investment advisor fees	To all current income beneficiaries Disclose the rate, formula and method of the compensation	
TN	Tenn Code Ann. § 35-3-117(h)	Allows for trustee and investment advisor fees		
TX	Tex. Property Code Ann. Section 113.053(g) (Vernon)	Allows for trustee and investment advisor fees	Disclose compensation by prospectus, account statement, or otherwise	Limits on Authorization Executor or administrator may not invest unless authorized by court Miscellaneous Portfolio of investment company must substantially consist of investments not prohibited by the governing instrument

UT	Utah Code Ann. § 75-7-402	Allows for trustee and investment advisor fees		
VA	Va. Code Ann. § 26-44.1	Cannot take fee as investment advisor and as trustee unless expressly agreed to in writing by creator of trust or affected beneficiary Compensation for such advice and services shall not exceed the customary or prevailing amount that is charged by a fiduciary for providing comparable advice and services for the benefit of nonfiduciary accounts	To all current income beneficiaries of an account By prospectus, statement of the account, or otherwise Disclose the rate, formula, or other method by which compensation is received or to be received

Subject: Supervisory Guidance Regarding the Investment of Fiduciary Assets in Mutual Funds and Potential Conflicts of Interest

Summary

Increasingly, banks and trust institutions are encountering various direct or indirect financial incentives to place trust assets with particular mutual funds. These incentives range from payments structured as reimbursements for services or for transferring business to an unaffiliated fund family, to the financial benefits arising from the use of mutual funds that are managed by the institution or an affiliate. In some cases, such as service fees for administrative and record-keeping functions performed by the trust institution, the permissibility of such payments may be specifically addressed under state law. In the case of other financial incentives, guidance under applicable law may be less clear. In all cases, however, decisions to place fiduciary assets in particular investments must be consistent with the underlying trust documents and must be undertaken in the best interest of the trust beneficiary.

The primary supervisory concern is that an institution may fail to act in the best interest of beneficiaries if it stands to benefit independently from a particular investment. As a result, an institution may expose itself to an increased risk of legal action by account beneficiaries, as well as to potential violations of law or regulation. The Federal Reserve is issuing this guidance to help institutions minimize these risks and to help ensure that their activities meet fiduciary standards.

Background

Certain mutual fund providers offer compensation in the form of "service" fees to institutions that invest fiduciary assets in particular mutual funds. These fees, referred to variously as shareholder, sub-accounting or administrative service fees, are structured as payments to reimburse the institution for performing standard recordkeeping and accounting functions for the institution's fiduciary accounts, such as maintaining shareholder subaccounts and records, transmitting mutual fund communications as necessary, and arranging mutual fund transactions. These fees are typically based on a percentage or basis point amount of the dollar value of assets invested, or on transaction volume.

In recent years, nearly every state legislature has modified its laws explicitly to allow the acceptance of such fees by fiduciaries under certain conditions. These conditions often include compliance with standards of prudence, quality and appropriateness for the account,

and a determination of the "reasonableness" of the fees received by the institution. The Office of the Comptroller of the Currency (OCC) has also adopted these general standards for national banks.[1] However, the Employee Retirement Income Security Act of 1974 (ERISA) generally prohibits fee arrangements between fiduciaries and third parties, such as mutual fund providers, with limited exceptions.[2] ERISA requirements supersede state laws and guidelines put forth by the bank regulatory agencies.

While there has been no comprehensive review of the extent to which these types of incentive payments are presently being offered by mutual fund providers, the practice appears to have become more common in recent years. In addition to the service fees cited above, another form of compensation reportedly offered by some mutual fund providers is a lump-sum payment based on assets transferred into a mutual fund.

Similar conflict of interest concerns are raised by the investment of fiduciary account assets in mutual funds for which the institution or an affiliate acts as investment adviser (referred to as "proprietary" funds). In this case, the institution receives a financial benefit from management fees generated by the mutual fund investments. This activity can be expected to become more prevalent as banking organizations become more active in offering proprietary mutual funds.[3]

Supervisory Guidance

Although many state laws now explicitly authorize certain fee arrangements in conjunction with the investment of trust assets in mutual funds, institutions nonetheless face heightened legal and compliance risks from activities in which a conflict of interest exists, particularly if proper fiduciary standards are not observed and documented. Even in the case of investments where the institution does not exercise investment discretion, disclosure or other requirements may apply. Therefore, institutions should ensure that they perform and document an appropriate level of due diligence before entering into any fee arrangements similar to those described above or placing fiduciary assets in proprietary mutual funds. The following measures should be included in this process:

- Reasoned Legal Opinion - The institution should obtain a reasoned opinion of counsel that addresses the conflict of interest inherent in the receipt of fees or other forms of compensation from mutual fund providers in connection with the investment of fiduciary assets. The opinion should address the permissibility of the investment and compensation under applicable state or federal laws, trust instrument, or court order, as well as any applicable disclosure requirements or "reasonableness" standard for fees set forth in the law.

- Establishment of Policies and Procedures - The institution should establish written policies and procedures governing the acceptance of fees or other compensation from mutual fund providers as well as the use of proprietary mutual funds. The policies must be reviewed and approved by the institution's board of directors or its designated committee. Policies and procedures should, at a minimum, address the following issues: (1) designation of decision-making authority; (2) analysis and documentation of investment decisions; (3) compliance with applicable laws, regulations and sound fiduciary principles, including any disclosure requirements or "reasonableness" standards for fees; and (4) staff training and methods for monitoring compliance with policies and procedures by internal or external audit staff.

- Analysis and Documentation of Investment Decisions - Where fees or other compensation are received in connection with fiduciary account investments over which the institution has investment discretion or where such investments are made in the institution's proprietary mutual funds, the institution should fully document its analysis supporting the investment decision. This analysis should be performed on a regular, ongoing basis and would typically include factors such as historical performance comparisons to similar mutual funds, management fees and expense ratios, and ratings by recognized mutual fund rating services. The institution should also document its assessment that the investment is, and continues to be, appropriate for the individual account, in the best interest of account beneficiaries, and in compliance with the provisions of the Prudent Investor or Prudent Man Rules, as appropriate.

Please distribute this letter to the appropriate supervision staff, particularly all examiners of fiduciary and securities activities, and to all domestic and foreign banking organizations with fiduciary activities supervised by the Federal Reserve. A suggested transmittal letter is attached. To the extent that examiners identify issues and concerns pertaining to the acceptance of fees from mutual fund providers or investments in proprietary mutual funds, please forward such information to the Manager, Specialized Activities Section, Mail Stop 182, at the Federal Reserve Board. Any matters of significant concern should be noted in examination reports and corrective action pursued as appropriate.

Questions concerning this letter may be addressed to Michael G. Martinson, Deputy Associate Director, at (202) 452-3640 or Heidi Richards, Manager, at (202) 452-2598.

FDIC General Counsel's Opinion No. 12: "Engaged in the Business of Receiving Deposits Other Than Trust Funds"

February 17, 2000

Memorandum TO: The Board of Directors

From: William F. Kroener, III

General Counsel

Subject:

General Counsel's Opinion No. 12:"Engaged in the Business of Receiving Deposits Other Than Trust Funds"

Background

In recent years, the FDIC has received applications for deposit insurance from an increasing number of non-traditional depository institutions. Some of these applicants have been credit card banks; others have been trust companies. These applications have raised the issue of whether these institutions would be "engaged in the business of receiving deposits other than trust funds" as required by section 5 of the FDI Act. *See* 12 U.S.C. § 1815(a)(1). The purpose of this General Counsel's opinion is to clarify the agency's interpretation of the statutory phrase.

Summary and Recommendation

The FDIC has approved applications from a number of institutions that planned to maintain a single non-trust deposit account. Typically in recent years the amount of this deposit account

has been $500,000. The FDIC thus has found that institutions holding this amount of deposited funds in one or more non-trust deposit accounts are "engaged in the business of receiving deposits other than trust funds." The FDIC in acting on deposit insurance applications has not required the acceptance of non-trust deposits from the general public. This interpretation of the statutory phrase by the FDIC is confirmed by this General Counsel's opinion. I recommend that the Board of Directors approve the publication of this General Counsel's opinion in the Federal Register.

Staff member knowledgeable about this case:

Christopher Hencke, Legal Division (898-8839)

Discussion

Section 5 of the FDI Act provides that an applicant for deposit insurance must be "engaged in the business of receiving deposits other than trust funds." 12 U.S.C. § 1815(a)(1). The corollary to section 5 is section 8. Under the latter section, the FDIC must terminate the insured status of any depository institution "not engaged in the business of receiving deposits, other than trust funds." 12 U.S.C. § 1818(p).

For many years the FDIC has approved applications from institutions that did not plan to accept deposits from the general public. The FDIC has determined that being "engaged in the business of receiving [non-trust] deposits" does not require the acceptance of non-trust deposits from the general public. Rather, the acceptance of non-trust deposits from a particular group (such as trust customers or affiliates) has been regarded by the FDIC as sufficient to satisfy the threshold requirement of the statute.

The FDIC's long-standing interpretation is consistent with the language of the FDI Act. Although the Act refers to the "receiving" of deposits, the Act also defines "deposit" in such a way as to equate "receiving" and "holding." *See* 12 U.S.C. § 1813(l)(1). This is appropriate because the "holding" of a single deposit account involves a continuing business relationship with periodic withdrawals, deposits, rollovers and the accrual of interest. In other words, the opening of a deposit account is not a completed, isolated transaction. Also, the FDIC is mindful that a single deposit account can be divided into portions. If the FDIC required the periodic receipt of a particular number of non-trust deposits, institutions holding one deposit account would simply arrange for the account to be divided into portions. At periodic intervals, funds would be withdrawn and redeposited. Under these circumstances, the FDIC has regarded one non-trust deposit account in the amount of $500,000 as sufficient.

The FDIC's interpretation of "engaged in the business of receiving [non-trust] deposits" also is consistent with the past practice of the Office of the Comptroller of the Currency (OCC). Prior to 1991 the OCC was responsible for determining whether a new national bank would be "engaged in the business of receiving deposits other than trust funds." (Since the enactment of FDICIA in 1991 that responsibility has rested with the FDIC for national as well as State banks.) By chartering national banks with limited deposit-taking functions, the OCC effectively found that being "engaged in the business" did not require the acceptance of non-trust deposits from the general public.

The FDIC's interpretation is also consistent with other federal banking law as well as State banking laws. The Bank Holding Company Act (BHCA) as amended by the Competitive Equality Banking Act (CEBA) contemplates that an institution could be insured by the FDIC even though substantially all of the institution's deposits are trust funds. *See* 12 U.S.C. § 1841(c)(2)(D). Similarly, a Virginia statute defines a "credit card bank" in such a way that the bank must be insured by the FDIC even though the bank may accept deposits only from affiliates. *See* Va. Code §§ 6.1-391; 6.1-392.1.A. A number of other States have statutes to similar effect. These federal and State statutes presume that an institution may be "engaged in the business of receiving [non-trust] deposits" even though the institution accepts no such deposits from the general public.

The leading case on being "engaged in the business of receiving [non-trust] deposits" is *Meriden Trust and Safe Deposit Company v. FDIC,* 62 F.3d 449 (2d Cir. 1995). In that case, the court found that a particular bank was "engaged in the business" even though the bank held only two non-trust deposit accounts in the aggregate amount of $200,000. This case supports the FDIC's interpretation.

Recently a contrary ruling was issued on a preliminary jurisdictional motion by a federal district court in Louisiana. The litigation was initiated by a group of credit card holders in Louisiana against a credit card bank chartered in Georgia. The cardholders charged the bank with violating Louisiana restrictions on fees and interest rates. In its defense, the bank cited 12 U.S.C. § 1831d. That section of the FDI Act allows a "State bank" to avoid State restrictions on fees and interest rates when operating outside its State of incorporation. The issue before the federal district court was whether the Georgia bank was a "State bank" as defined at 12 U.S.C. § 1813(a)(2). Under the statutory definition, an institution cannot be a "State bank" unless it is "engaged in the business of receiving deposits, other than trust funds." 12 U.S.C. § 1813(a)(2)(A).

In its recent ruling, the federal district court found that the Georgia bank insured by the FDIC was not "engaged in the business of receiving [non-trust] deposits" because it held only two deposits owned by affiliates. This ruling is inconsistent with the factors noted above supporting a broader, less restrictive interpretation of being "engaged in the business of receiving [non-trust] deposits." Also, the court's ruling is inconsistent with section 8 of the FDI Act. Under that section, the FDIC is authorized to make "conclusive" findings that an insured institution is "not engaged in the business of receiving deposits, other than trust funds." 12 U.S.C. § 1818(p). The FDIC has made no such determination in the case of the Georgia credit card bank. In any event, the district court's ruling has been appealed by the Georgia bank to the United States Court of Appeals for the Fifth Circuit. The case is pending before the Court of Appeals.

Conclusion

For the reasons summarized above, in my opinion the holding of one or more non-trust deposits in the aggregate amount of $500,000 is sufficient to satisfy the threshold requirement of being "engaged in the business of receiving deposits other than trust funds." I recommend that the Board authorize the publication of this General Counsel's opinion in the Federal Register. The publication of the opinion would be beneficial to future applicants for deposit insurance.

Financial Institution Letters

Alert Regarding Bank Investment Securities and Custodial Accounts Held At Securities Broker-Dealers

FIL-38-2002
April 25, 2002

To:	Chief Executive Officer
Subject:	*Credit Risks Arising From Bank Investment Securities and Custodial Accounts Held at Securities Broker-Dealers*

The Federal Deposit Insurance Corporation (FDIC) is alerting you to concerns it has identified regarding bank custodial relationships with failed broker-dealers. These concerns have arisen following the failure of a large regional securities broker-dealer and its liquidation by the Securities Investor Protection Corporation (SIPC). For this liquidation (which was the largest in SIPC history), the bankruptcy trustee has informed banks with securities held in safekeeping that they will incur a loss. This alert provides banks basic information regarding SIPC coverage and reminds banks of the credit risks associated with custodial relationships. Bank management is advised to review existing custodial relationships, evaluate the creditworthiness and reputation of custodians, and ensure that the bank maintains properly diversified custodial relationships.

The Securities Investor Protection Act of 1970 (SIPA) created SIPC to provide certain protections to customers against losses from the failure of a securities broker-dealer. Under SIPA, only customers of a SIPC-member firm qualify for SIPC protection and only "customer property" as defined in SIPA and determined to be in the member firm's custody are covered. Although SIPC coverage allows a bank, for its own account, to share in "customer property," banks cannot receive advances from SIPC. In the event that a bank demonstrates that it is acting as an agent for an investor, that investor is entitled to separate

status as a "customer" and is eligible to receive advances from SIPC.

In general, during a liquidation proceeding, the trustee for the failed broker-dealer will (1) return to customers property that is registered in a specific customer's name, (2) pay those customers their pro rata share of "customer property," and (3) provide customers (other than banks and broker-dealers for their own accounts) SIPC advances up to the $500,000 limit. Customers not subject to SIPC protection, such as banks, will receive a pro rata distribution of "customer property." Banks should be aware of SIPC's coverage and claims procedures and be able to differentiate between bank-owned and bank customer-owned accounts and securities held at failed broker-dealers.

These events serve as an opportunity to remind banks of their obligation under existing supervisory policy to exercise due diligence when selecting broker-dealers and establishing a custodial relationship. Banks should establish and periodically review broker-dealer selection criteria that would include a review of the broker-dealer's financial statements and an assessment of the firm's ability to honor its commitments. An inquiry into the broker-dealer's reputation should be conducted. Such information can be obtained from state and federal securities regulators and industry self-regulatory organizations such as the National Association of Securities Dealers (NASD). The custodian's reputation and creditworthiness should be periodically reviewed. Banks should review their existing custodial relationships and underlying documentation and practices so that bank management can fully understand the nature and extent of potential credit risks that can arise from existing custodial relationships. Where needed, banks should consult with their attorneys and independently review their agreements and business practices with broker-dealers.

These events also instruct that even sound due diligence practices may not adequately minimize banks' exposure. In order to avoid unforeseen credit exposure in similar circumstances, banks should ensure that their custodial relationships are properly diversified. Maintaining relationships with different custodians can minimize the bank's exposure in this area.

Glass-Steagall Act As Modified By Gramm-Leach-Bliley Act

Historical Perspective

The Banking Act of 1933 (Act), in particular Sections 16, 20, 21, and 32, are often called the Glass-Steagall Act, was enacted to address questionable banking industry practices during the 1920's and 1930's.. The primary purpose of the Act is to separate commercial banking from investment banking. This separation was designed to promote the financial stability of commercial banks, create public confidence in the banking system, and prevent conflicts of interest which might develop from the performance of both commercial and investment banking.

Sections 16, 20, 21, and 32 of the Act established certain restrictions regarding commercial banks engaging in securities related activities. In general, these Sections prohibited banks from underwriting or making a market in stocks and municipal revenue debt instruments. They also prohibited banks from maintaining financial or personnel ties with investment banks. Specifically, Section 32 of the Banking Act of 1933 prohibited any employee of a member bank from concurrently being employed by any firm engaged in the issuance of securities. In the case of a State nonmember bank, this would result in a conflict of interest situation and would, if proper safeguards were not taken, result in a deficiency in the bank's operation and action by the Corporation to remedy the situation.

Gramm-Leach-Bliley Act (GLBA): enacted November 12, 1999

The GLBA repealed Sections 20 and 32 of the Banking Act of 1933 [Section 101 of GLBA]. The GLBA also modified several other securities laws which are applicable to banks and bank securities activities. Those issues are discussed in the following sub-section.

Section 20 Repealed

Prior to GLBA, Section 20 had prohibited bank affiliations with organizations dealing in the issuance of securities. It prohibited a bank from affiliation with any corporation, association, business trust, or other similar organization engaged principally in the issuance, flotation, underwriting, public sale, or distribution, whether through wholesale or retail channels or through participation in a syndicate, of stocks, bonds, debentures, notes, or other securities.

With the repeal of Section 20, banks have more flexibility to engage in securities underwriting and dealer activities. These activities will need to be conducted through a Financial Holding Company or f inancial subsidiary (at the bank level). This will be of particular interest to banks with proprietary mutual funds, as they are now allowed to underwrite and distribute both proprietary and third-party mutual funds.

Section 32 Repealed

Prior to GLBA, Section 32 had prohibited interlocking management between entities that issue securities and banks. The language describing these entities was similar to that noted above.

With the repeal of Section 32, banks can have common officers, directors, and employees with registered investment companies (mutual funds). This allows interlocks and poses a new conflict of interest situation. Though the interlock is limited to some degree by the Investment Company Act of 1940, it still exists. Examiners should be mindful of the potentially abusive situations this interlock may present.

Section 10(c) of the Investment Company Act of 1940 prohibits a majority of the directors of a mutual fund from being officers, directors, or employees of any one bank. The GLBA expanded this prohibition to affiliates and subsidiaries of the bank. Basically, a mutual fund may not have a majority of its directorate comprised of individuals of a single bank and its associated affiliates and subsidiaries.

In addition, the SEC strengthened its general rules for director independence of investment companies by amending certain exemptive rules under the Investment Company Act of 1940. For investment companies that rely on these rules: independent directors must constitute a majority of their board of directors; independent directors must select and nominate other independent directors; and any legal counsel for the independent directors must be an independent legal counsel. [Section 10 of Investment Company Act of 1940 and SEC Release Nos. 33-7932 & 34-43786 Final Rule: Role of Independent Directors of Investment Companies; effective May 12, 2001.]

Applicability of Federal Securities Laws to Banks and Bank Sponsored Securities Activities

The Gramm-Leach-Bliley Act (GLBA) modified aspects of certain Federal securities laws that are applicable to banks and bank sponsored securities activities. The GLBA was enacted November 12, 1999. GLBA provisions were phased-in during an eighteen month period after November 12, 1999. The following discussion of rules and exemptions are post- GLBA .

1. **Registration of Bank Securities**
   Securities Act of 1933 : To provide full and fair disclosure of the character of securities sold in interstate and foreign commerce and through the mails, and to prevent frauds in the sale thereof, and for other purposes.

   The Act exempts any security issued or guaranteed by a bank from all Sections except Section 17 fraud provisions. (§ 3(a)(2)).

   Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

   Bank securities must be registered with the appropriate bank regulatory agency which administers and enforces §§ 12, 13, 14(a), (c), (d), (f), and 16 in a manner substantially similar to the SEC (§ 12(i)).

2. **Bank as Broker**
   a. Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

      §3(a)(4) : The GLBA Section 201, Definition of Broker, amended §3(a)(4) of the Securities Exchange Act of 1934.

      There is an exemption for banks engaging in traditional trust and fiduciary activity, provided a few key points are followed. These include how compensation is received, how the activity is marketed, and how transactions are directed. A further explanation of these concepts is found in subsections (B)(ii) and (C). Fiduciary activity is defined in subsection (D).

      An exemption has also been afforded to certain stock purchase plans (subsection B(iv)) and safekeeping and custodial activity (subsection B(viii). Again, these are subject to how transactions are directed. There is also a "catch-all" de minimis exemption for isolated transactions that fall outside of the items specifically exempted (subsection B(xi)). It is expected that this will help with incidental

transactions.

There is no specific recordkeeping requirement set-forth in this section; however, management will need sufficient records to demonstrate that the institution qualifies for the exemption. If an activity does not meet any of the exemptions detailed below the bank must register with the SEC. Either the SEC or the NASD will provide regulatory oversight. Management may decide to move the activity to a subsidiary or affiliate. In that case, the subsidiary or affiliate must register with the SEC.

On October 3, 2007, the Federal Reserve and SEC published Regulation R, "Definitions of Terms and Exemptions Relating to the 'Broker' Exceptions for Banks and Exemptions for Banks Under Section 3(a)(5) of The Securities Exchange Act and Related Rules; Final Rule," which sets forth requirements for satisfying the conditions for the Trust & Fiduciary exceptions, the Custody & Safekeeping exemptions, as well as the Networking exception and other exemptions for banks from the definition of "Broker." See SEC Release No. 34-56501: File No. S7-22-0 (353KB PDF file - PDF Help). Also refer to Section 10.F for a detailed discussion of Regulation R.

The revised definition of a broker in Section §3(a)(4) states, in part,

Broker:

A. In General - The term `broker' means any person engaged in the business of effecting transactions in securities for the account of others.
B. Exception for certain bank activities - A bank shall not be considered to be a broker because the bank engages in any one or more of the following activities under the conditions described:

i. Third party brokerage arrangements - "text not included"
ii. Trust Activities - The bank effects transactions in a trustee capacity, or effects transactions in a fiduciary capacity in its trust department or other department that is regularly examined by bank examiners for compliance with fiduciary principles and standards, and
    I. is chiefly compensated for such transactions, consistent with fiduciary principles and standards, on the basis of an administration or annual fee (payable on a monthly, quarterly, or other basis), a percentage of assets under management, or a flat or capped per order processing fee equal to not more than the cost incurred by the bank in connection with executing securities transactions for trustee and fiduciary customers, or any combination of such fees; and
    II. does not publicly solicit brokerage business, other than by advertising that it effects transactions in securities in conjunction with advertising its other trust activities.
iii. Permissible Securities Transactions - "text not included"
iv. Certain Stock Purchase Plans
    I. Employee Benefit Plans - The bank effects transactions, as part of its transfer agency activities, in the securities of an issuer as part of any pension, retirement, profit-sharing, bonus, thrift, savings, incentive, or other similar benefit plan for the employees of that issuer or its affiliates (as defined in Section 2 of the Bank Holding Company Act of 1956), if the bank does not solicit transactions or provide investment advice with respect to the purchase or sale of securities in connection with the plan.

II. Dividend Reinvestment Plans - The bank effects transactions, as part of its transfer agency activities, in the securities of an issuer as part of that issuer's dividend reinvestment plan, if
    a. the bank does not solicit transactions or provide investment advice with respect to the purchase or sale of securities in connection with the plan; and
    b. the bank does not net shareholders' buy and sell orders, other than for programs for odd-lot holders or plans registered with the Commission.

III. Issuer Plans - The bank effects transactions, as part of its transfer agency activities, in the securities of an issuer as part of a plan or program for the purchase or sale of that issuer's shares, if
    a. the bank does not solicit transactions or provide investment advice with respect to the purchase or sale of securities in connection with the plan or program; and
    b. the bank does not net shareholders' buy and sell orders, other than for programs for odd-lot holders or plans registered with the Commission.

IV. Permissible Delivery of Materials - The exception to being considered a broker for a bank engaged in activities described in sub clauses (I), (II), and (III) will not be affected by delivery of written or electronic plan materials by a bank to employees of the issuer, shareholders of the issuer, or members of affinity groups of the issuer, so long as such materials are
    a. comparable in scope or nature to that permitted by the Commission as of the date of the enactment of the Gramm-Leach-Bliley Act; or
    b. otherwise permitted by the Commission.

v. Sweep Accounts .--The bank effects transactions as part of a program for the investment or reinvestment of deposit funds into any no-load, open-end management investment company registered under the Investment Company Act of 1940 that holds out as a money market fund.

vi. Affiliate Transactions - "text not included"

vii. Private Securities Offerings - "text not included"

viii. Safekeeping and Custody Activities

I. In General- The bank, as part of customary banking activities
    a. provides safekeeping or custody services with respect to securities, including the exercise of warrants and other rights on behalf of customers;
    b. facilitates the transfer of funds or securities, as a custodian or a clearing agency, in connection with the clearance and settlement of its customers' transactions in securities;
    c. effects securities lending or borrowing transactions with or on behalf of customers as part of services provided to customers pursuant to division (a) or (b) or invests cash collateral pledged in connection with such transactions;
    d. holds securities pledged by a customer to another person or securities subject to purchase or resale agreements involving a customer, or facilitates the pledging or transfer of such securities by book entry or as otherwise provided under applicable law, if the bank maintains records separately identifying the securities and the customer; or
    e. serves as a custodian or provider of other related administrative services to any individual retirement account, pension, retirement, profit sharing, bonus, thrift savings, incentive, or other similar benefit plan.

II. Exception for Carrying Broker Activities - "text not included"

ix. Identified Banking Products -- The bank effects transactions in identified banking products as defined in Section 206 of the Gramm-Leach-Bliley Act.
x. Municipal Securities - The bank effects transactions in municipal securities.
xi. De Minimis Exception - The bank effects, other than in transactions referred to in clauses (i) through (x), not more than 500 transactions in securities in any calendar year, and such transactions are not effected by an employee of the bank who is also an employee of a broker or dealer.

C. Execution by Broker or Dealer- The exception to being considered a broker for a bank engaged in activities described in clauses (ii), (iv), and (viii) of subparagraph (B) shall not apply if the activities described in such provisions result in the trade in the United States of any security that is a publicly traded security in the United States, unless

i. the bank directs such trade to a registered broker or dealer for execution;

ii. the trade is a cross trade or other substantially similar trade of a security that
   I. is made by the bank or between the bank and an affiliated fiduciary; and
   II. is not in contravention of fiduciary principles established under applicable Federal or State law; or
iii. the trade is conducted in some other manner permitted under rules, regulations, or orders as the Commission may prescribe or issue.

D. Fiduciary Capacity - For purposes of subparagraph (B)(ii), the term `fiduciary capacity' means
   i. in the capacity as trustee, executor, administrator, registrar of stocks and bonds, transfer agent, guardian, assignee, receiver, or custodian under a uniform gift to minor act, or as an investment adviser if the bank receives a fee for its investment advice;
   ii. in any capacity in which the bank possesses investment discretion on behalf of another; or
   iii. in any other similar capacity.
E. Exception for Entities Subject to Section 15(e) - "text not included"

b. Investment Company Act of 1940: To provide for the registration and regulation of investment companies and investment advisers, and for other purposes.

   The GLBA in Section 215, Definition of Broker Under the Investment Company Act of 1940, amended Section 2(a)(6) of the Investment Company Act of 1940.

   The term `broker' has the same meaning as given in Section 3 of the Securities Exchange Act of 1934, except that such term does not include any person solely by reason of the fact that such person is an underwriter for one or more investment companies.

c. Investment Advisers Act of 1940 : To provide for the registration and regulation of investment companies and investment advisers, and for other purposes.

   The GLBA in Section 218, Definition of Broker Under the Investment Advisers Act of 1940 amended Section 202(a)(3).

   The term `broker' has the same meaning as given in Section 3 of the

Securities Exchange Act of 1934.

3. **Bank as Dealer**
   a. Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

   §3 (a)(5) : The GLBA Section 202, Definition of Dealer, amended Section 3(a)(5) of the Securities Exchange Act of 1934.

   There is an exception for trustee and fiduciary transactions and asset-backed activity. However, the Securities Exchange Act of 1934 does not define what is considered a trustee or fiduciary as it pertains to dealer activity. It does define fiduciary activity in the revised Section 3(a)(4)(D).

   The revised **definition of a dealer** in Section 3(a)(5) states, in part,

   Dealer:

   A. In General - The term `dealer' means any person engaged in the business of buying and selling securities for such person's own account through a broker or otherwise.
   B. Exception for person not engaged in the business of Dealing - "text not included"
   C. Exception for Certain Bank Activities - A bank shall not be considered to be a dealer because the bank engages in any of the following activities under the conditions described:
      i. Permissible Securities Transactions - "text not included"
      ii. Investment, Trustee, and Fiduciary Transactions - The bank buys or sells securities for investment purposes
         I. for the bank; or
         II. for accounts for which the bank acts as a trustee or fiduciary.
      iii. Asset-Backed Transactions - The bank engages in the issuance or sale to qualified investors, through a grantor trust or other separate entity, of securities backed by or representing an interest in notes, drafts, acceptances, loans, leases, receivables, other obligations (other than securities of which the bank is not the issuer), or pools of any such obligations predominantly originated by
         I. the bank;
         II. an affiliate of any such bank other than a broker or dealer; or
         III. a syndicate of banks of which the bank is a member, if the obligations or pool of obligations consists of mortgage obligations or consumer-related receivables.
      iv. Identified Banking Products - The bank buys or sells identified banking products, as defined in Section 206 of the Gramm-Leach-Bliley Act.

   Furthermore, the SEC issued a Final Rule (below) and separate Staff Commentary in 2003 to clarify the requirements for bank exemptions for broker and dealer rules. The new guidance finalizes dealer rules, but separate broker rules are to be issued separately at a later date. Broker rules definitions had not been issued as of this printing. The revised sections of the Securities Exchange Act of 1934 are quoted below. For preamble and endnotes to the SEC's final rule, refer to either SEC Release No. 34-47364 or 68 Federal Register 8686.

   SEC Final Rule: Definition of Terms in and Specific Exemptions for

Banks, Savings Associations, and Savings Banks Under Sections 3(a)(4) and 3(a)(5) of the Securities Exchange Act of 1934 Securities and Exchange Commission 17 CFR Part 240 [Release No. 34-47364; File No. S7-41-02]

Excerpt:

Summary: The Securities and Exchange Commission is adopting amendments to its rule granting an exemption to banks from dealer registration for a de minimis number of riskless principal transactions, and to its rule that defines terms used in the bank exception to dealer registration for asset-backed transactions. The Commission also is adopting a new exemption for banks to the definition of broker and dealer under the Securities Exchange Act of 1934 for certain securities lending transactions. In addition, the Commission is extending the exemption from rescission liability under Exchange Act Section 29 to contracts entered into by banks acting in a dealer capacity before March 31, 2005. These rules address certain of the exceptions for banks from the definitions of "broker" and "dealer" that were added to the Securities Exchange Act of 1934 by the Gramm-Leach-Bliley Act.

Compliance Date: September 30, 2003.

Section 240.3a5-1 is revised to read as follows:

§ 240.3a5-1 Exemption from the definition of "dealer" for a bank engaged in riskless principal transactions.

(a) A bank is exempt from the definition of the term "dealer" to the extent that it engages in or effects riskless principal transactions if the number of such riskless principal transactions during a calendar year combined with transactions in which the bank is acting as an agent for a customer pursuant to Section 3(a)(4)(B)(xi) of the Act (15 U.S.C. 78c(a)(4)(B)(xi)) during that same year does not exceed 500.

(b) For purposes of this section, the term riskless principal transaction means a transaction in which, after having received an order to buy from a customer, the bank purchased the security from another person to offset a contemporaneous sale to such customer or, after having received an order to sell from a customer, the bank sold the security to another person to offset a contemporaneous purchase from such customer.

Section 240.3b-18 is revised to read as follows:

§ 240.3b-18 Definitions of terms used in Section 3(a)(5) of the Act.

For the purposes of Section 3(a)(5)(C) of the Act (15 U.S.C. 78c(a)(5)(C):

(a) The term affiliate means any company that controls, is controlled by, or is under common control with another company.

(b) The term consumer-related receivable means any obligation incurred by any natural person to pay money arising out of a transaction in which the money, property, insurance, or services (being purchased) are primarily for personal, family, or household purposes.

(c) The term member as it relates to the term "syndicate of banks" means a bank that is a participant in a syndicate of banks and together with its affiliates, other than its broker or dealer affiliates, originates no less than 10% of the value of the obligations in a pool of obligations used to back the securities issued through a grantor trust or other separate entity.

(d) The term obligation means any note, draft, acceptance, loan, lease, receivable, or other evidence of indebtedness that is not a security issued by a person other than the bank.

(e) The term originated means:

> (1) Funding an obligation at the time that the obligation is created; or
>
> (2) Initially approving and underwriting the obligation, or initially agreeing to purchase the obligation, provided that:
>
>> (i) The obligation conforms to the underwriting standards or is evidenced by the loan documents of the bank or its affiliates, other than its broker or dealer affiliates; and
>>
>> (ii) The bank or its affiliates, other than its broker or dealer affiliates, fund the obligation in a timely manner, not to exceed six months after the obligation is created.

(f) The term pool means more than one obligation or type of obligation grouped together to provide collateral for a securities offering.

(g) The term predominantly originated_means that no less than 85% of the value of the obligations in any pool were originated by:

> (1) The bank or its affiliates, other than its broker or dealer affiliates; or
>
> (2) Banks that are members of a syndicate of banks and affiliates of such banks, other than their broker or dealer affiliates, if the obligations or pool of obligations consist of mortgage obligations or consumer-related receivables.
>
> (3) For this purpose, the bank and its affiliates include any financial institution with which the bank or its affiliates have merged but does not include the purchase of a pool of obligations or the purchase of a line of business.

(h) The term syndicate of banks means a group of banks that acts jointly, on a temporary basis, to issue through a grantor trust or other separate entity, securities backed by obligations originated by each of the individual banks or their affiliates, other than their broker or dealer affiliates.

Section 240.15a-8 is revised to read as follows:

§ 240.15a-8 Exemption for banks from Section 29 liability.

(a) No contract entered into before January 1, 2003 shall be void or considered voidable by reason of Section 29 of the Act (15 U.S.C. 78cc) because any bank that is a party to the contract violated the registration requirements of Section 15(a) of the Act (15 U.S.C. 78o(a)) or any applicable provision of the Act (15 U.S.C. 78a et seq.) and the rules and regulations thereunder based solely on the bank's status as a broker or dealer when the contract was created.

(b) No contract entered into before March 31, 2005, shall be void or considered voidable by reason of Section 29 of the Act (15 U.S.C. 78cc) because any bank that is a party to the contract violated the registration requirements of Section 15(a) of the Act (15 U.S.C. 78o(a)) or any applicable provision of the Act (15 U.S.C. 78a et seq.) and the rules and regulations thereunder based solely on the bank's status as a dealer when the contract was created.

Section 240.15a-11 is added to read as follows:

§ 240.15a-11 Exemption from the definitions of "broker" and "dealer" for banks engaging in securities lending transactions.
(a) A bank is exempt from the definitions of the terms "broker" and "dealer" under Sections 3(a)(4) and 3(a)(5) of the Act (15 U.S.C. 78c(a)(4) and (a)(5)), to the extent that, as a conduit lender, or as an agent, it engages in or effects securities lending transactions, and any securities lending services in connection with such transactions, with or on behalf of a person the bank reasonably believes to be:

(1) A qualified investor as defined in Section 3(a)(54)(A) of the Act (15 U.S.C. 78c(a)(54)(A)); or

(2) Any employee benefit plan that owns and invests on a discretionary basis, not less than $25,000,000 in investments.

(b) Securities lending transaction means a transaction in which the owner of a security lends the security temporarily to another party pursuant to a written securities lending agreement under which the lender retains the economic interests of an owner of such securities, and has the right to terminate the transaction and to recall the loaned securities on terms agreed by the parties.

(c) Securities lending services means:

(1) Selecting and negotiating with a borrower and executing, or directing the execution of the loan with the borrower;

(2) Receiving, delivering, or directing the receipt or delivery of loaned securities;

(3) Receiving, delivering, or directing the receipt or delivery of collateral;

(4) Providing mark-to-market, corporate action, recordkeeping or other

services incidental to the administration of the securities lending transaction;

(5) Investing, or directing the investment of, cash collateral; or

(6) Indemnifying the lender of securities with respect to various matters.

(d) For the purposes of this section, the term conduit lender means a bank that borrows or loans securities, as principal, for its own account, and contemporaneously loans or borrows the same securities, as principal, for its own account. A bank that qualifies under this definition as a conduit lender at the commencement of a transaction will continue to qualify, notwithstanding whether:

(1) The lending or borrowing transaction terminates and so long as the transaction is replaced within one business day by another lending or borrowing transaction involving the same securities; and

(2) Any substitutions of collateral occur.

b. Investment Company Act of 1940 : To provide for the registration and regulation of investment companies and investment advisers, and for other purposes.

The GLBA in Section 216, Definition of Dealer Under the Investment Company Act of 1940, amended Section 2(a)(11) of the Investment Company Act of 1940 to read as follows.

The term `dealer' has the same meaning as given in the Securities Exchange Act of 1934, but does not include an insurance company or investment company.

c. Investment Advisers Act of 1940 : To provide for the registration and regulation of investment companies and investment advisers, and for other purposes.

The GLBA in Section 219, Definition of Dealer Under the Investment Advisers Act of 1940 amended Section 202(a)(7) to read as follows.

The term `dealer' has the same meaning as given in Section 3 of the Securities Exchange Act of 1934, but does not include an insurance company or investment company.

4. **Bank as Underwriter**
   a. Securities Act of 1933 : To provide full and fair disclosure of the character of securities sold in interstate and foreign commerce and through the mails, and to prevent frauds in the sale thereof, and for other purposes.

   No exemption from definition of "underwriter" (§ 2(11)). The provisions of the Act are applicable to banks.

   b. Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

   Not exempt from definition (§ 3(a)(20)). The provisions of the act are applicable to banks.

   c. Investment Company Act of 1940 : To provide for the registration and regulation of investment companies and investment advisers, and for other purposes.

   Not exempt from definition of "underwriter" (§ 2(a)(40)). The provisions of the act are applicable to banks.

5. **Bank as Principal Underwriter**
   Investment Company Act of 1940 : To provide for the registration and regulation of investment companies and investment advisers, and for other purposes.

   No exemption from definition (§ 2(a)(29)).

6. **Bank as a Municipal Bond Underwriter**
   The GLBA amends the corporate powers of National banks. They now have the authority to underwrite municipal revenue bonds. This activity may be performed within the bank. State banks may also engage in this activity to the extent permitted by the respective State's laws. This activity may be at the holding company, the bank, or the bank subsidiary level.

   Section 151 of the GLBA amends the paragraph designating the Seventh of Section 5136 of the Revised Statutes of the United States (12 U.S.C. 24(7)). It adds the following sentence.

   In addition to the provisions in this paragraph for dealing in, underwriting, or purchasing securities, the limitations and restrictions contained in this paragraph as to dealing in, underwriting, and purchasing investment securities for the national bank's own account shall not apply to obligations (including limited obligation bonds, revenue bonds, and obligations that satisfy the requirements of Section 142(b)(1) of the Internal Revenue Code of 1986) issued by or on behalf of any State or political

subdivision of a State, including any municipal corporate instrumentality of 1 or more States, or any public agency or authority of any State or political subdivision of a State, if the national bank is well capitalized (as defined in Section 38 of the Federal Deposit Insurance Act).

7. **Bank as Clearing Agency**
   Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

   No exemption from definition (§ 3(a)(23)(A); however, a bank is not to be deemed a clearing agency if it only performs customary bank functions or acts as agent for a clearing agency or participant in a clearing agency (§ 3(a)(23)(B)).

8. **Bank as Municipal Securities Dealer**
   Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

   No exemption from "municipal securities dealer" definition for banks (§ 3(a)(30)); however, § 3(a)(30)(B) allows a separately identifiable department or division and not the bank itself to register as a municipal securities dealer

9. **Bank as Municipal Securities Broker**
   Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

   Exempts banks from definition of broker (§3(a)(4)(B)(ix))

10. **Bank as Investment Adviser**
    a. Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

       Incorporates Investment Advisers, as defined in the Investment Advisers Act of 1940. (§3(a)(20))

    b. Investment Advisers Act of 1940 : To provide for the registration and regulation of investment companies and investment advisers, and for other purposes.

       Banks, bank holding companies, or their SIDDs (separately identifiable department or division) are required to register and comply with the Investment Advisers Act of 1940 if the bank, bank holding company, or SIDD serves or acts as an investment adviser to a registered investment company. A registered investment company is defined in the Investment Company Act of 1940 Section 3(a)(1) and includes mutual funds and other similar issuers.

       An "investment adviser" under the Investment Advisers Act of 1940 is subject to SEC jurisdiction, recordkeeping requirements, advertising and solicitation rules, rules on receipt of performance fees, and limits on use of nonpublic information.

       If the bank or bank holding company does not advise a registered investment company - the bank or bank holding company is exempt from the Act. This is explained below in an excerpt from Section 202(a)(11).

(§202(a)(11)) : "Investment adviser" means any person who, for compensation, engages in the business of advising others, either directly or through publications or writings, as to the value of securities or as to the advisability of investing in, purchasing, or selling securities, or who, for compensation and as part of a regular business, issues or promulgates analyses or reports concerning securities; but does not include (A) a bank, or any bank holding company as defined in the Bank Holding Company Act of 1956, which is not an investment company, except that the term "investment adviser" includes any bank or bank holding company to the extent that such bank or bank holding company serves or acts as an investment adviser to a registered investment company, but if, in the case of a bank, such services or actions are performed through a separately identifiable department or division, the department or division, and not the bank itself, shall be deemed to be the investment adviser. "

If management elects to provide investment advice to a registered investment company, they will need to register the bank with the SEC or establish a "separately identifiable department or division" (SIDD) that will provide the advisory service. The SIDD must meet the provisions of 202(a)(26) below and register with the SEC.

(§ 202(a)(26)) : " The term "separately identifiable department or division" of a bank means a unit--
(A) that is under the direct supervision of an officer or officers designated by the board of directors of the bank as responsible for the day-to-day conduct of the bank's investment adviser activities for one or more investment companies, including the supervision of all bank employees engaged in the performance of such activities; and
(B) for which all of the records relating to its investment adviser activities are separately maintained in or extractable from such unit's own facilities or the facilities of the bank, and such records are so maintained or otherwise accessible as to permit independent examination and enforcement by the Commission of this Act or the Investment Company Act of 1940 and rules and regulations promulgated under this Act or the Investment Company Act of 1940. "

(§210(A) Consultation) : This section of the Investment Advisors Act was added in 1999 through the GLBA . It allows for the sharing of information, between the SEC and the appropriate federal banking agency, regarding the investment advisory activities of any bank, bank holding company, or SIDD that is registered under Section 203 of the Act.

11. **Banks as Investment Company**
    a. Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

    Incorporates Investment Company Act definition of "investment company". (§ 3(a)(19)).

    b. Investment Company Act of 1940 : To provide for the registration and regulation of investment companies and investment advisers, and for other purposes.

    Banks are exempt from definition of investment company for the Act (§ 3(c)(3)).

    c. Investment Advisers Act of 1940 : To provide for the registration and regulation of investment companies and investment advisers, and for other

purposes.

Incorporates Investment Company Act definition of investment company (§ 202(a)(12)).

12. **Collective Trust Fund Treatment**
    a. Securities Act of 1933 : To provide full and fair disclosure of the character of securities sold in interstate and foreign commerce and through the mails, and to prevent frauds in the sale thereof, and for other purposes.

       Exempts any interest or participation in any common trust fund or similar fund that is excluded from the definition of the term 'investment company' under Section 3(c)(3) of the Investment Company Act of 1940 from all except fraud provisions under Section 17 of the Securities Act of 1933. (§ 3(a)(2)).

    b. Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

       Exempts any interest or participation in any common trust fund or similar fund that is excluded from the definition of the term `investment company' under Section 3(c)(3) of the Investment Company Act of 1940. (§ 3(a)(12))

    c. Investment Company Act of 1940 : To provide for the registration and regulation of investment companies and investment advisers, and for other purposes.

       The GLBA codified the SEC's position on common trust funds and collective pooled investment funds. An exemption under Section 3(c)(3) of the Investment Company Act of 1940 is available for common trust fund or similar fund if:

       a. such fund is employed by the bank solely as an aid to the administration of trusts, estates, or other accounts created and maintained for a fiduciary purpose;
       b. except in connection with the ordinary advertising of the bank's fiduciary services, interests in such fund are not-
          i. advertised; or
          ii. offered for sale to the general public; and
       c. fees and expenses charged by such fund are not in contravention of fiduciary principles established under applicable Federal or State law. (§ 3(c)(3))

Collective Trust Funds (for Qualified Plans)

13. **Single and Collective Trust Fund for IRC § 401 "Qualified" Retirement Plans Which Do Not Contain Voluntary Employment Contributions**
    a. Securities Act of 1933 : To provide full and fair disclosure of the character of securities sold in interstate and foreign commerce and through the mails, and to prevent frauds in the sale thereof, and for other purposes.

       Exempts interests or participations in a single or collective trust fund maintained by a bank . . . issued in connection with (a) a stock bonus, pension, or profit-sharing plan which meets the requirements for qualification under Section 401 of the Internal Revenue Code of 1954" from all except fraud provisions (§ 3(a)(2)).

    b. Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

Includes in definition of exempted security "interests or participations in a collective trust fund maintained by a bank . . . issued in connection with (A) a stock bonus, pension, or profit-sharing plan which meets the requirements for qualification under Section 401 of the Internal Revenue Code of 1954" (§ 3(a)(12)). Exempts from registration "interests or participations in any collective trust fund maintained by a bank . . . issued in connection with (i) a stock-bonus, pension, or profit-sharing plan which meets the requirements for qualification under Section 401 of the Internal Revenue Code of 1954" (§ 12(g)(2)(H)).

c. Investment Company Act of 1940 : To provide for the registration and regulation of investment companies and investment advisers, and for other purposes.

Exempts from definition of investment company "employees, stock bonus, pension, or profit-sharing trust which meets the requirements for qualification under Section 401 of the Internal Revenue Code of 1954; or any collective trust fund maintained by a bank consisting solely of assets of such trusts" (§ 3(c)(11)).

14. **Single and Collective Trust Fund for IRC § 401 "Qualified" Retirement Plans Which Contain Voluntary Employee Contributions**

a. Securities Act of 1933 : To provide full and fair disclosure of the character of securities sold in interstate and foreign commerce and through the mails, and to prevent frauds in the sale thereof, and for other purposes.

Contains no exemption for interests or participants in a single or collective trust fund maintained by a bank if "an amount in excess of the employer's contribution is allocated to the purchase of securities (other than interests or participants in the trust or separate account itself) issued by the employer or by any company indirectly or indirectly controlling, controlling by or under common control with the employer" (§ 3(a)(2)).

b. Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

Includes in definition of exempted security "interests or participations in a collective trust fund maintained by a bank . . . issued connection with . . . a stock bonus, pension, or profit-sharing plan which meets the requirements for qualification under Section 401 of the Internal Revenue Code of 1954" from all but fraud provisions (§ 3(a)(12)). Exempts from registration "interests or participations in any collective trust fund maintained by a bank . . . (which) are issued connection with . . . a stock-bonus, pension, or profit-sharing plan which meets the requirements for qualification under Section 401 of the Internal Revenue Code of 1954" (§ 12(g)(2)(H)).

c. Investment Company Act of 1940 : To provide for the registration and regulation of investment companies and investment advisers, and for other purposes.

Exempts from definition of investment company "employees' stock bonus, pension, or profit-sharing trust which meet the requirements for qualification under Section 401 of the Internal Revenue Code of 1954; or any collective trust fund consisting solely of assets of such trusts": (§ 3(c)(11)).

15. **Single and Collective Trust Fund for H.R. 10 or Keogh Plans**

a. Securities Act of 1933 : To provide full and fair disclosure of the character of securities sold in interstate and foreign commerce and through the mails, and to prevent frauds in the sale thereof, and for other purposes.

Contains no exemption since only interests or participations in single or collective trust funds maintained by a bank which cover employees some or all of whom are employees within the meaning of Section 401 of Internal Revenue Code of 1954 are exempted (§ 3(a)(2)).

b. Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through

the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

Contains no exemption because the definition of exempted security expressly excludes "interests or participations in collective trust funds maintained by a bank . . . which cover employees some or all of whom are employees within the meaning of Section 401(c)(1) of the Internal Revenue Code of 1954" (§ 3(a)(12)).. However, interests in Keogh Plans are exempt from registration under (§ 12(g)(2)(H)) which exempts "any interest or participation in any collective trust funds maintained by a bank . . . (which) is issued in connection with (i) a stock bonus, pension, or profit-sharing plan which meets the requirements for qualifications under Section 401 of the Internal Revenue Code of 1954" (§ 12(g)(2)(H)).

c. Investment Company Act of 1940 : To provide for the registration and regulation of investment companies and investment advisers, and for other purposes.

Exempts from definition of investment company "employees' stock bonus, pension, or profit-sharing trusts which meet the requirements for qualification under Section 401 of the Internal Revenue Code of 1954; or any collective trust fund consisting solely of assets of such trusts": (§ 3(c)(11)).

16. **Collective Trust Funds, Including "Commingled Agency Accounts"**

a. Securities Act of 1933 : To provide full and fair disclosure of the character of securities sold in interstate and foreign commerce and through the mails, and to prevent frauds in the sale thereof, and for other purposes.

No exemption.

b. Securities Exchange Act of 1934 : To provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes.

No exemption.

c. Investment Company Act of 1940 : To provide for the registration and regulation of investment companies and investment advisers, and for other purposes.

No general exemption; however, there is a limited exemption excepting from the definition of investment company "any common trust fund, or similar fund, established before the effective date of the Revenue Act of 1936 (June 22, 1936) by a corporation which is supervised or examined by State or Federal authority having supervision over banks, if a majority of the units of beneficial ownership in such fund, other than units owned by charitable or educational institutions, are held under instruments providing for payment of income to one or more persons and of principal to another or others" (§ 3(c)(3)).

Securities and Exchange Commission

Staff Compliance Guide to Banks on Dealer Statutory Exceptions and Rules
September 16, 2003

Division of Market Regulation

This Staff Compliance Guide to Banks on Dealer Statutory Exceptions and Rules was prepared by and represents the views of the staff of the Division of Market Regulation and does not constitute rules, regulations, or statements of the Securities and Exchange Commission ("Commission"). The Commission has neither approved nor disapproved its contents.

Beginning October 1, 2003, banks that buy and sell securities need to consider whether they are "dealers" under the federal securities laws.

Dealer activity is not interpreted the same way under securities law and banking law.

Banks need to be aware that "dealer" activity under the federal securities laws is not necessarily the same thing as "dealer" activity under banking law. For example, so-called "riskless principal" transactions are dealer activity for securities law purposes, even though they are agency activity for banking law purposes. Similarly, repurchase agreement transactions are treated as purchases and sales of securities for securities law purposes. Generally, these transactions would also be characterized for securities law purposes as transactions in the underlying security.

Although this Staff Compliance Guide highlights some of the significant provisions of the Securities Exchange Act of 1934 ("Exchange Act") and the Commission's rules, it is not comprehensive. We urge banks that need more information about particular exceptions and exemptions to consult the applicable law, including Section 3(a)(5) of the Exchange Act and the rules cited below. Banks can also obtain additional information by reading Exchange Act Release No. 47364 (February 14, 2003) (which can be found at http://www.sec.gov/rules/final/34-47364.htm) and Exchange Act Release No. 44291 (May 11, 2001) (which can be found at http://www.sec.gov/rules/final/34-44291.htm).

Banks that have additional questions may contact SEC staff for guidance at 202-942-0069 or at marketreg@sec.gov. Banks may also wish to consult with private counsel.

What is a "dealer" under the federal securities laws?

Section 3(a)(5) of the Exchange Act generally defines a "dealer" as "any person engaged in the business of buying and selling securities for his own account, through a broker or otherwise." All transactions that go through a bank's own accounting books are potential dealer transactions.

The securities laws and rules, however, distinguish "dealers" (which buy and sell securities as part of a regular business) from "traders" (which buy and sell securities for investment and not as part of a regular business). For additional information on distinguishing "dealers" from "traders," see http://www.sec.gov/rules/proposed/34-46745.htm and http://www.sec.gov/rules/final/34-47364.htm at "Dealer Activities and the Dealer/Trader Distinction."

Typical dealer functions include:

- Providing two-sided quotations, or otherwise indicating an ongoing willingness to buy and sell particular securities; or
- Issuing or originating securities that the person also buys and sells.

If you are trying to determine whether a particular bank is acting as a dealer, you might want to consider the following questions:

- Does the bank hold itself out as being in the business of buying and selling securities?
- Does the bank engage in transactions with the public?
- Does the bank make a market in, or quote prices for both purchases and sales of, one or more securities?
- Does the bank participate in a "selling group" or otherwise underwrite securities?
- Does the bank hold a dealer inventory or does it trade with an affiliate that is a dealer?

A "yes" answer to any of these questions indicates that the bank may be a dealer.

Special Rules for Banks and FDIC-Insured Savings Associations

If a bank - or an FDIC-insured savings association or savings bank (which we will refer to as "savings banks") - is engaging in dealer activity, it does not necessarily have to register as a dealer with the Commission. Rather, Section 3(a)(5) of the Exchange Act and certain Commission rules provide transaction-specific exceptions and exemptions from the definition of "dealer" for banks and savings banks. These exceptions and exemptions are outlined below.

Exceptions From the Definition of "Dealer" Under Exchange Act Section 3(a)(5)

The Exchange Act provides four exceptions from the definition of "dealer." While the statute only makes these exceptions available to "banks" as defined in Section 3(a)(6) of the Exchange Act, the Commission has extended the scope of these exceptions to include savings banks. The four exceptions cover permissible securities transactions, investment transactions, asset-backed transactions, and identified banking products.

1. Permissible securities transactions . This exception permits banks to buy and sell commercial paper, bankers acceptances or commercial bills, certain Canadian government obligations, Brady bonds, and "exempted securities." "Exempted securities" include government securities, municipal securities, and interests or participations in common or collective trust funds.

   Note: Banks that deal in municipal securities, government securities, and Canadian government obligations have other registration requirements under the Exchange Act. These requirements are discussed below in the question and answer section of this guide.

2. Investment transactions. This exception permits banks to buy and sell securities for investment purposes. It applies to transactions both for the bank itself and for its trustee and fiduciary accounts. It does not apply to transactions between the bank and its customers. This exception is analogous to the "trader" distinction discussed above.

3. Asset-backed transactions. This exception permits banks - through a grantor trust or other separate entity - to issue and sell certain asset-backed securities to "qualified investors." These securities must represent obligations predominantly (85% or more) originated by the bank, or an affiliate of the bank other than a broker-dealer. If the underlying assets are mortgage obligations or consumer-related receivables, a syndicate of banks that includes the bank issuing and selling the securities must have originated 85% or more of the obligations, and the bank issuing and selling the securities must have originated at least 10% of the value of the pool of obligations backing the securities. The term "qualified investor" is defined in Exchange Act Section 3(a)(54) to include other banks, broker-dealers, savings associations, and other parties that meet specified criteria. The exception is limited to the original placement of securities. It does not permit a bank to repurchase and re-sell securities in the secondary market. For additional information, see Exchange Act Rule 3b-18, which defines terms used in the asset-backed transaction exception.

4. Identified banking products. This exception permits banks to buy and sell certain "identified banking products," which include deposit accounts, savings accounts, certificates of deposit, other deposit instruments issued by a bank, banker's acceptances, bank issued letters of credit, bank loans, and debit accounts. "Identified banking products" also include loan participations if they are sold to "qualified investors," or to other persons who have the opportunity to review and assess any material information. In addition, "identified banking products" include (i) credit swaps and (ii) equity swaps that are sold directly to "qualified investors." (As noted above, "qualified investors" include other banks, broker-dealers, savings associations, and

other parties that meet specified criteria.)

Exemptions from the Definition of "Dealer"

In addition to the four exceptions from the definition of "dealer" outlined above, banks and savings banks should also consider two exemptions adopted by the Commission by rule. These exemptions pertain to riskless principal transactions and securities lending transactions.

1. Riskless principal transactions. [17 CFR 240.3a5-1.] This exemption, under Exchange Act Rule 3a5-1, permits banks to engage in a limited number (up to 500) of "riskless principal" transactions per calendar year without registering with the Commission as dealers. A "riskless principal" transaction is one in which, after having received an order to buy from a customer, a bank purchases the security from another person to offset that contemporaneous sale. Alternatively, a riskless principal transaction is one in which after having received an order to sell from a customer, a bank sells the security to another person to offset that contemporaneous purchase.

How to count transactions for purposes of this exemption: Transactions with two customers where the bank acts as a riskless principal between them count as one transaction. However, if a bank acts as a riskless principal between one counterparty and multiple counterparties by arranging multiple transactions, each of the transactions on the side that involves the largest number of transactions would count as separate transactions against the annual transaction-limit.

How counting will be affected by banks' brokerage activities: The Exchange Act also permits banks to engage in certain "broker" activities without registering with the Commission. At the time the "dealer" provisions become effective, however, the "broker" provisions still will be subject to a Commission order delaying their effectiveness. See Exchange Act Release No. 47649 (April 8, 2003) (which can be found at http://www.sec.gov/rules/other/34-47649.htm).

One of the "broker" exceptions - known as the de minimis exception - permits banks to engage in no more than 500 brokerage transactions per year that are not otherwise exempt without registering with the Commission. When banks utilize this exception after the compliance date is set for the broker rules, banks' riskless principal transactions and brokerage transactions effected under the de minimis exception will count toward the same 500-transaction limit. In other words, banks may be able to engage in any combination of brokerage transactions under the de minimis exception and riskless principal transactions under Rule 3a5-1, so long as the total number of these transactions does not exceed 500 per year. Until the broker rules are effective, however, banks may use the entire 500-transaction limit for riskless principal transactions.

A final note about this interim period: Banks will have additional flexibility initially, during the period when the dealer exceptions are effective but the broker rules are not. Until the broker rules become effective, banks may also choose to accommodate customers by executing securities transactions as agent for a commission, rather than assuming the role of a principal without risk.

2. Securities lending transactions. [17 CFR 240.15a-11.] This exemption, under Rule 15a-11, permits banks to engage in, or effect, securities lending transactions with certain counterparties. A "securities lending transaction" is a transaction in which the owner of a security lends the security temporarily to another party under a written securities lending agreement. Through this agreement, the lender retains the economic interests of an owner of the securities. Subject to any terms agreed upon by the parties, including an agreement to loan the securities for a fixed term, the lender also has the right to terminate the transaction and to recall the loaned securities.

Who can be a counterparty under this exemption? The counterparty to these securities lending transactions must be either a person the bank reasonably believes is a "qualified investor," or any employee benefit plan that owns and invests on a discretionary basis, at least $25,000,000 in investments. (As noted above, "qualified investors" include other banks, broker-dealers, savings associations, and other parties that that meet specified criteria.) See Exchange Act Section 3(a)(54).

In what capacities may a bank act under this exemption? A bank may act as a conduit lender, or as an agent. A bank is a "conduit lender" if, as principal for its own account, it borrows or loans securities, and contemporaneously loans or borrows the same securities. A bank that qualifies as a conduit lender at the commencement of a transaction will continue to qualify if the lending or borrowing transaction terminates so long as it is replaced within one business day by another lending or borrowing transaction involving the same securities. It will also continue to qualify if substitutions of collateral occur.

Securities lending services are included within this exemption. Banks may also provide securities lending services in connection with securities lending transactions. "Securities lending services" encompass (1) selecting and negotiating with a borrower, and executing, or directing the execution of the loan with the borrower; (2) receiving, delivering, or directing the receipt or delivery of loaned securities; (3) receiving, delivering, or directing the receipt or delivery of collateral; (4) providing mark-to-market, corporate action, recordkeeping or other services incidental to the administration of the securities lending transaction; (5) investing, or directing the investment of, cash collateral; and (6) indemnifying the lender of securities with respect to various matters.

A final note about safekeeping and custody activities: Banks also have a conditional exception under Section 3(a)(4)(B)(viii) from the Exchange Act definition of "broker" for safekeeping and custody activities. Under that exception, banks may engage in securities lending services for custody customers without meeting the requirements of this exemption. For example, the safekeeping and custody exception permits a bank to engage in securities lending transactions for custody customers that are not "qualified investors." Of course, because the custody exception is only an exception from the definition of "broker," it does not cover "dealer" transactions.

Reminder: If your bank is doing, or may do, any of the activities of a dealer, you should find out if the bank needs to register with the SEC or stop engaging in dealer transactions. We want to underscore that similar topics may be analyzed differently under the securities laws and interpretations than under banking law and interpretations. If you are not certain, you may want to review SEC laws, rules, interpretations, consult with private counsel, or ask for Commission staff advice.

* * * * *

Frequently Asked Questions

Question #1: May a bank holding company, subsidiary of a bank, or affiliate of a bank use the bank exceptions in the Exchange Act?

Answer #1: No. The exceptions in the Exchange Act only exclude *banks'* securities activities from broker-dealer regulation, and then only in certain specified circumstances. ***Only the bank itself*** may claim an exception or exemption. The exceptions and exemptions are not available to a subsidiary or affiliate of a bank (unless the subsidiary or affiliate is itself a bank).

Question #2: May a bank conduct securities transactions with its subsidiaries or affiliates without registering as a broker-dealer?

Answer #2: Each of a bank's securities transactions with a subsidiary or affiliate of the bank must qualify for an exception or exemption.

Question #3: May a bank use more than one exception or exemption?

Answer #3: Yes, if the bank meets all of the conditions of any exception or exemption on which it is relying. For example, a bank may engage in securities lending transactions in accordance with Exchange Act Rule 15a-1, or if the security lent is an exempted security, in accordance with Exchange Act Section 3(a)(5)(C)(i)(II).

Question #4: What can a bank do if it needs additional time to bring its activities into conformity with the bank dealer exceptions and exemptions?

Answer #4: As the Commission noted in adopting the final dealer rules, individual banks may have specific transactions in progress for which they may need an extension of the implementation date of these rules. Banks in this situation should contact SEC's staff to determine if specific relief may be available to them. Each bank's situation will be considered on a case-by-case basis for specified transactions for which a demonstrated burden could be avoided or alleviated through a reasonably short extension of the compliance date, or during any period when additional specific exemption requests are being considered.

Question #5: What kinds of issues will the Commission staff address by telephone?

Answer #5: The Commission staff is available to discuss any legal issue under the federal securities laws. However, banks should understand that this guidance is highly informal and, while intended to be helpful to the persons making the inquiries, not binding on the Commission. A bank seeking more formal assurance with respect to particular proposed activities should submit a written request to the Office of Chief Counsel of the Division of Market Regulation.

Question #6: If my bank has a program where it sweeps deposit accounts into government securities subject to repurchase agreements, will the bank have to change or end that program when the bank "broker" and "dealer" rules go into effect?

Answer #6: As explained above, repurchase agreement transactions ("repos") are treated as purchases and sales of securities for securities law purposes. Generally, these transactions would also be characterized for securities law purposes as transactions in the underlying security. Therefore, the bank would need to consider whether it is acting as a broker (that is, if the bank forwards the money to another entity which enters into the repo as principal) or as a dealer (that is, if the bank itself enters into the repo as principal). Under the bank exception to the definition of broker, banks are permitted to effect transactions in "exempted securities." Under the bank exception to the definition of dealer, banks are permitted to buy and sell exempted securities as defined in Section 3(a)(12) of the Exchange Act. Exempted securities include government securities. Thus, a bank has an exception from the definition of broker for transactions in government securities and an exception from the definition of dealer for buying and selling government securities. Banks must also, however, comply with the requirements of the Government Securities Act of 1986 and the related regulations. An analysis of those requirements is beyond the scope of this guide.

Question #7: If my bank was doing riskless principal transactions as a service to our customers when banks had a complete exemption from broker-dealer registration under the federal securities laws, how many riskless principal transactions may the bank engage in from October 1, 2003 until December 31, 2003, after the more limited exemption takes effect?

Answer #7: During the period before the broker rules become effective, a bank is exempt from the definition of "dealer" for 500 riskless principal transactions during a calendar year. To make it easy for banks to comply during this calendar year, a bank may utilize the entire 500 transactions between October 1, 2003 and December 31, 2003. The Commission extended the blanket bank broker exemption until November 12, 2004. During calendar year 2004, the bank also may use the entire 500 transactions for riskless principal transactions. Once the revised broker rules become effective, the bank will have to combine its riskless principal transactions with the transactions in which the bank is acting as an agent for a customer under the statutory exception for de minimis transactions during each calendar year. The combined number of transactions may not exceed 500 per calendar year. [17 CFR 240.3a5-1.] The calculation for combining the de minimis broker transactions with the riskless principal transactions will be more fully addressed when the broker rules become effective.

Question #8: If my bank wants to act as a riskless principal to fill a securities order as a service to a customer, how does the bank count the order when the bank transacts with several broker-dealers to get best execution?

Answer #8: The bank would count the order as one transaction, assuming the customer only placed one order with the bank. In other words, multiple transactions with broker-dealers to fill a single customer order would only count as one transaction for the purpose of this exemption. Moreover, if the bank routes an order to a single broker-dealer, and the broker-dealer splits the order among several of its customers, the bank would still count the transaction as one transaction. In contrast, if the bank acts as an intermediary between one customer and multiple customers by arranging multiple transactions, the bank must count each of the transactions on the side of the intermediation that involves the largest number of transactions against the annual 500-transaction limit.

Question #9: What does it mean for a bank to act as a fiduciary for purposes of Exchange Act Section 3(a)(5)(C)(ii)?

Answer #9: The exception for trustee and fiduciary transactions applies when the bank buys or sells securities for investment purposes for accounts for which the bank acts as a trustee or fiduciary. In giving meaning to the term "fiduciary" in Section 3(a)(5)(C)(ii), we look to the legislative history, which states that Exchange Act Section 3(a)(5) "excepts a bank from the definition of 'dealer' when it buys and sells securities for investment purposes for the bank or for accounts for which the bank acts as trustee or fiduciary. This mirrors existing law distinguishing between investors and dealers, and is limited to the portfolio trading of the bank and accounts for which it makes investment decisions." H.R. Rep. No. 106-74, pt. 3, at 170-71(1999).

Question #11: What does it mean to underwrite securities?

Answer #11: Confusion about what it means to be a dealer sometimes is caused by the belief that dealers only underwrite securities, although in general the determination of broker or dealer status under the Exchange Act primarily depends on the broader definitions of 'purchase' and 'sale.' See Exchange Act Section 3(a)(13) and 3(a)(14) [15 USC 78c(a)(13) and 78c(a)(14)]. As the Commission stated in footnote 21 of Exchange Act Release No 47364 (February 14, 2003): "The term 'underwriter' is defined in Section 2(a)(11) of the Securities Act of 1933 [15 USC 77b(a)(11)]. In determining whether a bank is acting as an underwriter when it undertakes particular securities activities, the Commission is not expressing any views on whether those activities would constitute 'underwriting' for purposes of Section 16 of the Glass-Steagall Act. The Commission wishes to emphasize that the determination of dealer status with respect to securities transactions, including those that do not involve a public offering, must be made by

reference to the federal securities laws. It is the Commission's view, however, that the fact that an offering is exempt from registration under the Securities Act of 1933 ("Securities Act") [15 USC 77a, et seq.] does not necessarily affect the status of a participant in that offering as an 'underwriter' as defined in Securities Act Section 2(a)(11)." [68 FR 8686 at 8688, note 21.]

Question #12: May a bank register itself as a broker-dealer?

Answer #12: While this is possible as a theoretical matter, it may not be practical for most banks (except in the case of banks that do not make loans). As the Commission noted in Exchange Act Release No. 44291 (May 11, 2001) http://www.sec.gov/rules/final/34-44291.htm at note 266 and the sources cited therein, banks have traditionally had varying reasons for choosing to conduct securities activities through a separate entity.

Question #13: Why is the definition of "dealer" for purposes of broker-dealer registration different from the analysis under the Commission's net capital rule of when a registered broker-dealer must maintain the required minimum capital as a "dealer"?

Answer #13: The analysis is different because the purpose of the analysis is different. All registered broker-dealers, including any bank that registered with the Commission, are subject to the net capital rule. The net capital rule sets forth appropriate capital levels to comply with the financial responsibility requirements for a registered broker-dealer based on its business model. Exchange Act Rule 15c3-1(a)(2)(iii)(B) establishes minimum net capital requirements for broker-dealers that are designated as "dealers" because they engage in a certain level of proprietary trading. Under that rule, a "dealer" includes "any broker or dealer that effects more than ten transactions in any one calendar year for its own investment account." In contrast, determining when a person meets the initial threshold that requires registration as a broker-dealer is subject to the analysis of the factors set forth at the beginning of this special notice as well as the broker factors set forth in the Compliance Guide to the Registration and Regulation of Brokers and Dealers.

Question #14: If a bank acts only as a municipal securities dealer, must it register as a broker-dealer?

Answer #14: No, it has an exception from broker-dealer registration. It, or its separately identified department or division, must, however, register as a municipal securities dealer under Exchange Act Section 15B. A bank should use Form MSD to register with the Commission. The bank, or its separately identified department or division, must follow the rules governing municipal securities dealers, including the rules of the Municipal Securities Rulemaking Board ("MSRB").

Question #15: If a bank is registered as a municipal securities dealer, must it also register as a municipal securities broker?

Answer #15: No, there is no separate registration for municipal securities brokers. However, if a bank has a separately identified department or division registered as a municipal securities dealer, the bank must conduct its municipal brokerage business in that separately identifiable department or division. For additional information on this subject, see MSRB Rule G-1, which defines the separately identifiable department or division of a bank.

Question #16: Do a bank's transactions in municipal fund securities have to comply with Commission and MSRB rules?

Answer #16: Banks must register as municipal securities dealers to deal in municipal securities that States issue to provide tax-favored vehicles for educational savings, such as 529 plans. All those banks' municipal securities

activities - including municipal fund securities transactions in which the bank acts solely as an agent - must conform with MSRB rules and all Commission rules that apply to municipal securities dealers. On the other hand, if a bank does not act as a dealer in municipal securities, then the bank may engage in agency transactions involving municipal fund securities without registering with the Commission and registering with the MSRB.

Question #17: If a bank acts as a dealer of U.S. government or Canadian government securities, must it register as a broker-dealer?

Answer #17: No, because banks are exempted from broker-dealer registration for "permissible securities transactions." Permissible securities transactions include "exempt securities," which include government securities and Canadian securities and are defined in Exchange Act Section 3(a)(12). Banks, however, must also comply with the requirements of the Government Securities Act of 1986 [15 USC § 78o-5] as well as the legal requirements of the implementing regulations promulgated by Treasury, 17 C.F.R. Parts 400 to 450 when they effect transactions in or buy or sell government securities and Canadian securities. For hold-in-custody repurchase transactions, 17 C.F.R. § 450 also is applicable. Banks that are dealing in government securities also should review the Federal Financial Institutions Examination Council ("FFIEC") Modification of Policy Statement, 63 F.R. 6935 (February 11, 1998).

Question # 18: If a bank may deal only with "qualified investors" to meet the terms of an exemption or exception, who can be its customers or counterparties?

Answer #18: The term "qualified investor" is defined in Exchange Act Section 3(a)(54). [15 USC 78c(a)(54).] Qualified investors include investment companies, banks, small business investment companies, any State sponsored employee benefit plan, institutional trusts, market intermediaries, and individuals, corporations or partnerships that own and invest on a discretionary basis more than $25,000,000.

Trust Indenture Act Of 1939

As Amended

AN ACT To provide for the regulation of the sale of certain securities in interstate and foreign commerce and through the mails, and the regulation of the trust indentures under which the same are issued, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, the Act entitled "An Act to provide full and fair disclosure of the character of securities sold in interstate and foreign commerce and through the mails, and to prevent frauds in the sale thereof, and for other purposes", approved May 27, 1933, as amended, is amended by adding at the end thereof the following:

TITLE III[1]

[1] Title I of this act is the Securities Act of 1933. Title II is the Corporation of Foreign Security Holders Act.

Section 301 Short Title

This title, divided into sections as follows, may be cited as the "Trust Indenture Act of 1939". [Codified to 15 USC 77aaa]

[Source: Section 301 of title III of the Act of May 27, 1933 (Pub. L. No. 22, 48 Stat. 74), effective May 27, 1933, as added by section 301 of title III of the Act of August 3, 1939 (Pub. L. No. 253; 53 Stat. 1149), effective August 3, 1939]

Section 302 Necessity for Regulation

(a) Upon the basis of facts disclosed by the reports of the Securities and Exchange Commission made to the Congress pursuant to section 211 of the Securities Exchange Act of 1934 and otherwise disclosed and ascertained, it is hereby declared that the national public interest and the interest of investors in notes, bonds, debentures, evidences of indebtedness, and certificates of interest or participation therein, which are offered to the public, are adversely affected -

(1) when the obligor fails to provide a trustee to protect and enforce the rights and to represent the interests of such investors, notwithstanding the fact that -

(A) individual action by such investors for the purpose of protecting and enforcing their rights is rendered impracticable by reason of the disproportionate expense of taking such action, and

(B) concerted action by such investors in their common interest through representatives of their own selection is impeded by reason of the wide dispersion of such investors through many States, and by reason of the fact that information as to the names and addresses of such investors generally is not available to such investors;

(2) when the trustee does not have adequate rights and powers, or adequate duties and responsibilities, in connection with matters relating to the protection and enforcement of the rights of such investors; when, notwithstanding the obstacles to concerted action by such investors, and the general and reasonable assumption by such investors that the trustee is under an affirmative duty to take action for the protection and enforcement of their rights, trust indentures -

(A) generally provide that the trustee shall be under no duty to take any such action, even in the event of default, unless it receives notice of default, demand for action, and indemnity, from the holders of substantial percentages of the securities outstanding thereunder, and

(B) generally relieve the trustee from liability even for its own negligent action or failure to act;

(3) when the trustee does not have resources commensurate with its responsibilities, or has any relationship to or connection with the obligor or any underwriter of any securities of the obligor, or holds, beneficially or otherwise, any interest in the obligor or any such underwriter, which relationship, connection, or interest involves a material conflict with the interests of such investors;

(4) when the obligor is not obligated to furnish to the trustee under the indenture and to such investors adequate current information as to its financial condition, and as to the performance of its obligations with respect to the securities outstanding under such indenture; or when the communication of such information to such investors is impeded by the fact that information as to the names and addresses of such investors generally is not available to the trustee and to such investors;

(5) when the indenture contains provisions which are misleading or deceptive, or when full and fair disclosure is not made to prospective investors of the effect of important indenture provisions; or

(6) when, by reason of the fact that trust indentures are commonly prepared by the obligor or underwriter in advance of the public offering of the securities to be issued thereunder, such investors are unable to participate in the preparation thereof, and, by reason of their lack of understanding of the situation, such investors would in any event be unable to procure the correction of the defects enumerated in this subsection.

(b) Practices of the character above enumerated have existed to such an extent that, unless regulated, the public offering of notes, bonds, debentures, evidences of indebtedness, and certificates of interest or participation therein, by the use of means and instruments of transportation and communication in interstate commerce and of the mails, is injurious to the capital markets, to investors, and to the general public; and it is hereby

declared to be the policy of this title, in accordance with which policy all the provisions of this title shall be interpreted, to meet the problems and eliminate the practices, enumerated in this section, connected with such public offerings. [Codified to 15 USC 77bbb]

[Source: Section 302 of title III of the Act of May 27, 1933 (Pub. L. No. 22, 48 Stat. 74), effective May 27, 1933, as added by section 302 of title III of the Act of August 3, 1939 (Pub. L. No. 253; 53 Stat. 1150), effective August 3, 1939]

Section 303 Definitions

When used in this title, unless the context otherwise requires -

(1) Any term defined in section 2 of the Securities Act of 1933, and not otherwise defined in this section, shall have the meaning assigned to such term in such section 2.

(2) The terms "sale", "sell", "offer to sell", "offer for sale", and "offer" shall include all transactions included in such terms as provided in paragraph (3) of section 2 of the Securities Act of 1933, except that an offer or sale of a certificate of interest or participation shall be deemed an offer or sale of the security or securities in which such certificate evidences an interest or participation if and only if such certificate gives the holder thereof the right to convert the same into such security or securities.

(3) The term "prospectus" shall have the meaning assigned to such term in paragraph (10) of section 2 of the Securities Act of 1933, except that in the case of securities which are not registered under the Securities Act of 1933, such term shall not include any communication -

(A) if it is proved that prior to or at the same time with such communication a written statement if any required by section 306 was sent or given to the persons to whom the communication was made, or

(B) if such communication states from whom such statement may be obtained (if such statement is required by rules or regulations under paragraphs (1) or (2) of subsection (b) of section 306) and, in addition, does no more than identify the security, state the price thereof, state by whom orders will be executed and contain such other information as the Commission, by rules or regulations deemed necessary or appropriate in the public interest or for the protection of investors, and subject to such terms and conditions as may be prescribed therein, may permit.

(4) The term "underwriter" means any person who has purchased from an issuer with a view to, or offers or sells for an issuer in connection with, the distribution of any security, or participates or has a direct or indirect participation in any such undertaking, or participates or has a participation in the direct or indirect underwriting of any such undertaking; but such term shall not include a person whose interest is limited to a commission from an underwriter or dealer not in excess of the usual and customary distributors' or sellers' commission.

(5) The term "director" means any director of a corporation, or any individual performing similar functions with respect to any organization whether incorporated or unincorporated.

(6) The term "executive officer" means the president, every vice president, every trust officer, the cashier, the secretary, and the treasurer of a corporation, and any individual customarily performing similar functions with respect to any organization whether incorporated or unincorporated, but shall not include the chairman of the board of directors.

(7) The term "indenture" means any mortgage, deed of trust, trust or other indenture, or similar instrument or agreement (including any supplement or amendment to any of the foregoing), under which securities are outstanding or are to be issued, whether or not any property, real or personal, is, or is to be, pledged, mortgaged, assigned, or conveyed thereunder.

(8) The term "application" or "application for qualification" means the application provided for in section 305 or 307, and includes any amendment thereto and any report, document,

or memorandum accompanying such application or incorporated therein by reference.

(9) The term "indenture to be qualified" means -

(A) the indenture under which there has been or is to be issued a security in respect of which a particular registration statement has been filed, or

(B) the indenture in respect of which a particular application has been filed.

(10) The term "indenture trustee" means each trustee under the indenture to be qualified, and each successor trustee.

(11) The term "indenture security" means any security issued or issuable under the indenture to be qualified

(12) The term "obligor", when used with respect to any such indenture security, means every person (including a guarantor) who is liable thereon, and, if such security is a certificate of interest or participation, such term means also every person (including a guarantor) which such certificate evidences an interest or participation; but such term shall not include the trustee under an indenture under which certificates of interest or participation, equipment trust certificates, or like securities are outstanding.

(13) The term "paying agent", when used with respect to any such indenture security, means any person authorized by an obligor thereon -

(A) to pay the principal of or interest on such security on behalf of such obligor, or

(B) if such security is a certificate of interest or participation, equipment trust certificate, or like security, to make such payment on behalf of the trustee.

(14) The term "State" means any State of the United States.

(15) The term "Commission" means the Securities and Exchange Commission.

(16) The term "voting security" means any security presently entitling the owner or holder thereof to vote in the direction or management of the affairs of a person, or any security issued under or pursuant to any trust, agreement, or arrangement whereby a trustee or trustees or agent or agents for the owner or holder of such security are presently entitled to vote in the direction or management of the affairs of a person; and a specified percentage of the voting securities of a person means such amount of the outstanding voting securities of such person as entitled the holder or holders thereof to cast such specified percentage of the aggregate votes which the holders of all the outstanding voting securities of such person are entitled to cast in the direction or management of the affairs of such person.

(17) The terms "Securities Act of 1933", "Securities Exchange Act of 1934", and "Public Utility Holding Company Act of 1935" shall be deemed to refer, respectively, to such Acts, as amended, whether amended prior to or after the enactment of this title.

(18) The term "Bankruptcy Act" means the Bankruptcy Act or title 11.

No. 100-181; 101 Stat. 1260), effective December 4, 1987; and section 402 of title IV of the Act of November 15, 1990 (Pub. L. No. 101-550; 104 Stat. 2722), effective November 15, 1990]

Section 304 Exempted Securities and Transactions

(a) The provisions of this title shall not apply to any of the following securities:

(1) any security other than -

(A) a note, bond, debenture, or evidence of indebtedness, whether or not secured, or

(B) a certificate of interest or participation in any such note, bond, debenture, or evidence of indebtedness, or

(C) a temporary certificate for, or guarantee of, any such note, bond, debenture, evidence of indebtedness, or certificate;

(2) any certificate of interest or participation in two or more securities having substantially different rights and privileges, or a temporary certificate for any such certificate;

(3) Reserved.

(4) (A) any security exempted from the provisions of the Securities Act of 1933 by paragraph (2), (3), (4), (5), (6), (7), (8), or (11) of subsection 3(a) thereof;

(B) any security exempted from the provisions of the Securities Act of 1933, as amended, by paragraph (2) of subsection 3(a) thereof, as amended by section 401 of the Employment Securities Amendments of 1970.

(5) any security issued under a mortgage indenture as to which a contract of insurance under the National Housing Act is in effect; and any such security shall be deemed to be exempt from the provisions of the Securities Act of 1933 to the same extent as though such security were specifically enumerated in section 3(a)(2) of such Act;

(6) any note, bond, debenture, or evidence of indebtedness issued or guaranteed by a foreign government or by a subdivision, department, municipality, agency, or instrumentality thereof;

(7) any guarantee of any security which is exempted by this subsection;

(8) any security which has been or is to be issued otherwise than under an indenture, but this exemption shall not be applied within a period of twelve consecutive months to an aggregate principal amount of securities of the same issuer greater than the figure stated in section 3(b) of the Securities Act of 1933 [15 USC 77c(b)] limiting exemptions thereunder, or such lesser amount as the Commission may establish by its rules and regulations;

(9) any security which has been or is to be issued under an indenture which limits the aggregate principal amount of securities at any time outstanding thereunder to $10,000,000, or such lesser amount as the Commission may establish by its rules and regulations, but this exemption shall not be applied within a period of thirty-six consecutive months to more than $10,000,000 aggregate principal amount of securities of the same issuer, or such lesser amount as the Commission may establish by its rules and regulations; or

(10) any security issued under a mortgage or trust deed indenture as to which a contract of insurance under title XI of the National Housing Act is in effect: and any such security shall be deemed to be exempt from the provisions of the Securities Act of 1933 to the same extent as though such security were specifically enumerated in section 3(a)(2), as amended, of the Securities Act of 1933.

In computing the aggregate principal amount of securities to which the exemptions provided by paragraphs (8) and (9) may be applied, securities to which the provisions of sections 305 and 306 would not have applied, irrespective of the provisions of those paragraphs, shall be disregarded.

(b) The provisions of sections 305 and 306 shall not apply -

(1) to any of the transactions exempted from the provisions of section 5 of the Securities Act of 1933 by section 4 thereof, or

(2) to any transaction which would be so exempted but for the last sentence of paragraph (11) of section 2 of such Act.

(c) The Commission shall, on application by the issuer and after opportunity for hearing thereon, by order exempt from any one or more provisions of this title any security issued or proposed to be issued under any indenture under which, at the time such application is filed, securities referred to in paragraph (3) of subsection (a) of this section are outstanding or on January 1, 1959, such securities were outstanding, if and to the extent that the Commission finds that compliance with such provision or provisions, through the execution of a supplemental indenture or otherwise -

(1) would require, by reason of the provisions of such indenture, or the provisions of any other indenture or agreement made prior to the enactment of this title, or the provisions of any applicable law, the consent of the holders of securities outstanding under any such indenture or agreement; or
