| 16.02                  | <u>Explain the differences between event-related, date-related, and manufacturer recommendations.</u>                                                             |
| 16.03                  | <u>State the methods of determining expiration dates.</u>                                                                                                         |
| 16.04                  | <u>List the steps in reprocessing outdated hospital packaged items.</u>                                                                                           |
| 16.05                  | <u>List conditions that would make a product unsafe for use</u>                                                                                                   |
| 16.06                  | <u>Describe the use of tamper-evident seals.</u>                                                                                                                  |

|                        |                                                                                                                                                                                                                            |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.07                  | Describe the methods of reprocessing.                                                                                                                                                                                      |
| 16.08                  | Identify standards and facility policies on the reprocessing of single-use items.                                                                                                                                          |
| 16.09                  | Describe the process of recall for medical/surgical supplies.                                                                                                                                                              |
| 17.0                   | Identify fundamentals of the supply chain. The student will be able to:                                                                                                                                                    |
| 17.01                  | Describe the process of supply chain management.                                                                                                                                                                           |
| 17.02                  | Communicate with other hospitals, facilities, or company representatives for the procurement of supplies and equipment.                                                                                                    |
| 17.03                  | Describe several different methods of procurement of supplies.                                                                                                                                                             |
| 17.04                  | Describe the basics of receiving and distributing items to other facilities, which must include documentation.                                                                                                             |
| <del>19.0</del> 18.0   | Demonstrate the roles and responsibilities of the <del>central-supply worker</del> , <u>sterile processing technician</u> . The student will be able to:                                                                   |
| <del>19.01</del> 18.01 | <del>Describes</del> <u>Describe</u> professional standards related to personal hygiene and dress codes for the central supply worker to include appropriate <del>PPE</del> , <u>personal protective equipment (PPE)</u> . |
| <del>19.02</del> 18.02 | <del>Identifies</del> <u>Identify</u> relevant federal, state, and local guidelines, standards, and regulations.                                                                                                           |
| <del>19.03</del> 18.03 | <del>Describes</del> <u>Describe</u> the <u>organization</u> , function, and workflow of the sterile processing department.                                                                                                |
| <del>19.04</del> 18.04 | <u>Apply</u> ergonomic considerations and appropriate body mechanics for lifting, turning, pulling, pushing, and reaching.                                                                                                 |
| <del>19.05</del> 18.05 | <u>Apply</u> policies and procedures related to sterile processing functions (safety, infection control, disaster control, <del>disaster</del> , <u>material safety data sheets (MSDS)</u> , incident reports, etc.).      |
| 18.06                  | <u>Apply</u> infection control techniques following the <u>Centers for Disease Control (CDC) guidelines</u> .                                                                                                              |
| <del>19.06</del> 18.07 | <del>Describes</del> <u>Describe</u> the importance of following <u>the</u> device, equipment, instrument, or supply manufacturer's instructions for processing, operation, and troubleshooting.                           |
| 18.08                  | <u>Demonstrate</u> the process of stock rotation.                                                                                                                                                                          |
| 18.09                  | <u>Describe</u> the processes for loaner instrumentation and equipment.                                                                                                                                                    |
| 18.10                  | <u>Demonstrate</u> the methods of case cart preparation and the utilization of preference cards.                                                                                                                           |
| <del>20.0</del> 19.0   | Recognize basic principles of microbiology. -The student will be able to:                                                                                                                                                  |
| <del>20.01</del> 19.01 | <u>Describe</u> terms related to microbiology and the control of microorganisms in <del>central</del> -sterile processing departments.                                                                                     |
| <del>20.02</del> 19.02 | <u>Identify</u> the main categories <u>and life functions</u> of microorganisms.                                                                                                                                           |

|                        |                                                                                                                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>20.03</del>       | <del>Describe the life functions of microorganisms.</del>                                                                                                                                                                     |
| <del>20.04</del> 19.03 | Describe conditions affecting the growth of bacteria.                                                                                                                                                                         |
| <del>20.05</del> 19.04 | Describe special methods used to destroy harmful microorganisms on fomites in the environment.                                                                                                                                |
| <del>20.06</del> 19.05 | List the <del>helpful</del> <u>conditions where</u> microorganisms <u>may be helpful</u> .                                                                                                                                    |
| <del>20.07</del> 19.06 | Describe how the body controls the growth of pathogenic microorganisms.                                                                                                                                                       |
| <del>20.08</del> 19.07 | Identify pathogenic microorganisms commonly found in <del>central-service</del> <u>sterile processing</u> departments.                                                                                                        |
| <del>21.0</del> 20.0   | Interpret and apply medical terminology and anatomical terms as they relate to equipment and supplies issued by <del>central service personnel.</del> <u>the sterile processing department</u> . The student will be able to: |
| <del>21.01</del> 20.01 | Identify <del>word elements</del> <u>prefixes, roots, and suffixes</u> for medical terms <u>used by the sterile processing department</u> .                                                                                   |
| <del>21.02</del> 20.02 | Relate anatomical concepts to <del>orthopedic</del> <u>surgical</u> devices <del>and</del> <u>other supplies</u> and equipment issued by <del>the CS Department</del> <u>sterile processing</u> .                             |
| <del>22.0</del> 21.0   | Describe how <del>central-service</del> <u>sterile processing</u> is involved in controlling infections in <del>hospitals.</del> <u>healthcare facilities</u> . The student will be able to:                                  |
| <del>22.01</del> 21.01 | Describe <del>hospital-acquired</del> <u>nosocomial</u> infections.                                                                                                                                                           |
| <del>22.02</del> 21.02 | Describe <del>the types of</del> <u>droplet, airborne, bloodborne, and contact</u> isolation <u>protocols</u> .                                                                                                               |
| <del>22.03</del>       | <del>Describe the organization and functions of CS.</del>                                                                                                                                                                     |
| <del>22.04</del> 21.03 | Describe the <del>CS</del> <u>sterile processing</u> responsibilities for infection control and traffic patterns when in the operating room and other departments.                                                            |
| <del>22.05</del> 21.04 | Identify proper storage and transportation standards for supplies in the facility (receivables, sterile, clean, or contaminated).                                                                                             |
| <del>22.06</del>       | <del>Describe the organizational patterns of health care facilities.</del>                                                                                                                                                    |
| <del>23.0</del> 22.0   | Explain the purpose of <u>the</u> Occupational Safety and Health Act (OSHA). -The student will be able to:                                                                                                                    |
| <del>23.01</del> 22.01 | Describe how employees are protected under OSHA.                                                                                                                                                                              |
| <del>23.02</del> 22.02 | Describe potential workplace hazards in <del>CS.</del> <u>(sterile processing, such as</u> wet floors, chemicals, fumes, gases, steam, electrical outlets, body fluids, microorganisms, sharps, and medical wastes) <u>).</u> |
| <del>23.03</del> 22.03 | Describe the role preventive maintenance plays in patient and personnel safety in the <del>hospital</del> <u>healthcare facility</u> .                                                                                        |
| <del>23.04</del> 22.04 | Explain the purpose of Florida's "Right to Know" law and its provisions.                                                                                                                                                      |
| <del>23.05</del> 22.05 | <del>-</del> Describe the protocol for personal injury, including the completion of incident/occupancy reports and follow <u>-up</u> .                                                                                        |

|                        |                                                                                                                                                                                                                                                                    |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>23.06</del> 22.06 | Implement appropriate regulatory and accreditation agency patient safety guidelines.                                                                                                                                                                               |
| <del>24.0</del> 23.0   | Receive, decontaminate, clean, prepare, disinfect, and sterilize reusable items. -The student will be able to:                                                                                                                                                     |
| <del>24.04</del> 23.01 | Describe the importance of thorough cleaning to the overall objectives of making items safe for patient use.                                                                                                                                                       |
| <del>24.02</del> 23.02 | Explain the importance of following manufacturers' instructions in cleaning each item for reprocessing.                                                                                                                                                            |
| 23.03                  | Describe the levels of disinfection.                                                                                                                                                                                                                               |
| <del>24.03</del> 23.04 | Describe the <del>levels of disinfection, the</del> cleaning <del>process</del> processes and methods of disinfection for the environment, instruments, syringes, needles, rubber goods, and equipment.                                                            |
| <del>24.04</del> 23.05 | Describe the mechanisms of action for each disinfection method, including ultrasonic machines and washer/sterilizers.                                                                                                                                              |
| <del>24.05</del> 23.06 | Describe the strategies for managing difficult-to-control microorganisms that require isolation techniques and specialized decontamination methods, including Creutzfeldt–Jakob disease (CJD).                                                                     |
| <del>24.06</del> 23.07 | Describe the factors affecting decontamination- <del>(, such as</del> water temperature, loading procedures, water impurities, <del>and</del> opening and disassembling <del>).</del>                                                                              |
| <del>24.07</del> 23.08 | Distinguish correct reprocessing policies related to single-use, limited-use, and reusable items.                                                                                                                                                                  |
| <del>24.08</del> 23.09 | Describe decontamination methods for drill systems and batteries.                                                                                                                                                                                                  |
| <del>24.09</del> 23.10 | Describe the function of case cart washers, and alternative methods of cleaning.                                                                                                                                                                                   |
| <del>24.10</del> 23.11 | Describe the need for testing and monitoring all decontamination machines for proper function and cleaning agents.                                                                                                                                                 |
| <del>24.14</del> 23.12 | Explain the importance of using correct chemicals for cleaning <del>in regards as it pertains</del> to water quality, PH, filters, softeners, enzymes, <del>and</del> lubricants.                                                                                  |
| <del>24.12</del> 23.13 | Describe the types, characteristics, and uses of chemicals, solutions, and gases utilized for decontamination- <del>(, such as</del> detergents, disinfectants, <del>enzymatics</del> enzymatic, and germicides <del>).</del>                                      |
| <del>24.13</del> 23.14 | Demonstrate the decontamination process for <del>canulated</del> instruments, <del>instruments with lumens</del> , syringes, needles, rubber goods, and equipment.                                                                                                 |
| <del>24.14</del> 23.15 | Demonstrate flexible endoscopic leak testing, decontamination, and reprocessing.                                                                                                                                                                                   |
| <del>24.15</del> 23.16 | Demonstrates decontamination and proper handling of rigid scopes.                                                                                                                                                                                                  |
| <del>24.16</del> 23.17 | Describes the methods of high-level disinfection, including manual <del>processing, STERRAD processing, Medavador, and automated endoscopic reprocessor</del> Automated Endoscopic Reprocessor (AER <del>).</del> , that may be found in the endoscopy department. |
| <del>24.17</del> 23.18 | Describe the types of sterilizers and methods of sterilization.                                                                                                                                                                                                    |
| <del>24.18</del> 23.19 | Describe the primary objectives in selecting the correct packaging materials for both the individual item and the sterilization method to be used.                                                                                                                 |

|                        |                                                                                                                                                                                                                                                 |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>24.19</del> 23.20 | Describe the principles of packaging.                                                                                                                                                                                                           |
| <del>24.20</del> 23.21 | Describe the characteristics of packaging materials in <del>relationship</del> <u>relation</u> to sterilization methods.                                                                                                                        |
| <del>24.24</del> 23.22 | Describe the principles of linen pack and tray construction/assembly.                                                                                                                                                                           |
| <del>24.22</del> 23.23 | Describe the recommended labeling methodologies.                                                                                                                                                                                                |
| <del>24.23</del> 23.24 | Identify <del>basic</del> -surgical procedure trays, instruments, supplies, and accessories.                                                                                                                                                    |
| <del>24.24</del> 23.25 | Explain the principles utilized when loading different kinds of wrapped packs or packages into a sterilizer to <del>be assured of sterilant penetration</del> <u>ensure sterilization</u> .                                                     |
| <del>24.25</del> 23.26 | Recognize equipment malfunction and list corrective actions.                                                                                                                                                                                    |
| <del>24.26</del> 23.27 | Demonstrate the wrapping of <del>procedures</del> <u>procedure</u> trays, instruments, and other supplies.                                                                                                                                      |
| <del>24.27</del> 23.28 | Demonstrate loading of different kinds of wrapped packs or packages into a sterilizer to be assured of sterilant penetration.                                                                                                                   |
| <del>24.28</del> 23.29 | Describe how sterile supplies should be handled.                                                                                                                                                                                                |
| <del>24.29</del> 23.30 | Demonstrate handling, transportation, and storage of clean, sterile, and nonsterile supplies <del>and</del> , <u>including</u> equipment.                                                                                                       |
| <del>25.0</del> 24.0   | Demonstrate the use of sterilization process monitors, including <del>temperature and frequency</del> <u>proper utilization</u> of appropriate chemical indicators and bacterial spore tests for all sterilizers. -The student will be able to: |
| <del>25.04</del> 24.01 | Describe the types of sterilization, sterilization cycles, and parameters for each.                                                                                                                                                             |
| <del>25.02</del> 24.02 | Describe the importance of the manufacturer's recommendations for the safe operation of each type of sterilizer.                                                                                                                                |
| <del>25.03</del> 24.03 | Describe the methods of sterilization monitoring.                                                                                                                                                                                               |
| <del>25.04</del> 24.04 | Demonstrate the process of preparing and documenting the sterilizer load contents for each sterilizer correctly according to the manufacturer's recommendations.                                                                                |
| <del>25.05</del> 24.05 | Demonstrate the operation, testing, and monitoring of sterilizers <u>according to the manufacturer's instructions for use</u> .                                                                                                                 |
| <del>25.06</del> 24.06 | Demonstrate the ability to interpret and document monitoring devices, printouts, and charts accurately for each sterilization system utilized.                                                                                                  |
| <del>25.07</del> 24.07 | Identify the standards for, <del>and facility policy regarding, frequency of</del> <u>the</u> monitoring <del>for</del> <u>of</u> all sterilizers <u>according to facility policies</u> .                                                       |
| <del>26.0</del> 25.0   | Demonstrate the ability to identify and select appropriate instrumentation or equipment that meets the needs of the surgical specialty. -The student will be able to:                                                                           |
| <del>26.04</del> 25.01 | Describe instrument terminology and identify the anatomy of surgical instruments (jaws, shanks, box locks, rings, etc.).                                                                                                                        |
| <del>26.02</del> 25.02 | Describe the types and functions of instruments.                                                                                                                                                                                                |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

The standard length of this program is 900 clock hours or 30 credit hours. This includes the Health Careers Core (90 clock hours).

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

### **Inquiries about a voluntary certification for sterile processing and distribution may be made to:**

Healthcare Sterile Processing Association (HSPA)/  
International Association of Hospital Central Service Materiel Management (IAHCSMM)  
<https://myhspa.org/certification/iahcsmm-certifications.html>  
55 West Wacker Drive, Suite 501, Chicago, IL 60601  
Toll Free: 800-962-8274

Or

Certification Board for Sterile Processing and Distribution, Inc. (CBSPD)  
<http://www.sterileprocessing.org/cbspd.htm>  
1392 US Hwy 22, Suite #1, Lebanon, NJ 08865

The Core should be taken first in the program. Following the successful completion of the core, the National Health Care Foundation Skill Standards Assessment will be taken with instructor approval and the completion of a portfolio.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

### Purpose

This certificate program is part of the Health Navigator AS degree program (1351220800).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Health Science career cluster.

The purpose of this program is to prepare students for employment ~~as health navigators (Medical and Health Services Manager) or (Navigators, Benefits Navigators,~~ Community ~~Health Worker)~~[Service Specialists](#), or to provide supplemental training for persons previously or currently employed in these occupations.

The content includes but is not limited to communication skills, leadership skills, human relations and employability skills, principles of health insurance, introduction to computer literacy, health care organization, medical ethics, legal aspects, and advanced technical skills in a chosen health-related profession, health and safety.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 31 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

**Job Attainment**

10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Identify and apply basic knowledge of ~~different~~ aspects of health and wellness.
- 02.0 Demonstrate knowledge of various topics pertinent to the five core disciplines of public health.
- 03.0 ~~Demonstrate the ability to identify~~Identify and apply U.S. ~~health care~~ healthcare delivery ~~funding sources~~and fiscal resources.
- 04.0 Demonstrate ability to work as a health navigator or community health worker.
- 05.0 Demonstrate knowledge of current events in the field of public health.
- 06.0 Demonstrate knowledge of health communication and its impact on health outcomes.
- 07.0 Define and describe aging, long-term care, and types of residences.
- 08.0 Demonstrate the use of evidence to draw conclusions about disease etiology.
- 09.0 Demonstrate knowledge of the three primary levels of prevention.
- 10.0 Demonstrate knowledge of how the insured and uninsured interact with the ~~United States~~U.S. healthcare system.

Florida Department of Education  
Student Performance Standards

Program Title: **Health Navigator Specialist**  
 CIP Number: **0351220800**  
 Program Length: **31 credit hours**

**This certificate program is part of the Health Navigator AS program (1351220800). At the completion of this program, the student will be able to:**

01.0 Identify and apply basic knowledge of ~~different~~ aspects of health and wellness. -The student will be able to:

01.01 Discuss integrating ~~health~~healthy living choices into one's lifestyle.

01.02 Define: how physical fitness, mental health, nutrition, substance use and abuse, and family ~~living and how these factors~~influences connect with the ~~concepts~~concept of patient wellness ~~on a personal level~~.

01.03 Describe the impact of social media and time in the digital environment on physical and mental health and wellness.

~~01.03~~01.04 Identify the risk factors for cardiovascular disease.

|       |                                                                                                                                                                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.05 | Identify elements of public health <del>in our everyday world.</del>                                                                                                                                                                                                                  |
| 02.06 | Explain the concepts of: prevention, detection, control of infectious and chronic conditions, <u>and the factors that contribute to differences in population-level health disparities, and global health indicators.</u>                                                             |
| 02.07 | Compare and contrast examples of major domestic and international public health issues.                                                                                                                                                                                               |
| 03.0  | <del>Demonstrate</del> <u>Identify and apply knowledge of</u> the <del>ability to identify</del> U.S. <del>health care</del> <u>healthcare</u> delivery <del>funding sources, and fiscal resources.</del> The student will be able to:                                                |
| 03.01 | <del>Demonstrate an understanding of</del> <u>Describe</u> the <del>evolutionary perspective</del> <u>changing landscape</u> of health services and its relevance <del>with on</del> the existing healthcare system, facilities, and services.                                        |
| 03.02 | Explain the <del>social, political, and impacts of</del> public <del>policy implications of health-related issues</del> <u>policies on healthcare</u> , such as availability <u>of healthcare services</u> , cost, delivery, and <del>financing</del> <u>financial implications</u> . |
| 03.03 | Describe the various <del>health care</del> <u>healthcare</u> organizations and service delivery options.                                                                                                                                                                             |
| 03.04 | Identify the <del>major</del> health professions and explain the role of each and their licensing/educational requirements.                                                                                                                                                           |
| 03.05 | Compare and contrast the <del>health care</del> <u>healthcare</u> delivery systems of the U.S. with <del>other major</del> industrialized nations.                                                                                                                                    |
| 03.06 | <del>Understand</del> <u>Describe</u> the array of <u>healthcare</u> career <del>choices in the health care sector of the economy</del> <u>options</u> .                                                                                                                              |
| 03.07 | Discuss the various sources and uses of funds for healthcare <del>as well as market trends and future implications.</del>                                                                                                                                                             |
| 04.0  | Demonstrate ability to work as a health navigator or community health worker. -The student will be able to:                                                                                                                                                                           |
| 04.01 | Identify community agencies where health navigators are employed.                                                                                                                                                                                                                     |
| 04.02 | Complete a field experience that provides <del>student with</del> descriptions of primary duties, annual salary, and <del>interaction with professional organization</del> <u>interpersonal collaboration</u> .                                                                       |
| 04.03 | Demonstrate an understanding <u>and expectation</u> of the essential duties of health navigators.                                                                                                                                                                                     |
| 04.04 | Describe barriers to care faced by <u>healthcare providers</u> , patients, and consumers of <u>the</u> placement site.                                                                                                                                                                |
| 04.05 | Discuss the core health activities of <u>the</u> placement site.                                                                                                                                                                                                                      |
| 04.06 | Demonstrate an understanding of how placement <del>site works</del> <u>sites work</u> with: local, county, state, and federal agencies.                                                                                                                                               |
| 04.07 | Evaluate the role of <u>a</u> health <del>navigation</del> <u>navigator</u> in patient <del>health care</del> <u>healthcare</u> .                                                                                                                                                     |
| 04.08 | Demonstrate communication techniques to assess patient health and needs.                                                                                                                                                                                                              |
| 04.09 | <u>Apply health literacy principles and adapt instruction and training, as appropriate, to patients, groups, and populations.</u>                                                                                                                                                     |

|       |                                                                                                                                                                                                                                                                                                                                             |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 05.0  | Demonstrate knowledge of current events in the field of public health. -The student will be able to:                                                                                                                                                                                                                                        |
| 05.01 | Identify <del>outlets</del> <u>(sources and platforms (e.g., news, media, and governmental)</u> used to communicate public health events to the general public.                                                                                                                                                                             |
| 05.02 | Describe the implications of current events on public health.                                                                                                                                                                                                                                                                               |
| 05.03 | Discuss concerns related to how public health information is <del>relayed</del> <u>and presented</u> to the public.                                                                                                                                                                                                                         |
| 05.04 | Recognize how reporting of global events (e.g., epidemics, regime change, and weather events) has the potential to impact other areas.                                                                                                                                                                                                      |
| 05.05 | Locate emerging public health trends.                                                                                                                                                                                                                                                                                                       |
| 05.06 | Explain <u>the</u> etiology of emerging public health trends discussed throughout <del>semester</del> <u>the course</u> .                                                                                                                                                                                                                   |
| 05.07 | Discuss legislation designed to protect the public's right to information during major health events (epidemics, terrorism, natural disasters).                                                                                                                                                                                             |
| 06.0  | Demonstrate knowledge of health communication and its impact on health outcomes. -The student will be able to:                                                                                                                                                                                                                              |
| 06.01 | Describe key concepts and skills used to identify <u>and measure</u> individuals with reduced health literacy.                                                                                                                                                                                                                              |
| 06.02 | Explain how understanding health literacy is <del>as</del> -a determinant of health.                                                                                                                                                                                                                                                        |
| 06.03 | <del>Discuss how to best provide culturally appropriate communication and care starting with an awareness of one's own culture and the skills needed to provide sensitive and meaningful care and services to others.</del> <u>Advocate for patients, ensuring that their voices are heard and respected in healthcare decision-making.</u> |
| 06.04 | Discuss basic constructs of theories used in behavior change and persuasion.                                                                                                                                                                                                                                                                |
| 06.05 | Classify health communication programs based on disease type (e.g., chronic vs. infectious).                                                                                                                                                                                                                                                |
| 06.06 | Determine communication methods to be used in specific settings ( <u>e.g.,</u> healthcare, school, and workplace).                                                                                                                                                                                                                          |
| 06.07 | Discuss risks and rewards associated with <u>the</u> use of <del>digital communication</del> <u>technology-based applications</u> in <del>health care</del> <u>healthcare</u> .                                                                                                                                                             |
| 07.0  | Define and describe <u>aging, long-term care,</u> and types of residences. -The student will be able to:                                                                                                                                                                                                                                    |
| 07.01 | <del>Explain psychological factors associated with the graying of populations in developed areas.</del> <u>Describe demographic characteristics of an aging population.</u>                                                                                                                                                                 |
| 07.02 | <del>Describe demographic characteristics of aging population.</del> <u>Explain psychological factors associated with aging.</u>                                                                                                                                                                                                            |
| 07.03 | Describe the phenomenon of increasing life expectancy <u>and the impact on the U.S. healthcare system, economy, and society.</u>                                                                                                                                                                                                            |
| 07.04 | Discuss health promotion <del>and,</del> <u>disease</u> prevention, <u>and end-of-life planning</u> for aging populations.                                                                                                                                                                                                                  |

|       |                                                                                                                                                                                                                                                                                            |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.05 | Compare and contrast aging populations <del>across the 20 and 21<sup>st</sup> centuries</del> <u>from a historical perspective</u> .                                                                                                                                                       |
| 07.06 | <del>Summarize the geriatric medicine movement.</del> <u>Describe the levels of care and types of residences for different health needs.</u>                                                                                                                                               |
| 08.0  | Demonstrate the use of evidence to draw conclusions about disease etiology. -The student will be able to:                                                                                                                                                                                  |
| 08.01 | Define <del>evidenced</del> <u>evidence</u> -based <del>thinking</del> <u>practices</u> in public health.                                                                                                                                                                                  |
| 08.02 | Identify evidence-based <del>recommendations to determine</del> <u>practices in</u> disease etiology, <u>the</u> benefits, and <del>basic</del> recommendations for prevention.                                                                                                            |
| 08.03 | Discuss health information concepts related to economic, legal, and social issues.                                                                                                                                                                                                         |
| 08.04 | Investigate a problem by using <del>evidenced</del> <u>evidence</u> -based <del>thinking</del> <u>practice</u> skills to define a health problem and determine <del>what</del> <u>the</u> information <u>that</u> is <del>—</del> needed to make <del>a</del> <u>an educated</u> decision. |
| 08.05 | Locate and evaluate online health information to determine <u>that</u> appropriate audiences are reached using <u>content that is patient-specific</u> <del>content to the demographic group</del> .                                                                                       |
| 09.0  | Demonstrate knowledge of the three primary levels of prevention. -The student will be able to:                                                                                                                                                                                             |
| 09.01 | Discuss implementation methods of prevention used in public health: <u>including</u> education, motivation, and obligation.                                                                                                                                                                |
| 09.02 | Describe the three levels of prevention in public health: <u>including</u> primary, secondary, and tertiary.                                                                                                                                                                               |
| 09.03 | Explain how preventative methods can be used throughout the <del>life-cycle</del> <u>lifespan</u> .                                                                                                                                                                                        |
| 09.04 | Identify individual and community <del>prevention</del> <u>needs in order</u> to connect available resources to distressed areas <u>and prevent adverse effects</u> .                                                                                                                      |
| 09.05 | Summarize specific primary prevention methods, including: vaccinations, exercise, nutrition counseling, and birth control.                                                                                                                                                                 |
| 09.06 | Summarize secondary prevention methods, including: screening for risk factors of <del>cardiovascular</del> disease and injury prevention.                                                                                                                                                  |
| 09.07 | Summarize specific tertiary prevention methods, including: treatment to control symptoms and prevent complications.                                                                                                                                                                        |
| 10.0  | Demonstrate knowledge of how the insured and uninsured interact with the <del>United States</del> <u>U.S.</u> healthcare system. -The student will be able to:                                                                                                                             |
| 10.01 | Identify types of health insurance, <del>—</del> (e.g., Medicaid, Medicare and Medigap, exchanges, <u>and</u> employment-based:).                                                                                                                                                          |
| 10.02 | Accurately describe the history, <u>advantages, and disadvantages</u> of the development of the U.S. <del>Healthcare</del> <u>healthcare</u> system.                                                                                                                                       |
| 10.03 | Explain the relationship between essential services <del>such as:</del> <u>(e.g.,</u> preventive care, emergency care, choice of providers, institutional options, prescription drug options, <u>and coverage decisions:).</u>                                                             |
| 10.04 | Describe issues associated with having access to <del>care</del> <u>healthcare</u> in the absence of health insurance and consequences of the decision not to obtain health insurance.                                                                                                     |

10.05 Explain goals, limitations, and basic ~~rules~~guidelines for eligibility for ~~worker's~~workers' compensation.

~~10.06—Discuss market and social justice philosophies in relation to health care coverage internationally.~~

~~10.07~~10.06 ~~Describe~~Discuss the ~~advantages~~economic implications related to access and ~~disadvantages~~affordability of the U.S. health ~~care~~healthcare coverage ~~system~~.

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error, and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Biotechnology Specialist  
**Career Cluster:** Health Science

### Purpose

This certificate program is part of the Biotechnology Laboratory Technology AS degree program (1341010100).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Health Science career cluster.

The content includes but is not limited to broad biology and chemistry concepts, algebraic analysis, documentation procedures, basic laboratory techniques and concepts, as well as biohazard and safety procedures.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 ~~Demonstrate~~Apply communication skills.
- 02.0 ~~Demonstrate~~Follow laboratory safety ~~skills~~requirements.
- 03.0 ~~Demonstrate~~Apply basic laboratory skills.
- 04.0 ~~Demonstrate~~Follow regulatory compliance.
- 05.0 Demonstrate appropriate decision-making and problem-solving techniques.
- 06.0 ~~Demonstrate specific~~Apply advanced laboratory skills.
- 07.0 ~~Demonstrate~~Implement quality assurance/control measurements.
- 08.0 ~~Maintain~~Recognize facility and equipment maintenance.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Biotechnology Specialist  
**CIP Number:** 0641010100  
**Program Length:** 19 credit hours

**This certificate program is part of the Biotechnology Laboratory Technology AS degree program (1341010100). At the completion of this program, the student will be able to:**

01.0 ~~Demonstrate~~Apply communication skills. -The student will be able to:

01.01 Comprehend and use correct scientific, technical, and medical vocabulary.

01.02 Follow~~/analyze~~ experimental ~~and~~protocols, laboratory protocols, and scientific literature.

01.03 ~~Keep~~Maintain accurate laboratory records in notebooks, batch records, or other approved ~~mediums~~media.

~~01.04 Perform basic applications in word processing, spread sheets, databases, presentations and project management.~~

~~01.05~~01.04 ~~Ask appropriate scientific questions and recognize what is involved in experimental approaches to the solution of such questions. Recognize the scientific process, including formulating hypotheses.~~

02.0 ~~Demonstrate~~Follow laboratory safety ~~skills~~requirements. The student will be able to:

02.01 ~~Identify and maintain~~Locate first aid supplies, eye wash station, emergency shower, co-worker contact, medical information, emergency and chemical protection, ~~chemical hygiene plan~~, and evacuation plan.

02.02 Follow correct safety procedures, guidelines, and chemical hygiene plans.

02.03 ~~Maintain~~Follow the required environmental health, safety, and laboratory training.

02.04 Handle, store, and dispose of hazardous materials per appropriate MSDS, other safety guidelines, Worker Protection Standards (WPS), and/or appropriate regulatory guidelines (i.e., state, federal, local, accreditation, etc.).

02.05 Follow standard precautions for biological ~~pathogen, both~~pathogens, using proper handling and disposal methods, and ~~define principles~~follow guidelines of contamination control ~~including standard and transmission based precautions~~.

02.06 ~~Demonstrate~~Identify procedures for declaring a laboratory emergency and~~/or responding with~~ the appropriate institutional response procedures.

03.0 ~~Demonstrate~~Apply basic laboratory skills. -The student will be able to:

03.01 Obtain and read ~~protocol, protocols, follow~~ test ~~procedure, procedures, use~~ standard operating ~~procedure (SOP), procedures (SOPs), and follow~~ equipment manuals, ~~and proper forms~~.

03.02 Clean, organize, and sterilize materials and laboratory instruments, when required.

03.03 ~~Organization of~~Organize supply inventory; ~~i~~, date~~/and~~ label reagents, and store promptly upon arrival.

|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.04 | Demonstrate knowledge of <del>asepsis</del> <u>aseptic techniques</u> and practice procedures such as hand-washing and <u>specimen</u> isolation.                                                                                                                                                                                                                             |
| 03.05 | <del>Use</del> <u>Master</u> titration/pipetting techniques; <del>measure</del> <u>and measurement of</u> volume/weights.                                                                                                                                                                                                                                                     |
| 03.06 | Perform basic calculations, unit conversions, graphing of data, and statistical analysis.                                                                                                                                                                                                                                                                                     |
| 03.07 | Calculate and prepare <del>dilutions</del> <u>dilution</u> series.                                                                                                                                                                                                                                                                                                            |
| 03.08 | Prepare solutions and reagents for laboratory use.                                                                                                                                                                                                                                                                                                                            |
| 03.09 | Collect and set up samples for analysis.                                                                                                                                                                                                                                                                                                                                      |
| 03.10 | Perform <del>up</del> -general laboratory tests, including, <del>setup</del> <u>setting up</u> equipment and <del>perform/document</del> <u>performing/documenting</u> tests and results.                                                                                                                                                                                     |
| 03.11 | Demonstrate knowledge of chemical cross-contamination control between reagents from weighing implements, storage containers, and media.                                                                                                                                                                                                                                       |
| 04.0  | <del>Demonstrate</del> <u>Follow</u> regulatory compliance. -The student will be able to:                                                                                                                                                                                                                                                                                     |
| 04.01 | Follow guidelines from the appropriate regulatory, accreditation, and/or certification agencies, such as FDA, OSHA, USDA, NIH, NR, DOT, EPA, CDC, ISO/IEC, and NRC.                                                                                                                                                                                                           |
| 04.02 | Comply with principles using current Good Experimental Practices and quality improvement systems (e.g., GXP; GLP, GMP, GCP).                                                                                                                                                                                                                                                  |
| 05.0  | Demonstrate appropriate decision-making and problem-solving techniques. -The student will be able to:                                                                                                                                                                                                                                                                         |
| 05.01 | Make decisions based on <del>accurate</del> facts, data, and <del>agreed-upon-goals</del> <u>analyses</u> .                                                                                                                                                                                                                                                                   |
| 05.02 | <del>Demonstrate ability to evaluate data and draw conclusions.</del>                                                                                                                                                                                                                                                                                                         |
| 05.03 | <del>05.02</del> Diagnose <del>problem, its</del> <u>problems, their</u> urgency and causes, and <del>documenting</del> <u>maintain documentation</u> as appropriate.                                                                                                                                                                                                         |
| 06.0  | <del>Demonstrate specific</del> <u>Apply advanced</u> laboratory skills. -The student will be able to:                                                                                                                                                                                                                                                                        |
| 06.01 | <del>Perform</del> <u>Apply</u> microbiology skills, <del>which may include but are not limited to, such as</del> plating <u>and aseptic</u> techniques, <del>isolating and characterizing cell lines, propagating cell lines,</del> <u>growth on differential</u> and <del>cryogenic techniques</del> <u>selective media, and staining procedures</u> .                      |
| 06.02 | <del>Perform various genetic engineering</del> <u>Utilize molecular biology</u> techniques <del>including but not limited to, such as cloning and transformation, transfection of mammalian, insect, and/or bacterial cells.</del>                                                                                                                                            |
| 06.03 | <del>Perform</del> <u>Apply</u> various molecular biology techniques, <del>including but not limited to</del> <u>such as DNA, RNA, protein,</u> isolation, quantitation, amplification, <u>characterization, molecular stability,</u> electrophoresis <del>and</del> hybridization <del>of both RNA and DNA</del> <u>techniques,</u> and construction of recombinant vectors. |
| 06.04 | <del>Demonstrate an understanding of</del> <u>Perform</u> translation assays, <u>construction of</u> DNA libraries, and <del>isotopic and non-isotopic</del> labeling techniques.                                                                                                                                                                                             |

|       |                                                                                                                                                                                                                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 06.05 | <del>Perform</del> <u>Compare</u> chemical assays <del>including but not limited to such as</del> measuring turbidity, viscosity, density, quantitative analysis, distillation techniques, titration techniques, employing dyes and indicators, <u>and</u> lyophilization, <del>and organic chemistry techniques</del> . |
| 07.0  | <del>Demonstrate</del> <u>Implement</u> quality assurance/control– <u>measurements</u> . The student will be able to:                                                                                                                                                                                                    |
| 07.01 | Perform quality tests, <u>follow SOPs</u> , and <del>document results</del> <u>complete batch records</u> .                                                                                                                                                                                                              |
| 07.02 | Verify test standards and maintain <del>QA</del> <u>Quality Assurance</u> records.                                                                                                                                                                                                                                       |
| 07.03 | Archive samples and documents.                                                                                                                                                                                                                                                                                           |
| 07.04 | Inspect and verify <u>the</u> integrity of product, procedure, and specimen.                                                                                                                                                                                                                                             |
| 08.0  | <del>Maintain</del> <u>Recognize</u> facility and equipment– <u>maintenance</u> . The student will be able to:                                                                                                                                                                                                           |
| 08.01 | <del>Monitor/record</del> <u>Describe</u> the <del>environmental condition of</del> <u>essential conditions for</u> the facility <u>and equipment for laboratory maintenance</u> (e.g., growth chamber, laboratory, greenhouse, storage room, animal room, freezers, or manufacturing site).                             |
| 08.02 | Notify appropriate personnel <del>if sampling indicates a problem</del> <u>when required conditions are not met</u> .                                                                                                                                                                                                    |
| 08.03 | Clean work area according to SOPs <u>and/or facility requirements</u> .                                                                                                                                                                                                                                                  |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals and SkillsUSA are the~~ CTSOs are co-curricular career and technical student organizations ~~for~~ providing leadership training and reinforcing specific career and technical skills. - Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. -Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Biotechnology Laboratory Technology  
**Career Cluster:** Health Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as Biotechnology Research Technicians, Biological Technicians ~~or~~ cell culture technicians, or biotechnology manufacturing ~~technician~~ technicians, and/or to supply supplemental training for persons previously or currently employed in these occupations.

The content includes, but is not limited to, broad biology and chemistry concepts, algebraic and statistical analysis, basic microbiology concepts, biohazard and safety procedures, human anatomy and physiology or botany, core biotechnical laboratory techniques, and industry workplace experience. ~~It~~ also includes components designed to enhance critical thinking and technical communication skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of 61 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 ~~Demonstrate~~Apply communication skills.
- 02.0 ~~Demonstrate~~Follow laboratory safety ~~skills~~requirements.
- 03.0 ~~Demonstrate~~Apply basic laboratory skills.
- 04.0 ~~Demonstrate~~Follow regulatory compliance.
- 05.0 Demonstrate appropriate decision-making and problem-solving techniques.
- 06.0 ~~Demonstrate specific~~Apply advanced laboratory skills.
- 07.0 ~~Demonstrate~~Implement quality assurance/control measurements.
- 08.0 ~~Maintain~~Recognize facility and equipment maintenance.
- ~~09.0—Demonstrate knowledge and proper care/use of test animals/plants. (optional)~~
- ~~10.0~~09.0 DemonstrateOutline basic skills in bioinformatics. (optional)

Florida Department of Education  
Student Performance Standards

Program Title: **Biotechnology Laboratory Technology**  
 CIP Number: **1341010100**  
 Program Length: **61 credit hours**

**At the completion of this program, the student will be able to:**

01.0 ~~Demonstrate~~Apply communication skills. -The student will be able to:

01.01 ~~Make~~Prepare professional oral and written presentations.

01.02 Comprehend and use correct scientific, technical, and medical vocabulary.

01.03 Follow~~/analyze~~ experimental ~~and~~protocols, laboratory protocols, and scientific literature.

01.04 ~~Prepare identify and apply changes to control procedures.~~Identify experimental controls.

01.05 ~~Write or update manuals, SOP's~~Follow laboratory protocols, ~~reports~~standard operating procedures (SOP), and ~~technical summaries~~scientific techniques.

01.06 ~~Keep~~Maintain accurate laboratory records in notebooks, batch records, or other approved ~~mediums~~media.

01.07 ~~Perform~~Explore computerized ~~research and web searches, including, but not limited to Pub-Med~~databases, such as the National Center for Biotechnology Information (NCBI), and identify ~~basic reference~~ resources in~~necessary for~~ biotechnology, ~~including, but not limited to original journal articles~~.

01.08 Recognize differences between ~~primary~~peer-reviewed scientific references and ~~secondary information~~non-scientific sources.

01.09 ~~Perform basic applications in word processing, spread sheets, databases, presentations and project management.~~Recognize the scientific process, including formulating hypotheses.

01.10 ~~Ask appropriate scientific questions and recognize what is involved in experimental approaches to the solution of such questions.~~Illustrate an ethical application of artificial intelligence tools.

02.0 ~~Demonstrate~~Follow laboratory safety ~~skills~~requirements. The student will be able to:

02.01 ~~Identify and maintain~~Locate first aid supplies, eye wash station, emergency shower, co-worker contact, medical information, emergency and chemical protection, ~~chemical hygiene plan~~ and evacuation plan.

02.02 Follow correct safety procedures, guidelines, and chemical hygiene plans.

02.03 ~~Maintain~~Follow required environmental health, safety, and laboratory training.

02.04 Handle, store, and dispose of hazardous materials per appropriate MSDS, other safety guidelines, Worker Protection Standards (WPS), and/or appropriate regulatory guidelines (i.e. ~~State~~, state, federal, local, accreditation, etc.).

|       |                                                                                                                                                                                                                                                                                                   |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.05 | Follow standard precautions for biological <del>pathogen, both</del> <u>pathogens using</u> proper handling and disposal, <u>methods</u> and <del>define principles</del> <u>follow the guidelines</u> of contamination control <del>including standard and transmission-based precautions.</del> |
| 02.06 | <del>Demonstrate</del> <u>Identify</u> procedures for declaring a laboratory emergency and/or <del>responding with the</del> appropriate institutional <u>response</u> procedures.                                                                                                                |
| 03.0  | <del>Demonstrate</del> <u>Apply</u> basic laboratory skills. -The student will be able to:                                                                                                                                                                                                        |
| 03.01 | Obtain and read <del>protocol, protocols, follow</del> test <del>procedure, procedures, use</del> standard operating <del>procedure (SOP), procedures (SOPs), and follow</del> equipment manuals, <del>and proper forms.</del>                                                                    |
| 03.02 | Prioritize and perform multiple tasks in a timely manner, based upon priorities communicated by supervisor.                                                                                                                                                                                       |
| 03.03 | Clean, organize, and sterilize materials and laboratory instruments, when required.                                                                                                                                                                                                               |
| 03.04 | <del>Organization of</del> <u>Organize</u> supply inventory, date/ <u>and</u> label reagents, and store promptly upon arrival.                                                                                                                                                                    |
| 03.05 | Demonstrate knowledge of <del>asepsis</del> <u>aseptic techniques</u> and practice procedures such as hand-washing and <u>specimen</u> isolation.                                                                                                                                                 |
| 03.06 | <del>Use</del> <u>Master</u> titration/pipetting techniques; <del>measure</del> <u>and measurement of</u> volume/weights.                                                                                                                                                                         |
| 03.07 | Perform basic calculations, unit conversions, graphing of data, and statistical analysis.                                                                                                                                                                                                         |
| 03.08 | Calculate and prepare <del>dilutions</del> <u>dilution</u> series.                                                                                                                                                                                                                                |
| 03.09 | Prepare solutions and reagents for laboratory use.                                                                                                                                                                                                                                                |
| 03.10 | Monitor physical properties of reagents, buffers, media, and solutions, and determine optimum conditions for use.                                                                                                                                                                                 |
| 03.11 | Obtain and review appropriate procedures and test forms, prepare for laboratory inspections, and respond to the reports.                                                                                                                                                                          |
| 03.12 | Collect and set up samples for analysis.                                                                                                                                                                                                                                                          |
| 03.13 | Perform general laboratory tests, including, setup equipment, and perform/document tests and results.                                                                                                                                                                                             |
| 03.14 | Demonstrate knowledge of chemical cross-contamination control between reagents from weighing implements, storage containers, and media.                                                                                                                                                           |
| 03.15 | Make estimations and approximations and judge the reasonableness of the result.                                                                                                                                                                                                                   |
| 04.0  | <del>Demonstrate</del> <u>Follow</u> regulatory compliance. —The student will be able to:                                                                                                                                                                                                         |
| 04.01 | Follow guidelines from the appropriate regulatory, accreditation, and/or certification agencies, such as FDA, OSHA, USDA, NIH, NR, DOT, EPA, CDC, ISO/IEC, and NRC.                                                                                                                               |
| 04.02 | Comply with principles using current Good Experimental Practices and quality improvement systems (e.g., GXP; GLP, GMP, GCP).                                                                                                                                                                      |
| 05.0  | Demonstrate appropriate decision-making and problem-solving techniques. -The student will be able to:                                                                                                                                                                                             |

|       |                                                                                                                                                                                                                                                                                                                                                                                      |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 05.01 | Identify <del>decision to be made</del> <u>decisions</u> and compare <del>alternatives</del> <u>alternative techniques</u> .                                                                                                                                                                                                                                                         |
| 05.02 | Make decisions based on <del>accurate</del> facts, data, and <del>agreed-upon goals</del> <u>analyses</u> .                                                                                                                                                                                                                                                                          |
| 05.03 | <del>Evaluate the decision made.</del>                                                                                                                                                                                                                                                                                                                                               |
| 05.04 | <del>05.03</del> <u>Demonstrate ability to evaluate data</u> <u>Evaluate the experimental outcome</u> and draw conclusions.                                                                                                                                                                                                                                                          |
| 05.05 | <del>05.04</del> Diagnose <del>problem, its</del> <u>problems, their</u> urgency and causes, and <del>documenting</del> <u>maintain documentation</u> as appropriate.                                                                                                                                                                                                                |
| 05.06 | <del>05.05</del> Determine <del>appropriate</del> <u>potential alternative hypotheses and further</u> action, <del>implement it and evaluate results.(s).</del>                                                                                                                                                                                                                      |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

[Programs using live specimens must follow established regulatory guidelines and ethical standards for their use, growth, propagation, and maintenance.](#)

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals and SkillsUSA are the~~ [CTSOs are](#) co-curricular career and technical student organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral

part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS degree program includes the following College Credit Certificates:

Biotechnology Laboratory Specialist (0341010101) – 30 credit hours  
Biotechnology Specialist (0641010100) – 19 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Dental Assisting Technology and Management  
**Career Cluster:** Health Science

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as dental assistants 66002, dental auxiliaries as practice managers, educational managers for dental companies, and dental assisting educators. The program will prepare students for the Dental Assisting National Board Examination as well as state requirements. The program should meet the requirements of the Commission on Dental Accreditation of the American Dental Association and standards recommended by the Florida Board of Dentistry.

The content includes but is not limited to dental and general anatomy, dental terminology, nutrition, microbiology, dental pharmacology and anesthesia, chairside assisting, expanded functions, dental office emergencies/CPR, dental radiography, maintenance and asepsis of dental operatory and instruments, dental instrument and equipment utilization, dental specialty procedures, basic dental laboratory procedures, dental materials, preventive dentistry, employability skills, leadership and human relations skills, ethics and jurisprudence, dental office and patient management, general studies, physical sciences, business principles, educational leadership, and communication skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 70 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the dental health care delivery system and dental health occupations.
- 02.0 Use oral, written, and electronic communication skills with professional etiquette in creating, expressing, and interpreting information and ideas.
- 03.0 Describe the legal and ethical responsibilities of the dental health care worker.
- 04.0 Demonstrate an understanding of general anatomy and physiology and apply wellness and disease concepts.
- 05.0 Demonstrate the importance of health, safety, and environmental management systems in dental organizations and their importance to organizational performance and regulatory compliance.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Use information technology tools. ~~(Optional)~~
- 08.0 Explain the importance of employability skills.
- 09.0 Demonstrate knowledge of airborne and blood borne diseases.
- 10.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 11.0 Use dental terminology.
- 12.0 Identify structures and explain functions and pathologies of dental and general head and neck anatomy.
- 13.0 Identify principles of microbiology, [disease transmission](#), and disease prevention, and perform infection control procedures.
- 14.0 Identify, describe, maintain, and utilize dental instruments and equipment.
- 15.0 Record patient assessment and treatment data.
- 16.0 Identify the functions of pharmacology and anesthesia as they relate to dentistry.
- 17.0 Identify and perform dental radiographic procedures [using current technology](#).
- 18.0 Identify properties and uses, and manipulate dental materials.
- 19.0 Perform chairside assisting for general dentistry and specialty procedures.
- 20.0 Describe principles and perform techniques of preventive dentistry.
- 21.0 Perform general dental business office procedures.
- 22.0 Demonstrate professionalism as a dental team member in the clinical setting.

## **Specialty Options 1-3**

- 23.0 Demonstrate skills for educational methodologies and strategies.
- 24.0 Demonstrate skills necessary for marketing, sales, and educational programs for dental products.
- 25.0 Demonstrate knowledge of dental practice set up and management procedures.

**Florida Department of Education  
Student Performance Standards**

**Program Title:**         Dental Assisting Technology and Management          
**CIP Number:**         1351060104          
**Program Length:**         70 credit hours        

**At the completion of this program, the student will be able to:**

|       |                                                                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Demonstrate knowledge of the dental health care delivery system and dental health occupations. -The student will be able to:                                                      |
| 01.01 | Identify the basic components of the dental health care delivery system, including public, private, government, and non-profit.                                                   |
| 01.02 | Describe the various types of dental health care providers and the range of services available.                                                                                   |
| 01.03 | Describe the composition and functions of a dental health care team.                                                                                                              |
| 01.04 | Identify the general roles and responsibilities of the individual members of the dental health care team.                                                                         |
| 01.05 | Identify the roles and responsibilities of the consumer within the dental healthcare system.                                                                                      |
| 01.06 | Explain the <del>cause</del> causes and effects of factors that influence the current delivery system of dental healthcare.                                                       |
| 01.07 | Discuss the impact of emerging issues, including technology, epidemiology, bioethics, and socioeconomics, on the dental healthcare delivery system.                               |
| 01.08 | Discuss the history of dentistry, and the dental health care team.                                                                                                                |
| 01.09 | Demonstrate knowledge in communicating and collaborating with other members of the health care team to support comprehensive patient care.                                        |
| 02.0  | Use oral, written, and electronic communication skills with professional etiquette in creating, expressing, and interpreting information and ideas. -The student will be able to: |
| 02.01 | Apply basic speaking and active listening skills, including reflection, restatement, and clarification techniques.                                                                |
| 02.02 | Develop basic observational skills and related documentation strategies in written and oral form.                                                                                 |
| 02.03 | Identify characteristics of <del>successful and unsuccessful</del> communication, including communication styles and barriers.                                                    |
| 02.04 | Compose written communication using correct spelling, grammar, etiquette, formatting-and, confidentiality, and specific formats of letter writing.                                |
| 02.05 | Recognize components of medical and dental terminology-and, abbreviations, and their uses.                                                                                        |
| 02.06 | Recognize the importance of courtesy and respect for patients and other health care workers and maintain good interpersonal relationships.                                        |

|                               |                                                                                                                                                                                                                                                                                                                    |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.07                         | Recognize the importance of patient education regarding dental and health care.                                                                                                                                                                                                                                    |
| 02.08                         | Adapt communication skills to varied levels of understanding and <del>cultural</del> -orientation <del>including diverse</del> of diversity, but not limited to <u>sexual orientation, gender orientation, disability, age, cultural, economic, ethnic and religious groups, culture, economics, or ethnicity.</u> |
| 02.09                         | Identify psychological considerations influencing communication and behaviors.                                                                                                                                                                                                                                     |
| 03.0                          | Describe the legal and ethical responsibilities of the dental health care worker. -The student will be able to:                                                                                                                                                                                                    |
| <del>03.01</del>              | Identify areas of 466, F.S. and Rule 64B5-16, F.A.C. and Rule 64B5-25, F.A.C. applicable to practice by the dental health <u>03.01</u> workers <u>and providers.</u>                                                                                                                                               |
| 03.02                         | Explain practices that could result in malpractice, liability, negligence, abandonment, false imprisonment, and fraud.                                                                                                                                                                                             |
| 03.03                         | Demonstrate procedures for accurate documentation and record keeping.                                                                                                                                                                                                                                              |
| 03.04                         | Interpret healthcare facility policy and procedures.                                                                                                                                                                                                                                                               |
| 03.05                         | Explain the patients' "Bill of Rights".                                                                                                                                                                                                                                                                            |
| 03.06                         | Identify and implement standards of the Health Insurance Portability and Accountability Act (HIPAA) and apply these standards to social media, <u>and the use of personal electronic devices in the workplace.</u>                                                                                                 |
| 03.07                         | Distinguish between expressed, implied, and informed consent.                                                                                                                                                                                                                                                      |
| 03.08                         | Explain the laws governing harassment, labor, and employment.                                                                                                                                                                                                                                                      |
| 03.09                         | Differentiate between legal and ethical issues in dentistry.                                                                                                                                                                                                                                                       |
| 03.10                         | Describe <u>at the dental profession's</u> Code of Ethics <del>consistent</del> with <u>emphasis on</u> the dental assisting profession.                                                                                                                                                                           |
| 03.11                         | Identify and compare personal, professional, and organizational ethics.                                                                                                                                                                                                                                            |
| 03.12                         | Recognize the limits of authority and responsibility of dental health care workers, including legislated scope of practice.                                                                                                                                                                                        |
| 03.13                         | Recognize and report illegal and/or unethical practices of dental health care workers.                                                                                                                                                                                                                             |
| 03.14                         | Recognize <del>and report</del> <u>various forms of</u> abuse <del>including (i.e., trafficking,</del> domestic violence, and neglect).                                                                                                                                                                            |
| <u>03.15</u>                  | <u>Demonstrate an understanding of reporting requirements for all types of abuse.</u>                                                                                                                                                                                                                              |

| 04.0  | Demonstrate an understanding of general anatomy and physiology and apply wellness and disease concepts. -The student will be able to:                                                                                                                   |
| 04.01 | Develop a basic understanding of the structure and function of the body systems.                                                                                                                                                                        |
| 04.02 | Identify common disorders related to each of the body systems.                                                                                                                                                                                          |
| 04.03 | <del>Explain basic concepts</del> <a href="#">Identify and develop a control plan to address the issues</a> of positive self-image, wellness, and stress.                                                                                               |
|       | <del>04.04 Develop a wellness and stress control plan that can be used in personal and professional life.</del>                                                                                                                                         |
| 05.0  | Demonstrate the importance of health, safety, and environmental management systems in dental organizations and their importance to organizational performance and regulatory compliance. -The student will be able to:                                  |
| 05.01 | Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments.                                                                                                                                            |
| 05.02 | Identify and describe methods in medical error reduction and prevention in the dental healthcare setting.                                                                                                                                               |
| 05.03 | Demonstrate an understanding of personal safety procedures based on <del>Occupations</del> <a href="#">the Occupational</a> Safety and Health Administration (OSHA) and Centers for Disease Control (CDC) regulations (including standard precautions). |
| 05.04 | Recognize Safety Data Sheets (SDS) and <a href="#">Globally Harmonized System (GHS) labels and</a> comply with safety signs, symbols, and labels.                                                                                                       |
| 05.05 | Demonstrate procedures for the safe transport and transfer of patients.                                                                                                                                                                                 |
| 05.06 | Describe <a href="#">workplace preparedness and procedures for</a> fire safety, disaster, and evacuation <del>procedures</del> .                                                                                                                        |
| 05.07 | Explain emergency procedures to follow <del>in response</del> <a href="#">for responding</a> to, <a href="#">reporting, and recording</a> workplace accidents <a href="#">and acts of violence</a> .                                                    |
| 05.08 | Demonstrate handwashing and the use of personal protective equipment used in dentistry.                                                                                                                                                                 |
| 06.0  | Recognize and respond to emergency situations. -The student will be able to:                                                                                                                                                                            |
| 06.01 | Take and record vital signs.                                                                                                                                                                                                                            |
| 06.02 | Describe legal parameters relating to the administration of emergency care.                                                                                                                                                                             |
| 06.03 | Obtain and maintain certification in basic life support (BLS), cardiopulmonary resuscitation (CPR), automated external defibrillator (AED), foreign body airway obstruction (FBAO), and first aid.                                                      |
| 07.0  | Use information technology tools. <del>(Optional)</del> -The student will be able to:                                                                                                                                                                   |

|                        |                                                                                                                                                                                                                                   |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.01                  | Define terms and demonstrate basic computer skills.                                                                                                                                                                               |
| 07.02                  | Interpret information from electronic medical documents.                                                                                                                                                                          |
| 08.0                   | Explain the importance of employability skills. -The student will be able to:                                                                                                                                                     |
| 08.01                  | Identify personal traits or attitudes desirable in a member of the healthcare team.                                                                                                                                               |
| 08.02                  | Exemplify basic professional standards of dental healthcare workers/providers as they apply to hygiene, dress, language, confidentiality, and behavior (i.e., telephone etiquette, courtesy, and self-introductions).             |
| <del>08.03</del>       | <del>Prepare and maintain a professional portfolio to document knowledge, continued education, skills, and experience. (Optional)</del>                                                                                           |
| <del>08.04</del>       | <del>Write an appropriate resume.</del>                                                                                                                                                                                           |
| <del>08.05</del>       | <del>Conduct a job search and complete a job application form correctly.</del>                                                                                                                                                    |
| <del>08.06</del>       | <del>Demonstrate competence in job interview techniques.</del>                                                                                                                                                                    |
| <del>08.03</del>       | <del>Examine levels of education, and industry credentialing requirements, including licensure and certification, employment opportunities</del>                                                                                  |
| <del>08.07</del>       | <del>workplace environments, and career growth potential.</del>                                                                                                                                                                   |
| <del>08.08</del>       | <del>Examine licensing, certification, and industry credentialing requirements.</del>                                                                                                                                             |
| 09.0                   | Demonstrate knowledge of airborne and blood-borne diseases. -The student will be able to:                                                                                                                                         |
| 09.01                  | Recognize emerging diseases and disorders.                                                                                                                                                                                        |
| 09.02                  | <del>Distinguish between fact and fallacy about</del> Demonstrate knowledge of the transmission and treatment of infectious diseases caused by airborne and blood-borne pathogens, infectious agents, and organisms.              |
| 09.03                  | Identify "at-risk" behaviors that promote the spread of diseases caused by airborne and blood-borne pathogens and the public education necessary to combat the spread of these diseases.                                          |
| 09.04                  | Identify community resources and services available to the individuals with diseases caused by airborne and blood-borne pathogens.                                                                                                |
| 09.05                  | Apply infection control techniques designed to prevent the spread of diseases caused by airborne and blood-borne pathogens to the care of all patients following the Centers for Disease Control and Prevention (CDC) guidelines. |
| <del>09.06</del>       | <del>Demonstrate knowledge of the legal aspects of patient privacy, standard precautions, and incident reporting protocols.</del>                                                                                                 |
| <del>09.06</del> 09.07 | <del>Demonstrate knowledge of the legal aspects of AIDS</del> treating patients with infectious diseases, including testing- and proper documentation.                                                                            |
| 10.0                   | Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. -The students will be able to:                                                                                                         |
| 10.01                  | Analyze attributes and attitudes of an effective leader to include emotional intelligence.                                                                                                                                        |
| 10.02                  | Recognize factors and situations that may lead to conflict.                                                                                                                                                                       |

|                                        |                                                                                                                                                                                                                    |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10.03                                  | Demonstrate effective <a href="#">problem-solving</a> techniques for managing team conflict.                                                                                                                       |
| 11.0                                   | Use dental terminology. -The student will be able to:                                                                                                                                                              |
| 11.01                                  | Identify and define common dental terms.                                                                                                                                                                           |
| 11.02                                  | Demonstrate the use of proper dental terminology in the dental environment.                                                                                                                                        |
| 12.0                                   | Identify structures and explain functions and pathologies of dental and general head and neck anatomy. -The student will be able to:                                                                               |
| 12.01                                  | Identify structures and functions of <a href="#">the</a> head and neck anatomy, including bones, muscles, sinuses, salivary glands, lymph nodes, nerves, and blood vessels.                                        |
| 12.02                                  | Identify embryonic development of <a href="#">the</a> head, oral cavity, and teeth.                                                                                                                                |
| 12.03                                  | Identify teeth and their landmarks, and the morphological characteristics of each individual tooth.                                                                                                                |
| 12.04                                  | Describe the histological components of the head, oral cavity, and elements of the teeth and supporting structures.                                                                                                |
| 12.05                                  | Recognize and describe oral pathological conditions, related to the teeth and their supporting structures.                                                                                                         |
| 12.06                                  | Recognize and describe developmental anomalies related to the teeth, face, and oral structures.                                                                                                                    |
| 12.07                                  | Describe and differentiate between <del>normal</del> <a href="#">occlusion</a> and malocclusion.                                                                                                                   |
| 12.08                                  | Discuss the adverse effects of the use of alcohol, tobacco, and both legal and illegal drugs on the oral cavity.                                                                                                   |
| 13.0                                   | Identify principles of microbiology, <a href="#">disease transmission</a> , and disease prevention, and perform infection control procedures. -The student will be able to:                                        |
| 13.01                                  | Differentiate between pathogenic and non-pathogenic microorganisms.                                                                                                                                                |
| 13.02                                  | Describe pathogens and modes of disease transmission.                                                                                                                                                              |
| 13.03                                  | Differentiate between aseptic and non-aseptic environments.                                                                                                                                                        |
| <del>13.04</del> <a href="#">13.05</a> | <a href="#">Perform aseptic handwashing technique.</a>                                                                                                                                                             |
| <del>13.05</del> <a href="#">13.06</a> | Describe, <a href="#">apply</a> , and <del>apply</del> <a href="#">differentiate between</a> methods of <a href="#">pre-cleaning</a> , disinfection, and sterilization <a href="#">of the dental environment</a> . |
| <del>13.06</del> <a href="#">13.07</a> | Identify chemicals and their uses for controlling the spread of disease in the dental environment.                                                                                                                 |
| <del>13.07</del> <a href="#">13.08</a> | Identify and practice the current CDC guidelines for infection control in dental healthcare settings.                                                                                                              |
| <del>13.08</del>                       | Describe the duties of the dental office safety coordinator.                                                                                                                                                       |

|                        |                                                                                                                                                                                                             |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>13.08</del> 13.09 | Demonstrate compliance with the OSHA Blood-Borne Pathogens Standard (29CFR-1910.1030) applicable to the dental office environment.                                                                          |
| <del>13.09</del> 13.10 | Identify and manage hazardous chemicals and biomedical wastes in accordance with the OSHA Hazard Communications Standard (29CFR-1910.1200), 64E-16 F.A.C., and Environmental Protection Agency regulations. |
| <del>13.10</del> 13.11 | Define principles of infection control, including standard and transmission-based precautions.                                                                                                              |
| <del>13.14</del> 13.12 | Demonstrate knowledge of dental asepsis <u>within the dental environment</u> .                                                                                                                              |
| <del>13.12</del> 13.13 | Implement appropriate hand hygiene procedures and use of <u>personal</u> protective <del>barriers</del> <u>equipment</u> .                                                                                  |
| <del>13.13</del> 13.14 | Demonstrate knowledge of surgical asepsis and isolation.                                                                                                                                                    |
| 14.0                   | Identify, describe, maintain, and utilize dental instruments and equipment. -The student will be able to:                                                                                                   |
| 14.01                  | Identify various types, functions, and operations of dental operatory and laboratory equipment.                                                                                                             |
| 14.02                  | Identify types and functions of operative, restorative, surgical, prosthodontic, <u>periodontic</u> , orthodontic, and endodontic dental instruments.                                                       |
| 14.03                  | Maintain dental operatory equipment and instruments.                                                                                                                                                        |
| 14.04                  | Identify types and functions of specific dental hygiene instruments with emphasis on category rather than individual instruments.                                                                           |
| 14.05                  | Seat and dismiss patients.                                                                                                                                                                                  |
| 14.06                  | Operate oral evacuation devices and air/water syringe.                                                                                                                                                      |
| 14.07                  | Maintain a clear field of vision, including isolation techniques.                                                                                                                                           |
| 14.08                  | Perform a variety of instrument transfers to include four-handed dentistry.                                                                                                                                 |
| 14.09                  | Utilize appropriate chairside assistant ergonomics.                                                                                                                                                         |
| 14.10                  | Assist with and place dental dams as permitted by Florida Statute and Florida Board of Dentistry <del>Rule</del> <u>Rules</u> .                                                                             |
| 15.0                   | Record patient assessment and treatment data. -The student will be able to:                                                                                                                                 |
| 15.01                  | Take and record medical-, <u>health, and</u> dental histories.                                                                                                                                              |
| 15.02                  | Record assessment of existing oral conditions.                                                                                                                                                              |
| 15.03                  | Perform intraoral and extraoral photography.                                                                                                                                                                |
| 15.04                  | Record conditions diagnosed by the dentist.                                                                                                                                                                 |

|                        |                                                                                                                                                                                              |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15.05                  | Record treatment-related data on the patient's clinical record.                                                                                                                              |
| 15.06                  | Record treatment plan and treatment in <u>the</u> patient's chart.                                                                                                                           |
| 15.07                  | Perform a visual assessment of existing oral conditions.                                                                                                                                     |
| 15.08                  | Distinguish between and report subjective <del>and</del> objective <u>indications, and contraindication</u> information.                                                                     |
| 15.09                  | Report relevant information in order of occurrence.                                                                                                                                          |
| 16.0                   | Identify the functions of pharmacology and anesthesia as they relate to dentistry. -The student will be able to:                                                                             |
| 16.01                  | Identify drug requirements, agencies, and regulations, including prescribing regulations related to medications subject to addiction.                                                        |
| 16.02                  | Distinguish among the five schedules of controlled substances.                                                                                                                               |
| 16.03                  | Record a drug/ <u>medication</u> prescription in a patient's chart.                                                                                                                          |
| 16.04                  | <del>Utilize</del> <u>Understand</u> ratios and proportional problems to calculate prescribed drug dosages <u>as instructed by the dentist</u> .                                             |
| 16.05                  | Identify drug/ <u>medicaments</u> actions, <u>metabolism</u> , side effects, indications, and contraindications; verify with Physician's Desk Reference (PDR) or its equivalent.             |
| 16.06                  | Identify <del>common drugs</del> <u>pharmaceuticals and medicaments</u> used in dentistry.                                                                                                   |
| 16.07                  | <del>Prepare</del> <u>Identify the tissues innervated by each of the nerves associated with dental local and topical anesthetics to prepare</u> and apply <u>a</u> topical anesthetic agent. |
| 16.08                  | Identify properties of anesthetics.                                                                                                                                                          |
| 16.09                  | Prepare syringes for the administration of local anesthetics.                                                                                                                                |
| 16.10                  | Monitor and identify precautions in the use of nitrous oxide-oxygen conscious sedation.                                                                                                      |
| 16.11                  | <del>Calculate</del> <u>Understand</u> the <del>percentage</del> <u>calculations</u> of nitrous oxide-oxygen delivered <u>by the dentist</u> during a conscious sedation procedure.          |
| 16.12                  | Identify drugs and agents used for treating dental-related infection.                                                                                                                        |
| 16.13                  | Identify and respond to dental office emergencies.                                                                                                                                           |
| 16.14                  | Describe the signs and symptoms of drug addiction.                                                                                                                                           |
| 16.15                  | <u>Recognize specific conditions in the oral cavity that may be caused by pharmaceutical agents.</u>                                                                                         |
| <del>16.15</del> 16.16 | <u>Discuss the dental team's responsibility to recognize patients with drug addictions.</u>                                                                                                  |

|                               |                                                                                                                                              |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| 17.0                          | Identify and perform dental radiographic procedures- <u>using current technology</u> . The student will be able to:                          |
| 17.01                         | Describe <u>the</u> history, physics, and biological effects of ionizing radiation.                                                          |
| 17.02                         | Identify parts of the <del>X-ray</del> <u>radiography</u> machine, including accessories.                                                    |
| 17.03                         | Demonstrate radiologic health protection techniques.                                                                                         |
| <del>17.04</del>              | <del>Describe dark room/processing procedures, mix solutions.</del>                                                                          |
| <del>17.05</del>              | <del>Describe the proper disposal of hazardous radiographic waste.</del>                                                                     |
| <del>17.06</del> <u>17.04</u> | Place and expose dental radiographic <del>films or phosphors and</del> <u>images on</u> digital <del>sensors</del> <u>image receptors</u> .  |
| <del>17.07</del> <u>17.05</u> | Perform extraoral radiography as required for dental diagnostic procedures.                                                                  |
| <del>17.08</del> <u>17.06</u> | <del>Identify</del> <u>Describe and identify</u> radiographic anatomical landmarks and pathologies.                                          |
| <del>17.09</del> <u>17.07</u> | Mount radiographic <del>surveys</del> <u>images</u> .                                                                                        |
| <del>17.10</del> <u>17.08</u> | Describe how to maintain <del>unexposed film inventory</del> <u>digital image receptors</u> and <del>storage/or</del> <u>image devices</u> . |
| <del>17.11</del> <u>17.09</u> | Maintain digitally acquired radiographic images.                                                                                             |
| <del>17.12</del> <u>17.10</u> | Practice infection control procedures for all radiographic procedures.                                                                       |
| 18.0                          | Identify properties and uses, and manipulate dental materials. -The student will be able to:                                                 |
| 18.01                         | Identify properties and uses and manipulate gypsum.                                                                                          |
| 18.02                         | Identify properties and uses and manipulate restorative materials.                                                                           |
| 18.03                         | Identify properties and uses and manipulate dental cements.                                                                                  |
| 18.04                         | Place and remove matrices as permitted by Florida Statute and Florida Board of Dentistry Rule.                                               |
| 18.05                         | Place and remove temporary restorations as permitted by Florida Statute and Florida Board of Dentistry Rule.                                 |
| 18.06                         | Identify properties and uses and manipulate impression materials.                                                                            |
| 18.07                         | Make intraoral impressions as permitted by Florida Statute and Florida Board of Dentistry Rule.                                              |
| 18.08                         | Identify properties and uses and manipulate acrylics and <del>thermo</del> <u>plastics</u> <u>thermoplastic materials</u> .                  |
| 18.09                         | Identify properties and uses and manipulate waxes.                                                                                           |

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <b>Specialty Option 2: Product Marketing, Sales, and Educational Programs</b>                                                                                                                           |                                                                                                                                                                                    |
| 24.0                                                                                                                                                                                                    | Demonstrate skills necessary for marketing, sales, and educational programs for dental products. -The student will be able to:                                                     |
| 24.01                                                                                                                                                                                                   | Establish educational programs relating the value and effectiveness of various dental products.                                                                                    |
| 24.02                                                                                                                                                                                                   | Apply economic principles for product marketing, distribution, and sales.                                                                                                          |
| 24.03                                                                                                                                                                                                   | Demonstrate effective product evaluation and comparison.                                                                                                                           |
| 24.04                                                                                                                                                                                                   | Identify appropriate consumer populations.                                                                                                                                         |

| Specialty Option 3: Dental Practice Management |                                                                                                          |
|------------------------------------------------|----------------------------------------------------------------------------------------------------------|
| 25.0                                           | Demonstrate knowledge of dental practice set up and management procedures. -The student will be able to: |
| 25.01                                          | Establish policies and procedures for dental practice operations.                                        |
| <del>25.02</del>                               | <del>Identify roles and responsibilities of all employees.</del>                                         |
| <del>25.03</del> <u>25.02</u>                  | Implement policies and procedures for establishing effective management of a dental practice.            |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

**Field Internship Activities:** Clinical experiences are integrated with the didactic portion of this program. Clinical experience assisting a dentist must be an integral part of the educational program designed to perfect students' competence in performing dental assisting functions, rather than to provide basic instruction. The major portion of the students' time in clinical assignments must be spent assisting with or participating in patient care. Prior to clinical assignments, students demonstrate minimum competence in performing the procedures which they will be expected to perform in their clinical experience.

### **Special Notes**

Dental assisting programs accredited by the American Dental Association Commission on Dental Accreditation are required to implement enrollment and admissions criteria that include the selection of adult students with a high school diploma, its equivalent, or an advanced degree.

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.

This program meets the goals of TECH PREP and is based on the model developed by the Allied Health Articulation Task Force.

This program should meet the most current edition of the American Dental Association Accreditation Standards for Dental Assisting Education Programs. For further information, contact:- Commission on Dental Accreditation, 211 East Chicago Avenue, Chicago, Illinois 60611.

For Florida information contact the Florida Agency for Health Care Administration (AHCA), Division of Health Quality Assurance, Board of Dentistry, 4052 Bald Cypress Way, Tallahassee, FL 32399, 850/245-4161.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

Pursuant to 466.024, F.S., 64B5-16.002, F.A.C. and 64B5-9.011, F.A.C., completers of the dental assisting program may be awarded a certificate verifying formal training which is required for the performance of certain remediable tasks (also known as expanded functions→).

Students should be encouraged to become members and participate in the activities of the professional organization: The American Dental Assistants Association.

Completers of the dental assisting program should be encouraged to take the Dental Assisting National Board (DANB) Certified Dental Assistant (CDA) exam. DANB is recognized by the American Dental Association as the national certification board for dental assistants.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOSs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Dental Hygiene  
**Career Cluster:** Health Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as dental hygienists or to provide supplemental training for persons previously or currently employed in this occupation.

The content includes but is not limited to patient assessment, dental hygiene instrumentation and direct patient care services (scaling/root planing/curettage/radiographs/oral hygiene-instruction/expanded functions), community dental health, dental office emergencies, infection control, special needs dental care, office management, employability skills, ethics and jurisprudence.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of 88 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

### **Regulated Programs**

Students are prepared to take the Dental Hygiene National Board and state licensure examinations. Dental Hygiene Programs accredited by the American Dental Association Commission on Dental Accreditation are required to implement clinical experiences outlined in these program standards.

| <a href="#"><u>09.09 Take responsibility for professional growth.</u></a>                              |

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the dental health care delivery system and dental health occupations.
- 02.0 Use oral and written communication skills in creating, expressing, and interpreting information and ideas.
- 03.0 Describe the legal and ethical responsibilities of the dental health care provider.
- 04.0 Demonstrate an understanding of general anatomy and physiology and apply wellness and disease concepts.
- 05.0 Demonstrate the importance of health, safety, and environmental management systems in dental organizations and their importance to organizational performance and regulatory compliance.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Use information technology tools.
- 08.0 Explain the importance of employability skills.
- 09.0 Demonstrate knowledge of infectious diseases.
- 10.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 11.0 Perform remediable tasks delegable to a dental hygienist as permitted by Florida Statutes/Law.
- 12.0 Perform dental office procedures.
- 13.0 Identify, describe, maintain, and utilize dental instruments and equipment.
- 14.0 Identify and perform dental and radiographic procedures.
- 15.0 Identify the properties and uses, ~~and~~ of dental materials, demonstrate their manipulation ~~of dental materials,~~ and integrate digital technologies such as image scanners and software for designing and fabricating dental appliances, crowns, and restorations.
- 16.0 Identify, and explain the formation and function of the head, neck, dental structures, and tissues, including pathological conditions of the human body in relation to the oral cavity.
- 17.0 Identify, and explain principles of microbiology, disease transmission, disease prevention, and perform infection control procedures.
- 18.0 Explain usage, administration, indications, contraindications, adverse reactions, and precautions of pharmaceutical and anesthetic agents used in the treatment of dental disease.
- 19.0 Describe principles and perform techniques of preventive dentistry.
- 20.0 Perform patient assessment.
- 21.0 Perform direct patient services and competently provide the dental hygiene process of care for the child, adolescent, adult, and geriatric patient, as well as the special needs patient.
- 22.0 Implement and evaluate community health interventions and research activities.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Dental Hygiene  
**CIP Number:** 1351060200  
**Program Length:** 88 credit hours

**At the completion of this program, the student will be able to:**

|       |                                                                                                                                                                                                                                                                                                                       |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Demonstrate knowledge of the dental health care delivery system and dental health occupations. -The student will be able to:                                                                                                                                                                                          |
| 01.01 | Identify the basic components of the dental health care delivery system, including public, private, government, and non-profit.                                                                                                                                                                                       |
| 01.02 | Describe the <del>various types</del> <u>roles</u> of <u>general and specialty</u> dental <del>health care</del> <u>healthcare</u> providers <del>and</del> <u>including</u> the <del>range of</del> <u>services available</u> <u>offered by specialists such as orthodontists, periodontists, and oral surgeons.</u> |
| 01.03 | Describe the composition and functions of a dental health care team.                                                                                                                                                                                                                                                  |
| 01.04 | Identify the general roles and responsibilities of the individual members of the dental health care team.                                                                                                                                                                                                             |
| 01.05 | Identify the roles and responsibilities of the consumer within the dental healthcare system.                                                                                                                                                                                                                          |
| 01.06 | Explain factors that influence the current delivery system of dental healthcare.                                                                                                                                                                                                                                      |
| 01.07 | Explain the impact of current and emerging issues, including, <u>Artificial Intelligence (AI), teledentistry,</u> technology, epidemiology, bioethics, and socioeconomics on the dental healthcare delivery system.                                                                                                   |
| 01.08 | Discuss the history of dentistry and dental hygiene.                                                                                                                                                                                                                                                                  |
| 01.09 | Demonstrate knowledge in communicating and collaborating with other members of the health care team to support comprehensive patient care.                                                                                                                                                                            |
| 02.0  | Use oral and written communication skills in creating, expressing, and interpreting information and ideas. -The student will be able to:                                                                                                                                                                              |
| 02.01 | Apply basic speaking and active listening skills, including reflection, restatement, and clarification techniques.                                                                                                                                                                                                    |
| 02.02 | Develop basic observational skills and related documentation strategies in written and oral form.                                                                                                                                                                                                                     |
| 02.03 | Identify characteristics of successful and unsuccessful communication, including communication styles and barriers.                                                                                                                                                                                                   |
| 02.04 | Compose written communication using correct spelling, grammar, formatting, and confidentiality.                                                                                                                                                                                                                       |
| 02.05 | Recognize components of medical and dental terminology and abbreviations.                                                                                                                                                                                                                                             |
| 02.06 | Recognize the importance of courtesy and respect for patients and other health care workers and maintain good interpersonal relationships.                                                                                                                                                                            |

|       |                                                                                                                                                                                                                                     |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.07 | <del>Recognize the importance of</del> Develop and implement effective patient education <del>regarding dental and health care</del> strategies, including written, oral, and digital communication methods.                        |
| 02.08 | Adapt communication skills to meet various levels of understanding and orientation of diversity, including but not limited to sexual orientation, gender orientation, disability, age, culture, economics, ethnicity, and religion. |
| 02.09 | Identify psychological considerations influencing communication and behaviors.                                                                                                                                                      |
| 03.0  | Describe the legal and ethical responsibilities of the dental health care provider. -The student will be able to:                                                                                                                   |
| 03.01 | Identify areas of 466, F.S., <u>Rule 64B5-16, F.A.C.</u> , and Rule 64B5- <del>16, F.A.C. and Rule 64B5-</del> 25, F.A.C., applicable to practice by dental health providers.                                                       |
| 03.02 | Explain practices that could result in malpractice, liability, negligence, abandonment, false imprisonment, and fraud.                                                                                                              |
| 03.03 | Demonstrate procedures for accurate documentation and record keeping.                                                                                                                                                               |
| 03.04 | Interpret healthcare facility policy and procedures.                                                                                                                                                                                |
| 03.05 | Explain the patients' "Bill of Rights".                                                                                                                                                                                             |
| 03.06 | Identify and implement standards of the Health Insurance Portability and Accountability Act (HIPAA), including but not limited to social media, and use of personal electronic devices in the workplace.                            |
| 03.07 | Distinguish between express, implied, and informed consent.                                                                                                                                                                         |
| 03.08 | Explain the laws governing harassment, labor, and employment.                                                                                                                                                                       |
| 03.09 | Differentiate between legal and ethical issues in dentistry.                                                                                                                                                                        |
| 03.10 | Describe the dental <u>hygienist</u> profession's Code of Ethics.                                                                                                                                                                   |
| 03.11 | Identify and compare personal, professional, and organizational ethics.                                                                                                                                                             |
| 03.12 | Recognize the limits of authority and responsibility of dental health care workers, including legislated scope of practice.                                                                                                         |
| 03.13 | Recognize and report illegal and/or unethical practices of dental health care workers.                                                                                                                                              |
| 03.14 | Recognize <del>signs of</del> and report child, elder, and domestic abuse <del>and neglect.</del> <u>as mandated by law.</u>                                                                                                        |
| 03.15 | Demonstrate an understanding of reporting requirements for all types of abuse.                                                                                                                                                      |
| 03.16 | Identify resources for victims of abuse.                                                                                                                                                                                            |
| 03.17 | Define commonly used legal vocabulary relating to dentistry.                                                                                                                                                                        |
| 03.18 | Describe ethical considerations/obligations in the dental team-patient relationship.                                                                                                                                                |

|       |                                                                                                                                                                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.19 | Explain risk management and root cause analysis <u>in the prevention of medical errors, infection control breaches, improper documentation, and failure to obtain informed consent.</u>                                                                  |
| 03.20 | Apply self-assessment skills to prepare for <del>life-long</del> <u>lifelong</u> learning.                                                                                                                                                               |
| 03.21 | Apply ethical <del>principles</del> , legal, and regulatory <del>concepts</del> <u>principles</u> to resolve ethical dilemmas.                                                                                                                           |
| 04.0  | Demonstrate an understanding of general anatomy and physiology and apply wellness and disease concepts. -The student will be able to:                                                                                                                    |
| 04.01 | Develop a basic understanding of the structure and function of the body systems.                                                                                                                                                                         |
| 04.02 | Identify common disorders <del>related to</del> <u>associated with</u> each <del>of the</del> body <del>systems</del> <u>system, emphasizing the oral manifestations of disease and the necessary modifications to treatment.</u>                        |
| 04.03 | Explain basic concepts of positive self-image, wellness, and stress.                                                                                                                                                                                     |
| 04.04 | Describe a wellness and stress control plan that can be used in personal and professional life.                                                                                                                                                          |
| 05.0  | Demonstrate the importance of health, safety, and environmental management systems in dental organizations and their importance to organizational performance and regulatory compliance. -The student will be able to:                                   |
| 05.01 | Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments, including the proper transport and transfer of patients.                                                                                    |
| 05.02 | <del>Identify</del> <u>Utilize root cause analysis, electronic health record audits, and checklists for</u> medical <del>errors and describe methods to reduce and prevent errors in the</del> <u>dental healthcare setting</u> <u>error prevention.</u> |
| 05.03 | Demonstrate an understanding of personal safety procedures based on Occupational Safety and Health Administration (OSHA) and Centers for Disease Control and Prevention (CDC) regulations (including standard precautions).                              |
| 05.04 | Recognize Safety Data Sheets (SDS) and Globally Harmonized System (GHS) labels and comply with safety signs, symbols, and labels.                                                                                                                        |
| 05.05 | Describe workplace preparedness and procedures for fire safety, disaster, and evacuation.                                                                                                                                                                |
| 05.06 | Explain procedures to follow for responding to, reporting, and recording workplace incidents.                                                                                                                                                            |
| 05.07 | Demonstrate handwashing and the use of personal protective equipment <del>used</del> in dentistry.                                                                                                                                                       |
| 06.0  | Recognize and respond to emergency situations. -The student will be able to:                                                                                                                                                                             |
| 06.01 | Take and record vital signs <u>and know abnormal vital parameters (bp, blood glucose, respirations, etc.) and their implications for dental treatment.</u>                                                                                               |
| 06.02 | Describe legal parameters relating to the administration of emergency care.                                                                                                                                                                              |
| 06.03 | Obtain and maintain certification in cardiopulmonary resuscitation (CPR), automated external defibrillator (AED), foreign body airway obstruction (FBAO), and first aid.                                                                                 |
| 07.0  | Use information technology tools. -The student will be able to:                                                                                                                                                                                          |

|                               |                                                                                                                                                                                                        |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.01                         | Define terms and demonstrate basic computer skills.                                                                                                                                                    |
| 07.02                         | Interpret and input information from electronic medical documents.                                                                                                                                     |
| <u>07.03</u>                  | <u>Demonstrate an understanding of Artificial Intelligence (AI) software and its applications in digital dentistry.</u>                                                                                |
| 08.0                          | Explain the importance of employability skills. -The student will be able to:                                                                                                                          |
| 08.01                         | Identify personal traits or attitudes desirable in a member of the healthcare team.                                                                                                                    |
| 08.02                         | Exemplify basic professional standards of dental healthcare providers.                                                                                                                                 |
| 08.03                         | Develop a professional resume and/or career portfolio.                                                                                                                                                 |
| 08.04                         | Conduct a job search and complete a job application form.                                                                                                                                              |
| 08.05                         | Demonstrate effective job interview techniques.                                                                                                                                                        |
| 08.06                         | Examine levels of education, credentialing requirements <u>(including licensure and certification,)</u> employment opportunities, workplace environments, and career growth potential.                 |
| 09.0                          | Demonstrate knowledge of infectious diseases. -The student will be able to:                                                                                                                            |
| <u>09.01</u>                  | <u>Recognize oral manifestations of systemic diseases and infections that may contraindicate dental treatment.</u>                                                                                     |
| <del>09.01</del> <u>09.02</u> | Recognize emerging diseases and disorders.                                                                                                                                                             |
| <del>09.02</del> <u>09.03</u> | Demonstrate knowledge of transmission <del>and</del> <u>of infectious diseases, their causative agents, and the</u> treatment of diseases caused by infectious <del>agents or</del> organisms.         |
| <del>09.03</del> <u>09.04</u> | Identify "at-risk" behaviors that promote the spread of infectious diseases and the public education necessary to combat the spread of these diseases.                                                 |
| <del>09.04</del> <u>09.05</u> | Identify community resources and services available to <del>the</del> individuals with infectious diseases.                                                                                            |
| <del>09.05</del> <u>09.06</u> | Apply infection control techniques designed to prevent the spread of infectious diseases in the care of all patients following <u>the</u> Centers for Disease Control and Prevention (CDC) guidelines. |
| <del>09.06</del> <u>09.07</u> | Demonstrate knowledge of the legal aspects of treating patients with infectious diseases, including testing and proper documentation.                                                                  |
| 10.0                          | Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. -The students will be able to:                                                                              |
| 10.01                         | Analyze attributes <del>and</del> of effective leadership.                                                                                                                                             |
| 10.02                         | Recognize factors and situations that may lead to conflict.                                                                                                                                            |
| 10.03                         | Demonstrate effective problem-solving techniques for managing team conflict.                                                                                                                           |

|       |                                                                                                                                                                                                                                                                                                                                                 |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11.0  | Perform remediable tasks delegable to a dental hygienist as permitted by Florida Statutes/Law. -The student will be able to:                                                                                                                                                                                                                    |
| 11.01 | Demonstrate remediable delegable tasks to lab and/or clinical competence.                                                                                                                                                                                                                                                                       |
| 12.0  | Perform dental office procedures. -The student will be able to:                                                                                                                                                                                                                                                                                 |
| 12.01 | Maintain appointment control with effective time management skills.                                                                                                                                                                                                                                                                             |
| 12.02 | Assess, create, modify, and maintain an active re-care system.                                                                                                                                                                                                                                                                                  |
| 12.03 | Prepare and maintain accurate patient records <u>and conduct chart audits.</u>                                                                                                                                                                                                                                                                  |
| 12.04 | Demonstrate skills on office equipment to include computers and dental office management systems.                                                                                                                                                                                                                                               |
| 12.05 | Utilize correct dental codes and nomenclature for procedures.                                                                                                                                                                                                                                                                                   |
| 13.0  | Identify, describe, maintain, and utilize dental instruments and equipment. -The student will be able to:                                                                                                                                                                                                                                       |
| 13.01 | Identify and demonstrate the operation of dental operator and laboratory equipment.                                                                                                                                                                                                                                                             |
| 13.02 | Maintain dental operator equipment and instruments.                                                                                                                                                                                                                                                                                             |
| 13.03 | Identify and demonstrate the use of dental hygiene instruments.                                                                                                                                                                                                                                                                                 |
| 14.0  | Identify and perform dental and radiographic procedures. -The student will be able to:                                                                                                                                                                                                                                                          |
| 14.01 | Describe <u>the</u> history, physics, and biological effects of ionizing radiation.                                                                                                                                                                                                                                                             |
| 14.02 | Identify parts of the radiographic imaging machine.                                                                                                                                                                                                                                                                                             |
| 14.03 | Demonstrate radiologic health protection techniques.                                                                                                                                                                                                                                                                                            |
| 14.04 | Perform radiographic procedures that include processing, utilization, and care of equipment.                                                                                                                                                                                                                                                    |
| 14.05 | Place image receptors, expose dental images, and understand the relevance of exposure settings, times, and patient record keeping.                                                                                                                                                                                                              |
| 14.06 | Identify radiographic anatomical landmarks.                                                                                                                                                                                                                                                                                                     |
| 14.07 | Mount radiographic surveys and/or save and store digital files.                                                                                                                                                                                                                                                                                 |
| 14.08 | <u>Recognize and correct errors in exposing radiographic images.</u>                                                                                                                                                                                                                                                                            |
| 15.0  | Identify <u>the</u> properties and uses, <del>and</del> <u>of dental materials,</u> demonstrate <u>their</u> manipulation <del>of dental materials,</del> <u>and integrate digital technologies such as image scanners and software for designing and fabricating dental appliances, crowns, and restorations.</u> The student will be able to: |

|       |                                                                                                                                                                                                                                                                                                                       |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15.01 | Identify properties and uses, and demonstrate manipulation of gypsum.                                                                                                                                                                                                                                                 |
| 15.02 | Identify properties and uses, and <u>demonstrate</u> manipulation of sealants and restorative materials.                                                                                                                                                                                                              |
| 15.03 | Identify properties and uses, and demonstrate manipulation of dental cements.                                                                                                                                                                                                                                         |
| 15.04 | Identify properties and uses, and demonstrate manipulation of impression materials.                                                                                                                                                                                                                                   |
| 15.05 | Identify properties and uses, and demonstrate manipulation of acrylics and/or thermoplastics.                                                                                                                                                                                                                         |
| 15.06 | Identify and demonstrate dental laboratory procedures as outlined by remediable tasks delegable to the dental hygienist by Florida Statute/Law.                                                                                                                                                                       |
| 16.0  | Identify, <u>and</u> explain the formation and function of the head, neck, dental structures, and tissues, including pathological conditions of the human body in relation to the oral cavity. -The student will be able to:                                                                                          |
| 16.01 | Identify structures and functions of head and neck anatomy, including bones, muscles, sinuses, salivary glands, lymph nodes, nerves, and blood vessels.                                                                                                                                                               |
| 16.02 | Identify embryonic development of the head, oral cavity, and teeth.                                                                                                                                                                                                                                                   |
| 16.03 | Describe the histological components of the head, oral cavity, and elements of the teeth and supporting structures.                                                                                                                                                                                                   |
| 16.04 | Describe and differentiate between normal and malocclusion.                                                                                                                                                                                                                                                           |
| 16.05 | Identify the elements of the chemical basis of life, cellular metabolism, and the structure of the major tissue types of the human body.                                                                                                                                                                              |
| 16.06 | Describe the metabolism of nutrient foods, vitamins, and minerals by the human body and pathological conditions related to nutrient deficiencies.                                                                                                                                                                     |
| 16.07 | Identify anatomical structures and physiological <del>function</del> <u>functions</u> of the <del>principle</del> <u>principal</u> systems of the human body, including the skeletal, muscular, integumentary, circulatory, lymphatic, endocrine, digestive, reproductive, respiratory, urinary, and nervous systems. |
| 16.08 | <del>Recognize</del> <u>Identify</u> and <del>describe</del> <u>explain</u> oral pathological conditions <del>related to</del> <u>affecting</u> the teeth and <del>their</del> -supporting structures, <u>including general pathology, as many systemic conditions present oral manifestations.</u>                   |
| 16.09 | Identify teeth and their landmarks, and the morphological characteristics of each individual tooth.                                                                                                                                                                                                                   |
| 16.10 | Recognize and describe developmental anomalies related to the head and oral structures.                                                                                                                                                                                                                               |
| 17.0  | Identify, <u>and</u> explain principles of microbiology, disease transmission, disease prevention, and perform infection control procedures. -The student will be able to:                                                                                                                                            |
| 17.01 | Differentiate between pathogenic and non-pathogenic microorganisms.                                                                                                                                                                                                                                                   |
| 17.02 | Describe pathogens and modes of disease transmission.                                                                                                                                                                                                                                                                 |
| 17.03 | Differentiate between aseptic and non-aseptic environments.                                                                                                                                                                                                                                                           |

|            |                                                                                                                                                                                                                  |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 17.04      | Perform aseptic handwashing technique.                                                                                                                                                                           |
| 17.05      | Describe, apply, and differentiate between methods of cleaning, disinfection, and sterilization of the dental environment.                                                                                       |
| 17.06      | Recognize the need for and demonstrate the use of proper precautions for the prevention of disease transmission during all dental-related procedures.                                                            |
| 17.07      | Identify the role of prokaryotic cells, eukaryotic cells, viruses, and bacteria in infections and the mechanisms of diseases.                                                                                    |
| 17.08      | Identify the genetics of microbes, including replication of DNA and protein synthesis, mutation, and gene transfer.                                                                                              |
| 18.0       | Explain usage, administration, indications, contraindications, adverse reactions, and precautions of pharmaceutical and anesthetic agents used in the treatment of dental disease. -The student will be able to: |
| 18.01      | Identify the agencies responsible for drug regulations.                                                                                                                                                          |
| 18.02      | Document in a patient's chart medication prescribed by the dentist or over-the-counter medications, along with any supplements or vitamins the patient is taking.                                                |
| 18.03      | Identify medication actions, side effects, indications, and contraindications; verify with Physician's Desk Reference or its equivalent.                                                                         |
| 18.04      | Describe the process of medication metabolism.                                                                                                                                                                   |
| 18.05      | Identify pharmaceuticals and medicaments used in dentistry.                                                                                                                                                      |
| 18.06      | Recognize specific conditions in the oral cavity that may be caused by pharmaceutical agents.                                                                                                                    |
| 18.07      | Identify properties of anesthetics.                                                                                                                                                                              |
| 18.08      | Identify the tissues innervated by each of the nerves associated with dental local and topical anesthesia.                                                                                                       |
| 18.09      | Describe the properties and mode of action of an effective local and topical anesthetic.                                                                                                                         |
| 18.10      | List systemic considerations in choosing a local and topical anesthetic.                                                                                                                                         |
| 18.11      | Describe ASA classifications and their role in dental treatment planning.                                                                                                                                        |
| 18.1118.12 | Describe and demonstrate methods of administering topical and local anesthetics.                                                                                                                                 |
| 18.1218.13 | List potential local and systemic adverse reactions associated with local anesthetic administration.                                                                                                             |
| 18.1318.14 | Prepare armamentarium for administering local anesthetics for recognized techniques.                                                                                                                             |
| 18.1418.15 | Document anesthetics administered and any adverse reactions in a patient's chart.                                                                                                                                |
| 18.1518.16 | Describe the administration and monitoring process and identify precautions in the use of nitrous oxide-oxygen inhalation analgesia.                                                                             |

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.0                   | Describe principles and perform techniques of preventive dentistry. -The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 19.01                  | Identify, communicate, and instruct patients on applicable methods of preventive dentistry that utilize: <ul style="list-style-type: none"> <li>• <del>risk</del><u>Risk</u> assessment</li> <li>• <del>evidence</del><u>Evidence</u>-based learning</li> <li>• <del>individualized</del><u>Individualized</u> preventive care plans</li> <li>• <del>motivational</del><u>Motivational</u> interviewing/counseling</li> <li>• <del>training</del><u>Training</u> regarding health status and rationale for <u>the</u> preventive care plan.</li> </ul> |
| 19.02                  | Identify properties and indications for use of <del>anticariogenic</del> <u>anticarcinogenic</u> treatments utilized in the community, home, and office.                                                                                                                                                                                                                                                                                                                                                                                               |
| 19.03                  | Identify and demonstrate proper auxiliary aides based on individual patient needs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 19.04                  | Identify and describe deficiencies that manifest symptoms in the oral cavity and communicate applicable therapies.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 19.05                  | Present dietary recommendations to address specific dental needs during nutritional counseling.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 20.0                   | Perform patient assessment. -The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 20.01                  | Take, record, and correlate medical/dental history with dental hygiene treatment plan and services to be performed.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 20.02                  | <u>Understand contraindications to dental hygiene treatment for systemic conditions or diseases.</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <del>20.02</del> 20.03 | Take, record, and correlate vital sign observations with <u>the</u> dental hygiene treatment plan and services to be performed.                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <del>20.03</del> 20.04 | Assess vital signs in order to reduce <u>the</u> incidence of patient complications and medical emergencies.                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <del>20.04</del> 20.05 | Perform, record, and correlate extraoral and intraoral examination findings with <u>the</u> dental <del>hygienecare</del> <u>hygiene care</u> plan and patient services to be performed.                                                                                                                                                                                                                                                                                                                                                               |
| <del>20.05</del> 20.06 | Observe and record existing restorations as well as conditions and suspected pathologies of hard and soft tissues using the appropriate armamentarium.                                                                                                                                                                                                                                                                                                                                                                                                 |
| <del>20.06</del> 20.07 | Perform a comprehensive periodontal examination, which includes pocket depth, attachment level, recession, mobility, furcations, radiographic findings, and tissue health.                                                                                                                                                                                                                                                                                                                                                                             |
| <del>20.07</del> 20.08 | Consult with <del>dentist</del> <u>dentists</u> and physicians to verify dental and medical information to develop and implement <u>a</u> dental hygiene care plan.                                                                                                                                                                                                                                                                                                                                                                                    |
| <del>20.08</del> 20.09 | Interpret and correlate dental radiographs/ <u>intraoral images</u> and dental charting with <u>the</u> dental hygiene treatment plan.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <del>20.09</del> 20.10 | Perform soft tissue reassessment and evaluate the effects of initial dental hygiene therapy, and make appropriate therapy modifications or referrals.                                                                                                                                                                                                                                                                                                                                                                                                  |
| <del>20.10</del> 20.11 | Identify oral manifestations that deviate from normal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <del>20.11</del> 20.12 | Document the diagnosis made by <u>the</u> dentist <u>and dental hygienist</u> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|       |                                                                                                                                                                                                                                                                         |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <del>20.12</del> <u>20.13</u> Recognize and respond appropriately to contraindications for dental hygiene treatment found in medical and dental history.                                                                                                                |
|       | <del>20.13</del> <u>20.14</u> Identify and assess dental office emergencies and follow the appropriate protocol for treatment.                                                                                                                                          |
| 21.0  | Perform direct patient services and competently provide <u>the</u> dental hygiene process of care for the child, adolescent, adult, and geriatric patient, as well as the special needs patient. -The student will be able to:                                          |
| 21.01 | Demonstrate all delegable dental hygiene clinical services within the scope of practice as permitted by Florida statute/law.                                                                                                                                            |
| 21.02 | Communicate to <del>patients'</del> <u>the patient</u> appropriate post-operative instructions and correctly select all necessary self-care therapies intended to restore and maintain the <del>patients'</del> <u>patient's</u> oral health.                           |
| 21.03 | Provide and communicate recommendations for patient use of caries prevention agents.                                                                                                                                                                                    |
| 21.04 | Provide a comprehensive collection of patient data to identify the physical and oral health status, as well as risk factors that could affect patient care and healing.                                                                                                 |
| 21.05 | Provide analysis of assessment findings and use of critical thinking in order to address the patient's dental hygiene treatment needs.                                                                                                                                  |
| 21.06 | Establish a dental hygiene care plan that reflects the desired outcomes and treatment interventions to facilitate optimal oral health.                                                                                                                                  |
| 21.07 | Present proposed treatment and procedures to the patient and obtain appropriate informed consent signatures prior to rendering patient care services.                                                                                                                   |
| 21.08 | Provide patient-centered treatment and evidence-based care in a manner minimizing risk and optimizing oral and systemic health.                                                                                                                                         |
| 21.09 | Measure the extent to which desired outcomes identified in the dental hygiene care plan are achieved.                                                                                                                                                                   |
|       | <u>21.10 Demonstrate the ability to collaborate effectively with an interprofessional healthcare team, using clear and respectful communication to contribute to comprehensive, patient-centered care.</u>                                                              |
| 22.0  | Implement and evaluate community health interventions and research activities. -The student will be able to:                                                                                                                                                            |
| 22.01 | Demonstrate competence in assessment, planning, <del>implementation</del> <u>implementing, evaluating,</u> and <del>evaluation-of</del> <u>documenting</u> community health interventions.                                                                              |
|       | <u>22.02 Utilize dental indices to assess, interpret, and evaluate oral health status in individuals and populations, supporting community health initiatives and evidence-based decision making.</u>                                                                   |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error, and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Equipment and supplies should be provided to enhance hands-on experiences for students. In-depth clinical information and requirements can be found in the Commission on Dental Accreditation Dental Hygiene Standards.

### Special Notes

General education content must include oral and written communications, Psychology, and Sociology.

Biomedical science content must include content in anatomy, physiology, chemistry, biochemistry, microbiology, immunology, general pathology, and/or pathophysiology, nutrition, and pharmacology.

Dental sciences content must include tooth morphology, head, neck, and oral anatomy, oral embryology and histology, oral pathology, radiography, periodontology, pain management, and dental materials.

Graduates must be competent in providing the dental hygiene process of care, which includes: Assessment, Planning, Implementation, and Evaluation.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S., for more information on disqualification for a license, certificate, or registration through the Department of Health.

Outcomes 01-11 are referred to as the Health Careers Core and do not have to be completed if the student has previously completed the Core in another health science program. The Core should be taken first or concurrently with the first course in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded). The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Health Services Management  
**Career Cluster:** Health Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as health services managers (Medical and Health Services Managers) or health service administrators, or to provide supplemental training for persons previously or currently employed in these occupations.

The content includes but is not limited to communication skills, leadership skills, human relations and employability skills, principles of management, introduction to computer literacy, health care organization, medical ethics, legal aspects, and advanced technical skills in a chosen health-related profession, health and safety, and CPR.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of 60 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

- 05.0 Demonstrate information technology applications in healthcare.
- 06.0 Demonstrate employability skills.
- 07.0 Demonstrate basic knowledge of medical language, anatomy and physiology, and disease processes.
- 08.0 Demonstrate knowledge of materials and supplies needed in healthcare settings.
- 09.0 Demonstrate leadership and administrative skills basic to management in any ~~health-care~~healthcare facility.
- ~~10.0—Interpret federal, state and local laws as they apply to health-care facilities.~~
- ~~11.0~~10.0 Demonstrate knowledge of appropriate human resource management in healthcare.
- ~~12.0~~11.0 Demonstrate knowledge of the economics involved in healthcare.

Florida Department of Education  
Student Performance Standards

Program Title: **Health Services Management**  
 CIP Number: **1351070101**  
 Program Length: **60 credit hours**

**At the completion of this program, the student will be able to:**

|                               |                                                                                                                                                                                                                                                      |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                          | Demonstrate knowledge of the <del>health-care</del> <u>healthcare</u> delivery system and health occupations. The student will be able to:                                                                                                           |
| 01.01                         | Identify the basic components of the <del>health-care</del> <u>healthcare</u> delivery system, including public, private, government, and non-profit.                                                                                                |
| 01.02                         | Identify types of healthcare settings.                                                                                                                                                                                                               |
| 01.03                         | Identify the <u>consumer</u> perspective <del>of the health-care consumer</del> regarding healthcare.                                                                                                                                                |
| 01.04                         | Describe the composition and functions of a systemic healthcare team, including those not based in the <del>health-care</del> <u>healthcare</u> facility (e.g., medical device <del>rep.</del> <u>representative</u> and insurance claims adjuster). |
| <del>01.05</del>              | <del>Identify characteristics of effective teams and techniques for managing team conflict.</del>                                                                                                                                                    |
| <del>01.06</del>              | <del>Analyze attributes and attitudes of an effective leader.</del>                                                                                                                                                                                  |
| <del>01.07</del> <u>01.05</u> | <del>Explain both the positive and negative impacts of</del> <u>challenges impacting</u> emerging issues, including technology, <del>epidemiology,</del> bioethics, and socioeconomics, on healthcare delivery systems.                              |
| 02.0                          | Demonstrate the ability to communicate and use interpersonal skills effectively. -The student will be able to:                                                                                                                                       |
| 02.01                         | Develop fundamental speaking and active listening skills.                                                                                                                                                                                            |
| 02.02                         | <del>Distinguish the differences between</del> <u>Demonstrate</u> effective <u>verbal</u> and <del>ineffective</del> <u>written</u> communication <del>practices</del> <u>skills</u> .                                                               |
| <del>02.03</del>              | <del>Distinguish the differences between effective and ineffective online communication.</del>                                                                                                                                                       |
| <del>02.04</del> <u>02.03</u> | <del>Recognize communication styles and barriers in both yourself and others and adjust accordingly for optimum application to</del> <u>utilize the most effective communication technique based on the situation.</u>                               |
| <del>02.05</del>              | <del>Use factual data to produce and deliver credible and understandable reports.</del>                                                                                                                                                              |
| <del>02.06</del>              | <del>Compose written communication for various purposes using correct spelling, grammar, formatting and confidentiality.</del>                                                                                                                       |
| <del>02.07</del> <u>02.04</u> | <del>Demonstrate appropriate situational communication by considering diverse cultures and</del> lifestyles, medical conditions, <u>and</u> <u>generational</u> and <del>generations</del> <u>cultural differences</u> .                             |
| <u>02.05</u>                  | <u>Identify characteristics of effective teams and techniques for managing team conflict.</u>                                                                                                                                                        |

|                                                                                                                                        |                                                                                                                                                                                                                                        |

| <del>12.05</del> 11.05 | Demonstrate <del>knowledge of</del> <u>effective practices in</u> accounts receivable <del>system that monitors</del> and <del>optimizes</del> reimbursement <u>systems</u> . |
| <del>12.06</del> 11.06 | Demonstrate knowledge of third-party reimbursements, including Center for Medicare/Medicaid Services (CMS) rulings and precedence to other payers.                            |
| <del>12.07</del> 11.07 | Demonstrate basic knowledge of the procedures and purposes of medical documentation, medical billing, and coding.                                                             |
| <del>12.08</del> 11.08 | Demonstrate knowledge of the revenue cycle.                                                                                                                                   |
| <del>12.09</del> 11.09 | Explain government impacts to reimbursement (i.e., value-based payment models, government incentive programs, self-pay models, and HCAPS scores).                             |
| <del>12.10</del> 11.10 | Identify volume and growth strategies for healthcare agencies.                                                                                                                |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

It is strongly recommended that hands-on practical experience be an integral part of the program.

### **Special Notes**

The curriculum content must include: courses in management, personnel relations and management, governmental standards, and regulation of health care administration in diverse health care settings.

The theory base is built upon supportive courses available to students in the community college setting. Such courses shall include, but not be limited to, business communication, social science, business, mathematics, and computer application.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS degree program includes the following College Credit Certificates:

~~Health Care~~[Healthcare](#) Services Specialist (0351070102) – 27 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as Health Information Technicians, Medical Record Technicians (Medical Records and Health Information Technicians), or to provide supplemental training for persons previously or currently employed in these occupations.

The content includes but is not limited to health information management, ethical and medico-legal aspects, computer information technology for health records, biomedical sciences, including anatomy and physiology, medical terminology, pharmacology and pathophysiology, health record science, computer applications, word processing, data base management, and spreadsheet, health data content, analysis and structure, statistics and data literacy, coding, clinical classification systems, reimbursement methodologies, quality assessment and performance improvement, health care delivery systems, indexing, organization and supervision, professional practice experience, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## **Program Structure**

This program is a planned sequence of instruction consisting of 70 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

|------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b><u>10.0</u></b>           | <b><u>Find, assess and apply to job opportunities.</u></b>                                                                    |
| <b><u>10.01</u></b>          | <b><u>Identify online job posts relevant to his or her career aspirations.</u></b>                                            |
| <b><u>10.02</u></b>          | <b><u>Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.</u></b>  |
| <b><u>10.03</u></b>          | <b><u>Define what information, documentation and writing prompts are required for the positions.</u></b>                      |
| <b><u>11.0</u></b>           | <b><u>Communicate personal competence, character and fit for a job opportunity.</u></b>                                       |
| <b><u>11.01</u></b>          | <b><u>Develop a resume.</u></b>                                                                                               |
| <b><u>11.02</u></b>          | <b><u>Write a cover letter.</u></b>                                                                                           |
| <b><u>11.03</u></b>          | <b><u>Curate a professional portfolio that includes work products.</u></b>                                                    |
| <b><u>11.04</u></b>          | <b><u>Prepare for and experience a mock job interview.</u></b>                                                                |
| <b><u>12.0</u></b>           | <b><u>Cultivate and leverage relationships to professionally advance.</u></b>                                                 |
| <b><u>12.01</u></b>          | <b><u>Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.</u></b> |
| <b><u>12.02</u></b>          | <b><u>Develop a plan to cultivate a professional digital footprint.</u></b>                                                   |
| <b><u>12.03</u></b>          | <b><u>Develop a networking plan for a specific industry of interest.</u></b>                                                  |

## Standards

After successfully completing this program, the student will be able to perform the following:

### **Health Information Technology Core**

- 01.0 Demonstrate an understanding of healthcare organizations and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Explore health informatics as ~~an allied~~ health ~~profession~~ professional.
- 04.0 ~~Demonstrate an understanding~~ Apply knowledge of health data concepts.
- 05.0 Manage the ~~functions~~ adoption of ~~a multiple formats of~~ health ~~record~~ records and the function of digital applications.
- 06.0 ~~Demonstrate an understanding of~~ Apply Health Information Technology principles.
- 07.0 ~~Discuss~~ Apply classification systems, clinical vocabularies, and terminologies.
- 08.0 Evaluate ethical issues in Health Information ~~Professions~~ professions.
- 09.0 Demonstrate compliance with laws, regulations, and standards that impact healthcare.
- 10.0 Apply policies, regulations, and standards to the management of information associated with treatment, payment, and operations (TPO).
- 11.0 Demonstrate computer knowledge and skills.
- 12.0 Demonstrate employability skills.

In addition, students will complete the objectives in one of the following specialization tracks:

### **Standards 13-20 must be completed by students specializing in the Medical Information Coder/Biller CCC or Medical Coder/Biller CCC, or ATD Track.**

- 13.0 Describe the anatomy and physiology of the human body.
- 14.0 Demonstrate proficiency in the application of medical terminology.
- 15.0 Demonstrate an understanding of the fundamentals of disease ~~process~~ processes in ~~relationship~~ relation to the human body, including pharmacology.
- 16.0 ~~Perform proficiently~~ Demonstrate proficiency in ~~the use of ICD~~ current medical code set systems and ~~HCPGS/CPT~~ technology-assisted coding systems, both manual and automated solutions.
- ~~17.0 Perform coding complexities proficiently.~~
- 17.0 Demonstrate proficiency in complex coding scenarios and value-based care requirements.
- 18.0 Articulate ~~the significance of~~ health information services ~~as it relates~~ within modern healthcare delivery systems related to the medical coder/biller.
- 19.0 Ensure professional and ethical behavior of a medical coder/biller in an evolving digital healthcare environment.
- 20.0 ~~Take part~~ Participate in healthcare revenue cycle management processes.

### **Standards 21-29 must be completed by students specializing in the HealthCare Informatics Specialist CCC Track.**

- 21.0 Examine the various informatics and data analytics ~~-related~~ disciplines.
- 22.0 Demonstrate ethical and legal principles with regard to the role of the informatics and data analytics specialist.
- 23.0 Apply appropriate resources in healthcare informatics and data analytics to retrieve and analyze relevant information.
- 24.0 Manage health data processes and systems.

- 25.0 Analyze healthcare data, ~~including~~ to support research and performance improvement initiatives.
- 26.0 Perform appropriate information technology ~~and systems~~ system functions.
- 27.0 Perform project management principles and best practices.
- 28.0 Collaborate in the planning, design, selection, implementation, integration, testing, and support for health information systems.
- 29.0 ~~Perform proficiently in the application and integration of~~ Integrate healthcare informatics and data analytics ~~concepts and~~ skills through practical lab experiences.

**Students must complete at least one of the specialization tracks above and standards 30-31 to obtain the Health Information Technology AS degree.**

- 30.0 Collaborate in the planning, design, selection, implementation, integration, testing, and support for health information systems.
- 31.0 Utilize leadership principles and organizational resources.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Health Information Technology  
**CIP Number:** 1351070700  
**Program Length:** 70 credits

**At the completion of this program, the student will be able to:**

|                        |                                                                                                                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                   | Demonstrate an understanding of healthcare organizations and health occupations. -The student will be able to:                                                                                                               |
| 01.01                  | Discuss the evolution of healthcare.                                                                                                                                                                                         |
| 01.02                  | Demonstrate an understanding of the infrastructure of healthcare in the United States.                                                                                                                                       |
| 01.03                  | Discuss healthcare regulatory agencies and organizations.                                                                                                                                                                    |
| 01.04                  | Recognize levels of education, credentialing requirements, employment opportunities, workplace environments, and career growth potential.                                                                                    |
| 01.05                  | Summarize the roles of various providers and disciplines throughout the continuum of healthcare.                                                                                                                             |
| 02.0                   | Demonstrate the ability to communicate and use interpersonal skills effectively. -The student will be able to:                                                                                                               |
| 02.01                  | Apply basic speaking and active listening skills with meaningful feedback.                                                                                                                                                   |
| <del>02.02</del>       | <del>Apply basic observational skills, related documentation strategies in written and oral form.</del>                                                                                                                      |
| <del>02.03</del> 02.02 | Identify characteristics of successful and unsuccessful communication, including barriers.                                                                                                                                   |
| <del>02.04</del> 02.03 | <del>Recognize</del> Demonstrate emotional intelligence (e.g., recognize verbal and non-verbal cues-).                                                                                                                       |
| <del>02.05</del> 02.04 | Demonstrate <del>written</del> effective professional communication <del>including emails</del> using correct spelling, grammar, formatting, and confidentiality.                                                            |
| <del>02.06</del>       | <del>Demonstrate ability to create professional correspondence using appropriate email practices and etiquette.</del>                                                                                                        |
| <del>02.07</del> 02.05 | <del>Utilize</del> Use appropriate medical terminology and abbreviations.                                                                                                                                                    |
| <del>02.08</del>       | <del>Demonstrate the importance of cultural diversity and competence for patients and other healthcare workers by maintaining good interpersonal relationships.</del>                                                        |
| <del>02.09</del> 02.06 | Promote health information training and awareness to internal/external stakeholders.                                                                                                                                         |
| <del>02.10</del> 02.07 | Model communication skills to varied levels of understanding and cultural orientation, including <del>diverse age</del> generational differences, cultural, <del>economic</del> socioeconomic, ethnic, and religious groups. |

|                        |                                                                                                                                                                                                                                     |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>02.11</del> 02.08 | Distinguish between <del>and identify</del> subjective and objective information.                                                                                                                                                   |
| 03.0                   | Explore health <del>information</del> <u>informatics</u> as <del>an allied</del> <u>a</u> health <del>profession</del> <u>professional</u> . The student will be able to:                                                           |
| 03.01                  | Discuss the <del>history</del> <u>past, present, and future</u> of health information <del>management</del> .                                                                                                                       |
| 03.02                  | <del>Discuss the</del> <u>Examine</u> professional opportunities <del>within the</del> <u>related to</u> health information <del>professions</del> .                                                                                |
| 03.03                  | Demonstrate knowledge of <u>industry-recognized credentials and</u> professional associations applicable to the field of health information.                                                                                        |
| 04.0                   | <del>Demonstrate an understanding</del> <u>Apply knowledge</u> of health data concepts. -The student will be able to:                                                                                                               |
| 04.01                  | <del>Describe the</del> <u>Examine</u> various <del>uses of primary and secondary</del> health data <u>uses</u> and data sets.                                                                                                      |
| 04.02                  | Identify various characteristics of health data quality and <u>emerging</u> standards.                                                                                                                                              |
| 05.0                   | Manage the <del>functions</del> <u>adoption</u> of <del>a</del> <u>multiple formats of</u> health <del>record</del> <u>records and the function of digital applications</u> . The student will be able to:                          |
| 05.01                  | <del>Demonstrate an understanding</del> <u>Apply regulations and requirements</u> of <u>health information to</u> the <del>various formats</del> <u>continuum</u> of the <del>health record in various settings</del> <u>care</u> . |
| 05.02                  | <del>Take part in the various uses of a</del> <u>Analyze</u> health information <del>as it relates</del> <u>related</u> to treatment, payment, and operations (TPO).                                                                |
| 06.0                   | <del>Demonstrate an understanding of</del> <u>Apply</u> Health Information Technology <del>principles</del> . The student will be able to:                                                                                          |
| 06.01                  | <del>Articulate</del> <u>Explain</u> how changing regulations and technology impact the health information field.                                                                                                                   |
| 06.02                  | Validate <u>the accuracy, integrity, and reliability of</u> information from health information systems and applications in healthcare.                                                                                             |
| 06.03                  | Demonstrate <del>an</del> <u>proficiency and</u> understanding of creation, use, storage, retrieval, and exchange of health data.                                                                                                   |
| 07.0                   | <del>Discuss</del> <u>Apply</u> classification systems, clinical vocabularies, and terminologies. -The student will be able to:                                                                                                     |
| 07.01                  | <del>Explain</del> <u>Demonstrate</u> the use of classification systems, clinical vocabularies, terminologies, and nomenclatures.                                                                                                   |
| 08.0                   | Evaluate ethical issues in Health Information <del>Professions</del> <u>professions</u> . The student will be able to:                                                                                                              |

| <b>Standards 13-20 must be completed by students specializing in the Medical Coder/Biller ATD Track.</b> |                                                                                                                                                                                                                                                                                                    |
| 13.0                                                                                                     | Describe the anatomy and physiology of the human body. -The student will be able to:                                                                                                                                                                                                               |

|       |                                                                                                                                                                                                                     |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.01 | Describe the structure and function of the respiratory system.                                                                                                                                                      |
| 13.02 | Describe the structure and function of the circulatory system.                                                                                                                                                      |
| 13.03 | Describe the structure and function of the musculoskeletal <del>&amp;and</del> connective tissue <del>system</del> <u>systems</u> .                                                                                 |
| 13.04 | Describe the structure and function of nervous and sensory systems.                                                                                                                                                 |
| 13.05 | Describe the structure and function of the reproductive system.                                                                                                                                                     |
| 13.06 | Describe the structure and function of the urinary system.                                                                                                                                                          |
| 13.07 | Describe the structure and function of the digestive system.                                                                                                                                                        |
| 13.08 | Describe the structure and function of the endocrine system.                                                                                                                                                        |
| 13.09 | Describe the structure and function of the integumentary system.                                                                                                                                                    |
| 13.10 | Describe major mental health disorders.                                                                                                                                                                             |
| 14.0  | Demonstrate proficiency in the application of medical terminology. –The student will be able to:                                                                                                                    |
| 14.01 | Identify word parts of medical terminology in daily use.                                                                                                                                                            |
| 14.02 | Build, spell, and pronounce correctly; appropriate terms from word parts <del>learned</del> and be able to <del>give the meaning of</del> <u>define</u> the word.                                                   |
| 14.03 | Identify word parts and be able to build, spell, and understand new words with those parts.                                                                                                                         |
| 14.04 | Spell and use medical abbreviations <del>correctly</del> .                                                                                                                                                          |
| 14.05 | Identify terminology specific to healthcare settings, including surgical, medical, and therapeutic.                                                                                                                 |
| 14.06 | Apply medical reference sources.                                                                                                                                                                                    |
| 15.0  | Demonstrate an understanding of the fundamentals of disease <del>process</del> <u>processes</u> in <del>relationship</del> <u>relation</u> to the human body, including pharmacology. –The student will be able to: |
| 15.01 | Demonstrate an understanding of the predisposing factors and direct causes of disease as they relate to the human body.                                                                                             |
| 15.02 | Demonstrate an understanding of the general pathogenesis and morphology of disease and its role in the disease process.                                                                                             |
| 15.03 | –Demonstrate an understanding of pharmacological agents, <del>mechanisms of action, modalities</del> <u>uses, treatments</u> , and <del>utilizing</del> <u>utilize</u> drug reference sources.                      |
| 15.04 | Identify and use <del>therapeutic and</del> diagnostic test terminology.                                                                                                                                            |

|       |                                                                                                                                                                                                                                                                                                                                                   |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.0  | <del>Perform proficiently</del> <u>Demonstrate proficiency in the use of ICD current medical code set systems and HCPCS/CPT technology-assisted coding systems, both manual and automated solutions.</u> The student will be able to:                                                                                                             |
| 16.01 | <del>Analyze</del> <u>Apply coding conventions and guidelines used in coding when utilizing Computer-Assisted Coding (CAC) and Natural Language Processing (NLP) technologies.</u>                                                                                                                                                                |
| 16.02 | <del>Map the process to update</del> <u>Implement processes for maintaining and updating coding resources, including automated updates and coding software maintenance.</u>                                                                                                                                                                       |
| 16.03 | <del>Assign</del> <u>Validate codes using both manual and verify automated systems, including diagnosis, procedure, HCPCS level II codes, APCs, and applicable modifiers and groupings in accordance with according to current official guidelines.</u>                                                                                           |
| 16.04 | <del>Perform coding using current versions of ICD-10-CM, ICD-10-PCS, CPT, and HCPCS HCPCS Level II coding to assign diagnosis in both traditional and procedure codes to case studies and authentic health records/abstracts in various virtual healthcare settings, including telehealth services.</del>                                         |
| 16.05 | <del>Examine components</del> <u>Analyze the impact of Social Determinants of Health (SDoH) coding on revenue cycle management and clinical documentation improvement including quality indicators as it relates to coding participate in various settings Clinical Documentation Integrity (CDI) programs using modern technology solutions.</u> |
| 16.06 | <del>Analyze</del> <u>Evaluate documentation compliance using automated auditing tools and standards to improve Artificial Intelligence (AI)-assisted documentation practices improvement systems.</u>                                                                                                                                            |
| 17.0  | <del>Perform</del> <u>Demonstrate proficiency in complex coding complexities proficiently scenarios and value-based care requirements.</u> The student will be able to:                                                                                                                                                                           |
| 17.01 | <del>Verify</del> <u>Apply coding concepts to complex authentic cases, including post-acute care and virtual health records/abstracts and case studies across the continuum of care in various settings encounters.</u>                                                                                                                           |
| 17.02 | <del>Analyze</del> <u>Utilize advanced analytics tools to assess case-mix index, severity of illness systems, hierarchical condition categories (HCCs), risk adjustment systems factors, and coding quality monitors and reporting metrics for value-based reimbursement.</u>                                                                     |
| 17.03 | <del>Examine a variety of simulated health records from</del> <u>Analyze cases across the contemporary healthcare continuum of care, interpret data, including remote patient monitoring and assign and verify codes in various settings digital health services.</u>                                                                             |
| 17.04 | <del>Identify the</del> <u>Apply various classification systems, including but not limited to ICD-O, DSM, ICF, and ICF emerging code sets for precision medicine and genomics.</u>                                                                                                                                                                |
| 18.0  | <del>Articulate the significance of health information services as it relates within modern healthcare delivery systems related to the medical coder/biller. -</del> The student will be able to:                                                                                                                                                 |
| 18.01 | <del>Identify the functions of</del> <u>Collaborate with interdisciplinary teams in various departments through digital communication platforms and how this department interacts with the Medical Coder/Biller shared health information systems.</u>                                                                                            |
| 18.02 | <del>Utilize the electronic health record records (EHRs) and other digital health information systems content in various settings.</del>                                                                                                                                                                                                          |
| 18.03 | <del>Educate stakeholders on the importance of the health record in relation to state and federal agencies regulatory compliance, including compliance area</del> <u>information blocking rules, interoperability requirements, and privacy regulations.</u>                                                                                      |
| 19.0  | <del>Ensure professional and ethical behavior of a medical coder/biller -</del> <u>in an evolving digital healthcare environment.</u> The student will be able to:                                                                                                                                                                                |
| 19.01 | <del>Advocate for the scope of work expanding role of the Medical Coder/Biller</del> <u>medical coder/biller in data analytics and population health management.</u>                                                                                                                                                                              |
| 19.02 | <del>Comply with</del> <u>Adhere to ethical coding practices as outlined by professional associations in AI and automated coding systems.</u>                                                                                                                                                                                                     |

| 30.05 | <del>Map</del> <u>Analyze</u> workflow <del>and process assessment as it pertains to information technology</del> <u>within an electronic health record</u> .                                                  |
| 30.06 | Summarize <u>the various types of</u> information systems theory <u>and their applications</u> .                                                                                                               |
| 30.07 | <del>Describe strategic planning for implementation of</del> <u>Analyze problems, promote solutions, and encourage decision-making in implementing</u> health information systems <del>to include SWOT</del> . |
| 30.08 | <del>Provide information for strategic planning.</del> <u>Identify cybersecurity risks, including physical, virtual, and network areas</u> .                                                                   |
| 30.09 | <del>Identify security risks including physical, virtual, and network areas.</del> <u>Develop training materials for various individuals, groups, and populations</u> .                                        |
| 30.10 | Identify the influence and scope of health information system practices <del>on a national and international scale</del> <u>globally</u> .                                                                     |
| 30.11 | <del>Verify user access logs and audit trails.</del> <u>Examine data generated from advanced digital applications to review the security, authenticity, or reliability of the data generated</u> .             |
| 31.0  | Utilize <u>leadership principles and</u> organizational resources. -The student will be able to:                                                                                                               |
| 31.01 | Demonstrate fundamental leadership skills.                                                                                                                                                                     |
| 31.02 | Identify the <del>impact of</del> organizational change <u>impact</u> on processes, people, and systems.                                                                                                       |
| 31.03 | Identify human resources and productivity standards for <del>organizational best</del> <u>optimal</u> practices.                                                                                               |
| 31.04 | Utilize data- <del>drives performance improvement</del> <u>driven</u> techniques to <u>improve performance and</u> achieve <del>desired</del> outcomes.                                                        |
| 31.05 | <del>Utilize financial management tools and processes to meet organizational goals.</del> <u>Evaluate cost-effectiveness and cost-benefit analysis of budget priorities</u> .                                  |
| 31.06 | Identify policies and strategies <del>that address</del> <u>for AI and</u> information governance.                                                                                                             |
| 31.07 | Apply strategies that <del>support</del> <u>promote</u> cultural <del>of diversity and</del> competence.                                                                                                       |
| 31.08 | Implement legal and regulatory requirements <del>related to the health</del> <u>for an ethical AI and</u> information <u>governance</u> infrastructure.                                                        |
| 31.09 | <del>Take part</del> <u>Participate</u> in privacy, security, and confidentiality training programs.                                                                                                           |
| 31.10 | Identify <del>and recommend</del> risk mitigation- <u>strategies (e.g., AI usage, emergency planning, and patient care)</u> .                                                                                  |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

The program should meet the program standards and guidelines of the Commission on Accreditation for Health Informatics and Information Management Education (CAHIIM). The program should encompass the AHIMA established knowledge clusters and entry-level competencies for Registered Health Information Technicians (RHIT's). It prepares the student to take the AHIMA national certification examination for Registered Health Information Technicians (RHIT).

This program should be taught in accordance with the accreditation standards of: The Commission on Accreditation for Health Informatics and Information Management Education (CAHIIM), 233 North Michigan Ave., 21<sup>st</sup> Floor, Chicago, IL 60601-5800 (312/233-1100)

~~www.cahiim.org~~ [www.cahiim.org](http://www.cahiim.org)

Students should be encouraged to join the (AHIMA) American Health Information Management Association and/or (AAPC) American Academy of Professional Coders and participate in the state/local association.

Outcomes 01-~~11~~12 are referred to as the Health Information Technology core and do not have to be completed if the students have previously completed the core in another program at any level. The Core should be taken first in the program.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded). The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS degree program includes the following College Credit Certificate:

Healthcare Informatics Specialist (0351070712) – 24 credit hours  
 Medical Information Coder/Biller (0351071404) – 37 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Clinical Research Professional  
**Career Cluster:** Health Science

**AS** Associate in Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as clinical research coordinators (Natural Science Manager), (Medical and Health Services Manager), (Manager All Other), or (Healthcare Support Workers, All Other) or to provide supplemental training for persons previously or currently employed in these occupations.

The content includes but is not limited to communication skills, leadership skills, human relations and employability skills, principles of management, introduction to computer literacy, health care organization, medical ethics, legal aspects, and advanced technical skills in a chosen health-related profession, health and safety, and CPR.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of 60 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |
|-----------------------------|--------------------------------------------------------------------------------------------------|
| <u>01.0</u>                 | <u>Apply academic skills to workplace scenarios.</u>                                             |
| <u>01.01</u>                | <u>Use reading skills.</u>                                                                       |
| <u>01.02</u>                | <u>Use writing skills.</u>                                                                       |
| <u>01.03</u>                | <u>Use mathematical strategies and procedures.</u>                                               |
| <u>01.04</u>                | <u>Use scientific principles and procedures.</u>                                                 |
| <u>02.0</u>                 | <u>Design a solution to an industry problem.</u>                                                 |
| <u>02.01</u>                | <u>Use critical thinking.</u>                                                                    |
| <u>02.02</u>                | <u>Use creativity.</u>                                                                           |
| <u>02.03</u>                | <u>Make sound decisions.</u>                                                                     |
| <u>02.04</u>                | <u>Solve problems.</u>                                                                           |
| <u>02.05</u>                | <u>Reason.</u>                                                                                   |
| <u>02.06</u>                | <u>Plan and organize.</u>                                                                        |
| <u>03.0</u>                 | <u>Manage resources within an industry project</u>                                               |
| <u>03.01</u>                | <u>Manage time.</u>                                                                              |
| <u>03.02</u>                | <u>Manage money or resources.</u>                                                                |
| <u>03.03</u>                | <u>Manage materials.</u>                                                                         |
| <u>03.04</u>                | <u>Manage personnel.</u>                                                                         |
| <u>04.0</u>                 | <u>Oversee the subcomponents, operations and output of a technical or organizational system.</u> |
| <u>04.01</u>                | <u>Manage systems.</u>                                                                           |
| <u>04.02</u>                | <u>Monitor systems.</u>                                                                          |
| <u>04.03</u>                | <u>Improve systems.</u>                                                                          |
| <u>05.0</u>                 | <u>Use information for decision making.</u>                                                      |
| <u>05.01</u>                | <u>Locate information.</u>                                                                       |
| <u>05.02</u>                | <u>Organize information.</u>                                                                     |
| <u>05.03</u>                | <u>Use information.</u>                                                                          |

|                                                                                                 |

| <b><u>12.03</u></b>          | <b><u>Develop a networking plan for a specific industry of interest.</u></b>                                                  |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate basic knowledge of medical language, anatomy and physiology.
- 02.0 Demonstrate knowledge of the major ~~ethical~~ Public Health, Bio-Medical, Sociological, Psychological and Ethical theories ~~in philosophy~~ and how they relate to clinical research and care.
- ~~03.0~~ Demonstrate knowledge of the use of scientific methods in examining ~~society~~.
- ~~04.0~~ ~~03.0~~ Demonstrate knowledge of modern scientific psychology health related behaviors and ~~its application to human behavior~~ their impact on individual and community level factors.
- ~~05.0~~ 04.0 Identify and apply basic knowledge of different aspects of wellness.
- ~~06.0~~ 05.0 Demonstrate knowledge of health communication and its impact on health outcomes.
- ~~07.0~~ 06.0 Demonstrate knowledge of the three primary levels of prevention.
- ~~08.0~~ 07.0 Demonstrate the use of evidence to draw conclusions about disease etiology.
- ~~09.0~~ 08.0 Demonstrate knowledge of current events in the ~~field~~ fields of public health biomedical science and clinical research.
- ~~10.0~~ 09.0 Demonstrate the ability to identify U.S. health care delivery funding sources.
- ~~11.0~~ 10.0 Demonstrate knowledge of funding and site sponsorship related to clinical research including: public/private grants and contracts and lifecycles of clinical trials.
- ~~12.0~~ 11.0 Demonstrate knowledge of the research process including: consent, screening, phases of clinical trials, product development and adverse events and safety.
- ~~13.0~~ 12.0 Demonstrate knowledge of the guidelines and regulations governing clinical trials.
- ~~14.0~~ 13.0 Demonstrate ability to work as a clinical research professional.
- ~~15.0~~ 14.0 Demonstrate knowledge of ~~the~~ compliance and monitoring ~~issues~~ practices in clinical research.
- ~~16.0~~ 15.0 Demonstrate knowledge of Institutional Review Board functions and operations including purpose, review types and composition. In addition, ethical issues within clinical research will be introduced.
- ~~17.0~~ 16.0 Demonstrate knowledge of the principles and language of pharmacology, including drugs and drug classes, diagnostic tests, indications, techniques.

**Program Title:** Clinical Research Professional  
**CIP Number:** 1351071902  
**Program Length:** 60 credit hours

**At the completion of this program, the student will be able to:**

|                  |                                                                                                                                                                                                                                                                |
|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0             | Demonstrate basic knowledge of medical <del>language</del> <u>terminology</u> , anatomy and physiology. The student will be able to:                                                                                                                           |
| 01.01            | Define, describe and discuss anatomic <u>names and</u> descriptive terms of the body.                                                                                                                                                                          |
| 01.02            | Demonstrate an understanding of basic patient discharge and transfer procedures.                                                                                                                                                                               |
| 01.03            | Describe common abbreviations and commonly used medical terms and their proper usage.                                                                                                                                                                          |
| <del>01.04</del> | <del>Define and describe anatomic names of bones and organs of the body.</del>                                                                                                                                                                                 |
| 02.0             | Demonstrate knowledge of the major <del>ethical</del> <u>Public Health, Bio-Medical, Sociological, Psychological and Ethical</u> theories <del>in philosophy</del> and how they relate to clinical research <del>and care</del> . The student will be able to: |
| 02.01            | Define ethical theories in philosophy and how they are used in evaluating contemporary issues in clinical care.                                                                                                                                                |
| 02.02            | Describe applications of ethical codes.                                                                                                                                                                                                                        |
| 02.03            | Explain variations in ethical standards across health research settings.                                                                                                                                                                                       |
| <u>02.04</u>     | <u>Explain the ethical consideration of artificial intelligence (AI) technologies in research, data collection and analysis, health care delivery and documentation, and individual healthcare decisions.</u>                                                  |
| <u>02.05</u>     | <u>Recognize and report various forms of abuse (e.g., trafficking, domestic violence, and neglect).</u>                                                                                                                                                        |
| <u>02.06</u>     | <u>Identify evidence-based prevention strategies and interventions for victims of abuse.</u>                                                                                                                                                                   |
| 03.0             | Demonstrate knowledge of the use of scientific methods in examining <del>society</del> <u>health related behaviors and their impact on individual and community level factors</u> . The student will be able to:                                               |
| 03.01            | Define and discuss <del>group structure</del> <u>sociological structures</u> .                                                                                                                                                                                 |
| 03.02            | Define and discuss socialization, social stratification and <del>social</del> <u>individual societal</u> roles.                                                                                                                                                |
| 03.03            | <del>Explain deviance, collective behavior, ethnic diversity and globalism.</del> <u>Explain societal influences and behaviors, factors that influence population density, and the impact of international health policies.</u>                                |
| <del>04.0</del>  | <del>Demonstrate knowledge of modern scientific psychology and its application to human behavior. The student will be able to:</del>                                                                                                                           |

|                               |                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>04.01</del>              | <del>Discuss personality development.</del>                                                                                                                                                                                                                                                                                                                     |
| <del>04.02</del>              | <del>Define: perception, motivation, learning, thinking, and remembering.</del>                                                                                                                                                                                                                                                                                 |
| <del>04.03</del>              | <del>Describe how the scientific method is used in psychology.</del>                                                                                                                                                                                                                                                                                            |
| <del>04.04</del>              | <del>Explain emotion and how it impacts perception.</del>                                                                                                                                                                                                                                                                                                       |
| <del>04.05</del>              | <del>Define intelligence and describe how it is measured.</del>                                                                                                                                                                                                                                                                                                 |
| <del>04.06</del> <u>03.04</u> | <del>Define cognition and how information is input, stored and retrieved.</del> <u>Identify and describe safety principles in the online environment for privacy and security of patient medical information and organizational processes.</u>                                                                                                                  |
| <del>05.0</del> <u>04.0</u>   | Identify and apply basic knowledge of different aspects of wellness. -The student will be able to:                                                                                                                                                                                                                                                              |
| <del>05.01</del> <u>04.01</u> | Discuss integrating health living into one's lifestyle.                                                                                                                                                                                                                                                                                                         |
| <del>05.02</del> <u>04.02</u> | Define: <u>how</u> physical fitness, mental health, nutrition, <del>tobacco usage, alcohol consumption, illicit drug</del> <u>substance</u> use, <u>and</u> <u>abuse</u> , and family <del>living and how these factors</del> <u>influences</u> connect with the <del>concepts</del> <u>concept</u> of <u>patient</u> wellness <del>on a personal level</del> . |
| <u>04.03</u>                  | <u>Describe the impact of social media and time in the digital environment on physical and mental health and wellness.</u>                                                                                                                                                                                                                                      |
| <del>05.03</del> <u>04.04</u> | Identify the risk factors for cardiovascular disease.                                                                                                                                                                                                                                                                                                           |
| <del>05.04</del> <u>04.05</u> | Describe the effects of tobacco <del>and</del> , smoking <del>on the human body</del> <u>and vaping</u> .                                                                                                                                                                                                                                                       |
| <del>05.05</del> <u>04.06</u> | Describe the various fitness methods to improve health.                                                                                                                                                                                                                                                                                                         |
| <del>05.06</del> <u>04.07</u> | Discuss the effects of nutrition on health and wellness.                                                                                                                                                                                                                                                                                                        |
| <del>05.07</del> <u>04.08</u> | Explain body composition and achieving a healthy weight.                                                                                                                                                                                                                                                                                                        |
| <del>05.08</del> <u>04.09</u> | Describe stress management strategies.                                                                                                                                                                                                                                                                                                                          |
| <del>05.09</del> <u>04.10</u> | Discuss the use and abuse of illicit drugs in society.                                                                                                                                                                                                                                                                                                          |
| <del>05.10</del> <u>04.11</u> | Describe the effects of chronic disease on the human body.                                                                                                                                                                                                                                                                                                      |
| <del>06.0</del> <u>05.0</u>   | Demonstrate knowledge of health communication and its impact on health outcomes. -The student will be able to:                                                                                                                                                                                                                                                  |

| 07.01 | 06.01            | Discuss implementation methods of prevention used in public health: education, motivation and obligation.                                                                                                                                                                                                                                          |
| 07.02 | 06.02            | Describe the three levels of prevention in public health: primary, secondary and tertiary.                                                                                                                                                                                                                                                         |
| 07.03 | 06.03            | Explain how preventative methods can be used throughout the life-cycle.                                                                                                                                                                                                                                                                            |
| 07.04 | 06.04            | Identify individual and community prevention needs in order to connect available resources to distressed areas.                                                                                                                                                                                                                                    |
| 07.05 | 06.05            | Summarize specific primary prevention methods including: vaccinations, exercise, nutrition counseling, and birth control.                                                                                                                                                                                                                          |
|       | 06.06            | <u>Summarize secondary prevention methods, including screening for risk factors of disease and injury prevention.</u>                                                                                                                                                                                                                              |
|       | 06.07            | <u>Summarize specific tertiary prevention methods, including treatment to control symptoms and prevent complications.</u>                                                                                                                                                                                                                          |
| 08.0  | 07.0             | Demonstrate the use of evidence to draw conclusions about disease etiology. The student will be able to:                                                                                                                                                                                                                                           |
| 08.01 | 07.01            | Define evidenced based thinking in public health.                                                                                                                                                                                                                                                                                                  |
| 08.02 | 07.02            | Identify evidence-based recommendations to determine disease etiology, benefits and basic recommendations for prevention.                                                                                                                                                                                                                          |
| 08.03 | 07.03            | Discuss health information concepts related to economic, legal and social issues.                                                                                                                                                                                                                                                                  |
| 08.04 | 07.04            | Investigate a problem by using evidenced based thinking skills to define a health <del>problem</del> <u>related issues</u> and determine what information is <del>needed</del> <u>necessary</u> to make a decision.                                                                                                                                |
| 08.05 | 07.05            | Locate and evaluate online health information to determine appropriate audiences are reached using specific content to the demographic group.                                                                                                                                                                                                      |
| 09.0  | 08.0             | Demonstrate knowledge of current events in the field of public health. <del>biomedical science and clinical research.</del> The student will be able to:                                                                                                                                                                                           |
| 09.01 | 08.01            | Identify <del>outlets</del> <u>(sources and platforms (e.g., news, media, governmental and government))</u> used to communicate public health events to the general public.                                                                                                                                                                        |
| 09.02 | 08.02            | Describe the implications of current events on public health.                                                                                                                                                                                                                                                                                      |

|                        |                                                                                                                                                                                                                                                                           |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>09.03</del> 08.03 | Discuss concerns related to how public health information is relayed to the public.                                                                                                                                                                                       |
| <del>09.04</del> 08.04 | Recognize how reporting of global events (e.g., epidemics, regime change, and weather events) has the potential to impact other areas.                                                                                                                                    |
| <del>09.05</del> 08.05 | Locate emerging public health trends.                                                                                                                                                                                                                                     |
| <del>09.06</del> 08.06 | Explain etiology of emerging public health trends discussed throughout semester.                                                                                                                                                                                          |
| <del>09.07</del> 08.07 | Discuss legislation designed to protect the public's right to information during major health events (epidemics, terrorism, natural disasters).                                                                                                                           |
| <del>10.0</del> 09.0   | Demonstrate the ability to identify U.S. health care delivery funding sources. -The student will be able to:                                                                                                                                                              |
| <del>10.01</del> 09.01 | <del>Demonstrate an understanding of the evolutionary perspective</del> Describe changes landscape of health services and its relevance <del>with on</del> the existing healthcare <del>system</del> systems, facilities, and services.                                   |
| <del>10.02</del> 09.02 | Explain the <del>social, political, and impacts of</del> public <del>policy implications of health-related issues</del> policies on healthcare, such as availability <del>of healthcare services</del> , cost, delivery, and <del>financing</del> financial implications. |
| <del>10.03</del> 09.03 | Describe the various health care organizations and service delivery options.                                                                                                                                                                                              |
| <del>10.04</del> 09.04 | Identify <del>the major</del> health professions and explain the role of each and their licensing/educational requirements.                                                                                                                                               |
| <del>10.05</del> 09.05 | Compare and contrast the health care delivery systems of the U.S. with other <del>major industrialized nations</del> countries                                                                                                                                            |
| <del>10.06</del> 09.06 | Understand the array of career choices in the health care sector of the economy.                                                                                                                                                                                          |
| <del>10.07</del> 09.07 | Discuss the various sources and uses of funds for healthcare <del>as well as market trends and future implications</del> .                                                                                                                                                |
| <del>11.0</del> 10.0   | Demonstrate knowledge of funding and site sponsorship related to clinical research including: public/private grants and contracts and lifecycles of clinical trials. The student will be able to:                                                                         |
| <del>11.01</del> 10.01 | Describe key concepts and skills used in the site-sponsor relationship.                                                                                                                                                                                                   |
| <del>11.02</del> 10.02 | Classify clinical research funding sources and the protocols used to secure funding.                                                                                                                                                                                      |
| <del>11.03</del> 10.03 | Discuss <del>basic</del> constructs related to grants and contracts management in clinical research.                                                                                                                                                                      |
| <del>11.04</del> 10.04 | <del>Provide examples of the types</del> Demonstrate knowledge of lifecycles <del>of in</del> clinical trials.                                                                                                                                                            |
| <del>11.05</del> 10.05 | Define <del>the</del> terms and language used in startup and closing <del>items on</del> of a clinical research <del>trail</del> .                                                                                                                                        |
| <del>11.06</del> 10.06 | Determine communication methods <del>to be</del> used in the startup and closing of <del>items in</del> a clinical research <del>trails</del> .                                                                                                                           |
| <del>12.0</del> 11.0   | Demonstrate knowledge of the research process including: consent, screening, phases of clinical trials, product development and adverse events and safety. The student will be able to:                                                                                   |
| <del>12.01</del> 11.01 | <del>Accurately describe the</del> Describe processes involved in clinical research.                                                                                                                                                                                      |

|                        |                                                                                                                                                                                                                                |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>12.02</del> 11.02 | Define and describe issues associated with participant consent <u>and assent</u> .                                                                                                                                             |
| <del>12.03</del> 11.03 | Explain the goals, limitations and basic rules for screening participants.                                                                                                                                                     |
| <del>12.04</del> 11.04 | Discuss <del>market and social</del> aspects of product development (drugs and devices).                                                                                                                                       |
| <del>12.05</del> 11.05 | Discuss impacts of clinical trial stakeholders.                                                                                                                                                                                |
| <del>12.06</del> 11.06 | Accurately describe how epidemiology is used in clinical research.                                                                                                                                                             |
| <del>12.07</del> 11.07 | Explain <del>the relationship between essential</del> processes related to adverse events and safety.                                                                                                                          |
| <del>13.0</del> 12.0   | Demonstrate knowledge of the guidelines and regulations governing clinical trials. The student will be able to:                                                                                                                |
| <del>13.01</del> 12.01 | Understand <del>the array of</del> guidelines and regulations governing clinical trials.                                                                                                                                       |
| <del>13.02</del> 12.02 | Describe <del>the various</del> HIPPA Privacy and clinical research privacy issues.                                                                                                                                            |
| <del>13.03</del> 12.03 | Identify <del>the major GCP/ICH</del> <u>Good Clinical Practices/ International Conference on Harmonization</u> guidelines related <del>to working with human subjects in</del> <u>subject</u> research.                       |
| <del>13.04</del> 12.04 | Discuss <del>the various</del> sources and uses of essential <del>documents</del> <u>documentations</u> generated from clinical <del>studies</del> <u>trials</u> .                                                             |
| <del>13.05</del> 12.05 | Explain the role of compliance in maintaining fidelity to a study protocol.                                                                                                                                                    |
| <del>13.06</del> 12.06 | Provide examples of a standard response to a request for documentation of meeting award conditions.                                                                                                                            |
| <del>13.07</del> 12.07 | Understand <del>the array of</del> <u>quantitative and qualitative</u> analysis techniques used in interpreting research findings.                                                                                             |
| <del>14.0</del> 13.0   | Demonstrate ability to work as a clinical research professional. The student will be able to:                                                                                                                                  |
| <del>14.01</del> 13.01 | Identify clinical and behavioral research settings where Clinical Research Professionals are employed.                                                                                                                         |
| <del>14.02</del> 13.02 | Demonstrate an understanding of the essential duties of a Clinical Research Professional.                                                                                                                                      |
| <del>14.03</del> 13.03 | Describe procedures and processes used to protect research participants <del>at placement site</del> .                                                                                                                         |
| <del>14.04</del> 13.04 | Discuss <del>the core</del> research activities of placement site.                                                                                                                                                             |
| <del>14.05</del> 13.05 | Demonstrate an understanding of how placement site works with: local, county, state and federal agencies to carry out their research activities.                                                                               |
| <del>14.06</del> 13.06 | Evaluate the role of Clinical Research Professionals in research settings.                                                                                                                                                     |
| <del>14.07</del> 13.07 | Demonstrate the skills necessary to be a productive member of a research team including; working on a multidisciplinary research team and demonstrating an ability to work with confidential research participant information. |

|                        |                                                                                                                                                                                                                                     |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>15.0</del> 14.0   | Demonstrate knowledge of <del>the</del> compliance and monitoring <del>issues</del> practice in clinical research. The student will be able to:                                                                                     |
| <del>15.01</del> 14.01 | Describe the role of compliance in clinical research.                                                                                                                                                                               |
| <del>15.02</del> 14.02 | Identify issues related to compliance in human <del>subject's</del> subject research.                                                                                                                                               |
| <del>15.03</del> 14.03 | Explain activities associated with monitoring <del>within the scope of</del> clinical research <u>trails</u> .                                                                                                                      |
| <del>15.04</del> 14.04 | Discuss processes used to resolve issues that may arise from <u>a</u> monitoring <del>as part of a clinical trial</del> site visit.                                                                                                 |
| <del>15.05</del> 14.05 | Provide examples of quality assurance audits used in clinical research and discuss their value in relation to performing research with human subjects.                                                                              |
| <del>15.06</del> 14.06 | Define the types of inspections clinical research facilities are subject to.                                                                                                                                                        |
| <del>16.0</del> 15.0   | Demonstrate knowledge of Institutional Review Board functions and operations including purpose, review types and composition. In addition, ethical issues within clinical research will be introduced. The student will be able to: |
| <del>16.01</del> 15.01 | Define an IRB's: purpose and membership.                                                                                                                                                                                            |
| <del>16.02</del> 15.02 | Explain the historical significance of IRBs.                                                                                                                                                                                        |
| <del>16.03</del> 15.03 | Explain the goals, limitations and basic rules for screening participants.                                                                                                                                                          |
| <del>16.04</del> 15.04 | Provide examples of international and federal laws that <del>scaffold</del> guide the duties IRBs.                                                                                                                                  |
| <del>16.05</del> 15.05 | Discuss IRB: functions and operations.                                                                                                                                                                                              |
| <del>16.06</del> 15.06 | Describe IRB: document review and approval.                                                                                                                                                                                         |
| <del>16.07</del> 15.07 | Classify and demonstrate an understanding of IRB review processes: expedited Review vs. <del>continuing</del> Continuing Review                                                                                                     |
| <del>16.08</del> 15.08 | Identify essential documents used by the IRB: approval and review letters, site and staff documents.                                                                                                                                |
| <del>17.0</del> 16.0   | Demonstrate knowledge of the principles and language of pharmacology, including drugs and drug classes, diagnostic tests, indications, techniques. The student will be able to:                                                     |
| <del>17.01</del> 16.01 | Describe pharmacological principles.                                                                                                                                                                                                |
| <del>17.02</del> 16.02 | Classify routes of administration.                                                                                                                                                                                                  |
| <del>17.03</del> 16.03 | Describe the <del>relationships of</del> relationship between drug classes <del>with</del> and disease processes <del>and</del> within medical specialties.                                                                         |
| <del>17.04</del> 16.04 | Recognize commonly prescribed medications                                                                                                                                                                                           |
| <del>17.05</del> 16.05 | Use appropriate pharmacological and laboratory references.                                                                                                                                                                          |

~~17.06~~ 16.06 Describe indications, actions, dosages, and routes of administration.

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### General Education Course Requirements for AS and AAS Degrees

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization(s)~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### Accommodations

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS degree program includes the following College Credit Certificates:

Clinical Research Coordinator (0351071901) – 30 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Health Science career cluster.

This program is designed to prepare students for employment as medical assistants.

The content includes but is not limited to communication, transcultural communication in healthcare, interpersonal skills, legal and ethical responsibilities, health-illness concepts, administrative and clinical duties, emergency procedures including CPR and first aid, emergency preparedness, safety and security procedures, medical terminology, anatomy and physiology, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Program Structure**

This program is a planned sequence of instruction consisting of 65 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |
|-----------------------------|--------------------------------------------------------------------------------------------------|
| <u>01.0</u>                 | <u>Apply academic skills to workplace scenarios.</u>                                             |
| <u>01.01</u>                | <u>Use reading skills.</u>                                                                       |
| <u>01.02</u>                | <u>Use writing skills.</u>                                                                       |
| <u>01.03</u>                | <u>Use mathematical strategies and procedures.</u>                                               |
| <u>01.04</u>                | <u>Use scientific principles and procedures.</u>                                                 |
| <u>02.0</u>                 | <u>Design a solution to an industry problem.</u>                                                 |
| <u>02.01</u>                | <u>Use critical thinking.</u>                                                                    |
| <u>02.02</u>                | <u>Use creativity.</u>                                                                           |
| <u>02.03</u>                | <u>Make sound decisions.</u>                                                                     |
| <u>02.04</u>                | <u>Solve problems.</u>                                                                           |
| <u>02.05</u>                | <u>Reason.</u>                                                                                   |
| <u>02.06</u>                | <u>Plan and organize.</u>                                                                        |
| <u>03.0</u>                 | <u>Manage resources within an industry project</u>                                               |
| <u>03.01</u>                | <u>Manage time.</u>                                                                              |
| <u>03.02</u>                | <u>Manage money or resources.</u>                                                                |
| <u>03.03</u>                | <u>Manage materials.</u>                                                                         |
| <u>03.04</u>                | <u>Manage personnel.</u>                                                                         |
| <u>04.0</u>                 | <u>Oversee the subcomponents, operations and output of a technical or organizational system.</u> |
| <u>04.01</u>                | <u>Manage systems.</u>                                                                           |
| <u>04.02</u>                | <u>Monitor systems.</u>                                                                          |
| <u>04.03</u>                | <u>Improve systems.</u>                                                                          |
| <u>05.0</u>                 | <u>Use information for decision making.</u>                                                      |
| <u>05.01</u>                | <u>Locate information.</u>                                                                       |
| <u>05.02</u>                | <u>Organize information.</u>                                                                     |
| <u>05.03</u>                | <u>Use information.</u>                                                                          |

**Job Attainment****10.0 Find, assess and apply to job opportunities.**10.01 Identify online job posts relevant to his or her career aspirations.10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.10.03 Define what information, documentation and writing prompts are required for the positions.**11.0 Communicate personal competence, character and fit for a job opportunity.**11.01 Develop a resume.11.02 Write a cover letter.11.03 Curate a professional portfolio that includes work products.11.04 Prepare for and experience a mock job interview.**12.0 Cultivate and leverage relationships to professionally advance.**12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.12.02 Develop a plan to cultivate a professional digital footprint.12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of ~~blood borne~~bloodborne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate proper use of medical terminology.
- 13.0 Demonstrate knowledge of legal and ethical responsibilities for medical assistants.
- 14.0 Demonstrate an understanding of anatomy and physiology concepts ~~in both illness and wellness states.~~
- 15.0 Demonstrate ~~basic clerical/medical~~effective front office duties.
- 16.0 Demonstrate accepted professional, communication, and interpersonal skills as related to phlebotomy.
- 17.0 Discuss phlebotomy in relation to the ~~health care~~healthcare setting.
- 18.0 Identify the anatomic structure and function of body systems in relation to services performed by ~~a~~the phlebotomist.
- 19.0 Recognize and identify collection reagents supplies, equipment, and interfering chemical substances.
- 20.0 Demonstrate skills and knowledge necessary to perform phlebotomy.
- 21.0 Practice infection control following standard precautions.
- 22.0 Practice accepted procedures of transporting, accessioning, and processing specimens.
- 23.0 Practice quality assurance and safety.
- 24.0 Describe the role of a medical assistant with intravenous therapy ~~in oncology and dialysis.~~
- 25.0 Describe the cardiovascular system.
- 26.0 Identify legal and ethical responsibilities of an electrocardiogram (EKG/ECG) aide.
- 27.0 Perform correct patient care techniques ~~in the health care facility for EKG/ECG testing.~~
- 28.0 Demonstrate knowledge of, apply, and use medical instrumentation modalities ~~when performing EKG/ECG.~~
- 29.0 Demonstrate ~~basic office examination procedures~~clinical care assistance.
- 30.0 Demonstrate knowledge of ~~the~~infection control fundamentals ~~of microbial control and use aseptic techniques.~~
- ~~31.0 Demonstrate minor treatments.~~
- 31.0 Demonstrate knowledge of basic minor medical treatments.
- 32.0 Demonstrate knowledge of diagnostic medical ~~assisting~~ procedures.
- 33.0 Demonstrate basic radiologic procedures.
- 34.0 Demonstrate knowledge of ~~pharmaceutical~~pharmacological principles and ~~administer medications~~medication administration.
- 35.0 ~~Perform~~Demonstrate knowledge of CLIA-waived diagnostic clinical laboratory procedures.

36.0 Demonstrate knowledge of emergency preparedness and protective practices.

37.0 Perform administrative ~~office~~and managerial duties.

~~38.0 Perform administrative and general skills.~~

~~39.0~~38.0 Perform clinical and general skills.

~~40.0~~39.0 Display professional work habits ~~integral~~essential to medical assisting.

~~41.0 Demonstrate knowledge regarding health information technology.~~

~~42.0~~40.0 ~~Identify the processes~~use of leadership by influencing human behavior to accomplish predetermined goals. Artificial Intelligence (AI)  
in healthcare.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Medical Assisting Advanced  
**CIP Number:** 1351080103  
**Program Length:** 65 credit hours  
**SOC Code(s):** \_\_\_\_\_

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

**At the completion of this program, the student will be able to:**

12.0 Demonstrate proper use of medical terminology. -The student will be able to:

12.01 Use medical terminology as appropriate for a medical assistant.

12.02 Identify medical terms, labeling the word parts.

12.03 Define medical terms and abbreviations related to all body systems.

13.0 Demonstrate knowledge of legal and ethical responsibilities for medical assistants. -The student will be able to:

13.01 Describe the role of the medical assistant.

~~13.02 Understand the importance of order entry as it relates to certification of the medical assistant.~~

~~13.03~~ 13.02 Provide health care as set forth in ~~Florida Statute~~ section 458.3485, Florida Statutes, for the medical assistant.

~~13.04~~ 13.03 Distinguish between the liability of ~~the~~ physicians and ~~staff members~~ medical personnel in the medical office.

~~13.05~~ 13.04 Explain the principles for preventing medical liability.

~~13.06~~ 13.05 List the principles in the Codes of Ethics for Medical Assistants as stated by the American Association of Medical Assistants.

14.0 Demonstrate an understanding of anatomy and physiology concepts ~~in both illness and wellness states.~~ The student will be able to:

|       |                                                                                                                                                                                                                                                                                                               |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.01 | Define the terms <del>Anatomy</del> <u>anatomy</u> and <del>Physiology</del> <u>physiology</u> .                                                                                                                                                                                                              |
| 14.02 | Define both medical terms and abbreviations related to all body systems.                                                                                                                                                                                                                                      |
| 14.03 | Define the <del>principle</del> <u>principal</u> directional terms, planes, quadrants, and cavities used in describing the body and the association of body parts to one another.                                                                                                                             |
| 14.04 | Define the levels of organization of the body <del>inclusive of, but not limited to, from</del> cells, <del>organs and body</del> <u>to</u> systems.                                                                                                                                                          |
| 14.05 | Describe the function of the 11 major organ systems of the body (1) <del>Integumentary</del> <u>integumentary</u> , (2) skeletal, (3) muscular, (4) nervous, (5) endocrine, (6) <del>circulatory</del> -(cardiovascular), (7) lymphatic, (8) respiratory, (9) digestive, (10) urinary, and (11) reproductive. |
| 14.06 | Describe symptoms and common disease pathology related to each body system and the relationship of the disease process to other body systems-..                                                                                                                                                               |
| 14.07 | Discuss diagnostic options to identify common disease pathology and <del>corresponding basic</del> -treatment <u>options</u> .                                                                                                                                                                                |
| 14.08 | Compare <u>the</u> structure and function of the body across the life span.                                                                                                                                                                                                                                   |
| 15.0  | Demonstrate <del>basic-clerical/medical</del> <u>effective front</u> office duties. -The student will be able to:                                                                                                                                                                                             |
| 15.01 | <del>Perform</del> <u>Utilize</u> effective communication skills essential <del>to</del> <u>in</u> the medical office <u>and recognize both verbal and non-verbal cues</u> .                                                                                                                                  |
| 15.02 | <del>Maintain filing systems-</del> <u>Operate office equipment</u> .                                                                                                                                                                                                                                         |
| 15.03 | <del>Operate office equipment and perform</del> <u>Perform</u> clerical office procedures.                                                                                                                                                                                                                    |
| 15.04 | Discuss principles of using electronic <del>health</del> <u>medical</u> record ( <del>EHR</del> <u>EMR</u> ).                                                                                                                                                                                                 |
| 15.05 | Prepare and maintain medical records both manually and within the <del>electronic health record (EHR)-</del> <u>EMR</u> .                                                                                                                                                                                     |
| 15.06 | Screen and process mail.                                                                                                                                                                                                                                                                                      |
| 15.07 | Schedule routine appointments and patient admissions, and/or procedures, both manually and within the <del>electronic health record (EHR)-</del> <u>EMR</u> .                                                                                                                                                 |
| 15.08 | Adhere to current government regulations, risk management, and compliance within the scope of practice of a medical assistant practicing in the <del>State</del> <u>state</u> of Florida.                                                                                                                     |
| 15.09 | Maintain office inventory.                                                                                                                                                                                                                                                                                    |
| 15.10 | Inform patients of office policies <del>both verbally and written</del> .                                                                                                                                                                                                                                     |
| 15.11 | Perform general <del>housekeeping duties</del> <u>medical office maintenance</u> .                                                                                                                                                                                                                            |
| 15.12 | Perform daily office activities both manually and within the <del>electronic health record (EHR)-</del> <u>EMR</u> .                                                                                                                                                                                          |

|                        |                                                                                                                                                                                                                                                   |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15.13                  | <del>Receive</del> <u>Greet</u> patients and visitors.                                                                                                                                                                                            |
| 15.14                  | <u>Maintain confidentiality and adhere to Health Insurance Portability and Accountability Act (HIPAA) regulations.</u>                                                                                                                            |
| 15.15                  | <u>Demonstrate safety and quality assurance in the workplace.</u>                                                                                                                                                                                 |
| <del>15.14</del> 15.16 | Identify and maintain office security policies/ <u>and</u> procedures.                                                                                                                                                                            |
| 16.0                   | Demonstrate accepted professional, communication, and interpersonal skills as related to phlebotomy. -The student will be able to:                                                                                                                |
| 16.01                  | Demonstrate the appropriate professional behavior of a phlebotomist: <u>and describe the scope of practice (job skills and duties).</u>                                                                                                           |
| 16.02                  | Explain to the patient the procedure to be used in specimen collection.                                                                                                                                                                           |
| 16.03                  | Explain in detail the importance of identifying patients correctly when drawing blood.                                                                                                                                                            |
| 16.04                  | <del>Describe the scope of practice for a phlebotomist.</del>                                                                                                                                                                                     |
| 16.05                  | <del>List and describe professional organizations that provide accreditation, certification, and licensure to phlebotomists and phlebotomy programs.</del>                                                                                        |
| <del>16.06</del> 16.04 | Explain the importance of continuing education in relation to certification to maintain competency and skills.                                                                                                                                    |
| 17.0                   | Discuss phlebotomy in relation to the <del>health-care</del> <u>healthcare</u> setting. -The student will be able to:                                                                                                                             |
| 17.01                  | List, classify, and discuss various departments and services within the <del>health-care</del> <u>healthcare</u> setting <del>with</del> <u>in</u> which the phlebotomist must interact <u>with</u> to obtain laboratory specimens from patients. |
| 17.02                  | Identify the major departments/sections within the clinical laboratory, the major types of procedures run in each department/section, and their specimen requirements.                                                                            |
| 17.03                  | Describe roles of the major classifications of clinical laboratory personnel (i.e., pathologist, chief/administrative technologist, CLS, MLS, MLT, MT, phlebotomist, lab assistant, etc.).                                                        |
| 18.0                   | Identify the anatomic structure and function of body systems in relation to services performed by <del>a</del> <u>the</u> phlebotomist. -The student will be able to:                                                                             |
| 18.01                  | Describe and define major body systems with emphasis on the circulatory system.                                                                                                                                                                   |
| 18.02                  | List and describe the main superficial veins used in performing venipuncture.                                                                                                                                                                     |
| 18.03                  | Locate the most appropriate site(s) for <del>both</del> -capillary and venipuncture.                                                                                                                                                              |
| 18.04                  | Describe the function of the following blood components: -erythrocytes, thrombocytes, leukocytes, and plasma.                                                                                                                                     |
| 18.05                  | Compare and contrast <del>between</del> serum and plasma as <del>it relates</del> <u>they relate</u> to blood collection.                                                                                                                         |
| 18.06                  | Discuss hemostasis, <u>hemolysis, and methods of prevention</u> as <del>it relates</del> <u>they relate</u> to blood collection.                                                                                                                  |

|                               |                                                                                                                                                                                                       |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.0                          | Recognize and identify collection reagents supplies, equipment, and interfering chemical substances. -The student will be able to:                                                                    |
| 19.01                         | Identify and discuss <u>the</u> proper use of appropriate types of equipment needed to collect various clinical laboratory blood specimens by venipuncture.                                           |
| 19.02                         | Explain the special precautions and types of equipment needed to collect blood from <del>a</del> <u>the</u> pediatric patient.                                                                        |
| 19.03                         | Identify and discuss <u>the</u> proper use of supplies used in collecting short-draw specimens or difficult draws.                                                                                    |
| 19.04                         | Identify and discuss the proper use of the various types of anticoagulants, preservatives, and gels used in blood collection and the vacuum tube color-codes for these additives.                     |
| 19.05                         | Describe the types of specimens that are analyzed in the clinical laboratory and the phlebotomist's role in collecting and/or transporting these specimens to the laboratory.                         |
| 19.06                         | Describe substances potentially encountered during phlebotomy <del>which</del> <u>that</u> can interfere <del>in</del> <u>with the</u> analysis of blood constituents.                                |
| 19.07                         | Define and utilize correct medical terminology and metric measurement needed for specimen collection.                                                                                                 |
| 20.0                          | Demonstrate skills and knowledge necessary to perform phlebotomy. -The student will be able to:                                                                                                       |
| 20.01                         | Follow approved procedure for completing a laboratory requisition form- <u>and recognize a properly completed form.</u>                                                                               |
| <del>20.02</del>              | <del>Recognize a properly completed requisition.</del>                                                                                                                                                |
| <del>20.03</del> <u>20.02</u> | Demonstrate knowledge of established protocol for patient and specimen identification.                                                                                                                |
| <del>20.04</del> <u>20.03</u> | Discuss appropriate methods for facilitating and preparing the patient for capillary and venipuncture collection.                                                                                     |
| <del>20.05</del> <u>20.04</u> | List appropriate antiseptic agents useful in preparing sites for capillary and venipuncture <u>for adult and pediatric patients.</u>                                                                  |
| <del>20.06</del> <u>20.05</u> | Perform venipuncture by evacuated tube, butterfly, and syringe systems, demonstrating appropriate use of supplies, proper handling of equipment, and specimens, and appropriate patient care.         |
| <del>20.07</del> <u>20.06</u> | Describe the correct order of draw.                                                                                                                                                                   |
| <del>20.08</del> <u>20.07</u> | Describe the use of barcoding systems used for specimen collection.                                                                                                                                   |
| <del>20.09</del> <u>20.08</u> | <del>Perform a</del> <u>Convey an understanding of</u> capillary puncture using appropriate supplies and techniques for <del>both adults</del> <u>adult</u> and pediatric patients.                   |
| <del>20.10</del> <u>20.09</u> | Describe the most common complications associated with capillary and venipuncture, their causes, prevention, and treatment.                                                                           |
| <del>20.11</del> <u>20.10</u> | Recognize and respond to possible adverse patient reactions such as allergies, convulsions, syncope, <del>light</del> <u>headedness</u> <del>lightheadedness</del> , vomiting, and nerve involvement. |
| <del>20.12</del> <u>20.11</u> | Perform appropriate procedures for disposing of used or contaminated capillary and venipuncture supplies.                                                                                             |
| <del>20.13</del> <u>20.12</u> | Perform appropriate techniques for making a peripheral blood smear for hematologic evaluation.                                                                                                        |

|       |                                                                                                                                                                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <del>20.14</del> 20.13 Demonstrate the proper procedure for collecting blood cultures.                                                                                                                                                                                                |
|       | <del>20.15 Discuss the effects of hemolysis and methods of prevention.</del>                                                                                                                                                                                                          |
|       | <del>20.16</del> 20.14 Demonstrate a working understanding of how <u>the</u> age and weight of patients <del>impacts</del> <u>impact</u> the maximum amount of blood that can be safely drawn.                                                                                        |
| 21.0  | Practice infection control following standard precautions. -The student will be able to:                                                                                                                                                                                              |
| 21.01 | Define the term <u>“hospital-acquired infection.”</u>                                                                                                                                                                                                                                 |
| 21.02 | Describe and practice procedures for infection prevention, including hand washing skills.                                                                                                                                                                                             |
| 21.03 | Discuss transmission-based precautions.                                                                                                                                                                                                                                               |
| 21.04 | Identify potential routes of infection and their complications.                                                                                                                                                                                                                       |
| 22.0  | Practice accepted procedures of transporting, accessioning, and processing specimens. -The student will be able to:                                                                                                                                                                   |
|       | <u>22.01 Instruct patients in the proper collection of urine (clean catch, mid-stream), sputum, and stool specimens.</u>                                                                                                                                                              |
|       | <del>22.01</del> 22.02 <del>Demonstrate good laboratory practice</del> <u>Follow the approved procedure</u> for preparation and processing (e.g., centrifugation, separation, aliquoting, labeling, and storage) of serum, plasma, urine, sputum, stool, and wound culture specimens. |
|       | <del>22.02 Demonstrate knowledge of accessioning procedures.</del>                                                                                                                                                                                                                    |
| 22.03 | <u>Describe the significance of time constraints for specimen collection, transporting, and delivery.</u>                                                                                                                                                                             |
| 22.04 | Describe routine procedures for transporting and processing specimens, including DOT packaging requirements.                                                                                                                                                                          |
|       | <del>22.05 Follow protocol for accepting verbal test orders and explain procedure for obtaining signature or other form of authentication of verbal orders.</del>                                                                                                                     |
| 23.0  | Practice quality assurance and safety. -The student will be able to:                                                                                                                                                                                                                  |
| 23.01 | Distinguish and perform procedures <del>which</del> <u>that</u> ensure <u>the</u> reliability of test results when collecting blood specimens.                                                                                                                                        |
| 23.02 | Practice appropriate patient safety.                                                                                                                                                                                                                                                  |
| 23.03 | Practice safety in accordance with OSHA (State & Federal guidelines) for chemical, biological, and PPE established procedures, including proper disposal of sharps and biohazardous materials.                                                                                        |
| 23.04 | Follow documentation procedures for work-related accidents.                                                                                                                                                                                                                           |
| 23.05 | Implement appropriate Joint Commission patient safety goals and other accrediting/regulatory agency guidelines.                                                                                                                                                                       |
| 24.0  | Describe the role of a medical assistant with intravenous therapy <del>in oncology and dialysis.</del> The student will be able to:                                                                                                                                                   |

|       |                                                                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 24.01 | Outline the principles of intravenous therapy.                                                                                                                       |
| 24.02 | Understand intravenous terminology, practices, and equipment.                                                                                                        |
| 24.03 | Describe the dangers of intravenous treatment.                                                                                                                       |
| 24.04 | <del>Describe</del> <u>Recognize</u> the role of <del>the</del> <u>a</u> medical assistant in assisting with intravenous therapy.                                    |
| 25.0  | Describe the cardiovascular system. -The student will be able to:                                                                                                    |
| 25.01 | <del>Locate</del> <u>Label</u> the heart and surrounding structures.                                                                                                 |
| 25.02 | <del>Diagram and label the parts of the heart and list</del> <u>List</u> the functions of <del>each labeled part</del> <u>the heart and surrounding structures</u> . |
| 25.03 | Trace the flow of blood through the <del>cardiopulmonary system</del> <u>body</u> .                                                                                  |
| 25.04 | <u>Identify and describe the electrical conduction system.</u>                                                                                                       |
| 26.0  | Identify legal and ethical responsibilities of an <u>electrocardiogram (EKG/ECG)</u> aide. -The student will be able to:                                             |
| 26.01 | Recognize and practice legal and ethical responsibilities as they relate to an EKG/ <u>ECG</u> aide.                                                                 |
| 26.02 | Maintain a safe and efficient work environment.                                                                                                                      |
| 26.03 | Maintain EKG/ <u>ECG</u> equipment so it will be safe and accurate.                                                                                                  |
| 27.0  | Perform <u>correct</u> patient care techniques <del>in the health care facility.</del> <u>for EKG/ECG testing</u> . The student will be able to:                     |
| 27.01 | Describe the physical preparation of the patient for EKG/ <u>ECG</u> testing.                                                                                        |
| 27.02 | Identify <u>the</u> patient and verify the requisition order.                                                                                                        |
| 27.03 | Prepare patient for EKG/ <u>ECG</u> testing.                                                                                                                         |
| 27.04 | State precautions required when performing an EKG/ <u>ECG</u> .                                                                                                      |
| 28.0  | Demonstrate knowledge of, apply, and use medical instrumentation modalities- <u>when performing EKG/ECG</u> . The student will be able to:                           |
| 28.01 | Calibrate and maintain EKG/ <u>ECG</u> equipment in the work environment.                                                                                            |
| 28.02 | Identify three types of lead systems ( <del>standard</del> /limb, augmented, and precordial/chest).                                                                  |
| 28.03 | State Einthoven's triangle.                                                                                                                                          |
| 28.04 | Demonstrate proper lead placement <del>including lead placement for</del> <u>to include</u> patients with special needs-.                                            |

|                        |                                                                                                                                                                                                                                              |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.05                  | Demonstrate knowledge of the <del>application of a</del> Holter Monitor and provide patient education <del>of its use</del> .                                                                                                                |
| 28.06                  | Identify, <u>troubleshoot, and resolve</u> artifacts and mechanical problems.                                                                                                                                                                |
| 28.07                  | Perform <del>a</del> 12-lead EKG/ <u>ECG</u> .                                                                                                                                                                                               |
| <del>28.08</del>       | <del>Perform a rhythm strip.</del>                                                                                                                                                                                                           |
| <del>28.09</del> 28.08 | Recognize normal sinus rhythm.                                                                                                                                                                                                               |
| <del>28.10</del> 28.09 | <del>Report</del> <u>Recognize and report</u> dysrhythmias <del>that are not normal sinus rhythm</del> .                                                                                                                                     |
| <del>28.11</del> 28.10 | Recognize <del>a</del> cardiac <u>emergency/emergencies</u> as seen on <del>the</del> EKG/ <u>ECG</u> .                                                                                                                                      |
| <del>28.12</del> 28.11 | Use <u>proper</u> documentation skills to <del>identify</del> <u>analyze</u> electrocardiographs.                                                                                                                                            |
| 29.0                   | Demonstrate <del>basic office examination procedures, clinical care assistance</del> . The student will be able to:                                                                                                                          |
| 29.01                  | Prepare patients for and assist the <u>physician/provider</u> with physical examinations <del>including, but not limited to, pre and post-natal, male and female reproductive, rectal, and pediatric in all specialty areas</del> .          |
| 29.02                  | Measure and record vital signs, recognizing abnormalities and danger signs.                                                                                                                                                                  |
| <del>29.03</del>       | <del>Measure and record a pulse pressure.</del>                                                                                                                                                                                              |
| <del>29.04</del> 29.03 | Measure and record <del>an</del> apical <del>pulse</del> <u>and radial pulses</u> .                                                                                                                                                          |
| <del>29.05</del> 29.04 | Measure and record <del>an orthostatic</del> blood pressure.                                                                                                                                                                                 |
| <del>29.06</del> 29.05 | Record patient data.                                                                                                                                                                                                                         |
| <del>29.07</del> 29.06 | <del>Instruct</del> <u>Educate</u> patient on breast and testicular self-examinations.                                                                                                                                                       |
| <del>29.08</del> 29.07 | Assist with pediatric procedures, <del>including, but not limited to, weighing, measuring, and collecting specimens</del> .                                                                                                                  |
| <del>29.09</del> 29.08 | <del>Instruct</del> <u>Educate</u> patients regarding <u>health care/healthcare</u> and wellness practices <del>including but not limited to dietary guidelines necessary for common diseases in accordance with their health status</del> . |
| <del>29.10</del>       | <del>Create a patient teaching plan which addresses dietary guidelines and special needs.</del>                                                                                                                                              |
| <del>29.11</del> 29.09 | <del>Explore and utilize</del> <u>Educate patients utilizing</u> the U.S. Department of <del>Agricultures</del> <u>Agriculture's</u> "My Plate" Food Guide ( <a href="https://www.myplate.gov/">https://www.myplate.gov/</a> ).              |
| <del>29.12</del> 29.10 | Prepare patients for diagnostic procedures.                                                                                                                                                                                                  |
| 30.0                   | Demonstrate knowledge of <del>the</del> <u>infection control</u> fundamentals <del>of microbial control and use aseptic techniques</del> . The student will be able to:                                                                      |

|       |                                                                                                                                                                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30.01 | <del>Demonstrate competence in</del> <a href="#">Practice standard precautions when performing</a> sanitation, disinfection, and sterilization.                                                                                                                             |
| 30.02 | Identify common instruments.                                                                                                                                                                                                                                                |
| 30.03 | <del>Sterilize and maintain instruments and supplies.</del> <a href="#">Perform proper sterilization.</a>                                                                                                                                                                   |

| <del>41.06 Explain patient record numbering, filing systems, storage, and circulation methods.</del>                                                                                                                                                                                                              |
| <del>41.07 Summarize the evolution of the electronic health record (EHR) and its functional benefits.</del>                                                                                                                                                                                                       |
| <del>41.08 Explain additional health information systems used in the hospital setting.</del>                                                                                                                                                                                                                      |
| <del>41.09</del> <u>40.02</u> Summarize the requirements of <u>Identify</u> healthcare coding and reimbursement <u>sectors benefiting from AI.</u>                                                                                                                                                                |
| <del>41.10 Explain the different concepts of healthcare transactions and billing.</del>                                                                                                                                                                                                                           |
| <del>41.11</del> <u>40.03</u> Explain <u>Demonstrate</u> the use of indexes, registries, and health data collection <u>AI tools in medical assisting.</u>                                                                                                                                                         |
| <del>41.12 Summarize the different management and decision support systems used in healthcare.</del>                                                                                                                                                                                                              |
| <del>41.13</del> <u>40.04</u> Differentiate the roles of various providers and disciplines throughout the continuum of healthcare and respond to their information needs. <u>Identify AI's role in patient privacy, data protection, and ethical concerns.</u>                                                    |
| <del>41.14</del> <u>40.05</u> Demonstrate knowledge of current laws, accreditation, licensure, and certification standards related to health information initiatives from the national, state, local, and facility levels. <u>Demonstrate knowledge of interpreting AI outputs in patient management systems.</u> |
| <del>41.15 Apply policies and procedures to comply with the changing regulations among various payment systems for healthcare services such as Medicare, Medicaid, managed care, etc.</del>                                                                                                                       |
| <del>41.16 Identify HIPAA compliance guidelines and regulations for electronic health information.</del>                                                                                                                                                                                                          |
| <del>42.0 Identify the processes of leadership by influencing human behavior to accomplish predetermined goals. The student will be able to:</del>                                                                                                                                                                |
| <del>42.01 Formulate a philosophy for leadership.</del>                                                                                                                                                                                                                                                           |
| <del>42.02 Explain methods that leaders can use in initiating or adjusting to change.</del>                                                                                                                                                                                                                       |
| <del>42.03 Evaluate the role of a leader in conflict management.</del>                                                                                                                                                                                                                                            |
| <del>42.04 Develop a plan for setting effective goals.</del>                                                                                                                                                                                                                                                      |
| <del>42.05 Integrate different genres in development of a leadership philosophy.</del>                                                                                                                                                                                                                            |
| <del>42.06 Model an effective team.</del>                                                                                                                                                                                                                                                                         |

~~42.07 Explore the complexities inherent in an ethical and effective leader.~~

~~42.08 Communicate effectively with all members of the health care team when delegating responsibility and monitoring progress.~~

~~42.09 Coordinate the decision-making process with the client, significant support person(s), and other members of the health care team.~~

~~42.10 Describe how a leader utilizes research for evidence-based practice effecting positive client outcomes.~~

~~42.11 Employ effective conflict resolution strategies that promote a healthy work environment.~~

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error, and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

Although it is not required, it is strongly recommended that the programs meet the Standards and Guidelines of an Accredited Educational Program for the Medical Assistant adopted by the American Association of Medical Assistants and the Commission on Accreditation of Allied Health Education Programs (CAAHEP) or the American Medical Technologist and the Accrediting Bureau of Health Education Schools (ABHES). For further information, contact:

Commission on Accreditation of Allied Health Education Programs (CAAHEP) [www.caahep.org](http://www.caahep.org)/[www.caahep.org/](http://www.caahep.org/)  
1361 Park Street, Clearwater, FL 33756  
Phone: 727-210-2350/ Fax: 727-210-2354

Accrediting Bureau of Health Education Schools (ABHES) [www.abhes.org](http://www.abhes.org)/[www.abhes.org/](http://www.abhes.org/)  
777 Leesburg Pike, Suite 312, North Falls, VA 22043  
(703) 917-9503

This program will also be in accordance with Florida Statute for Medical Assistants, 458.3485, F.S.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

Program completers of a CAAHEP or ABHES-accredited program are eligible to take the American Association of Medical Assistants' Certification Examination (CMA) or the American Medical Technologists' Certification Examination (RMA). For further information, contact:

American Association of Medical Assistants (AAMA) [www.aama-ntl.org](http://www.aama-ntl.org)/[www.aama-ntl.org/](http://www.aama-ntl.org/)  
20 North Wacker Drive, Suite 1575, Chicago, Illinois 60606, (312) 899-1500  
Or

American Medical Technologist (AMT) <https://americanmedtech.org/>  
10700 West Higgins Road, Suite 150, Rosemont, Illinois 60018, (800) 275-1268

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded). The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization(s)~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOSs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS degree program includes the following College Credit Certificates:

Medical Assisting Specialist (0351080104) – 44 credit hours  
Healthcare Support Specialist (0351081401) – 21 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Occupational Therapy Assistant  
**Career Cluster:** Health Science

**AS** Associate in Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as occupational therapy assistants or to provide supplemental training for persons previously or currently employed in this occupation. The program has been developed to prepare graduates as entry-level generalists and to offer a broad exposure to delivery model systems through academic and fieldwork education including preparation to assist an occupational therapist in implementing the plan of therapy for a patient prescribed by a physician.

The content includes but is not limited to communication and interpersonal skills, health-illness-health concepts, specific life tasks and skills, the study and application of occupational therapy principles, cultural competencies, professional behaviors, and employability skills, health and safety including CPR, anatomy and physiology, kinesiology, psychology, sociology, and gerontology.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## **Program Structure**

This program is a planned sequence of instruction consisting of 74 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## **Regulated Programs**

The program should meet the guidelines of the Accreditation Council for Occupational Therapy Education (ACOTE), 4720 Montgomery Lane Suite 200, Bethesda, MD 20814-3449, (301) 352-2682, of the American Occupational Therapy Association so that students who complete the program will be eligible to take the national certification examination administered by the National Board for Certification in Occupational Therapy (NBCOT). Florida requires licensing of graduates by the Florida Department of Health through the Florida Board of Occupational Therapy Practice for persons completing programs approved by the American Occupational Therapy Association. This program must be in accordance with the Florida Department of Health's Occupational Therapy Board, Chapter 468, Part III, F.S. and Rule Chapter 64B11, F.A.C.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

**Job Attainment****10.0 Find, assess and apply to job opportunities.**10.01 Identify online job posts relevant to his or her career aspirations.10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.10.03 Define what information, documentation and writing prompts are required for the positions.**11.0 Communicate personal competence, character and fit for a job opportunity.**11.01 Develop a resume.11.02 Write a cover letter.11.03 Curate a professional portfolio that includes work products.11.04 Prepare for and experience a mock job interview.**12.0 Cultivate and leverage relationships to professionally advance.**12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.12.02 Develop a plan to cultivate a professional digital footprint.12.03 Develop a networking plan for a specific industry of interest.

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate ability to communicate and use interpersonal skills effectively for the occupation.
- 13.0 Demonstrate an understanding of and apply health-illness-health concepts.
- 14.0 Analyze and apply learned skills in occupations and activities.
- 15.0 Apply occupational therapy assistant role in the OT service delivery process.
- 16.0 Demonstrate knowledge of ethics and safety related to occupational therapy assistants.
- 17.0 Demonstrate knowledge of client mobility.
- 18.0 Demonstrate an understanding of stress/ stressors and stress reactions as well as mediating factors and its influence on health and human functioning.
- 19.0 Explain the role of the OTA in the management of occupational therapy services.
- 20.0 Provide client, family and caregiver education and training.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Occupational Therapy Assistant  
**CIP Number:** 1351080303  
**Program Length:** 74 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

| 12.07                                                           | <del>Effectively interact through written, oral and nonverbal communication</del> <u>Use sound judgement maintaining professionalism when communicating</u> with the client, family, significant others and <del>other health providers in a professionally acceptable manner. using effective written, oral and nonverbal communication. Models socially appropriate behaviors.</del> |
| 13.0                                                            | Demonstrate an understanding of and apply health-illness-health concepts. The student will be able to:                                                                                                                                                                                                                                                                                 |
| 13.01                                                           | Explain occupation as a health determinant.                                                                                                                                                                                                                                                                                                                                            |
| 13.02                                                           | Describe the basic function of the human body with particular emphasis on the neurological, sensory, musculoskeletal and cardiopulmonary systems.                                                                                                                                                                                                                                      |

|       |                                                                                                                                                                                                                                                        |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.03 | Describe the basic development of personality and learning.                                                                                                                                                                                            |
| 13.04 | Describe human occupation across the lifespan as related to the developmental process from birth to death.                                                                                                                                             |
| 13.05 | Identify and describe disabling conditions commonly referred to occupational therapy.                                                                                                                                                                  |
| 13.06 | <del>Explain the role of occupational therapy as a profession.</del> <u>Demonstrate how the use of occupations supports positive health outcomes and influences health and well-being throughout the lifespan.</u>                                     |
| 13.07 | Explain the role of the occupational therapist and occupational therapy assistant in the assessment and intervention process identifying the collaborative roles and rationale for supervision.                                                        |
| 13.08 | <del>Explain</del> <u>Apply</u> the <del>relationship</del> <u>concepts</u> of occupational therapy to <del>other health care workers</del> <u>a variety of service delivery models and systems where OT is both currently practiced and emerging.</u> |
| 13.09 | Analyze how theory, political climate, history, culture, socioeconomics and demographics influence practice and engagement in activities across the lifespan.                                                                                          |
| 13.10 | Demonstrate sound judgment in regard to safety of self and others and adhere to safety regulations throughout the occupational therapy practice.                                                                                                       |
| 13.11 | Demonstrate the ability to assess and monitor vital sign to ensure that the client is stable for intervention.                                                                                                                                         |
| 14.0  | Analyze and apply learned skills in occupations and activities. The student will be able to:                                                                                                                                                           |
| 14.01 | Demonstrate skill in analyzing, developing and implementing intervention strategies utilizing occupations and activities.                                                                                                                              |
| 14.02 | Demonstrate skill in instructing and adapting occupations and activities.                                                                                                                                                                              |
| 14.03 | Demonstrate the ability to analyze occupations and activities to implement the intervention plan.                                                                                                                                                      |
| 14.04 | Grade <u>and adapt</u> activities and occupations to promote independent performance.                                                                                                                                                                  |
| 14.05 | Demonstrate proper care and maintenance of equipment and supplies used in occupational therapy.                                                                                                                                                        |
| 14.06 | Demonstrate an understanding of the use of technology and adaptive equipment to support performance, participation, health and well-being.                                                                                                             |
| 14.07 | Demonstrate understanding and apply principles of environmental adaptations addressing ergonomics in school, home and work environments.                                                                                                               |
| 15.0  | Apply occupational therapy assistant role in the OT service delivery process. The student will be able to:                                                                                                                                             |
| 15.01 | Contribute to initial screening to determine <u>the</u> need for OT services, including data collection for clients' occupational profiles.                                                                                                            |
| 15.02 | Contribute to evaluation of occupations, client factors, performance skills, performance patterns, contexts/environments and activity demands, and implement assessments delegated by OT.                                                              |
| 15.03 | Contribute to development of occupation-based intervention plans and strategies based on client needs and priorities and occupational therapy goals, in collaboration with OT and client.                                                              |

|       |                                                                                                                                                                                                                                                                                                                                            |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15.04 | Implement occupational therapy interventions selected to promote, establish, restore, maintain, modify, or prevent deterioration in occupational performance.                                                                                                                                                                              |
| 15.05 | Contribute to implementation of occupational therapy intervention for development, remediation and restoration of client factors and performance skills (physical, cognitive, perceptual, neuromuscular, behavioral skills and sensory functions).                                                                                         |
| 15.06 | Implement occupational therapy intervention through the use of therapeutic occupations and activities, preparatory methods and tasks, education and training, advocacy, and group interventions.                                                                                                                                           |
| 15.07 | Contribute to the ongoing review and modification of occupational therapy interventions, and compare progress toward established outcomes.                                                                                                                                                                                                 |
| 15.08 | Implement outcome measurements and <del>provide</del> <u>participate in the discharge planning process including client discharge resources. Recommend appropriate levels of care needed for safe discharge based on the discharge destination. Provide</u> needed client discharge resources.                                             |
| 15.09 | Complete <u>timely</u> documentation along each step of the service delivery process which communicates the need and rationale for occupational therapy services and meets standards for accountability and reimbursement.                                                                                                                 |
| 15.10 | Implement patient safety goals according to appropriate accrediting and regulatory agency guidelines.                                                                                                                                                                                                                                      |
| 16.0  | Demonstrate knowledge of ethics and safety related to occupational therapy assistants. The student will be able to:                                                                                                                                                                                                                        |
| 16.01 | Describe the relationship of the occupational therapy assistant to: <ul style="list-style-type: none"> <li><del>• the physician</del></li> <li>• <u>the Physician</u></li> <li>• <u>The</u> occupational therapist</li> <li>• <del>the</del><u>The</u> employer</li> <li>• <del>other</del><u>Other</u> allied health personnel</li> </ul> |
| 16.02 | Explain the term "risk management".                                                                                                                                                                                                                                                                                                        |
| 16.03 | Describe to client current treatment objectives and techniques <u>with the client</u> prior to initiation of treatment or service.                                                                                                                                                                                                         |
| 16.04 | Describe the principles of ethics as outlined in the AOTA Code of Ethics.                                                                                                                                                                                                                                                                  |
| 16.05 | Adhere to safety regulations throughout the occupational therapy process as appropriate to the setting and scope of practice.                                                                                                                                                                                                              |
| 16.06 | Explain the process of applying and maintaining a Florida license and national certification.                                                                                                                                                                                                                                              |
| 16.07 | Identify requirements to obtain and maintain the Florida license including disqualifying felonies.                                                                                                                                                                                                                                         |
| 16.08 | <del>Explain the continuing education requirements necessary to maintain licensure and national certification.</del> <u>Assumes the responsibility for professional growth and development.</u>                                                                                                                                            |
| 17.0  | Demonstrate knowledge of client mobility. The student will be able to:                                                                                                                                                                                                                                                                     |
| 17.01 | Transfer client safely and correctly using proper body mechanics from any surface to another such as (i.e., bedside commode, wheelchair, toilet, chair or car). <del>;</del>                                                                                                                                                               |

|       |                                                                                                                                                                                                                                                                   |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 17.02 | Identify wheelchair parts and demonstrate proper wheelchair management in various environments.                                                                                                                                                                   |
| 17.03 | Provide information to client as needed.                                                                                                                                                                                                                          |
| 17.04 | Demonstrate the understanding of the use of other assistive devices utilized for mobility of clients, i.e., walker, cane, crutches, gait belt, mechanical lifts.                                                                                                  |
| 18.0  | Demonstrate an understanding of stress/ stressors and stress reactions as well as mediating factors and its influence on health and human functioning. The student will be able to:                                                                               |
| 18.01 | Evaluate psychological stressors and their positive and negative effect on physical and mental health.                                                                                                                                                            |
| 18.02 | Understand the relationship between stress and psychological disorders.                                                                                                                                                                                           |
| 18.03 | Understand stress mediators including perception of stressors, predictability and control of stress, physical and psychological effects and coping resources and methods.                                                                                         |
| 18.04 | Promote health of the client by utilizing <a href="#">meaningful occupation-based treatments</a> health belief models, self-efficacy and coping strategies.                                                                                                       |
| 19.0  | Explain the role of the OTA in the management of occupational therapy services. The student will be able to:                                                                                                                                                      |
| 19.01 | Perform program administration and support responsibilities.                                                                                                                                                                                                      |
| 19.02 | Function in the role of supervisee and assist with supervision of aides and volunteers and fieldwork students.                                                                                                                                                    |
| 19.03 | Describe the impact of federal and state legislation and practice acts on the practice of occupational therapy.                                                                                                                                                   |
| 19.04 | Demonstrate knowledge of various reimbursement systems and documentation requirements.                                                                                                                                                                            |
| 19.05 | Describe the ongoing professional responsibility for providing fieldwork education and the criteria for becoming a fieldwork educator.                                                                                                                            |
| 19.06 | Demonstrate the ability to participate in the development, marketing and management of service delivery options.                                                                                                                                                  |
| 19.07 | Cooperate, collaborate and communicate to integrate care and ensure care is continuous and reliable as part of an interdisciplinary team.                                                                                                                         |
| 19.08 | Employ evidenced based practice: integrate research, clinical expertise and patient values for optimal care.                                                                                                                                                      |
| 19.09 | Participate in learning and research activities.                                                                                                                                                                                                                  |
| 19.10 | Explain the role of the practitioner to advocate for changes in service delivery policies, effect changes in the system, recognize opportunities for emerging practice areas, and advocate for opportunities to expand the Occupational Therapy Assistant's role. |
| 20.0  | Provide client, family and caregiver education and training. The student will be able to:                                                                                                                                                                         |
| 20.01 | Identify resources necessary for clients, family and caregivers for the discharge planning process.                                                                                                                                                               |
| 20.02 | Educate the client, family and caregivers on the community resources available and their importance.                                                                                                                                                              |

|       |                                                                                                                                                                                             |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20.03 | Educate the client, family and caregiver on the referral process.                                                                                                                           |
| 20.04 | Provide client, family and caregivers with comprehensive discharge resources.                                                                                                               |
| 20.05 | Educate client, family and caregivers on home <del>program</del> <u>programs</u> .                                                                                                          |
| 20.06 | Provide training in Activities of Daily Living (ADL) in and out of the home utilizing adapted methods and teaching strategies.                                                              |
| 20.07 | Provide training in Instrumental Activities of Daily Living (I-ADL) in and out of the home utilizing adapted methods and teaching strategies.                                               |
| 20.08 | Provide training for safe bed positioning and functional transfers in the living environment according to the diagnosis of the client and their limitations.                                |
| 20.09 | Utilize the concept of health literacy while educating clients in order to facilitate skills in areas of occupation as well as prevention, health maintenance, health promotion and safety. |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.

Cooperative training - OJT is appropriate for this program. Whenever cooperative training is offered, the following are required for each student: a training plan, signed by the student, teacher, and the employer, which includes instructional objectives and a list of on-the-job and in-school learning experiences; a workstation which reflects equipment, skills and tasks which are relevant to the occupation which the student has chosen as a career goal. The student must receive compensation for work performed.

The CORE must be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

**The standards and benchmarks for this program were updated for the 2026-27 academic year.**

**Program Title:** Pharmacy Management  
**Career Cluster:** Health Science

**AS Associate in Science**

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as a Senior/Lead Pharmacy Technician, Pharmacy Technician Coordinator, Pharmacy Manager/Supervisor trainee, drugstore/pharmacy managers, purchasing managers (First line supervisors/Manager of Retail sales worker), or to provide supplemental training for persons previously or currently employed in these occupations.

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues, and health, safety, and environmental issues.

The content includes but is not limited to metric system, medical terminology, medicinal drugs, pharmaceutical compounding, USP 795 standards, sterile techniques, USP 797 and USP 800 standards, maintenance of inventory, IV preparation, receiving and handling of hazardous materials, preparing purchase orders, receiving and checking supplies purchased, printing labels, typing prescription labels, delivering medications, pricing

prescription drug orders and supplies, prepackaging unit dose packages, patient record systems, control records, data processing automation in pharmacy, computer application, employability skills, leadership and human relations skills, health and safety, including CPR.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 70 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

### **Regulated Programs**

**This program is regulated by the Department of Health, Florida Board of Pharmacy.**

This program must be approved by the Florida Board of Pharmacy. Program completers who wish to work as Pharmacy Technicians in the State of Florida must register with the Board of Pharmacy (465.014, F.S.).

**Job Attainment****10.0 Find, assess and apply to job opportunities.**10.01 Identify online job posts relevant to his or her career aspirations.10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.10.03 Define what information, documentation and writing prompts are required for the positions.**11.0 Communicate personal competence, character and fit for a job opportunity.**11.01 Develop a resume.11.02 Write a cover letter.11.03 Curate a professional portfolio that includes work products.11.04 Prepare for and experience a mock job interview.**12.0 Cultivate and leverage relationships to professionally advance.**12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.12.02 Develop a plan to cultivate a professional digital footprint.12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Practice ~~personal relation~~ professional pharmacy relational skills.
- ~~13.0 Identify pharmaceutical abbreviations and terminology as related to Community Pharmacy Practice.~~
- ~~14.0~~ 13.0 Identify medical and legal considerations in various pharmacy settings.
- ~~15.0~~ 14.0 Perform clerical duties as related to ~~pharmacy practice~~ Pharmacy Practice.
- ~~16.0~~ 15.0 Demonstrate knowledge of ~~basic pharmaceutical chemistry~~ medication safety and ~~drug classification~~ prevention of medication errors.
- ~~17.0~~ 16.0 Demonstrate knowledge of inventory management.
- ~~18.0~~ 17.0 Initiate measurement and calculating techniques as ~~it relates~~ they relate to United States Pharmacopeia (USP) 795 (non-sterile) compounding in pharmacy practice.
- ~~19.0~~ 18.0 Demonstrate ~~a~~ basic knowledge and skills in areas of ~~science~~ anatomy/ physiology, pharmacology, and drug classification relevant to pharmacy technicians ~~including anatomy/physiology and pharmacology~~.
- ~~20.0~~ 19.0 Prepare and deliver medications.
- ~~21.0~~ 20.0 Repackage unit-dose medications.
- ~~22.0~~ 21.0 Prepare United States Pharmacopeia (USP) 797 and USP 800 sterile products.
- ~~23.0~~ 22.0 Recognize consumer economic activities.
- ~~24.0~~ 23.0 Perform decision-making activities.
- ~~25.0~~ 24.0 Demonstrate leadership skills.
- ~~26.0~~ 25.0 Identify, classify, and demonstrate management activities.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Pharmacy Management  
**CIP Number:** 1351080502  
**Program Length:** 70 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

**At the completion of this program, the student will be able to:**

**Pharmacy Technician**

12.0 Practice ~~personal relation~~professional pharmacy relational skills. -The student will be able to:

12.01 Explore the meaning, organizational flow, and duties of pharmacy personnel.

12.02 Identify pharmacy organizations and their role in the profession to include student membership opportunities.

12.03 Identify the current trends and perspectives in the pharmacy practice.

12.04 Describe how team building can facilitate change within the pharmacy working environment.

12.05 Understand the importance of good interpersonal skills/soft skills in various pharmacy settings.

12.06 Explain ethical conduct in job-related activities.

12.07 Identify State of Florida requirements for obtaining and maintaining pharmacy technician registration as well as continuing education requirements for renewal.

12.08 Explore the importance of national certification and the continuing education requirements for renewal.

~~13.0—Identify pharmaceutical abbreviations and terminology as related to pharmacy practice. The student will be able to:~~

~~13.01—Utilize pharmaceutical medical terminology.~~

| <del>14.0</del> 13.0   | Identify medical and legal considerations in various pharmacy settings. -The student will be able to:                                                                                                   |
| <del>14.04</del> 13.01 | Articulate the significance of current national and Florida law, <u>medical legal concepts</u> , and administrative rules as they relate to the scope of practice for the pharmacy technician.          |
| 13.02                  | <u>Demonstrate an understanding of current vaccines and their guidelines.</u>                                                                                                                           |
| <del>14.02</del> 13.03 | Convey an understanding of patient counseling requirements pertaining to OBRA-90 versus <del>MTM</del> (Medication Therapy Management ( <u>MTM</u> )).                                                  |
| <del>14.03</del>       | <del>Convey an understanding of medical legal concepts as they relate to the scope of practice for the pharmacy technician.</del>                                                                       |
| <del>14.04</del> 13.04 | Explain the legal requirements for accurate pharmacy documentation and recordkeeping.                                                                                                                   |
| <del>14.05</del> 13.05 | Demonstrate an understanding of HIPAA in pharmacy practice pertaining to the ethical and legal considerations.                                                                                          |
| <del>14.06</del>       | <del>Convey an understanding of the patient's Bill of Rights as it relates to pharmacy practice.</del>                                                                                                  |
| <del>14.07</del> 13.06 | Convey an understanding of pertinent laws governing pharmacy practice, including but not limited to prescriptions, drug diversion, and use of E-FORCSE PDMP requirements.                               |
| <del>14.08</del> 13.07 | Differentiate between controlled substance schedules (CI-CV) and their applicable regulations.                                                                                                          |
| <del>14.09</del> 13.08 | Convey an understanding of the Florida Right to Know Act with respect to P-listed drugs in addition to hazardous materials, the utilization of safety data sheets, and hazardous communication symbols. |
| <del>14.10</del>       | <del>Identify and explain appropriate patient safety goals by applicable accrediting and regulatory organizations.</del>                                                                                |
| <del>14.14</del> 13.09 | -Understand and explain activities that may be performed by pharmacy technicians and those that must be performed by licensed pharmacists, including final check.                                       |
| <del>14.12</del> 13.10 | Explain the importance of technology and its current use in various pharmacy settings.                                                                                                                  |
| 13.11                  | <u>Utilize emerging technologies such as AI to cross-reference reports with dispense/administration history to address unaccounted medications.</u>                                                     |
| <del>15.0</del> 14.0   | Perform clerical duties as related to <del>pharmacy practice</del> . <u>Pharmacy Practice</u> . The student will be able to:                                                                            |
| 14.01                  | <u>Utilize pharmaceutical medical terminology.</u>                                                                                                                                                      |
| 14.02                  | <u>Identify the major symbols and abbreviations used on prescriptions and state the meaning.</u>                                                                                                        |
| 14.03                  | <u>Utilize pharmacy reference manuals or websites.</u>                                                                                                                                                  |
| <del>15.04</del> 14.04 | Demonstrate retail pharmacy dispensing processes.                                                                                                                                                       |

|                        |                                                                                                                                                                                                                                                                                                   |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>15.02</del>       | <del>Identify potential errors that may result in Quality Related Events and explain specific ways they can be prevented.</del>                                                                                                                                                                   |
| <del>15.03</del> 14.05 | Utilize pharmacy software in processing pharmacy prescription data.                                                                                                                                                                                                                               |
| <del>15.04</del> 14.06 | Identify and discuss applications of E-Prescribing and facsimile.                                                                                                                                                                                                                                 |
| <del>15.05</del> 14.07 | Utilize and apply interactive communication skills while gathering accurate information from patients and <del>from</del> other healthcare professionals.                                                                                                                                         |
| <del>15.06</del> 14.08 | <del>Identify communication modalities that can result in the transmission of inaccurate information, and explain specific ways to make improvements.</del> Create, complete, and maintain patient profiles including third-party billing information.                                            |
| <del>15.07</del> 14.09 | <del>Create, complete</del> Understand the processes of PBMs and <del>maintain patient profiles including</del> third-party billing information, resolving rejections, and obtaining prior authorizations.                                                                                        |
| <del>15.08</del> 14.10 | <del>Understand the processes of third party billing, resolving rejections, and obtaining authorizations.</del> Demonstrate professional communication skills within the scope of practice for the pharmacy technician.                                                                           |
| <del>15.09</del> 14.11 | Demonstrate <del>professional communication skills within the scope</del> knowledge of practice for the <del>systems used in</del> maintaining pharmacy technician records.                                                                                                                       |
| <del>15.10</del> 15.0  | Demonstrate <del>the knowledge of</del> systems used in maintaining pharmacy records. medication safety and prevention of medication errors. The student will be able to:                                                                                                                         |
| <del>15.11</del> 15.01 | <del>Summarize, evaluate, and describe the role of the technician in quality assurance activities as related to various pharmacy practices.</del> Identify communication modalities that can result in the transmission of inaccurate information and explain specific ways to make improvements. |
| <del>16.0</del> 15.02  | <del>Demonstrate knowledge of basic pharmaceutical chemistry and drug classification. The student will be able to:</del> Convey an understanding of the patient's Bill of Rights for medication administration as it relates to pharmacy practice.                                                |
| <del>16.01</del> 15.03 | <del>Define the major classifications of pharmaceuticals.</del> Identify and explain appropriate patient safety goals by applicable accrediting and regulatory organizations                                                                                                                      |
| <del>16.02</del> 15.04 | Identify <del>at least one official compendia of standards for</del> potential errors that may result in quality-related events (QRE) and <del>purity of drug monograph.</del> explain specific ways they can be prevented.                                                                       |
| <del>16.03</del> 15.05 | <del>Utilize pharmacy reference manuals or web sites.</del> Describe safety strategies used to prevent medication errors due to pharmaceutical abbreviations and terminology.                                                                                                                     |
| <del>16.04</del> 15.06 | <del>Demonstrate knowledge of trade and generic name equivalents.</del> Summarize, evaluate, and describe the technician's role in quality assurance activities as related to various pharmacy practices.                                                                                         |
| <del>17.0</del> 16.0   | Demonstrate knowledge of inventory management. -The student will be able to:                                                                                                                                                                                                                      |
| <del>17.01</del> 16.01 | Convey an understanding of industry standards in purchasing pharmaceutical supplies, <del>including the Florida Pedigree Law.</del>                                                                                                                                                               |
| <del>17.02</del> 16.02 | <del>Explain</del> Demonstrate how to maintain a controlled substance inventory.                                                                                                                                                                                                                  |
| <del>17.03</del> 16.03 | <del>Apply knowledge of</del> Understand pharmacy business math <del>to</del> in prescription pricing systems.                                                                                                                                                                                    |
| <del>17.04</del> 16.04 | Maintain stock inventory, communicate shortages, and seek solutions to maintain continuity of patient care.                                                                                                                                                                                       |

|                        |                                                                                                                                                                                                                                                                                                                                    |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>17.05</del> 16.05 | Understand the process of how to create electronic purchase orders.                                                                                                                                                                                                                                                                |
| <del>17.06</del> 16.06 | Accurately perform the process of purchasing, receiving, special handling, storing, distributing, and disposing of pharmaceutical supplies.                                                                                                                                                                                        |
| <del>17.07</del> 16.07 | Convey an understanding of <del>Investigational Drugs, Risk Evaluation</del> recall management and <del>Mitigation Strategies (REMS), off label indications,</del> know the differences between types of recalls and <del>emerging drug therapy</del> how to address them.                                                         |
| <del>17.08</del> 16.08 | Convey an understanding of the inventory control process implemented by Title II of the Drug Quality and Security Act.                                                                                                                                                                                                             |
| <del>18.0</del> 17.0   | Initiate measurement and calculating techniques as <del>it relates</del> they relate to United States Pharmacopeia (USP) 795 (non-sterile) compounding in pharmacy practice. -The student will be able to:                                                                                                                         |
| <del>18.04</del> 17.01 | Convey an understanding of United States Pharmacopeia (USP) 795 standards.                                                                                                                                                                                                                                                         |
| <del>18.02</del> 17.02 | Convert measurements within the apothecary, avoirdupois, household, and metric systems.                                                                                                                                                                                                                                            |
| <del>18.03</del> 17.03 | Perform common pharmaceutical calculations.                                                                                                                                                                                                                                                                                        |
| <del>18.04</del> 17.04 | Identify and utilize common pharmaceutical weighing equipment.                                                                                                                                                                                                                                                                     |
| <del>18.05</del> 17.05 | Identify and utilize common pharmaceutical volume measurement equipment.                                                                                                                                                                                                                                                           |
| <del>18.06</del> 17.06 | Accurately demonstrate the technique of preparing common non-sterile pharmaceutical compounds.                                                                                                                                                                                                                                     |
| <del>18.07</del> 17.07 | Summarize, evaluate, and describe the <u>technician's</u> role <del>of the technician</del> in quality assurance activities as related to the preparation of non-sterile products.                                                                                                                                                 |
| <del>19.0</del> 18.0   | Demonstrate basic knowledge and skills in areas of <del>science</del> <u>anatomy/ physiology, pharmacology, and drug classification</u> relevant to pharmacy technicians <del>including anatomy/physiology and pharmacology.</del> The student will be able to:                                                                    |
| <del>19.04</del> 18.01 | <del>Describe electrolyte balances and imbalances.</del> <u>Evaluate and apply anatomical terminology to describe the location of parts or areas of the body and related disease processes.</u>                                                                                                                                    |
| 18.02                  | <u>Define the major classifications of pharmaceuticals and conditions treated.</u>                                                                                                                                                                                                                                                 |
| 18.03                  | <u>Demonstrate knowledge of trade and generic name equivalents.</u>                                                                                                                                                                                                                                                                |
| <del>19.02</del> 18.04 | <u>Relate</u> <u>Evaluate</u> the <del>general sources, classes, indications</del> pharmacy technician's understanding of pharmacology, including <u>drug classifications</u> , mechanisms of <del>actions, routes of administration,</del> <u>action, common</u> side effects, and <del>various types of drug</del> interactions. |
| 18.05                  | <u>Identify at least one official compendium of standards for quality and purity of drug monographs.</u>                                                                                                                                                                                                                           |
| 18.06                  | <u>Convey an understanding of Investigational Drugs, Risk Evaluation and Mitigation Strategies (REMS), off-label indications, and emerging drug therapy.</u>                                                                                                                                                                       |
| <del>19.03</del> 18.07 | Demonstrate an understanding of common adult doses of medications, duration of common drug therapies, and respective contraindications, including the BEERS Criteria.                                                                                                                                                              |

|                        |                                                                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>19.04</del> 18.08 | Identify potential interactions that require a pharmacist's intervention pertaining to food/alcohol, herbal, OTC, and/or prescription medications.                          |
| 18.09                  | Identify allergy histories during the medication reconciliation process and discern "allergy" vs "side effect" in optimizing care.                                          |
| <del>20.0</del> 19.0   | Prepare and deliver medications. -The student will be able to:                                                                                                              |
| <del>20.04</del> 19.01 | Read and prepare medication orders correctly.                                                                                                                               |
| <del>20.02</del> 19.02 | Demonstrate institutional pharmacy dispensing processes.                                                                                                                    |
| <del>20.03</del> 19.03 | Compare all new orders with medications listed on profiles while noting any changes.                                                                                        |
| <del>20.04</del> 19.04 | Utilize special precautions in the preparation of medications for pediatric patients.                                                                                       |
| <del>20.05</del> 19.05 | Explain how to safely transport medications, being aware of hazards, theft, legal implications of accidental loss, and other consequences.                                  |
| <del>20.06</del> 19.06 | Understand how to correctly fill and deliver medication.                                                                                                                    |
| <del>20.07</del> 19.07 | Collect data from <u>the</u> medication administration record.                                                                                                              |
| <del>20.08</del> 19.08 | Describe the use of automated medication dispensing equipment.                                                                                                              |
| <del>21.0</del> 20.0   | Repackage unit-dose medications. -The student will be able to:                                                                                                              |
| <del>21.04</del> 20.01 | Locate <u>the</u> correct stock container.                                                                                                                                  |
| <del>21.02</del> 20.02 | <del>Operate</del> <u>Describe the use of</u> unit-dose packaging equipment.                                                                                                |
| <del>21.03</del> 20.03 | Measure, count, and place <u>the</u> individual dose in appropriate containers.                                                                                             |
| <del>21.04</del> 20.04 | Understand precautions used when packaging unit-dose hazardous drugs.                                                                                                       |
| <del>21.05</del> 20.05 | Record repackaged medication data correctly.                                                                                                                                |
| <del>21.06</del> 20.06 | Summarize, evaluate, and describe the <u>technician's</u> role <del>of the technician</del> in quality assurance activities as related to repackaging unit-dose medication. |
| <del>22.0</del> 21.0   | Prepare United States Pharmacopeia (USP) 797 and USP 800 sterile products. -The student will be able to:                                                                    |
| <del>22.04</del> 21.01 | Convey an understanding of United States Pharmacopeia (USP) 797 regulations.                                                                                                |
| <del>22.02</del> 21.02 | Convey an understanding of United States Pharmacopeia (USP) 800 regulations.                                                                                                |
| <del>22.03</del> 21.03 | Compare <u>the</u> medication order with <u>the</u> label on <u>the</u> vial and check <u>the</u> expiration date of <u>the</u> product.                                    |

|                                                                                                               |                                                                                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>22.04</del> 21.04                                                                                        | Calculate drug dosage for parenteral use.                                                                                                                                                 |
| <del>22.05</del> 21.05                                                                                        | Reconstitute parenteral medications.                                                                                                                                                      |
| <del>22.06</del> 21.06                                                                                        | Demonstrate aseptic technique to withdraw medication from stock vial, measure correct quantity as instructed, select and insert it into IV solution without error.                        |
| <del>22.07</del> 21.07                                                                                        | Demonstrate aseptic technique to withdraw medication from an ampule using <u>a</u> filter needle/straw.                                                                                   |
| <del>22.08</del> 21.08                                                                                        | Prepare parenteral solutions using proper aseptic technique.                                                                                                                              |
| <del>22.09</del> 21.09                                                                                        | Understand the preparation of Total Parenteral Nutrition (TPN) solutions.                                                                                                                 |
| <del>22.10</del> 21.10                                                                                        | Understand the preparation of chemotherapeutic agents using proper safety techniques.                                                                                                     |
| <del>22.11</del> 21.11                                                                                        | Understand the appropriate technique while using specialized equipment such as: laminar flow hoods, filters, pumps, automated compounders, and barrier <del>isolator</del> isolators.     |
| <del>22.12</del> 21.12                                                                                        | Place label on IV solution container and record appropriately.                                                                                                                            |
| <del>22.13</del> 21.13                                                                                        | Perform <u>a</u> quality control check of <u>the</u> completed product.                                                                                                                   |
| <del>22.14</del> 21.14                                                                                        | Convey an understanding of the proper storage and disposal requirements of reconstituted and non-reconstituted IV solutions.                                                              |
| <del>22.15</del> 21.15                                                                                        | Convey an understanding of the proper storage and disposal of hazardous drugs.                                                                                                            |
| <del>22.16</del> 21.16                                                                                        | Summarize, evaluate, and describe the <u>technician's</u> role <del>of the technician</del> in quality assurance activities <del>as</del> related to the preparation of sterile products. |
| <u>21.17 Understand the concept of Diversion Surveillance to assist in recognizing controlled substances.</u> |                                                                                                                                                                                           |
| <del>23.0</del> 22.0                                                                                          | Recognize consumer economic activities. -The student will be able to:                                                                                                                     |
| <del>23.01</del> 22.01                                                                                        | Identify basic concepts of the American economic system.                                                                                                                                  |
| <del>23.02</del> 22.02                                                                                        | Identify basic types and sources of consumer credit.                                                                                                                                      |
| <del>24.0</del> 23.0                                                                                          | Perform decision-making activities. -The student will be able to:                                                                                                                         |
| <del>24.01</del> 23.01                                                                                        | Demonstrate the ability to determine the <del>roper</del> proper priority of work.                                                                                                        |
| <del>24.02</del> 23.02                                                                                        | Prepare a day's schedule for the employer.                                                                                                                                                |
| <del>24.03</del> 23.03                                                                                        | Choose appropriate action in situations requiring application of business ethics.                                                                                                         |
| <del>24.04</del> 23.04                                                                                        | Choose appropriate action in situations requiring following a chain of command.                                                                                                           |

|                               |                                                                                                                         |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <del>24.05</del> <u>23.05</u> | Choose appropriate action in situations requiring effective time management.                                            |
| <del>25.0</del> <u>24.0</u>   | Demonstrate leadership skills. -The student will be able to:                                                            |
| <del>25.01</del> <u>24.01</u> | Prepare an agenda and minutes.                                                                                          |
| <del>25.02</del> <u>24.02</u> | Demonstrate the ability to conduct an orderly meeting.                                                                  |
| <del>25.03</del> <u>24.03</u> | Greet and introduce individuals.                                                                                        |
| <del>25.04</del> <u>24.04</u> | Demonstrate ability to give clear directions, fair assignments, and constructive criticism.                             |
| <del>25.05</del> <u>24.05</u> | Demonstrate ability to manage a team.                                                                                   |
| <del>26.0</del> <u>25.0</u>   | Identify, classify, and demonstrate management activities. -The student will be able to:                                |
| <del>26.01</del> <u>25.01</u> | Define management.                                                                                                      |
| <del>26.02</del> <u>25.02</u> | Identify various management positions.                                                                                  |
| <del>26.03</del> <u>25.03</u> | Identify various management styles.                                                                                     |
| <del>26.04</del> <u>25.04</u> | Identify the major functions of management.                                                                             |
| <del>26.05</del> <u>25.05</u> | Classify activities as part of the planning function of management.                                                     |
| <del>26.06</del> <u>25.06</u> | Classify activities as part of the organizing function of management.                                                   |
| <del>26.07</del> <u>25.07</u> | Classify activities as part of the staffing function of management.                                                     |
| <del>26.08</del> <u>25.08</u> | Classify activities as part of the directing function of management.                                                    |
| <del>26.09</del> <u>25.09</u> | Classify activities as part of the controlling function of management.                                                  |
| <del>26.10</del> <u>25.10</u> | Demonstrate the ability to perform planning, organizing, staffing, directing, and controlling activities of management. |
| <del>26.11</del> <u>25.11</u> | Demonstrate knowledge of the relationship between authority and responsibility to task accomplishment.                  |
| <del>26.12</del> <u>25.12</u> | Select the most effective communication systems.                                                                        |
| <del>26.13</del> <u>25.13</u> | Identify problems and make appropriate decisions.                                                                       |
| <del>26.14</del> <u>25.14</u> | Identify how to build and maintain a network inside and outside of your organization.                                   |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Clinical practicum experiences are an integral part of this program.

### Special Notes

This program must be approved by the Board of Pharmacy. Program completers who wish to work as Pharmacy Technicians in the State of Florida must register with the Board of Pharmacy (465.014, F.S.).

Due to the clinical experiences students are engaged in through the program and to ensure the safety of both the students and the patients the recommended student to instructor ratio in the classroom is 20:1 and in the lab is 4:1.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

It is recommended that program completers take national pharmacy technician certification exam offered by the Pharmacy Technician Certification Board, 2215 Constitution Ave, Washington, DC 20037-2985, (202) 429-7576. This certification is offered three times annually.

Cooperative training - OJT is appropriate for this program. When cooperative training is offered, the following is required for each student: a training plan, signed by the student, instructor and employer which includes instructional objectives and a list of on-the-job and in-school learning experiences; a workstation which reflects equipment, skills and tasks which are relevant to the occupations which the student has chosen as a career goal. **Students must receive compensation for work performed.**

The CORE should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

## **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

## **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Physical Therapist Assistant  
**Career Cluster:** Health Science

**AS** Associate in Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as physical therapist assistants.

The content includes but is not limited to the requirements of the Commission on Accreditation in Physical Therapy Education/~~American Physical Therapy Association, 1111 North Fairfax Street~~ (<https://www.captonline.org/>), 3030 Potomac Avenue, Suite 100, Alexandria, VA ~~22314, (703) 684-22305, (800) 999-2782~~.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of 74 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

### **Regulated Programs**

~~The~~A graduate of this program is prepared to ~~make an application to the Florida~~apply to the Federation of State Boards of Physical Therapy for the National Physical Therapy Exam (<https://www.fsbpt.org/>) and the Florida Board of Physical Therapy for the Physical Therapist Assistant licensingLicensure examination ~~which is given by the Florida Department of Health, Board of Physical Therapy Practice.~~(<https://floridasphysicaltherapy.gov/>).

## Florida's Career Readiness Skills for CTE Programs

**Job Attainment****10.0 Find, assess and apply to job opportunities.**10.01 Identify online job posts relevant to his or her career aspirations.10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.10.03 Define what information, documentation and writing prompts are required for the positions.**11.0 Communicate personal competence, character and fit for a job opportunity.**11.01 Develop a resume.11.02 Write a cover letter.11.03 Curate a professional portfolio that includes work products.11.04 Prepare for and experience a mock job interview.**12.0 Cultivate and leverage relationships to professionally advance.**12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.12.02 Develop a plan to cultivate a professional digital footprint.12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

### Health Science Core (Standards 1-11)

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Describe anatomical structure, function, and dysfunction of the human body related to the practice of physical therapy.
- 13.0 Demonstrate ethical, legal, and legal professional standards of practice as a physical therapist assistant.
- 14.0 Demonstrate the knowledge and skills necessary to provide comprehensive patient/client management and implement a comprehensive plan of care as established by a physical therapist.
- 15.0 Demonstrate competence in implementing selected components of interventions identified in the plan of care established by a physical therapist—to achieve patient/client goals and outcomes for the following: Cardiovascular conditions, Pulmonary conditions, Neurological conditions, Musculoskeletal conditions, Integumentary and lymphatic conditions, Metabolic conditions, Growth and human development, Pain and pain experiences.
- 16.0 Demonstrate competence in performing components of data collection skills essential for carrying out the plan of care by administering appropriate tests, ~~measures~~, and ~~outcome~~ (measuring outcomes before, during, and after interventions).
- 17.0 Participate in the ~~health care~~ healthcare environment as a member of a patient/client-centered interprofessional collaborative team.

Florida Department of Education  
Student Performance Standards

**Program Title:** Physical Therapist Assistant  
**CIP Number:** 1351080601  
**Program Length:** 74 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

To ensure consistency whenever these courses are offered, the ~~health-science-core~~ Health Science Core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

**At the completion of this program, the student will be able to:**

12.0 Describe anatomical structure, function, and dysfunction of the human body related to the practice of physical therapy. -The student will be able to:

12.01 Label the following topographic terms:

- ~~Medial~~
- medial
- lateral
- proximal
- distal
- superior
- inferior
- anterior
- posterior
- midline
- right and left
- bilateral

~~12.02 Describe the life support chain and recognize the differences between Aerobic and Anaerobic metabolism.~~

~~12.03~~ 12.02 Identify and describe the anatomical structures and functions as related to physical therapy interventions and patient/client outcomes, their possible adverse effects ~~or~~ complications, and ~~effects of therapy on the~~ how interventions may influence other body systems ~~effor~~ the following:

- ~~Circulatory~~/Cardiovascular system
- Endocrine and metabolic ~~system~~ systems

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Gastrointestinal/<del>Digestive</del> system</li> <li>• Genital and Reproductive <del>system</del><u>systems</u></li> <li>• Hematologic system</li> <li>• <u>Hepatic and Biliary systems</u></li> <li>• <u>Immune</u> system</li> <li>• <del>Immune System</del></li> <li>• Integumentary system</li> <li>• Lymphatic <del>System</del><u>system</u></li> <li>• Musculoskeletal <del>System</del><u>system</u></li> <li>• <del>Nervous System</del></li> <li>• <del>Respiratory System</del></li> <li>• <u>Neurological system</u></li> <li>• <u>Pulmonary system</u></li> <li>• Renal and Urologic systems</li> </ul> |
| 12.04 | 12.03 Demonstrate an understanding of how to apply foundational knowledge of medical/surgical conditions <del>that supports by</del> <u>identifying pathological conditions, their impact on patient/client function, and the selection of interventions that support</u> appropriate and effective patient/client management for rehabilitation across the lifespan <u>within the Physical Therapy plan of care.</u>                                                                                                                                                                                                                                           |
| 13.0  | Demonstrate ethical, <u>legal</u> , and <del>legal</del> <u>professional</u> standards of practice as a physical therapist assistant. -The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 13.01 | Act in a manner that is consistent with the American Physical Therapy Association's Standards of Ethical Conduct for the Physical Therapist Assistant, <u>ensuring adherence to professional conduct in all interactions.</u>                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 13.02 | Demonstrate an understanding of the laws and regulations governing the profession of physical therapy in Florida Statute and other laws and regulations including but not limited to ADA, IDEA, HIPAA, and Patients' Bill of Rights.                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 13.03 | Practice under the direction and supervision of a <u>Licensed</u> Physical Therapist (PT), <u>maintaining a collaborative relationship in the delivery of care.</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 13.04 | Demonstrate behaviors <del>consistent</del> <u>that align</u> with the American Physical Therapy Association's Core Values for the Physical Therapist Assistant, <u>including accountability, altruism, compassion, and integrity.</u>                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 13.05 | <del>Demonstrate awareness of</del> <u>Recognize and uphold</u> the <del>patient/client's need for</del> dignity and independence <u>of patients/clients, respecting their autonomy in decision-making.</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 13.06 | Recognize and appropriately respond to <u>verbal and non-verbal</u> patient/client expressions of discomfort, spoken or unspoken (body language).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 13.07 | Demonstrate sensitivity to the patient/client's emotional <del>response</del> <u>responses.</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 13.08 | Recognize own <del>reaction</del> <u>bias</u> to the patient/client's illness or disability and understand how that may affect treatment outcome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 13.09 | Recognize patient/client's and <del>family's</del> <u>caregiver's emotional, psychological, and social</u> reactions to illness and disability.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 13.10 | Demonstrate sensitivity to individual, cultural, religious and socio-economic differences in <del>people</del> <u>patients/clients, caregivers, and colleagues, fostering an inclusive environment.</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|       |                                                                                                                                                                                                                                                                                                                                                                       |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.11 | Identify <del>scope of responsibility of</del> the physical therapist <del>assistant</del> <u>assistant's role/scope</u> as it relates to patient/client care, departmental function, <del>the physical therapist,</del> <u>direction</u> and <del>the supervision, and</del> unlicensed personnel <del>and understand the roles of other healthcare providers.</del> |
| 13.12 | Determine <u>and recognize</u> tasks and duties that are beyond the scope of practice for the physical therapist assistant <u>and communicate appropriately with the supervising physical therapist.</u>                                                                                                                                                              |
| 13.13 | Communicate information effectively to the patient, <del>appropriate/client,</del> caregiver, <del>and</del> healthcare delivery personnel, <u>and other relevant stakeholders.</u>                                                                                                                                                                                   |
| 13.14 | Utilize equipment and resources <u>safely,</u> efficiently, and effectively in the delivery of healthcare.                                                                                                                                                                                                                                                            |
| 13.15 | Manage time effectively <u>in all aspects of healthcare.</u>                                                                                                                                                                                                                                                                                                          |
| 13.16 | Adhere to <u>all relevant</u> legal practice standards, including all federal, state, and institutional regulations related to patient/client care, <u>documentation,</u> and fiscal management.                                                                                                                                                                      |
| 13.17 | Report to appropriate authorities suspected cases of abuse <u>or neglect</u> of vulnerable populations.                                                                                                                                                                                                                                                               |
| 13.18 | Report to appropriate authorities suspected cases of fraud and abuse related to payment for physical therapy and other <del>health</del> <u>healthcare</u> services.                                                                                                                                                                                                  |
| 13.19 | Implement, in response to an ethical situation, a plan of action that demonstrates sound moral reasoning congruent with core professional ethics and values.                                                                                                                                                                                                          |
| 13.20 | Apply current knowledge, theory, and clinical judgment <u>including evidence-based practice,</u> while considering the patient/client perspective and the environment, based on the plan of care established by the physical therapist.                                                                                                                               |
| 13.21 | Identify basic concepts in professional literature including, but not limited to, validity, reliability, and level of statistical significance.                                                                                                                                                                                                                       |
| 13.22 | Identify and integrate appropriate evidence-based resources <del>to support</del> <u>into</u> clinical decision-making <del>for progress of the</del> <u>to optimize</u> patient/client <del>within care and support the achievement of goals outlined in</del> the plan of care established by the physical therapist.                                               |
| 13.23 | Participate in professional and community organizations that provide opportunities for volunteerism, advocacy <del>and,</del> leadership, <u>and professional growth.</u>                                                                                                                                                                                             |
| 13.24 | Identify career development and lifelong learning opportunities, including the role of the physical therapist assistant in the clinical education of physical therapist assistant students.                                                                                                                                                                           |
| 14.0  | Demonstrate the knowledge and skills necessary to provide comprehensive patient/client management and implement a comprehensive plan of care as established by a physical therapist. -The student will be able to:                                                                                                                                                    |
| 14.01 | Contribute to the <del>discharge planning related to</del> <u>discontinuation of</u> the <del>plan</del> <u>episode</u> of care <u>and follow-up planning as directed by the supervising physical therapist.</u>                                                                                                                                                      |
| 14.02 | Review patient/client medical <del>record</del> <u>records</u> and <u>the</u> plan of care <del>and to</del> identify pertinent information related to the patient/ <del>clients'</del> <u>client's</u> diagnosis.                                                                                                                                                    |
| 14.03 | Collaborate with <del>patient</del> <u>patients</u> /clients, caregivers, <u>and</u> other <del>appropriate</del> healthcare personnel, <del>and family</del> to obtain current information and report relevant <del>information</del> <u>findings</u> to the supervising <del>PT</del> <u>physical therapist.</u>                                                    |
| 14.04 | Identify indications, precautions, and contradictions for each treatment/procedure and apply appropriate interventions: <u>within the scope of the plan of care.</u>                                                                                                                                                                                                  |
| 14.05 | Report any changes in patient/client status or progress to the supervising physical therapist and other appropriate healthcare personnel <del>- in a timely manner.</del>                                                                                                                                                                                             |

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 15.08                  | Perform <del>acceptable portions of</del> wound management <u>within the physical therapist assistant scope of practice.</u>                                                                                                                                              |
| 15.09                  | Measure and properly fit assistive devices.                                                                                                                                                                                                                               |
| 15.10                  | Perform gait training <del>locomotion training</del> in household and community environments with appropriate assistive device(s) <del>or wheelchair.</del>                                                                                                               |
| 15.11                  | <u>Perform appropriate wheelchair assessment and locomotion training in household and community environments.</u>                                                                                                                                                         |
| <del>15.11</del> 15.12 | Describe the therapeutic benefits of exercise.                                                                                                                                                                                                                            |
| <del>15.12</del> 15.13 | <del>Define orthotics</del> <u>Identify orthotic</u> and prosthetic devices and state the importance of proper fit and <del>checking</del> <u>assessment of</u> skin integrity.                                                                                           |
| <del>15.13</del> 15.14 | <del>Describe</del> upper and lower extremity prosthetics in terms of types of amputations.                                                                                                                                                                               |
| <del>15.14</del> 15.15 | Identify common problems in orthotic and prosthetic management and apply decision-making skills in dealing effectively with them.                                                                                                                                         |
| <del>15.15</del> 15.16 | Instruct patient, client or <del>care giver</del> <u>caregiver</u> in orthotic and prosthetic management and assist patient/client in problem-solving techniques.                                                                                                         |
| <del>15.16</del> 15.17 | Perform airway clearance techniques and instruct patient/client in proper coughing and breathing exercises.                                                                                                                                                               |
| 15.17                  | <del>Describe action required to remediate barriers based on the plan of care established by the Physical Therapist.</del>                                                                                                                                                |
| 15.18                  | Effectively educate others using teaching methods that are commensurate with the needs of the patient/client, caregiver, or healthcare personnel.                                                                                                                         |
| 15.19                  | Demonstrate appropriate use of medical terminology and layman's terms.                                                                                                                                                                                                    |
| 15.20                  | Define and describe the importance of the following terms: <ul style="list-style-type: none"> <li>• disinfect</li> <li>• sterilize</li> <li>• germicide</li> <li>• <del>vaccinate</del></li> <li>• <del>immunize</del></li> <li>• antiseptic</li> <li>• septic</li> </ul> |
| 15.21                  | Demonstrate appropriate isolation, sterile techniques, and disinfection of equipment.                                                                                                                                                                                     |
| 15.22                  | State the therapeutic temperature range for modalities in which temperature is a guideline for application.                                                                                                                                                               |

|       |                                                                                                                                                                                                                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15.23 | Identify physiological effects of heat vs. cold applications.                                                                                                                                                                                                                                                      |
| 15.24 | Demonstrate appropriate therapeutic use of biophysical agents including biofeedback, electrotherapeutic agents, compression therapies, cryotherapy, hydrotherapy, superficial and deep thermal agents, traction, and light therapies.                                                                              |
| 15.25 | <u>Describe the therapeutic actions and side effects of commonly used pharmacological agents in rehabilitation.</u>                                                                                                                                                                                                |
| 16.0  | Demonstrate competence in performing components of data collection skills essential for carrying out the plan of care by administering appropriate tests, <del>measures</del> , and <del>outcome measures</del> ( <u>measuring outcomes</u> before, during, and after interventions). The student will be able to: |
| 16.01 | Recognize and describe normal and abnormal motor behavior.                                                                                                                                                                                                                                                         |
| 16.02 | <del>-</del> Detect and describe normal and abnormal joint movement.                                                                                                                                                                                                                                               |
| 16.03 | Perform appropriate measurement and assessment techniques within the knowledge and limits of practice to assist the supervising <del>Physical Therapist</del> <u>physical therapist</u> in monitoring and modifying the plan of care.                                                                              |
| 16.04 | Recognize gait deviations and compensatory strategies.                                                                                                                                                                                                                                                             |
| 16.05 | <del>-</del> Demonstrate competence in performing components of data collection skills essential for carrying out the plan of care such as standard vital signs, perceived exertion scales, anthropometrical characteristics, and mental functions.                                                                |
| 16.06 | Perform goniometric measurement.                                                                                                                                                                                                                                                                                   |
| 16.07 | Identify which environmental factors are potential architectural barriers.                                                                                                                                                                                                                                         |
| 16.08 | Determine which architectural barriers will impact a patient/client's functional level including the use of ambulatory/mobility equipment.                                                                                                                                                                         |
| 16.09 | Document all aspects of treatment using <u>the</u> correct format, content, and terminology.                                                                                                                                                                                                                       |
| 16.10 | Appropriately recognize and monitor responses to positional changes and activities (e.g., orthostatic hypotension, <del>response to</del> <u>and</u> exercise).                                                                                                                                                    |
| 16.11 | Identify the <del>individual's</del> <u>patient/client's</u> and caregiver's ability to care for the assistive equipment, prosthetics and orthotics; recognize changes in skin condition and safety factors while using devices and equipment.                                                                     |
| 16.12 | Determine the safety, status, and progression of patients/ <u>clients</u> while engaged in gait, locomotion, balance, wheelchair management, and mobility.                                                                                                                                                         |
| 16.13 | Detect absent or altered sensation; normal and abnormal integumentary changes; activities, positioning, and postures that aggravate or relieve pain or altered sensations, or that can produce associated skin trauma; and recognize viable versus nonviable tissue.                                               |
| 16.14 | Measure muscle strength by manual muscle testing; observe the presence or absence of muscle mass; <u>and</u> recognize normal and abnormal muscle length, and changes in muscle tone.                                                                                                                              |
| 16.15 | Administer standardized questionnaires, graphs, behavioral scales, or visual analog scales for pain; recognize activities, positioning, and postures that aggravate or relieve pain or altered sensations.                                                                                                         |
| 16.16 | Determine normal and abnormal alignment of trunk and extremities at rest and during activities.                                                                                                                                                                                                                    |

|                               |                                                                                                                                                                                                                                                      |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.17                         | Detect signs and symptoms of respiratory distress, and activities that aggravate or relieve edema, pain, dyspnea, or other symptoms; describe thoracoabdominal movements and breathing patterns with activity, and cough and sputum characteristics. |
| 16.18                         | Respond efficiently and effectively to patient/client and environmental emergencies that commonly occur in the clinical setting.                                                                                                                     |
| 17.0                          | Participate in the <del>health-care</del> <u>healthcare</u> environment as a member of a patient/client-centered interprofessional collaborative team. -The student will be able to:                                                                 |
| 17.01                         | Prepare patient/ <del>clients</del> <u>client</u> and treatment areas <del>and-ensures</del> <u>to ensure</u> equipment is in proper working order.                                                                                                  |
| 17.02                         | Clean and check operation of wheelchairs, assistive devices, treatment tables, electrical equipment, etc.                                                                                                                                            |
| 17.03                         | Demonstrate how to properly operate patient/client equipment.                                                                                                                                                                                        |
| 17.04                         | Instruct in safety considerations for equipment <del>and-on</del> , indications, precautions, and contraindications of a specific physical therapy intervention.                                                                                     |
| 17.05                         | Implement appropriate patient/client safety <del>considerations</del> <u>precautions</u> related to the plan of care.                                                                                                                                |
| 17.06                         | Describe disciplines within the healthcare system and identify the roles of each discipline related to patient/client interventions.                                                                                                                 |
| 17.07                         | Describe the categories of healthcare agencies.                                                                                                                                                                                                      |
| 17.08                         | Recognize current issues, problems, and trends affecting the delivery of healthcare.                                                                                                                                                                 |
| <del>17.09</del>              | <del>Accurately and ethically charge for services provided.</del>                                                                                                                                                                                    |
| <del>17.10</del> <u>17.09</u> | Participate in performance improvement activities (quality assurance).                                                                                                                                                                               |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Laboratory work is structured so that students begin with basic patient/client care skills, progress to basic physical therapy skills and then to more advanced physical therapy application and techniques.

### Special Notes

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to [s. 456.0635, F.S.](#) for more information on disqualification for a license, certificate, or registration through the Department of Health.

The Health ~~Careers~~Science Core [\(Core\)](#) must be taken by all students ~~(secondary, postsecondary adult and postsecondary vocational)~~ planning to complete any Health Occupations program: [\(secondary and postsecondary\)](#). Once successfully completed, the ~~core~~Core does not need to be repeated at any instructional level.

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the ~~health care~~healthcare industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues, and health, safety, and environmental issues.

The cooperative method of instruction is not appropriate for this program.

The ~~CORE~~Health Science Core [\(Core\)](#) should be taken first in the program. Following the successful completion of the ~~core~~Core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### General Education Course Requirements for AS and AAS Degrees

State Board of Education Rule 6A-14.030([45 and 6](#)), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter,

to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded). The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~CTSOs are co-curricular career and technical student ~~organization~~organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Cardiovascular Technology  
**Career Cluster:** Health Science

**AS** Associate in Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as cardiovascular technologists and technicians.

The content includes but is not limited to instruction in performing examinations leading to diagnosis and treatment of patients with cardiovascular disease. A clinical component is a necessary element to a program. Reinforcement of basic skills in English, mathematics and science occurs through classroom instruction and applied laboratory practice.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of 77 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

| <a href="#"><u>09.08 Display positive attitude.</u></a>                                                |
| <a href="#"><u>09.09 Take responsibility for professional growth.</u></a>                              |

**Job Attainment****10.0 Find, assess and apply to job opportunities.**10.01 Identify online job posts relevant to his or her career aspirations.10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.10.03 Define what information, documentation and writing prompts are required for the positions.**11.0 Communicate personal competence, character and fit for a job opportunity.**11.01 Develop a resume.11.02 Write a cover letter.11.03 Curate a professional portfolio that includes work products.11.04 Prepare for and experience a mock job interview.**12.0 Cultivate and leverage relationships to professionally advance.**12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.12.02 Develop a plan to cultivate a professional digital footprint.12.03 Develop a networking plan for a specific industry of interest.

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the health care delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Explore career opportunities in one or more of the following: invasive cardiovascular technology (cardiac catheterization, invasive cardiac electrophysiology and non-invasive adult echocardiography, pediatric echocardiography, non-invasive vascular technology.
- 13.0 Identify the anatomic structure and function of body systems in relation to cardiovascular disease and studies.
- 14.0 Demonstrate the ability to recognize normal and abnormal electrocardiogram (EKG) rhythms and arrhythmias as each apply to intra-procedural therapies.
- 15.0 Practice safety and quality assurance.
- 16.0 Follow professional principles related to the practice of cardiovascular technology.
- 17.0 Use basic medical electronics and medical instrumentation.
- 18.0 Describe the role of the cardiovascular technologist in catastrophic event management.
- 19.0 Discuss the pharmacological aspects of cardiovascular drugs.
- 20.0 Perform patient care, record patient history and practice effective communication.

**One of the following sub-specialties must be added to the intended outcomes for students to complete the Cardiovascular Technology AS degree:**

- 21.0 Assist in all aspects of invasive cardiovascular diagnostic and interventional procedures and techniques with emphasis on ~~cardiovascular~~cardiac catheterization.
- 22.0 Perform noninvasive cardiovascular techniques with an emphasis on echocardiography.
- 23.0 Perform noninvasive peripheral vascular studies.
- 24.0 Perform noninvasive cardiovascular techniques with an emphasis on echocardiography related to the pediatric patient.
- 25.0 Assist in all aspects of cardiovascular electrophysiology procedure.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Cardiovascular Technology  
**CIP Number:** 1351090100  
**Program Length:** 77 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

| At the completion of this program, the student will be able to: |                                                                                                                                                                                                                                                                                                   |
|-----------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.0                                                            | Explore career opportunities in one or more of the following: invasive cardiovascular technology (cardiac catheterization, invasive cardiac electrophysiology and non-invasive adult echocardiography, pediatric echocardiography, non-invasive vascular technology. The student will be able to: |
| 12.01                                                           | Describe the CVT profession, including but not limited to, history, accreditation, education, job conditions, salaries, critical thinking and team building.                                                                                                                                      |
| 12.02                                                           | Identify the cardiovascular professional organizations and discuss their roles (SDMS, ASE, SVU, HRS, <a href="#">SCAI</a> , and ACVP).                                                                                                                                                            |
| 12.03                                                           | Discuss certification, licensure, <a href="#">credential</a> , and registration for the Cardiovascular Technologist.                                                                                                                                                                              |
| 12.04                                                           | Describe the sub-specialty of Invasive cardiovascular technology ( <del>Cardiovascular</del> <a href="#">Cardiac</a> Catheterization) and identify the duties of the Cardiovascular Invasive Specialist.                                                                                          |
| 12.05                                                           | Describe the sub-specialty of and identify the duties of the Cardiovascular Technologist.                                                                                                                                                                                                         |
| 12.06                                                           | Describe the sub-specialty of adult echocardiography and identify the duties of the Cardiovascular Technologist.                                                                                                                                                                                  |
| 12.07                                                           | Describe the sub-specialty of pediatric echocardiography and identify the duties of the Cardiovascular Technologist.                                                                                                                                                                              |
| 12.08                                                           | Describe the sub-specialty of Non-invasive Vascular technologist and identify the duties of the Cardiovascular Technologist.                                                                                                                                                                      |
| 12.09                                                           | Describe the sub-specialty of cardiac electrophysiology and identify the duties of the Cardiovascular Technologist.                                                                                                                                                                               |
| 13.0                                                            | Identify the anatomic structure and function of body systems in relation to cardiovascular disease and studies. The student will be able to:                                                                                                                                                      |

|       |                                                                                                                                                                                               |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.01 | Describe human anatomy and physiology with emphasis on the cardiovascular systems.                                                                                                            |
| 13.02 | Discuss principles and methods of disease transmission and prevention.                                                                                                                        |
| 13.03 | Identify normal and abnormal data obtained from medical tests.                                                                                                                                |
| 13.04 | Describe basic acquired and congenital pathological conditions of the cardiovascular systems.                                                                                                 |
| 14.0  | Demonstrate the ability to recognize normal and abnormal electrocardiogram (EKG) rhythms and arrhythmias as each apply to intra-procedural therapies. The student will be able to:            |
| 14.01 | Identify cardiac anatomy and the normal and abnormal electrical conduction pathways within the heart.                                                                                         |
| 14.02 | Identify the inherent rates of each segment of the nodal pathway of the heart.                                                                                                                |
| 14.03 | Identify the components of a normal cardiac cycle including the hemodynamic, mechanical and electrical components.                                                                            |
| 14.04 | Associate the action potential and each electrical segment of the EKG cycle (P wave, PR interval, QRS complex, ST segment, T wave, isoelectric line) to the mechanical function of the heart. |
| 14.05 | Explain how the PR interval and QRS complex are measured within the cardiac cycle.                                                                                                            |
| 14.06 | Identify sinus, atrial, junctional, supraventricular, and ventricular rhythms as well as heart blocks and paced rhythms.                                                                      |
| 14.07 | Correlate the clinical implications of arrhythmias to cardiac pathology.                                                                                                                      |
| 14.08 | Differentiate artifact, interference, and noise versus arrhythmia.                                                                                                                            |
| 14.09 | Identify the components of a 12-Lead EKG including appearance of infarct, ischemia and chamber enlargement.                                                                                   |
| 15.0  | Practice safety and quality assurance. The student will be able to:                                                                                                                           |
| 15.01 | Apply acceptable safety practices in cardiovascular instrumentation per employer and OSHA standards.                                                                                          |
| 15.02 | Demonstrate knowledge of radiation safety procedures.                                                                                                                                         |
| 15.03 | Demonstrate the practice of radiation safety procedures.                                                                                                                                      |
| 15.04 | Demonstrate knowledge of quality assurance as it relates to imaging equipment.                                                                                                                |
| 15.05 | Implement appropriate regulatory, institutional and department specific accreditation patient safety guidelines.                                                                              |
| 15.06 | Apply the knowledge of blood and air borne pathogens and the psychomotor skills to employ <del>Standard</del> <u>standard</u> precautions and safe practices to reduce occupational exposure. |
| 16.0  | Follow professional principles related to the practice of cardiovascular technology. The student will be able to:                                                                             |

|       |                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------|
| 16.01 | Carry out all responsibilities in the best interest of the patient in an excellent manner.                                        |
| 16.02 | Carry out assigned tasks conscientiously, honestly, enthusiastically, and accept responsibility for the task and the results.     |
| 16.03 | Function effectively as part of a team-adaptable to change and willing to teach others.                                           |
| 16.04 | Abide by the rules and procedures of the work site.                                                                               |
| 16.05 | Maintain a hygienic, professional appearance.                                                                                     |
| 16.06 | Demonstrate pride and loyalty to the profession.                                                                                  |
| 17.0  | Use basic medical electronics and medical instrumentation. The student will be able to:                                           |
| 17.01 | Identify the duties related to electronic monitoring and diagnostic testing of patient.                                           |
| 17.02 | Demonstrate computer literacy skills as applied to cardiovascular practice.                                                       |
| 17.03 | Operate equipment used in diagnostic testing, physiological monitoring and interventional procedures for cardiovascular patients. |
| 17.04 | Set up, calibrate, and operate selected equipment in the cardiovascular laboratory.                                               |
| 18.0  | Describe the role of the cardiovascular technologist in catastrophic event management. The student will be able to:               |
| 18.01 | Follow institutional catastrophic event protocol.                                                                                 |
| 18.02 | Respond to simulated emergency care situations encountered in a cardiovascular department.                                        |
| 18.03 | Identify the components of the defibrillator and how it is used.                                                                  |
| 18.04 | Cite the indications for cardiac defibrillation and cardioversion.                                                                |
| 18.05 | <a href="#">Demonstrate working Knowledge of ACLS algorithms.</a>                                                                 |
| 19.0  | Discuss the pharmacological aspects of cardiovascular drugs. The student will be able to:                                         |
| 19.01 | State the mechanism of action of selected cardiovascular drugs.                                                                   |
| 19.02 | Identify and describe uses of pharmacological agents on an emergency "crash" cart.                                                |
| 19.03 | Use needles and syringes in preparing medications for administration in simulated practice.                                       |
| 20.0  | Perform patient care, record patient history and practice effective communication. The student will be able to:                   |
| 20.01 | Perform patient identification and time-out procedures.                                                                           |

|                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| 21.07                                                                                                                                                          | Demonstrate the knowledge of interventional procedures in the <del>cardiovascular Cathcath</del> lab including, but not limited to, angioplasty, stent implantation, thrombectomy, <del>IABP (intraaortic balloon pumping), mechanical circulatory support devices,,</del> valvuloplasty, pericardiocentesis, atherectomy, <del>closure devices,</del> vena cava filters, LVADs, and structural heart procedures.                                                                                                                                                                                       |

|       |                                                                                                                                                                                                                                                                                                                       |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21.08 | Describe catheter insertion techniques and assist physician with manipulation of catheterization equipment and instruments during the procedures.                                                                                                                                                                     |
| 21.09 | Recognize cardiovascular anatomy through angiography and assess cardiovascular status from the data.                                                                                                                                                                                                                  |
| 21.10 | Recognize and interpret cardiovascular hemodynamic parameters and record and measure left and right heart and vascular pressures.                                                                                                                                                                                     |
| 21.11 | Determine cardiac output and cardiac index by Fick equation, thermodilution technique and angiographic technique and perform Hemodynamic calculations.                                                                                                                                                                |
| 21.12 | Perform calculations which include, but are not limited to, mean arterial pressure, ejection fraction regurgitation fraction, valve area using Gorlin formula and pulmonary and systemic vascular resistances.                                                                                                        |
| 21.13 | Recognize presence of shunts by oximetry and perform shunt calculations.                                                                                                                                                                                                                                              |
| 21.14 | Discuss permanent and temporary pacemaker protocols.                                                                                                                                                                                                                                                                  |
| 21.15 | Correlate and calculate necessary data from right and left heart and vascular catheterization and assess the cardiovascular status from this information.                                                                                                                                                             |
| 21.16 | Demonstrate acceptable post-Cath care of the patient and catheterization access <del>site(s)</del> .                                                                                                                                                                                                                  |
| 21.17 | Identify complications which occur during cardiovascular catheterization procedures and describe treatment options.                                                                                                                                                                                                   |
| 21.18 | Describe and perform venipuncture to initiate intravenous fluid therapy on a venipuncture model, where applicable. (Optional)                                                                                                                                                                                         |
| 21.19 | Maintain and troubleshoot existing intravenous/intra-arterial lines, where applicable. (Optional)                                                                                                                                                                                                                     |
| 21.20 | Demonstrate knowledge of basic x-ray history, theory, production, radiation biology and protection.                                                                                                                                                                                                                   |
| 21.21 | Demonstrate knowledge of patient assessment and practice patient care of the invasive Cardiovascular patient, including but not limited to basic assessment, history and physical, vital signs, lab values, CNS assessment, CVS assessment, peripheral vascular assessment etc.                                       |
| 21.22 | Demonstrate the knowledge associated with cardiovascular catheterization procedures, including but not limited to Pre and post-cardiovascular catheterization patient care, monitoring and recording, manipulation of imaging equipment, image acquisition quality control, scrubbing, and circulating.               |
| 21.23 | Perform the psychomotor clinical skills associated with cardiovascular catheterization procedures, including but not limited to Pre and post-cardiovascular catheterization patient care, monitoring and recording, manipulation of imaging equipment, image acquisition quality control, scrubbing, and circulating. |
| 21.24 | Demonstrate knowledge of the pharmacologic principles and medications required to function in the cardiovascular Cath labs including pharmacology calculations and IV fluid therapy.                                                                                                                                  |
| 21.25 | Administer medications during cardiovascular catheterization procedures under the direction of the physician.                                                                                                                                                                                                         |
| 21.26 | Demonstrate knowledge and skills of ACLS protocols.                                                                                                                                                                                                                                                                   |

|                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21.27                                                                                                                                                   | Demonstrate knowledge of the congenital and acquired cardiovascular diseases and their treatments found in cardiovascular patients.                                                                                                                                                                                    |
| <del>21.28</del>                                                                                                                                        | <del>Demonstrate knowledge of arterial and venous blood gas and acid-base physiology; identify normal and abnormal blood gas values, interpret blood gas and acid-base data, outline steps in collecting arterial and venous blood samples, where applicable. (Optional)</del>                                         |
| <del>21.29</del> 21.28                                                                                                                                  | Discuss the main components of the <del>blood-clotting</del> coagulation cascade, how different pathology and pharmacological agents affect the process, and how manual, mechanical, and <del>invasive arterial</del> vascular closure <del>methods relate</del> devices are <del>related</del> to post-op hemostasis. |
| <del>21.30</del> 21.29                                                                                                                                  | Demonstrate knowledge of patient preparation, sterile technique, instrumentation, and basic device function for PPM and ICD procedures.                                                                                                                                                                                |
| <b>**For those programs which include the adult echocardiography sub-specialty, these student performance standards are necessary:</b>                  |                                                                                                                                                                                                                                                                                                                        |
| 22.0                                                                                                                                                    | Perform noninvasive cardiovascular techniques with an emphasis on echocardiography. The student will be able to:                                                                                                                                                                                                       |
| 22.01                                                                                                                                                   | Relate normal and abnormal heart sounds to specific cardiac pathology.                                                                                                                                                                                                                                                 |
| 22.02                                                                                                                                                   | Assist in performance of stress electrocardiography and explain indications, contraindications, and positive and negative test results.                                                                                                                                                                                |
| 22.03                                                                                                                                                   | Assist in performance of ambulatory electrocardiography, explain indications, and test results.                                                                                                                                                                                                                        |

| 25.10 | Identify and properly utilize surgical instruments while assisting with <del>internal cardiac device implants</del> <a href="#">implantable electronic devices.</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 25.11 | Identify the ionic properties of the cardiac action potential and the changes to the action potential associated with abnormal values.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 25.12 | Identify the normal refractory periods of the nodes and tissue and describe the effects that antiarrhythmics may have on them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 25.13 | Identify intra-cardiac electrograms from the right and left atrium, at the AV node, bundle of His, right and left ventricles and in the coronary sinus.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 25.14 | Identify and describe the mechanism and perform differential diagnosis of cardiac arrhythmias including, but not limited to, ventricular tachycardia, AV nodal reentrant tachycardia, AV reentrant tachycardia, atrial flutter and atrial fibrillation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 25.15 | Perform stimulation protocols and identify pharmacology used for induction, termination, and differential diagnosis of arrhythmias, including but not limited to, ventricular tachycardia's (ischemic, RVOT-VT, idiopathic LV VT & BBRT), AV nodal reentrant tachycardia, AV reentrant tachycardia, atrial flutter and atrial fibrillation.                                                                                                                                                                                                                                                                                                                                                                                 |
| 25.16 | Demonstrate knowledge of the pharmacologic principles and medications used for the care of patients in the cardiac electrophysiology lab.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 25.17 | Demonstrate knowledge of differential diagnosis techniques and treatment of congenital arrhythmias, including but not limited to, Brugada Syndrome, Long QT syndrome, Arrhythmogenic Right Ventricular Dysplasia and Wolf-Parkinson-White.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 25.18 | Identify the coronary venous system utilizing radiographic and angiographic imaging.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 25.19 | Identify venous and arterial hemodynamic waveforms while performing trans-septal puncture and respond appropriately to recognized data.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 25.20 | Perform in the record role, demonstrating knowledge of acquisition and evaluation of data, stimulator operations, and provide differential diagnosis of arrhythmias during electrophysiology and internal cardiac device procedures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 25.21 | Demonstrate the ability to perform basic internal cardiac device programmer operations, including interrogation, diagnostic information retrieval, pacing & sensing thresholds, and emergency pacing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 25.22 | Analyze diagnostic data and results of functional testing retrieved from pacemakers and internal cardiac devices.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 25.23 | Demonstrate appropriate post-procedure care for venous/arterial access sites and/or electrophysiology procedures or <del>internal cardiac device implant sites.</del> <a href="#">Cardiac implantable electronic devices.</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 25.24 | Demonstrate knowledge of basic x-ray history, theory, production, biology, and patient/employee safety.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 25.25 | Demonstrate critical behaviors and knowledge of quality control while manipulating imaging equipment, and providing image acquisition during diagnostic/interventional electrophysiology procedures and internal cardiac device implants.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|       |                                                                                                                                                                                                                                                                                 |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 25.26 | Identify mapping technologies and theories currently used in ablation procedures: To include impedance based, hybrid and electromagnetically derived systems. Mapping theories such as: anatomical, <a href="#">activation</a> , high definition, voltage, isochronal, and CFE. |
| 25.27 | Identify the difference between bipolar and unipolar electrograms, including current filtering utilization.                                                                                                                                                                     |
| 25.28 | Demonstrate basic knowledge of ICE (Intracardiac echocardiography) applications currently used during electrophysiology procedures.                                                                                                                                             |
| 25.29 | Demonstrate knowledge of procedural focused aspects of the <del>transeptal</del> <a href="#">transseptal</a> procedure used in EP labs. Including but limited to: Anatomical locations, equipment currently used, complications, indications, monitoring and scrub duties.      |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

Basic preparation in English, Mathematics, and the Sciences are recommended prior to entering the Cardiovascular/Cardiopulmonary professional component of the curriculum. The following courses with an (\*) marking those thought to be essential. (Prerequisite courses required to complete the program must be included in the listed program length credits.

- \_ English - Composition\*
- \_ Communications - Speech
- \_ Electronic
- \_ Oral Biology
- \_ Anatomy & Physiology - General\*
- \_ Math - Algebra \*
- \_ Chemistry\*
- \_ Physics\*
- \_ Microbiology
- \_ Psychology - Social Skills
- \_ Computers (health informatics)
- \_ Keyboarding
- \_ Word processing
- \_ Hardware & systems
- \_ Software
- \_ Humanities - as required for graduation

Cardiovascular/cardiopulmonary technology educational programs will address one or more of the five basic sub-specialties: 1) invasive cardiovascular technology, 2) adult echocardiography) pediatric echocardiography, 4) noninvasive vascular study and 5) cardiac electrophysiology. Cardiopulmonary technology should include the additional component of pulmonary function testing. The Cardiovascular/Cardiopulmonary Technology Program may award an Associate of Applied Science (AAS) and/or Associate of Science (AS) degree within the program length guidelines. When the cardiovascular program competencies are offered, the program cannot exceed 77 credit hours.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal; therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

The program should meet the requirements of the American Medical Association and Commission on Accreditation of Allied Health Education Programs (CAAHEP), 1361 Park Street, Clearwater, Florida 33756, Phone: 727-210-2350, Fax: 727-210-2354 [www.CAAHEP.org](http://www.CAAHEP.org).

Graduates should be prepared to take the appropriate registry and/or state licensure examinations.

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The content includes but is not limited to all those objectives identified in the current U S Department of Transportation, National EMS Education Standards for both the EMT and Paramedic.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 73 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.

- Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

### **Regulated Programs**

The recommended instructor-student ratio may not exceed 1:6 pursuant to 401.1201, F.S. Clinical activity shall include appropriate patient assessment skills, intervention and documentation relevant to each clinical rotation.

This program meets the Department of Health trauma score card methodologies and Sudden Unexpected Infant Death Syndrome (SUIDS) training education requirements. Upon completion of this program, the instructor will provide a certificate to the student verifying that these requirements have been met. This program also meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

Management practicum shall be provided in an agency which will provide the student with the opportunity to observe and practice the learning objectives.

All students must satisfy the requirements of both the EMT and Paramedic certificates prior to completion of the associate's degree.

The medical procedures performed by a Paramedic must be performed under the direction of a licensed physician with appropriate emergency experience according to Chapter 64J, Florida Administrative Code (F.A.C.).

It is strongly recommended this program be accredited by Commission on Accreditation of Allied Health Education Programs (CAAHEP). Beginning January 1, 2013, National Registry for Emergency Medical Technicians (NREMT) will require students applying for Paramedic National certification to be from a CAAHEP/CoAEMSP accredited program.

"All EMR/EMT/Paramedic students are required to complete the 4-hour Traffic Incident Management Safety (TIMS) course at least once. This requirement can be fulfilled either as a prerequisite or as part of the curriculum, at the discretion of the EMS education program."

"It is highly recommended, though not mandatory, that courses in medical terminology, anatomy, and pharmacology be completed before enrolling in EMT and Paramedic training."

## Florida's Career Readiness Skills for CTE Programs

| <a href="#">09.0 Manage personal behavior to maximize productivity and professional growth.</a> |
| <a href="#">09.01 Demonstrate responsibility and self-discipline.</a>                           |
| <a href="#">09.02 Adapt and show flexibility.</a>                                               |
| <a href="#">09.03 Work independently.</a>                                                       |
| <a href="#">09.04 Demonstrate a willingness to learn.</a>                                       |
| <a href="#">09.05 Demonstrate integrity.</a>                                                    |
| <a href="#">09.06 Demonstrate professionalism.</a>                                              |
| <a href="#">09.07 Take initiative.</a>                                                          |
| <a href="#">09.08 Display positive attitude.</a>                                                |
| <a href="#">09.09 Take responsibility for professional growth.</a>                              |

**Job Attainment****10.0 Find, assess and apply to job opportunities.**10.01 Identify online job posts relevant to his or her career aspirations.10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.10.03 Define what information, documentation and writing prompts are required for the positions.**11.0 Communicate personal competence, character and fit for a job opportunity.**11.01 Develop a resume.11.02 Write a cover letter.11.03 Curate a professional portfolio that includes work products.11.04 Prepare for and experience a mock job interview.**12.0 Cultivate and leverage relationships to professionally advance.**12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.12.02 Develop a plan to cultivate a professional digital footprint.12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

### **EMT: Completion of intended outcomes 01-62 lead to the student's eligibility to sit for the licensure exam for EMT.**

- 01.0 Demonstrate a simple depth, foundational breadth of knowledge of EMS systems.
- 02.0 Demonstrate a simple depth, simple breadth of knowledge of research and evidence-based decision making.
- 03.0 Demonstrate a fundamental depth, foundational breadth of knowledge of workforce safety and wellness.
- 04.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the principles of medical documentation and report writing.
- 05.0 Demonstrate a simple depth, simple breadth of knowledge of the EMS communication system, communication with other health care professionals, and team communication.
- 06.0 Demonstrate a simple depth, simple breadth of knowledge of the principles of therapeutic communication.
- 07.0 Demonstrate a fundamental depth, foundational breadth of knowledge of medical legality and ethics.
- 08.0 Demonstrate a fundamental knowledge of the anatomy and function of all human systems to the practice of EMS.
- 09.0 Demonstrate a fundamental knowledge in the use of medical terminology.
- 10.0 Demonstrate a fundamental knowledge of the causes and pathophysiology of shock and the components of resuscitation.
- 11.0 Demonstrate a fundamental knowledge of life span development to patient assessment and management.
- 12.0 Demonstrate a simple knowledge of the principles of illness and injury prevention in emergency care.
- 13.0 Demonstrate a simple depth, simple breadth of knowledge of pharmacology, medication safety, and medication types used during an emergency.
- 14.0 Demonstrate a fundamental depth, simple breadth of knowledge of emergency medications within the scope of practice of the EMT.
- 15.0 Demonstrate a fundamental depth, foundational breadth of knowledge of respiration
- 16.0 Demonstrate a fundamental depth, foundational breadth of knowledge of airway management patients of all ages within the scope of practice of the EMT.
- 17.0 Demonstrate a fundamental depth, foundational breadth of knowledge of assessment and management utilizing ventilation, patients of all ages.
- 18.0 Demonstrate a fundamental depth, foundational breadth of knowledge of scene management and multiple patient situations.
- 19.0 Demonstrate a fundamental depth, simple breadth of knowledge of the primary assessment for all patient situations.
- 20.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the components of history taking.
- 21.0 Demonstrate a fundamental depth, foundational breadth of knowledge of techniques used for a secondary assessment.
- 22.0 Demonstrate a simple depth, simple breath of knowledge of monitoring devices within the scope of practice of the EMT.
- 23.0 Demonstrate a fundamental depth, foundational breadth of knowledge of how and when to perform a reassessment for all patient situations.
- 24.0 Demonstrate a simple depth, foundation breadth of knowledge of pathophysiology, assessment and management of medical complaints.
- 25.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of neurologic disorders/emergencies, patients of all ages.
- 26.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of abdominal and gastrointestinal disorders/emergencies, patients of all ages.
- 27.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of immunology disorders/emergencies, patients of all ages.

- 28.0 Demonstrate a simple depth, simple breadth of knowledge of the assessment and management of a patient who may have an infectious disease, patient of all ages.
- 29.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of endocrine disorders/emergencies, patients of all ages.
- 30.0 Demonstrate a fundamental depth, foundational breadth of knowledge regarding the assessment and management of psychiatric emergencies, patients of all ages.
- 31.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of cardiovascular emergencies, patients of all ages.
- 32.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of toxicological (poisoning and overdose) emergencies, patients of all ages.
- 33.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of respiratory disorders/emergencies, patients of all ages.
- 34.0 Demonstrate a simple depth, simple breadth of knowledge of the assessment, and management of hematology disorders, patients of all ages.
- 35.0 Demonstrate a simple in-depth, simple breath of knowledge of the assessment and management of genitourinary/ renal emergencies, patients of all ages.
- 36.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of gynecologic emergencies, patients of all ages.
- 37.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of non-traumatic fractures, patients of all ages.
- 38.0 Demonstrate a simple depth, simple breadth of knowledge of assessment and management of diseases of the eyes, ears, nose, and throat, patients of all ages.
- 39.0 Demonstrate a fundamental knowledge of the causes, pathophysiology, and management of shock and respiratory failure, patients of all ages
- 40.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of trauma, patients of all ages.
- 41.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of bleeding, patients of all ages.
- 42.0 Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment, and management of chest trauma, patients of all ages
- 43.0 Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment, and management of abdominal and genitourinary trauma, patients of all ages.
- 44.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of orthopedic, trauma patients of all ages.
- 45.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of soft tissue trauma, patients of all ages.
- 46.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of head, facial, neck, and spine trauma, patients of all ages.
- 47.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of nervous system trauma, patients of all ages

- 48.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of trauma patients with special considerations, patients of all ages.
- 49.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of environmental emergencies, patients of all ages.
- 50.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of multi-system trauma and blast injuries, patients of all ages.
- 51.0 Demonstrate a fundamental depth, foundational breadth of knowledge of management of the obstetric patient within the scope of practice of the EMT.
- 52.0 Demonstrate a fundamental depth, foundational breadth of knowledge of management of the newborn and neonatal patient within the scope of practice of the EMT.
- 53.0 Demonstrate a fundamental depth, fundamental breath of knowledge of management of the pediatric patient within the scope of practice of the EMT.
- 54.0 Demonstrate a fundamental depth, foundational breadth of knowledge of management of the geriatric patient within the scope of practice of the EMT.
- 55.0 Demonstrate a simple depth, simple breadth of knowledge of management of the patient with special challenges patients of all ages.
- 56.0 Demonstrate a simple depth, foundational breadth of knowledge of risks and responsibilities of transport.
- 57.0 Demonstrate a fundamental depth, fundamental breadth of knowledge of establishing and working within the incident management system.
- 58.0 Demonstrate a simple depth, foundational breadth of knowledge of responding to an emergency during a multiple casualty incident.
- 59.0 Demonstrate a simple depth, simple breadth of knowledge of safe air medical operations and criteria for utilizing air medical response.
- 60.0 Demonstrate a simple depth, simple breadth of knowledge for safe vehicle extrication and use of simple hand tools.
- 61.0 Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating in a cold zone at a hazardous material or other special incident.
- 62.0 Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating on the scene of a natural or man-made disaster.

**Paramedic: Completion of intended (outcomes 63-127) lead to the student's eligibility to sit for the licensure exam for Paramedic.**

- 63.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the History of EMS and a complex depth, comprehensive breadth of knowledge of EMS Systems.
- 64.0 Demonstrate a fundamental depth, foundational breath of knowledge of research principles to interpret literature and advocate evidence-based practice.
- 65.0 Demonstrate a complex depth, comprehensive breadth of knowledge of workforce safety and wellness.
- 66.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the principles of medical documentation and report writing.
- 67.0 Demonstrate a complex depth, comprehensive breadth of knowledge of EMS communication system.
- 68.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the therapeutic communication principles.
- 69.0 Demonstrate a complex depth, comprehensive breadth of knowledge of medical legal and ethical concepts related to EMS.
- 70.0 Integrate a comprehensive knowledge of anatomy and physiology of all human systems.
- 71.0 Integrate a comprehensive knowledge in the use of medical terminology and abbreviations into written and oral communication with health care professionals.
- 72.0 Demonstrate a complex knowledge of pathophysiology of major systems.
- 73.0 Integrate the knowledge of the physiological and sociological changes throughout human development.

- 74.0 Demonstrate a fundamental knowledge of the principles of public health.
- 75.0 Demonstrate a complex depth, comprehensive breadth of knowledge in the principles of pharmacology.
- 76.0 Demonstrate a complex depth, comprehensive breadth of knowledge of medication administration within the scope of practice of the paramedic.
- 77.0 Demonstrate a complex depth, comprehensive breadth of knowledge of emergency medications within the scope of practice for the paramedic.
- 78.0 Demonstrate a complex depth, comprehensive breadth of knowledge of airway management within the scope of practice of paramedic, patients of all ages.
- 79.0 Demonstrate a complex depth, comprehensive breadth of knowledge of respiration within the scope of practice of paramedic, patients of all ages.
- 80.0 Demonstrate a complex breadth, comprehensive breadth of knowledge of ventilator assessment and management, patients of all ages.
- 81.0 Demonstrate a complex depth, comprehensive breadth of knowledge of scene management.
- 82.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the primary assessment for all patient situations.
- 83.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the components of history taking.
- 84.0 Demonstrate a complex depth, comprehensive breadth of knowledge of techniques used for a secondary assessment, patients of all ages.
- 85.0 Demonstrate a fundamental depth, foundational breadth of knowledge of monitoring devices within the scope of practice of the paramedic.
- 86.0 Demonstrate a complex depth, comprehensive breadth of knowledge of how and when to perform a reassessment for all patient situations.
- 87.0 Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of medical complaints.
- 88.0 Demonstrate a complex depth, comprehensive breadth of knowledge of neurologic disorders/emergencies, patients of all ages.
- 89.0 Demonstrate a complex depth, comprehensive breadth of knowledge of abdominal and gastrointestinal disorders/emergencies, patients of all ages.
- 90.0 Demonstrate a complex depth, comprehensive breadth of knowledge of immunology disorders/emergencies, patients of all ages.
- 91.0 Demonstrate a complex depth, comprehensive breadth of knowledge of assessment and management of a patient who may have an infectious disease, patient of all ages.
- 92.0 Demonstrate a complex depth, comprehensive breadth of knowledge in endocrine disorders/emergencies, patients of all ages.
- 93.0 Demonstrate a complex depth, comprehensive breadth of knowledge regarding the assessment and management of psychiatric disorders/emergencies, patients of all ages.
- 94.0 Demonstrate a complex depth, comprehensive breadth of knowledge of cardiovascular disorders/ emergencies, patients of all ages.
- 95.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment and management of toxicology emergencies including psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and patients of all ages.
- 96.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment and management of respiratory disorders include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/ or emergencies associated with emergencies, patients of all ages.
- 97.0 Demonstrate a complex depth, foundational breadth of knowledge of the assessment and management of hematology disorders/ emergencies, patients of all ages.
- 98.0 Demonstrate a complex depth, comprehensive breadth of knowledge of genitourinary and renal emergencies to include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/or emergencies, patients of all ages
- 99.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment findings and the management of gynecology disorders Include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/or /emergencies, patients of all ages.

- 100.0 Demonstrate a fundamental depth, foundation breadth of knowledge of the assessment and management of non-traumatic fractures, patients of all ages
- 101.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of common or major diseases of the eyes, ears, nose, and throat, patients of all ages
- 102.0 Demonstrate the integration of a comprehensive knowledge of causes and pathophysiology into the management of shock (Include psychosocial aspects of age- related assessment and treatment modifications for pediatric and geriatric patients).
- 103.0 Demonstrate the integration of a comprehensive knowledge of causes and pathophysiology into the management of cardiac arrest and respiratory failure (Include psychosocial aspects of age- related assessment and treatment modifications for pediatric and geriatric patients).
- 104.0 Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment and management of the trauma, patient patients of all ages
- 105.0 Demonstrate a complex depth, comprehension breadth of knowledge of pathophysiology, assessment and management of bleeding, patients of all ages
- 106.0 Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of chest trauma, patients of all ages
- 107.0 Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of abdominal and genitourinary trauma, patients of all ages
- 108.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of orthopedic trauma, patients of all ages
- 109.0 Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of soft tissue trauma, patients of all ages. (Include psychosocial aspects of age- related assessment and treatment modifications for pediatric and geriatric patients).
- 110.0 Demonstrate a fundamental depth, foundational breadth of knowledge of head, face, neck, and spine trauma, patients of all ages.
- 111.0 Demonstrate a fundamental depth, foundational breadth of knowledge of nervous system trauma, patients of all ages.
- 112.0 Demonstrate a complex depth, comprehensive breadth of knowledge of special considerations in trauma, patients of all ages.
- 113.0 Demonstrate a complex depth, comprehensive breadth of knowledge of environmental emergencies, patients of all ages
- 114.0 Demonstrate a complex depth, comprehensive breadth of knowledge of multi-system trauma and blast injuries.
- 115.0 Demonstrate a complex depth, comprehensive breadth of knowledge of multi-system trauma and blast injuries.
- 116.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the obstetric patient within the scope of practice of the paramedic.
- 117.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the neonatal patient within the scope of practice of the paramedic.
- 118.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the pediatric patient within the scope of practice of the paramedic.
- 119.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the geriatric patient within the scope of practice of the paramedic.
- 120.0 Demonstrate a complex depth, comprehensive breadth of knowledge of management of the patient with special challenges within the scope of practice of the paramedic, patients of all ages.
- 121.0 Demonstrate a simple depth, foundational breadth of knowledge of risks and responsibilities of transport.
- 122.0 Demonstrate a complex depth, comprehensive breadth of knowledge of establishing and working within the incident management system.
- 123.0 Demonstrate a simple depth, foundational breadth of knowledge of responding to an emergency during a multiple casualty incident.

- 124.0 Demonstrate a complex depth, comprehensive breadth of knowledge of air medical transport risks, needs, and advantages.
- 125.0 Demonstrate a simple depth, simple breadth of knowledge for safe vehicle extrication and use of simple hand tools.
- 126.0 Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating in a cold zone at a hazardous material or other special incident.
- 127.0 Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating on the scene of a natural or man-made disaster.

**Management Option: This option (outcomes 128-138) prepares students for administrative and supervisory positions in the Emergency Medical Services field.**

- 128.0 Demonstrate leadership and administrative skills basic to management emergency medical service systems.
- 129.0 Interpret federal, state and local laws as they apply to emergency medical service systems.
- 130.0 Demonstrate knowledge of operational and organizational structures of emergency medical service systems.
- 131.0 Demonstrate knowledge of psychological problems and stressors in emergency medical service employees and find appropriate solutions.
- 132.0 Demonstrate knowledge of materials and supplies used in emergency medical service systems.
- 133.0 Demonstrate knowledge of occupational safety and health.
- 134.0 Demonstrate knowledge of appropriate workloads for each employee.
- 135.0 Review, approve and monitor departmental capital and operational budgets.
- 136.0 Identify and apply legal reimbursement systems.
- 137.0 Comply with accreditation standards of governmental or governmental-appointed agencies and organizations.
- 138.0 Demonstrate computer literacy.

**Education Option: This option (outcomes 139-144) prepares students as trainers and/or instructors in the EMS field.**

- 139.0 Demonstrate knowledge of basic teaching methods, learning and educational psychology.
- 140.0 Describe and discuss curriculum design and development.
- 141.0 Demonstrate appropriate measurement and evaluation skills.
- 142.0 Demonstrate mastery of required technical skills.
- 143.0 Demonstrate classroom management skills.
- 144.0 Demonstrate computer literacy.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Emergency Medical Services

**CIP Number:** 1351090402

**Program Length:** 73 credit hours

**At the completion of this program, the student will be able to:**

**EMT: Completion of intended outcomes 01-63 lead to the student's eligibility to sit for the licensure exam for EMT.**

**01.0 EMS Systems:** Demonstrate a simple depth, foundational breadth of knowledge of EMS systems. The student will be able to:

01.01 Define Emergency Medical Services (EMS) systems.

01.02 Discuss the historical background of the development of the EMS system.

01.03 Identify the four levels of national EMS providers (EMR, EMT, AEMT and PM) as well as the three levels (EMR, EMT, and PM) in the State of Florida.

01.04 Discuss the specific statutes and regulations regarding the EMS system in Florida.

01.05 Discuss vehicle and equipment readiness.

01.06 Characterize the EMS system's role in prevention and public education.

01.07 Systems of care, e.g., Stroke, STEMI, Trauma, Pediatrics (S, F)

01.08 MIH/CP and other EMS-related specialty roles (S, S)

01.09 Discuss the roles and responsibilities of the EMT related to personal safety of the crew, patient and by standers.

01.10 Discuss the roles and responsibilities of the EMT to operate emergency vehicles, provide scene leadership and perform patient assessment and administer emergency care.

01.11 Discuss the maintenance of and differences between certification and licensure for the EMS professional in the State of Florida and NREMT.

01.12 Define quality improvement and discuss the EMT's role in the process.

01.13 Quality improvement vs. quality assurance (S, F)

01.14 Role of medical oversight (S, S)

01.15 Culture of safety

01.16 Patient safety (SF)

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.17 | Identify the basics of common methods of payment for healthcare services.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 01.18 | Analyze attributes and attitudes of an effective leader.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 01.19 | Demonstrate effective techniques for managing team conflict.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 01.20 | Describe factors that influence the current delivery system of healthcare.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 01.21 | Continuum of care (S, F)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 01.22 | Discuss the importance of continuing medical education and skills retention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 01.23 | Assess personal attitudes and demeanor that may distract from professionalism.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 01.24 | Serve as a role model and exhibit professional behaviors in the following areas: <ul style="list-style-type: none"> <li>• Integrity</li> <li>• Empathy</li> <li>• Self-motivation</li> <li>• Appearance and personal hygiene</li> <li>• Self-confidence</li> <li>• Communications (including phone, email and social media etiquette)</li> <li>• Time management</li> <li>• Teamwork and diplomacy</li> <li>• Respect</li> <li>• Patient advocacy (inclusive of those with special needs, alternate lifestyles and cultural diversity)</li> <li>• Careful delivery of service</li> </ul> |
| 02.0  | <b>Research:</b> Demonstrate a simple depth, simple breadth of knowledge of research and evidence-based decision making. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 02.01 | Discuss EMS research and evidence-based decision making. <ul style="list-style-type: none"> <li>• Conduct scientific literature searches</li> <li>• Read, interpret, and extract information from journal articles relevant to a project</li> </ul>                                                                                                                                                                                                                                                                                                                                      |
| 02.02 | Explain the importance of assessing and treating patients based on evidence-based decision-making.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 02.03 | Interpret graphs, charts, and tables.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 02.04 | Measure time, temperature, distance, capacity, and mass/weight.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 02.05 | Convert and use traditional and metric units.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 02.06 | Make estimations, approximations and judge the reasonableness of the result.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 02.07 | Convert time from a 12-hour format to a 24-hour format                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|       |                                                                                                                                                                         |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.08 | Demonstrate ability to evaluate and draw conclusions.                                                                                                                   |
| 02.09 | Calculate ratios.                                                                                                                                                       |
| 02.10 | Explain the rationale for the EMS system gathering data.                                                                                                                |
| 02.11 | Impact of research on EMT care (S, S).                                                                                                                                  |
| 02.12 | Data collection (S, S).                                                                                                                                                 |
| 02.13 | Evidence-based decision making (S, S).                                                                                                                                  |
| 03.0  | <b>Workforce Safety and Wellness:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of workforce safety and wellness. The student will be able to: |
| 03.01 | Explain the need to determine scene safety.                                                                                                                             |
| 03.02 | Discuss the importance of body substance isolation (BSI).                                                                                                               |
| 03.03 | Describe the steps and equipment the EMT should take for personal protection from airborne and blood borne pathogens and communicable disease.                          |
| 03.04 | List possible emotional reactions that an individual (EMT and EMT family, Patient and Patient family) may experience when faced with trauma, illness, death and dying.  |
| 03.05 | Discuss the steps the EMT should take when approaching a family confronted with death and dying.                                                                        |
| 03.06 | Recognize the warning signs of personal stress and discuss the strategies and resources available for EMTs to utilize.                                                  |
| 03.07 | Demonstrate good body mechanics while using a stretcher and other patient moving devices.                                                                               |
| 03.08 | Discuss the guidelines and safety precautions to be followed when lifting and moving patients and equipment.                                                            |
| 03.09 | Discuss patient positioning in common emergency situations.                                                                                                             |
| 03.10 | Discuss situation that may require the use of medical restraints on the patient and explain guidelines and safety consideration for their use.                          |
| 03.11 | Define “infectious disease” and “communicable disease.”                                                                                                                 |
| 03.12 | Disease transmission (F, F).                                                                                                                                            |
| 03.13 | Describe the routes of transmission and associated risks for infectious disease.                                                                                        |
| 03.14 | Explain the mode of transmission and the steps to prevent/deal with an exposure of hepatitis, meningitis, tuberculosis and HIV.                                         |
| 03.15 | Explain how immunity to infectious diseases is acquired.                                                                                                                |

|       |                                                                                                                                                                                      |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.16 | Explain post exposure management of exposure to patient blood or body fluids, including proper notification documentation.                                                           |
| 03.17 | Describe the components of physical fitness and mental wellbeing.                                                                                                                    |
| 03.18 | Identify personal health practices and environmental factors which affect physical, mental, and emotional wellbeing.                                                                 |
| 03.19 | Prevention of work-related injuries and illnesses (F, F).                                                                                                                            |
| 03.20 | Responder mental health, resilience and suicide prevention (F, F).                                                                                                                   |
| 03.21 | Wellness principles (F, F).                                                                                                                                                          |
| 03.22 | Discuss complementary and alternative health practices.                                                                                                                              |
| 03.23 | Explain the basic concepts of positive self-image, wellness and stress.                                                                                                              |
| 03.24 | Discuss the need for a wellness and stress control plan that can be used in personal and professional life.                                                                          |
| 03.25 | Explore the importance of adequate nutrition (i.e., U.S. Department of Agriculture's MyPlate food guide ( <a href="http://www.choosemyplate.gov">www.choosemyplate.gov</a> )).       |
| 03.26 | Demonstrate safe behaviors in the proper use of medical equipment.                                                                                                                   |
| 03.27 | Explain the theory of root- cause analysis.                                                                                                                                          |
| 03.28 | Identify and describe methods in medical error reduction and prevention in the various healthcare settings.                                                                          |
| 03.29 | Identify and practice security procedures for medical supplies and equipment in the various healthcare settings.                                                                     |
| 03.30 | Describe fire, safety, disaster and evacuation procedures in the various healthcare settings.                                                                                        |
| 03.31 | Discuss applicable accrediting and regulatory agency patient safety guidelines.                                                                                                      |
| 04.0  | <b>Documentation:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the principles of medical documentation and report writing. The student will be able to: |
| 04.01 | Discuss applications of technology in healthcare.                                                                                                                                    |
| 04.02 | Demonstrate basic computer skills.                                                                                                                                                   |
| 04.03 | Interpret and utilize information from electronic health records.                                                                                                                    |
| 04.04 | Identify methods of electronic communication to access and distribute data.                                                                                                          |
| 04.05 | Describe the use and importance of properly written communication and patient care documentation.                                                                                    |
| 04.06 | Explain the legal implication of the patient care report.                                                                                                                            |

|       |                                                                                                                                                                                                                                    |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 04.07 | Supporting medical necessity (S, S).                                                                                                                                                                                               |
| 04.08 | Identify the minimum dataset reference patient information and administrative information on the patient care report.                                                                                                              |
| 04.09 | Understand how to document refusal of care, including legal implications.                                                                                                                                                          |
| 04.10 | Discuss the implications of the Health Insurance Portability and Accountability Act of 1996 on confidential documentation.                                                                                                         |
| 04.11 | Describe the special considerations concerning mass casualty incident documentation.                                                                                                                                               |
| 04.12 | Demonstrate completion of a patient care report for a medical and trauma patient.                                                                                                                                                  |
| 05.0  | <b>EMS System Communication:</b> Demonstrate a simple depth, simple breadth of knowledge of the EMS communication system, communication with other health care professionals, and team communication. The student will be able to: |
| 05.01 | Understand the basic principles of the various types of communications equipment used in EMS.                                                                                                                                      |
| 05.02 | Describe the use of radio communication and correct radio procedures, including the proper methods of initiating and terminating the radio call/transmission.                                                                      |
| 05.03 | Explain the rationale for providing efficient and effective radio communications and patient reports.                                                                                                                              |
| 05.04 | Identify the essential components of the verbal report and legal aspects that need to be considered.                                                                                                                               |
| 05.05 | Perform an organized and concise radio transmission.                                                                                                                                                                               |
| 05.06 | Team communication and dynamics (S, S).                                                                                                                                                                                            |
| 05.07 | Perform an organized, concise verbal patient report that would be given to the staff at a receiving facility.                                                                                                                      |
| 05.08 | Perform a brief, organized verbal report that would be given during transfer of care at an incident scene.                                                                                                                         |
| 06.0  | <b>Therapeutic Communication:</b> Demonstrate a simple depth, simple breadth of knowledge of the principles of therapeutic communication. The student will be able to:                                                             |
| 06.01 | Describe principles of therapeutic and effective communication with patients.                                                                                                                                                      |
| 06.02 | Health care literacy (S, S).                                                                                                                                                                                                       |
| 06.03 | Non-discriminatory communication that addresses inherent or unconscious bias, is culturally aware and sensitive, and intended to improve patient outcome (S, S).                                                                   |
| 06.04 | Discuss basic speaking and active listening skills.                                                                                                                                                                                |
| 06.05 | Recognize the importance of patient/client education regarding healthcare.                                                                                                                                                         |
| 06.06 | Discuss the adjustment of communication strategies to effectively communicate with patients with: <ul style="list-style-type: none"> <li>• Differing age groups</li> </ul>                                                         |

|       |                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Differing developmental stages</li> <li>• Special needs</li> <li>• Differing cultures, including language barriers</li> </ul>                                                                                       |
| 06.07 | Discuss the communication techniques that should be used to interact with the patient, patient family, bystanders, and individuals from other agencies including verbal diffusion and interview techniques.                                                  |
| 06.08 | Discuss the strategies for interviewing persons in special situations.                                                                                                                                                                                       |
| 06.09 | Distinguish between and respond to verbal and non-verbal cues.                                                                                                                                                                                               |
| 06.10 | Analyze elements of communication using a sender-receiver/close loop model.                                                                                                                                                                                  |
| 06.11 | Exhibit positive non-verbal behaviors.                                                                                                                                                                                                                       |
| 06.12 | Establish proper patient rapport.                                                                                                                                                                                                                            |
| 07.0  | <b>Medical/Legal and Ethics:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of medical legality and ethics. The student will be able to:                                                                                             |
| 07.01 | Discuss the rational, importance, and limitations of patient autonomy.                                                                                                                                                                                       |
| 07.02 | Differentiate between expressed, implied and involuntary consent.                                                                                                                                                                                            |
| 07.03 | Discuss the methods of obtaining consent and procedures for minors.                                                                                                                                                                                          |
| 07.04 | Discuss the issues of abandonment, negligence, false imprisonment and battery and their implications to the EMT.                                                                                                                                             |
| 07.05 | Discuss the implications for the EMT in patient refusal of care and/or transport.                                                                                                                                                                            |
| 07.06 | Explain the importance, necessity and legality of patient confidentiality.                                                                                                                                                                                   |
| 07.07 | Discuss the importance of Do Not Resuscitate [DNR] (advance directives) and local or Florida provisions regarding EMS application.                                                                                                                           |
| 07.08 | Patient rights/advocacy (S, S).                                                                                                                                                                                                                              |
| 07.09 | Discuss State of Florida and Federal special reporting situations including: <ul style="list-style-type: none"> <li>• Abuse</li> <li>• Sexual assault</li> <li>• Gunshot and knife wounds</li> <li>• Communicable disease</li> <li>• Animal Bites</li> </ul> |
| 07.10 | Differentiate between civil tort and criminal actions.                                                                                                                                                                                                       |
| 07.11 | Discuss the elements of negligence and defenses/protections from liability.                                                                                                                                                                                  |

|       |                                                                                                                                                                                                                                                                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.12 | Discuss the role of the EMT at crime scenes and preservation of evidence.                                                                                                                                                                                                                                                                                          |
| 07.13 | Define ethics and morality and discuss their implication for the EMT.                                                                                                                                                                                                                                                                                              |
| 07.14 | Discuss Florida legislation such as: <ul style="list-style-type: none"> <li>• Baker Act (394.451, F.S.)</li> <li>• Marchman Act (397.601, F.S. and 397.675, F.S.)</li> <li>• Emergency Examination and Treatment of Incapacitated Persons Act (401.445, F.S.)</li> </ul>                                                                                           |
| 07.15 | Differentiate between the scope of practice and the standard of care as applied to the EMT.                                                                                                                                                                                                                                                                        |
| 07.16 | Discuss the legal concepts and limitations of immunity, including Good Samaritan statutes and governmental immunity.                                                                                                                                                                                                                                               |
| 07.17 | Describe the appropriate patient management and care techniques in a refusal of care situation.                                                                                                                                                                                                                                                                    |
| 07.18 | Analyze the relationship between the law, morals and ethics in EMS and the premise that should under lie the EMTs ethical decisions.                                                                                                                                                                                                                               |
| 07.19 | Describe the criteria necessary to honor an advance directive.                                                                                                                                                                                                                                                                                                     |
| 07.20 | Explain the rationale for the needs, benefits and varying degrees of advance directives.                                                                                                                                                                                                                                                                           |
| 08.0  | <b>Anatomy and Physiology:</b> Demonstrate a fundamental knowledge of the anatomy and function of all human systems to the practice of EMS. The student will be able to:                                                                                                                                                                                           |
| 08.01 | Identify the following topographic terms: <ul style="list-style-type: none"> <li>• Medial</li> <li>• Lateral</li> <li>• Proximal</li> <li>• Distal</li> <li>• Superior</li> <li>• Inferior</li> <li>• Anterior</li> <li>• Posterior</li> <li>• Midline</li> <li>• Right and left</li> <li>• Mid-clavicular</li> <li>• Bilateral</li> <li>• Mid-axillary</li> </ul> |
| 08.02 | Describe the life support chain, aerobic metabolism, and anaerobic metabolism.                                                                                                                                                                                                                                                                                     |
| 08.03 | Define anatomy, physiology, pathophysiology, and homeostasis.                                                                                                                                                                                                                                                                                                      |
| 08.04 | Identify and describe the anatomical structures and functions of the following: <ul style="list-style-type: none"> <li>• Skeletal system</li> </ul>                                                                                                                                                                                                                |

|       |                                                                                                                                                                                                                                                                                                                                                      |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Muscular system</li> <li>• Respiratory system</li> <li>• Circulatory/ cardiovascular system</li> <li>• Nervous system</li> <li>• Integumentary system</li> <li>• Digestive system</li> <li>• Endocrine system</li> <li>• Renal system</li> <li>• Reproductive system</li> <li>• Lymphatic system</li> </ul> |
| 08.05 | Explain cellular anatomy and physiology.                                                                                                                                                                                                                                                                                                             |
| 08.06 | Explain cellular respiration.                                                                                                                                                                                                                                                                                                                        |
| 08.07 | Discuss cell division.                                                                                                                                                                                                                                                                                                                               |
| 08.08 | Describe the different types of muscle tissues including skeletal, smooth and cardiac.                                                                                                                                                                                                                                                               |
| 08.09 | Name and identify the location of the bones of the axial and appendicular skeleton.                                                                                                                                                                                                                                                                  |
| 08.10 | Describe the classification and types of joints.                                                                                                                                                                                                                                                                                                     |
| 08.11 | Discuss the mechanisms of breathing including: <ul style="list-style-type: none"> <li>• Mechanical ventilation</li> <li>• Pulmonary volumes</li> <li>• Dead space</li> <li>• Lung compliance</li> </ul>                                                                                                                                              |
| 08.12 | Explain the diffusion of gases in external and internal respiration.                                                                                                                                                                                                                                                                                 |
| 08.13 | Describe oxygen and carbon dioxide transport in the blood.                                                                                                                                                                                                                                                                                           |
| 08.14 | Describe nervous and chemical mechanisms that regulate respirations.                                                                                                                                                                                                                                                                                 |
| 08.15 | Discuss respiration and acid-base balance.                                                                                                                                                                                                                                                                                                           |
| 08.16 | Discuss the hemodynamics of blood pressure.                                                                                                                                                                                                                                                                                                          |
| 08.17 | Discuss the role of nutrition, metabolism and body temperature on body function.                                                                                                                                                                                                                                                                     |
| 08.18 | Describe the causes, advantages, and disadvantages of a fever.                                                                                                                                                                                                                                                                                       |
| 08.19 | Discuss the hypothalamus functions as the thermostat in the body.                                                                                                                                                                                                                                                                                    |

|       |                                                                                                                                                                                                                                                                                        |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 09.0  | <b>Medical Terminology:</b> Demonstrate a fundamental knowledge in the use of medical terminology. The student will be able to:                                                                                                                                                        |
| 09.01 | Identify medical terminology word parts such as: <ul style="list-style-type: none"> <li>• Root words</li> <li>• Prefixes</li> <li>• Suffixes</li> <li>• Combining forms</li> </ul>                                                                                                     |
| 09.02 | Correctly utilize medical terminology describing each of the following: <ul style="list-style-type: none"> <li>• Body structures</li> <li>• Functions</li> <li>• Conditions and disorders</li> <li>• Body regions</li> <li>• Cavities</li> <li>• Areas</li> <li>• Landmarks</li> </ul> |
| 09.03 | Correctly use medical abbreviations and symbols.                                                                                                                                                                                                                                       |
| 09.04 | Read and understand basic medical documentation in medical records and medical reports.                                                                                                                                                                                                |
| 09.05 | Communicate with healthcare professionals utilizing basic medical terminology.                                                                                                                                                                                                         |
| 09.06 | Explain the rationale for using accepted medical terminology correctly.                                                                                                                                                                                                                |
| 10.0  | <b>Pathophysiology:</b> Demonstrate a fundamental knowledge of the causes and pathophysiology of shock and the components of resuscitation. The student will be able to:                                                                                                               |
| 10.01 | Discuss signs of irreversible death.                                                                                                                                                                                                                                                   |
| 10.02 | Review the anatomy and physiology of the respiratory and cardiovascular systems.                                                                                                                                                                                                       |
| 10.03 | Discuss and identify the pathophysiology of respiratory failure and respiratory and cardiac arrest.                                                                                                                                                                                    |
| 10.04 | Understand shock, including the pathophysiology, causes, and the signs and symptoms associated with the various types of shock.                                                                                                                                                        |
| 10.05 | Discuss the variations in the pathophysiology of shock Patients of all ages.                                                                                                                                                                                                           |
| 11.0  | <b>Life Span Development:</b> Demonstrate a fundamental knowledge of life span development to patient assessment and management. The student will be able to:                                                                                                                          |
| 11.01 | Describe the major physiologic and psychosocial characteristics Patients of all ages.                                                                                                                                                                                                  |
| 12.0  | <b>Public Health:</b> Demonstrate a simple knowledge of the principles of illness and injury prevention in emergency care. The student will be able to:                                                                                                                                |

|       |                                                                                                                                                                                                                                                                                                                                  |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.01 | Define public health and explain the goal of the public health field.                                                                                                                                                                                                                                                            |
| 12.02 | Identify the EMS role within the public health field.                                                                                                                                                                                                                                                                            |
| 12.03 | Discuss basic concepts of epidemiology.                                                                                                                                                                                                                                                                                          |
| 12.04 | Discuss ways of EMS involvement in injury prevention.                                                                                                                                                                                                                                                                            |
| 12.05 | Identify areas of need for prevention programs in the community.                                                                                                                                                                                                                                                                 |
| 13.0  | <b>Principles of Pharmacology:</b> Demonstrate a simple depth, simple breadth of knowledge of pharmacology, medication safety, and medication types used during an emergency. The student will be able to:                                                                                                                       |
| 13.01 | Explain the “rights” of medication administration and describe how each one related to EMS.                                                                                                                                                                                                                                      |
| 13.02 | Discuss and differentiate the various medication forms and the appropriate routes of administration                                                                                                                                                                                                                              |
| 13.03 | Describe the difference between a generic medication name and trade name and provide an example of each.                                                                                                                                                                                                                         |
| 13.04 | Specific medication classes to be determined locally <ul style="list-style-type: none"> <li>• <del>Class names (S, S)</del></li> <li>• <del>Class indications (S, S)</del></li> <li>• <del>Class complications (S, S)</del></li> <li>• <del>Class side effects (S, S)</del></li> <li>• <del>Polypharmacy (S, S)</del></li> </ul> |
| 13.05 | Discuss the components and elements of a drug profile including: <ul style="list-style-type: none"> <li>• Class</li> <li>• Actions</li> <li>• Contraindications</li> <li>• Side effects</li> <li>• Dose</li> <li>• Route</li> <li>• Adverse drug reactions (S, S)</li> <li>• Medication response relationships (F,F)</li> </ul>  |
| 13.06 | Describe the role of medical direction in medication administration and explain the difference between direct orders (online) and standing orders (off-line).                                                                                                                                                                    |
| 14.0  | <b>Pharmacology:</b> Demonstrate a fundamental depth, simple breadth of knowledge of emergency medications within the scope of practice of the EMT. The student will be able to:                                                                                                                                                 |
| 14.01 | State the following for each medication that can be administered by an EMT as dictated by the State of Florida and local medical direction: <ul style="list-style-type: none"> <li>• Medication safety</li> <li>• Medication legislation</li> </ul>                                                                              |

| 15.02 | Physiology and pathophysiology of respiration <ul style="list-style-type: none"> <li>• Pulmonary ventilation</li> <li>• Oxygenation</li> <li>• Respiration</li> <li>• External</li> <li>• Internal</li> <li>• Cellular</li> </ul>                                                                                                                                                   |
| 15.03 | Demonstrate the correct operation of oxygen tanks and regulators.                                                                                                                                                                                                                                                                                                                   |
| 15.04 | Describe the following regarding supplemental oxygen delivery devices: <ul style="list-style-type: none"> <li>• Indications</li> <li>• Contraindications</li> <li>• Advantages</li> <li>• Disadvantages</li> <li>• Complications</li> <li>• Liter flow range</li> <li>• Concentration of delivered oxygen</li> <li>• Procedures</li> <li>• Purpose</li> <li>• Components</li> </ul> |
| 15.05 | Demonstrate the use of low, medium, high, and variable concentration oxygen delivery devices for patients of all ages.                                                                                                                                                                                                                                                              |
| 15.06 | Describe assessment and management for adequate and inadequate respiration, including the use of pulse oximetry and capnography.                                                                                                                                                                                                                                                    |
| 15.07 | Explain the rationale for providing adequate oxygenation through high inspired oxygen concentrations to patients who, in the past, may have received low concentrations.                                                                                                                                                                                                            |
| 15.08 | Discuss the use of an oxygen humidifier and the requirements needed for its use.                                                                                                                                                                                                                                                                                                    |
| 15.09 | Discuss the differences between negative pressure and positive pressure ventilation.                                                                                                                                                                                                                                                                                                |
| 16.0  | <b>Airway Management:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of airway management patients of all ages within the scope of practice of the EMT. The student will be able to:                                                                                                                                                                        |
| 16.01 | Review the structures and functions of the Anatomy of the Airway and the Respiratory System (Include age- related variations in pediatric and geriatric patients).                                                                                                                                                                                                                  |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Normal</li> <li>• Abnormal</li> <li>• Special Considerations (MDI, In-Line Neb, Simple Face Mask, Venturi, CPAP/BiPAP)</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                        |
| 16.02 | Describe appropriate assessment of the airway and the management for a patient with or without adequate breathing (Include age-related variations in pediatric and geriatric patients).                                                                                                                                                                                                                                                                                                                                                                           |
| 16.03 | Describe the Techniques of assuring a patent airway, indications for airway management, and demonstrate the steps in performing the head-tilt chin-lift and jaw thrust in patients of all ages (Include age-related variations in pediatric and geriatric patients). <ul style="list-style-type: none"> <li>• Demonstrate the techniques of suctioning.</li> <li>• Demonstrate relief of FBAO.</li> <li>• Demonstrate how to insert an oral and nasal -airway adjunct.</li> <li>• Demonstrate how to insert both esophageal and supra-glottic airways.</li> </ul> |
| 17.0  | <b>Artificial Ventilations:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of assessment and management utilizing ventilation, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                         |
| 17.01 | Effect of ventilation on cardiac output <ul style="list-style-type: none"> <li>• E.g., Bag Valve Mask, Ventilator, CPAP, Hyper Mechanical Inflation</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                    |
| 17.02 | Demonstrate how to ventilate a patient with a pocket mask.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 17.03 | Demonstrate the safe and effective ventilation for a patient with a BVM for one or two rescuers using oral-nasal adjuncts with appropriate airway positioning.                                                                                                                                                                                                                                                                                                                                                                                                    |
| 17.04 | Discuss the signs of adequate and inadequate ventilation using the BVM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 17.05 | Describe the steps involved in performing a comprehensive assessment of ventilations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 17.06 | Demonstrate how to ventilate a patient with a stoma.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 17.07 | Demonstrate the use of various devices used in the assessment of supra-glottic airway placement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 17.08 | Describe the following for a patient with an automatic transport ventilator (ATV): <ul style="list-style-type: none"> <li>• Indications</li> <li>• Contraindications</li> <li>• Advantages</li> <li>• Disadvantages</li> <li>• Complications</li> <li>• Technique for ventilating</li> </ul>                                                                                                                                                                                                                                                                      |
| 17.09 | Describe the following for a patient with a CPAP: <ul style="list-style-type: none"> <li>• Indications</li> <li>• Contraindications</li> <li>• Advantages</li> <li>• Disadvantages</li> <li>• Complications</li> </ul>                                                                                                                                                                                                                                                                                                                                            |

|       |                                                                                                                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Technique for ventilating</li> </ul>                                                                                                                                        |
| 18.0  | <b>Scene Size-Up:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of scene management and multiple patient situations. The student will be able to:                                           |
| 18.01 | Recognize and describe hazards/potential hazards at the scene.                                                                                                                                                       |
| 18.02 | Discuss common mechanisms of injury/nature of illness.                                                                                                                                                               |
| 18.03 | Discuss the priority considerations for multiple-patient situations.                                                                                                                                                 |
| 18.04 | Explain why it is important for the EMT to anticipate and determine the need of appropriate Scene management including but not limited to traffic incident management, additional resources, or specialty resources. |
| 18.05 | Discuss the importance of continuous scene assessment to ensure safety of the EMS Impact of the environment on team and the patient care.                                                                            |
| 18.06 | Explain why it is important for the EMT to anticipate and determine the need for additional or specialized resources.                                                                                                |
| 18.07 | Discuss the importance of continuous scene assessment to ensure safety of the EMS team and the patient.                                                                                                              |
| 18.08 | Discuss the minimum standard precautions that should be followed and PPE that should be worn as appropriate.                                                                                                         |
| 18.09 | Discuss special considerations for dealing with a violent scene.                                                                                                                                                     |
| 18.10 | Explain the rationale for crew members to evaluate scene safety prior to entering.                                                                                                                                   |
| 18.11 | Explain how patient situations affect your evaluation of mechanism of injury or illness.                                                                                                                             |
| 19.0  | <b>Primary Assessment:</b> Demonstrate a fundamental depth, simple breadth of knowledge of the primary assessment for all patient situations. The student will be able to:                                           |
| 19.01 | Summarize the elements of a general impression of the patient.                                                                                                                                                       |
| 19.02 | Explain the reason for performing a primary assessment.                                                                                                                                                              |
| 19.03 | Discuss and demonstrate methods of assessing level of responsiveness using AVPU.                                                                                                                                     |
| 19.04 | Discuss and demonstrate methods of assessing the airway and providing airway care patients of all ages.                                                                                                              |
| 19.05 | Describe and demonstrate methods used for assessing if a patient is breathing, patients of all ages.                                                                                                                 |
| 19.06 | Differentiate between a patient with adequate and inadequate breathing.                                                                                                                                              |
| 19.07 | Describe and demonstrate the methods used to obtain a pulse, patients of all ages.                                                                                                                                   |
| 19.08 | Discuss and demonstrate assessing the patient for external bleeding.                                                                                                                                                 |

|       |                                                                                                                                                                                                                                                                                                                                             |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.09 | Describe and demonstrate the assessment and interpretation of skin color, temperature, moisture and capillary refill, patients of all ages.                                                                                                                                                                                                 |
| 19.10 | Explain the reasons prioritizing a patient for care and transport.                                                                                                                                                                                                                                                                          |
| 19.11 | Describe when it is appropriate to expose the patient completely.                                                                                                                                                                                                                                                                           |
| 19.12 | Differentiate between critical life-threatening, potentially life-threatening, and non-life-threatening patient presentations.                                                                                                                                                                                                              |
| 20.0  | <b>History-Taking:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the components of history taking. The student will be able to:                                                                                                                                                                                 |
| 20.01 | Determine and investigate the chief complaint (MOI/NOI).                                                                                                                                                                                                                                                                                    |
| 20.02 | Describe components of the patient history.                                                                                                                                                                                                                                                                                                 |
| 20.03 | Explain the importance of obtaining a SAMPLE and OPQRST history.                                                                                                                                                                                                                                                                            |
| 20.04 | Acknowledge the feelings patients experience during assessment.                                                                                                                                                                                                                                                                             |
| 20.05 | Discuss the value of obtaining a family and social history.                                                                                                                                                                                                                                                                                 |
| 20.06 | Describe examples of different techniques the EMT may use to obtain information from patients, family or bystanders during the history taking process.                                                                                                                                                                                      |
| 21.0  | <b>Secondary Assessment:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of techniques used for a secondary assessment. The student will be able to:                                                                                                                                                                 |
| 21.01 | Discuss the components and techniques of the physical exam and skills involved.                                                                                                                                                                                                                                                             |
| 21.02 | Discuss the indications for performing: <ul style="list-style-type: none"> <li>• Rapid assessment</li> <li>• Focused exam</li> <li>• Head to toe exam</li> </ul>                                                                                                                                                                            |
| 21.03 | Demonstrate: <ul style="list-style-type: none"> <li>• Rapid exam</li> <li>• Focused exam</li> <li>• Head to toe exam</li> </ul>                                                                                                                                                                                                             |
| 21.04 | Describe and demonstrate the techniques of inspection, palpation, percussion, and auscultation. <ul style="list-style-type: none"> <li>• Respiratory system including breath sound quality</li> <li>• Cardiovascular system</li> <li>• Neurological system</li> <li>• Musculoskeletal system</li> <li>• Major anatomical regions</li> </ul> |
| 21.05 | Describe and demonstrate the importance of obtaining a baseline set of vital signs.                                                                                                                                                                                                                                                         |

|       |                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>E.g. Non-Invasive Blood Pressure, Blood Glucose, Temperature</li> </ul>                                                                                                                                                                                                                                                                                               |
| 21.06 | Discuss blood pressure ranges, patients of all ages.                                                                                                                                                                                                                                                                                                                                                         |
| 22.0  | <b>Monitoring Devices:</b> Demonstrate a simple depth, simple breadth of knowledge of monitoring devices within the scope of practice of the EMT. The student will be able to:                                                                                                                                                                                                                               |
| 22.01 | Describe and demonstrate the purpose, indications, procedure, normal findings, and limitations of the following patient monitoring technologies. <ul style="list-style-type: none"> <li>Pulse oximetry</li> <li>Glucometer</li> <li>Capnography</li> <li>Noninvasive BP monitoring</li> <li>Thermometry</li> <li>Telemetry</li> <li>Cardiac monitoring – 12 lead ECG acquisition and transmission</li> </ul> |
| 23.0  | <b>Reassessment:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of how and when to perform a reassessment for all patient situations. The student will be able to:                                                                                                                                                                                                                   |
| 23.01 | Describe the components of reassessment and demonstrate the skills involved.                                                                                                                                                                                                                                                                                                                                 |
| 23.02 | Discuss the reasons for repeating the primary assessment as part of the reassessment.                                                                                                                                                                                                                                                                                                                        |
| 23.03 | Explain trending assessment components and its value to other health professionals who assume care of the patient.                                                                                                                                                                                                                                                                                           |
| 23.04 | Demonstrate the reassessment of patients of all ages.                                                                                                                                                                                                                                                                                                                                                        |
| 24.0  | <b>Medical Overview:</b> Demonstrate a simple depth, foundation breadth of knowledge of pathophysiology, assessment and management of medical complaints. The student will be able to:                                                                                                                                                                                                                       |
| 24.01 | Pathophysiology, assessment, and management of a medical complaints to include <ul style="list-style-type: none"> <li>Identify factors that affect the patient Transport Decision and Medically Appropriate Destination</li> <li>E.g., Scene Safety, Environmental Factors, Chief Complaint, Preconceptions</li> </ul>                                                                                       |
| 24.02 | Discuss forming a field impression and utilizing available information to determine a differential diagnosis.                                                                                                                                                                                                                                                                                                |
| 25.0  | <b>Neurology:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of neurologic disorders/emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 25.01 | Review the anatomy and physiology of the nervous system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 25.02 | Describe the pathophysiology of the following neurologic disorders: <ul style="list-style-type: none"> <li>• Altered Mental Status / Decreased Level of Responsiveness (Possible Differential Diagnosis)</li> <li>• Stroke (Hemorrhagic, Occlusive, Transient Ischemic Attack)</li> <li>• Headache</li> <li>• Seizures</li> <li>• Syncope</li> <li>• Dementia vs. delirium</li> <li>• Alzheimer's disease</li> <li>• Headache</li> <li>• Brief Resolved Unexplained Event (BRUE)</li> <li>• Other neurological disorders to be determined locally</li> </ul> |
| 25.03 | Discuss and identify the causes, signs and symptoms of ischemic strokes, hemorrhagic strokes, and transient ischemic attacks and their similarities and differences.                                                                                                                                                                                                                                                                                                                                                                                         |
| 25.04 | Discuss and demonstrate how to use a stroke scoring system in the assessment of patients with suspected stroke.                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 25.05 | Define and differentiate generalize seizure, partial seizure and status epilepticus and list their possible causes.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 25.06 | Define and differentiate migraine headache, sinus headache, tension headache and discuss how to distinguish harmless headaches from something more serious.                                                                                                                                                                                                                                                                                                                                                                                                  |
| 25.07 | Define "altered mental status" and identify the possible causes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 25.08 | Describe and demonstrate the assessment and management of the patient with various neurological emergencies in patients of all ages to include: <ul style="list-style-type: none"> <li>• Strokes</li> <li>• Headaches</li> <li>• Seizures</li> <li>• Altered mental status</li> </ul>                                                                                                                                                                                                                                                                        |
| 25.09 | Discuss the transport of the stroke patient to the appropriate treatment center.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 26.0  | <b>Abdominal and Gastrointestinal Disorder:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of abdominal and gastrointestinal disorders/emergencies, patients of all ages The student will be able to:                                                                                                                                                                                                                                                                                               |
| 26.01 | Review the basic anatomy and physiology the gastrointestinal, genital and urinary systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 26.02 | Define and describe the pathophysiology of the following abdominal and gastrointestinal disorders: <ul style="list-style-type: none"> <li>• Abdominal pain</li> <li>• Acute abdomen</li> <li>• Peritonitis</li> <li>• Appendicitis</li> </ul>                                                                                                                                                                                                                                                                                                                |

|       |                                                                                                                                                                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| 26.03 | Identify the signs and symptoms of common GI disorders.                                                                                                                                                                                                                                            |
| 26.04 | Describe and demonstrate the assessment and management of the patient with various gastrointestinal emergencies.                                                                                                                                                                                   |
| 26.05 | Differentiate between hemorrhagic and non-hemorrhagic abdominal pain.                                                                                                                                                                                                                              |
| 27.0  | <b>Immunology:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of immunology disorders/emergencies, patients of all ages The student will be able to:                                                                                      |
| 27.01 | Define and differentiate allergic reaction and anaphylaxis.                                                                                                                                                                                                                                        |
| 27.02 | Describe the pathophysiology of the following immunology disorders: <ul style="list-style-type: none"> <li>• Allergic reaction</li> <li>• Anaphylaxis</li> <li>• Anaphylactic shock</li> </ul>                                                                                                     |
| 27.03 | Describe and demonstrate the assessment and management of the patient in patients of all ages experiencing an allergic or anaphylactic reaction.                                                                                                                                                   |
| 27.04 | Review the following for the epinephrine auto-injector: <ul style="list-style-type: none"> <li>• Generic and trade names</li> <li>• Medication forms</li> <li>• Dose</li> <li>• Administration</li> <li>• Action</li> <li>• Contraindications</li> </ul>                                           |
| 27.05 | Demonstrate the use of epinephrine auto-injector.                                                                                                                                                                                                                                                  |
| 27.06 | Review the anatomy and physiology of the organs and structures related to anaphylaxis.                                                                                                                                                                                                             |
| 27.07 | Describe the incidence, morbidity and mortality of anaphylaxis.                                                                                                                                                                                                                                    |
| 27.08 | Recognize the signs and symptoms related to anaphylaxis.                                                                                                                                                                                                                                           |

|       |                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27.09 | Describe the risk factors for and prevention of anaphylaxis and appropriate patient education.                                                                                                                                                               |
| 27.10 | Discuss common antigens most frequently associated with anaphylaxis.                                                                                                                                                                                         |
| 27.11 | Explain the importance of separating the patient from the allergen when possible.                                                                                                                                                                            |
| 28.0  | <b>Infectious Disease:</b> Demonstrate a simple depth, simple breadth of knowledge of the assessment and management of a patient who may have an infectious disease, patient of all ages The student will be able to:                                        |
| 28.01 | Discuss the causes of infectious diseases                                                                                                                                                                                                                    |
| 28.02 | Describe the pathophysiology of infectious diseases of significant public health concern.                                                                                                                                                                    |
| 28.03 | Describe and demonstrate the assessment and management of the patient in patients of all ages experiencing an infectious disease.                                                                                                                            |
| 28.04 | Discuss mandatory notification to state or federal agencies of various diseases.                                                                                                                                                                             |
| 28.05 | Identify patients with risk factors for infectious disease.                                                                                                                                                                                                  |
| 28.06 | Explain the principles and practices of infection control in prehospital care.                                                                                                                                                                               |
| 28.07 | Describe and discuss the rationale for the various types of PPE.                                                                                                                                                                                             |
| 28.08 | Discuss the proper disposal of contaminated supplies (sharps, gauze sponges, tourniquets, etc.).                                                                                                                                                             |
| 28.09 | Discuss decontamination of the ambulance and disinfection of patient care equipment, and areas in which care of the patient occurred.                                                                                                                        |
| 28.10 | Describe the actions to take if the EMS provider is exposed to an infectious disease.                                                                                                                                                                        |
| 28.11 | Demonstrate the ability to comply with body substance isolation guidelines.                                                                                                                                                                                  |
| 28.12 | Discuss the pathophysiology, risk factors, assessment, and prehospital management of sepsis/systemic inflammatory response syndrome (SIRS)                                                                                                                   |
| 28.13 | Identify the signs and symptoms and discuss the assessment and prehospital management of a patient in septic shock.                                                                                                                                          |
| 28.14 | Describe the risk factors for and prevention of infectious disease and appropriate patient education (including but not limited to handwashing, PPE use, and disposal of contaminated supplies)                                                              |
| 29.0  | <b>Endocrine Disorders:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of endocrine disorders/emergencies, patients of all ages. The student will be able to:                                       |
| 29.01 | Review the anatomy and physiology of the endocrine system and its main function in the body.                                                                                                                                                                 |
| 29.02 | Describe the pathophysiology and signs and symptoms of the following endocrine disorders: <ul style="list-style-type: none"> <li>• Insulin dependent Diabetes Mellitus</li> <li>• Non-insulin dependent Diabetes Mellitus</li> <li>• Hypoglycemia</li> </ul> |

|       |                                                                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Hyperglycemia</li> <li>• Diabetic Ketoacidosis (DKA)</li> <li>• Hyperglycemic Hyperosmolar Nonketotic Syndrome (HHNS)</li> </ul>                                                                        |
| 29.03 | Define and differentiate between Type I and Type II Diabetes.                                                                                                                                                                                    |
| 29.04 | Identify and demonstrate the steps in the management of the patient taking diabetic medicine with an altered mental status and a history of diabetes, patients of all ages.                                                                      |
| 29.05 | Review the following for oral glucose: <ul style="list-style-type: none"> <li>• Generic and trade names</li> <li>• Medication forms</li> <li>• Dose</li> <li>• Administration</li> <li>• Action</li> <li>• Contraindications</li> </ul>          |
| 29.06 | Demonstrate the steps of using a glucometer device and administering oral glucose.                                                                                                                                                               |
| 29.07 | Describe and demonstrate the assessment and the management of the patient experiencing an endocrinologic emergency to include hypo- and hyper-glycemia.                                                                                          |
| 29.08 | Discuss the general assessment findings associated with endocrinologic emergencies. Across patients of all ages.                                                                                                                                 |
| 29.09 | Describe the risk factors for and prevention of endocrine emergencies, including but not limited to healthy lifestyles and modifiable risk factors, the use of blood sugar monitoring devices and self-administration of prescribed medications. |
| 30.0  | <b>Psychiatric:</b> Demonstrate a fundamental depth, foundational breadth of knowledge regarding the assessment and management of psychiatric emergencies, patients of all ages The student will be able to:                                     |
| 30.01 | Differentiate among behavior, psychiatric disorders and behavioral emergencies                                                                                                                                                                   |
| 30.02 | Discuss common psychiatric disorders and behavioral emergencies.                                                                                                                                                                                 |
| 30.03 | Discuss the general factors that may cause an alteration in a patient's behavior.                                                                                                                                                                |
| 30.04 | Discuss patterns of violence, abuse, and neglect.                                                                                                                                                                                                |
| 30.05 | Discuss the risk factors/signs or symptoms of various psychiatric emergencies to include acute psychosis, suicide ideation, excited delirium, anxiety, depression, medical fear, substance use disorder, and PTSD.                               |
| 30.06 | Manage a behavioral emergency scenario applying knowledge of medical/legal Florida Statutes.                                                                                                                                                     |
| 30.07 | Describe and demonstrate the assessment and management of the patient experiencing a behavioral or psychiatric emergency.                                                                                                                        |
| 30.08 | Discuss the role of the National Suicide and Crisis Lifeline (988) in the United States.                                                                                                                                                         |
| 30.09 | Demonstrate an understanding of appropriate and available mental health resources and provide patient education.                                                                                                                                 |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30.10 | Describe and demonstrate the assessment and management of the patient experiencing a behavioral or psychiatric emergency, patients of all ages.                                                                                                                                                                                                                                                                                                  |
| 30.11 | Describe the biological, psychosocial, and sociocultural influences on psychiatric disorders.                                                                                                                                                                                                                                                                                                                                                    |
| 30.12 | Describe the special considerations for the safety of the EMS provider and EMS crew, the patient and bystanders when dealing with behavioral and psychiatric emergencies.                                                                                                                                                                                                                                                                        |
| 30.13 | Describe and demonstrate methods of restraint that may be used in the management of a patient with a behavioral emergency.                                                                                                                                                                                                                                                                                                                       |
| 30.14 | Explain the importance of provider behavior and communication in the care of a patient with a behavioral emergency.                                                                                                                                                                                                                                                                                                                              |
| 31.0  | <b>Cardiovascular:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of cardiovascular emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                     |
| 31.01 | Review the basic anatomy and physiology of the cardiovascular system.                                                                                                                                                                                                                                                                                                                                                                            |
| 31.02 | Describe the pathophysiology and signs and symptoms of the following cardiovascular disorders: <ul style="list-style-type: none"> <li>• Acute coronary syndrome</li> <li>• Angina pectoris</li> <li>• Thromboembolism</li> <li>• Myocardial infarction</li> <li>• Hypertensive emergencies</li> <li>• Aortic aneurysm/dissection</li> <li>• Left and right sided heart failure</li> <li>• Cardiogenic shock</li> <li>• Cardiac arrest</li> </ul> |
| 31.03 | Describe and demonstrate the assessment and management of the patient experiencing a cardiac emergency. Patients of all ages.                                                                                                                                                                                                                                                                                                                    |
| 31.04 | Discuss the indications and contraindications for automated external defibrillation (AED). (Including automatic, manual and vest type).                                                                                                                                                                                                                                                                                                          |
| 31.05 | Explain the impact of age and weight on defibrillation.                                                                                                                                                                                                                                                                                                                                                                                          |
| 31.06 | Discuss the position of comfort for patients with various cardiac emergencies.                                                                                                                                                                                                                                                                                                                                                                   |
| 31.07 | Explain the rationale for early defibrillation.                                                                                                                                                                                                                                                                                                                                                                                                  |
| 31.08 | Discuss and differentiate among various types of external defibrillators.                                                                                                                                                                                                                                                                                                                                                                        |
| 31.09 | Discuss and differentiate among the various types of implanted cardiac devices.                                                                                                                                                                                                                                                                                                                                                                  |
| 31.10 | Understand the importance of maintenance and operators check list for AED's.                                                                                                                                                                                                                                                                                                                                                                     |
| 31.11 | Demonstrate the ability to use an AED according to the latest American Heart Association (AHA) guidelines.                                                                                                                                                                                                                                                                                                                                       |

| 32.01 | Define and differentiate among toxicology, poisoning, and overdose.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 32.02 | Describe the pathophysiology and signs and symptoms of the following toxicological emergencies, including but not limited to: <ul style="list-style-type: none"> <li>• Food poisoning</li> <li>• Carbon monoxide poisoning</li> <li>• Cyanide poisoning</li> <li>• Exposure to acid or alkaline substances</li> <li>• Exposure to hydrocarbons</li> <li>• Methanol ingestion</li> <li>• Isopropanol ingestion</li> <li>• Ethylene glycol ingestion</li> <li>• Exposure to poisonous plants</li> <li>• Drug withdrawal</li> <li>• Alcoholic syndrome</li> <li>• Withdrawal syndrome (including delirium tremens)</li> <li>• Illicit drug use</li> <li>• Medication overdose</li> <li>• Opioid overdose</li> <li>• Organophosphate overdose</li> <li>• Nerve agents</li> </ul> |
| 32.03 | Discuss various ways that toxins enter the body, including inhalation, ingestion, injection, and absorption.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 32.04 | Discuss and demonstrate the assessment and management for the patient with a toxicological emergency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 32.05 | Discuss the role of the Poison Control Center with the nationwide contact number 800-222-1222 in the United States.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 32.06 | Explain the rationale for contacting medical direction early in the prehospital management of a patient with a toxicological emergency.                                                                                                                                                                                                                                                                                                                                                                                                         |
| 32.07 | Review the following for Narcan (naloxone): <ul style="list-style-type: none"> <li>• Generic and trade names</li> <li>• Medication forms</li> <li>• Dose</li> <li>• Administration</li> <li>• Action</li> <li>• Contraindications</li> <li>• Discuss the use of medication assisted treatments for substance misuse disorders including suboxone, methadone, and naltrexone and potential complications.</li> <li>• Discuss safe uses and practices with potentially toxic substances while providing appropriate patient education.</li> </ul> |
| 32.08 | Discuss the use of medication assisted treatments for substance misuse disorders including suboxone, methadone, and naltrexone and potential complications.                                                                                                                                                                                                                                                                                                                                                                                     |
| 32.09 | Discuss safe uses and practices with potentially toxic substances while providing appropriate patient education.                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 33.0  | <b>Respiratory:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of respiratory disorders/emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                |
| 33.01 | Review the basic anatomy and physiology of the respiratory system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 33.02 | Describe the pathophysiology and signs and symptoms of the following respiratory disorders: <ul style="list-style-type: none"> <li>• Chronic Obstructive Pulmonary Disease</li> <li>• Asthma</li> <li>• Bronchiolitis</li> <li>• Pulmonary Edema</li> <li>• Spontaneous Pneumothorax</li> <li>• Hyperventilation Syndrome</li> <li>• Cystic Fibrosis</li> <li>• Pulmonary Embolism</li> <li>• Pneumonia</li> <li>• Viral Respiratory Infections</li> <li>• Poisonous Exposures</li> <li>• Bacterial respiratory infections</li> </ul>           |
| 33.03 | Discuss signs of adequate air exchange.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 33.04 | Discuss the signs and symptoms of a patient across the continuum from respiratory distress to failure.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 33.05 | Describe and demonstrate the assessment and management of the patient with a respiratory emergency. Patients of all ages.                                                                                                                                                                                                                                                                                                                                                                                                                       |

|       |                                                                                                                                                                                                                                                                                                                                                      |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 33.06 | Review the following for the metered-dose inhalers and small volume nebulizers for medications within the scope of practice of the EMT: <ul style="list-style-type: none"> <li>• Generic name</li> <li>• Medication forms</li> <li>• Dose</li> <li>• Administration</li> <li>• Action</li> <li>• Indications</li> <li>• Contraindications</li> </ul> |
| 33.07 | Describe and demonstrate the steps in facilitating the use of an inhaler and a small volume nebulizer.                                                                                                                                                                                                                                               |
| 33.08 | Differentiate between upper and lower airway obstruction.                                                                                                                                                                                                                                                                                            |
| 33.09 | Demonstrate assessment and interpretation of normal and abnormal lung and breath sounds.                                                                                                                                                                                                                                                             |
| 33.10 | Discuss common respiratory disorders, self-administered medications, and equipment (including, but not limited to: home oxygen, nebulizers, and CPAP) and provide appropriate patient education.                                                                                                                                                     |
| 34.0  | <b>Hematology:</b> Demonstrate a simple depth, simple breadth of knowledge of the assessment, and management of hematology disorders, patients of all ages The student will be able to:                                                                                                                                                              |
| 34.01 | Review the compositions and functions of blood and plasma.                                                                                                                                                                                                                                                                                           |
| 34.02 | Describe the pathophysiology of the following hematology disorders: <ul style="list-style-type: none"> <li>• Anemia</li> <li>• Sickle Cell Anemia/Sickle Cell Crisis</li> <li>• Hemophilia/Clotting Disorder</li> </ul>                                                                                                                              |
| 34.03 | Describe and demonstrate the assessment and the management of the patient with a hematological disorder. Patients of all ages.                                                                                                                                                                                                                       |
| 34.04 | Discuss signs, symptoms, and potential complications of various hematological disorders and provide appropriate patient education.                                                                                                                                                                                                                   |
| 35.0  | <b>Genitourinary/Renal:</b> Demonstrate a simple depth, simple breadth of knowledge of the assessment and management of genitourinary/renal emergency, patients of all ages. The student will be able to:                                                                                                                                            |
| 35.01 | Review the basic anatomy and physiology of the genitourinary and renal systems.                                                                                                                                                                                                                                                                      |
| 35.02 | <del>35.02</del> Describe the pathophysiology and signs and symptoms of the following genitourinary/ renal disorders: <ul style="list-style-type: none"> <li>• Urinary tract infection</li> <li>• Kidney stones</li> <li>• Kidney failure</li> </ul>                                                                                                 |
| 35.03 | Discuss the basic principles and complications of kidney dialysis.                                                                                                                                                                                                                                                                                   |
| 35.04 | Discuss the recognition and complications of urinary catheters.                                                                                                                                                                                                                                                                                      |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <del>35.04</del> <u>35.05</u> Describe and demonstrate the assessment and management of the patient with a dialysis emergency. Patients of ages.                                                                                                                                                                                                                                                                                        |
|       | <del>35.05</del> <u>35.06</u> Discuss traumatic injuries to the genitourinary system, including, but not limited to sexual assault (female and male).                                                                                                                                                                                                                                                                                   |
| 36.0  | <b>Gynecology:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of gynecologic emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                   |
| 36.01 | Review the basic anatomy and physiology of the female reproductive system.                                                                                                                                                                                                                                                                                                                                                              |
| 36.02 | Describe the pathophysiology and signs and symptoms of the following gynecologic disorders and emergencies, including but not limited to: <ul style="list-style-type: none"> <li>• Sexual assault</li> <li>• Nontraumatic vaginal bleeding</li> <li>• Menstrual pain</li> <li>• Ovarian cyst</li> <li>• Endometritis</li> <li>• Endometriosis</li> <li>• Pelvic inflammatory disease</li> <li>• Sexually Transmitted Disease</li> </ul> |
| 36.03 | Describe and demonstrate the assessment and management of the patient experiencing a gynecologic emergency. Patients of patients of all ages.                                                                                                                                                                                                                                                                                           |
| 36.04 | Describe the assessment and management of a patient who has experienced a sexual assault including the psychosocial impact and assessment findings/presentations.                                                                                                                                                                                                                                                                       |
| 36.05 | Discuss the professional and psychological importance of maintaining a patient's modesty and privacy while still being able to obtain necessary information.                                                                                                                                                                                                                                                                            |
| 36.06 | Discuss the need to provide care for a patient of sexual assault, while still preventing destruction of crime scene information.                                                                                                                                                                                                                                                                                                        |
| 37.0  | <b>Non-Traumatic Musculoskeletal Disorders:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of non-traumatic fractures, patients of all ages. The student will be able to:                                                                                                                                                                                                      |
| 37.01 | Review the basic anatomy and physiology of the musculoskeletal system.                                                                                                                                                                                                                                                                                                                                                                  |
| 37.02 | Describe and demonstrate the assessment and management of the patient in patients of all ages with a non-traumatic musculoskeletal emergency.                                                                                                                                                                                                                                                                                           |
| 38.0  | <b>Diseases of the Eyes, Ears, Nose, and Throat:</b> Demonstrate a simple depth, simple breadth of knowledge of assessment and management of diseases of the eyes, ears, nose, and throat, patients of all ages. The student will be able to:                                                                                                                                                                                           |
| 38.01 | Describe and demonstrate the assessment and management of the patient in patients of all ages with abnormal conditions affecting the eyes, ears, nose and throat, including epistaxis.                                                                                                                                                                                                                                                  |
| 39.0  | <b>Shock and Resuscitation:</b> Demonstrate a fundamental knowledge of the causes, pathophysiology, and management of shock and respiratory failure, patients of all ages The student will be able to:                                                                                                                                                                                                                                  |
| 39.01 | Discuss and identify causes and pathophysiology of the categories of hemorrhage and shock.                                                                                                                                                                                                                                                                                                                                              |

|       |                                                                                                                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 39.02 | Review causes and pathophysiology of respiratory failure and arrest.                                                                                                                                               |
| 39.03 | Review causes and pathophysiology of cardiac failure or arrest.                                                                                                                                                    |
| 39.04 | Discuss the various types and degrees of shock.                                                                                                                                                                    |
| 39.05 | Discuss post resuscitation management.                                                                                                                                                                             |
| 39.06 | Explain the system components of CPR, the links in the AHA chain of survival and how each relates to patient survival.                                                                                             |
| 39.07 | Define and differentiate between compensated and decompensated shock.                                                                                                                                              |
| 39.08 | Discuss the importance of teamwork in the successful management of the critical patient.                                                                                                                           |
| 39.09 | Demonstrate how to perform one and two rescuer CPR, adult, child, and infant.                                                                                                                                      |
| 39.10 | Demonstrate how to perform rescuer level appropriate defibrillation in an adult, child, and infant patient.                                                                                                        |
| 39.11 | Demonstrate rapid decision making based on differential field diagnosis of the critical patient with a <b>special arrest</b> peri-arrest condition.                                                                |
| 39.12 | Describe and demonstrate the assessment and management of the patient with hemorrhage and shock.                                                                                                                   |
| 39.13 | Discuss ethical issues in resuscitation.                                                                                                                                                                           |
| 39.14 | Discuss options for termination resuscitation.                                                                                                                                                                     |
| 40.0  | <b>Trauma Overview:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment and management of the trauma patient, patients of all ages. The student will be able to: |
| 40.01 | Discuss pathophysiology of the trauma patient.                                                                                                                                                                     |
| 40.02 | Discuss the components of a comprehensive trauma systems and levels of trauma centers.                                                                                                                             |
| 40.03 | Describe the considerations for different transportation modes <b>transport and destination issues</b> to a trauma center.                                                                                         |
| 40.04 | Discuss the kinematics of blunt and penetrating trauma.                                                                                                                                                            |
| 40.05 | Discuss and describe significant and non-significant Mechanism of Injury (MOI) and provide examples of each.                                                                                                       |
| 40.06 | Demonstrate the application of the State of Florida's trauma scorecard methodologies as required in Florida Statute (F.S.) and Florida Administrative Code (F.A.C.).                                               |
| 40.07 | Discuss the National Trauma Triage Protocol of injured Patients.                                                                                                                                                   |
| 40.08 | Discuss forming a field impression and utilizing available information to determine a differential diagnosis.                                                                                                      |

|       |                                                                                                                                                                                                                                                                                                        |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 40.09 | Identify the need for rapid intervention transport of the trauma patient.                                                                                                                                                                                                                              |
| 41.0  | <b>Bleeding:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of bleeding, patients of all ages. The student will be able to:                                                                                                     |
| 41.01 | Review the anatomy and physiology of the circulatory system.                                                                                                                                                                                                                                           |
| 41.02 | Discuss the different types of bleeding and classes of hemorrhage.                                                                                                                                                                                                                                     |
| 41.03 | Review signs and symptoms of shock (hypo-perfusion).                                                                                                                                                                                                                                                   |
| 41.04 | Demonstrate effective hemorrhage control to include application of a tourniquet.                                                                                                                                                                                                                       |
| 41.05 | Review the pathophysiology of hemorrhagic shock.                                                                                                                                                                                                                                                       |
| 41.06 | Recognize the need for rapid transport for patients that are bleeding and showing signs of shock (hypo-perfusion).                                                                                                                                                                                     |
| 41.07 | Describe and demonstrate the assessment and management of a patient with hemorrhagic shock.                                                                                                                                                                                                            |
| 41.08 | Discuss the possible complications of an improperly applied dressing, bandage, tourniquet, and hemostatic agents.                                                                                                                                                                                      |
| 42.0  | <b>Chest Trauma:</b> Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment and management of chest trauma, patients of all ages. The student will be able to:                                                                                                    |
| 42.01 | Review the anatomy and physiology of the thoracic/chest cavity and respiratory system.                                                                                                                                                                                                                 |
| 42.02 | Differentiate between a pneumothorax (open, simple and tension) and hemothorax.                                                                                                                                                                                                                        |
| 42.03 | Discuss the pathophysiology, signs and symptoms, and MOI of myocardial injuries, including the following: <ul style="list-style-type: none"> <li>• Pericardial tamponade</li> <li>• Myocardial contusion</li> <li>• Myocardial rupture</li> <li>• Commotio cordis</li> <li>• Aortic shearer</li> </ul> |
| 42.04 | Discuss the pathophysiology, signs and symptoms, and MOI of specific chest wall injuries, including the following: <ul style="list-style-type: none"> <li>• Rib fracture</li> <li>• Flail segment</li> <li>• Sternal fracture</li> <li>• Open chest wound</li> <li>• Impaled object</li> </ul>         |
| 42.05 | Describe and demonstrate the assessment and management of chest trauma. <b><i>To include blunt versus penetrating trauma.</i></b>                                                                                                                                                                      |
| 43.0  | <b>Abdominal and Genitourinary Trauma:</b> Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment and management of abdominal and genitourinary trauma, patients of all ages. The student will be able to:                                                        |

|       |                                                                                                                                                                                                                                                                                                                                                                                |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 43.01 | Review the anatomy and physiology of the abdominal cavity and genitourinary system.                                                                                                                                                                                                                                                                                            |
| 43.02 | Discuss the pathophysiology, signs and symptoms, and MOI for abdominal trauma including <u>evisceration, impaled objects, blunt versus penetrating mechanisms</u> , hollow and solid <b>organ</b> injuries.                                                                                                                                                                    |
| 43.03 | Describe and demonstrate the assessment and management of a patient with a suspected abdominal or genitourinary injury/trauma to include internal/external genitalia.                                                                                                                                                                                                          |
| 44.0  | <b>Orthopedic Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of orthopedic trauma patients of all ages. The student will be able to:                                                                                                                                                            |
| 44.01 | Review the anatomy and physiology of the Musculo-skeletal system.                                                                                                                                                                                                                                                                                                              |
| 44.02 | Discuss pathophysiology, signs and symptoms, and MOI for orthopedic trauma.                                                                                                                                                                                                                                                                                                    |
| 44.03 | Discuss the different types of orthopedic trauma including fracture classifications to include: <ul style="list-style-type: none"> <li>• <u>Open fracture</u></li> <li>• <u>Closed fracture</u></li> <li>• <u>Dislocation</u></li> <li>• <u>Upper and Lower extremity orthopedic trauma</u></li> <li>• <u>Sprains and Strains</u></li> <li>• <u>Pelvic Fracture</u></li> </ul> |
| 44.04 | Explain the rationale for stabilization of an injured extremity.                                                                                                                                                                                                                                                                                                               |
| 44.05 | Describe and demonstrate the assessment and management of a patient with a suspected orthopedic trauma.                                                                                                                                                                                                                                                                        |
| 44.06 | Discuss the following management techniques: <ul style="list-style-type: none"> <li>• Heat therapy</li> <li>• Cold therapy</li> <li>• Splinting</li> </ul>                                                                                                                                                                                                                     |
| 44.07 | List the six “Ps” of orthopedic injury assessment.                                                                                                                                                                                                                                                                                                                             |
| 44.08 | Discuss the need for assessment of distal pulses, motor, and sensation before and after splinting.                                                                                                                                                                                                                                                                             |
| 44.09 | Review age-associated changes in the bones.                                                                                                                                                                                                                                                                                                                                    |
| 44.10 | Discuss the proper procedures to package an amputated body part for replantation.                                                                                                                                                                                                                                                                                              |
| 44.11 | Explain the rationale for splinting at the scene versus load and go.                                                                                                                                                                                                                                                                                                           |
| 44.12 | Demonstrate the proper use of various splinting materials and devices to include improvised and traction splints.                                                                                                                                                                                                                                                              |
| 45.0  | <b>Soft Tissue Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of soft tissue trauma, patients of all ages. The student will be able to:                                                                                                                                                         |

|       |                                                                                                                                                                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 45.01 | Review anatomy and physiology of the integumentary system to include the layers of the skin.                                                                                                                                                                                                       |
| 45.02 | Describe the pathophysiology, signs and symptoms, and MOI of soft tissue trauma.                                                                                                                                                                                                                   |
| 45.03 | Describe and demonstrate the assessment and management of various soft tissue injuries. <ul style="list-style-type: none"> <li>• Wounds (e.g., avulsion, bite, laceration, puncture, and incisions)</li> <li>• Crush and compartment syndrome</li> <li>• High pressure injection injury</li> </ul> |
| 45.04 | Identify types of burn injuries, including: <ul style="list-style-type: none"> <li>• Thermal burn</li> <li>• Chemical burn</li> <li>• Electrical burn</li> <li>• Radiation exposure</li> </ul>                                                                                                     |
| 45.05 | Describe the depth classifications of burn injuries, including: <ul style="list-style-type: none"> <li>• Superficial burn</li> <li>• Partial-thickness burn</li> <li>• Full-thickness burn</li> <li>• Other depth classifications</li> </ul>                                                       |
| 45.06 | Describe and demonstrate methods for determining body surface area percentage of a burn injury including the “rule of nines,” the “rule of palms,” and other methods.                                                                                                                              |
| 45.07 | Explain how the seriousness of a burn is related to its depth and percent of body surface area (BSA) involved.                                                                                                                                                                                     |
| 45.08 | Review the various management techniques for hemorrhage control.                                                                                                                                                                                                                                   |
| 45.09 | Differentiate among the types of injuries requiring the use of an occlusive versus non- occlusive dressing.                                                                                                                                                                                        |
| 45.10 | Demonstrate the assessment and management of specific burn injuries including: <ul style="list-style-type: none"> <li>• Thermal</li> <li>• Inhalation</li> <li>• Chemical (<i>in the eye and on the skin</i>)</li> <li>• Electrical</li> <li>• Radiation</li> </ul>                                |
| 46.0  | <b>Head, Facial, Neck, and Spine Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of head, facial, neck and spine trauma, patients of all ages. The student will be able to:                                          |
| 46.01 | Review the anatomy and physiology of the head, face, neck and spine.                                                                                                                                                                                                                               |
| 46.02 | Describe the pathophysiology, signs and symptoms, and MOI for head, face, neck, and spine trauma.                                                                                                                                                                                                  |
| 46.03 | Describe and demonstrate the assessment and management of a patient with the following traumas to the head, face, neck, and spine: <ul style="list-style-type: none"> <li>• Penetrating neck trauma</li> </ul>                                                                                     |

|       |                                                                                                                                                                                                                                                                                      |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Laryngotracheal injury</li> <li>• Skull fracture</li> <li>• Facial fracture</li> <li>• Eye injury (foreign body) <u>eyes, globe rupture</u></li> <li>• Dental trauma</li> <li>• Shaken Baby Syndrome</li> <li>• Severe epistaxis</li> </ul> |
| 46.04 | Recognize and manage life threats due to face, head, neck, and spine trauma.                                                                                                                                                                                                         |
| 46.05 | Discuss and demonstrate the utilization of the Glasgow Coma Scale.                                                                                                                                                                                                                   |
| 47.0  | <b>Nervous System Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of nervous system trauma, patients of all ages. The student will be able to:                                                         |
| 47.01 | Review the anatomy and physiology of the nervous system.                                                                                                                                                                                                                             |
| 47.02 | Discuss the pathophysiology, signs and symptoms, and MOI for <b>traumatic</b> brain <b>injury (TBI)</b> and spinal cord trauma.                                                                                                                                                      |
| 47.03 | Describe and demonstrate the assessment and management of a patient with a <b>traumatic</b> brain <b>injury (TBI)</b> and/or spinal cord trauma.                                                                                                                                     |
| 47.04 | Discuss the rationale and potential complications of spinal motion restriction of the entire spine when a cervical spine injury is suspected.                                                                                                                                        |
| 47.05 | Given a scenario, discuss whether or not to remove a helmet prior to transport of a patient.                                                                                                                                                                                         |
| 47.06 | Demonstrate various methods for stabilization and removal of a helmet.                                                                                                                                                                                                               |
| 47.07 | Discuss documentation of assessment before, during, and after spinal motion restriction.                                                                                                                                                                                             |
| 48.0  | <b>Special Considerations in Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment and management of trauma patients with special considerations, patients of all ages. The student will be able to:                         |
| 48.01 | Review the anatomy and physiology for the following trauma patients: <ul style="list-style-type: none"> <li>• Pregnant</li> <li>• Pediatric</li> <li>• Geriatric</li> </ul>                                                                                                          |
| 48.02 | Discuss the pathophysiology, signs and symptoms, and MOI of trauma in the following patients: <ul style="list-style-type: none"> <li>• Pregnant</li> <li>• Pediatric</li> <li>• Geriatric</li> </ul>                                                                                 |
| 48.03 | Discuss and demonstrate unique assessment and management considerations for the following trauma patients: <ul style="list-style-type: none"> <li>• Pregnant</li> <li>• Pediatric</li> <li>• Geriatric</li> </ul>                                                                    |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Cognitively impaired</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 49.0  | <b>Environmental Emergencies:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment and management of environmental emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                  |
| 49.01 | Define drowning and discuss its incidence, risk factors and prevention.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 49.02 | <p>Discuss the pathophysiology, signs and symptoms, and MOI of the following:</p> <ul style="list-style-type: none"> <li>• Drowning and water related incidents</li> <li>• Temperature-related illness</li> <li>• Bites and envenomation</li> <li>• Dysbarism such as high-altitude injuries</li> <li>• Diving injuries</li> <li>• Lightning (electrical) injury</li> <li>• High altitude illness</li> <li>• Radiation exposure</li> <li>• Other environmental emergencies</li> </ul>                |
| 49.03 | <p>Describes and demonstrate the assessment and management for a patient with the following:</p> <ul style="list-style-type: none"> <li>• Drowning and water related incidents</li> <li>• Temperature-related illness</li> <li>• Bites and envenomation</li> <li>• Dysbarism such as high-altitude injuries</li> <li>• Diving injuries</li> <li>• Lightning (electrical) injury</li> <li>• High altitude illness</li> <li>• Radiation exposure</li> <li>• Other environmental emergencies</li> </ul> |
| 49.04 | Discuss the fundamental principles of the gas laws including Boyle's, Dalton, Henry and Charles.                                                                                                                                                                                                                                                                                                                                                                                                     |
| 49.05 | Discuss scene management and provider safety considerations for a variety of environmental emergencies.                                                                                                                                                                                                                                                                                                                                                                                              |
| 49.06 | Explain the five ways a body can lose heat.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 49.07 | Discuss potentially life-threatening venomous species of insects, spiders and snakes in the U.S.                                                                                                                                                                                                                                                                                                                                                                                                     |
| 50.0  | <b>Multi-Systems Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of multi-system trauma and blast injuries, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                         |
| 50.01 | Discuss the pathophysiology, signs and symptoms, and MOI of multi-system trauma and blast injuries.                                                                                                                                                                                                                                                                                                                                                                                                  |
| 50.02 | Describe and demonstrate assessment and management considerations for a patient of multi system trauma and blast injuries.                                                                                                                                                                                                                                                                                                                                                                           |

|       |                                                                                                                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 51.0  | <b>Obstetrics:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of management of the obstetric patient within the scope of practice of the EMT. The student will be able to:               |
| 51.01 | Identify and describe the anatomical and the physiological changes during pregnancy.                                                                                                                             |
| 51.02 | Define the stages of labor and discuss how to assess them.                                                                                                                                                       |
| 51.03 | Differentiate between cephalic and abnormal delivery.                                                                                                                                                            |
| 51.04 | Describe the management of a patient with pre-delivery emergencies.                                                                                                                                              |
| 51.05 | Discuss and demonstrate the patient care measures for all stages of labor in a cephalic delivery for the mother and the newborn.                                                                                 |
| 51.06 | Describe the management of the mother post-delivery.                                                                                                                                                             |
| 51.07 | Discuss and demonstrate the patient care measures for all stages of labor in abnormal deliveries for the mother and the newborn.                                                                                 |
| 51.08 | Describe the procedures for handling complications of delivery.                                                                                                                                                  |
| 51.09 | Describe special considerations when meconium is present in amniotic fluid or during delivery.                                                                                                                   |
| 51.10 | Identify the factors that lead to premature birth and low birth weight newborns.                                                                                                                                 |
| 51.11 | Demonstrate the procedures for handling complications of pregnancy including pre-eclampsia, eclampsia, and high risk.                                                                                            |
| 52.0  | <b>Neonatal Care:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of management of the newborn and neonatal patient within the scope of practice of the EMT. The student will be able to: |
| 52.01 | Discuss and demonstrate assessment and management considerations of a neonate.                                                                                                                                   |
| 52.02 | Define the term neonate.                                                                                                                                                                                         |
| 52.03 | Describe special patient care considerations of a premature baby.                                                                                                                                                |
| 52.04 | Calculate the Apgar score given various newborn situations.                                                                                                                                                      |
| 52.05 | Discuss the common signs when ventilatory assistance is appropriate for a neonate.                                                                                                                               |
| 52.06 | Discuss and demonstrate the steps in resuscitation of a neonate.                                                                                                                                                 |
| 52.07 | Review the signs of hypovolemia in a newborn.                                                                                                                                                                    |
| 52.08 | Discuss the effects maternal narcotic usage has on the newborn.                                                                                                                                                  |
| 52.09 | Discuss the management/treatment plan for vomiting in the neonate.                                                                                                                                               |

|       |                                                                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 52.10 | Discuss the assessment findings associated with common birth injuries in the neonate.                                                                                                              |
| 53.0  | <b>Pediatrics:</b> Demonstrate a fundamental depth, fundamental breadth of knowledge of management of the pediatric patient within the scope of practice of the EMT. The student will be able to:  |
| 53.01 | Review the anatomy, physiology and pathophysiology differences of patients.                                                                                                                        |
| 53.02 | Discuss the differences in approaching and assessing patients.                                                                                                                                     |
| 53.03 | Discuss and demonstrate assessment and management considerations for Sudden Unexplained Infant Death Syndrome (SUIDS).                                                                             |
| 53.04 | Describe the selection of appropriate airway adjuncts and ventilation devices.                                                                                                                     |
| 53.05 | Discuss complications of improper utilization of airway adjuncts and ventilation devices.                                                                                                          |
| 53.06 | Describe the common causes, assessment and management of respiratory distress, failure, or arrest.                                                                                                 |
| 53.07 | Discuss the common causes, assessment and management of hypo-perfusion.                                                                                                                            |
| 53.08 | Discuss the common causes, assessment and management of cardiopulmonary arrest.                                                                                                                    |
| 53.09 | Describe the common causes, assessment and management of altered level of consciousness.                                                                                                           |
| 53.10 | Describe the common causes, assessment and management of trauma.                                                                                                                                   |
| 53.11 | Describe the common causes, assessment and management of neurological emergencies.                                                                                                                 |
| 53.12 | Demonstrate proper technique for administering blow-by oxygen.                                                                                                                                     |
| 53.13 | Review proper technique for suctioning.                                                                                                                                                            |
| 53.14 | Review appropriate use of airway adjuncts and ventilation devices.                                                                                                                                 |
| 53.15 | Review age-appropriate basic airway clearing maneuvers for a completely obstructed airway.                                                                                                         |
| 54.0  | <b>Geriatrics:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of management of the geriatric patient within the scope of practice of the EMT. The student will be able to: |
| 54.01 | Define and discuss the term geriatrics.                                                                                                                                                            |
| 54.02 | Review the anatomy, physiology and pathophysiology of the geriatric patient.                                                                                                                       |
| 54.03 | Discuss common emotional and psychological concerns and conditions of the geriatric patient.                                                                                                       |
| 54.04 | Discuss the importance of fall prevention with the geriatric patient.                                                                                                                              |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 54.05 | Describe principles that should be employed when assessing and communicating with the geriatric patient.                                                                                                                                                                                                                                                                                                                              |
| 54.06 | Describe the common causes, assessment, and management of the geriatric patient with a medical, trauma, or psychosocial complaint.                                                                                                                                                                                                                                                                                                    |
| 55.0  | <b>Patients with Special Challenges:</b> Demonstrate a simple depth, simple breadth of knowledge of the management of the patient with special challenges, patients of all ages. The student will be able to:                                                                                                                                                                                                                         |
| 55.01 | Discuss the special considerations required when providing emergency care to patients with: <ul style="list-style-type: none"> <li>• Abuse/neglect of vulnerable populations</li> <li>• Homelessness</li> <li>• Poverty</li> <li>• Bariatrics</li> <li>• Tech dependent</li> <li>• Hospice/terminally ill</li> <li>• Tracheostomy</li> <li>• Home care</li> <li>• Sensory deficit/loss</li> <li>• Developmental disability</li> </ul> |
| 55.02 | Discuss special considerations regarding common medical devices used in the home care of patients with special challenges including: <ul style="list-style-type: none"> <li>• Respiratory devices</li> <li>• Cardiac devices</li> <li>• Gastro-urinary devices</li> <li>• Central &amp; peripheral IV catheters</li> </ul>                                                                                                            |
| 55.03 | Describe home care and the types of patients it serves and the services it encompasses.                                                                                                                                                                                                                                                                                                                                               |
| 55.04 | Differentiate between hospice/palliative care and curative care.                                                                                                                                                                                                                                                                                                                                                                      |
| 55.05 | Discuss the role of the EMT as a patient advocate for vulnerable populations.                                                                                                                                                                                                                                                                                                                                                         |
| 56.0  | <b>Principles of Safely Operating a Ground Ambulance:</b> Demonstrate a simple depth, foundational breadth of knowledge of risks and responsibilities of transport. The student will be able to:                                                                                                                                                                                                                                      |
| 56.01 | Discuss the importance of performing regular vehicle and equipment inspection.                                                                                                                                                                                                                                                                                                                                                        |
| 56.02 | Demonstrate how to perform a daily inspection of an ambulance.                                                                                                                                                                                                                                                                                                                                                                        |
| 56.03 | Review the general provisions of Florida laws relating to the operation of the ambulance.                                                                                                                                                                                                                                                                                                                                             |
| 56.04 | Discuss the guidelines for operating an ambulance safely during emergency and non-emergency situation/incident.                                                                                                                                                                                                                                                                                                                       |
| 56.05 | Review considerations that are required for ensuring scene safety, including personal safety, patient safety, and traffic control.                                                                                                                                                                                                                                                                                                    |

|       |                                                                                                                                                                                                                                                                                                                                                                                      |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 56.06 | Review how to clean and disinfect the ambulance and equipment.                                                                                                                                                                                                                                                                                                                       |
| 57.0  | <b>Incident Management:</b> Demonstrate a fundamental depth, fundamental breadth of knowledge of establishing and working within the incident management system. The student will be able to:                                                                                                                                                                                        |
| 57.01 | Discuss the importance of NIMS (National Incident Management System) and its functional components.                                                                                                                                                                                                                                                                                  |
| 57.02 | Discuss unified command and when it is applicable.                                                                                                                                                                                                                                                                                                                                   |
| 57.03 | Describe the role of command and the procedures for transfer of command.                                                                                                                                                                                                                                                                                                             |
| 57.04 | List and describe the functions of the following groups and leaders in ICS as it pertains to EMS incidents: <ul style="list-style-type: none"> <li>• Safety</li> <li>• Logistics</li> <li>• Rehabilitation</li> <li>• Staging,</li> <li>• Treatment</li> <li>• Triage</li> <li>• Transportation</li> <li>• Extrication/rescue</li> <li>• Morgue</li> <li>• Communications</li> </ul> |
| 57.05 | Discuss the physical and psychological signs of critical incident stress.                                                                                                                                                                                                                                                                                                            |
| 58.0  | <b>Multiple Casualty Incidents:</b> Demonstrate a simple depth, foundational breadth of knowledge of responding to an emergency during a multiple casualty incident. The student will be able to:                                                                                                                                                                                    |
| 58.01 | Review essential elements of scene size-up when arriving at a potential MCI.                                                                                                                                                                                                                                                                                                         |
| 58.02 | Describe the role of the rescuers and EMS systems in planning for MCIs and disasters.                                                                                                                                                                                                                                                                                                |
| 58.03 | Describe the role of the physician at multiple casualty incidents.                                                                                                                                                                                                                                                                                                                   |
| 58.04 | Define triage and describe the principles of triage.                                                                                                                                                                                                                                                                                                                                 |
| 58.05 | Describe the START (simple triage and rapid treatment) and JUMP START method of initial triage.                                                                                                                                                                                                                                                                                      |
| 58.06 | Describe techniques used to allocate patients to hospitals and track them.                                                                                                                                                                                                                                                                                                           |
| 58.07 | Discuss and describe the essential equipment to provide logistical support to MCI operations.                                                                                                                                                                                                                                                                                        |
| 58.08 | Describe the role of critical incident stress management during and after MCIs.                                                                                                                                                                                                                                                                                                      |
| 58.09 | Demonstrate the use of local/regional triage tagging system.                                                                                                                                                                                                                                                                                                                         |

|       |                                                                                                                                                                                                                                                                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 59.0  | <b>Air Medical:</b> Demonstrate a simple depth, simple breadth of knowledge of safe air medical operations and criteria for utilizing air medical response. The student will be able to:                                                                                                                                                                        |
| 59.01 | Describe key scene safety considerations when preparing for a helicopter medivac, including establishing a landing zone and approaching the aircraft.                                                                                                                                                                                                           |
| 59.02 | Describe the capabilities, protocols, and methods for accessing air medical transport.                                                                                                                                                                                                                                                                          |
| 59.03 | Review the advantages and disadvantages of air medical transport.                                                                                                                                                                                                                                                                                               |
| 59.04 | Review the conditions/situations in which air medical transport should be considered.                                                                                                                                                                                                                                                                           |
| 60.0  | <b>Vehicle Extrication:</b> Demonstrate a simple depth, simple breadth of knowledge for safe vehicle extrication and use of simple hand tools. The student will be able to:                                                                                                                                                                                     |
| 60.01 | Describe the role of the EMT in patient rescue and vehicle extrication                                                                                                                                                                                                                                                                                          |
| 60.02 | Describe personal and patient safety during vehicle extrication.                                                                                                                                                                                                                                                                                                |
| 60.03 | Explain the difference between simple access and complex access in vehicle extrication.                                                                                                                                                                                                                                                                         |
| 60.04 | Discuss patient care considerations related to assisting with rapid extrication, providing emergency care to the trapped patient and removing and transferring a patient.                                                                                                                                                                                       |
| 60.05 | Discuss the use of simple hand tools used for vehicle extrication.                                                                                                                                                                                                                                                                                              |
| 60.06 | Discuss and describe the hazards and safe practices associated with the following vehicle components: <ul style="list-style-type: none"> <li>• Energy absorbing bumpers</li> <li>• Air bag/supplemental restraint systems</li> <li>• Catalytic converters and conventional fuel systems</li> <li>• Stored energy</li> <li>• Hybrid-electric vehicles</li> </ul> |
| 60.07 | Describe methods for emergency stabilization using rope, cribbing, jacks, spare tire, and come-a-longs for vehicles.                                                                                                                                                                                                                                            |
| 60.08 | Describe the electrical hazards commonly found at highway incidents (above and below ground).                                                                                                                                                                                                                                                                   |
| 60.09 | Explain the difference between tempered and safety glass, identify its locations on a vehicle and how to break it safely.                                                                                                                                                                                                                                       |
| 60.10 | Explain typical door anatomy and methods to gain access to the patient.                                                                                                                                                                                                                                                                                         |
| 61.0  | <b>Hazardous Materials Awareness:</b> Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating in a cold zone at a hazardous material or other special incident. The student will be able to:                                                                                                                         |
| 61.01 | Identify and describe resources for substance identification, decontamination, and treatment information, including but not limited to the following: <ul style="list-style-type: none"> <li>• Poison control center</li> <li>• Medical control</li> </ul>                                                                                                      |

|       |                                                                                                                                                                                                                                                                                                                                            |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Material safety data sheets (MSDS),</li> <li>• Reference textbooks</li> <li>• Computer databases</li> <li>• Computer-Aided Management of Emergency Operations (CAMEO)</li> <li>• CHEMTREC</li> <li>• Technical specialists</li> <li>• Agency for toxic substances and disease registry</li> </ul> |
| 61.02 | Explain primary and secondary contamination risk.                                                                                                                                                                                                                                                                                          |
| 61.03 | Review routes of exposure.                                                                                                                                                                                                                                                                                                                 |
| 61.04 | Discuss how the substance and route of contamination alters triage and decontamination methods.                                                                                                                                                                                                                                            |
| 61.05 | <p>Explain the common signs, symptoms, and treatment for the following substances:</p> <ul style="list-style-type: none"> <li>• Corrosives</li> <li>• Pesticides</li> <li>• Chemical asphyxiants</li> <li>• Hydrocarbon solvents</li> </ul>                                                                                                |
| 61.06 | Identify local facilities and resources capable of treating patients exposed to hazardous materials.                                                                                                                                                                                                                                       |
| 61.07 | <p>Determine the appropriate level of PPE by considering the following:</p> <ul style="list-style-type: none"> <li>• Types</li> <li>• Application</li> <li>• Use and limitations</li> <li>• Use of chemical compatibility chart</li> </ul>                                                                                                 |
| 61.08 | Explain specific decontamination procedures.                                                                                                                                                                                                                                                                                               |
| 61.09 | Discuss the designated HAZMAT control zones (HOT, WARM, and COLD).                                                                                                                                                                                                                                                                         |
| 61.10 | Discuss an emergency two-step decontamination process.                                                                                                                                                                                                                                                                                     |
| 61.11 | Identify DOT Labels, placards and markings that are used to designate HAZMAT materials.                                                                                                                                                                                                                                                    |
| 61.12 | Demonstrate the ability to use a variety of reference materials to identify a HAZMAT material.                                                                                                                                                                                                                                             |
| 62.0  | <b>Mass Casualty Incidents Due to Terrorism and Disaster:</b> Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating on the scene of a natural or man-made disaster. The student will be able to:                                                                                              |
| 62.01 | Describe the role of the EMT on the scene of a natural or man-made disaster.                                                                                                                                                                                                                                                               |
| 62.02 | Define the different types of terrorism and provide examples of incidents of each.                                                                                                                                                                                                                                                         |

|                                                                                                                                           |                                                                                                                                                                                                                                                                                             |
|-------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 62.03                                                                                                                                     | Describe the factors related to ensuring situational safety at the site of a disaster and the procedures required.                                                                                                                                                                          |
| 62.04                                                                                                                                     | Discuss the National Terrorism Advisory System.                                                                                                                                                                                                                                             |
| 62.05                                                                                                                                     | Discuss factors to consider when responding to a terrorist situation.                                                                                                                                                                                                                       |
| 62.06                                                                                                                                     | Review important actions to take at the scene of a terrorist event such as: <ul style="list-style-type: none"> <li>• Scene safety</li> <li>• Personal protection</li> <li>• Notification procedures</li> <li>• Available resources</li> <li>• Working with in the command system</li> </ul> |
| 62.07                                                                                                                                     | List and describe the main categories of weapons of mass destruction.                                                                                                                                                                                                                       |
| 62.08                                                                                                                                     | Discuss the different types of chemical agents and their signs and symptoms.                                                                                                                                                                                                                |
| 62.09                                                                                                                                     | Review the treatment and management of patients exposed to various types of chemical agents and radiation.                                                                                                                                                                                  |
| 62.10                                                                                                                                     | Review the different types of radiations and their effect on the human body.                                                                                                                                                                                                                |
| 62.11                                                                                                                                     | Discuss the use of a nerve agent antidote kit.                                                                                                                                                                                                                                              |
| <b>Paramedic: Completion of intended (outcomes 63-126) lead to the student's eligibility to sit for the licensure exam for Paramedic.</b> |                                                                                                                                                                                                                                                                                             |
| 63.0                                                                                                                                      | <b>EMS Systems:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the History of EMS and a complex depth, comprehensive breadth of knowledge of EMS Systems. The student will be able to:                                                                           |
| 63.01                                                                                                                                     | Define terms, including but not limited to: EMS systems, licensure, registration, profession, professionalism, health care professional, ethics, peer review, medical direction, and protocols.                                                                                             |
| 63.02                                                                                                                                     | Knowledge of EMS History                                                                                                                                                                                                                                                                    |

| 63.07                                                                                                                                     | Discuss the role of national associations and of a national certification agency.                                                                                                                                                                                                           |
| 63.08                                                                                                                                     | Discuss Chapter 401, Florida Statutes, and Chapter 64-E, Florida Administrative Code.                                                                                                                                                                                                       |
| 63.09                                                                                                                                     | Discuss the roles of various EMS standard setting agencies.                                                                                                                                                                                                                                 |

|       |                                                                                                                                                                                                                                                                                     |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 63.10 | Identify the standards (components) of an EMS System as defined by the National Highway Traffic Safety Administration.                                                                                                                                                              |
| 63.11 | Describe and demonstrate professional behaviors in the following areas: integrity, empathy, self-motivation, appearance and personal hygiene, self-confidence, communications, time management, teamwork and diplomacy, respect, patient advocacy, and careful delivery of service. |
| 63.12 | Describe the role of the EMS physician in providing medical direction.                                                                                                                                                                                                              |
| 63.13 | Discuss examples of local protocols.                                                                                                                                                                                                                                                |
| 63.14 | Differentiate between quality improvement and quality assurance.                                                                                                                                                                                                                    |
| 63.15 | Describe the relationship between a physician on the scene, the paramedic on the scene, and the EMS physician providing on-line medical direction.                                                                                                                                  |
| 63.16 | Describe the role of the paramedic relative to the safety of the crew, the patient, and bystanders.                                                                                                                                                                                 |
| 63.17 | Assess personal practices relative to the responsibility for personal safety, the safety of the crew, the patient, and bystanders.                                                                                                                                                  |
| 63.18 | Advocate the need for injury prevention.                                                                                                                                                                                                                                            |
| 63.19 | Discuss the diverse types of EMS services and differences in their provision of care, including mobile integrated health and community paramedic, and discuss the paramedics role in community risk reduction.                                                                      |
| 64.0  | <b>Research:</b> Demonstrate a fundamental depth, foundational breath of knowledge of research principles to interpret literature and advocate evidence-based practice. The student will be able to:                                                                                |
| 64.01 | Interpret results and reach conclusions.                                                                                                                                                                                                                                            |
| 64.02 | Discuss the importance of evidenced based medicine and medical research and its role in refining EMS practices.                                                                                                                                                                     |
| 65.0  | <b>Workforce Safety and Wellness:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of workforce safety and wellness. The student will be able to:                                                                                                                |
| 65.01 | Discuss the concept of wellness and its benefits.                                                                                                                                                                                                                                   |
| 65.02 | Discuss how cardiovascular endurance, muscle strength, and flexibility contribute to physical fitness.                                                                                                                                                                              |
| 65.03 | Describe the impact of shift work on circadian rhythms.                                                                                                                                                                                                                             |
| 65.04 | Discuss the role of risk assessments and warning signs in cancer and cardiovascular disease.                                                                                                                                                                                        |
| 65.05 | Differentiate between proper from improper body mechanics for lifting and moving patients in emergency and non-emergency situations.                                                                                                                                                |
| 65.06 | Discuss the principles of crew resource management.                                                                                                                                                                                                                                 |
| 65.07 | Describe the problems that a paramedic might encounter in a hostile situation and the techniques used to manage the situation.                                                                                                                                                      |

|       |                                                                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 65.08 | Describe the equipment available for self-protection when confronted with a variety of adverse situations.                                                                        |
| 65.09 | Describe the three phases and factors that trigger the stress response.                                                                                                           |
| 65.10 | Differentiate between normal/ healthy and detrimental reactions to anxiety and stress.                                                                                            |
| 65.11 | Identify and describe the defense mechanisms and management techniques and resources commonly used to deal with stress.                                                           |
| 65.12 | Describe the components of critical incident stress management (CISM).                                                                                                            |
| 65.13 | Describe the needs of the paramedic when dealing with death and dying.                                                                                                            |
| 65.14 | Discuss the importance of standard precautions and body substance isolation practices.                                                                                            |
| 65.15 | Discuss the principles of disease transmission and prevention measures                                                                                                            |
| 65.16 | Discuss the need to treat each patient as an individual, with respect and dignity.                                                                                                |
| 65.17 | Discuss the need to respect the emotional needs of dying patients and their families.                                                                                             |
| 65.18 | Discuss the paramedics' role in performing community risk assessment.                                                                                                             |
| 66.0  | <b>Documentation:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the principles of medical documentation and report writing. The student will be able to: |
| 66.01 | Identify the general principles regarding the importance of EMS documentation and ways in which documents are used.                                                               |
| 66.02 | Demonstrate proper use of medical terminology.                                                                                                                                    |
| 66.03 | Record pertinent administrative information to a given standard.                                                                                                                  |
| 66.04 | Analyze the documentation for accuracy and completeness, including spelling.                                                                                                      |
| 66.05 | Describe the differences between subjective and objective elements of documentation.                                                                                              |
| 66.06 | Describe the potential consequences of illegible, incomplete, or inaccurate documentation.                                                                                        |
| 66.07 | Describe the special considerations concerning patient refusal of transport.                                                                                                      |
| 66.08 | Explain how to properly record direct patient or bystander comments.                                                                                                              |
| 66.09 | Describe the special considerations concerning mass casualty incident documentation.                                                                                              |
| 66.10 | Identify and record the pertinent, reportable clinical data of each patient interaction.                                                                                          |
| 66.11 | Note and record pertinent negative clinical findings.                                                                                                                             |

|       |                                                                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 66.12 | Demonstrate proper completion of an EMS PCR (patient care record).                                                                                                          |
| 67.0  | <b>EMS Communication:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of EMS communication system. The student will be able to:                         |
| 67.01 | Identify the role of verbal, written, and electronic communications in the provision of EMS.                                                                                |
| 67.02 | Describe the phases of communications necessary for an emergency response and transport.                                                                                    |
| 67.03 | Discuss the importance of proper terminology when communicating during an emergency.                                                                                        |
| 67.04 | Discuss factors that impede or enhance effective verbal and written communications.                                                                                         |
| 67.05 | Discuss the legal implications of written communications.                                                                                                                   |
| 67.06 | Identify the components of the local EMS communications system and describe their function and use.                                                                         |
| 67.07 | Identify and differentiate among the following communications systems: simplex, multiplex, duplex, trunked, digital communications, and cellular telephone.                 |
| 67.08 | Describe the functions and responsibilities of the Federal Communications Commission.                                                                                       |
| 67.09 | Describe how emergency medical dispatch (EMD) functions as an integral part of the EMS system.                                                                              |
| 67.10 | List appropriate information to be gathered by the telecommunicator.                                                                                                        |
| 67.11 | Demonstrate an organized and concise radio transmission                                                                                                                     |
| 67.12 | Demonstrate an organized and concise patient report upon transfer of care.                                                                                                  |
| 68.0  | <b>Therapeutic Communication:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the therapeutic communication principles. The student will be able to: |
| 68.01 | Demonstrate health care literacy when communicating with patients.                                                                                                          |
| 68.02 | Identify internal and external factors that affect a patient/ bystander interview conducted by a paramedic.                                                                 |
| 68.03 | Review the strategies for developing patient rapport.                                                                                                                       |
| 68.04 | Summarize the methods to assess mental status based on interview techniques.                                                                                                |
| 68.05 | Discuss the strategies for interviewing difficult patients.                                                                                                                 |
| 68.06 | Summarize developmental considerations Patients of all ages that influence patient interviewing.                                                                            |
| 68.07 | Review unique interviewing techniques necessary to employ with patients who have special needs.                                                                             |

|       |                                                                                                                                                                                                                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 68.08 | Discuss interviewing considerations used by paramedics in cross-cultural communications.                                                                                                                                                                                                                 |
| 69.0  | <b>Medical/Legal and Ethics:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of medical legal and ethical concepts related to EMS. The student will be able to:                                                                                                                      |
| 69.01 | Differentiate between legal and ethical responsibilities.                                                                                                                                                                                                                                                |
| 69.02 | Discuss State of Florida and Federal special reporting situations including: <ul style="list-style-type: none"> <li>• Abuse</li> <li>• Sexual assault</li> <li>• Gunshot and knife wounds</li> <li>• Communicable disease</li> <li>• Animal bites</li> </ul>                                             |
| 69.03 | Review terms, including but not limited to, the following: abandonment, battery, breach of duty, consent (expressed, implied, informed, voluntary), DNR orders, duty to act, emancipated minor, false imprisonment, liability, libel, negligence, proximate cause, scope of practice, slander, and tort. |
| 69.04 | Differentiate between the scope of practice and the standard of care for paramedic practice.                                                                                                                                                                                                             |
| 69.05 | Discuss the concept of medical direction, including off-line medical direction and on-line medical direction, and its relationship to the standard of care of a paramedic.                                                                                                                               |
| 69.06 | Review the four elements that must be present in order to prove negligence.                                                                                                                                                                                                                              |
| 69.07 | Review the legal concept and limitations of immunity, including Good Samaritan statutes and governmental immunity, as it applies to the paramedic.                                                                                                                                                       |
| 69.08 | Review the importance and necessity of patient confidentiality and the standards for maintaining patient confidentiality that apply to the paramedic.                                                                                                                                                    |
| 69.09 | Review consent to include expressed, informed, implied, and involuntary.                                                                                                                                                                                                                                 |
| 69.10 | Discuss the importance of patient rights and advocating for the patient's best interest.                                                                                                                                                                                                                 |
| 69.11 | Demonstrate appropriate patient management techniques in a refusal of care situation.                                                                                                                                                                                                                    |
| 69.12 | Discuss the issues of abandonment, negligence, false imprisonment, and battery and their implications to the paramedic.                                                                                                                                                                                  |
| 69.13 | Describe the actions that the paramedic should take to preserve evidence at a crime or accident scene.                                                                                                                                                                                                   |
| 69.14 | Describe the importance of providing accurate communication (oral and written) in substantiating an incident.                                                                                                                                                                                            |
| 69.15 | Describe the criteria necessary to honor an advance directive in Florida.                                                                                                                                                                                                                                |
| 70.0  | <b>Anatomy and Physiology:</b> Integrate a comprehensive knowledge of anatomy and physiology of all human systems. The student will be able to:                                                                                                                                                          |
| 70.01 | Review the EMT standards and benchmarks for the anatomy & physiology.                                                                                                                                                                                                                                    |

|       |                                                                                                                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 70.02 | Demonstrate comprehensive knowledge of anatomy and physiology as it applies to paramedic practice.                                                                                                                   |
| 71.0  | <b>Medical Terminology:</b> Integrate a comprehensive knowledge in the use of medical terminology and abbreviations into written and oral communication with health care professionals. The student will be able to: |
| 71.01 | Review the EMT standards and benchmarks for medical terminology.                                                                                                                                                     |
| 71.02 | Demonstrate a comprehensive knowledge of medical terminology as it applies to paramedic practice.                                                                                                                    |
| 72.0  | <b>Pathophysiology:</b> Demonstrate a complex knowledge of pathophysiology of major systems. The student will be able to:                                                                                            |
| 72.01 | Describe the factors that precipitate disease in the human body including genetics familial diseases and risk factors.                                                                                               |
| 72.02 | Describe environmental risk factors.                                                                                                                                                                                 |
| 72.03 | Define and discuss the pathogenesis, signs, and symptoms of distributive, obstructive, neurogenic, anaphylactic, and septic shock.                                                                                   |
| 72.04 | Discuss multiple organ dysfunction syndrome (MODS).                                                                                                                                                                  |
| 72.05 | Describe alterations in cells and tissues including cellular adaptation, cellular injury, manifestation of cellular injury, and cellular death/necrosis.                                                             |
| 72.06 | Describe genetics and familial diseases and the role they play in pathophysiology.                                                                                                                                   |
| 72.07 | Describe the self-defense mechanisms of inflammation and immune responses and their relationships to pathophysiology.                                                                                                |
| 73.0  | <b>Life Span Development:</b> Integrate the knowledge of physiological and sociological changes throughout human development. The student will be able to:                                                           |
| 73.01 | Compare, contrast, and analyze the physiological and psychosocial characteristics, patients of all ages.                                                                                                             |
| 74.0  | <b>Public Health:</b> Demonstrate a fundamental knowledge of principles of public health. The student will be able to:                                                                                               |
| 74.01 | Review the EMT standards and benchmarks for the public health.                                                                                                                                                       |
| 74.02 | Apply a fundamental knowledge of the principles of public health, epidemiology, health promotion, and illness and injury prevention.                                                                                 |
| 74.03 | Discuss human trafficking and the need to recognize potential victims.                                                                                                                                               |
| 74.04 | Review Electronic Health Records in EMS.                                                                                                                                                                             |
| 74.05 | Discuss the roles of governmental and nongovernmental agencies in public health.                                                                                                                                     |
| 74.06 | Review the mission and goals of public health.                                                                                                                                                                       |
| 74.07 | Discuss the social, geographic, economic, and demographic factors that influence public health.                                                                                                                      |

|                       |                                                                                                                                                                    |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 74.08                 | Demonstrate the ability to provide patient and community education on public health topics.                                                                        |
| 74.09                 | Discuss unique concerns in the pediatric, geriatric, and special populations.                                                                                      |
| 74.10                 | Describe the role of EMS in health screenings, vaccinations, and immunizations.                                                                                    |
| 74.11                 | Discuss the impacts of the political, social, and economic environments on public health.                                                                          |
| 74.12                 | Review the various types of infectious disease that are a threat to public health.                                                                                 |
| 74.13                 | Describe the various patient dispositions, choosing appropriate destinations, and transport modes.                                                                 |
| 74.14                 | Define and understand bioinformatics and its role in EMS and public health.                                                                                        |
| 74.15                 | Analyze the principles and practices of Mobile Integrated Health in enhancing community healthcare delivery.                                                       |
| 74.16                 | Evaluate technology integration and data sharing in Mobile Integrated Health initiatives.                                                                          |
| <a href="#">74.17</a> | <del>74.17</del> Review the collaboration between EMS and other healthcare providers within Mobile Integrated Health frameworks.                                   |
| <a href="#">74.18</a> | <del>74.18</del> Demonstrate strategies for addressing the social determinants of health through Mobile Integrated Health Services.                                |
| <a href="#">74.19</a> | <del>74.19</del> Evaluate the integration of community resources and services in the primary assessment process within Mobile Integrated Health.                   |
| <a href="#">74.20</a> | <del>74.20</del> Review and understand substance abuse disorders and how they impact public health.                                                                |
| 75.0                  | <b>Principles of Pharmacology:</b> Demonstrate a complex depth, comprehensive breadth of knowledge in the principles of pharmacology. The student will be able to: |
| 75.01                 | Discuss medication administration safety.                                                                                                                          |
| 75.02                 | Differentiate among the chemical, generic (nonproprietary), and trade (proprietary) names of a drug.                                                               |
| 75.03                 | List the four main sources of drug products.                                                                                                                       |
| 75.04                 | Describe how drugs are classified.                                                                                                                                 |
| 75.05                 | List legislative acts controlling drug use and abuse in the United States.                                                                                         |
| 75.06                 | Differentiate among Schedule I, II, III, IV, and V substances.                                                                                                     |
| 75.07                 | Use reference materials to research medications.                                                                                                                   |
| 75.08                 | Discuss standardization of drugs.                                                                                                                                  |

|       |                                                                                                                                                                                                                                                                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 75.09 | Discuss investigational drugs, including the Food and Drug Administration (FDA) approval process and the FDA classifications for newly approved drugs.                                                                                                                                                                                                                   |
| 75.10 | Discuss the paramedic's responsibilities and scope of practice pertinent to the administration of medications.                                                                                                                                                                                                                                                           |
| 75.11 | Review best practices and legal requirements for the storage and security of medications.                                                                                                                                                                                                                                                                                |
| 75.12 | List and describe available drug forms.                                                                                                                                                                                                                                                                                                                                  |
| 75.13 | List and differentiate all methods and routes of medication administration covered in the current National EMS Scope of Practice Model.                                                                                                                                                                                                                                  |
| 75.14 | Describe the process of: <ul style="list-style-type: none"> <li>• Pharmacokinetics</li> <li>• Pharmacodynamics</li> <li>• Theories of drug action</li> <li>• Drug-response relationship</li> <li>• Factors altering drug responses</li> <li>• Predictable drug responses</li> <li>• Iatrogenic drug responses</li> <li>• Unpredictable adverse drug responses</li> </ul> |
| 75.15 | Discuss the prevention, recognition and management of adverse medication reactions.                                                                                                                                                                                                                                                                                      |
| 75.16 | Discuss the prevention, recognition and management of medication interactions.                                                                                                                                                                                                                                                                                           |
| 75.17 | Select the optimal medication and method of medication administration for patients with a particular clinical condition or situation.                                                                                                                                                                                                                                    |
| 76.0  | <b>Medication Administration:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of medication administration within the scope of practice of the paramedic. The student will be able to:                                                                                                                                                               |
| 76.01 | Review the specific anatomy and physiology pertinent to medication administration.                                                                                                                                                                                                                                                                                       |
| 76.02 | Discuss the paramedic's responsibilities and scope of practice pertinent to the administration of medications.                                                                                                                                                                                                                                                           |
| 76.03 | Review mathematical principles and demonstrate equations necessary for performing drug calculations. <b><i>Include resources for safe administration of weight-based dosing.</i></b>                                                                                                                                                                                     |
| 76.04 | Describe the indications, contraindications, procedure, equipment and risks associated with peripheral intravenous or external jugular access.                                                                                                                                                                                                                           |
| 76.05 | Describe the indications, equipment needed, technique used, precautions, and general principles of intraosseous needle placement and infusion.                                                                                                                                                                                                                           |
| 76.06 | Describe complications that can occur as a result of IV therapy.                                                                                                                                                                                                                                                                                                         |
| 76.07 | Review <b><i>medication cross-check procedure and</i></b> the "six rights" of drug administration and correlate these with the principles of medication administration.                                                                                                                                                                                                  |

|       |                                                                                                                                                                                                                                                                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 76.08 | Describe the use of standard precautions and body substance isolation (BSI) procedures when administering a medication.                                                                                                                                                                                                                                                           |
| 76.09 | Prepare medications for administration from a variety of types of packaging, including vials, non-constituted vials, ampules, prefilled syringes, and packaging for intravenous solutions.                                                                                                                                                                                        |
| 76.10 | Describe the role of medical direction in medication administration and describe the difference between direct orders (online) and standing orders (off-line).                                                                                                                                                                                                                    |
| 76.11 | Describe the indications, equipment needed, techniques used, precautions, and general principles of administering medications by the following routes: <ul style="list-style-type: none"> <li>• Inhalation route</li> <li>• Gastric tube</li> <li>• Rectal route</li> </ul>                                                                                                       |
| 76.12 | Differentiate among the different percutaneous routes of medication administration.                                                                                                                                                                                                                                                                                               |
| 76.13 | Describe the purpose, equipment needed, techniques used, complications, and general principles for obtaining a blood sample.                                                                                                                                                                                                                                                      |
| 76.14 | Obtain venous and capillary blood for testing and discuss blood chemistry and normal values.                                                                                                                                                                                                                                                                                      |
| 76.15 | Demonstrate principles of medical asepsis in the administration of medications.                                                                                                                                                                                                                                                                                                   |
| 76.16 | Demonstrate the procedure for disposal of contaminated items and supplies.                                                                                                                                                                                                                                                                                                        |
| 76.17 | Demonstrate cannulation of peripheral, intravenous and/or external jugular veins.                                                                                                                                                                                                                                                                                                 |
| 76.18 | Demonstrate intraosseous access.                                                                                                                                                                                                                                                                                                                                                  |
| 76.19 | Demonstrate administration of medications by the following routes: <ul style="list-style-type: none"> <li>• Oral</li> <li>• Sublingual</li> <li>• Buccal</li> <li>• Auto-injector</li> <li>• Inhalation route</li> <li>• Intranasal route.</li> <li>• Subcutaneous route.</li> <li>• Intramuscular route.</li> <li>• Intravenous route.</li> <li>• Intraosseous route.</li> </ul> |
| 77.0  | <b>Emergency Medications:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of emergency medications within the scope of practice for the paramedic. The student will be able to:                                                                                                                                                                               |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 77.01 | Discuss medications <b>acute and maintenance/chronic</b> ) used by the paramedic, including indications, <b>name, effects, medication action, routes of administration</b> , contraindications, dosages, adverse reactions, side effects, <b>complications</b> and interactions for the following: <ul style="list-style-type: none"> <li>• Airway management</li> <li>• Respiratory</li> <li>• Cardiovascular</li> <li>• Neurologic conditions</li> <li>• Gastrointestinal</li> <li>• Miscellaneous medications</li> <li>• Pain management</li> <li>• Discuss polypharmacy</li> </ul> |
| 78.0  | <b>Airway Management:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of airway management within the scope of practice of the paramedic, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                       |
| 78.01 | Explain the primary objective of airway maintenance. <b>To include proper airway assessment and techniques of assuring a patient airway.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 78.02 | Explain the differences in airway anatomy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 78.03 | Define, identify and describe a tracheostomy, laryngectomy, stoma, and tracheostomy tube.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 78.04 | Describe the special considerations in airway management and ventilation for the pediatric patient.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 78.05 | Describe the indications, contraindications, advantages, disadvantages, complications and equipment for rapid sequence intubation with neuromuscular blockade.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 78.06 | Identify neuromuscular blocking drugs and other agents used in rapid sequence intubation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 78.07 | Describe the indications, contraindications, advantages, disadvantages, complications and equipment for sedation during intubation.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 78.08 | Describe the indications, contraindications, advantages, disadvantages and complications for performing cricothyrotomy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 78.09 | Demonstrate the procedure for percutaneous cricothyrotomy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 78.10 | Review the function of the structures located in the upper and lower airway.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 78.11 | Demonstrate effective techniques of advanced airway management of the following: <ul style="list-style-type: none"> <li>• Orotracheal,</li> <li>• Nasotracheal,</li> <li>• Subglottic,</li> <li>• Supraglottic,</li> <li>• Digital intubation</li> </ul>                                                                                                                                                                                                                                                                                                                               |
| 78.12 | Describe and demonstrate methods of assessment for confirming correct placement of any airway device.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|                  |                                                                                                                                                                                                                                                                                  |
|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 78.13            | Describe the indications, contraindications, advantages, disadvantages, complications, equipment and technique for extubation.                                                                                                                                                   |
| 79.0             | <b>Respiration:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of respiration within the scope of practice of paramedic, patients of all ages. The student will be able to:                                                                                 |
| 79.01            | List the concentration of gases that comprise atmospheric air.                                                                                                                                                                                                                   |
| 79.02            | Describe the measurement of oxygen in the blood.                                                                                                                                                                                                                                 |
| 79.03            | Describe the measurement of carbon dioxide in the blood.                                                                                                                                                                                                                         |
| 79.04            | Describe peak expiratory flow.                                                                                                                                                                                                                                                   |
| 79.05            | Describe factors that cause decreased oxygen concentrations in the blood.                                                                                                                                                                                                        |
| 79.06            | Describe the factors that increase and decrease carbon dioxide production in the body.                                                                                                                                                                                           |
| 79.07            | Define pulsus paradoxus.                                                                                                                                                                                                                                                         |
| 79.08            | Describe the indications, contraindications, advantages, disadvantages, complications, liter flow range, and concentration of delivered oxygen for supplemental oxygen delivery devices.                                                                                         |
| 79.09            | Review the anatomy, physiology and pathophysiology of ventilation and respiration to include <ul style="list-style-type: none"> <li>• Pulmonary ventilation</li> <li>• Oxygenation</li> <li>• Respiration</li> <li>• External</li> <li>• Internal</li> <li>• Cellular</li> </ul> |
| <del>79.10</del> | <del>Discuss assessment and management of adequate and inadequate respiration to include,</del>                                                                                                                                                                                  |
| <u>79.10</u>     | <u>Supplemental oxygen therapy.</u>                                                                                                                                                                                                                                              |
| 80.0             | <b>Ventilation:</b> Demonstrate a complex breadth, comprehensive breadth of knowledge of ventilatory assessment and management, patients of all ages. The student will be able to:                                                                                               |
| 80.01            | Perform and interpret pulse oximetry and capnography.                                                                                                                                                                                                                            |
| 80.02            | Describe indications, contraindications, advantages, disadvantages, complications, and technique for ventilating a patient with an automatic transport ventilator (ATV), BIPAP/CPAP, AND PEEP devices.                                                                           |
| 80.03            | Assessment and management of adequate and inadequate ventilation to include effect on ventilation on cardiac output.                                                                                                                                                             |
| 81.0             | <b>Scene Size-Up:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of scene management. The student will be able to:                                                                                                                                          |
| 81.01            | Describe common hazards found at the scene of a trauma and a medical patient.                                                                                                                                                                                                    |
| 81.02            | Discuss common mechanisms of injury/-nature of illness. <b>(MOI/NOI).</b>                                                                                                                                                                                                        |

|       |                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 81.03 | Explain the rationale for crew members to evaluate scene safety prior to entering.                                                                                                                                                                                                                                                                                                                 |
| 81.04 | Demonstrate the scene-size-up to include: <ul style="list-style-type: none"> <li>• Scene safety/situational awareness</li> <li>• Scene management</li> <li>• Impact of the environment on patient care</li> <li>• Addressing hazards</li> <li>• Violence</li> <li>• Need for additional or specialized resources</li> <li>• Standard precautions</li> <li>• Multiple patient situations</li> </ul> |
| 82.0  | <b>Primary Assessment:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the primary assessment for all patient situations. The student will be able to:                                                                                                                                                                                                                      |
| 82.01 | Summarize the elements of a general impression of the patient.                                                                                                                                                                                                                                                                                                                                     |
| 82.02 | Explain the reason for performing a primary assessment.                                                                                                                                                                                                                                                                                                                                            |
| 82.03 | Discuss and demonstrate methods of assessing levels of responsiveness using AVPU.                                                                                                                                                                                                                                                                                                                  |
| 82.04 | Discuss and demonstrate methods of assessing the airway: patients of all ages.                                                                                                                                                                                                                                                                                                                     |
| 82.05 | Describe and demonstrate methods used for assessing if a patient is breathing patients of all ages.                                                                                                                                                                                                                                                                                                |
| 82.06 | Differentiate between a patient with adequate and inadequate breathing.                                                                                                                                                                                                                                                                                                                            |
| 82.07 | Describe and demonstrate the methods used to obtain a pulse, patients of all ages.                                                                                                                                                                                                                                                                                                                 |
| 82.08 | Discuss and demonstrate assessing the patient for external bleeding.                                                                                                                                                                                                                                                                                                                               |
| 82.09 | Describe and demonstrate the assessment and interruption of skin color, temperature, moisture, and capillary refill, patients of all ages.                                                                                                                                                                                                                                                         |
| 82.10 | Explain the reasons for prioritizing a patient for care and transport.                                                                                                                                                                                                                                                                                                                             |
| 82.11 | Describe when it is appropriate to expose the patient completely.                                                                                                                                                                                                                                                                                                                                  |
| 82.12 | Differentiate between critical, potentially, and non-life-threatening patient presentations and integration of treatment/procedures needed to preserve life.                                                                                                                                                                                                                                       |
| 83.0  | <b>History Taking:</b> Demonstrate a complex depth, comprehensive breath of knowledge of the components of history taking. The student will be able to:                                                                                                                                                                                                                                            |
| 83.01 | Determine and investigate the chief complaint. ( <i>i.e., MOI, NOI</i> ).                                                                                                                                                                                                                                                                                                                          |
| 83.02 | Describe the components of the patient history.                                                                                                                                                                                                                                                                                                                                                    |

|       |                                                                                                                                                                                                                                            |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 83.03 | Explain the importance of obtaining a SAMPLE and OPQRST history.                                                                                                                                                                           |
| 83.04 | Acknowledge the feelings patients experience during assessment.                                                                                                                                                                            |
| 83.05 | Discuss the value of obtaining a family and social history.                                                                                                                                                                                |
| 83.06 | Describe examples of different techniques ( <i>i.e., therapeutic communication and adaptive interview techniques</i> ) the paramedic may use to obtain information from patients, family, or bystanders during the history taking process. |
| 83.07 | Analyze the impact of cultural and linguistic factors on history-taking in diverse patient populations served by Mobile Integrated Health.                                                                                                 |
| 83.08 | Evaluate the use of technology, such as electronic health records and telemedicine, to enhance the history-taking process within MIH.                                                                                                      |
| 83.09 | Discuss the importance of integrating community resources and support systems into the patient's history to inform care planning.                                                                                                          |
| 83.10 | Demonstrate the ability to identify and address potential mental health concerns during the history-taking process in MIH settings.                                                                                                        |
| 83.11 | Explain the significance of continuity of care in history-taking and how it influences treatment decisions and patient outcomes in Mobile Integrated Health.                                                                               |
| 84.0  | <b>Secondary Assessment:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of techniques used for a secondary assessment, patients of all ages. The student will be able to:                                             |
| 84.01 | Review EMT standards and benchmarks for secondary assessment. ( <i>i.e., assessment of vital signs, pain, techniques of physical exam</i> ).                                                                                               |
| 84.02 | Describe the techniques of inspection, palpation, percussion, and auscultation.                                                                                                                                                            |
| 84.03 | Discuss the limitations of conducting a physical exam in the out-of-hospital environment.                                                                                                                                                  |
| 84.04 | Demonstrate the examination of the patient including all major body systems and anatomical regions.                                                                                                                                        |
| 84.05 | Distinguish the importance of abnormal assessment findings in all the major body systems and anatomical regions.                                                                                                                           |
| 84.06 | Describe the evaluation of patient's perfusion status based on findings in the initial assessment.                                                                                                                                         |
| 84.07 | State the reasons for performing a rapid trauma assessment.                                                                                                                                                                                |
| 84.08 | Discuss the reason for performing a focused history and physical exam.                                                                                                                                                                     |
| 84.09 | Discuss appropriate gender and cultural considerations regarding assessment.                                                                                                                                                               |
| 84.10 | Discuss medical identification devices/ systems.                                                                                                                                                                                           |
| 85.0  | <b>Monitoring Devices:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of monitoring devices within the scope of practice of the paramedic. The student will be able to:                                            |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 85.01 | Describe the purpose, indications, procedure, normal findings, and limitations of the following patient monitoring technologies, including but not limited to: <ul style="list-style-type: none"> <li>• Continuous ECG monitoring</li> <li>• 12-Lead ECG</li> <li>• <b>EtCO<sub>2</sub></b> capnography (wave form)</li> <li>• Methemoglobin monitoring</li> <li>• Total hemoglobin</li> <li>• Basic blood chemistry</li> <li>• Ultrasound</li> <li>• Other devices identified at the EMT level</li> </ul> |
| 85.02 | Demonstrate the use of the following patient monitoring technologies, including but not limited to: <ul style="list-style-type: none"> <li>• Continuous ECG monitoring</li> <li>• 12-Lead ECG (<i>i.e., acquisition, interpretation, and transmission</i>).</li> <li>• Capnography (wave form)</li> <li>• Other devices identified at the EMT level</li> </ul>                                                                                                                                             |
| 86.0  | <b>Reassessment:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of how and when to perform a reassessment for all patient situations. The student will be able to:                                                                                                                                                                                                                                                                                                                    |
| 86.01 | Describe the components of reassessment and demonstrate the skills involved.                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 86.02 | Discuss the reasons for reassessment <i>of the patient</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 86.03 | Explain trending assessment components and its value to other health professionals who assume care of the patient.                                                                                                                                                                                                                                                                                                                                                                                         |
| 86.04 | Demonstrate reassessment of patients of all ages.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 87.0  | <b>Medical Overview:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of medical complaints. The student will be able to:                                                                                                                                                                                                                                                                                                                |
| 87.01 | Identify factors that complicate patient assessment including: <ul style="list-style-type: none"> <li>• Scene safety</li> <li>• Environmental factors</li> <li>• Chief complaint</li> <li>• Paramedic preconceptions</li> <li>• Distracting injuries</li> <li>• Tunnel vision</li> <li>• Patient cooperation</li> <li>• Paramedic attitude</li> </ul>                                                                                                                                                      |
| 87.02 | Discuss forming a field impression and utilizing available information to determine a different diagnosis.                                                                                                                                                                                                                                                                                                                                                                                                 |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 90.03 | Describe the prevention of anaphylaxis and appropriate patient education.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 90.04 | Review the pathophysiology of allergy and anaphylaxis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 90.05 | Describe the common methods of entry of allergens into the body.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 90.06 | Review common antigens most frequently associated with anaphylaxis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 90.07 | Differentiate among the various treatment and pharmacological interventions used in the management of anaphylaxis and allergic reaction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 91.0  | <b>Infectious Diseases:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of assessment and management of a patient who may have an infectious disease, patient of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                           |

|       |                                                                                                                                                                                    |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 91.01 | Review EMT standards and benchmarks for infectious disease.                                                                                                                        |
| 91.02 | Review the specific anatomy and physiology pertinent to infectious and communicable diseases.                                                                                      |
| 91.03 | Describe the steps of an infectious process.                                                                                                                                       |
| 91.04 | Describe and differentiate infectious agents, including bacteria, viruses, fungi, protozoans, and helminths (worms).                                                               |
| 91.05 | Review characteristics of the immune system.                                                                                                                                       |
| 91.06 | Perform an assessment of a patient with an infectious/communicable disease.                                                                                                        |
| 91.07 | Effectively and safely manage a patient with an infectious/communicable disease.                                                                                                   |
| 91.08 | Review public health principles related to infectious disease.                                                                                                                     |
| 91.09 | Review the roles of local, state, and federal agencies involved in infectious disease surveillance and outbreaks.                                                                  |
| 91.10 | Describe the interactions of the agent, host, and environment as determining factors in disease transmission.                                                                      |
| 91.11 | Describes the EMS professional's responsibilities as well as their rights under the Ryan White Act.                                                                                |
| 91.12 | Discuss the pathophysiology, signs, symptoms, assessment, and management and risk factors of significant health concerns.                                                          |
| 91.13 | Discuss the characteristics of, and organisms associated with, febrile and afebrile respiratory disease.                                                                           |
| 91.14 | Describe the EMS provider's role in patient education and preventing disease transmission.                                                                                         |
| 91.15 | Review the pathophysiology, risk factors, assessment, and prehospital management of sepsis/systemic inflammatory response syndrome (SIRS).                                         |
| 91.16 | Knowledge of: <ul style="list-style-type: none"> <li>• Antibiotic resistance infections</li> <li>• Vaccine-preventable diseases</li> <li>• Emerging infectious disease</li> </ul>  |
| 92.0  | <b>Endocrine Disorders:</b> Demonstrate a complex depth, comprehensive breadth of knowledge in endocrine disorders/emergencies, patients of all ages. The student will be able to: |
| 92.01 | Identify the risk factors related to disorders of the endocrine system.                                                                                                            |
| 92.02 | Review the anatomy and physiology of organs and structures related to endocrinologic diseases.                                                                                     |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 92.03 | Discuss the pathophysiology, signs and symptoms and demonstrate the assessment, and management of patients with the following endocrinologic emergencies: <ul style="list-style-type: none"> <li>• Hypoglycemia</li> <li>• Hyperglycemia</li> <li>• Diabetic ketoacidosis</li> <li>• Cushing's syndrome</li> <li>• Adrenal insufficiency</li> <li>• Pituitary disorders</li> <li>• Thyroid disorders</li> </ul>                                                                                                                                    |
| 93.0  | <b>Psychiatric Cognitive and Behavioral:</b> Demonstrate a complex depth, comprehensive breadth of knowledge regarding the assessment and management of psychiatric disorders, cognitive and behavioral emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                            |
| 93.01 | Differentiate among behavior, psychiatric disorders, and behavioral emergencies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 93.02 | Basic principles of the mental health system <ul style="list-style-type: none"> <li>• Patterns of violence, abuse, and neglect</li> <li>• Suicide ideation</li> <li>• Excited delirium</li> <li>• Anxiety</li> <li>• Depression</li> <li>• Medical fear</li> <li>• Substance use disorder/ addictive behavior.</li> <li>• PTSD</li> <li>• Acute psychosis</li> <li>• Cognitive disorders</li> <li>• Thought disorders (Mood disorders, Neurotic disorders, Somatoform disorders, Factitious disorders)</li> <li>• Personality disorders</li> </ul> |
| 93.03 | Discuss the pathophysiology of common psychiatric disorders and behavioral emergencies.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 93.04 | Discuss the general factors that may cause an alteration in a patient's behavior.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 93.05 | Discuss the factors/signs or symptoms of various psychiatric emergencies to include suicide.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 93.06 | Manage a behavioral emergency scenario applying knowledge of medical/legal Florida Statutes.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 93.07 | Describe and demonstrate the assessment and management of the patient experiencing a behavioral or psychiatric emergency.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 93.08 | Describe the biological, psychosocial, and sociocultural influences on psychiatric disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 93.09 | Describe the special considerations for the safety of the EMS provider, and EMS crew, the patient and bystanders when dealing with behavioral and psychiatric emergencies.                                                                                                                                                                                                                                                                                                                                                                         |

|       |                                                                                                                                                                                    |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 93.10 | Explain the importance of provider behavior and communication in the care of a patient with a behavioral emergency.                                                                |
| 93.11 | Describe and demonstrate methods of restraint that may be used in the management of a patient with a behavioral emergency and possible legal implication.                          |
| 93.12 | List the risk factors (including behaviors) for suicide.                                                                                                                           |
| 94.0  | <b>Cardiovascular:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of cardiovascular disorders/emergencies, patients of all ages. The student will be able to: |
| 94.01 | Describe the epidemiology, incidence, morbidity and mortality of cardiovascular disease.                                                                                           |
| 94.02 | Identify the risk factors of coronary artery disease.                                                                                                                              |
| 94.03 | Review the anatomy and physiology of the heart and circulatory system.                                                                                                             |
| 94.04 | Discuss the electrophysiology of the heart.                                                                                                                                        |
| 94.05 | Discuss and demonstrate ECG monitoring, 12 Lead placement, acquisition, and interpretation.                                                                                        |
| 94.06 | Define and give examples of positive and negative inotropes, chronotropes and dromotropes.                                                                                         |
| 94.07 | Identify the normal characteristics of the point of maximal impulse (PMI).                                                                                                         |
| 94.08 | Discuss the normal and abnormal heart sounds and how they relate to hemodynamic events in the cardiac cycle.                                                                       |
| 94.09 | Describe a systematic approach to the analysis and interpretation of cardiac dysrhythmias.                                                                                         |
| 94.10 | Describe the conditions of pulseless electrical activity.                                                                                                                          |
| 94.11 | Compare and contrast electrotherapy to include pacing.                                                                                                                             |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 94.12 | Discuss the pathophysiology, signs and symptoms and demonstrate the assessment, and management of patients following conditions including the development of a treatment plan, including but not limited to: <ul style="list-style-type: none"> <li>• Angina</li> <li>• Myocardial infarction STEMI/Non-STEMI</li> <li>• Congestive heart failure</li> <li>• Cardiac tamponade</li> <li>• Cardiogenic shock</li> <li>• Hypertension and acute hypertensive states</li> <li>• Cardiac arrest</li> <li>• Vascular disorders</li> <li>• Hypertrophic cardiomyopathies</li> <li>• Infectious diseases of the heart</li> <li>• Congenital abnormalities</li> <li>• Thromboembolism</li> <li>• Aortic aneurysm/dissection</li> <li>• LVAD</li> <li>• Heart Transplant</li> </ul> |
| 94.13 | List other clinical conditions that may mimic signs and symptoms of coronary artery disease and angina pectoris.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 94.14 | Compare fibrinolysis from percutaneous intervention as reperfusion techniques used in patients with AMI or suspected AMI and describe the "window of opportunity" as it pertains to reperfusion of a myocardial infarction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 94.15 | List the characteristics of a patient eligible for thrombolytic therapy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 94.16 | Define the term acute pulmonary edema and describe its relationship to left ventricular failure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 94.17 | Discuss preload, afterload and left ventricular end-diastolic pressure and relate each to the pathophysiology of heart failure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 94.18 | Identify non-cardiac causes of cardiac arrest.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 94.19 | Discuss the components of post resuscitation care including how to determine the return of spontaneous circulation (ROSC).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 94.20 | Identify circumstances and situations where resuscitation efforts would not be initiated or would be terminated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 94.21 | Conditions that predispose patients to cardiac rhythm disturbances including WPW, Brugada, long QT syndrome and others                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 94.22 | Understand the principles of mean arterial pressure and the components used to calculate the pressure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 95.0  | <b>Toxicology:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment and management of toxicology emergencies including psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 95.01 | Define and differentiate among toxicology, poisoning, and overdose.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 95.02 | Describe the pathophysiology and signs and symptoms of the following toxicological emergencies, including but not limited to: <ul style="list-style-type: none"> <li>• Food poisoning</li> <li>• Carbon monoxide poisoning</li> <li>• Cyanide poisoning</li> <li>• Exposure to acid or alkaline substance</li> <li>• Exposure to hydrocarbons</li> <li>• Methanol ingestion</li> <li>• Isopropanol ingestion</li> <li>• Ethylene glycol ingestion</li> <li>• Exposure to poisonous substances</li> <li>• Drug withdrawal</li> <li>• Alcoholic syndrome</li> <li>• Withdrawal syndrome (including delirium tremens)</li> <li>• Illicit drug use</li> <li>• Medication overdose</li> <li>• Opioid overdose</li> <li>• Organa phosphate overdose</li> <li>• Toxidromes</li> <li>• Cholinergic</li> <li>• Anticholinergic</li> <li>• Sympathomimetic</li> <li>• Sedative / hypnotics</li> <li>• Opioid</li> <li>• Corrosive</li> <li>• Knockdown</li> </ul> |
| 95.03 | Discuss the role of the Poison Control Center with the nationwide contact number 800-222-1222 in the United States.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 95.04 | Review various ways that toxins enter the body.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 95.05 | Discuss and demonstrate the assessment and management for the patient with a toxicological emergency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 95.06 | Explain the rationale for contacting medical direction early in the prehospital management of a patient with a toxicological emergency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|       |                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 95.07 | Review the following for Narcan (naloxone): <ul style="list-style-type: none"> <li>• Generic and trade names</li> <li>• Medication forms</li> <li>• Dose</li> <li>• Administration</li> <li>• Contraindications</li> <li>• Medications</li> <li>• Drugs of Abuse</li> <li>• Non-FDA approved medications and supplements</li> <li>• Serotonin Syndrome</li> <li>• Malignant Hyperthermia</li> </ul> |
| 96.0  | <b>Respiratory:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment and management of respiratory disorders, include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/ or emergencies associated with emergencies, patients of all ages. The student will be able to:                              |
| 96.01 | Discuss the epidemiology, morbidity, and mortality of respiratory illness in the United States.                                                                                                                                                                                                                                                                                                     |
| 96.02 | Review hypoventilation and hyperventilation and outline the conditions with which they are often associated.                                                                                                                                                                                                                                                                                        |
| 96.03 | Review the anatomy, physiology and functions of the respiratory system.                                                                                                                                                                                                                                                                                                                             |
| 96.04 | Discuss those factors that contribute to the formation of a general impression and degree of respiratory distress.                                                                                                                                                                                                                                                                                  |
| 96.05 | Identify breathing patterns that are associated with respiratory distress and neurologic insults and their correlation with the signs of increased work of breathing.                                                                                                                                                                                                                               |
| 96.06 | Review between normal and abnormal breath/lung sounds and its physiologic significance.                                                                                                                                                                                                                                                                                                             |
| 96.07 | Explain the concepts of hypoxic drive and auto-PEEP as they relate to the COPD patient.                                                                                                                                                                                                                                                                                                             |

96.08 Discuss the pathophysiology, signs and symptoms and demonstrate the assessment, and management of patients with the following respiratory conditions, including but not limited to:

- Pulmonary infections (upper and lower airway)
- Atelectasis
- Anatomic or foreign body obstruction
- Aspiration
- Asthma
- Emphysema
- Chronic bronchitis
- Spontaneous pneumothorax
- Pleural effusion
- Pulmonary embolism
- Cancer
- Toxic inhalations
- Pulmonary edema
- Acute respiratory distress syndrome (ARDS)
- Pneumonia
- Neoplasms of the lung
- Hyperventilation syndrome
- Upper airway disease
- RSV
- Croup
- Epiglottitis
- COPD
- Broncho pulmonary dysplasia
- Respiratory Distress
- Respiratory Failure
- Respiratory Arrest
- Pulmonary Hypertension

97.0 **Hematology:** Demonstrate a complex depth, foundational breadth of knowledge of the assessment, and management of hematology disorders/emergencies, patients of all ages. The student will be able to:

97.01 Identify the role of heredity in the risk for hematologic disorders.

97.02 Review the anatomy and physiology of the hematopoietic system.

97.03 Describe volume and volume-control related to the hematopoietic system.

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 97.04 | Explain the significance of the hematocrit with respect to red cell size and number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 97.05 | Explain the correlation of the RBC count, hematocrit and hemoglobin values.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 97.06 | Recognize medications used to decrease the risk of thrombosis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 97.07 | Identify blood groups.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 97.08 | Discuss the pathophysiology, signs and symptoms and demonstrate the assessment, and management of patients with the following conditions, including but not limited to: <ul style="list-style-type: none"> <li>• Anemia</li> <li>• Leukemia</li> <li>• Lymphomas</li> <li>• Polycythemia</li> <li>• Disseminated intravascular coagulopathy</li> <li>• Hemophilia</li> <li>• Sickle cell disease</li> <li>• Multiple myeloma</li> <li>• Leukopenia/neutropenia</li> <li>• Leukocytosis</li> <li>• Thrombocytosis</li> <li>• Thrombocytopenia</li> <li>• Transfusion complications</li> <li>• Hemostatic disorders</li> </ul> |
| 98.0  | <b>Genitourinary/Renal:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of genitourinary and renal emergencies to include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/or emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                             |
| 98.01 | Describe the epidemiology, incidence, morbidity, mortality, and risk factors of urological emergencies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 98.02 | Review the anatomy and physiology of the organs and structures related to urogenital diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 98.03 | Discuss referred pain and visceral pain as it relates to urology.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <a href="#">105.01</a> — <del>105.01</del> | Review the priority of care in the multisystem trauma patient.                                                                                                                                          |
| <a href="#">105.02</a> — <del>105.02</del> | Identify and Explain Blast Injuries                                                                                                                                                                     |
| <a href="#">105.03</a> — <del>105.03</del> | Explain which ALS interventions should occur prior to a transport decision and during transport.                                                                                                        |
| 106.0                                      | <b>Bleeding:</b> Demonstrate a complex depth, comprehension breadth of knowledge of pathophysiology, assessment and management of bleeding, patients of all ages. The student will be able to:          |
| <del>106.1</del> <a href="#">106.01</a>    | Review the compensatory mechanism in hemorrhagic shock.                                                                                                                                                 |
| <del>106.2</del> <a href="#">106.02</a>    | Review the administration of medications to assist in the maintenance of homeostasis.                                                                                                                   |
| <del>106.3</del> <a href="#">106.03</a>    | Review the maintenance of tissue oxygenation in a bleeding patient.                                                                                                                                     |
| <del>106.4</del> <a href="#">106.04</a>    | Discuss appropriate fluid resuscitation for the patient in hemorrhagic shock.                                                                                                                           |
| <del>106.5</del> <a href="#">106.05</a>    | Review the different methods/modalities of controlling bleeding.                                                                                                                                        |
| 107.0                                      | <b>Chest Trauma:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of chest trauma, patients of all ages. The student will be able to: |
| <del>107.1</del> <a href="#">107.01</a>    | Review the anatomy and physiology of the organs and structures related to thoracic injuries. <ul style="list-style-type: none"> <li>• Blunt vs Penetrating Mechanisms</li> </ul>                        |

~~407.2~~[107.02](#) Review the pathophysiology, signs and symptoms and mechanism of injury (MOI) of the following injuries, including but not limited to:

- Myocardial injuries
  - pericardial tamponade
  - myocardial contusion
  - myocardial rupture
- Vascular injury
  - aortic dissection
  - pulmonary contusion
- Hemothorax
- Pneumothorax
- Hemopneumothorax
- Cardiac tamponade
- Commotio cordis
- Tracheobronchial disruption
- Diaphragmatic rupture and injury
- Traumatic asphyxia
- Rib fracture
- Flail segment
- Sternal fracture
- Vascular injuries
- Impaled objects
- Evisceration/shock

~~407.3~~[107.03](#) Discuss monitoring of chest tubes.

~~407.4~~[107.04](#) Demonstrate the following techniques of management for thoracic injuries: needle decompression, elective intubation, ECG monitoring, oxygenation, and ventilation

108.0 **Abdominal and Genitourinary Trauma:** Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of abdominal and genitourinary trauma, patients of all ages. The student will be able to:

~~408.1~~[108.01](#) Review the anatomy and physiology of organs and structures related to abdominal injuries.

~~408.2~~[108.02](#) Describe the mechanism of injury for and types of open and closed abdominal and retroperitoneal injuries involving seat belts, penetrating, blunt and evisceration.

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <del>109.8</del> <a href="#">109.08</a> | Define luxation and subluxation.                                                                                                                                                                                                                                                                                                                |
| <del>109.9</del> <a href="#">109.09</a> | Explain the rationale for splinting at the scene versus load and go.                                                                                                                                                                                                                                                                            |
| 109.10                                  | Demonstrate the proper use various splinting materials and devices to include improvised and traction splints.                                                                                                                                                                                                                                  |
| 109.11                                  | Discuss and demonstrate the assessment and management of compartment and crush syndrome: <ul style="list-style-type: none"> <li>• Destination decision</li> <li>• Rhabdomyolysis</li> </ul>                                                                                                                                                     |
| 109.12                                  | Discuss the pathophysiology and demonstrate the assessment and management of a tendon injury to the knee (patellar), shoulder and Achilles.                                                                                                                                                                                                     |
| 109.13                                  | Discuss the proper procedure to package an amputated body part for replantation                                                                                                                                                                                                                                                                 |
| 110.0                                   | <b>Soft Tissue Trauma:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of soft tissue trauma, patients of all ages. (Include psychosocial aspects of age- related assessment and treatment modifications for pediatric and geriatric patients). The student will be able to: |
| <del>110.1</del> <a href="#">110.01</a> | Review anatomy and physiology and identify the major functions of the integumentary system.                                                                                                                                                                                                                                                     |
| <del>110.2</del> <a href="#">110.02</a> | Discuss the pathophysiology of soft tissue injuries and the healing process including: <ul style="list-style-type: none"> <li>• Inflammation</li> <li>• Epithelialization</li> <li>• Neovascularization</li> <li>• Collagen Synthesis</li> <li>• Alterations in wound healing</li> <li>• Abnormal scar formation</li> </ul>                     |
| <del>110.3</del> <a href="#">110.03</a> | Describe and demonstrate the assessment and management of various soft tissue injuries. <ul style="list-style-type: none"> <li>• Wounds (avulsion, bite, laceration, puncture, incision)</li> <li>• Crush/compartment syndrome</li> <li>• High-pressure injection injury</li> </ul>                                                             |
| <del>110.4</del> <a href="#">110.04</a> | Identify types of burn injuries including: <ul style="list-style-type: none"> <li>• Thermal burn</li> <li>• Chemical burn</li> <li>• Electrical burn</li> <li>• Radiation burn</li> </ul>                                                                                                                                                       |
| <del>110.5</del> <a href="#">110.05</a> | Describe the depth classification of burn injuries including: <ul style="list-style-type: none"> <li>• Superficial burn</li> <li>• Partial-thickness burn</li> <li>• Full-thickness burn</li> <li>• Other depth classification</li> </ul>                                                                                                       |

|                         |                                                                                                                                                                                                                                                              |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>410.6</del> 110.06 | Describe and demonstrate methods for determining body surface area percentage of a burn injury including the “rule of nines”, the “rule of palms”, and other methods.                                                                                        |
| <del>410.7</del> 110.07 | Explain how the seriousness of a burn is related to its depth and percentage of body surface area (BSA) involved.                                                                                                                                            |
| <del>410.8</del> 110.08 | Review the various management techniques for hemorrhage control.                                                                                                                                                                                             |
| <del>410.9</del> 110.09 | Differentiate among the types of injuries requiring the use of occlusive versus non-occlusive dressing.                                                                                                                                                      |
| 110.10                  | Demonstrate the assessment and management of specific burn injuries including: <ul style="list-style-type: none"> <li>• Thermal</li> <li>• Inhalation</li> <li>• Chemical</li> <li>• Electrical</li> <li>• Radiation</li> </ul>                              |
| 110.11                  | Describe the pathophysiologic complications and systemic complications of a burn injury.                                                                                                                                                                     |
| 110.12                  | Discuss comorbidities in burn patients.                                                                                                                                                                                                                      |
| 110.13                  | Describe the management of a burn injury, including airway and ventilation, circulation, pharmacological, non-pharmacological, transport considerations, psychological support/ communication strategies, and other management.                              |
| 110.14                  | Describe the types of chemicals and their burning processes and a chemical burn injury to the eye.                                                                                                                                                           |
| 110.15                  | Discuss appropriate fluid resuscitation for burn patients.                                                                                                                                                                                                   |
| 111.0                   | <b>Head, Face, Neck, and Spine:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of head, face, neck, and spine trauma, patients of all ages. The student will be able to:                                                             |
| 111.01                  | Discuss types of and potential complications of facial injuries to include life threatening.                                                                                                                                                                 |
| 111.02                  | Discuss Anatomy, assessment and management, and a field impression for injuries to the following areas: <ul style="list-style-type: none"> <li>• Eye(s)</li> <li>• Nose</li> <li>• Throat/neck</li> <li>• Face</li> <li>• Mouth</li> <li>• Ear(s)</li> </ul> |
| 111.03                  | Distinguish between an open and closed head injury.                                                                                                                                                                                                          |
| 111.04                  | Define and explain the process involved with increasing ICP.                                                                                                                                                                                                 |
| 111.05                  | Describe and demonstrate the assessment and general management of the head/ brain injury patient, including pharmacological and non-pharmacological treatment.                                                                                               |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>111.06 Discuss the pathophysiology, signs and symptoms, and assessment and management for a patient for each of the following conditions:</p> <ul style="list-style-type: none"> <li>• Skull fracture</li> <li>• Cerebral contusion</li> <li>• Intracranial hemorrhage</li> <li>• Epidural, subdural, intracerebral, and subarachnoid</li> <li>• Perforated tympanic membranes</li> <li>• Orbital fracture</li> <li>• Mandibular fracture</li> <li>• Dental fracture</li> <li>• Facial / Unstable Facial fracture</li> <li>• Penetrating neck trauma</li> <li>• Spine trauma</li> <li>• Shaken baby syndrome.</li> <li>• Laryngotracheal injuries</li> </ul> |
| <p>111.07 Review various methods for stabilization and removal of a helmet.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <p><b>112.0 Nervous System Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of nervous system trauma, patients of all ages. The student will be able to:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <p>112.01 Review the anatomy and physiology of the central nervous system, brain, spinal cord, skull and spinal column.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 120.05 | Discuss the role of the Paramedic as a patient advocate for vulnerable populations.                                                                                                                                                                                                                                                                                                                                                                                                     |
| 120.06 | Differentiate between hospice/palliative care and curative care.                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 120.07 | Describe paraplegia/quadruplegia.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 120.08 | Describe the various etiologies of mental illness.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 120.09 | Recognize the presenting signs of the following: <ul style="list-style-type: none"> <li>• Autism spectrum</li> <li>• Developmental disability</li> <li>• Down's syndrome</li> </ul>                                                                                                                                                                                                                                                                                                     |
| 120.10 | Describe the following diseases/illnesses and identify each of their possible presenting signs, including but not limited to: <ul style="list-style-type: none"> <li>• Arthritis</li> <li>• Cancer</li> <li>• Cerebral palsy</li> <li>• Cystic fibrosis</li> <li>• Multiple sclerosis</li> <li>• Muscular dystrophy</li> <li>• Myasthenia gravis</li> <li>• Poliomyelitis</li> <li>• Spina bifida,</li> <li>• Patients with a previous head injury</li> <li>• Mental illness</li> </ul> |
| 120.11 | Review hospice care, comfort care and DNR/DNAR as they relate to local practice, law and policy.                                                                                                                                                                                                                                                                                                                                                                                        |
| 120.12 | Describe the access and discuss indwelling catheters, implanted central IV ports and central line monitoring.                                                                                                                                                                                                                                                                                                                                                                           |
| 120.13 | Describe complications of assessing each of the airway, vascular access, and GI/GU devices.                                                                                                                                                                                                                                                                                                                                                                                             |
| 120.14 | Identify and describe the failure of wound drains.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 120.15 | Review the rights of the terminally ill.                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 120.16 | Demonstrate proper tracheotomy care.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 120.17 | Demonstrate the insertion of a new inner cannula and/or the use of an endotracheal tube to temporarily maintain an airway in a tracheostomy patient.                                                                                                                                                                                                                                                                                                                                    |
| 121.0  | <b>Principles of Safely Operating a Ground Ambulance:</b> Demonstrate a simple depth, foundational breadth of knowledge of risks and responsibilities of transport. The student will be able to:                                                                                                                                                                                                                                                                                        |
| 121.01 | Review the EMT standards and benchmarks for the Principles of Safely Operating a Ground Ambulance.                                                                                                                                                                                                                                                                                                                                                                                      |

|        |                                                                                                                                                                                                   |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 121.02 | —Risks and responsibilities of emergency response and radio communications.                                                                                                                       |
| 121.03 | —Risks and responsibilities of operating emergency vehicles.                                                                                                                                      |
| 121.04 | —Pediatric transport considerations.                                                                                                                                                              |
| 121.05 | —Risks and responsibilities of transport.                                                                                                                                                         |
| 122.0  | <b>Incident Management:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of establishing and working within the incident management system. The student will be able to:       |
| 122.01 | Review the EMT standards and benchmarks for Incident Management and apply a complex depth and comprehensive breadth of establishing and working within the incident management system.            |
| 123.0  | <b>Multiple Casualty Incidents:</b> Demonstrate a simple depth, foundational breadth of knowledge of responding to an emergency during a multiple casualty incident. The student will be able to: |
| 123.01 | Review the EMT standards and benchmarks for Multiple Casualty Incidents.                                                                                                                          |
| 123.02 | —Establish and work within the incident management system.                                                                                                                                        |
| 123.03 | —Understand the principles of Crew Resource Management.                                                                                                                                           |
| 124.0  | <b>Air Medical:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of air medical transport risks, needs and advantages. The student will be able to:                            |
| 124.01 | Describe the advantages and disadvantages of air medical transport.                                                                                                                               |
| 124.02 | Safe air medical operations.                                                                                                                                                                      |
| 124.03 | Identify appropriate reasons for the use of air medical for emergency patient transport.                                                                                                          |
| 124.04 | Describe the risks involved with the use of air medical transport.                                                                                                                                |
| 124.05 | Criteria for utilizing air medical response.                                                                                                                                                      |
| 124.06 | Demonstrate the actions needed to ensure effective and safe ground operations involving air medical response.                                                                                     |
| 124.07 | Demonstrate appropriate communication of information needed for safe and effective interaction between the air medical crew and ground personnel.                                                 |
| 124.08 | Medical risks/needs/advantages.                                                                                                                                                                   |
| 125.0  | <b>Vehicle Extrication:</b> Demonstrate a simple depth, simple breadth of knowledge for safe vehicle extrication and use of simple hand tools. The student will be able to:                       |
| 125.01 | Review the EMT standards and benchmarks for Vehicle Extrication.                                                                                                                                  |
| 125.02 | —Safety principles of rescue operations.                                                                                                                                                          |

|                                                                                                                                                                  |                                                                                                                                                                                                                                                                                              |

| 129.04                  | Discuss the impact of legislative changes on emergency medical service systems.                                                                                                     |
| 130.0                   | <del>130.0</del> —Demonstrate knowledge of operational and organizational structures of emergency medical service system. The student will be able to:                              |
| 130.01                  | Describe the functions and standards of departments in emergency medical service systems.                                                                                           |
| 130.02                  | Contrast administrative roles and responsibilities in different types of emergency medical service systems.                                                                         |
| 130.03                  | Describe principles and philosophies of emergency medical service systems.                                                                                                          |
| 130.04                  | Identify several basic principles of emergency medical care.                                                                                                                        |
| 130.05                  | Describe communication techniques within health care systems.                                                                                                                       |
| 130.06                  | Utilize state of the art language and terminology when communicating within the emergency medical service system.                                                                   |
| 131.0                   | <del>131.0</del> —Demonstrate knowledge of psychological problems and stressors in emergency medical service employees and find appropriate solutions. The student will be able to: |
| 131.01                  | Demonstrate knowledge of the worth and dignity of each employee.                                                                                                                    |
| 131.02                  | Accommodate individual differences, characteristics, and behaviors.                                                                                                                 |
| 131.03                  | Adjust employee schedules, personnel assignments, etc. to provide optimum performance.                                                                                              |
| 132.0                   | <del>132.0</del> —Demonstrate knowledge of materials and supplies used in emergency medical service systems. The student will be able to:                                           |
| 132.01                  | Evaluate current inventory.                                                                                                                                                         |
| 132.02                  | Prepare purchase orders with knowledge of current financial status and budgetary constraints.                                                                                       |
| 132.03                  | Demonstrate knowledge of optimum quality, price, and quantity.                                                                                                                      |
| 133.0                   | Demonstrate knowledge of occupational safety and health. The student will be able to:                                                                                               |
| 133.01                  | Prepare a plan for employee safety in the event of emergency situations involving business or office facilities.                                                                    |
| 133.02                  | Identify hazardous materials and substances in the workplace.                                                                                                                       |

|                                                                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 133.03 Identify appropriate storage facilities for all substances.                                                                                                    |
| 133.04 Conduct in-service for employees.                                                                                                                              |
| 133.05 Respond to employee inquiries and post notices as needed.                                                                                                      |
| 133.06 Implement appropriate Joint Commission patient safety goals.                                                                                                   |
| <u>134.0</u> <del>134.0</del> —Demonstrate knowledge of appropriate workloads for each employee. The student will be able to:                                         |
| 134.01 Prepare job descriptions.                                                                                                                                      |
| 134.02 Prepare job advertisements and notices.                                                                                                                        |
| 134.03 Compute man-hours required for each job position within the emergency medical service system.                                                                  |
| 134.04 Identify factors that alter the workload and man-hours computed for each position.                                                                             |
| <u>135.0</u> <del>135.0</del> —Review, approve and monitor departmental capital and operational budgets. The student will be able to:                                 |
| 135.01 Develop capital budget justification format.                                                                                                                   |
| 135.02 Delegate capital budget preparation to key managers.                                                                                                           |
| 135.03 Analyze and approve appropriate capital budget items.                                                                                                          |
| 135.04 Develop an operational budget format.                                                                                                                          |
| 135.05 Analyze and approve appropriate financial levels in each operational budget.                                                                                   |
| <u>136.0</u> <del>136.0</del> —Identify and apply legal reimbursement systems. The student will be able to:                                                           |
| 136.01 Establish an item charge system that meets reimbursement system requirements.                                                                                  |
| 136.02 Establish a mechanism for utilization review and quality assurance.                                                                                            |
| 136.03 Develop an accounts receivable system which monitors and optimizes reimbursement.                                                                              |
| <u>137.0</u> <del>137.0</del> —Comply with accreditation standards of governmental or governmental-appointed agencies and organizations. The student will be able to: |
| 137.01 Describe and discuss procedures to meet required standards for emergency medical service systems.                                                              |
| 137.02 Identify the required standards for health care personnel in general and emergency medical service personnel in particular.                                    |
| 137.03 Develop policies and operational procedures to meet required standards.                                                                                        |

|                                                                                                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------|
| 137.04 Establish liaison mechanisms with appropriate accrediting organizations.                                                                  |
| <u>138.0</u> <del>138.0</del> Demonstrate computer literacy. The student will be able to:                                                        |
| 138.01 Describe and demonstrate the function and operation of basic computer systems.                                                            |
| 138.02 Describe and demonstrate various types of computer systems and their specific applications.                                               |
| 138.03 Describe and demonstrate general applications such as word processing, database management, spreadsheets, and communications.             |
| 138.04 Describe and discuss special applications such as computer-aided dispatch (CAD), quality assurance, and inventory control.                |
| <b>Education Option: This option (outcomes 139-144) prepares students as trainers and/or instructors in the EMS field.</b>                       |
| <u>139.0</u> <del>139.0</del> Demonstrate knowledge of basic teaching methods, learning and educational psychology. The student will be able to: |
| 139.01 Describe and demonstrate various methods of student learning.                                                                             |
| 139.02 Describe and demonstrate various methods of teaching as they apply to student learning techniques.                                        |
| 139.03 Describe and demonstrate competency-based education (CBE).                                                                                |
| 139.04 Describe and demonstrate short-term and long-term memory and the implications of each on the student learning process.                    |
| 139.05 Describe and demonstrate various educational psychologies.                                                                                |
| <u>140.0</u> <del>140.0</del> Describe and discuss curriculum design and development. The student will be able to:                               |
| 140.01 Develop and discuss needs assessments.                                                                                                    |
| 140.02 Develop a task analysis.                                                                                                                  |
| 140.03 Develop student behavioral objectives.                                                                                                    |
| 140.04 Design and develop competency-based curriculum.                                                                                           |
| 140.05 Integrate curriculum with current occupational responsibilities.                                                                          |
| 140.06 Perform on-going curriculum review and development.                                                                                       |
| <u>141.0</u> <del>141.0</del> Demonstrate appropriate measurement and evaluation skills. The student will be able to:                            |
| 141.01 Construct appropriate objective tests commensurate with curriculum.                                                                       |
| 141.02 Develop effective measurement instruments for student performance in clinical settings.                                                   |

|                                 |                                                                                                                                                                                                  |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 141.03                          | Develop effective evaluation tools for evaluating student performance.                                                                                                                           |
| 141.04                          | Record, monitor, and provide feedback to student regarding student progress.                                                                                                                     |
| <u>142.0</u> <del>142.0</del>   | Demonstrate mastery of required technical skills. The student will be able to:                                                                                                                   |
| 142.01                          | Demonstrate performance of basic life support instructor skills.                                                                                                                                 |

| <del>141.05</del> <u>142.04</u> | Demonstrate performance of other medical skills appropriate to the emergency medical services curriculum.                                                                                        |
| <u>143.0</u> <del>143.0</del>   | Demonstrate classroom management skills. The student will be able to:                                                                                                                            |
| 143.01                          | <del>Demonstrate</del> <u>Dem onstrate</u> and apply effective leadership skills.                                                                                                                |
| 143.02                          | Demonstrate and apply effective motivational skills.                                                                                                                                             |
| 143.03                          | Demonstrate and apply effective organizational skills.                                                                                                                                           |
| 143.04                          | Demonstrate and apply effective disciplinary skill.                                                                                                                                              |
| <u>144.0</u> <del>144.0</del>   | Demonstrate computer literacy. The student will be able to:                                                                                                                                      |
| 144.01                          | Describe and discuss various types of computer systems and their specific applications as they relate to Emergency Medical Services.                                                             |
| 144.02                          | Describe and discuss applications such as word processing, database management, spreadsheets, communications, and computer-aided instruction (CAI) as they relate to Emergency Medical Services. |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

Through the use of common core courses and the addition of several optional courses, this program is designed to prepare students for employment in the following occupational areas:

**Education Option:** Field Training Officer, In-service Training Officer, or EMS Instructor, Vocational Education Teachers, Postsecondary or to provide supplemental training for persons previously or currently employed in these occupations. The program must be approved by the Department of Health, Office of Emergency Medical Services (EMS); and the curriculum must adhere to the US Department of Transportation (DOT) National EMS Educational Standards for both the EMT and Paramedic.

**Management Option:** EMS Coordinator, EMS Supervisor, EMS Shift Supervisor, Operations Manager, EMS Manager, or Director of EMS Services (General and Operations Managers).

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS degree program includes the following College Credit Certificates:

Paramedic (0351090405) – 42 credit hours

Emergency Medical Technician (0351090415) – 12 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Nuclear Medicine Technology  
**Career Cluster:** Health Science

**AS** Associate in Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as radiologic technologists or nuclear medicine technologists or to provide supplemental training for persons previously or currently employed in this occupation.

The content includes but is not limited to the utilization of radioactive materials for diagnostic and therapeutic procedures, patient care, administrative functions, health and safety including CPR.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of 75 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

### **Regulated Programs**

**The program must also be approved by the Department of Health Bureau of Radiation Control.**

| <a href="#"><u>09.08 Display positive attitude.</u></a>                                                |
| <a href="#"><u>09.09 Take responsibility for professional growth.</u></a>                              |

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the health care delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Practice radiation safety.
- 13.0 Practice basic radio-pharmacy.
- 14.0 Calculate doses and administer radiopharmaceuticals and interventional pharmaceuticals.
- 15.0 Perform "in vitro"/"in vivo" non-imaging procedures.
- 16.0 Perform imaging procedures and radiotherapy.
- 17.0 Practice quality control.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Nuclear Medicine Technology  
**CIP Number:** 1351090502  
**Program Length:** 75 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

| At the completion of this program, the student will be able to: |                                                                                                             |
|-----------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| 12.0                                                            | Practice radiation safety. The student will be able to:                                                     |
| 12.01                                                           | Maintain compliance with local, state and federal regulations.                                              |
| 12.02                                                           | Follow appropriate protection procedures for patients, coworkers, and public.                               |
| 12.03                                                           | Follow approved procedures for identifying and labeling radioactive material and radiopharmaceutical doses. |
| 12.04                                                           | Perform area surveys and wipe tests.                                                                        |
| 12.05                                                           | Dispose of radioactive wastes appropriately and in accordance with local, state, and federal regulations.   |
| 12.06                                                           | Apply and interpret proper personnel monitoring of radiation exposure.                                      |
| 12.07                                                           | Perform decontamination procedures.                                                                         |
| 12.08                                                           | Implement appropriate accrediting/regulatory agency guidelines.                                             |
| 13.0                                                            | Practice basic radio-pharmacy. The student will be able to:                                                 |
| 13.01                                                           | Maintain radiopharmaceutical laboratory records and materials.                                              |
| 13.02                                                           | Perform or simulate generator eluate.                                                                       |
| 13.03                                                           | Perform quality control testing on generator eluate.                                                        |

|       |                                                                                                                                        |
|-------|----------------------------------------------------------------------------------------------------------------------------------------|
| 13.04 | Prepare radiopharmaceuticals including quality control tests.                                                                          |
| 13.05 | Demonstrate understanding of ordering radiopharmaceuticals in appropriate dosage and effective time frame.                             |
| 14.0  | Calculate doses and administer radiopharmaceutical and interventional pharmaceuticals. The student will be able to:                    |
| 14.01 | Perform dose calibrator quality control tests.                                                                                         |
| 14.02 | Calculate the activity and volume of dose.                                                                                             |
| 14.03 | Assay <a href="#">diagnostic and therapeutic</a> radiopharmaceuticals.                                                                 |
| 14.04 | Properly administer dose using appropriate route.                                                                                      |
| 14.05 | Calculate, prepare, and administer <a href="#">diagnostic and therapeutic</a> radiopharmaceuticals and interventional pharmaceuticals. |
| 14.06 | Perform venipuncture accurately and efficiently.                                                                                       |
| 14.07 | Participate in the tagging of blood cells.                                                                                             |
| 14.08 | Maintain records of administrations/preparations.                                                                                      |
| 14.09 | Recognize and follow precautions and contraindications of medications including radiopharmaceuticals.                                  |
| 14.10 | Evaluate patient history.                                                                                                              |
| 14.11 | Evaluate patient status/needs and care for them accordingly, including treatment for adverse effects.                                  |
| 14.12 | Document and maintain records according to facility protocol.                                                                          |
| 15.0  | Perform "in vitro"/"in vivo" non-imaging procedures. The student will be able to:                                                      |
| 15.01 | Operate laboratory equipment.                                                                                                          |
| 15.02 | Accurately and efficiently collect specimens in accordance with facility protocol.                                                     |
| 15.03 | Operate radiation detection equipment.                                                                                                 |
| 15.04 | Perform radioassays and calculations.                                                                                                  |
| 16.0  | Perform imaging procedures- <a href="#">and radiotherapy</a> . The student will be able to:                                            |
| 16.01 | Verify order, history, and protocol for patient prior to proceeding.                                                                   |
| 16.02 | Verify identity of patient in accordance with facility protocol.                                                                       |

|       |                                                                                                                |
|-------|----------------------------------------------------------------------------------------------------------------|
| 16.03 | Explain procedure and prepare patient for procedure.                                                           |
| 16.04 | Select proper acquisition parameters to obtain planar, SPECT, SPECT/CT, WB, and PET/CT images.                 |
| 16.05 | Appropriately perform planar, WB, SPECT, SPECT/CT, and PET/CT data processing using reconstruction techniques. |
| 16.06 | Properly prepare images to be sent to physician according to facility protocol.                                |
| 16.07 | Perform PACS procedures according to facility protocol.                                                        |
| 16.08 | Maintain appropriate records.                                                                                  |
| 17.0  | Practice quality control. The student will be able to:                                                         |
| 17.01 | Perform scheduled quality control testing of laboratory and imaging equipment.                                 |
| 17.02 | Operate scintillation detectors.                                                                               |
| 17.03 | Operate and perform daily quality control on gas-filled detectors.                                             |
| 17.04 | Maintain a quality assurance program according to accrediting and regulatory agencies.                         |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

The graduate is eligible to be licensed in Florida as a Certified Radiologic Technologist - Nuclear Medicine (i.e., a Nuclear Medicine Technologist). As specified in Chapter 468, Part IV, F.S. and 64E, F.A.C. All accredited NMT programs which are recognized and accepted by either the American Registry of Radiologic Technologists (ARRT), or the Nuclear Medicine Technology Certification Board (NMTCB), are approved by the Department of Health.

Students who complete the program will be eligible to apply to the Department of Health for the required state Nuclear Medicine Technologist license. For further information contact:

Department of Health, MQA Radiologic Technology Program  
4052 Bald Cypress Way, Bin #C85, Tallahassee, FL 32399  
Phone: (850) 245-4910 Fax: (850) 921-6365  
[www.doh.state.fl.us/mqa/rad-tech](http://www.doh.state.fl.us/mqa/rad-tech)

Students who complete the program will be eligible to make an application to take one or both of the National Registry examination. For further information contact:

American Registry of Radiologic Technologists (ARRT)  
1255 Northland Drive, St. Paul, MN 55120-1155  
(612) 687-0048 [www.arrt.org](http://www.arrt.org)

**Or**

Nuclear Medicine Technology Certification Board (NMTCB)  
3558 Habersham at Northlake, Building I, Tucker, GA 30084  
Toll Free: (800) 659-3953 [www.nmtcb.org](http://www.nmtcb.org)

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

The program must be accredited by the:

Joint Review Committee on Educational Programs in Nuclear Medicine Technology  
820 W. Danforth Rd., #B1, Edmond OK 73003  
Tel: (405) 285-0546/ Fax: (405) 285-0579 <http://www.jrcnmt.org/>

**Or**

Southern Association of Colleges and Schools (SACS)  
9115 Westside Parkway, Alpharetta, GA 30009  
888-41ED NOW (888-413-3669) <http://www.sacs.org/>

The nuclear medicine technologist performs patient care with understanding of patients' special needs, fears and concerns and recognizes changes in patient condition. Limiting the exposure of the patient and other health care workers to minimal levels of radiation is of paramount importance.

A fundamental knowledge and understanding of the physical and biological sciences, including radiation biology and protection, as well as radiopharmaceuticals "in vivo" and "in vitro", is essential: nuclear physics, biochemistry, immunology, physiology and an introduction to computer application/operation with data manipulation must be included.

Students are encouraged to become members of their appropriate professional organizations such as the Society of Nuclear Medicine – Technologist Section (SNM-TS), Florida Nuclear Medicine Technologists, Inc. (FNMT), the American Society of Radiologic Technologists (ASRT), Florida Society of Radiologic Technologists (FSRT) and its local affiliate.

The Core should be taken first in the program. Following the successful completion of the core, the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as Radiation Therapy Technologist (Radiation Therapists) or to provide supplemental training for persons previously or presently employed in these occupations.

The content includes but is not limited to performing radiation therapy procedures with skill and understanding to practice the art and science of radiation therapy technology; to administer the prescribed radiation therapy treatments of the highest caliber, thereby providing the patient treatments of the highest quality and accuracy; to become members of the health care team that contributes to the physical and psychological comfort of the patient, to provide radiation protection to the patient, self and health care team; to work with the health care team to improve radiotherapeutic health care in the hospital and community; and to understand the importance of maintaining membership in the professional organizations and keeping abreast of the changes in the field of radiation therapy.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## **Program Structure**

This program is a planned sequence of instruction consisting of 77 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## **Regulated Programs**

**This program is regulated by the Florida Department of Health, Bureau of Radiation Control.**

The program must be accredited by the Joint Review Committee on Education in Radiologic Technology (JRCERT), 20 North Wacker Drive, Suite 900, Chicago, Illinois 60606-2901, (312) 704-5300, or by the Southern Association of Colleges and Schools to enable graduates to become candidates for examination in Radiation Therapy Technology by the American Registry of Radiologic Technologists. It may also be approved by the Department of Health, Bureau of Radiation Control so that the graduate is eligible for licensure in Florida as a certified Radiation Therapy Technologists. As specified in Chapter 468 Part IV, F.S. and Chapter 64E-3, F.A.C.

Students completing the program will be eligible to make application to take the National Registry examination. For further information contact:

American Registry of Radiologic Technologists (ARRT)  
1255 Northland Drive, St. Paul, MN 55120-1155  
(612-687-0048) [www.arrt.org](http://www.arrt.org)

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate the proficiency in the skills and knowledge required of clinical practice.
- 02.0 Convey an understanding of the ethics that impact radiation therapy at both the state and federal levels.
- 03.0 Demonstrate proficiency in imaging and processing in radiation oncology.
- 04.0 Demonstrate a basic understanding of laws related to radiation therapy at both the state and federal levels.
- ~~05.0~~ Demonstrate ~~a functional~~ knowledge of ~~medical terminology required in radiation therapy.~~
- ~~06.0~~ ~~Demonstrate knowledge of procedures and techniques related to the resolution of operational issues in radiation therapy.~~
- ~~07.0~~ 05.0 Demonstrate knowledge of the foundational principles and practices that encompass the training, practice, and professional standards of radiation therapy as a specialized area within healthcare.
- ~~08.0~~ 06.0 Demonstrate knowledge of essential concepts related to pathophysiology.
- ~~09.0~~ 07.0 Demonstrate knowledge of the fundamental principles of radiation therapy.
- ~~10.0~~ 08.0 Demonstrate knowledge of the principles of radiation therapy as it relates to the management of neoplastic disease.
- ~~11.0~~ 09.0 Demonstrate the skills, procedures and knowledge required for effective quality management, quality assurance, safety and operations.
- ~~12.0~~ 10.0 Demonstrate an understanding of the integral aspects of radiation biology required of a radiation therapist.
- 11.0 Demonstrate proficient knowledge of physics pertinent to the understanding of ~~radiations~~ the different types of ionizing radiation used in the clinical ~~setting~~ settings.
- ~~13.0~~ 12.0 Demonstrate an advanced understanding of the concepts and theories of radiation therapy physics.
- ~~14.0~~ 13.0 Demonstrate the principles of radiation protection and safety for the radiation therapist.
- 14.0 Demonstrate knowledge of magnetic resonance Imaging, screening, safety and imaging considerations in radiation therapy.
- 15.0 Demonstrate knowledge of the foundational concepts and competencies in assessment and evaluation of the patient ~~for service delivery.~~
- ~~16.0~~ ~~Demonstrate an advanced understanding of the concepts and theories of radiation therapy physics.~~
- ~~17.0~~ 16.0 Demonstrate proficiency in research methods, evidence-based practice and information literacy.
- ~~18.0~~ 17.0 Demonstrate the skills, techniques and knowledge required for medical imaging methods to capture sectional anatomy.
- ~~19.0~~ 18.0 Demonstrate the skills, techniques and knowledge required for the clinical planning of patient treatment.

Student Performance Standards**

**Program Title:** Radiation Therapy  
**CIP Number:** 1351090701  
**Program Length:** 77 credit hours

Standards 1-19 are copy written ©2014, the American Society of Radiologic Technologists. All rights reserved. Reprinted with permission of the ASRT for educational purposes.

**At the completion of this program, the student will be able to:**

|       |                                                                                                                                                 |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Demonstrate the proficiency in the skills and knowledge required of clinical practice. - The student will be able to:                           |
| 01.01 | Operate within the radiation therapy scope of practice.                                                                                         |
| 01.02 | Demonstrate values and attitudes congruent with the profession's standards and ethics.                                                          |
| 01.03 | Formulate priorities in daily clinical practice.                                                                                                |
| 01.04 | Apply concepts of teamwork.                                                                                                                     |
| 01.05 | Adapt to dynamic clinical situations.                                                                                                           |
| 01.06 | Establish patient-centered, clinically effective service delivery strategies.                                                                   |
| 01.07 | Deliver a prescribed course of treatment adhering to acceptable departmental, institutional, governmental and professional standards.           |
| 01.08 | Assess the patient's status and condition <del>in-order</del> to deliver a prescribed course of radiation therapy.                              |
| 01.09 | Use critical thinking for accurate treatment delivery by demonstrating knowledge of didactic concepts.                                          |
| 01.10 | Demonstrate the principles of radiation protection.                                                                                             |
| 01.11 | Monitor tumor lethal dose and normal tissue tolerance dose.                                                                                     |
| 01.12 | Evaluate the patient's clinical response to treatment parameters as prescribed to determine if medical intervention by the doctor is necessary. |
| 01.13 | Apply the principles of total quality management.                                                                                               |
| 01.14 | Detect equipment malfunctions and take appropriate action.                                                                                      |
| 01.15 | Construct and prepare immobilization, beam alignment and beam modification devices.                                                             |

|       |                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.16 | Design, evaluate and implement treatment plans.                                                                                                              |
| 01.17 | Validate manual and computer dosimetric calculations.                                                                                                        |
| 01.18 | Perform simulation, localization and therapeutic procedures as they pertain to radiation therapy in accordance with national patient safety standards.       |
| 01.19 | Demonstrate appropriate and effective communication.                                                                                                         |
| 01.20 | Demonstrate safe, ethical and legal practices.                                                                                                               |
| 01.21 | Evaluate the significance of the patient's unique diagnosed cancerous pathology to formulate appropriate simulations and treatment actions.                  |
| 01.22 | Apply appropriate safety, transfer and immobilization principles.                                                                                            |
| 01.23 | Apply concepts of teaching and learning theories in design, implementation and evaluation in the education of patient, family, colleagues and the community. |
| 01.24 | Describe departmental resources that are designed to meet the health and wellness of patient needs.                                                          |
| 01.25 | Demonstrate appropriate interaction with patients and patients' family and friends.                                                                          |
| 01.26 | Assess patient side effects and complications to create an interdisciplinary management strategy that fosters prevention, healing and comfort.               |
| 01.27 | Document all aspects of patient care and management in the appropriate record.                                                                               |
| 01.28 | Document and communicate errors and discrepancies in accordance with institutional and national quality management procedures.                               |
| 01.29 | Demonstrate knowledge of situations where life support procedures would be necessary.                                                                        |
| 01.30 | Document knowledge of the institution's procedures in response to emergencies, disasters and accidents.                                                      |
| 01.31 | Apply strategies that ensure professional development at a level of clinical practice consistent with acceptable standards.                                  |
| 01.32 | Demonstrate quality assurance procedures for all treatment delivery equipment and accessories.                                                               |
| 01.33 | Evaluate outcomes to continuously improve radiation therapy services.                                                                                        |
| 01.34 | Incorporate Health Insurance Portability and Accountability Act (HIPAA) requirements into clinical practice.                                                 |
| 01.35 | Interpret treatment planning prior to and during a course of treatment.                                                                                      |
| 02.0  | Convey an understanding of the ethics that impact radiation therapy at both the state and federal levels. The student will be able to:                       |
| 02.01 | Identify theories and principles that guide ethical decision making for practice situations.                                                                 |

|       |                                                                                                                                                                |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.02 | <del>Define</del> <u>Describe</u> practice situations that carry high potential for dilemmas that require ethical scrutiny.                                    |
| 02.03 | Discuss basic ethical duties of health care providers.                                                                                                         |
| 02.04 | Demonstrate an awareness of and sensitivity to various cultural and ethnic differences among various client groups.                                            |
| 02.05 | Discuss the concept of patient advocacy in support of patients' rights.                                                                                        |
| 02.06 | Discuss ethical theories and models.                                                                                                                           |
| 02.07 | Discuss the radiation therapy scope of practice, code of ethics and practice standards.                                                                        |
| 02.08 | Examine concepts of personal honesty, integrity, accountability and professional compassion as ethical imperatives in professional practice.                   |
| 02.09 | Differentiate between distributive, compensatory and retributive justice.                                                                                      |
| 02.10 | Differentiate between provider and patient relationships.                                                                                                      |
| 02.11 | Discuss the duty of the radiation therapist to take responsibility for actions and decisions.                                                                  |
| 02.12 | Discuss the elements of an informed consent.                                                                                                                   |
| 02.13 | Discuss standards of disclosure.                                                                                                                               |
| 02.14 | Analyze issues related to the use and flow of patient information to determine confidentiality.                                                                |
| 02.15 | Explain ethical issues related to different age groups.                                                                                                        |
| 02.16 | Identify current ethical issues in health care.                                                                                                                |
| 02.17 | Demonstrate application of a system of examination, clarification, determination, the doctrine of informed consent and other issues related to patient rights. |
| 02.18 | Explain ethical issues related to the profession.                                                                                                              |
| 02.19 | Discuss the relationship between ethics and health care policy.                                                                                                |
| 02.20 | Examine ethical issues arising daily in a radiation therapy department.                                                                                        |
| 03.0  | Demonstrate proficiency in imaging and processing in radiation oncology. The student will be able to:                                                          |
| 03.01 | Define terminology associated with digital imaging systems.                                                                                                    |
| 03.02 | Describe the various types of digital receptors.                                                                                                               |

|       |                                                                                                                                                                                 |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.03 | Discuss the fundamentals of digital imaging.                                                                                                                                    |
| 03.04 | Discuss image acquisition on the simulator and linear accelerator.                                                                                                              |
| 03.05 | Describe the evaluative criteria for imaging detectors on the simulator and linear accelerator.                                                                                 |
| 03.06 | Describe the histogram and the process or histogram analysis as it relates to automatic rescaling and determining an exposure indicator.                                        |
| 03.07 | Identify the exposure indices for digital imaging receptors on the simulator <del>ad</del> and linear accelerator.                                                              |
| 03.08 | Discuss the response of digital imaging systems to background and scatter radiation on the simulator and linear accelerator.                                                    |
| 03.09 | Identify appropriate measures to control scatter in the simulator and linear accelerator rooms.                                                                                 |
| 03.10 | Explain methods to avoid histogram analysis errors.                                                                                                                             |
| 03.11 | Describe image processing employed for digital images.                                                                                                                          |
| 03.12 | Associate the impact of image processing parameters to the image appearance.                                                                                                    |
| 03.13 | Associate the effects of inappropriate processing on image clarity or conspicuity.                                                                                              |
| 03.14 | Describe and apply the fundamental physical principles of exposure for digital detectors.                                                                                       |
| 03.15 | Describe the selection of technical factors to ensure appropriate receptor exposure levels for digital detectors.                                                               |
| 03.16 | Describe the conditions that cause quantum mottle in a digital image.                                                                                                           |
| 03.17 | Explain methods to avoid poor quality images in simulation and treatment planning.                                                                                              |
| 03.18 | Examine the potential impact of digital imaging systems on patient exposure and methods of practicing the as low as reasonably achievable (ALARA) concept with digital systems. |
| 03.19 | Describe picture archiving and communications system (PACS) and its function.                                                                                                   |
| 03.20 | Identify components of a PACS system.                                                                                                                                           |
| 03.21 | Describe patient benefits gained through the use of telemedicine.                                                                                                               |
| 03.22 | Identify modality types that may be incorporated into a PACS.                                                                                                                   |
| 03.23 | Define digital imaging and communications in medicine (DICOM).                                                                                                                  |
| 03.24 | Describe data flow for a DICOM image from an imaging modality to a PACS.                                                                                                        |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.25 | Describe HIPAA concerns with electronic information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 03.26 | Identify common problems associated with retrieving/viewing images.                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 03.27 | Analyze relationships of factors affecting image contrast, density and resolution to determine optimal image quality.                                                                                                                                                                                                                                                                                                                                                                                                         |
| 03.28 | Apply techniques to enhance image details and reduce image distortion.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 03.29 | Determine artifact types, cause and preventive measures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 03.30 | Explain the basic principles of image formation for each of the following modalities: magnetic resonance (MR), ultrasound imaging and nuclear medicine.                                                                                                                                                                                                                                                                                                                                                                       |
| 03.31 | Describe and explain functions of the components of the computed tomography (CT) imaging system.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 03.32 | Differentiate between conventional and spiral/helical CT scanning.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 03.33 | List the CT computer data processing steps.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 03.34 | Name the functions of the array processor used for image reconstruction.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 03.35 | Explain the difference between reconstructing and reformatting an image.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 03.36 | Describe the application of the following terms to CT: <ul style="list-style-type: none"> <li>• Pixel.</li> <li>• Matrix.</li> <li>• Voxel.</li> <li>• Linear attenuation coefficient.</li> <li>• CT/Hounsfield number.</li> <li>• Partial volume averaging.</li> <li>• Window width (ww) and window level (wl).</li> <li>• Spatial resolution.</li> <li>• Contrast resolution.</li> <li>• Noise.</li> <li>• Annotation.</li> <li>• Region of interest (ROI).</li> <li>• Standard vs. volumetric data acquisition.</li> </ul> |
| 03.37 | Identify the types and appearance of artifacts most commonly affecting CT images.                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 03.38 | Explain how artifacts can be reduced or eliminated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 03.39 | Describe current data storage techniques used in CT.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|                  |                                                                                                                                                                                              |
|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.40            | Name the radiation protection devices that can be used to reduce patient dose in CT and describe the correct application of each.                                                            |
| 04.0             | Demonstrate a basic understanding of laws related to radiation therapy at both the state and federal levels. The student will be able to:                                                    |
| 04.01            | Apply concepts related to social, political, economic and historical issues to analyze the different sources of law.                                                                         |
| 04.02            | List the steps in a civil legal procedure and identify the potential role of a radiation therapist.                                                                                          |
| 04.03            | Assess the role of effective communication skills in reducing legal action.                                                                                                                  |
| 04.04            | Analyze negligence related to clinical practice issues of simulation, treatment delivery, patient assessment, patient education and quality assurance to determine if negligence is present. |
| 04.05            | Examine the role of the radiation therapist in the informed consent process, patient rights and practice standards.                                                                          |
| 04.06            | Analyze safety programs to reduce patient injury.                                                                                                                                            |
| 04.07            | Examine the importance of documentation and maintenance of clinical practice records.                                                                                                        |
| 04.08            | Formulate a risk management program.                                                                                                                                                         |
| 04.09            | Analyze the role of code of ethics, radiation therapy scope of practice and radiation therapy practice standards as guides to assess the appropriateness of professional actions.            |
| 04.10            | Discuss the practice of lifelong learning in maintaining professional competence.                                                                                                            |
| <del>05.0</del>  | <del>Demonstrate a functional knowledge of medical terminology required in radiation therapy. The student will be able to:</del>                                                             |
| <del>05.01</del> | <del>Identify primary language sources from which medical terms are derived.</del>                                                                                                           |
| <del>05.02</del> | <del>Define medical terms according to basic elements.</del>                                                                                                                                 |
| <del>05.03</del> | <del>Interpret language, abbreviations and symbols in the medical record.</del>                                                                                                              |
| <del>06.0</del>  | <del>Demonstrate knowledge of procedures and techniques related to the resolution of operational issues in radiation therapy. The student will be able to:</del>                             |
| <del>06.01</del> | <del>Identify CQI opportunities.</del>                                                                                                                                                       |
| <del>06.02</del> | <del>Explain the differences between CQI and QA.</del>                                                                                                                                       |
| <del>06.03</del> | <del>Select appropriate CQI tools for specific situations.</del>                                                                                                                             |
| <del>06.04</del> | <del>Apply CQI principles to specific situations.</del>                                                                                                                                      |
| <del>06.05</del> | <del>Discuss human resources' role in the work environment.</del>                                                                                                                            |

|                               |                                                                                                                                                                                                                                                               |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>06.06</del>              | <del>Discuss the need for organizational and departmental accreditation.</del>                                                                                                                                                                                |
| <del>06.07</del>              | <del>Recognize accreditation effects on radiation therapy operations.</del>                                                                                                                                                                                   |
| <del>06.08</del>              | <del>Use appropriate current procedural terminology (CPT) codes for professional and technical charges.</del>                                                                                                                                                 |
| <del>06.09</del>              | <del>Summarize the various types of insurance and the mechanisms necessary for approval of care.</del>                                                                                                                                                        |
| <del>06.10</del>              | <del>Discuss reimbursement for radiation therapy services.</del>                                                                                                                                                                                              |
| <del>06.11</del>              | <del>Compare the components and methods of developing and managing a departmental budget.</del>                                                                                                                                                               |
| <del>07.0</del> <u>05.0</u>   | Demonstrate knowledge of the <del>foundational</del> principles and practices <u>that encompass the training, practice, and professional standards</u> of radiation therapy <del>as a specialized area within healthcare</del> . The student will be able to: |
| <del>07.01</del> <u>05.01</u> | Discuss the policies and procedures of the educational program.                                                                                                                                                                                               |
| <del>07.02</del> <u>05.02</u> | Discuss the policies and procedures of clinical education settings.                                                                                                                                                                                           |
| <del>07.03</del> <u>05.03</u> | Identify the responsibilities of a radiation therapy student.                                                                                                                                                                                                 |
| <del>07.04</del> <u>05.04</u> | Use library/Internet resources pertinent to radiation oncology.                                                                                                                                                                                               |
| <del>07.05</del> <u>05.05</u> | Discuss maintaining patient and student confidentiality.                                                                                                                                                                                                      |
| <del>07.06</del> <u>05.06</u> | Analyze the importance of multidisciplinary care of cancer patients.                                                                                                                                                                                          |
| <del>07.07</del> <u>05.07</u> | Discuss the philosophy and mission of health care delivery systems and educational programs.                                                                                                                                                                  |
| <del>07.08</del> <u>05.08</u> | Incorporate key terms used in the principles and practice of radiation therapy.                                                                                                                                                                               |
| <del>07.09</del> <u>05.09</u> | Identify the contents/sections of the patient's records.                                                                                                                                                                                                      |
| <del>07.10</del> <u>05.10</u> | Explain radiation safety procedures for radiation therapy.                                                                                                                                                                                                    |
| <del>07.11</del> <u>05.11</u> | Explain health safety procedures for personnel and patients.                                                                                                                                                                                                  |
| <del>07.12</del> <u>05.12</u> | Differentiate between accreditation, credentialing, certification, registration, licensure, and regulations.                                                                                                                                                  |
| <del>07.13</del> <u>05.13</u> | Explain the purposes, functions and activities of international, national, state and local professional organizations.                                                                                                                                        |
| <del>07.14</del> <u>05.14</u> | Discuss the importance of professional and community commitment.                                                                                                                                                                                              |
| <del>07.15</del> <u>05.15</u> | Discuss the radiation therapist scope of practice, practice standards and professional code of ethics.                                                                                                                                                        |

|                        |                                                                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>07.16</del> 05.16 | Discuss the benefits of continuing education as related to improving the quality of patient care, professional development and personal enhancement.                          |
| <del>07.17</del> 05.17 | Discuss career advancement and opportunities for the radiation therapist.                                                                                                     |
| <del>08.0</del> 06.0   | Demonstrate knowledge of essential concepts related to pathophysiology. -The student will be able to:                                                                         |
| <del>08.01</del> 06.01 | Describe the physiological response in inflammation and cell injury due to pathological insult.                                                                               |
| <del>08.02</del> 06.02 | Assess the predictive factors, including genetics, lifestyles, age and environment as they influence the development of cancer and associated diseases.                       |
| <del>08.03</del> 06.03 | Compare the body's response to hereditary, lifestyle, age and environmental factors.                                                                                          |
| <del>08.04</del> 06.04 | Given a specific oncologic-related disease, determine probable diagnostic, prognostic, staging, grading and the rationale for the appropriate therapeutic pathway.            |
| <del>08.05</del> 06.05 | Given the histology of a neoplasm, determine the tumor characteristics.                                                                                                       |
| <del>08.06</del> 06.06 | Given a common disease, anticipate the effects of the disease on the oncologic patient.                                                                                       |
| <del>09.0</del> 07.0   | Demonstrate knowledge of the fundamental principles of radiation therapy. -The student will be able to:                                                                       |
| <del>09.01</del> 07.01 | Given diagnostic information about a particular cancer, determine the appropriateness of using radiation therapy as a primary treatment modality.                             |
| <del>09.02</del> 07.02 | Determine the medical and patient information necessary to develop a radiation therapy treatment plan.                                                                        |
| <del>09.03</del> 07.03 | Determine the appropriate treatment energy for any given tumor type or location.                                                                                              |
| <del>09.04</del> 07.04 | Differentiate between beam modifiers and their uses with a variety of treatment energies.                                                                                     |
| <del>09.05</del> 07.05 | Determine the appropriate treatment setup aid, immobilization technique and beam modifier for a given treatment technique.                                                    |
| <del>09.06</del> 07.06 | Identify inconsistencies between treatment prescription and treatment plan.                                                                                                   |
| <del>09.07</del> 07.07 | Develop a CT simulation plan for a particular tumor to include steps needed prior to, during and after the procedure.                                                         |
| <del>09.08</del> 07.08 | Critique treatment images in relation to simulation images.                                                                                                                   |
| <del>09.09</del> 07.09 | Discuss the radiation therapist scope of practice and practice standards.                                                                                                     |
| <del>10.0</del> 08.0   | Demonstrate knowledge of the principles of radiation therapy as it relates to the management of neoplastic disease. The student will be able to:                              |
| <del>10.01</del> 08.01 | Distinguishes tumor histology to determine pathways associated with cancer and neoplastic disease.                                                                            |
| <del>10.02</del> 08.02 | Examine the role of surgical, radiation and medical oncology to include immunotherapy (biological therapy) and personalized medicine in the management of neoplastic disease. |

|                        |                                                                                                                                                                                      |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>10.03</del> 08.03 | Discuss multidisciplinary emerging approaches to neoplastic disease management.                                                                                                      |
| <del>10.04</del> 08.04 | Discuss the role of radiation therapy in the management of all patient populations with benign and malignant diseases.                                                               |
| <del>10.05</del> 08.05 | Discuss epidemiologic and etiologic information pertinent to each neoplastic site.                                                                                                   |
| <del>10.06</del> 08.06 | Discuss the clinical presentation for each anatomic neoplastic site.                                                                                                                 |
| <del>10.07</del> 08.07 | Discuss preventive methods/screening tools associated with each neoplastic site.                                                                                                     |
| <del>10.08</del> 08.08 | Explain detection, diagnosis, grading and staging systems for each neoplastic site.                                                                                                  |
| <del>10.09</del> 08.09 | Implement the principles and practice of simulation to prepare a patient for treatment.                                                                                              |
| <del>10.10</del> 08.10 | Apply the parameters of treatment field design and arrangement used to treat neoplastic diseases.                                                                                    |
| <del>10.11</del> 08.11 | Examine the role of radiation therapy in palliative disease management.                                                                                                              |
| <del>10.12</del> 08.12 | Identify the treatment regimens and fractionalization schemes used in palliative disease management.                                                                                 |
| <del>10.13</del> 08.13 | Describe the role of radiation therapy in the management of oncology emergencies.                                                                                                    |
| <del>11.0</del> 09.0   | Demonstrate the skills, procedures and knowledge required for effective quality management-, <a href="#">quality assurance, safety and operations</a> . The student will be able to: |
| <del>11.01</del> 09.01 | Discuss the components of a quality management (QM) program in developing a culture of safety in radiation oncology.                                                                 |
| <del>11.02</del> 09.02 | Discuss the purpose, function and member's role on a quality management team.                                                                                                        |
| <del>11.03</del> 09.03 | Explain federal, state and institutional accreditation standards and reporting regulations for quality management.                                                                   |
| <del>11.04</del> 09.04 | Examine outcomes of quality management in radiation oncology.                                                                                                                        |
| <del>11.05</del> 09.05 | Explain the purpose, procedures and frequency for manual and electronic treatment documentation.                                                                                     |
| <del>11.06</del> 09.06 | Identify errors in treatment documentation.                                                                                                                                          |
| <del>11.07</del> 09.07 | Describe the procedure for assuring accuracy of manual and electronic records.                                                                                                       |
| <del>11.08</del> 09.08 | Examine the purpose and function of record and verify systems.                                                                                                                       |
| <del>11.09</del> 09.09 | Examine the patient chart in terms of medical and legal issues.                                                                                                                      |
| <del>11.10</del> 09.10 | Discuss the significance of treatment outcomes for patient care, education and research in radiation oncology.                                                                       |
| <del>11.11</del> 09.11 | Discuss the quality indicators to evaluate patient care areas.                                                                                                                       |

|                                        |                                                                                                                                                     |
|----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>11.12</del> <a href="#">09.12</a> | Explain the purpose, procedure and frequency for all QA and QM procedures in a radiation therapy department.                                        |
| <del>11.13</del> <a href="#">09.13</a> | Evaluate how the outcomes of QA and QM procedures impact patient care, education and research.                                                      |
| <del>11.14</del> <a href="#">09.14</a> | Examine statistical reporting available through quality assurance computerization.                                                                  |
| <del>11.15</del> <a href="#">09.15</a> | Perform quality measures for computerized operation, data collection and reporting.                                                                 |
| <del>11.16</del> <a href="#">09.16</a> | Determine sources of malfunction on the treatment and simulation/localization units.                                                                |
| <del>11.17</del> <a href="#">09.17</a> | Distinguish between safe and hazardous equipment operation.                                                                                         |

|                        |                                                                                                                                                                                                          |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>12.16</del> 10.16 | Differentiate between linear, nonlinear, and threshold and nonthreshold dose response curves.                                                                                                            |
| <del>12.17</del> 10.17 | Describe the 4 Rs of radiobiology.                                                                                                                                                                       |
| <del>12.18</del> 10.18 | Compare the relationship of time, dose, fractionation, volume, distance and site to radiation effects.                                                                                                   |
| <del>12.19</del> 10.19 | Discuss the use of radiation response modifiers.                                                                                                                                                         |
| <del>12.20</del> 10.20 | Describe the influence of chemotherapy and hyperthermia alone and in combination with radiation therapy.                                                                                                 |
| <del>13.0</del> 11.0   | Demonstrate proficient knowledge of physics pertinent to the understanding of <del>radiations</del> the different types of ionizing radiation used in the clinical setting. The student will be able to: |
| <del>13.01</del> 11.01 | Define the fundamental units of the English, metric and Système International d'Unites (SI) systems.                                                                                                     |
| <del>13.02</del> 11.02 | Calculate various unit conversions.                                                                                                                                                                      |
| <del>13.03</del> 11.03 | Demonstrate applications of the general principles that relate to inertia, work, energy and momentum.                                                                                                    |
| <del>13.04</del> 11.04 | Describe Bohr's theory of atomic structure.                                                                                                                                                              |
| <del>13.05</del> 11.05 | Compare the characteristics and functions of a proton, neutron and electron.                                                                                                                             |
| <del>13.06</del> 11.06 | Discuss the energy levels of the atom.                                                                                                                                                                   |
| <del>13.07</del> 11.07 | Define the terms relating to atomic nomenclature.                                                                                                                                                        |
| <del>13.08</del> 11.08 | Compare covalent bonding and ionic bonding.                                                                                                                                                              |
| <del>13.09</del> 11.09 | Describe the process of ionization.                                                                                                                                                                      |
| <del>13.10</del> 11.10 | Differentiate between the characteristics of a mixture, substance and element.                                                                                                                           |
| <del>13.11</del> 11.11 | Classify the characteristics of an element using the periodic table.                                                                                                                                     |
| <del>13.12</del> 11.12 | Compare the characteristics of a molecule and compound.                                                                                                                                                  |
| <del>13.13</del> 11.13 | Describe the nature of light.                                                                                                                                                                            |
| <del>13.14</del> 11.14 | Explain the relationship between wavelength, frequency and velocity.                                                                                                                                     |
| <del>13.15</del> 11.15 | Differentiate between the radiations of the electromagnetic (EM) spectrum.                                                                                                                               |
| <del>13.16</del> 11.16 | Explain the relationship of energy and frequency to Planck's constant.                                                                                                                                   |
| <del>13.17</del> 11.17 | Distinguish between electrical charge and electrical field.                                                                                                                                              |

|                                                                                                                                                    |                                                                                                                         |
|----------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <del>13.18</del> <a href="#">11.18</a>                                                                                                             | Describe the methods of electrification.                                                                                |
| <del>13.19</del> <a href="#">11.19</a>                                                                                                             | Explain the laws of electrostatics and their application.                                                               |
| <del>13.20</del> <a href="#">11.20</a>                                                                                                             | Describe the properties and laws of magnetism.                                                                          |
| <del>13.21</del> <a href="#">11.21</a>                                                                                                             | Explain the electronic spin of an element to its potential magnetic properties.                                         |
| <del>13.22</del> <a href="#">11.22</a>                                                                                                             | Describe the principle of magnetic induction.                                                                           |
| <del>13.23</del> <a href="#">11.23</a>                                                                                                             | Define potential difference, current, resistance, circuit and electric power.                                           |
| <del>13.24</del> <a href="#">11.24</a>                                                                                                             | Compare the characteristics of direct and alternating currents.                                                         |
| <del>13.25</del> <a href="#">11.25</a>                                                                                                             | Compare electrical measuring devices.                                                                                   |
| <del>13.26</del> <a href="#">11.26</a>                                                                                                             | Discuss electrical protective devices.                                                                                  |
| <del>13.27</del> <a href="#">11.27</a>                                                                                                             | Discuss the interaction between electric and magnetic fields.                                                           |
| <del>13.28</del> <a href="#">11.28</a>                                                                                                             | Describe the characteristics and functions of a cathode and rotating anode.                                             |
| <del>13.29</del> <a href="#">11.29</a>                                                                                                             | Describe the construction and function of tube housing.                                                                 |
| <del>13.30</del> <a href="#">11.30</a>                                                                                                             | Identify the parts of an x-ray tube.                                                                                    |
| <del>13.31</del> <a href="#">11.31</a>                                                                                                             | Determine heat units and cooling characteristics of x-ray tube housings.                                                |
| <del>13.32</del> <a href="#">11.32</a>                                                                                                             | Propose methods to extend tube life.                                                                                    |
| <del>13.33</del> <a href="#">11.33</a>                                                                                                             | Discuss application and components of automatic exposure devices.                                                       |
| <del>13.34</del> <a href="#">11.34</a>                                                                                                             | State the principles of x-ray production.                                                                               |
| <del>13.35</del> <a href="#">11.35</a>                                                                                                             | Compare the production of bremsstrahlung with the production of characteristic radiations.                              |
| <del>13.36</del> <a href="#">11.36</a>                                                                                                             | Compare various photon interactions in terms of description of interaction, relation to atomic number and applications. |
| <del>13.37</del> <a href="#">11.37</a>                                                                                                             | Discuss relationships of wavelength and frequency to beam characteristics.                                              |
| <del>13.38</del> <a href="#">11.38</a>                                                                                                             | Define units of radiation measurement and provide an example of its application.                                        |
| <a href="#">12.0 Demonstrate an advanced understanding of the concepts and theories of radiation therapy physics. The student will be able to:</a> |                                                                                                                         |
| <a href="#">12.01</a>                                                                                                                              | <a href="#">Distinguish between somatic and genetic effects of radiation exposure.</a>                                  |

|                                                                                                                                          |

| 14.01                  | Identify the potential hazards associated with the strong magnetic field and radiofrequency radiation in MRI.                                                                               |
| 14.02                  | Describe the MRI safety screening process.                                                                                                                                                  |
| 14.03                  | Identify safety protocols, and procedures to ensure patient and personnel safety.                                                                                                           |
| 14.04                  | Identify contraindications for MRI patients to prevent potential harm                                                                                                                       |
| 14.05                  | Identify the types of magnetic fields and the risks associated with each type.                                                                                                              |
| 14.06                  | Identify the MRI safety zones.                                                                                                                                                              |
| 14.07                  | Explain how MRI images are generated.                                                                                                                                                       |
| 14.08                  | Describe artifacts caused by patient motion or metallic implants.                                                                                                                           |
| 14.09                  | Demonstrate knowledge of different sequence parameters.                                                                                                                                     |
| 14.10                  | Demonstrate knowledge of the T1 and T2 relaxation times and their effect on image contrast                                                                                                  |
| 15.0                   | Demonstrate knowledge of <del>the</del> foundational concepts and competencies in assessment and evaluation of the patient <del>for service delivery.</del><br>The student will be able to: |
| 15.01                  | Differentiate between the roles and responsibilities of health care team members treating cancer patients.                                                                                  |
| 15.02                  | Demonstrate applications of professional self-care.                                                                                                                                         |
| 15.03                  | Examine different psychological aspects of dying.                                                                                                                                           |
| 15.04                  | Explain the dynamics of communicating with the cancer patient and family.                                                                                                                   |
| 15.05                  | Recognize radiation side effects and complications and select the appropriate medical intervention.                                                                                         |
| 15.06                  | Identify factors that influence a patient's emotional responses.                                                                                                                            |
| 15.07                  | Formulate content for answers to questions frequently asked by patients.                                                                                                                    |
| 15.08                  | Assess the physical condition of the patient before, during and after treatment delivery.                                                                                                   |

|       |                                                                                                                                                                                                        |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15.09 | Demonstrate application of the principles of health safety.                                                                                                                                            |
| 15.10 | Discuss the principles of medication administration.                                                                                                                                                   |
| 15.11 | Recognize common medications and explain their actions and side effects.                                                                                                                               |
| 15.12 | Evaluate a patient for an adverse reaction to medication.                                                                                                                                              |
| 15.13 | Describe emergency response procedures.                                                                                                                                                                |
| 15.14 | Describe the proper care of patients with tubes.                                                                                                                                                       |
| 15.15 | Provide patient education for medical procedures.                                                                                                                                                      |
| 15.16 | Assess the patient before, during and after brachytherapy procedures.                                                                                                                                  |
| 15.17 | Demonstrate the application of the principles of radiation protection during brachytherapy procedures.                                                                                                 |
| 15.18 | Assess the nutritional status of the cancer patient to provide nutritional education or intervention.                                                                                                  |
| 15.19 | Demonstrate proper use of the principles of patient safety and transfer.                                                                                                                               |
| 15.20 | Provide appropriate patient education following patient assessment.                                                                                                                                    |
| 15.21 | Select patient education materials appropriate for patient needs.                                                                                                                                      |
| 15.22 | Compare conventional and integrative medicine.                                                                                                                                                         |
| 16.0  | <del>Demonstrate an advanced understanding of the concepts and theories of radiation therapy physics. The student will be able to:</del>                                                               |
| 16.01 | <del>Compare and contrast atomic structure and composition among the elements, including but not limited to particles (their location, energy level, and charge), atomic number and mass number.</del> |
| 16.02 | <del>Compare isotope, isotone, isobar and isomer.</del>                                                                                                                                                |
| 16.03 | <del>Discuss nuclear stability and types of radioactive decay.</del>                                                                                                                                   |
| 16.04 | <del>Categorize the four fundamental forces of nature.</del>                                                                                                                                           |

| <del>16.30</del> Calculate attenuation requirements for beam modification devices.                                                                                                                                                                        |
| <del>16.31</del> Discuss activation of clinical accessories and alternate shielding materials due to photodisintegration.                                                                                                                                 |
| <del>16.32</del> Explain charged particle interactions with matter, describing dose deposition, energy loss and shielding requirements.                                                                                                                   |
| <del>16.33</del> Define mass stopping power.                                                                                                                                                                                                              |
| <del>16.34</del> Describe a Bragg curve.                                                                                                                                                                                                                  |
| <del>16.35</del> Discuss the purpose and importance of the National Institute of Standards and Technology (NIST).                                                                                                                                         |
| <del>16.36</del> Discuss the purpose and importance of the Accredited Dosimetry Calibration Labs (ADCL).                                                                                                                                                  |
| <del>16.37</del> Demonstrate use of the appropriate type of radiation detector for given clinical applications.                                                                                                                                           |
| <del>16.38</del> Calculate correction factors for chamber calibration, temperature, pressure and other factors used to correct a chamber reading.                                                                                                         |
| <del>16.39</del> Discuss protocols used for external beam calibration.                                                                                                                                                                                    |
| <del>16.40</del> Analyze spot check data to make appropriate judgment decisions regarding machine treatment parameters. Describe the quality of a gamma-ray ( $\gamma$ ) beam in terms of HVL, $\gamma$ energy or mean $\gamma$ energy/nuclide of origin. |
| <del>16.41</del> Describe beam filtration for the various external beam modalities, including but not limited to purpose, types of filters and their construction, energy considerations, inherent vs. added filtration and effect on HVL.                |
| <del>16.42</del> Calculate the approximate mean energy of a megavoltage beam.                                                                                                                                                                             |
| <del>16.43</del> Compare absorbed dose vs. exposure.                                                                                                                                                                                                      |
| <del>16.44</del> Discuss the relationship between kinetic energy released in the medium (KERMA), exposure and absorbed dose.                                                                                                                              |
| <del>16.45</del> Calculate air dose to absorbed dose conversions in tissue, including but not limited to, energy considerations, applicable conversion factors, necessary instrumentation and methods.                                                    |
| <del>16.46</del> Discuss the clinical importance of phantom material and size when applying the Bragg-Gray Cavity Theory.                                                                                                                                 |
| <del>16.47</del> Critique how dose distribution measured in a phantom is used to predict dose distribution in a patient.                                                                                                                                  |
| <del>16.48</del> Compare the characteristics and composition of various phantoms.                                                                                                                                                                         |
| <del>16.49</del> Compare source-skin distance (SSD) and isocentric methods of calibration.                                                                                                                                                                |
| <del>17.0</del> <u>16.0</u> Demonstrate proficiency in research methods, <u>evidence-based practice</u> and information literacy. The student will be able to:                                                                                            |
| <del>17.01</del> <u>16.01</u> Analyze research articles to determine the accuracy and validity of findings.                                                                                                                                               |

|                        |                                                                                                                                                                                                    |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>17.02</del> 16.02 | Integrate information literacy concepts into a research project.                                                                                                                                   |
| <del>17.03</del> 16.03 | Critique research projects to determine appropriateness and usefulness to the profession.                                                                                                          |
| <del>18.0</del> 17.0   | Demonstrate the skills, techniques and knowledge required for <del>medical imaging methods to capture sectional anatomy</del> clinical planning of patient treatment. The student will be able to: |
| <del>18.01</del> 17.01 | Relate the importance of imaging with computed tomography, magnetic resonance and PET-CT in radiation therapy.                                                                                     |
| <del>18.02</del> 17.02 | Differentiate between sagittal, coronal and axial planes of the body.                                                                                                                              |
| <del>18.03</del> 17.03 | Review the principles of imaging for imaging modalities using relevant terminology.                                                                                                                |
| <del>18.04</del> 17.04 | Compare the imaging modalities for application to radiation therapy.                                                                                                                               |
| <del>18.05</del> 17.05 | Identify normal anatomical structures on sectional images.                                                                                                                                         |
| <del>18.06</del> 17.06 | Identify topographic anatomy used to locate underlying internal structures.                                                                                                                        |
| <del>18.07</del> 17.07 | Describe image formation and orientation for computed tomography, magnetic resonance, positron emission tomography, ultrasonography, and image fusion.                                             |
| <del>19.0</del> 18.0   | Demonstrate the skills, techniques and knowledge required for the clinical planning of patient treatment. The student will be able to:                                                             |
| <del>19.01</del> 18.01 | Compare photon isodose curves for clinically relevant photon beams.                                                                                                                                |
| <del>19.02</del> 18.02 | Describe the general influencing factors that distinguish various isodose curves.                                                                                                                  |
| <del>19.03</del> 18.03 | Determine internal and external patient factors that influence a beam's distribution and apply isodose correction methods.                                                                         |
| <del>19.04</del> 18.04 | Describe methods of determining a patient's external contour, definition of internal structures and volumes of interest used in treatment planning.                                                |
| <del>19.05</del> 18.05 | Identify organs and tissues at risk and their dose limitations using published tolerance dose tables.                                                                                              |
| <del>19.06</del> 18.06 | Describe how biologic effective dose is influenced by prescription and treatment variables.                                                                                                        |
| <del>19.07</del> 18.07 | Compare fractionation schemes.                                                                                                                                                                     |
| <del>19.08</del> 18.08 | Discuss the integral dose concept.                                                                                                                                                                 |
| <del>19.09</del> 18.09 | Use appropriate factors for treatment calculations.                                                                                                                                                |
| <del>19.10</del> 18.10 | Describe the interrelationships of the various factors used in treatment calculations.                                                                                                             |
| <del>19.11</del> 18.11 | Perform dose calculations for external photon and electron beam treatments for all clinical variations.                                                                                            |

|                        |                                                                                                                                                                                                           |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>19.12</del> 18.12 | Calculate the absorbed dose to off-axis points of interest.                                                                                                                                               |
| <del>19.13</del> 18.13 | Compare absorbed doses within a treatment volume with beam variations.                                                                                                                                    |
| <del>19.14</del> 18.14 | Explain algorithms incorporated into treatment planning computers.                                                                                                                                        |
| <del>19.15</del> 18.15 | Describe the clinical applications for moving beam techniques.                                                                                                                                            |
| <del>19.16</del> 18.16 | Describe the past pointing technique.                                                                                                                                                                     |
| <del>19.17</del> 18.17 | Calculate equivalent squares using various methods and consider the limitations of each.                                                                                                                  |
| <del>19.18</del> 18.18 | Describe the effect of asymmetric beam collimation on dose distribution.                                                                                                                                  |
| <del>19.19</del> 18.19 | Describe methods for determining dose distribution at points outside the treatment field.                                                                                                                 |
| <del>19.20</del> 18.20 | Calculate dose under a block.                                                                                                                                                                             |
| <del>19.24</del> 18.21 | Evaluate a variety of treatment plans for clinical use.                                                                                                                                                   |
| <del>19.22</del> 18.22 | Identify all possible techniques that may be employed to clinically match adjacent fields.                                                                                                                |
| <del>19.23</del> 18.23 | Describe the multiple junction shift methods.                                                                                                                                                             |
| <del>19.24</del> 18.24 | Examine hot and cold regions that occur with the various matching methods, and describe the methods used to eliminate them.                                                                               |
| <del>19.25</del> 18.25 | Describe procedures for permanent record and legal documentation of matching fields.                                                                                                                      |
| <del>19.26</del> 18.26 | Analyze dose distributions to determine the need for beam modifiers.                                                                                                                                      |
| <del>19.27</del> 18.27 | Compare various methods of tissue compensation and the dosimetric impact.                                                                                                                                 |
| <del>19.28</del> 18.28 | Examine the fabrication of 2-D and 3-D compensators.                                                                                                                                                      |
| <del>19.29</del> 18.29 | Construct manual and computerized isodose curves.                                                                                                                                                         |
| <del>19.30</del> 18.30 | Differentiate between isodose distributions for all clinical variations.                                                                                                                                  |
| <del>19.34</del> 18.31 | Evaluate possible corrections for treatment errors to correct misadministration of prescribed dose.                                                                                                       |
| <del>19.32</del> 18.32 | Differentiate between the treatment planning terms: maximum, minimum, mean, modal and median dose.                                                                                                        |
| <del>19.33</del> 18.33 | Describe International Commission on Radiological Units (ICRU) recommendations on dose variance within a target volume and the effect that variances may have on cure rates, local control and tolerance. |

|                                        |                                                                                                                                           |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <del>19.34</del> <a href="#">18.34</a> | Analyze dose volume histograms relative to treatment planning.                                                                            |
| <del>19.35</del> <a href="#">18.35</a> | Evaluate patient changes to determine the integrity of a treatment plan.                                                                  |
| <del>19.36</del> <a href="#">18.36</a> | Compare electron beam depth dose characteristics for various energies.                                                                    |
| <del>19.37</del> <a href="#">18.37</a> | Identify clinical factors that would influence beam type and energy selection.                                                            |
| <del>19.38</del> <a href="#">18.38</a> | Differentiate between standard treatment distance and virtual distance.                                                                   |
| <del>19.39</del> <a href="#">18.39</a> | Discuss why equivalent squares used with photon beams are inappropriate with electron beams.                                              |
| <del>19.40</del> <a href="#">18.40</a> | Describe how inhomogeneities influence electron beam path.                                                                                |
| <del>19.41</del> <a href="#">18.41</a> | Discuss the considerations of matching an electron field to other adjacent photon or electron fields.                                     |
| <del>19.42</del> <a href="#">18.42</a> | Analyze which shielding materials and thickness would be needed to attenuate electron beams to appropriate levels.                        |
| <del>19.43</del> <a href="#">18.43</a> | Describe how electron shielding materials should be arranged for external vs. internal shielding.                                         |
| <del>19.44</del> <a href="#">18.44</a> | Discuss changes in dose rate and dose distribution with changes in blocking and electron energy.                                          |
| <del>19.45</del> <a href="#">18.45</a> | Compare calculations of shielding thicknesses to measured data for electron beams.                                                        |
| <del>19.46</del> <a href="#">18.46</a> | Determine why specific isodose lines are prescribed for various clinical situations involving critical and noncritical structures.        |
| <del>19.47</del> <a href="#">18.47</a> | Calculate percentage depth dose for 10%, 50%, 80% and 90% lines for various electron energies.                                            |
| <del>19.48</del> <a href="#">18.48</a> | Describe the considerations in the clinical application of special electron treatments, including total skin irradiation and arc therapy. |
| <del>19.49</del> <a href="#">18.49</a> | Compare the general isodose pattern of particle beams.                                                                                    |
| <del>19.50</del> <a href="#">18.50</a> | Determine clinical usefulness of various beam types and the clinical implications involved.                                               |
| <del>19.51</del> <a href="#">18.51</a> | Describe the various imaging modalities in tumor localization and planning.                                                               |
| <del>19.52</del> <a href="#">18.52</a> | Discuss planning techniques used to accommodate the treatment volume shape.                                                               |
| <del>19.53</del> <a href="#">18.53</a> | Discuss isocenter localization for radiosurgery.                                                                                          |
| <del>19.54</del> <a href="#">18.54</a> | Identify vital structures considered during treatment planning.                                                                           |
| <del>19.55</del> <a href="#">18.55</a> | Compare single dose delivery to fractionated dose delivery schedules.                                                                     |
| <del>19.56</del> <a href="#">18.56</a> | Discuss the need for specific equipment used to deliver radiation for conformal therapy.                                                  |

|                        |                                                                                                                         |
|------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <del>19.57</del> 18.57 | Discuss the purpose and contents of the ICRU Report 62 and supplements.                                                 |
| <del>19.58</del> 18.58 | Discuss the computer system features necessary for conformal therapy treatment planning.                                |
| <del>19.59</del> 18.59 | Identify common sites amenable to conformal therapy and the typical doses employed for those sites.                     |
| <del>19.60</del> 18.60 | Compare configurations of multileaf collimation systems.                                                                |
| <del>19.61</del> 18.61 | Discuss considerations for multileaf collimators.                                                                       |
| <del>19.62</del> 18.62 | Review the differences between static and dynamic multileaf collimation systems.                                        |
| <del>19.63</del> 18.63 | Identify appropriate clinical applications for brachytherapy.                                                           |
| <del>19.64</del> 18.64 | Compare and contrast brachytherapy delivery systems.                                                                    |
| <del>19.65</del> 18.65 | Describe the techniques and applicators used for intracavitary, interstitial and endovascular brachytherapy procedures. |
| <del>19.66</del> 18.66 | Explain how simulation and CT data is used for source localization.                                                     |
| <del>19.67</del> 18.67 | Discuss the objective of treatment planning for brachytherapy procedures.                                               |
| <del>19.68</del> 18.68 | Summarize dose specification and prescription techniques for different types of implants.                               |
| <del>19.69</del> 18.69 | Describe optimization techniques used in computer aided dose calculations.                                              |
| <del>19.70</del> 18.70 | Discuss record keeping requirements for radioactive material.                                                           |
| <del>19.71</del> 18.71 | State radiation safety requirements for brachytherapy procedures.                                                       |
| <del>19.72</del> 18.72 | Identify appropriate clinical applications for using intensity modulated radiation therapy (IMRT).                      |
| <del>19.73</del> 18.73 | Describe the general flow of the IMRT process from patient immobilization through treatment delivery.                   |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Clinical education has been established for the students in these programs. It is designed to permit accurate assessment of the knowledge, skills and abilities of students in the clinical education component of the program. After completion of the prerequisite practice of radiotherapeutic procedures, students indicate readiness for evaluation in a specific category to the clinical affiliate or faculty in the assigned clinical education center.

Clinical education and laboratory activities facilitate student rotations to provide them equitable opportunity to achieve the program clinical objective utilizing multiple affiliates. The resulting clinical rotation and laboratory practicum provides students with patient treatment techniques utilizing a variety of megavoltage equipment, radiation therapy patient care procedures, localization and treatment, radiation therapy physics including dosimetry, machine calibration, quality assurance, handling of sealed radioactive sources and protection, follow up, patient care and patient recordkeeping.

### **Special Notes**

The program is designed to provide the radiation therapy community with workers who, under the supervision of a Radiation Oncologist, uses ionizing radiation to treat disease. The curriculum provides students an opportunity to develop technical and social skills through experiences in the clinic, classroom, and laboratory.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

Students are encouraged to become members of their appropriate professional organizations such as the American Society of Radiologic Technologists (ASRT), Florida Society of Radiologic Technologists (FSRT) and its' local affiliate.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOSs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program trains students for the occupation of Respiratory Therapist or to provide supplemental training for persons previously or currently employed in these occupations. The respiratory therapist specializes in the application of scientific knowledge and theory to practical, clinical problems of respiratory care.

The content includes but is not limited to quality control of all units, intermittent positive pressure breathing (IPPB); humidity/aerosol therapy; medical gas administration; broncho-pulmonary drainage; mechanical ventilation; airway management; emergency care; pulmonary function testing; cardiopulmonary rehabilitation; measurement and reporting of cardiopulmonary sampling, infection control; cardiopulmonary drug administration, physiologic monitoring, and special advanced procedures.

Additional Information relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## **Program Structure**

This program is a planned sequence of instruction consisting of 76 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## **Regulated Programs**

Graduates of this program are eligible to take the NBRC (National Board ~~of~~for Respiratory Care) examination(s) and become **licensed with the State of Florida Department of Health, Division of Quality Assurance.**

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Recognize and practice safety and security procedures.
- 02.0 Recognize and practice infection control procedures.
- 03.0 Select, review, obtain, and interpret data.
- 04.0 Select, assemble, and check equipment for proper function, operation, and cleanliness.
- 05.0 Initiate, conduct, and modify prescribed therapeutic procedures.
- 06.0 Demonstrate knowledge of the health care delivery system, and maintain records and communications.
- 07.0 Demonstrate legal and ethical responsibilities.
- 08.0 Demonstrate knowledge of employment requirements as a respiratory care professional.
- ~~09.0 — Adapt appropriate respiratory care procedures to the home care environment.~~
- ~~10.0~~09.0 Perform advanced respiratory care procedures.
- ~~11.0~~10.0 Administer cardiopulmonary drugs.
- ~~12.0~~11.0 Assist the physician with special respiratory therapy procedures.
- ~~13.0~~12.0 Initiate and conduct patient and family education.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Respiratory Care

**CIP Number:** 1351090800

**Program Length:** 76 credit hours

**At the completion of this program, the student will be able to:**

01.0 Recognize and practice safety and security procedures. -The student will be able to:

01.01 Recognize safe and unsafe working conditions and report safety hazards.

01.02 Identify and describe methods ~~in~~for medical error reduction and prevention in the various healthcare settings.

01.03 Demonstrate personal safety procedures based on ~~Occupations~~Occupational Safety and Health Administration (OSHA) and Centers for Disease Control (CDC) regulations, including standard precautions.

01.04 Recognize Safety Data Sheets (SDS) and comply with safety signs, symbols, and labels.

01.05 Demonstrate proper body mechanics and ergonomics.

01.06 Demonstrate the procedure for properly identifying patients.

01.07 Demonstrate procedures for the safe transport and transfer of patients.

01.08 Describe fire, safety, disaster, and evacuation procedures.

02.0 Recognize and practice infection control procedures. -The student will be able to:

02.01 Define principles of infection control, including standard and transmission-based precautions.

02.02 Demonstrate knowledge of medical asepsis and practice procedures such as handwashing and isolation.

02.03 Demonstrate knowledge of surgical asepsis.

02.04 Describe how to dispose correctly of biohazardous materials according to appropriate government guidelines, such as OSHA.

02.05 Apply infection control techniques designed to prevent the spread of diseases caused by airborne and blood-borne pathogens to the care of all patients following the Centers for Disease Control (CDC) guidelines.

~~03.0~~02.06 ~~Select, review, obtain and interpret data. The student will be able to:~~Protect patient from nosocomial infection by adherence to infection control policies and procedures (standard precautions, blood and body fluid precautions, etc.)

~~03.01—Review existing data in patient record, and recommend diagnostic procedures based on all available patient information.~~

~~•—Review existing data in patient record including imaging and laboratory studies~~

|                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

- Administer/assist with directed cough (quad cough/huff cough).
- Administer prescribed aerosolized medications.
- Select the appropriate ventilator, including ~~both~~ conventional and non-conventional (i.e., high-frequency ventilation).
- Select, initiate, and adjust invasive ventilation device and properly manipulate settings based on patient response and data.
- Select, initiate, and adjust a non-invasive ventilation device and properly manipulate settings based on patient response and data.
- Manage and facilitate liberation from mechanical ventilation.
- Manage withdrawal of life support.
- Interpret invasive ventilator graphics and manipulate settings accordingly.
- Interpret non-invasive ventilator graphics and manipulate settings accordingly.
- Assist with the transport of a mechanically ventilated patient.

05.04 Conduct therapeutic procedures to achieve adequate arterial and tissue oxygenation.

- Position the patient to minimize hypoxia.
- Administer oxygen ~~(on, with or off ventilator)~~ without positive pressure.
- Prevent procedure-associated hypoxia (e.g., ~~oxygenated~~ oxygenate before and after suctioning and equipment change, etc.).
- Initiate and adjust CPAP/PEEP therapy.
- Initiate and adjust high-flow oxygen devices.
- Initiate lung recruitment maneuvers.

05.05 Evaluate and monitor the patient's response to respiratory care through accurate interpretation of monitored data.

- Measure and record vital signs.
- Monitor cardiac rhythm.
- Non-Invasive monitors
  - Monitor pulse oximetry.
  - Monitor capnography.
  - Monitor Transcutaneous gas exchange.
  - Monitor hemodynamic values.
- Auscultate, inspect, palpate, and percuss the chest and record changes.
- Observe changes in sputum production and consistency.
- Note the patient's subjective response to therapy.
- Measure FIO2 and or liter flow.
- Perform Pulmonary Function Testing.
  - Bedside spirometry
  - Peak flow
  - 6-minute walk
  - FeNO measurement
  - DLCO measurement
  - Nitrogen washout
  - Lung volumes and capacities
  - MEP and MIP
- Perform arterial puncture.

| <del>10.05</del> <u>09.05</u> | Remove, clean, and/or replace inner cannula tube and/or replace tracheostomy tube, as indicated.                                                                                                                                                                                                                                                                              |
| <del>10.06</del> <u>09.06</u> | Perform various mathematical computations dealing with cardiopulmonary assessment.                                                                                                                                                                                                                                                                                            |
| <del>10.07</del> <u>09.07</u> | Evaluate and apply hemodynamic monitoring to enhance care of the patient.                                                                                                                                                                                                                                                                                                     |
| <del>10.08</del> <u>09.08</u> | Perform intubation.                                                                                                                                                                                                                                                                                                                                                           |
| <del>10.09</del> <u>09.09</u> | Initiate mechanical ventilation with appropriate ventilator settings and parameters.                                                                                                                                                                                                                                                                                          |
| <del>10.10</del> <u>09.10</u> | Monitor return to normal physiology; reestablish airway/ventilation if necessary.                                                                                                                                                                                                                                                                                             |
| <del>10.11</del> <u>09.11</u> | Perform extubation and/or ventilator liberation.                                                                                                                                                                                                                                                                                                                              |
| <del>10.12</del> <u>09.12</u> | Monitor and assist in procedural sedation.                                                                                                                                                                                                                                                                                                                                    |
| <del>11.0</del> <u>10.0</u>   | Administer cardiopulmonary drugs. -The student will be able to:                                                                                                                                                                                                                                                                                                               |
| <del>11.04</del> <u>10.01</u> | Demonstrate knowledge of drug classifications, actions and uses, route of administration and usual adult doses, mathematics needed to calculate divided or children's dosage, contraindications, drug interactions, adverse reactions, how supplied, mixing instructions, storage, <u>and</u> laboratory test interferences.                                                  |
| <del>11.02</del> <u>10.02</u> | Perform administration of medication <u>and medical gases</u> following appropriate protocol and safe guidelines.                                                                                                                                                                                                                                                             |
| <u>10.03</u>                  | <u>Recommendations for pharmacologic interventions using bronchodilators, anti-inflammatory drugs, mucolytics and proteolytic, aerosolized antibiotics, inhaled pulmonary vasodilators, cardiovascular, antimicrobials, sedatives and hypnotics, analgesics, narcotic antagonists, benzodiazepine antagonists, neuromuscular blocking agents, diuretics, and surfactants.</u> |
| <del>12.0</del> <u>11.0</u>   | Assist the physician with special respiratory therapy procedures. -The student will have the knowledge of:                                                                                                                                                                                                                                                                    |

|                        |                                                                                                                                                              |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>12.01</del> 11.01 | Insertion and maintenance of an <del>umbilical</del> <u>indwelling</u> arterial <del>and</del> /or venous catheter.                                          |
| <del>12.02</del> 11.02 | Thoracentesis, chest tube insertion, tracheostomy, intubation, and cardioversion.                                                                            |
| <del>12.03</del> 11.03 | Cardiopulmonary stress testing.                                                                                                                              |
| <del>13.0</del> 12.0   | Initiate and conduct patient and family education. -The student will be able to:                                                                             |
| <del>13.01</del> 12.01 | Demonstrate knowledge of smoking cessation products, techniques, and programs.                                                                               |
| <del>13.02</del> 12.02 | Educate the patient and family in relevant safety and infection control procedures and techniques.                                                           |
| <del>13.03</del> 12.03 | Educate the patient and family on the importance of pulmonary rehabilitation and their role.                                                                 |
| <del>13.04</del> 12.04 | Educate the patient and family in disease management techniques for cardiopulmonary diseases.                                                                |
| 12.05                  | <u>Educate the patient, family, and other healthcare workers on the appropriate use, operation, cleaning, and maintenance of respiratory care equipment.</u> |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, [simulated learning activities](#), tools and equipment, as well as experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data [within an interprofessional learning environment](#). Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

The respiratory therapist may be required to exercise considerable independent, clinical judgment in the respiratory care of patients under the direct or indirect supervision of a physician. Further, the therapist is capable of serving as a technical resource person to the physician with regard to current practices in respiratory care, and to the hospital staff as to effective and safe methods for administering respiratory therapy.

Outcomes 01-11 are referred to as the Health Careers Core and do not have to be completed if the student has previously completed the Core in another health science program. The CORE should be taken first in the program. Following the successful completion of the core, the student is eligible to take the [National Health Care Foundation Skill Standards Assessment](#) with instructor approval and the completion of a portfolio.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

**Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

**Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as a Surgical First Assistant ~~Expanded Function (Surgical Technologists)~~.

The content includes, but is not limited to, communication and interpersonal skills, legal and ethical responsibilities, anatomy, physiology, pathophysiology, microbiology, aseptic techniques, patient care procedures, surgical procedures, patient safety, use and care of equipment and supplies, CPR, Heartsaver, employability skills, basic computer literacy and surgical first assistant skills such as preoperative duties, aid in exposure, hemostasis, closure, intraoperative technical functions, and postoperative duties under the direction and supervision of the surgeon.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of 74 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

| <b><u>12.03</u></b>          | <b><u>Develop a networking plan for a specific industry of interest.</u></b>                                                  |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the health care delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate ~~central~~ sterile processing skills.
- 13.0 Demonstrate competencies in the ~~core~~ components of the ~~surgical first assistant~~ [Surgical First Assistant](#) related to communication and interpersonal skills.
- 14.0 Demonstrate an understanding of the basic sciences related to ~~surgical first assisting~~ [Surgical First Assisting](#).
- 15.0 Describe and practice safety measures in the surgical environment.
- 16.0 Perform patient care procedures related to the surgical environment and describe methods for meeting ~~patient's~~ [patients'](#) needs.
- 17.0 Demonstrate knowledge of pharmacology and math calculation principles related to the surgical environment.
- 18.0 Demonstrate knowledge of the basic surgical skills necessary to function safely and effectively.
- 19.0 Demonstrate competencies in the ~~core~~ components of the ~~surgical first assistant~~ [Surgical First Assistant](#) related to knowledge and skills.
- 20.0 Demonstrate competencies in the ~~core~~ components of the ~~surgical first assistant~~ [Surgical First Assistant](#) related to legal and ethical responsibilities.
- 21.0 Demonstrate advanced skills competency regarding professional managerial skills.
- 22.0 Demonstrate the ability to analyze communication critically in the general education components of the program.
- 23.0 Demonstrate competency in critical reflection related to the human condition, interpretive abilities, [and](#) cultural literacy in the general education components of the program.
- 24.0 Demonstrate the ability to apply mathematical concepts and mathematical/computational models and methods in problem solving in the general education components of the program.
- 25.0 Demonstrate the ability to examine behavioral, social, and cultural issues from a variety of points of view.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Surgical First Assisting  
**CIP Number:** 1351090900  
**Program Length:** 74 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

| At the completion of this program, the student will be able to: |                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.0                                                            | Demonstrate <del>central</del> sterile processing skills. The student will be able to:                                                                                                                                                                          |
| 12.01                                                           | Apply the principles of medical/surgical asepsis, including attire, environmental control, and traffic patterns, to control and manage dirty, clean, and sterile areas of the operating room and central supply.                                                |
| 12.02                                                           | Identify relevant federal, state, and local guidelines, standards, and regulations.                                                                                                                                                                             |
| 12.03                                                           | Apply ergonomic considerations and appropriate body mechanics for lifting, turning, pulling, pushing, reaching, and other work-related activities.                                                                                                              |
| 12.04                                                           | Describe the methods of disinfection and sterilization.                                                                                                                                                                                                         |
| 12.05                                                           | Describe the importance of following the device, equipment, instrument, or supply manufacturer's instructions for decontamination, processing, operation, and troubleshooting.                                                                                  |
| 12.06                                                           | Demonstrate correctly decontamination techniques for instruments, equipment, and the environment used during surgical procedures.                                                                                                                               |
| 12.07                                                           | Demonstrate appropriate techniques for inspection, testing, and sending out for repair instruments, equipment, and supplies regarding condition, quantity, and quality.                                                                                         |
| 12.08                                                           | Describe clean and sterile transportation, restocking, and storage principles for instruments.                                                                                                                                                                  |
| 12.09                                                           | Analyze the results of sterilization process monitors used in sterilization units, <del>sterilizations</del> sterilization cycles, and <del>ensures</del> ensure documentation meets the safe parameters for each item prior to its use <del>of an item</del> . |
| 12.10                                                           | Describe the clean and sterile transportation, restocking, and storage principles for supplies in the facility (receivables, sterile, and clean, <del>or contaminated</del> ).                                                                                  |

|       |                                                                                                                                                                                                                                                                                                                                                            |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.11 | Demonstrates the ability to identify and <del>select</del> <u>communicate the</u> appropriate instruments, equipment, and supplies <u>to the surgical team</u> for any surgical procedure.                                                                                                                                                                 |
| 12.12 | Demonstrate the ability to prepare and label items for high-level disinfection and sterilization as required.                                                                                                                                                                                                                                              |
| 12.13 | Demonstrate the techniques of high-level disinfection and <del>sterilization</del> <u>the process</u> for <del>immediate use</del> <u>Immediate Use Steam Sterilization when necessary (i.e., one-of-a-kind items-)</u> .                                                                                                                                  |
| 12.14 | Describe various supply, distribution, and inventory control methods.                                                                                                                                                                                                                                                                                      |
| 12.15 | <del>-</del> Demonstrate <u>the ability to verify</u> case cart preparation and management.                                                                                                                                                                                                                                                                |
| 13.0  | Demonstrate competencies in the <del>core</del> components of the <del>surgical first assistant</del> <u>Surgical First Assistant</u> related to communication and interpersonal skills. The student will be able to:                                                                                                                                      |
| 13.01 | Demonstrate proper use of communication systems.                                                                                                                                                                                                                                                                                                           |
| 13.02 | Use various forms of communication in the role of Surgical First Assistant to communicate relevant, accurate, and complete information in a concise and clear manner.                                                                                                                                                                                      |
| 13.03 | Collaborate with the patient, surgeon, and other members of the <del>Healthcare</del> <u>healthcare</u> team to assess, plan, implement, and evaluate the patient's surgical care to promote positive outcomes, including the use of preoperative checklists <del>and</del> preoperative assessment, and <del>evaluations</del> <u>evaluation</u> methods. |
| 13.04 | Demonstrate <u>effective</u> patient <del>interviewing</del> <u>communication</u> techniques.                                                                                                                                                                                                                                                              |
| 13.05 | Demonstrate the ability to analyze and communicate specific patient care factors or needs and the surgeon's preferences to the surgical team, including suture needs, specialty supplies and instrumentation, and equipment.                                                                                                                               |
| 13.06 | Describe the concepts of conflict resolution, assertive behavior, and the principles of teamwork as a patient advocate and assistant to the surgeon.                                                                                                                                                                                                       |
| 13.07 | Demonstrate competency regarding reporting and documentation responsibilities in the clinical setting.                                                                                                                                                                                                                                                     |
| 13.08 | Employ leadership skills to accomplish <del>organizations</del> <u>the organization's</u> goals and objectives.                                                                                                                                                                                                                                            |
| 13.09 | Establish and maintain effective working relationships with others, in order to accomplish objectives and tasks.                                                                                                                                                                                                                                           |
| 13.10 | Conduct and participate in meetings to accomplish work tasks.                                                                                                                                                                                                                                                                                              |
| 13.11 | Employ mentoring skills to <del>inspire and teach others-</del> <u>support inexperienced team members.</u>                                                                                                                                                                                                                                                 |
| 14.0  | Demonstrate an understanding of the basic sciences related to <del>surgical first assisting-</del> <u>Surgical First Assisting</u> . The student will be able to:                                                                                                                                                                                          |
| 14.01 | Apply knowledge of the microbial environment to the surgical care of the patient.                                                                                                                                                                                                                                                                          |
| 14.02 | Analyze patient defense mechanisms, the chain of infection, and the infectious process as related to surgical practice and the prevention of surgical site infections.                                                                                                                                                                                     |
| 14.03 | Correlate wound classifications and wound healing principles with wound management guidelines and complications.                                                                                                                                                                                                                                           |

|                        |                                                                                                                                                                                                                                                                                                                   |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.04                  | Demonstrate infection and disease transmission control techniques following the <del>Center</del> <u>Centers</u> for Disease Control (CDC) and Occupational Safety and Health Administration (OSHA) guidelines for surgery.                                                                                       |
| 14.05                  | Describe the causes, clinical signs and symptoms, and prevention measures for surgical infections.                                                                                                                                                                                                                |
| 14.06                  | Describe the basic composition, principles, clinical signs, and symptoms regarding electrolytes and fluid balance <del>including the mechanism of hypovolemic, septic, hemorrhagic and cardiogenic shock.</del>                                                                                                   |
| 14.07                  | <u>Assess the clinical signs of hypovolemic, septic, hemorrhage, neurogenic, and cardiogenic shock.</u>                                                                                                                                                                                                           |
| <del>14.07</del> 14.08 | <del>Correlates</del> <u>Correlate</u> the principles and disorders of hematology, hemostasis, types of blood components, and coagulation with hemostasis in surgery.                                                                                                                                             |
| <del>14.08</del> 14.09 | <u>Discuss the principles of information technology, electricity, and robotics as they relate to surgery.</u>                                                                                                                                                                                                     |
| 15.0                   | Describe and practice safety measures in the surgical environment. The student will be able to:                                                                                                                                                                                                                   |
| 15.01                  | Inspect emergency equipment and supplies for condition and quantity.                                                                                                                                                                                                                                              |
| 15.02                  | Implement appropriate Joint Commission patient safety goals.                                                                                                                                                                                                                                                      |
| 15.03                  | Demonstrate appropriate safety measures to prevent operating room fires and electrical shock from equipment.                                                                                                                                                                                                      |
| 15.04                  | Apply knowledge of surgical hazards to safe patient care.                                                                                                                                                                                                                                                         |
| 15.05                  | Demonstrate the safe inspection and utilization of laser, electrical, endoscopic, and robotic equipment.                                                                                                                                                                                                          |
| 15.06                  | Describe and practice appropriate safety measures for laser, electrical, <del>endoscopy</del> <u>endoscopic</u> , and robotic surgery.                                                                                                                                                                            |
| 15.07                  | Describe the role preventive maintenance, prevention, correction, and documentation <del>plays</del> <u>play</u> in patient and personnel safety and the prevention of medical errors in the surgical setting.                                                                                                    |
| <del>15.08</del>       | <del>Explain the purpose of Florida's "Right to Know" law and its provisions.</del>                                                                                                                                                                                                                               |
| <del>15.09</del> 15.08 | <u>Describe the role of the surgical technologist and surgical first assistant in an emergency patient situation.</u>                                                                                                                                                                                             |
| <del>15.10</del> 15.09 | <u>Describe the protocol for personal injury, including the completion of incident/occupancy reports and follow-up.</u>                                                                                                                                                                                           |
| <del>15.14</del> 15.10 | <u>Describe the preparation and planning, detection and communication, incident management and support systems, safety and security, clinical/public health assessment and intervention, contingency, continuity and recovery, and the public health law and ethics of All-Hazards Preparation for disasters.</u> |
| <del>15.12</del> 15.11 | <u>Conduct technical research to gather information for decision-making.</u>                                                                                                                                                                                                                                      |
| <del>15.13</del> 15.12 | <u>List and describe quality control systems and/or practices common to the workplace.</u>                                                                                                                                                                                                                        |
| <del>15.14</del> 15.13 | <u>Employ critical thinking skills independently and in teams to solve problems, resolve conflicts, and make decisions.</u>                                                                                                                                                                                       |

|                               |                                                                                                                                                                                                                                                                                        |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.0                          | Perform patient care procedures related to the surgical environment and describe methods for meeting <del>patient's</del> <u>patients'</u> needs. -The student will be able to:                                                                                                        |
| 16.01                         | Identify the roles of the members of the surgical team during each phase of surgery.                                                                                                                                                                                                   |
| 16.02                         | Assist surgeon with the perioperative care of the surgical patient.                                                                                                                                                                                                                    |
| 16.03                         | <del>Correlate</del> <u>Participate in</u> the preoperative examination and preparation process for both surgery and anesthesia, with the identification of potential patient factors that may inhibit positive outcomes.                                                              |
| 16.04                         | Describe appropriate review and identification of patient factors regarding the chart, including preoperative identification, preoperative checklists, diagnostic tests, lab values, and surgical consent.                                                                             |
| 16.05                         | Demonstrate safe patient transfer/transportation techniques used in the perioperative setting.                                                                                                                                                                                         |
| 16.06                         | Monitor OR traffic, placement of sterile tables, and ensure steps are taken to reduce microbial fallout.                                                                                                                                                                               |
| 16.07                         | <del>Correlate</del> <u>Describe</u> anesthesia monitoring devices, patient complications <del>and</del> , interventions <del>with</del> , <u>and</u> maintaining patient homeostasis.                                                                                                 |
| 16.08                         | Demonstrate the principles of safe positioning, <u>and</u> application of safety devices, <del>and restraining</del> <u>to ensure</u> patient <del>for surgery</del> <u>correlating the prevention of potential complications with the need for patient stability</u> <u>safety</u> .  |
| 16.09                         | Demonstrate the selection of the appropriate solution and preparation of the operative site for the surgical procedure.                                                                                                                                                                |
| 16.10                         | Perform steps for Foley catheter insertion and connection to drainage.                                                                                                                                                                                                                 |
| 16.11                         | Describe the safe usage of critical instruments, equipment, and supplies utilized intraoperatively, including the electrosurgical unit, Lasers, Ultrasonic equipment, endoscopy equipment, robotics, insufflators, light sources, microscopes, power tools, suction, tourniquets, etc. |
| 16.12                         | Demonstrate correctly the connection and operation of essential instruments, equipment, and supplies for the surgical procedure.                                                                                                                                                       |
| 16.13                         | Demonstrate correct mathematical skills related to dosage available versus dosage <del>needing</del> <u>needed</u> when drawing up or administering medications.                                                                                                                       |
| <del>16.14</del>              | <del>Demonstrate correctly the techniques for injection of local anesthetics.</del>                                                                                                                                                                                                    |
| <del>16.15</del> <u>16.14</u> | <u>Demonstrate knowledge of wound management techniques, including suturing techniques in the operating room, perioperative care of special needs patients, and perioperative assessment of the skin.</u>                                                                              |
| <del>16.16</del> <u>16.15</u> | <u>Demonstrate applicable wound management principles, including the placement and security of catheters, wound drainage systems, sterile dressings, and cast applications.</u>                                                                                                        |
| <del>16.17</del> <u>16.16</u> | <u>Discuss relevant and unique factors regarding postoperative care specific to the procedure.</u>                                                                                                                                                                                     |
| 17.0                          | Demonstrate knowledge of pharmacology and math calculation principles related to the surgical environment. The student will be able to:                                                                                                                                                |
| 17.01                         | Analyze the terminology <u>and</u> the basic concepts of pharmacology and drug administration, including pharmacokinetics and pharmacodynamics.                                                                                                                                        |

|                        |                                                                                                                                                                                                                                                                                               |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 17.02                  | Describe pharmacological concepts relative to the administration of all anesthesia methods, agents, and techniques, including the role of the anesthetist, the first assistant, and the circulator during induction and extubation.                                                           |
| 17.03                  | <u>Analyze preoperative principles of patient assessment and how they relate to anesthesia.</u>                                                                                                                                                                                               |
| <del>17.03</del> 17.04 | Identify the classification, actions, effects, and precautions of common drugs used at the field, <del>and</del> within the surgical environment.                                                                                                                                             |
| <del>17.04</del> 17.05 | Apply knowledge of the pharmacologic agents used in the treatment of the surgical patient.                                                                                                                                                                                                    |
| <del>17.05</del> 17.06 | Describe potential anesthesia and operative complications and interventions for each.                                                                                                                                                                                                         |
| <del>17.06</del> 17.07 | Demonstrate the application of the <del>six rights</del> <u>Six Rights</u> of <del>medication administration</del> <u>Medication Administration</u> .                                                                                                                                         |
| <del>17.07</del> 17.08 | Identify the correct medication form and method of application.                                                                                                                                                                                                                               |
| 17.09                  | <u>Demonstrate correct techniques for injection of local anesthetics.</u>                                                                                                                                                                                                                     |
| <del>17.08</del> 17.10 | Analyze and assemble correctly all medication supplies, for each drug to be used on the sterile field.                                                                                                                                                                                        |
| <del>17.09</del> 17.11 | <del>Pour or receive, measure, prepare and manage</del> <u>Manage</u> sterile solutions accurately within the sterile field.                                                                                                                                                                  |
| <del>17.10</del> 17.12 | Demonstrate the appropriate methods of transferring and accepting medications onto the sterile field.                                                                                                                                                                                         |
| <del>17.11</del> 17.13 | Label properly all fluids and medications used within the sterile field.                                                                                                                                                                                                                      |
| <del>17.12</del> 17.14 | <del>Demonstrates</del> <u>Demonstrate the</u> ability to correctly calculate common medication conversions and dosages.                                                                                                                                                                      |
| <del>17.13</del> 17.15 | <del>Apply correct unit of measure for each medication.</del> <u>Assess the risks and adverse effects of anesthesia, conscious sedation, local anesthesia agents, and pain management in the surgical setting.</u>                                                                            |
| <del>17.14</del> 17.16 | <del>Demonstrates preparation and passing of medication mixtures using ratio and proportions correctly.</del> <u>Describe the function and its implications of anesthesia, conscious sedation, local anesthesia agents, and pain management as they relate to the preoperative patient.</u>   |
| <del>17.15</del> 17.17 | <del>Maintains an</del> <u>Maintain</u> accurate <del>account</del> <u>documentation</u> of the amount of each medication and/or solution used at the field and <del>notifies</del> <u>notify the</u> circulator as appropriate <del>to the situation to ensure accurate documentation.</del> |
| <del>17.16</del> 17.18 | <del>Describe</del> <u>Explain</u> the <del>adverse effects</del> <u>principles</u> of local <u>injection techniques</u> and topical <del>anesthetics</del> <u>anesthetic agents</u> .                                                                                                        |
| 18.0                   | Demonstrate knowledge of the basic surgical skills necessary to function safely and effectively. -The student will be able to:                                                                                                                                                                |
| 18.01                  | Demonstrate an understanding of advanced anatomy, physiology, <del>the</del> disease processes, and the relationship of the processes to the specific types of pathologies according to body systems.                                                                                         |
| 18.02                  | Correlate the preoperative diagnosis, diagnostic interventions, common complications, and operative pathophysiology relative to specific surgical procedures.                                                                                                                                 |
| 18.03                  | Correlate the preoperative diagnosis, operative anatomy, physiology and pathology, usual incision, wound closure techniques, medications utilized, common complications, and the usual sequence as related to specific surgical procedures.                                                   |

|                        |                                                                                                                                                                                                                 |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18.04                  | Select and verify required instrumentation, equipment, and supplies, including any implants needed for specific surgical procedures using core knowledge and the applicable surgeon preference/procedure cards. |
| 18.05                  | Demonstrate an understanding of diagnostic images as related to surgical anatomy.                                                                                                                               |
| 18.06                  | Demonstrate application of aseptic and sterile technique principles, including the appropriate corrective action for common breaks in sterile technique that may occur.                                         |
| 18.07                  | Demonstrate the surgical scrub and donning of a sterile gown and gloves.                                                                                                                                        |
| 18.08                  | Demonstrate the principles of sterile draping.                                                                                                                                                                  |
| <del>18.09</del>       | <del>Demonstrate the set up and management of the sterile mayo stand and/or instrument table(s).</del>                                                                                                          |
| <del>18.10</del>       | <del>Demonstrate the set up and management of the sterile mayo stand and/or instrument table(s).</del>                                                                                                          |
| <del>18.11</del>       | <del>Prepare, pass, utilize, and monitor sharps, sutures, ligatures, ties and staples correctly.</del>                                                                                                          |
| <del>18.12</del>       | <del>Prepare, pass, utilize, and monitor amount given for medications and solutions utilized on the sterile field.</del>                                                                                        |
| <del>18.13</del> 18.09 | Demonstrate assisted gowning/gloving for others.                                                                                                                                                                |
| <del>18.14</del> 18.10 | Participate in the surgical time out to prevent wrong-site surgery and delays in the surgical procedure.                                                                                                        |
| <del>18.15</del> 18.11 | Select, prepare, pass, and utilize instruments, equipment, tissue replacement materials, implants, and supplies efficiently.                                                                                    |
| <del>18.16</del> 18.12 | Monitor the surgical site regarding counted items, stage of surgery, tissue appearance, and patient's body fluids, e.g., blanching, desiccation, color of blood, blood loss, bile leaks, ascites, etc.          |
| <del>18.17</del> 18.13 | Demonstrate correctly the initiation and completion of counts regarding sponges, sharps, instruments, and miscellaneous items used within the patient's wound to prevent foreign body retention.                |
| <del>18.18</del> 18.14 | Describe the types of incisions, methods of wound closure, and mechanisms of wound management.                                                                                                                  |
| <del>18.19</del> 18.15 | Describe the usual sequence of a common surgical procedure. (i.e., incision into the anatomy, dissection of the anatomy, operative steps of the procedure, and closing of the anatomy).                         |
| <del>18.20</del> 18.16 | Selects the appropriate instrument, equipment, or supply for each step of the procedure.                                                                                                                        |
| <del>18.21</del> 18.17 | Demonstrate ability to prepare, validate, handle, and preserve specimen <del>specimens</del> accurately for laboratory analysis.                                                                                |
| <del>18.22</del> 18.18 | Demonstrates knowledge of and assists as needed with surgical procedures while functioning in the roles of scrub and assistant circulator.                                                                      |
| <del>18.23</del> 18.19 | Demonstrate effective perioperative case management, ensuring cost control and time/motion economy methods are utilized to maximize the efficiency of the OR team.                                              |
| 19.0                   | Demonstrate competencies in the <del>core</del> components of the <del>surgical first assistant</del> <u>Surgical First Assistant</u> related to knowledge and skills. The student will be able to:             |

|       |                                                                                                                                                                                                                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.01 | Prioritize care or actions to be taken in a given circumstance to expedite the operative procedure or emergency situation.                                                                                                                                                                                               |
| 19.02 | Describe preoperative diagnosis, common complications, operative pathophysiology, and postoperative care related to the specific surgical procedures performed.                                                                                                                                                          |
| 19.03 | Analyze common patient assessments, including skin and chart review, relating relevant diagnostic and monitoring results to the surgeon as applicable to the surgical specialty.                                                                                                                                         |
| 19.04 | Demonstrate preoperative preparation of the patient to facilitate proper patient care, including but not limited to positioning, application of tourniquet, surgical skin preparation, <del>catherization</del> catheterization, draping, and sterile setup preparation.                                                 |
| 19.05 | Demonstrate and describe types of incisions and insertion of trocars.                                                                                                                                                                                                                                                    |
| 19.06 | Identify types of tissue, organs, and gross anatomical structures correctly during surgical procedures.                                                                                                                                                                                                                  |
| 19.07 | Demonstrate appropriate tissue handling techniques, including the care of the surgical specimens.                                                                                                                                                                                                                        |
| 19.08 | Provide appropriate exposure and visualization of the operative field for the surgeon.                                                                                                                                                                                                                                   |
| 19.09 | Describe the appropriate sequence for common surgical procedures.                                                                                                                                                                                                                                                        |
| 19.10 | Utilize appropriate techniques to assist with hemostasis.                                                                                                                                                                                                                                                                |
| 19.11 | Demonstrate appropriate safe surgical techniques when the case involves either thermal, radiological, laparoscopic, environmental, or <del>other</del> another known surgical hazard.                                                                                                                                    |
| 19.12 | Participate in volume replacement or autotransfusion techniques and medication administration as appropriate.                                                                                                                                                                                                            |
| 19.13 | Select appropriate instruments and supplies for the type of tissue.                                                                                                                                                                                                                                                      |
| 19.14 | Demonstrate competence with technology, the use of instruments, equipment, supplies, and medications for the surgical procedure.                                                                                                                                                                                         |
| 19.15 | Use surgical instruments skillfully in ways consistent with their design and purpose.                                                                                                                                                                                                                                    |
| 19.16 | Utilize appropriate techniques to assist with the closure of body planes.                                                                                                                                                                                                                                                |
| 19.17 | Select and apply appropriate wound dressings.                                                                                                                                                                                                                                                                            |
| 19.18 | Assist <u>the</u> surgeon in securing drainage systems to tissue.                                                                                                                                                                                                                                                        |
| 19.19 | Evaluate <u>the</u> patient and report appropriately any abnormal condition found post-op related to positioning.                                                                                                                                                                                                        |
| 19.20 | Assist <u>the</u> surgeon with postoperative care of the patient to facilitate proper patient care.                                                                                                                                                                                                                      |
| 19.21 | Demonstrate appropriate response to emergency situations, including respiratory/cardiac arrest situations, sudden hypoxia, hemorrhage, shock, surgical misadventures, contamination, perforation of <del>viscous</del> viscus or cavity, critical equipment failure, and exposure, retraction, and compression injuries. |

|                        |                                                                                                                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.22                  | Facilitate the continuity of care within and across the healthcare settings to access available resources and services.                                                                                                      |
| 20.0                   | Demonstrate competencies in the <del>core</del> components of the <del>surgical first assistant</del> <a href="#">Surgical First Assistant</a> related to legal and ethical responsibilities. The student will be able to:   |
| 20.01                  | State methods, standards, and aids that assist a surgical first assistant with interpreting and following legal responsibilities.                                                                                            |
| 20.02                  | Describe the importance of maintaining credentials and following the appropriate credentialing policy in accordance with hospital policy and appropriate laws and regulations.                                               |
| 20.03                  | Explain the <del>job requirements</del> <a href="#">scope of practice for the surgical first assistant</a> .                                                                                                                 |
| 20.04                  | Describe the key elements related to the development of a surgical conscience.                                                                                                                                               |
| 20.05                  | <a href="#">Explain the purpose of Florida's "Right to Know" law and its provisions.</a>                                                                                                                                     |
| <del>20.05</del> 20.06 | Demonstrate an understanding of the legal, ethical, moral, and professional responsibilities of working as a surgical assistant, and the professional skills necessary to fulfill the role.                                  |
| <del>20.06</del> 20.07 | Provide health care within the ethical/legal framework of the job description, including role responsibilities and limitations.                                                                                              |
| <del>20.07</del> 20.08 | Describe the principles of problem solving and confidentiality in ethical decision making and risk management.                                                                                                               |
| 20.09                  | <a href="#">Define current strategies that promote patient safety and continuous improvement (i.e., Six Sigma and Lean Management).</a>                                                                                      |
| 21.0                   | Demonstrate advanced skills competency regarding professional managerial skills. The student will be able to:                                                                                                                |
| 21.01                  | Demonstrate the ability to communicate effectively during mock briefing and debriefing exercises.                                                                                                                            |
| 21.02                  | Analyze the potential risks and errors found in healthcare and methods to prevent those risks.                                                                                                                               |
| 21.03                  | Describe the mechanism of change, policy formation, and implementation.                                                                                                                                                      |
| 21.04                  | Describe the process of performance appraisal.                                                                                                                                                                               |
| 21.05                  | Describe how to promote positive patient outcomes through effective followership and leadership.                                                                                                                             |
| 22.0                   | Demonstrate the ability to analyze communication critically in the general education components of the program. The student will be able to:                                                                                 |
| 22.01                  | Demonstrate the ability to communicate effectively.                                                                                                                                                                          |
| 22.02                  | Demonstrate the ability to analyze communication critically.                                                                                                                                                                 |
| 23.0                   | Demonstrate competency in critical reflection related to the human condition, interpretive abilities, <a href="#">and</a> cultural literacy in the general education components of the program. The student will be able to: |
| 23.01                  | Confirm the ability to think critically through demonstrating interpretive ability and cultural literacy.                                                                                                                    |

|       |                                                                                                                                                                                                                                                                                    |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 23.02 | Acquire competence in reflecting critically upon the human condition.                                                                                                                                                                                                              |
| 24.0  | Demonstrate the ability to apply mathematical concepts and mathematical/computational models and methods in problem solving in the general education components of the program. The student will be able to:                                                                       |
| 24.01 | Determine appropriate mathematical and computational models and methods in problem solving.                                                                                                                                                                                        |
| 24.02 | Demonstrate an understanding of mathematical concepts.                                                                                                                                                                                                                             |
| 24.03 | Apply appropriate mathematical and computational models and methods in problem solving.                                                                                                                                                                                            |
| 25.0  | Demonstrate the ability to examine behavioral, social, and cultural issues from a variety of points of view. The student will be able to:                                                                                                                                          |
| 25.01 | <del>Demonstrate the ability to examine behavioral, social, and cultural issues from a variety of viewpoints.</del> <u>Describe cultural, religious, or ethical differences that could influence perceptions of an event or situation.</u>                                         |
| 25.02 | <del>Demonstrate an understanding of</del> <u>Describe</u> basic social and behavioral science concepts and principles used in the analysis of behavioral, social, and cultural issues, <del>past and present, local</del> <u>from historical</u> and global <u>perspectives</u> . |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

The Human Patient Simulator (HPS) or other accepted simulation scenarios may be used for a limited number of clinical hours. A low teacher-student ratio in the lab and clinical area is strongly recommended. The recommended maximum ratio is 1:8.

### Special Notes

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry: planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

The Surgical First Assistant Core Curriculum should be taught by qualified staff as outlined in the most recent approved Commission on Accreditation on Allied Health Education programs (CAAHEP) accreditation standards and guidelines.

Entering students who have successfully completed the program 0351090905 or 0351090904, Surgical Technology, or are currently Nationally Certified as a CST (Certified Surgical Technologist) or SA-C (Surgical Assistant-Certified) should be given appropriate advanced standing.

After successful completion of a Commission on Accreditation on Allied Health Education ~~programs~~ Programs (CAAHEP) accredited surgical first assistant program, students are eligible to take the National Board of Surgical Technology and Surgical Assisting First Assistant exam as approved.

The standard length for the AS degree program is 74 college credits.

The CORE should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

## **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded). The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

## **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

## **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS degree program includes the following College Credit Certificates:

Surgical First Assistant (0351090908) – 59 Credits

Standards for the above certificate programs are contained in separate curriculum frameworks.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Surgical Services  
**Career Cluster:** Health Science

**AS** Associate in Science

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program focuses on a core program of broad transferable skills and stresses understanding and demonstration of the following elements for employment in a specialized health science career field. The program specialization component focuses on advanced technical skills in a chosen ~~health care~~ [healthcare](#)-targeted occupation, including the applicable healthcare technology and healthcare applications.

The content includes but is not limited to communication skills, leadership skills, human relations, interpersonal skills, legal and ethical responsibilities, employability skills, anatomy, medical terminology, microbiology and infection control, the health care organization, health, safety and quality, use and care of standard equipment and supplies, CPR/Heart saver, and basic computer literacy.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## **Program Structure**

This program is a planned sequence of instruction consisting of 64 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the ~~health-care~~healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate language arts knowledge and skills.
- 13.0 Solve problems using critical thinking skills, creativity, and innovation.
- 14.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment.
- 15.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.

In addition, students will complete the objectives in one of the following specialization tracks:

**Standards 16-2625 must be completed by students specializing in the Central-Sterile Processing ~~Technologist~~Technician Track.**

~~16.0~~—Describe supply distribution systems and the principles of inventory control.

~~17.0~~16.0 Demonstrate the ability to recall ~~and~~ dispose of or reprocess sterile supplies/instruments.

~~18.0~~17.0 Identify fundamentals of the supply chain.

~~19.0~~18.0 \_\_\_\_\_ Demonstrate the roles and responsibilities of the  
~~central supply worker~~sterile processing technician.

~~20.0~~19.0 \_\_\_\_\_ Recognize basic principles of microbiology.

~~21.0~~20.0 \_\_\_\_\_ Interpret and apply medical terminology and  
anatomical terms as they relate to equipment and supplies issued by ~~central service personnel~~the sterile processing department.

~~22.0~~21.0 \_\_\_\_\_ Describe how ~~central service~~sterile processing is  
involved in controlling infections in ~~hospitals~~healthcare facilities.

~~23.0~~22.0 \_\_\_\_\_ Explain the purpose of ~~occupational safety~~the  
Occupational Safety and ~~health~~Health Act. (OSHA).

~~24.0~~23.0 \_\_\_\_\_ Receive, decontaminate, clean, prepare, disinfect,  
and sterilize reusable items.

~~25.0~~24.0 \_\_\_\_\_ Demonstrate the use of sterilization process  
monitors, including ~~temperature and frequency~~proper utilization of appropriate chemical indicators and bacterial spore tests for all sterilizers.

~~26.0~~25.0 Demonstrate the ability to identify and select appropriate instrumentation or equipment that meets the needs of the surgical specialty.

**Standards ~~27–34~~26- 33 must be completed by students specializing in the Endoscopic Technician Track.**

~~27.0~~26.0 Demonstrate ~~central supply~~endoscopic technician skills.

~~28.0~~27.0 Demonstrate competencies in the ~~core~~components of the ~~endoscopy~~endoscopic technician related to communication and interpersonal ~~Skills~~skills.

~~29.0~~28.0 Demonstrate an understanding of the basic sciences related to endoscopy.

~~30.0~~29.0 Describe and practice safety measures in the ~~endoscopy~~endoscopic environment.

~~31.0~~30.0 Perform patient care ~~endoscopy~~endoscopic procedures related to the ~~endoscopy~~endoscopic environment and describe methods for meeting ~~patient's~~patients' needs.

~~32.0~~31.0 Demonstrate knowledge of the basic endoscopy skills necessary to function safely and effectively.

~~33.0~~32.0 Demonstrate competencies in the ~~core~~components of the ~~endoscopy~~endoscopic technician related to knowledge and skills.

~~34.0~~33.0 Demonstrate competencies in the ~~core~~components of the ~~endoscopy~~endoscopic technician related to legal and ethical responsibilities.

**Standards ~~35–43~~34- 42 must be completed by students specializing in the Surgical ~~Technologist~~Technician Track.**

~~35.0~~34.0 Demonstrate ~~central supply~~sterile processing skills.

~~36.0~~35.0 Use communication and interpersonal skills ~~as~~ related to surgical technology.

~~37.0~~36.0 Demonstrate an understanding of the basic sciences related to surgical technology.

~~38.0~~37.0 Demonstrate knowledge of anesthesia, pharmacology, and math calculation principles related to the surgical environment.

~~39.0~~38.0 Describe and ~~practice~~demonstrate safety measures in the surgical environment.

~~40.0~~39.0 Assist the Registered Nurse (RN-circulator) with patient care procedures related to the surgical environment and describe methods for meeting ~~patient's~~patients' needs.

~~41.0~~40.0 Demonstrate knowledge of the skills necessary ~~to function safely and effectively~~for perioperative case management.

~~42.0~~41.0 Demonstrate knowledge of and assist with surgical procedures.

~~43.0~~42.0 Demonstrate an understanding of legal and ethical responsibilities specific to surgical technology.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Surgical Services  
**CIP Number:** 1351090901  
**Program Length:** 64 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

| <del>18.01</del> 17.01 | Describe the process of supply chain management.                                                                                                                                                                                               |
| <del>18.02</del> 17.02 | Communicate with other hospitals, facilities, or company representatives for <u>the</u> procurement of supplies and equipment.                                                                                                                 |
| <del>18.03</del> 17.03 | Describe several different methods of procurement of supplies.                                                                                                                                                                                 |
| <del>18.04</del> 17.04 | Describe <u>the</u> basics of receiving items, <del>including documentation of receiving</del> and <del>release</del> <u>distributing items</u> to other facilities, <u>which must include documentation</u> .                                 |
| <del>19.0</del> 18.0   | Demonstrate the roles and responsibilities of the <del>central supply worker</del> , <u>sterile processing technician</u> . The student will be able to:                                                                                       |
| <del>19.01</del> 18.01 | <del>Describes</del> <u>Describe</u> professional standards related to personal hygiene and dress codes for the <del>central supply</del> <u>sterile processing</u> worker to include appropriate <u>personal protective equipment (PPE)</u> . |
| <del>19.02</del> 18.02 | <del>Identifies</del> <u>Identify</u> relevant federal, state, and local guidelines, standards, and regulations.                                                                                                                               |
| <del>19.03</del> 18.03 | <del>Describes</del> <u>Describe</u> the <u>organization</u> , function, and workflow of the sterile processing department.                                                                                                                    |
| <del>19.04</del> 18.04 | Apply ergonomic considerations and appropriate body mechanics for lifting, turning, pulling, pushing, and reaching.                                                                                                                            |
| <del>19.05</del> 18.05 | Apply policies and procedures related to sterile processing functions (safety, infection control, disaster control, <del>disaster</del> , <u>material safety data sheets (MSDS)</u> , incident reports, etc.).                                 |
| 18.06                  | <u>Apply infection control techniques following the Centers for Disease Control (CDC) guidelines.</u>                                                                                                                                          |
| <del>19.06</del> 18.07 | <del>Describes</del> <u>Describe the</u> importance of following <u>the</u> device, equipment, instrument, or supply manufacturer's instructions for processing, operation, and troubleshooting.                                               |

|                                        |                                                                                                                                                                                                                                       |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">18.08</a>                  | Demonstrate the process of stock rotation.                                                                                                                                                                                            |
| <a href="#">18.09</a>                  | Describe the processes for loaner instrumentation and equipment.                                                                                                                                                                      |
| <a href="#">18.10</a>                  | Demonstrate the methods of case cart preparation and the utilization of preference cards.                                                                                                                                             |
| <del>20.0</del> <a href="#">19.0</a>   | Recognize basic principles of microbiology. -The student will be able to:                                                                                                                                                             |
| <del>20.04</del> <a href="#">19.01</a> | Describe terms related to microbiology and the control of microorganisms in <del>central</del> -sterile processing departments.                                                                                                       |
| <del>20.02</del> <a href="#">19.02</a> | Identify the main categories <a href="#">and life functions</a> of microorganisms.                                                                                                                                                    |
| <del>20.03</del>                       | <del>Describe the life functions of microorganisms.</del>                                                                                                                                                                             |
| <del>20.04</del> <a href="#">19.03</a> | Describe conditions affecting the growth of bacteria.                                                                                                                                                                                 |
| <del>20.05</del> <a href="#">19.04</a> | Describe special methods used to destroy harmful microorganisms on fomites in the environment.                                                                                                                                        |
| <del>20.06</del> <a href="#">19.05</a> | List the <del>helpful</del> <a href="#">conditions where</a> microorganisms <a href="#">may be helpful</a> .                                                                                                                          |
| <del>20.07</del> <a href="#">19.06</a> | Describe how the body controls the growth of pathogenic microorganisms.                                                                                                                                                               |
| <del>20.08</del> <a href="#">19.07</a> | Identify pathogenic microorganisms commonly found in <del>central-service</del> <a href="#">sterile processing</a> departments.                                                                                                       |
| <del>21.0</del> <a href="#">20.0</a>   | Interpret and apply medical terminology and anatomical terms as they relate to equipment and supplies issued by <del>central-service personnel</del> <a href="#">the sterile processing department</a> . The student will be able to: |
| <del>21.04</del> <a href="#">20.01</a> | Identify <del>word elements</del> <a href="#">prefixes, roots, and suffixes</a> for medical terms <a href="#">used by the sterile processing department</a> .                                                                         |
| <del>21.02</del> <a href="#">20.02</a> | Relate anatomical concepts to <del>orthopedic</del> <a href="#">surgical</a> devices <del>and</del> <a href="#">, other supplies, and equipment issued by the CS Department</a> <a href="#">sterile processing</a> .                  |
| <del>22.0</del> <a href="#">21.0</a>   | Describe how <del>central-service</del> <a href="#">sterile processing</a> is involved in controlling infections in <del>hospitals</del> <a href="#">healthcare facilities</a> . The student will be able to:                         |
| <del>22.04</del> <a href="#">21.01</a> | Describe <del>hospital-acquired</del> <a href="#">nosocomial</a> infections.                                                                                                                                                          |
| <del>22.02</del> <a href="#">21.02</a> | Describe <del>the types of</del> <a href="#">droplet, airborne, bloodborne, and contact</a> isolation <a href="#">protocols</a> .                                                                                                     |
| <del>22.03</del>                       | <del>Describe the organization and functions of CS.</del>                                                                                                                                                                             |
| <del>22.04</del> <a href="#">21.03</a> | Describe the <del>CS</del> <a href="#">sterile processing</a> responsibilities for infection control and traffic patterns when in the operating room and other departments.                                                           |
| <del>22.05</del> <a href="#">21.04</a> | Identify proper storage and transportation standards for supplies in the facility (receivables, sterile, clean, or contaminated).                                                                                                     |
| <del>22.06</del>                       | <del>Describe the organizational patterns of health care facilities.</del>                                                                                                                                                            |

|                        |                                                                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>23.0</del> 22.0   | Explain the purpose of <del>occupational safety</del> the Occupational Safety and <del>health act</del> Health Act (OSHA). The student will be able to:                                                       |
| <del>23.01</del> 22.01 | Describe how employees are protected under OSHA.                                                                                                                                                              |
| <del>23.02</del> 22.02 | Describe potential workplace hazards in <del>CS-</del> (sterile processing, such as wet floors, chemicals, fumes, gases, steam, electrical outlets, body fluids, microorganisms, sharps, and medical wastes). |
| <del>23.03</del> 22.03 | Describe the role preventive maintenance plays in patient and personnel safety in the <del>hospital</del> healthcare facility.                                                                                |
| <del>23.04</del> 22.04 | Explain the purpose of Florida's "Right to Know" law and its provisions.                                                                                                                                      |
| <del>23.05</del> 22.05 | -Describe the protocol for personal injury, including the completion of incident/occupancy reports and follow-up.                                                                                             |
| <del>23.06</del> 22.06 | Implement appropriate regulatory and accreditation agency patient safety guidelines.                                                                                                                          |
| <del>24.0</del> 23.0   | Receive, decontaminate, clean, prepare, disinfect, and sterilize reusable items. -The student will be able to:                                                                                                |
| <del>24.01</del> 23.01 | Describe the importance of thorough cleaning to the overall objectives of making items safe for patient use.                                                                                                  |
| <del>24.02</del> 23.02 | Explain the importance of following manufacturers' instructions in cleaning each item for reprocessing.                                                                                                       |
| <del>23.03</del>       | Describe the levels of disinfection.                                                                                                                                                                          |
| <del>24.03</del> 23.04 | Describe the <del>levels of disinfection, the</del> cleaning <del>process</del> processes and methods of disinfection for the environment, instruments, syringes, needles, rubber goods, and equipment.       |
| <del>24.04</del> 23.05 | Describe the mechanisms of action for each disinfection method, including ultrasonic machines and washer/sterilizers.                                                                                         |
| <del>24.05</del> 23.06 | Describe the strategies for managing difficult-to-control microorganisms that require isolation techniques and specialized decontamination methods, including Creutzfeldt-Jakob disease (CJD).                |
| <del>24.06</del> 23.07 | Describe the factors affecting decontamination-(, such as water temperature, loading procedures, water impurities, and opening and disassembling).                                                            |
| <del>24.07</del> 23.08 | Distinguish correct reprocessing policies related to single-use, limited-use, and reusable items.                                                                                                             |
| <del>24.08</del> 23.09 | Describe decontamination methods for drill systems and batteries.                                                                                                                                             |
| <del>24.09</del> 23.10 | Describe the function of case cart washers, and alternative methods of cleaning.                                                                                                                              |
| <del>24.10</del> 23.11 | Describe the need for testing and monitoring all decontamination machines for proper function and cleaning agents.                                                                                            |
| <del>24.14</del> 23.12 | Explain the importance of using correct chemicals for cleaning in-regardsas it pertains to water quality, PH, filters, softeners, enzymes, and lubricants.                                                    |
| <del>24.12</del> 23.13 | Describe the types, characteristics, and uses of chemicals, solutions, and gases utilized for decontamination-(Detergents, such as detergents, disinfectants, enzymatics,enzymatic, and germicides).          |
| <del>24.13</del> 23.14 | Demonstrate the decontamination process for <del>canulated</del> instruments, <del>instruments with lumens</del> , syringes, needles, rubber goods, and equipment.                                            |

|                               |                                                                                                                                                                                                                                                                                                 |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>24.14</del> <u>23.15</u> | Demonstrate flexible endoscopic leak testing, decontamination, and reprocessing.                                                                                                                                                                                                                |
| <del>24.15</del> <u>23.16</u> | <del>Demonstrates</del> <u>Demonstrate</u> decontamination and proper handling of rigid scopes.                                                                                                                                                                                                 |
| <del>24.16</del> <u>23.17</u> | <del>Describes</del> <u>Describe</u> the methods of high-level disinfection, including manual <u>processing, STERRAD processing, Medavador,</u> and <del>automated endoscopic reprocessor</del> <u>Automated Endoscopic Reprocessor (AER)-), that may be found in the endoscopy department.</u> |
| <del>24.17</del> <u>23.18</u> | Describe the types of sterilizers and methods of sterilization.                                                                                                                                                                                                                                 |
| <del>24.18</del> <u>23.19</u> | Describe the primary objectives in selecting the correct packaging materials for both the individual item and the sterilization method to be used.                                                                                                                                              |
| <del>24.19</del> <u>23.20</u> | Describe the principles of packaging.                                                                                                                                                                                                                                                           |
| <del>24.20</del> <u>23.21</u> | Describe the characteristics of packaging materials in <del>relationship</del> <u>relation</u> to sterilization methods.                                                                                                                                                                        |
| <del>24.24</del> <u>23.22</u> | Describe the principles of linen pack and tray construction/assembly.                                                                                                                                                                                                                           |
| <del>24.22</del> <u>23.23</u> | Describe the recommended labeling methodologies.                                                                                                                                                                                                                                                |
| <del>24.23</del> <u>23.24</u> | Identify <del>basic</del> -surgical procedure trays, instruments, supplies, and accessories.                                                                                                                                                                                                    |
| <del>24.24</del> <u>23.25</u> | Explain the principles utilized when loading different kinds of wrapped packs or packages into a sterilizer to <del>be assured of</del> <u>sterilant penetration. ensure sterilization.</u>                                                                                                     |
| <del>24.25</del> <u>23.26</u> | Recognize equipment malfunction and list corrective actions.                                                                                                                                                                                                                                    |
| <del>24.26</del> <u>23.27</u> | Demonstrate the wrapping of procedures trays, instruments, and other supplies.                                                                                                                                                                                                                  |
| <del>24.27</del> <u>23.28</u> | Demonstrate loading of different kinds of wrapped packs or packages into a sterilizer to be assured of sterilant penetration.                                                                                                                                                                   |
| <del>24.28</del> <u>23.29</u> | Describe how sterile supplies should be handled.                                                                                                                                                                                                                                                |
| <del>24.29</del> <u>23.30</u> | Demonstrate handling, transportation, and storage of clean, sterile, and nonsterile supplies <del>and,</del> <u>including</u> equipment.                                                                                                                                                        |
| <del>25.0</del> <u>24.0</u>   | Demonstrate the use of sterilization process monitors, including <del>temperature and frequency</del> <u>proper utilization</u> of appropriate chemical indicators and bacterial spore tests for all sterilizers. -The student will be able to:                                                 |
| <del>25.04</del> <u>24.01</u> | Describe the types of sterilization, sterilization cycles, and parameters for each.                                                                                                                                                                                                             |
| <del>25.02</del> <u>24.02</u> | Describe the importance of the manufacturer's recommendations for the safe operation of each type of sterilizer.                                                                                                                                                                                |
| <del>25.03</del> <u>24.03</u> | Describe the methods of sterilization monitoring.                                                                                                                                                                                                                                               |
| <del>25.04</del> <u>24.04</u> | Demonstrate the process of preparing and documenting the sterilizer load contents for each sterilizer correctly according to the manufacturer's recommendations.                                                                                                                                |

|                                                                                                                                           |                                                                                                                                                                                         |
|-------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>25.05</del> 24.05                                                                                                                    | Demonstrate the operation, testing, and monitoring of sterilizers <u>according to the manufacturer's instructions for use</u> .                                                         |
| <del>25.06</del> 24.06                                                                                                                    | Demonstrate the ability to interpret and document monitoring devices, printouts, and charts accurately for each sterilization system utilized.                                          |
| <del>25.07</del> 24.07                                                                                                                    | Identify the standards for <del>and facility policy regarding frequency of</del> <u>the</u> monitoring <del>for</del> <u>of</u> all sterilizers <u>according to facility policies</u> . |
| <del>26.0</del> 25.0                                                                                                                      | Demonstrate the ability to identify and select appropriate instrumentation or equipment that meets the needs of the surgical specialty. -The student will be able to:                   |
| <del>26.01</del> 25.01                                                                                                                    | Describe instrument terminology and identify the anatomy of surgical instruments (jaws, shanks, box locks, rings, etc.).                                                                |
| <del>26.02</del> 25.02                                                                                                                    | Describe the types and functions of instruments.                                                                                                                                        |
| <del>26.03</del> 25.03                                                                                                                    | Describe the types of instrument construction <u>and composition</u> .                                                                                                                  |

| <b>Standards 35-43 are necessary for those completing the Surgical <del>Technologist</del>Technician Specialization Track.</b> |                                                                                                                                                                                                                                                                                   |
| 35.0                                                                                                                           | Demonstrate <del>central supply</del> sterile processing skills. -The student will be able to:                                                                                                                                                                                    |
| 35.01                                                                                                                          | Apply the principles of medical/surgical asepsis, including attire, environmental control, and traffic patterns, to control and manage dirty, clean, and sterile areas of the operating room and <del>central supply</del> sterile processing.                                    |
| 35.02                                                                                                                          | Apply infection control techniques following <del>Center</del> the Centers for Disease Control (CDC) guidelines.                                                                                                                                                                  |
| 35.03                                                                                                                          | Inspect and send out for repair instruments, equipment, and supplies regarding condition and <del>quantity</del> quality.                                                                                                                                                         |
| 35.04                                                                                                                          | Describe the methods of disinfection and sterilization.                                                                                                                                                                                                                           |

|                        |                                                                                                                                                          |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 35.05                  | Demonstrate the handling, inspection, and notification process regarding package integrity.                                                              |
| 35.06                  | Demonstrate correctly decontamination techniques for instruments, equipment, and the environment used for surgical procedures.                           |
| 35.07                  | Describe clean and sterile transportation, restocking, and storage principles for instruments, supplies, and equipment.                                  |
| 35.08                  | Identify instruments, supplies, and equipment <u>used</u> for <del>any</del> surgical <del>procedure</del> <u>procedures</u> .                           |
| <del>35.09</del>       | <del>Describe various supply distribution and inventory control methods.</del>                                                                           |
| <del>35.10</del> 35.09 | Demonstrate <u>the</u> ability to prepare and label items for high-level disinfection and sterilization correctly.                                       |
| <del>35.11</del> 35.10 | Demonstrate the techniques of high-level disinfection and sterilization for <del>immediate-use items</del> <u>surgical instruments</u> .                 |
| <del>35.12</del> 35.11 | Demonstrate case cart preparation and management.                                                                                                        |
| 36.0                   | Use communication and interpersonal skills <del>as</del> related to surgical technology. -The student will be able to:                                   |
| 36.01                  | Describe various forms of communication <del>in</del> <u>within</u> the role of <u>a</u> surgical technologist.                                          |
| 36.02                  | <u>Discuss the goals of effective communication.</u>                                                                                                     |
| 36.03                  | <u>Demonstrate appropriate body language and non-verbal communication in the surgical environment.</u>                                                   |
| <del>36.02</del> 36.04 | Analyze and select the appropriate behavioral response <del>unique</del> to <u>meet</u> the patient's <u>individual</u> needs.                           |
| <del>36.03</del> 36.05 | <del>Describe</del> <u>Identify</u> the concepts of conflict resolution, assertive behavior, and the principles of teamwork in the surgical environment. |
| 36.06                  | <u>Advocate for patients to ensure that they are included in the healthcare decision-making processes.</u>                                               |
| 37.0                   | Demonstrate an understanding of the basic sciences related to surgical technology. -The student will be able to:                                         |
| 37.01                  | <u>Identify prefixes, roots, and suffixes for medical terms used by surgical technologists.</u>                                                          |
| 37.02                  | <u>Pronounce and write medical terms correctly, along with identifying abbreviations.</u>                                                                |
| 37.03                  | <u>Identify the basic organizational structures of the human body, including body planes, regions, quadrants, and terms of reference.</u>                |
| 37.04                  | <u>Analyze the basic structure of cells and relate cellular components to integrated cell function.</u>                                                  |
| 37.05                  | <u>Analyze the types of tissue that make up organs and the characteristics of each.</u>                                                                  |
| 37.06                  | <u>Describe the relationship between organs and systems in the body.</u>                                                                                 |
| 37.07                  | <u>Analyze the different body systems for composition and function.</u>                                                                                  |

|                        |                                                                                                                                                                                                                                                                       |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>37.04</del> 37.08 | <del>Describe</del> <u>Correlate</u> the <del>concepts</del> <u>impact</u> of microbiology <del>and relate key principles to</del> <u>on</u> the <del>surgical environment</del> <u>practice of sterile technique and infection control in the operative setting.</u> |
| <del>37.02</del> 37.09 | <u>Compare and contrast the structure and characteristics of microorganisms found in the surgical environment.</u>                                                                                                                                                    |
| <del>37.03</del> 37.10 | <u>Relate medical terminology, medical abbreviations, and anatomy and physiology to surgical specialties and specific procedures.</u>                                                                                                                                 |
| 37.11                  | <u>Analyze the various immune responses that occur in the body as defenses against invasion by pathogens.</u>                                                                                                                                                         |
| <del>37.04</del> 37.12 | <del>Analyze patient defense mechanisms, the chain of infection and</del> <u>Identify</u> the infectious process <del>as related to</del> <u>in</u> surgical practice.                                                                                                |
| <del>37.05</del> 37.13 | <u>Demonstrate infection and disease transmission control techniques following the <del>Center</del><u>Centers</u> for Disease Control (CDC) and Occupational Safety and Health Administration (OSHA) guidelines for surgery.</u>                                     |
| <del>37.06</del> 37.14 | <del>Correlate</del> <u>Identify</u> wound classifications and wound healing principles <del>with</del> <u>within</u> wound management guidelines.                                                                                                                    |
| <del>37.07</del> 37.15 | <u>Discuss the principles of information technology, electricity, and robotics as they relate to surgery.</u>                                                                                                                                                         |
| 37.16                  | <u>Relate pathophysiology to surgical interventions.</u>                                                                                                                                                                                                              |
| 37.17                  | <u>Examine hemodynamic disorders, inflammation, and infection.</u>                                                                                                                                                                                                    |
| 38.0                   | Demonstrate knowledge of <u>anesthesia</u> , pharmacology, and math calculation principles related to the surgical environment. -The student will be able to:                                                                                                         |
| 38.01                  | Describe the roles of the anesthesia provider and circulating nurse.                                                                                                                                                                                                  |
| 38.02                  | Analyze the <u>principles of anesthesia</u> administration <del>of anesthesia including</del> <u>and explain</u> the <del>methods, agents, and techniques</del> <u>necessity of each component of anesthesia preparation for the surgical patient.</u>                |
| 38.03                  | <del>Describe the preoperative examination</del> <u>Compare and contrast methods, agents, and techniques of anesthesia administration</u> and preparation <del>process for both surgery and anesthesia.</del>                                                         |
| 38.04                  | <u>Examine anesthesia monitoring devices with patient homeostasis.</u>                                                                                                                                                                                                |
| <del>38.04</del> 38.05 | <u>Describe potential anesthesia and operative complications and interventions for each.</u>                                                                                                                                                                          |
| <del>38.05</del> 38.06 | <u>Define the terminology and describe the basic concepts of pharmacology, including pharmacokinetics and pharmacodynamics.</u>                                                                                                                                       |
| <del>38.06</del> 38.07 | <u>Identify the classifications, actions, effects, and precautions for common drugs used at the sterile field and within the surgical environment.</u>                                                                                                                |
| <del>38.07</del> 38.08 | <u>Demonstrate the application of the six rights of medication administration (right patient, right medication, right dosage, right route, right time/frequency, and right documentation).</u>                                                                        |
| <del>38.08</del> 38.09 | <u>Analyze and assemble correctly all medication supplies, <del>for each drug</del> to be used <u>with drugs</u> on the sterile field.</u>                                                                                                                            |
| <del>38.09</del> 38.10 | <u>Demonstrate the appropriate methods of transferring and accepting medications onto the sterile field.</u>                                                                                                                                                          |

|                        |                                                                                                                                                                                                                                                                      |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>38.10</del> 38.11 | Prepare, manage, and label sterile solutions and medications accurately within the sterile field.                                                                                                                                                                    |
| <del>38.11</del> 38.12 | -Correctly calculate common medication conversions and dosages.                                                                                                                                                                                                      |
| <del>38.12</del> 38.13 | Demonstrate preparation and passing of medication mixtures using <del>ratio</del> ratios and proportions correctly.                                                                                                                                                  |
| <del>38.13</del> 38.14 | <del>Maintains</del> Maintain an accurate account of the amount of each medication and/or solution used <del>at</del> and notify the <del>field and</del> notifies circulator as appropriate to the situationRegistered Nurse (RN) to ensure accurate documentation. |
| 39.0                   | Describe and <del>practice</del> demonstrate safety measures in the surgical environment. -The student will be able to:                                                                                                                                              |
| 39.01                  | Describe the role, job duties, and responsibilities of the surgical technologist in the <del>healthcare</del> surgical setting.                                                                                                                                      |
| 39.02                  | Inspect equipment and supplies for condition and <del>quantity</del> quality.                                                                                                                                                                                        |
| 39.03                  | Demonstrate appropriate safety measures to prevent operating room fires and electrical shock from equipment.                                                                                                                                                         |
| 39.04                  | Describe appropriate safety measures for laser and electrosurgical unit usage in surgery.                                                                                                                                                                            |
| 39.05                  | <del>Implement</del> Describe appropriate regulatory and accreditation agency patient safety guidelines.                                                                                                                                                             |
| 39.06                  | Describe the role of the surgical technologist in a disaster situation.                                                                                                                                                                                              |
| 39.07                  | Describe the role of the surgical technologist in an emergency patient situation.                                                                                                                                                                                    |
| 39.08                  | <del>Prepare</del> Assist with the preparation of the operative site.                                                                                                                                                                                                |
| 40.0                   | Assist the <del>Registered Nurse (RN-circulator)</del> with patient care procedures related to the surgical environment and describe methods for meeting <del>patient's</del> patients' needs. -The student will be able to:                                         |
| 40.01                  | Demonstrate patient transfer/transportation techniques used in the operating room (OR).                                                                                                                                                                              |
| <del>40.02</del>       | <del>Describe appropriate review of the chart including preoperative identification, preoperative checklists, diagnostic tests, lab values and surgical consent.</del>                                                                                               |
| <del>40.03</del> 40.02 | <del>Monitor</del> Demonstrate the ability to monitor OR traffic, <del>placement of sterile tables</del> and ensure <del>steps are taken to reduce microbial fallout.</del> that the sterility of the room is kept secure.                                           |
| <del>40.04</del> 40.03 | Assist with positioning and apply safety devices correctly to the patient for surgery.                                                                                                                                                                               |
| <del>40.05</del> 40.04 | Describe the function, assembly, application, and care of critical specialty equipment utilized.                                                                                                                                                                     |
| <del>40.06</del> 40.05 | <del>Correlate</del> Identify anesthesia monitoring devices, patient complications, and interventions <del>with</del> for maintaining patient homeostasis.                                                                                                           |
| <del>40.07</del> 40.06 | Demonstrate correctly the connection and operation of essential equipment for the surgical procedure.                                                                                                                                                                |
| <del>40.08</del> 40.07 | Perform steps for Foley catheter insertion and connecting to drainage correctly.                                                                                                                                                                                     |

|                        |                                                                                                                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>40.09</del> 40.08 | Demonstrate applicable wound management principles, including the placement and security of catheters, wound drainage systems, sterile dressings, and splint applications.                                                  |
| <del>40.10</del> 40.09 | Discuss relevant and unique factors regarding postoperative care specific to the procedure.                                                                                                                                 |
| 41.0                   | Demonstrate knowledge of the skills necessary <del>to function safely and effectively for perioperative case management.</del> The student will be able to:                                                                 |
| 41.01                  | <del>Demonstrate</del> Identify the <del>use of various forms of communication in the role</del> types of surgical <del>technologist</del> attire, accessory attire, and the roles of each.                                 |
| 41.02                  | <del>Maintain current documentation in</del> Demonstrate the <del>clinical setting relative to the</del> principles associated with donning or doffing surgical <del>technologist role attire.</del>                        |
| 41.03                  | <del>Demonstrate proper use of the communication systems.</del> Describe the principles associated with establishing the sterile field.                                                                                     |
| 41.04                  | Select and verify required instrumentation, equipment, and supplies, including any implants needed for specific surgical procedures, using <del>core</del> knowledge and the applicable surgeon preference/procedure cards. |
| 41.05                  | Demonstrate and explain the sequence of opening sterile supplies.                                                                                                                                                           |
| 41.06                  | Explain the steps for organizing a back table.                                                                                                                                                                              |
| 41.07                  | Explain the steps for organizing a mayo stand.                                                                                                                                                                              |
| 41.08                  | Describe the final steps required to finish establishing the sterile field.                                                                                                                                                 |
| 41.09                  | Analyze special circumstances that require adjusting the normal routine for establishing the sterile field.                                                                                                                 |
| <del>41.05</del> 41.10 | Demonstrate the surgical scrub and donning of a sterile gown and gloves.                                                                                                                                                    |
| <del>41.06</del> 41.11 | <del>Demonstrate</del> Recognize the application of sterile technique principles, including the appropriate corrective action for common breaks in sterile technique.                                                       |
| <del>41.07</del> 41.12 | Demonstrate proper draping of tables, solution stands, mayo stand, patient, and equipment.                                                                                                                                  |
| <del>41.08</del> 41.13 | Demonstrate the <del>set up</del> setup and management of the sterile mayo stand and/or instrument table(s).                                                                                                                |
| <del>41.09</del> 41.14 | Select suture and needle appropriately for each scenario given based on function and type.                                                                                                                                  |
| <del>41.10</del> 41.15 | Prepare, pass, and monitor sharps, sutures, ligatures, ties, and staples.                                                                                                                                                   |
| <del>41.11</del> 41.16 | Demonstrate assisting gowning/ and gloving of other sterile team members.                                                                                                                                                   |
| <del>41.12</del> 41.17 | Participate in the surgical time out to prevent wrong-site surgery and delays in the surgical procedure.                                                                                                                    |
| <del>41.13</del> 41.18 | Prepare and pass instruments, equipment, tissue replacement materials, implants, and supplies <del>efficiently</del> appropriately.                                                                                         |
| <del>41.14</del> 41.19 | <del>Monitor</del> Observe the surgical site regarding counted items, stage of surgery, tissue appearance, and patient's body fluids.                                                                                       |

|       |       |                                                                                                                                                                                                                       |
|-------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 41.15 | 41.20 | Demonstrate correctly the initiation and completion of counts regarding sponges, sharps, instruments, and miscellaneous countable items <del>used within the patient's wound to prevent foreign body retention.</del> |
| 41.16 | 41.21 | Demonstrate ability to maintain retraction, cut suture, <del>provide retraction</del> and hold instruments in the second assistant <del>scrub</del> role as directed by the surgeon.                                  |
| 41.17 | 41.22 | Demonstrate ability to prepare, validate, handle, and preserve <del>specimen</del> <u>specimens</u> on and off the sterile field accurately for laboratory analysis.                                                  |
| 42.0  |       | Demonstrate knowledge of and assist with surgical procedures. -The student will be able to:                                                                                                                           |
| 42.01 |       | <del>Correlate</del> <u>Identify</u> the preoperative diagnosis, diagnostic interventions, <del>common</del> complications, and operative pathophysiology relative to <del>specific</del> surgical procedures.        |
| 42.02 |       | Describe the types of incisions, methods of wound closure, and mechanisms of wound management <u>care</u> .                                                                                                           |
| 42.03 |       | Describe the usual sequence of <del>a common surgical procedure (i.e., incision into the anatomy, dissection of the anatomy, operative steps of the procedure, and closing of the anatomy).</del> <u>procedures.</u>  |
| 42.04 |       | Select the appropriate instrument, equipment, or supply for each step of the procedure.                                                                                                                               |
| 42.05 |       | Demonstrate effective perioperative case management, ensuring cost control and time/motion <del>economy</del> <u>economic</u> methods are utilized to maximize the efficiency of the OR team.                         |
| 43.0  |       | Demonstrate an understanding of legal and ethical responsibilities specific to surgical technology. -The student will be able to:                                                                                     |
| 43.01 |       | State methods, standards, and aids that assist a surgical technologist with interpreting and following legal responsibilities.                                                                                        |
| 43.02 |       | <u>Understand the influence of ethics in professional practice.</u>                                                                                                                                                   |
| 43.03 |       | <u>Explain the role of morality during ethical decision-making.</u>                                                                                                                                                   |
| 43.02 | 43.04 | Provide <del>health care within the</del> <u>evidence of</u> ethical <del>legal framework of the surgical technologist's role.</del> <u>situations and problems in the healthcare profession.</u>                     |
| 43.03 | 43.05 | Describe the principles of problem solving and confidentiality in ethical decision-making <del>and risk management.</del>                                                                                             |
| 43.04 | 43.06 | <del>Describe</del> <u>Discuss and demonstrate</u> the key <del>qualities</del> <u>elements</u> related to <del>the development of</del> <u>developing</u> a surgical conscience.                                     |
| 43.07 |       | <u>Analyze the concepts of legal and ethical responsibilities.</u>                                                                                                                                                    |
| 43.08 |       | <u>Define the various types of legal doctrines.</u>                                                                                                                                                                   |
| 43.09 |       | <u>Discuss the standards of conduct.</u>                                                                                                                                                                              |
| 43.10 |       | <u>Analyze the legal elements of proper documentation.</u>                                                                                                                                                            |
| 43.11 |       | <u>Describe the types of sentinel events.</u>                                                                                                                                                                         |
| 43.12 |       | <u>Describe the importance of risk management.</u>                                                                                                                                                                    |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

The Human Patient Simulator (HPS) or other accepted simulation scenarios may be used for a limited number of clinical hours. A low teacher-student ratio in the lab and clinical area is strongly recommended. The recommended maximum ratio is 1:8.

### Special Notes

#### *Specialization Track Descriptions:*

**Specialization Track:** ~~Central Sterile Processing Technologist~~ Technician

**Specialization Length:** 30 credit hours

**Specialization Concepts and Content:** The purpose of this track is to prepare students for initial employment with an occupational title as a ~~Central Sterile Processing Technician~~ in various specialized areas, or to provide supplemental training for persons previously or currently employed in these occupations.

**Specialization Track:** Endoscopic Technician

**Specialization Length:** 24 credit hours

**Specialization Concepts and Content:** The purpose of this track is to prepare students for initial employment with an occupational title as Endoscopic or Gastrointestinal Lab (GI Lab) Technician in various specialized areas, or to provide supplemental training for persons previously or currently employed in these occupations.

**Specialization Track:** Surgical ~~Technologist~~ Technician

**Specialization Length:** 49 credit hours

**Specialization Concepts and Content:** The purpose of this track is to prepare students for initial employment with an occupational title as a Surgical Technologist in various specialized areas, or to provide supplemental training for persons previously or currently employed in these occupations.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S., for more information on disqualification for a license, certificate, or registration through the Department of Health.

The Specialization Core Curriculum should be taught by qualified staff as outlined in the most recent approved Commission on Accreditation on Allied Health Education programs (CAAHEP) or other ~~national~~ [nationally](#) recognized accreditation standards and guidelines for that specialization.

Entering students who have successfully completed the program 0317.021100, Surgical Technology, or currently Nationally Certified as a CST (Certified Surgical Technologist), should be given appropriate advanced standing.

After successful completion of an accredited program, students are eligible to take the national certification examination as applicable to the specialization.

The CORE should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded). The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary

education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS degree program includes the following College Credit Certificates:

~~Central~~ Sterile Processing ~~Technologist~~ Technician (0351101202) – 30 Credits

~~Endoscopy~~ Endoscopic Technician (0351099902) – 24 Credits

Surgical ~~Technology Specialist~~ Technician (0351090904) – 49 Credits

Standards for the above certificate programs are contained in separate curriculum frameworks.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Diagnostic Medical Sonography Technology  
**Career Cluster:** Health Science

**AS** Associate in Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as diagnostic medical sonographers or to provide supplemental training for persons previously or currently employed in this occupation.

The content includes but is not limited to anatomy, physiology and pathology of the abdominal, pelvic, and urogenital structures; physics; instrumentation; equipment standards; biological effect of ultrasound; patient care; clinical medicine; applications and limitations of ultrasound; related diagnostic procedures; image evaluation; administration; first aid and cardiopulmonary resuscitation; employability skills; leadership and human relations skills; health and safety.

Additional Information relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of 77 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

| <b><u>10.0</u></b>           | <b><u>Find, assess and apply to job opportunities.</u></b>                                                                    |
| <b><u>10.01</u></b>          | <b><u>Identify online job posts relevant to his or her career aspirations.</u></b>                                            |
| <b><u>10.02</u></b>          | <b><u>Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.</u></b>  |
| <b><u>10.03</u></b>          | <b><u>Define what information, documentation and writing prompts are required for the positions.</u></b>                      |
| <b><u>11.0</u></b>           | <b><u>Communicate personal competence, character and fit for a job opportunity.</u></b>                                       |
| <b><u>11.01</u></b>          | <b><u>Develop a resume.</u></b>                                                                                               |
| <b><u>11.02</u></b>          | <b><u>Write a cover letter.</u></b>                                                                                           |
| <b><u>11.03</u></b>          | <b><u>Curate a professional portfolio that includes work products.</u></b>                                                    |
| <b><u>11.04</u></b>          | <b><u>Prepare for and experience a mock job interview.</u></b>                                                                |
| <b><u>12.0</u></b>           | <b><u>Cultivate and leverage relationships to professionally advance.</u></b>                                                 |
| <b><u>12.01</u></b>          | <b><u>Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.</u></b> |
| <b><u>12.02</u></b>          | <b><u>Develop a plan to cultivate a professional digital footprint.</u></b>                                                   |
| <b><u>12.03</u></b>          | <b><u>Develop a networking plan for a specific industry of interest.</u></b>                                                  |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the health care delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate an understanding of the role and responsibilities of the sonographer ~~in regards to~~ regarding ultrasound imaging and patient care.
- 13.0 Demonstrate an awareness of the basic principles of ultrasound physics, emphasizing practical relationships of physics to optimizing images for more accurate diagnosis.
- 14.0 Demonstrate knowledge of the basic principles ~~of~~ and instrumentation ~~common~~ specific to the field of ultrasound.
- 15.0 Demonstrate knowledge of the principles of Doppler.
- 16.0 Apply knowledge ~~gained in instrumentation lecture~~ as it ~~applied~~ pertains to various ultrasound systems in the clinical setting.
- 17.0 Apply knowledge of the anatomy, pathology, and scanning techniques related to retroperitoneal structures ~~and upper~~, abdominal organs, cavities, and ~~systems~~ urinary tract.
- 18.0 Apply knowledge of the anatomy, pathology, and scanning techniques related to ~~superficial structures~~ abdominal Doppler studies.
- 19.0 Apply knowledge of anatomy, pathology, and scanning techniques to ~~the urinary system and adrenal glands~~ superficial structures.
- 20.0 Apply knowledge of anatomy, pathology, and scanning techniques used in ~~Sonography~~ sonography of the female pelvis.
- 21.0 Apply knowledge of anatomy, pathology, and scanning techniques related to obstetrics.
- 22.0 Develop a continuous awareness of the disease processes.
- 23.0 Apply accumulated knowledge to the process of creating and documenting diagnostic sonograms.
- 24.0 Apply skills needed to ~~complete diagnostic images~~ effectively perform in the role of ~~high quality from a variety of scanning units~~ an entry-level sonographer.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Diagnostic Medical Sonography Technology  
**CIP Number:** 1351091004  
**Program Length:** 77 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

| At the completion of this program, the student will be able to: |                                                                                                                                                                                                         |
|-----------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <del>12.09</del> <u>12.09</u>                                   | <u>Describe the organizational structure common to most hospitals with <del>special</del> emphasis placed on the role of the ultrasound department.</u>                                                 |
| <del>12.10</del> <u>12.10</u>                                   | <u>Describe the relationship of the sonographer to the patients and their <del>special</del> <u>individual</u> needs.</u>                                                                               |
| <del>12.11</del> <u>12.11</u>                                   | <u>Demonstrate professional communication skills required <del>on a daily basis</del> in the <del>health care</del> <u>healthcare</u> setting.</u>                                                      |

|                        |                                                                                                                                                                                                        |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>12.11</del> 12.12 | Explain and demonstrate the methods of patient preparation and care before and during a sonogram.                                                                                                      |
| <del>12.12</del> 12.13 | Demonstrate proper body mechanics when transporting <del>and</del> or assisting patients <u>with and without support equipment</u> .                                                                   |
| <del>12.13</del> 12.14 | Discuss current trends in sonographic technology and techniques.                                                                                                                                       |
| 12.15                  | <u>Demonstrate knowledge of medical and sonographic terminology.</u>                                                                                                                                   |
| <del>12.14</del> 12.16 | Demonstrate proper universal precautions and sterile techniques when preparing for a sonographic procedure.                                                                                            |
| 13.0                   | Demonstrate an awareness of the basic principles of ultrasound physics, emphasizing practical relationships of physics to optimizing images for more accurate diagnosis. -The student will be able to: |
| 13.01                  | Explain what sound is and its characteristics.                                                                                                                                                         |
| 13.02                  | Compare the difference between pulsed and continuous wave ultrasound.                                                                                                                                  |
| 13.03                  | Explain amplitude and intensity of sound as <del>it applies</del> <u>they apply</u> to sonography.                                                                                                     |
| 13.04                  | Describe the causes and effects of attenuation and acoustic impedance on ultrasound.                                                                                                                   |
| 13.05                  | Identify the causes and effects of <del>incidence,</del> <u>transmission, reflection, refraction, and</u> scattering <del>and refraction</del> of ultrasound.                                          |
| 13.06                  | Explain the Doppler <del>Effect</del> <u>effect</u> as it relates to ultrasound.                                                                                                                       |
| 13.07                  | Describe the factors of attenuation versus depth penetration of ultrasound in human tissue.                                                                                                            |
| 13.08                  | Identify resolution and controlling factors of resolution as applied to sonography.                                                                                                                    |
| 13.09                  | Discuss and demonstrate the basic principles governing sound and sound interaction in various types of tissue.                                                                                         |
| 13.10                  | Relate mathematical formulas to the interaction of sound with various <del>mediums</del> <u>media</u> .                                                                                                |
| 13.11                  | Describe resolution and its effect on the final image.                                                                                                                                                 |
| 13.12                  | Describe and demonstrate the factors that control and determine axial, elevational, and lateral resolution.                                                                                            |
| 14.0                   | Demonstrate knowledge of the basic principles <del>of</del> <u>and</u> instrumentation <del>common</del> <u>specific</u> to the field of ultrasound. -The student will be able to:                     |
| 14.01                  | Describe piezoelectric effects.                                                                                                                                                                        |
| 14.02                  | Describe transducer construction.                                                                                                                                                                      |
| 14.03                  | Discuss historical perspectives related to the development of the ultrasound system.                                                                                                                   |

|       |                                                                                                                                                                                                                            |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.04 | Explain and describe how signal processing affects image production and presentations.                                                                                                                                     |
| 14.05 | Discuss basic system operation in the form of block diagrams for real-time and Doppler image production.                                                                                                                   |
| 14.06 | Describe <u>and demonstrate</u> the purpose and use of typical controls located on ultrasound systems.                                                                                                                     |
