|       |                                                                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Demonstrate the ability to communicate and use interpersonal skills effectively. -The student will be able to:                                                  |
| 01.01 | Develop basic speaking and listening skills.                                                                                                                    |
| 01.02 | Develop basic observational skills and related documentation strategies in written and oral form.                                                               |
| 01.03 | Identify characteristics of successful and unsuccessful communication, including communication styles and barriers.                                             |
| 01.04 | Respond to verbal and non-verbal cues.                                                                                                                          |
| 01.05 | Compose written communication using correct spelling, grammar, a-formatting, confidentiality, and specific formats of letter writing.                           |
| 01.06 | Use appropriate medical terminology and abbreviations.                                                                                                          |
| 01.07 | Recognize the importance of courtesy and respect for patients and other healthcare workers and maintain good interpersonal relationships.                       |
| 01.08 | Recognize the importance of patient education regarding healthcare.                                                                                             |
| 01.09 | Adapt communication skills to varied levels of understanding and cultural orientation, including diverse age, cultural, economic, ethnic, and religious groups. |
| 01.10 | Adapt elements of communication using the sender-receiver model.                                                                                                |
| 01.11 | Distinguish between and report subjective and objective information.                                                                                            |
| 01.12 | Report relevant information in order of occurrence.                                                                                                             |
| 02.0  | Demonstrate an understanding of and apply wellness and disease concepts. -The student will be able to:                                                          |
| 02.01 | Describe strategies for prevention of disease, including health screenings and examinations.                                                                    |
| 02.02 | Identify personal health practices and environmental factors which affect optimal function of the major body systems.                                           |
| 02.03 | Identify psychological reactions to illness, including defense mechanisms.                                                                                      |

|       |                                                                                                                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.04 | Identify complementary and alternative health practices.                                                                                                                                                                              |
| 03.0  | Recognize and practice safety and security procedures. The student will be able to:                                                                                                                                                   |
| 03.01 | Recognize safe and unsafe working conditions and report safety hazards.                                                                                                                                                               |
| 03.02 | Demonstrate the safe use of medical equipment.                                                                                                                                                                                        |
| 03.03 | Identify and practice security procedures for medical supplies and equipment.                                                                                                                                                         |
| 03.04 | Demonstrate personal safety procedures based on the <del>Occupations</del> Occupational Safety and Health Administration (OSHA) and the Centers for Disease Control and Prevention (CDC) regulations, including standard precautions. |
| 04.0  | Recognize and practice infection control procedures. The student will be able to:                                                                                                                                                     |
| 04.01 | Define principles of infection control, including standard and transmission-based precautions.                                                                                                                                        |
| 04.02 | Demonstrate knowledge of medical asepsis and practice procedures such as hand-washing and isolation.                                                                                                                                  |
| 04.03 | Describe how to correctly dispose of biohazardous materials according to appropriate government guidelines, such as OSHA.                                                                                                             |
| 05.0  | Demonstrate knowledge of blood-borne diseases, including HIV/AIDS. The student will be able to:                                                                                                                                       |
| 05.01 | Recognize emerging diseases and disorders.                                                                                                                                                                                            |
| 05.02 | Distinguish between fact and fallacy about the transmission and treatment of diseases caused by blood-borne pathogens, including Hepatitis B.                                                                                         |
| 05.03 | Identify community resources and services available to the individuals with diseases caused by blood-borne pathogens.                                                                                                                 |
| 05.04 | Identify “at-risk” behaviors which promote the spread of diseases caused by <del>blood borne</del> bloodborne pathogens and the public education necessary to combat the spread of these diseases.                                    |
| 05.05 | Apply infection control techniques designed to prevent the spread of diseases caused by blood-borne pathogens to the care of all patients following CDC guidelines.                                                                   |
| 05.06 | Demonstrate knowledge of the legal aspects of HIV/AIDS, including testing.                                                                                                                                                            |
| 06.0  | Apply basic math and science skills. The student will be able to:                                                                                                                                                                     |
| 06.01 | Draw, read, and report on graphs, charts, and tables.                                                                                                                                                                                 |
| 06.02 | Measure time, temperature, distance, capacity, and mass/weight.                                                                                                                                                                       |
| 06.03 | Make, use, and convert using both traditional and metric units.                                                                                                                                                                       |
| 06.04 | Make estimations and approximations and judge the reasonableness of the result.                                                                                                                                                       |

|       |                                                                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 06.05 | Convert from regular to 24-hour time.                                                                                                                                                                                                                                                                        |
| 06.06 | Demonstrate the ability to evaluate and draw conclusions.                                                                                                                                                                                                                                                    |
| 06.07 | Organize and communicate the results obtained by observation and experimentation.                                                                                                                                                                                                                            |
| 06.08 | Ask appropriate scientific questions and recognize what is involved in experimental approaches to the solution of <del>the</del> such questions.                                                                                                                                                             |
| 06.09 | Calculate ratios.                                                                                                                                                                                                                                                                                            |
| 07.0  | Demonstrate an understanding of anatomy and physiology concepts <del>in both illness and wellness states.</del> The student will be able to:                                                                                                                                                                 |
| 07.01 | Define the terms <del>Anatomy</del> <u>anatomy</u> and <del>Physiology</del> <u>physiology</u> .                                                                                                                                                                                                             |
| 07.02 | Define both medical terms and abbreviations related to all body systems.                                                                                                                                                                                                                                     |
| 07.03 | Define the <del>principle</del> <u>principal</u> directional terms, planes, quadrants, and cavities used in describing the body and the association of body parts to one another.                                                                                                                            |
| 07.04 | Define the levels of organization of the body <del>inclusive of, but not limited to, from</del> cells, <del>organs and body</del> <u>to</u> systems.                                                                                                                                                         |
| 07.05 | Describe the function of the 11 major organ systems of the body (1) <del>Integumentary</del> <u>integumentary</u> , (2) skeletal, (3) muscular, (4) nervous, (5) endocrine, (6) <del>circulatory</del> (cardiovascular), (7) lymphatic, (8) respiratory, (9) digestive, (10) urinary, and (11) reproductive. |
| 07.06 | Describe <u>signs and</u> symptoms <del>and of</del> common <del>disease pathology related to each body system and the relationship of the disease process to other body systems</del> <u>pathologies</u> .                                                                                                  |
| 07.07 | Discuss diagnostic options to identify common disease pathology and <del>corresponding basic</del> treatment <u>options</u> .                                                                                                                                                                                |
| 07.08 | Compare structure and function of the body across the life span.                                                                                                                                                                                                                                             |
| 08.0  | Describe the cardiovascular system. -The student will be able to:                                                                                                                                                                                                                                            |
| 08.01 | <del>Locate</del> <u>Label</u> the heart and surrounding structures.                                                                                                                                                                                                                                         |
| 08.02 | <del>Diagram and label the parts of the heart and list</del> <u>List</u> the functions of <del>each labeled part</del> <u>the heart and surrounding structures</u> .                                                                                                                                         |
| 08.03 | Trace the flow of blood through the <del>cardiopulmonary system</del> <u>body</u> .                                                                                                                                                                                                                          |
| 08.04 | <u>Identify and describe the electrical conduction system.</u>                                                                                                                                                                                                                                               |
| 09.0  | Recognize and identify collection reagents supplies, equipment, and interfering chemical substances. -The student will be able to:                                                                                                                                                                           |
| 09.01 | Identify and discuss <u>the</u> proper use of appropriate types of equipment needed to collect various clinical laboratory blood specimens by venipuncture.                                                                                                                                                  |

|                               |                                                                                                       |
|-------------------------------|-------------------------------------------------------------------------------------------------------|
| 09.02                         | Define and utilize correct medical terminology and metric measurement needed for specimen collection. |
| 10.0                          | Practice infection control following standard precautions. -The student will be able to:              |
| <u>10.01</u>                  | <u>Define the term “hospital-acquired infection.”</u>                                                 |
| <del>10.01</del> <u>10.02</u> | <u>Describe and practice procedures for infection prevention,</u> including hand washing skills.      |
| <del>10.02</del> <u>10.03</u> | <u>Discuss transmission-based precautions.</u>                                                        |
| <del>10.03</del> <u>10.04</u> | <u>Identify potential routes of infection and their complications.</u>                                |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error, and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOSs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Purpose**

This certificate program is part of the Emergency Medical Services AS degree program (1351090402).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This is an instructional program that prepares students for employment as paramedics (Emergency Medical Technicians & Paramedics) to function at the basic pre-hospital paramedic level and treat various medical/trauma conditions, using appropriate equipment and materials. The program prepares students for certification as paramedics in accordance with Chapter 64J-1 of the Florida Administrative Code. The program must be approved by the Department of Health, Office of Emergency Medical Services, and the curriculum must adhere to the US Department of Transportation, National EMS Educational Standards for Paramedic. This is the second level for a career in emergency medical services in Florida.

The content includes but is not limited to: patient assessment, advanced airway management, cardiovascular emergencies, external and internal bleeding and shock, traumatic injuries, fractures, dislocations, sprains, poisoning, heart attack, stroke, diabetes, pharmacology, medication administration, respiratory emergencies, endocrine emergencies, acute abdomen, communicable diseases, patients with abnormal behavior,

substance abuse, the unconscious state, emergency childbirth, pediatric and geriatric emergencies, burns, environmental hazards, communications, documentation, extrication, mass casualty incident, incident command system, and transportation of patient.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

### Regulated Programs

This program meets the Department of Health trauma score card methodologies and Sudden Unexpected Infant Death Syndrome (SUIDS) training education requirements. Upon completion of this program, the instructor will provide a certificate to the student verifying that these requirements have been met. This program also meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

A Paramedic program must be taught by faculty meeting the qualifications as set forth in 64J-1.020, F.A.C.

Florida Statute (F.S.) 401.2701, requires that the instructor-student ratio should not exceed 1:6.

Field internship shall include a competency-based program to assure appropriate pre-hospital assessment and management of medical and trauma patients, as well as associated manual skills. The field internship activity shall include supervised experience in the field setting with a certified ALS transport EMS agency or ALS fire department. Refer to 64J-1.20 for additional requirements of the field internship inside of the paramedic program.

Pursuant 401.2701, F.S., to Paramedic programs must be available only to Florida-certified emergency medical technicians or an emergency medical technician applicant who will obtain Florida certification prior to completion of phase one of the paramedic program and EMT certification must be maintained through the program.

It is strongly recommended this program be accredited by Commission on Accreditation of Allied Health Education Programs (CAAHEP).

**NREMT requires that all paramedic students graduate from a CAAHEP-accredited Paramedic program (or an education program that has been issued a CoAEMSP "Letter of Review") that meets or exceeds the National Emergency Medical Services Education Standards for Paramedic.**

The Student Performance Standards for Paramedic were adapted and condensed from the most current US Department of Transportation, National EMS Educational Standards for the Paramedic. Administrators and instructors should refer to these materials for additional detail.

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |

| <b><u>12.0</u></b>           | <b><u>Cultivate and leverage relationships to professionally advance.</u></b>                                                 |
| <b><u>12.01</u></b>          | <b><u>Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.</u></b> |
| <b><u>12.02</u></b>          | <b><u>Develop a plan to cultivate a professional digital footprint.</u></b>                                                   |
| <b><u>12.03</u></b>          | <b><u>Develop a networking plan for a specific industry of interest.</u></b>                                                  |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the History of EMS and a complex depth, comprehensive breadth of knowledge of EMS Systems.
- 02.0 Demonstrate a fundamental depth, foundational breath of knowledge of research principles to interpret literature and advocate evidence-based practice.
- 03.0 Demonstrate a complex depth, comprehensive breadth of knowledge of workforce safety and wellness.
- 04.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the principles of medical documentation and report writing.
- 05.0 Demonstrate a complex depth, comprehensive breadth of knowledge of EMS communication system.
- 06.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the therapeutic communication principles.
- 07.0 Demonstrate a complex depth, comprehensive breadth of knowledge of medical legal and ethical concepts related to EMS.
- 08.0 Integrate a complex depth, comprehensive breadth of knowledge of anatomy and physiology of all human systems.
- 09.0 Integrate a comprehensive knowledge in the use of medical terminology and abbreviations into written and oral communication with health care professionals.
- 10.0 Demonstrate a complex knowledge of pathophysiology of major systems.
- 11.0 Integrate the knowledge of the physiological, psychological, and sociological changes throughout human development.
- 12.0 Demonstrate a fundamental knowledge of the principles of public health.
- 13.0 Demonstrate a complex depth, comprehensive breadth of knowledge in the principles of pharmacology.
- 14.0 Demonstrate a complex depth, comprehensive breadth of knowledge of medication administration within the scope of practice of the paramedic.
- 15.0 Demonstrate a complex depth, comprehensive breadth of knowledge of emergency medications within the scope of practice for the paramedic.
- 16.0 Demonstrate a complex depth, comprehensive breadth of knowledge of airway management within the scope of practice of the paramedic, patients of all ages.
- 17.0 Demonstrate a complex depth, comprehensive breadth of knowledge of respiration within the scope of practice of the paramedic, patients of all ages.
- 18.0 Demonstrate a complex breadth, comprehensive breadth of knowledge of ventilator assessment and management, patients of all ages.
- 19.0 Demonstrate a complex depth, comprehensive breadth of knowledge of scene management.
- 20.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the primary assessment for all patient situations.
- 21.0 Demonstrate a complex depth, comprehensive breath of knowledge of the components of history taking.
- 22.0 Demonstrate a complex depth, comprehensive breadth of knowledge of techniques used for a secondary assessment, patients of all ages
- 23.0 Demonstrate a fundamental depth, foundational breadth of knowledge of monitoring devices within the scope of practice of the paramedic.
- 24.0 Demonstrate a complex depth, comprehensive breadth of knowledge of how and when to perform a reassessment for all patient situations.
- 25.0 Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of medical complaints.
- 26.0 Demonstrate a complex depth, comprehensive breadth of knowledge of neurologic disorders/emergencies, patients of all ages.
- 27.0 Demonstrate a complex depth, comprehensive breadth of knowledge of abdominal and gastrointestinal disorders/emergencies, patients of all ages.
- 28.0 Demonstrate a complex depth, comprehensive breadth of knowledge of immunology disorders/emergencies, patients of all ages.

- 29.0 Demonstrate a complex depth, comprehensive breadth of knowledge of assessment and management of a patient who may have an infectious disease, patient of all ages.
- 30.0 Demonstrate a complex depth, comprehensive breadth of knowledge in endocrine disorders/emergencies, patients of all ages.
- 31.0 Demonstrate a complex depth, comprehensive breadth of knowledge regarding the assessment and management of psychiatric disorders, cognitive and behavioral emergencies.
- 32.0 Demonstrate a complex depth, comprehensive breadth of knowledge of cardiovascular disorders/ emergencies, patients of all ages.
- 33.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment and management of toxicology emergencies including psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and patients of all ages.
- 34.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment and management of respiratory disorders, include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/ or emergencies associated emergencies, patients of all ages.
- 35.0 Demonstrate a complex depth, foundational breadth of knowledge of the assessment and management of hematology disorders/ emergencies, patients of all ages.
- 36.0 Demonstrate a complex depth, comprehensive breadth of knowledge of genitourinary and renal emergencies to include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/or emergencies, patients of all ages.
- 37.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment findings and the management of gynecology disorders Include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/or /emergencies, patients of all ages.
- 38.0 Demonstrate a fundamental depth, foundation breadth of knowledge of the assessment and management of non-traumatic fractures, patients of all ages.
- 39.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of common or major diseases of the eyes, ears, nose, and throat, patients of all ages.
- 40.0 Demonstrate the integration of comprehensive knowledge of cause and pathophysiology into management of shock (include psychosocial aspect of age-related assessment and treatment modifications for pediatric and geriatric patients).
- 41.0 Demonstrate the integration of a comprehensive knowledge of causes and pathophysiology into the management of cardiac arrest and respiratory failure (including psychosocial aspects of age-related assessment and treatment modifications for pediatric and geriatric patients).
- 42.0 Demonstrate a complex depth, comprehension breadth of knowledge of pathophysiology, assessment and management of bleeding, patients of all ages.
- 43.0 Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of chest trauma, patients of all ages.
- 44.0 Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of abdominal and genitourinary trauma, patients of all ages.
- 45.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of orthopedic trauma, patients of all ages.
- 46.0 Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of soft tissue trauma. patients of all ages. (Include psychosocial aspects of age- related assessment and treatment modifications for pediatric and geriatric patients).
- 47.0 Demonstrate a fundamental depth, foundational breadth of knowledge of head, face, neck, and spine trauma, patients of all ages.

- 48.0 Demonstrate a fundamental depth, foundational breadth of knowledge of nervous system trauma, patients of all ages.
- 49.0 Demonstrate a complex depth, comprehensive breadth of knowledge of special considerations in trauma, patients of all ages.
- 50.0 Demonstrate a complex depth, comprehensive breadth of knowledge of environmental emergencies, patients of all ages.
- 51.0 Demonstrate a complex depth, comprehensive breadth of knowledge of multi-system trauma and blast injuries.
- 52.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the obstetric patient within the scope of practice of the paramedic.
- 53.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the neonatal patient within the scope of practice of the paramedic.
- 54.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the pediatric patient within the scope of practice of the paramedic.
- 55.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the geriatric patient within the scope of practice of the paramedic.
- 56.0 Demonstrate a complex depth, comprehensive breadth of knowledge of management of the patient with special challenges within the scope of practice of the paramedic, patients of all ages.
- 57.0 Demonstrate a simple depth, foundational breadth of knowledge of risks and responsibilities of transport.
- 58.0 Demonstrate a complex depth, comprehensive breadth of knowledge of establishing and working within the incident management system.
- 59.0 Demonstrate a simple depth, foundational breadth of knowledge of responding to an emergency during a multiple casualty incident.
- 60.0 Demonstrate a complex depth, comprehensive breadth of knowledge of air medical transport risks, needs, and advantages.
- 61.0 Demonstrate a simple depth, simple breadth of knowledge for safe vehicle extrication and use of simple hand tools.
- 62.0 Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating in a cold zone at a hazardous material or other special incident.
- 63.0 Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating on the scene of a natural or man-made disaster.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Paramedic  
**CIP Number:** 0351090405  
**Program Length:** 42 credit hours

The Paramedic standards and benchmarks in this framework include all of the content, knowledge and skills at the EMT level in addition to the Paramedic objectives. For those standards that state “Review EMT standards and benchmarks”, please refer to the EMT curriculum framework for specific objectives.

**This certificate program is part of the Emergency Medical Services AS degree program (1351090402). At the completion of this program, the student will be able to:**

|                          |                                                                                                                                                                                                                                                                                     |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>01.0 EMS Systems:</b> | Demonstrate a fundamental depth, foundational breadth of knowledge of the History of EMS and a complex depth, comprehensive breadth of knowledge of EMS Systems. The student will be able to:                                                                                       |
| 01.01                    | Define terms, including but not limited to: EMS systems, licensure, registration, profession, professionalism, health care professional, ethics, peer review, medical direction, and protocols.                                                                                     |
| 01.02                    | Describe the attributes of a paramedic as a health care professional.                                                                                                                                                                                                               |
| 01.03                    | Explain paramedic licensure/ certification, recertification, and reciprocity requirements in Florida.                                                                                                                                                                               |
| 01.04                    | Explain the importance of maintaining one’s paramedic license/certification.                                                                                                                                                                                                        |
| 01.05                    | Describe the benefits of paramedic continuing education.                                                                                                                                                                                                                            |
| 01.06                    | Discuss the role of national associations and of a national certification agency.                                                                                                                                                                                                   |
| 01.07                    | Discuss Chapter 401, Florida Statutes (F.S.), and Chapter 64-E, Florida Administrative Code (F.A.C.).                                                                                                                                                                               |
| 01.08                    | Discuss the roles of various EMS standard setting agencies.                                                                                                                                                                                                                         |
| 01.09                    | Identify the standards (components) of an EMS System as defined by the National Highway Traffic Safety Administration.                                                                                                                                                              |
| 01.10                    | Describe and demonstrate professional behaviors in the following areas: integrity, empathy, self-motivation, appearance and personal hygiene, self-confidence, communications, time management, teamwork and diplomacy, respect, patient advocacy, and careful delivery of service. |
| 01.11                    | Describe the role of the EMS physician in providing medical direction.                                                                                                                                                                                                              |
| 01.12                    | Discuss examples of local protocols.                                                                                                                                                                                                                                                |
| 01.13                    | Differentiate between quality improvement and quality assurance.                                                                                                                                                                                                                    |

|       |                                                                                                                                                                                                      |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.14 | Describe the relationship between a physician on the scene, the paramedic on the scene, and the EMS physician providing on-line medical direction.                                                   |
| 01.15 | Describe the role of the paramedic relative to the safety of the crew, the patient, and bystanders.                                                                                                  |
| 01.16 | Assess personal practices relative to the responsibility for personal safety, the safety of the crew, the patient, and bystanders.                                                                   |
| 01.17 | Advocate the need for injury prevention.                                                                                                                                                             |
| 01.18 | Discuss the diverse types of EMS services and differences in their provision of care. Including mobile integrated health and community paramedic.                                                    |
| 02.0  | <b>Research:</b> Demonstrate a fundamental depth, foundational breath of knowledge of research principles to interpret literature and advocate evidence-based practice. The student will be able to: |
| 02.01 | Interpret results and reach conclusions.                                                                                                                                                             |
| 02.02 | Discuss the importance of evidenced based medicine and medical research and its role in refining EMS practices.                                                                                      |
| 03.0  | <b>Workforce Safety and Wellness:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of workforce safety and wellness. The student will be able to:                                 |
| 03.01 | Discuss the concept of wellness and its benefits.                                                                                                                                                    |
| 03.02 | Discuss how cardiovascular endurance, muscle strength, and flexibility contribute to physical fitness.                                                                                               |
| 03.03 | Describe the impact of shift work on circadian rhythms.                                                                                                                                              |
| 03.04 | Discuss the role of risk assessments and warning signs in cancer and cardiovascular disease.                                                                                                         |
| 03.05 | Differentiate between proper from improper body mechanics for lifting and moving patients in emergency and non-emergency situations.                                                                 |
| 03.06 | Discuss the principles of crew resource management.                                                                                                                                                  |
| 03.07 | Describe the problems that a paramedic might encounter in a hostile situation and the techniques used to manage the situation.                                                                       |
| 03.08 | Describe the equipment available for self-protection when confronted with a variety of adverse situations.                                                                                           |
| 03.09 | Describe the three phases and factors that trigger the stress response.                                                                                                                              |
| 03.10 | Differentiate between normal/ healthy and detrimental reactions to anxiety and stress.                                                                                                               |
| 03.11 | Identify and describe the defense mechanisms and management techniques and resources commonly used to deal with stress.                                                                              |
| 03.12 | Describe the components of critical incident stress management (CISM).                                                                                                                               |
| 03.13 | Describe the needs of the paramedic when dealing with death and dying.                                                                                                                               |

|       |                                                                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.14 | Discuss the importance of standard precautions and body substance isolation practices.                                                                                            |
| 03.15 | Discuss the principles of disease transmission and prevention measures                                                                                                            |
| 03.16 | Discuss the need to treat each patient as an individual, with respect and dignity.                                                                                                |
| 03.17 | Discuss the need to respect the emotional needs of dying patients and their families.                                                                                             |
| 03.18 | Discuss the paramedics' role in performing community risk assessment.                                                                                                             |
| 04.0  | <b>Documentation:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the principles of medical documentation and report writing. The student will be able to: |
| 04.01 | Identify the general principles regarding the importance of EMS documentation and ways in which documents are used.                                                               |
| 04.02 | Demonstrate proper use of medical terminology.                                                                                                                                    |
| 04.03 | Record pertinent administrative information to a given standard.                                                                                                                  |
| 04.04 | Analyze the documentation for accuracy and completeness, including spelling.                                                                                                      |
| 04.05 | Describe the differences between subjective and objective elements of documentation.                                                                                              |
| 04.06 | Describe the potential consequences of illegible, incomplete, or inaccurate documentation.                                                                                        |
| 04.07 | Describe the special considerations concerning patient refusal of transport.                                                                                                      |
| 04.08 | Explain how to properly record direct patient or bystander comments.                                                                                                              |
| 04.09 | Describe the special considerations concerning mass casualty incident documentation.                                                                                              |
| 04.10 | Identify and record the pertinent, reportable clinical data of each patient interaction.                                                                                          |
| 04.11 | Note and record pertinent negative clinical findings.                                                                                                                             |
| 04.12 | Demonstrate proper completion of an EMS PCR (patient care record).                                                                                                                |
| 05.0  | <b>EMS Communication:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of EMS communication system. The student will be able to:                               |
| 05.01 | Identify the role of verbal, written, and electronic communications in the provision of EMS.                                                                                      |
| 05.02 | Describe the phases of communications necessary for an emergency response and transport.                                                                                          |
| 05.03 | Discuss the importance of proper terminology when communicating during an emergency.                                                                                              |

|       |                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 05.04 | Discuss factors that impede or enhance effective verbal and written communications.                                                                                                              |
| 05.05 | Discuss the legal implications of written communications.                                                                                                                                        |
| 05.06 | Identify the components of the local EMS communications system and describe their function and use.                                                                                              |
| 05.07 | Identify and differentiate among the following communications systems: simplex, multiplex, duplex, trunked, digital communications, and cellular telephone.                                      |
| 05.08 | Describe the functions and responsibilities of the Federal Communications Commission.                                                                                                            |
| 05.09 | Describe how emergency medical dispatch (EMD) functions as an integral part of the EMS system.                                                                                                   |
| 05.10 | List appropriate information to be gathered by the telecommunicator.                                                                                                                             |
| 05.11 | Demonstrate an organized and concise radio transmission                                                                                                                                          |
| 05.12 | Demonstrate an organized and concise patient report upon transfer of care.                                                                                                                       |
| 06.0  | <b>Therapeutic Communication:-</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the therapeutic communication principles. The <del>student</del> students will be able to: |
| 06.01 | Demonstrate health care literacy when communicating with patients.                                                                                                                               |
| 06.02 | Identify internal and external factors that affect a patient/ bystander interview conducted by a paramedic.                                                                                      |
| 06.03 | Review the strategies for developing patient rapport.                                                                                                                                            |
| 06.04 | Summarize the methods to assess mental status based on interview techniques.                                                                                                                     |
| 06.05 | Discuss the strategies for interviewing difficult patients.                                                                                                                                      |
| 06.06 | Summarize developmental considerations, patients of all ages that influence patient interviewing.                                                                                                |
| 06.07 | Review unique interviewing techniques necessary to employ with patients who have special needs.                                                                                                  |
| 06.08 | Discuss interviewing considerations used by paramedics in cross-cultural communications.                                                                                                         |
| 07.0  | <b>Medical/Legal and Ethics:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of medical legal and ethical concepts related to EMS. The student will be able to:              |
| 07.01 | Differentiate between legal and ethical responsibilities.                                                                                                                                        |

|       |                                                                                                                                                                                                                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.02 | Discuss State of Florida and Federal special reporting situations including: <ul style="list-style-type: none"> <li>• Abuse</li> <li>• Sexual assault</li> <li>• Gunshot and knife wounds</li> <li>• Communicable disease</li> <li>• Animal bites</li> </ul>                                             |
| 07.03 | Review terms, including but not limited to, the following: abandonment, battery, breach of duty, consent (expressed, implied, informed, voluntary), DNR orders, duty to act, emancipated minor, false imprisonment, liability, libel, negligence, proximate cause, scope of practice, slander, and tort. |
| 07.04 | Differentiate between the scope of practice and the standard of care for paramedic practice.                                                                                                                                                                                                             |
| 07.05 | Discuss the concept of medical direction, including off-line medical direction and on-line medical direction, and its relationship to the standard of care of a paramedic.                                                                                                                               |
| 07.06 | Review the four elements that must be present in order to prove negligence.                                                                                                                                                                                                                              |
| 07.07 | Review the legal concept and limitations of immunity, including Good Samaritan statutes and governmental immunity, as it applies to the paramedic.                                                                                                                                                       |
| 07.08 | Review the importance and necessity of patient confidentiality and the standards for maintaining patient confidentiality that apply to the paramedic.                                                                                                                                                    |
| 07.09 | Review consent to include expressed, informed, implied, and involuntary.                                                                                                                                                                                                                                 |
| 07.10 | Discuss the importance of patient rights and advocating for the patient's best interest.                                                                                                                                                                                                                 |
| 07.11 | Demonstrate appropriate patient management techniques in a refusal of care situation.                                                                                                                                                                                                                    |
| 07.12 | Discuss the issues of abandonment, negligence, false imprisonment, and battery and their implications to the paramedic.                                                                                                                                                                                  |
| 07.13 | Describe the actions that the paramedic should take to preserve evidence at a crime or accident scene.                                                                                                                                                                                                   |
| 07.14 | Describe the importance of providing accurate communication (oral and written) in substantiating an incident.                                                                                                                                                                                            |
| 07.15 | Describe the criteria necessary to honor an advance directive in Florida.                                                                                                                                                                                                                                |
| 08.0  | <b>Anatomy and Physiology:</b> Integrate a complex depth, comprehensive breadth of knowledge of anatomy and physiology of all human systems. The student will be able to:                                                                                                                                |
| 08.01 | Review the EMT standards and benchmarks for the anatomy and physiology.                                                                                                                                                                                                                                  |
| 08.02 | Demonstrate comprehensive knowledge of anatomy and physiology as it applies to paramedic practice.                                                                                                                                                                                                       |
| 09.0  | <b>Medical Terminology:</b> Integrate a comprehensive knowledge in the use of medical terminology and abbreviations into written and oral communication with health care professionals. The student will be able to:                                                                                     |
| 09.01 | Review the EMT standards and benchmarks for medical terminology.                                                                                                                                                                                                                                         |

|       |                                                                                                                                                                                |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 09.02 | Demonstrate a comprehensive knowledge of medical terminology as it applies to paramedic practice.                                                                              |
| 10.0  | <b>Pathophysiology:</b> Demonstrate a complex knowledge of pathophysiology of major systems. The student will be able to:                                                      |
| 10.01 | Describe the factors that precipitate disease in the human body including familial diseases and risk factors.                                                                  |
| 10.02 | Describe environmental risk factors.                                                                                                                                           |
| 10.03 | Define and discuss the pathogenesis, signs, and symptoms of distributive, obstructive, neurogenic, anaphylactic, and septic shock.                                             |
| 10.04 | Discuss multiple organ dysfunction syndrome (MODS).                                                                                                                            |
| 10.05 | Describe alterations in cells and tissues including cellular adaptation, cellular injury, manifestation of cellular injury, and cellular death/necrosis.                       |
| 10.06 | Describe genetics and familial diseases and the role they play in pathophysiology.                                                                                             |
| 10.07 | Describe the self–defense mechanisms of inflammation and immune responses and their relationships to pathophysiology.                                                          |
| 11.0  | <b>Life Span Development:</b> Integrate the knowledge of the physiological, psychological, and sociological changes throughout human development. The student will be able to: |
| 11.01 | Compare, contrast, and analyze the physiological and psychosocial characteristics of patients of all ages.                                                                     |
| 12.0  | <b>Public Health:</b> -Demonstrate a fundamental knowledge of principles of public health. The student will be able to:                                                        |
| 12.01 | Review the EMT standards and benchmarks for the public health.                                                                                                                 |
| 12.02 | Apply a fundamental knowledge of the principles of public health, epidemiology, health promotion, and illness and injury prevention.                                           |
| 12.03 | Discuss human trafficking and the need to recognize potential victims.                                                                                                         |
| 12.04 | Review Electronic Health Records in EMS.                                                                                                                                       |
| 12.05 | Discuss the roles of governmental and nongovernmental agencies in public health.                                                                                               |
| 12.06 | Review the mission and goals of public health.                                                                                                                                 |
| 12.07 | Discuss the social, geographic, economic, and demographic factors that influence public health.                                                                                |
| 12.08 | Demonstrate the ability to provide patient and community education on public health topics.                                                                                    |
| 12.09 | Discuss unique concerns in the pediatric, geriatric, and special populations.                                                                                                  |
| 12.10 | Describe the role of EMS in health screenings, vaccinations, and immunizations.                                                                                                |

|       |                                                                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.11 | Discuss the impacts of the political, social, and economic environments on public health.                                                                          |
| 12.12 | Review the various types of infectious disease that are a threat to public health.                                                                                 |
| 12.13 | Describe the various patient dispositions, choosing appropriate destinations, and transport modes.                                                                 |
| 12.14 | Define and understand bioinformatics and its role in EMS and public health.                                                                                        |
| 13.0  | <b>Principles of Pharmacology:</b> Demonstrate a complex depth, comprehensive breadth of knowledge in the principles of pharmacology. The student will be able to: |
| 13.01 | Discuss medication administration safety.                                                                                                                          |
| 13.02 | Differentiate among the chemical, generic (nonproprietary), and trade (proprietary) names of a drug.                                                               |
| 13.03 | List the four main sources of drug products.                                                                                                                       |
| 13.04 | Describe how drugs are classified.                                                                                                                                 |
| 13.05 | List legislative acts controlling drug use and abuse in the United States.                                                                                         |
| 13.06 | Differentiate among Schedule I, II, III, IV, and V substances.                                                                                                     |
| 13.07 | Use reference materials to research medications.                                                                                                                   |
| 13.08 | Discuss standardization of drugs.                                                                                                                                  |
| 13.09 | Discuss investigational drugs, including the Food and Drug Administration (FDA) approval process and the FDA classifications for newly approved drugs.             |
| 13.10 | Discuss the paramedic's responsibilities and scope of practice pertinent to the administration of medications.                                                     |
| 13.11 | Review best practices and legal requirements for the storage and security of medications.                                                                          |
| 13.12 | List and describe available drug forms.                                                                                                                            |
| 13.13 | List and differentiate all methods and routes of medication administration covered in the current National EMS Scope of Practice Model.                            |

|       |                                                                                                                                                                                                                                                                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.14 | Describe the process of: <ul style="list-style-type: none"> <li>• Pharmacokinetics</li> <li>• Pharmacodynamics</li> <li>• Theories of drug action</li> <li>• Drug-response relationship</li> <li>• Factors altering drug responses</li> <li>• Predictable drug responses</li> <li>• Iatrogenic drug responses</li> <li>• Unpredictable adverse drug responses</li> </ul> |
| 13.15 | Discuss the prevention, recognition and management of adverse medication reactions.                                                                                                                                                                                                                                                                                      |
| 13.16 | Discuss the prevention, recognition and management of medication interactions.                                                                                                                                                                                                                                                                                           |
| 13.17 | Select the optimal medication and method of medication administration for patients with a particular clinical condition or situation.                                                                                                                                                                                                                                    |
| 14.0  | <b>Medication Administration:- Demonstrate</b> a complex depth, comprehensive breadth of knowledge of medication administration within the scope of practice of the paramedic. The student will be able to:                                                                                                                                                              |
| 14.01 | Review the specific anatomy and physiology pertinent to medication administration.                                                                                                                                                                                                                                                                                       |
| 14.02 | Discuss the paramedic's responsibilities and scope of practice pertinent to the administration of medications.                                                                                                                                                                                                                                                           |
| 14.03 | Review mathematical principles and demonstrate equations necessary for performing drug calculations. <b><i>include resources for safe administration of weight-based dosing.</i></b>                                                                                                                                                                                     |
| 14.04 | Describe the indications, contraindications, procedure, equipment and risks associated with peripheral intravenous or external jugular access.                                                                                                                                                                                                                           |
| 14.05 | Describe the indications, equipment needed, technique used, precautions, and general principles of intraosseous needle placement and infusion.                                                                                                                                                                                                                           |
| 14.06 | Describe complications that can occur as a result of IV therapy.                                                                                                                                                                                                                                                                                                         |
| 14.07 | Review <b><i>medication cross-check procedure and</i></b> the "six rights" of drug administration and correlate these with the principles of medication administration.                                                                                                                                                                                                  |
| 14.08 | Describe the use of standard precautions and body substance isolation (BSI) procedures when administering a medication.                                                                                                                                                                                                                                                  |
| 14.09 | Prepare medications for administration from a variety of types of packaging, including vials, non-constituted vials, ampules, prefilled syringes, and packaging for intravenous solutions.                                                                                                                                                                               |
| 14.10 | Describe the role of medical direction in medication administration and describe the difference between direct orders (online) and standing orders (off-line).                                                                                                                                                                                                           |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.11 | Describe the indications, equipment needed, techniques used, precautions, and general principles of administering medications by the following routes: <ul style="list-style-type: none"> <li>• inhalation route</li> <li>• gastric tube</li> <li>• rectal route</li> </ul>                                                                                                                                                                                                                                                     |
| 14.12 | Differentiate among the different percutaneous routes of medication administration.                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 14.13 | Describe the purpose, equipment needed, techniques used, complications, and general principles for obtaining a blood sample.                                                                                                                                                                                                                                                                                                                                                                                                    |
| 14.14 | Obtain venous and capillary blood for testing and discuss blood chemistry and normal values.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 14.15 | Demonstrate principles of medical asepsis in the administration of medications.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 14.16 | Demonstrate the procedure for disposal of contaminated items and supplies.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 14.17 | Demonstrate cannulation of peripheral, intravenous and/or external jugular veins.                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 14.18 | Demonstrate intraosseous access.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 14.19 | Demonstrate administration of medications by the following routes: <ul style="list-style-type: none"> <li>• Oral</li> <li>• Sublingual</li> <li>• Buccal</li> <li>• Auto-injector</li> <li>• Inhalation route</li> <li>• Intranasal route</li> <li>• Subcutaneous route</li> <li>• Intramuscular route</li> <li>• Intravenous route</li> <li>• Intraosseous route</li> </ul>                                                                                                                                                    |
| 15.0  | <b>Emergency Medications:- Demonstrate</b> a complex depth, comprehensive breadth of knowledge of emergency medications within the scope of practice for the paramedic. The student will be able to:                                                                                                                                                                                                                                                                                                                            |
| 15.01 | Discuss medications acute and maintenance/chronic) used by the paramedic, including indications, name, effects, medication action, routes of administration, contraindications, dosages, adverse reactions, side effects, complications and interactions for the following: <ul style="list-style-type: none"> <li>• Airway management</li> <li>• Respiratory</li> <li>• Cardiovascular</li> <li>• Neurologic conditions</li> <li>• Gastrointestinal</li> <li>• Miscellaneous medications</li> <li>• Pain management</li> </ul> |

|       |                                                                                                                                                                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.0  | <b>Airway Management:- Demonstrate</b> a complex depth, comprehensive breadth of knowledge of airway management within the scope of practice of the paramedic, patients of all ages The student will be able to:                                         |
| 16.01 | Explain the primary objective of airway maintenance. <b><i>to include proper airway assessment and techniques of assuring a patient airway.</i></b>                                                                                                      |
| 16.02 | Explain the differences in airway anatomy.                                                                                                                                                                                                               |
| 16.03 | Define, identify and describe a tracheostomy, laryngectomy, stoma, and tracheostomy tube.                                                                                                                                                                |
| 16.04 | Describe the special considerations in airway management and ventilation for the pediatric patient.                                                                                                                                                      |
| 16.05 | Describe the indications, contraindications, advantages, disadvantages, complications and equipment for rapid sequence intubation with neuromuscular blockade.                                                                                           |
| 16.06 | Identify neuromuscular blocking drugs and other agents used in rapid sequence intubation.                                                                                                                                                                |
| 16.07 | Describe the indications, contraindications, advantages, disadvantages, complications and equipment for sedation during intubation.                                                                                                                      |
| 16.08 | Describe the indications, contraindications, advantages, disadvantages and complications for performing cricothyrotomy.                                                                                                                                  |
| 16.09 | Demonstrate the procedure for percutaneous cricothyrotomy.                                                                                                                                                                                               |
| 16.10 | Review the function of the structures located in the upper and lower airway.                                                                                                                                                                             |
| 16.11 | Demonstrate effective techniques of advanced airway management of the following: <ul style="list-style-type: none"> <li>• Orotracheal,</li> <li>• Nasotracheal,</li> <li>• Subglottic,</li> <li>• Supraglottic,</li> <li>• Digital intubation</li> </ul> |
| 16.12 | Describe and demonstrate methods of assessment for confirming correct placement of any airway device.                                                                                                                                                    |
| 16.13 | Describe the indications, contraindications, advantages, disadvantages, complications, equipment and technique for extubation.                                                                                                                           |
| 17.0  | <b>Respiration:- Demonstrate</b> a complex depth, comprehensive breadth of knowledge of respiration within the scope of practice of the paramedic patients of all ages. The student will be able to:                                                     |
| 17.01 | List the concentration of gases that comprise atmospheric air.                                                                                                                                                                                           |
| 17.02 | Describe the measurement of oxygen in the blood.                                                                                                                                                                                                         |
| 17.03 | Describe the measurement of carbon dioxide in the blood.                                                                                                                                                                                                 |
| 17.04 | Describe peak expiratory flow.                                                                                                                                                                                                                           |

|       |                                                                                                                                                                                                                                                                                  |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 17.05 | Describe factors that cause decreased oxygen concentrations in the blood.                                                                                                                                                                                                        |
| 17.06 | Describe the factors that increase and decrease carbon dioxide production in the body.                                                                                                                                                                                           |
| 17.07 | Define pulsus paradoxus.                                                                                                                                                                                                                                                         |
| 17.08 | Describe the indications, contraindications, advantages, disadvantages, complications, liter flow range, and concentration of delivered oxygen for supplemental oxygen delivery devices.                                                                                         |
| 17.09 | Review the anatomy, physiology and pathophysiology of ventilation and respiration to include <ul style="list-style-type: none"> <li>• Pulmonary ventilation</li> <li>• Oxygenation</li> <li>• Respiration</li> <li>• External</li> <li>• Internal</li> <li>• Cellular</li> </ul> |
| 17.10 | Discuss assessment and management of adequate and inadequate respiration to include, Supplemental oxygen therapy                                                                                                                                                                 |
| 18.0  | <b>Ventilation:-</b> Demonstrate a complex breadth, comprehensive breadth of knowledge of ventilatory assessment and management, patients of all ages. The student will be able to:                                                                                              |
| 18.01 | Perform and interpret pulse oximetry and capnography.                                                                                                                                                                                                                            |
| 18.02 | Describe indications, contraindications, advantages, disadvantages, complications, and technique for ventilating a patient with an automatic transport ventilator (ATV), BIPAP/CPAP, AND PEEP devices.                                                                           |
| 18.03 | Assessment and management of adequate and inadequate ventilation to include effect of ventilation on cardiac output.                                                                                                                                                             |
| 19.0  | <b>Scene Size-Up:-</b> Demonstrate a complex depth, comprehensive breadth of knowledge of scene management. The student will be able to                                                                                                                                          |
| 19.01 | Describe common hazards found at the scene of a trauma and a medical patient.                                                                                                                                                                                                    |
| 19.02 | Discuss common mechanisms of injury/ nature of illness. <b>(MOI/NOI)</b> .                                                                                                                                                                                                       |
| 19.03 | Explain the rationale for crew members to evaluate scene safety prior to entering.                                                                                                                                                                                               |

|       |                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.04 | Demonstrate the scene-size-up to include: <ul style="list-style-type: none"> <li>• Scene safety/situational awareness</li> <li>• Scene management</li> <li>• Impact of the environment on patient care</li> <li>• Addressing hazards</li> <li>• Violence</li> <li>• Need for additional or specialized resources</li> <li>• Standard precautions</li> <li>• Multiple patient situations</li> </ul> |
| 20.0  | <b>Primary Assessment:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the primary assessment for all patient situations. The student will be able to:                                                                                                                                                                                                                      |
| 20.01 | Summarize the elements of a general impression of the patient.                                                                                                                                                                                                                                                                                                                                     |
| 20.02 | Explain the reason for performing a primary assessment.                                                                                                                                                                                                                                                                                                                                            |
| 20.03 | Discuss and demonstrate methods of assessing levels of responsiveness using AVPU.                                                                                                                                                                                                                                                                                                                  |
| 20.04 | Discuss and demonstrate methods of assessing the airway, patients of all ages.                                                                                                                                                                                                                                                                                                                     |
| 20.05 | Describe and demonstrate methods used for assessing if a patient is breathing, patients of all ages.                                                                                                                                                                                                                                                                                               |
| 20.06 | Differentiate between a patient with adequate and inadequate breathing.                                                                                                                                                                                                                                                                                                                            |
| 20.07 | Describe and demonstrate the methods used to obtain a pulse, patients of all ages.                                                                                                                                                                                                                                                                                                                 |
| 20.08 | Discuss and demonstrate assessing the patient for external bleeding.                                                                                                                                                                                                                                                                                                                               |
| 20.09 | Describe and demonstrate the assessment and interruption of skin color, temperature, moisture, and capillary refill patients of all ages.                                                                                                                                                                                                                                                          |
| 20.10 | Explain the reasons for prioritizing a patient for care and transport.                                                                                                                                                                                                                                                                                                                             |
| 20.11 | Describe when it is appropriate to expose the patient completely.                                                                                                                                                                                                                                                                                                                                  |
| 20.12 | Differentiate between critical, and non-life-threatening patient presentations. <u>and integration of treatment/procedures needed to preserve life.</u>                                                                                                                                                                                                                                            |
| 21.0  | <b>History Taking:</b> Demonstrate a complex depth, comprehensive breath of knowledge of the components of history taking. The student will be able to:                                                                                                                                                                                                                                            |
| 21.01 | Determine and investigate the chief complaint. <i>(i.e., MOI, NOI).</i>                                                                                                                                                                                                                                                                                                                            |
| 21.02 | Describe the components of the patient history.                                                                                                                                                                                                                                                                                                                                                    |
| 21.03 | Explain the importance of obtaining a SAMPLE and OPQRST history.                                                                                                                                                                                                                                                                                                                                   |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21.04 | Acknowledge the feelings patients experience during assessment.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 21.05 | Discuss the value of obtaining a family and social history.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 21.06 | Describe examples of different techniques ( <i>i.e., therapeutic communication and adaptive interview techniques</i> ) the paramedic may use to obtain information from patients, family, or bystanders during the history taking process.                                                                                                                                                                                                                                               |
| 22.0  | <b>Secondary Assessment:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of techniques used for secondary assessment patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                              |
| 22.01 | Review EMT standards and benchmarks for secondary assessment. ( <i>i.e., assessment of vital signs, pain, techniques of physical exam</i> ).                                                                                                                                                                                                                                                                                                                                             |
| 22.02 | Describe the techniques of inspection, palpation, percussion, and auscultation.                                                                                                                                                                                                                                                                                                                                                                                                          |
| 22.03 | Discuss the limitations of conducting a physical exam in the out-of-hospital environment.                                                                                                                                                                                                                                                                                                                                                                                                |
| 22.04 | Demonstrate the examination of the patient including all major body systems and anatomical regions.                                                                                                                                                                                                                                                                                                                                                                                      |
| 22.05 | Distinguish the importance of abnormal assessment findings in all the major body systems and anatomical regions.                                                                                                                                                                                                                                                                                                                                                                         |
| 22.06 | Describe the evaluation of patient's perfusion status based on findings in the initial assessment.                                                                                                                                                                                                                                                                                                                                                                                       |
| 22.07 | State the reasons for performing a rapid trauma assessment.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 22.08 | Discuss the reason for performing a focused history and physical exam.                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 22.09 | Discuss appropriate gender and cultural considerations regarding assessment.                                                                                                                                                                                                                                                                                                                                                                                                             |
| 22.10 | Discuss medical identification devices/ systems.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 23.0  | <b>Monitoring Devices:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of monitoring devices within the scope of practice of the paramedic. The student will be able to:                                                                                                                                                                                                                                                                                          |
| 23.01 | Describe the purpose, indications, procedure, normal findings, and limitations of the following patient monitoring technologies, including but not limited to: <ul style="list-style-type: none"> <li>• Continuous ECG monitoring</li> <li>• 12-Lead ECG</li> <li>• EtCO2 capnography (wave form)</li> <li>• Methemoglobin monitoring</li> <li>• Total hemoglobin</li> <li>• Basic blood chemistry</li> <li>• Ultrasound</li> <li>• Other devices identified at the EMT level</li> </ul> |

|       |                                                                                                                                                                                                                                                                                                                                                         |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 23.02 | Demonstrate the use of the following patient monitoring technologies, including but not limited to: <ul style="list-style-type: none"> <li>• Continuous ECG monitoring</li> <li>• 12-Lead ECG (i.e., acquisition, interpretation, and transmission).</li> <li>• Capnography (wave form)</li> <li>• Other devices identified at the EMT level</li> </ul> |
| 24.0  | <b>Reassessment:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of how and when to perform a reassessment for all patient situations. The student will be able to:                                                                                                                                                                 |
| 24.01 | Describe the components of reassessment and demonstrate the skills involved.                                                                                                                                                                                                                                                                            |
| 24.02 | Discuss the reasons for reassessment. <i>of the patient.</i>                                                                                                                                                                                                                                                                                            |
| 24.03 | Explain trending assessment components and its value to other health professionals who assume care of the patient.                                                                                                                                                                                                                                      |
| 24.04 | Demonstrate reassessment of patients, patients of all ages-.                                                                                                                                                                                                                                                                                            |
| 25.0  | <b>Medical Overview:- Demonstrate</b> a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of medical complaints. The student will be able to:                                                                                                                                                            |
| 25.01 | Identify factors that complicate patient assessment including: <ul style="list-style-type: none"> <li>• Scene safety</li> <li>• Environmental factors</li> <li>• Chief complaint</li> <li>• Paramedic preconceptions</li> <li>• Distracting injuries</li> <li>• Tunnel vision</li> <li>• Patient cooperation</li> <li>• Paramedic attitude</li> </ul>   |
| 25.02 | Discuss forming a field impression and utilizing available information to determine a different diagnosis.                                                                                                                                                                                                                                              |
| 25.03 | Discuss pathophysiology, assessment, and management of a medical complaints to include. <ul style="list-style-type: none"> <li>• —Transport mode</li> <li>• —Destination decisions</li> </ul>                                                                                                                                                           |
| 26.0  | <b>Neurology:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of neurologic disorders/emergencies, patients of all ages. The student will be able to:                                                                                                                                                                               |
| 26.01 | Identify the risk factors associated with nervous system dysfunction.                                                                                                                                                                                                                                                                                   |
| 26.02 | Review the anatomy and physiology of the organs and structures related to nervous system.                                                                                                                                                                                                                                                               |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 26.03 | Discuss the pathophysiology, signs and symptoms and demonstrate the assessment and management of patients with the following neurological conditions, including but not limited to: <ul style="list-style-type: none"> <li>• Coma</li> <li>• Decreased level of responsiveness</li> <li>• Seizures</li> <li>• Syncope</li> <li>• Transient ischemic attack</li> <li>• Stroke and intracranial hemorrhage</li> <li>• Degenerative neurologic diseases (i.e., dementia, Alzheimer's and Parkinson's disease)</li> <li>• Chronic alcoholism</li> <li>• Back disorders</li> <li>• Headache</li> <li>• Brief Resolved Unexplained Event (BRUE)</li> <li>• Hydrocephalus – CSF diversion devices or shunts</li> <li>• Other neurological disorders to be determined locally</li> </ul> |
| 26.04 | Describe and differentiate the major types of seizures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 26.05 | Describe the types of stroke.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 26.06 | Describe the significance of the prevalence of neurologic disorders in the United States.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 27.05 | Identify patients at risk for gastrointestinal emergencies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 27.06 | Demonstrate how to auscultate the abdomen to assess for diminished, absent or abnormal bowel sounds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 28.0  | <b>Immunology:-</b> Demonstrate a complex depth, comprehensive breadth of knowledge of immunology disorders/emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 28.01 | Define and differentiate: <ul style="list-style-type: none"> <li>• Allergic reaction.</li> <li>• Anaphylaxis</li> <li>• Antigens</li> <li>• Antibodies</li> <li>• Anaphylactoid reaction</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 28.02 | Review the anatomy and physiology of the organs and structures related to anaphylaxis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 28.03 | Describe the prevention of anaphylaxis and appropriate patient education.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 28.04 | Review the pathophysiology of allergy and anaphylaxis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 28.05 | Describe the common methods of entry of allergens into the body.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 28.06 | Review common antigens most frequently associated with anaphylaxis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 28.07 | Differentiate among the various treatment and pharmacological interventions used in the management of anaphylaxis and allergic reaction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 29.0  | <b>Infectious Diseases:-</b> Demonstrate a complex depth, comprehensive breadth of knowledge of assessment and management of a patient who may have an infectious disease, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                        |

|       |                                                                                                                                                                                     |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 29.01 | Review EMT standards and benchmarks for infectious disease.                                                                                                                         |
| 29.02 | Review the specific anatomy and physiology pertinent to infectious and communicable diseases.                                                                                       |
| 29.03 | Describe the steps of an infectious process.                                                                                                                                        |
| 29.04 | Describe and differentiate infectious agents, including bacteria, viruses, fungi, protozoans, and helminths (worms).                                                                |
| 29.05 | Review characteristics of the immune system.                                                                                                                                        |
| 29.06 | Perform an assessment of a patient with an infectious/communicable disease.                                                                                                         |
| 29.07 | Effectively and safely manage a patient with an infectious/communicable disease.                                                                                                    |
| 29.08 | Review public health principles related to infectious disease.                                                                                                                      |
| 29.09 | Review the roles of local, state, and federal agencies involved in infectious disease surveillance and outbreaks.                                                                   |
| 29.10 | Describe the interactions of the agent, host, and environment as determining factors in disease transmission.                                                                       |
| 29.11 | Describes the EMS professional's responsibilities as well as their rights under the Ryan White Act.                                                                                 |
| 29.12 | Discuss the pathophysiology, signs, symptoms, assessment, and management and risk factors of significant health concerns.                                                           |
| 29.13 | Discuss the characteristics of, and organisms associated with, febrile and afebrile respiratory disease.                                                                            |
| 29.14 | Describe the EMS provider's role in patient education and preventing disease transmission.                                                                                          |
| 29.15 | Review the pathophysiology, risk factors, assessment, and prehospital management of sepsis/systemic inflammatory response syndrome (SIRS).                                          |
| 29.16 | Knowledge of: <ul style="list-style-type: none"> <li>• Antibiotic resistance infections</li> <li>• Vaccine-preventable diseases</li> <li>• Emerging infectious disease</li> </ul>   |
| 30.0  | <b>Endocrine Disorders:-</b> Demonstrate a complex depth, comprehensive breadth of knowledge in endocrine disorders/emergencies, patients of all ages. The student will be able to: |
| 30.01 | Identify the risk factors related to disorders of the endocrine system.                                                                                                             |
| 30.02 | Review the anatomy and physiology of organs and structures related to endocrinologic diseases.                                                                                      |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30.03 | Discuss the pathophysiology, signs and symptoms and demonstrate the assessment, and management of patients with the following endocrinologic emergencies: <ul style="list-style-type: none"> <li>• Hypoglycemia</li> <li>• Hyperglycemia</li> <li>• Diabetic ketoacidosis</li> <li>• Cushing's syndrome</li> <li>• Adrenal insufficiency</li> <li>• Pituitary disorders</li> <li>• Thyroid disorders</li> </ul>                                                                                                                                    |
| 31.0  | <b>Psychiatric, Cognitive and Behavioral:</b> Demonstrate a complex depth, comprehensive breadth of knowledge regarding the assessment and management of psychiatric disorders, cognitive and behavioral emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                           |
| 31.01 | Differentiate among behavior, psychiatric disorders, and behavioral emergencies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 31.02 | Basic principles of the mental health system <ul style="list-style-type: none"> <li>• Patterns of violence, abuse, and neglect</li> <li>• Suicide ideation</li> <li>• Excited delirium</li> <li>• Anxiety</li> <li>• Depression</li> <li>• Medical fear</li> <li>• Substance use disorder/ addictive behavior.</li> <li>• PTSD</li> <li>• Acute psychosis</li> <li>• Cognitive disorders</li> <li>• Thought disorders (Mood disorders, Neurotic disorders, Somatoform disorders, Factitious disorders)</li> <li>• Personality disorders</li> </ul> |
| 31.03 | Discuss the pathophysiology of common psychiatric disorders and behavioral emergencies.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 31.04 | Discuss the general factors that may cause an alteration in a patient's behavior.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 31.05 | Discuss the factors/signs or symptoms of various psychiatric emergencies to include suicide.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 31.06 | Manage a behavioral emergency scenario applying knowledge of medical/legal Florida Statutes.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 31.07 | Describe and demonstrate the assessment and management of the patient experiencing a behavioral or psychiatric emergency.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 31.08 | Describe the biological, psychosocial, and sociocultural influences on psychiatric disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 31.09 | Describe the special considerations for the safety of the EMS provider, and EMS crew, the patient and bystanders when dealing with behavioral and psychiatric emergencies.                                                                                                                                                                                                                                                                                                                                                                         |
| 31.10 | Explain the importance of provider behavior and communication in the care of a patient with a behavioral emergency.                                                                                                                                                                                                                                                                                                                                                                                                                                |

|       |                                                                                                                                                                                    |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 31.11 | Describe and demonstrate methods of restraint that may be used in the management of a patient with a behavioral emergency and possible legal implication.                          |
| 31.12 | List the risk factors (including behaviors) for suicide.                                                                                                                           |
| 32.0  | <b>Cardiovascular:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of cardiovascular disorders/emergencies, patients of all ages. The student will be able to: |
| 32.01 | Describe the epidemiology, incidence, morbidity and mortality of cardiovascular disease.                                                                                           |
| 32.02 | Identify the risk factors of coronary artery disease.                                                                                                                              |
| 32.03 | Review the anatomy and physiology of the heart and circulatory system.                                                                                                             |
| 32.04 | Discuss the electrophysiology of the heart.                                                                                                                                        |
| 32.05 | Discuss and demonstrate ECG monitoring, 12 Lead placement, acquisition, and interpretation.                                                                                        |
| 32.06 | Define and give examples of positive and negative inotropes, chronotropes and dromotropes.                                                                                         |
| 32.07 | Identify the normal characteristics of the point of maximal impulse (PMI).                                                                                                         |
| 32.08 | Discuss the normal and abnormal heart sounds and how they relate to hemodynamic events in the cardiac cycle.                                                                       |
| 32.09 | Describe a systematic approach to the analysis and interpretation of cardiac dysrhythmias.                                                                                         |
| 32.10 | Describe the conditions of pulseless electrical activity.                                                                                                                          |
| 32.11 | Compare and contrast electrotherapy to include pacing.                                                                                                                             |

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 33.07 | Review the following for Narcan (naloxone): <ul style="list-style-type: none"> <li>• Generic and trade names</li> <li>• Medication forms</li> <li>• Dose</li> <li>• Administration</li> <li>• Contraindications</li> <li>• Medications</li> <li>• Drugs of Abuse</li> <li>• Non-FDA approved medications and supplements</li> <li>• Serotonin Syndrome</li> <li>• Malignant Hyperthermia</li> </ul> |
| 34.0  | <b>Respiratory:</b> - Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment and management of respiratory disorders, include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/ or emergencies associated emergencies, patients of all ages. The student will be able to                                  |
| 34.01 | Discuss the epidemiology, morbidity, and mortality of respiratory illness in the United States.                                                                                                                                                                                                                                                                                                     |
| 34.02 | Review hypoventilation and hyperventilation and outline the conditions with which they are often associated.                                                                                                                                                                                                                                                                                        |
| 34.03 | Review the anatomy, physiology and functions of the respiratory system.                                                                                                                                                                                                                                                                                                                             |
| 34.04 | Discuss those factors that contribute to the formation of a general impression and degree of respiratory distress.                                                                                                                                                                                                                                                                                  |
| 34.05 | Identify breathing patterns that are associated with respiratory distress and neurologic insults and their correlation with the signs of increased work of breathing.                                                                                                                                                                                                                               |
| 34.06 | Review between normal and abnormal breath/lung sounds and its physiologic significance.                                                                                                                                                                                                                                                                                                             |
| 34.07 | Explain the concepts of hypoxic drive and auto-PEEP as they relate to the COPD patient.                                                                                                                                                                                                                                                                                                             |

34.08 Discuss the pathophysiology, signs and symptoms and demonstrate the assessment, and management of patients with the following respiratory conditions, including but not limited to:

- Pulmonary infections (upper and lower airway)
- Atelectasis
- Anatomic or foreign body obstruction
- Aspiration
- Asthma
- Emphysema
- Chronic bronchitis
- Spontaneous pneumothorax
- Pleural effusion
- Pulmonary embolism
- Cancer
- Toxic inhalations
- Pulmonary edema
- Acute respiratory distress syndrome (ARDS)
- Pneumonia
- Neoplasms of the lung
- Hyperventilation syndrome
- Upper airway disease
- RSV
- Croup
- Epiglottitis
- COPD
- Broncho pulmonary dysplasia
- Respiratory Distress
- Respiratory Failure
- Respiratory Arrest
- 

35.0 **Hematology:** Demonstrate a complex depth, foundational breadth of knowledge of the assessment, and management of hematology disorders/emergencies, patients of all ages. The student will be able to:

35.01 Identify the role of heredity in the risk for hematologic disorders.

35.02 Review the anatomy and physiology of the hematopoietic system.

35.03 Describe volume and volume-control related to the hematopoietic system.

35.04 Explain the significance of the hematocrit with respect to red cell size and number.

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 35.05 | Explain the correlation of the RBC count, hematocrit and hemoglobin values.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 35.06 | Recognize medications used to decrease the risk of thrombosis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 35.07 | Identify blood groups.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 35.08 | Discuss the pathophysiology, signs and symptoms and demonstrate the assessment, and management of patients with the following conditions, including but not limited to: <ul style="list-style-type: none"> <li>• Anemia</li> <li>• Leukemia</li> <li>• Lymphomas</li> <li>• Polycythemia</li> <li>• Disseminated intravascular coagulopathy</li> <li>• Hemophilia</li> <li>• Sickle cell disease</li> <li>• Multiple myeloma</li> <li>• Leukopenia/neutropenia</li> <li>• Leukocytosis</li> <li>• Thrombocytosis</li> <li>• Thrombocytopenia</li> <li>• Transfusion complications</li> <li>• Hemostatic disorders</li> </ul> |
| 36.0  | <b>Genitourinary/Renal: Demonstrate</b> a complex depth, comprehensive breadth of knowledge of genitourinary and renal emergencies to include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/or emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                             |
| 36.01 | Describe the epidemiology, incidence, morbidity, mortality, and risk factors of urological emergencies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 36.02 | Review the anatomy and physiology of the organs and structures related to urogenital diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 36.03 | Discuss referred pain and visceral pain as it relates to urology.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 36.04 | Discuss the pathophysiology, signs and symptoms and demonstrate the assessment, and management of patients of the following urologic and renal conditions, including but not limited to: <ul style="list-style-type: none"> <li>• Acute renal failure</li> <li>• Chronic renal failure</li> <li>• Complications related to hemodialysis and peritoneal dialysis.</li> <li>• Renal calculi</li> <li>• Priapism</li> <li>• Testicular torsion</li> <li>• Urinary tract infection</li> <li>• Complications related to urinary catheter management (not insertion)</li> <li>• Sexual assault (female and male)</li> <li>• Infection</li> <li>• Male genital tract conditions</li> </ul> |
| 36.05 | Review fluids, electrolytes, and acid-based disturbances.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 37.0  | <b>Gynecology:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment findings and the management of gynecology disorders Include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/or /emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                |
| 37.01 | Review anatomy and physiology of the female reproductive system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 37.02 | Identify the normal events of the menstrual and ovarian cycle.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 37.03 | Discuss the pathophysiology, signs and symptoms and demonstrate the assessment, and management of patients with specific gynecological emergencies, including but not limited to: <ul style="list-style-type: none"> <li>• Infection (including pelvic inflammatory disease, Bartholin's abscess, and vaginitis/ vulvovaginitis)</li> <li>• Ovarian cyst and ruptured ovarian cyst</li> <li>• Ovarian torsion</li> <li>• Endometriosis</li> <li>• Dysfunctional uterine bleeding</li> <li>• Prolapsed uterus</li> <li>• Vaginal foreign body</li> <li>• Vaginal hemorrhage</li> </ul>                                                                                               |
| 37.04 | Describe the importance of maintaining a patient's modesty and privacy while still being able to obtain necessary information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 37.05 | Discuss the need to provide care for a patient of sexual assault, while still preventing destruction of crime scene information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 38.0  | <b>Non-Traumatic Musculoskeletal Disorders:-</b> Demonstrate a fundamental depth, foundation breadth of knowledge of the assessment and management of non-traumatic fractures, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 38.01 | Review the anatomy and physiology of the musculoskeletal system                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 41.01            | Review the following for the cardiac arrest victim: <ul style="list-style-type: none"> <li>• Epidemiology</li> <li>• CPR Pathophysiology</li> <li>• Physiology of blood flow during external chest compressions</li> <li>• Resuscitation success/research</li> <li>• Ethical issues in resuscitation</li> </ul>                                                                                                                                                |
| 41.02            | Describe the epidemiology, including premorbid and comorbid conditions and prevention strategies, for Cardiac Arrest <ul style="list-style-type: none"> <li>• Termination of resuscitation</li> </ul>                                                                                                                                                                                                                                                          |
| 41.03            | Review defibrillation and cardioversion to include manual techniques, automatic and semi-automated devices.                                                                                                                                                                                                                                                                                                                                                    |
| <del>41.04</del> | <del>41.04</del> —Discuss causes, pathophysiology, signs, and symptoms and management of special arrest and peri-arrest conditions, including but not limited to: <ul style="list-style-type: none"> <li>• Electrolyte disorders</li> <li>• Toxic exposures</li> <li>• Drowning</li> <li>• Hypothermia</li> <li>• Near-Fatal Asthma</li> <li>• Anaphylaxis</li> <li>• Trauma</li> <li>• Pregnancy</li> <li>• Electrical shock and lightning strikes</li> </ul> |
| <del>41.05</del> | <del>41.05</del> —Review post resuscitative care include, temperature regulation, glucose/electrolyte management                                                                                                                                                                                                                                                                                                                                               |
| <del>42.0</del>  | <b>Trauma Overview:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of trauma patients, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                  |
| 42.01            | Review the pathophysiology of the trauma patient.                                                                                                                                                                                                                                                                                                                                                                                                              |

|       |                                                                                                                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 42.02 | Review the components of comprehensive trauma systems and levels of trauma centers.                                                                                                                      |
| 42.03 | Review the considerations for different transportation modes to a trauma center.                                                                                                                         |
| 42.04 | Discuss the kinematics of blunt and penetrating trauma.                                                                                                                                                  |
| 42.05 | Discuss and describe significant and non-significant mechanism of injury (MOI) and provide examples of each.                                                                                             |
| 42.06 | Discuss and demonstrate the application of State of Florida's trauma scorecard methodologies as required in Florida Statute and Florida Administrative Code.                                             |
| 42.07 | Review the National Trauma Triage Protocol of Injured Patients.                                                                                                                                          |
| 42.08 | Review forming a field impression and utilizing available information to determine a differential diagnosis.                                                                                             |
| 42.09 | Review the need for rapid intervention transport of the trauma patient.                                                                                                                                  |
| 43.0  | <b>Bleeding:-</b> Demonstrate a complex depth, comprehension breadth of knowledge of pathophysiology, assessment and management of bleeding patients of all ages. The student will be able to:           |
| 43.01 | Review the compensatory mechanism in hemorrhagic shock.                                                                                                                                                  |
| 43.02 | Review the administration of medications to assist in the maintenance of homeostasis.                                                                                                                    |
| 43.03 | Review the maintenance of tissue oxygenation in a bleeding patient.                                                                                                                                      |
| 43.04 | Discuss appropriate fluid resuscitation for the patient in hemorrhagic shock.                                                                                                                            |
| 43.05 | Review the different methods/modalities of controlling bleeding.                                                                                                                                         |
| 44.0  | <b>Chest Trauma:-</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of chest trauma, patients of all ages. The student will be able to: |
| 44.01 | Review the anatomy and physiology of the organs and structures related to thoracic injuries. <ul style="list-style-type: none"> <li>• Blunt vs Penetrating Mechanisms</li> </ul>                         |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 44.02 | <p>Review the pathophysiology, signs and symptoms and mechanism of injury (MOI) of the following injuries, including but not limited to:</p> <ul style="list-style-type: none"> <li>• myocardial injuries               <ul style="list-style-type: none"> <li>○ pericardial tamponade</li> <li>○ myocardial contusion</li> <li>○ myocardial rupture</li> </ul> </li> <li>• Vascular injury               <ul style="list-style-type: none"> <li>○ aortic dissection</li> <li>○ pulmonary contusion</li> </ul> </li> <li>• Hemothorax</li> <li>• Pneumothorax</li> <li>• Hemopneumothorax</li> <li>• Cardiac Tamponade</li> <li>• Commotio cordis</li> <li>• Tracheobronchial disruption</li> <li>• Diaphragmatic rupture and injury</li> <li>• Traumatic asphyxia</li> <li>• Rib fracture</li> <li>• Flail segment</li> <li>• Sternal fracture</li> <li>• Vascular injuries</li> <li>• Impaled objects</li> <li>• Evisceration/shock</li> </ul> |
| 44.03 | Discuss monitoring of chest tubes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 44.04 | Demonstrate the following techniques of management for thoracic injuries: needle decompression, elective intubation, ECG monitoring, oxygenation, and ventilation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 45.0  | <b>Abdominal and Genitourinary Trauma:-</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of abdominal and genitourinary trauma, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 45.01 | Review the anatomy and physiology of organs and structures related to abdominal injuries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 45.02 | Describe the mechanism of injury for and types of open and closed abdominal and retroperitoneal injuries involving seat belts, penetrating, blunt and evisceration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|       |                                                                                                                                                                                                                                                                                                                                                                                                |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 45.03 | Describe and demonstrate the pathophysiology, signs and symptoms and the assessment and management for, including but not limited to: <ul style="list-style-type: none"> <li>• Pelvic fractures.</li> <li>• Solid organ injuries</li> <li>• Hollow organ injuries</li> <li>• Abdominal vascular injuries</li> <li>• Retroperitoneal space (kidneys)</li> <li>• Genitourinary system</li> </ul> |
| 45.04 | Review the psychological considerations associated with genitourinary injuries.                                                                                                                                                                                                                                                                                                                |
| 46.0  | <b>Orthopedic Trauma:-</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of orthopedic trauma patients of all ages. (Include psychosocial aspects of age- related assessment and treatment modifications for pediatric and geriatric patients). The student will be able to:                                               |
| 46.01 | Review the anatomy and physiology of the musculoskeletal system, include the healing process.                                                                                                                                                                                                                                                                                                  |
| 46.02 | Discuss pathophysiology, signs and symptoms, and MOI for orthopedic trauma.                                                                                                                                                                                                                                                                                                                    |
| 46.03 | Define the different types of orthopedic trauma including fracture classifications. <ul style="list-style-type: none"> <li>• <del>Upper</del> Vs Lower</li> <li>• <del>Open</del> / Closed Fractures</li> <li>• <del>Pelvic</del></li> <li>• <del>Dislocations</del></li> <li>• <del>Sprains</del></li> <li>• <del>Strains</del></li> </ul>                                                    |
| 46.04 | List the 6 "P" orthopedic injury assessment. <ul style="list-style-type: none"> <li>• <del>Pain</del></li> <li>• <del>Paresthesia</del></li> <li>• <del>Poikilothermia</del></li> <li>• <del>Pallor</del></li> <li>• <del>Paralysis</del></li> <li>• <del>Pulselessness</del></li> <li>• <del></del></li> </ul>                                                                                |
| 46.05 | Discuss the following management techniques: <ul style="list-style-type: none"> <li>• Heat therapy</li> <li>• Cold therapy</li> <li>• Splinting</li> </ul>                                                                                                                                                                                                                                     |

|       |                                                                                                                                                                                                                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 46.06 | Describe and demonstrate the assessment and management of a patient with a suspected orthopedic trauma including medication administration (analgesics and anxiolytics).                                                                                                                                                    |
| 46.07 | Discuss the need for assessment of distal pulses, motor, and sensation before and after splinting.                                                                                                                                                                                                                          |
| 46.08 | Define Luxation and Subluxation.                                                                                                                                                                                                                                                                                            |
| 46.09 | Explain the rationale for splinting at the scene versus load and go.                                                                                                                                                                                                                                                        |
| 46.10 | Demonstrate the proper use various splinting materials and devices to include improvised and traction splints.                                                                                                                                                                                                              |
| 46.11 | Discuss and demonstrate the assessment and management of compartment and crush syndrome: <ul style="list-style-type: none"> <li>• Destination decision</li> <li>• Rhabdomyolysis</li> </ul>                                                                                                                                 |
| 46.12 | Discuss the pathophysiology and demonstrate the assessment and management of a tendon injury to the knee (patellar), shoulder, and Achilles.                                                                                                                                                                                |
| 46.13 | Discuss the proper procedure to package an amputated body part for replantation.                                                                                                                                                                                                                                            |
| 47.0  | <b>Tissue Trauma:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and <b>Softsoft</b> management of soft tissue trauma, patients of all ages. The student will be able to:                                                                                              |
| 47.01 | Review anatomy and physiology and identify the major functions of the integumentary system.                                                                                                                                                                                                                                 |
| 47.02 | Discuss the pathophysiology of soft tissue injuries and the healing process including: <ul style="list-style-type: none"> <li>• Inflammation</li> <li>• Epithelialization</li> <li>• Neovascularization</li> <li>• Collagen Synthesis</li> <li>• Alterations in wound healing</li> <li>• Abnormal scar formation</li> </ul> |
| 47.03 | Describe and demonstrate the assessment and management of various soft tissue injuries. <ul style="list-style-type: none"> <li>• Wounds (avulsion, bite, laceration, puncture, incision)</li> <li>• Crush/compartment syndrome</li> <li>• High-pressure injection injury</li> </ul>                                         |
| 47.04 | Identify types of burn injuries including: <ul style="list-style-type: none"> <li>• Thermal burn</li> <li>• Chemical burn</li> <li>• Electrical burn</li> <li>• Radiation burn</li> </ul>                                                                                                                                   |

|       |                                                                                                                                                                                                                                                                                          |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 47.05 | Describe the depth classification of burn injuries including: <ul style="list-style-type: none"> <li>• Superficial burn</li> <li>• Partial-thickness burn</li> <li>• Full-thickness burn</li> <li>• Other depth classification</li> </ul>                                                |
| 47.06 | Describe and demonstrate methods for determining body surface area percentage of a burn injury including the “rule of nines”, the “rule of palms”, and other methods.                                                                                                                    |
| 47.07 | Explain how the seriousness of a burn is related to its depth and percentage of body surface area (BSA) involved.                                                                                                                                                                        |
| 47.08 | Review the various management techniques for hemorrhage control.                                                                                                                                                                                                                         |
| 47.09 | Differentiate among the types of injuries requiring the use of occlusive versus non-occlusive dressing.                                                                                                                                                                                  |
| 47.10 | Demonstrate the proper use of any Morgan□ type lens for irrigation of the eye. <ul style="list-style-type: none"> <li>• Thermal</li> <li>• Inhalation</li> <li>• Chemical</li> <li>• Electrical</li> <li>• Radiation</li> </ul>                                                          |
| 47.11 | Describe the pathophysiologic complications and systemic complications of a burn injury.                                                                                                                                                                                                 |
| 47.12 | Discuss comorbidities in burn patients.                                                                                                                                                                                                                                                  |
| 47.13 | Describe the management of a burn injury, including airway and ventilation, circulation, pharmacological, non-pharmacological, transport considerations, psychological support/communication strategies, and other management.                                                           |
| 47.14 | Describe the types of chemicals and their burning processes and a chemical burn injury to the eye.                                                                                                                                                                                       |
| 47.15 | Discuss appropriate fluid resuscitation for burn patients.                                                                                                                                                                                                                               |
| 48.0  | <b>Head, Face, Neck, and Spine:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of head, face, neck, and spine trauma, patients of all ages. The student will be able to:                                                                                         |
| 48.01 | Discuss types of and potential complications of facial injuries.                                                                                                                                                                                                                         |
| 48.02 | Discuss pathophysiology, signs and symptoms, assessment and management, and a field impression for injuries to the following areas: <ul style="list-style-type: none"> <li>• Eye(s)</li> <li>• Nose</li> <li>• Throat/neck</li> <li>• Face</li> <li>• Mouth</li> <li>• Ear(s)</li> </ul> |

|                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 48.03                                                                                                                                                                              | Distinguish between an open and closed head injury.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 48.04                                                                                                                                                                              | Define and explain the process involved with increasing ICP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 48.05                                                                                                                                                                              | Describe and demonstrate the assessment and general management of the head/ brain injury patient, including pharmacological and non-pharmacological treatment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 48.06                                                                                                                                                                              | <p>Discuss the pathophysiology, signs and symptoms, and assessment and management for a patient for each of the following conditions:</p> <ul style="list-style-type: none"> <li>• -Skull fracture</li> <li>• Cerebral contusion</li> <li>• Intracranial hemorrhage</li> <li>• Epidural, subdural, intracerebral, and subarachnoid</li> <li>• Perforated tympanic membranes</li> <li>• Orbital fracture / Globe rupture</li> <li>• Severe Epistaxis</li> <li>• Mandibular fracture</li> <li>• Dental fracture</li> <li>• Facial / Unstable Facial fracture</li> <li>• Penetrating neck trauma</li> <li>• Spine trauma</li> <li>• Shaken baby syndrome.</li> <li>• Laryngotracheal injuries</li> </ul> |
| 48.07                                                                                                                                                                              | Review various methods for stabilization and removal of a helmet.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>49.0 Nervous System Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of nervous system trauma, patients of all ages. The student will be able to: |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 49.01                                                                                                                                                                              | Review the anatomy and physiology of the central nervous system, brain, spinal cord, skull and spinal column.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 49.02                                                                                                                                                                              | <p>Discuss pathophysiology, signs and symptoms, assessment, and management of the following nervous system injury including:</p> <ul style="list-style-type: none"> <li>• Cauda Equine syndrome</li> <li>• peripheral nerve injuries</li> <li>• intracerebral hemorrhage</li> <li>• cranial fractures</li> <li>• brain tissue injuries</li> <li>• spinal cord injuries</li> <li>• Brown-Sequard Syndrome</li> <li>• anterior cord syndrome</li> <li>• central cord syndrome</li> <li>• spinal shock</li> </ul>                                                                                                                                                                                        |

|                    |                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 49.03              | Discuss the mechanism of injury which would result in a nervous system injury.                                                                                                                                                                                                                                                                                              |
| 49.04              | Review the rationale for and potential for motion restriction for the entire spine when a cervical spine injury is suspected.                                                                                                                                                                                                                                               |
| 49.05              | Discuss the research involving the management of nervous system injuries and patient management.                                                                                                                                                                                                                                                                            |
| <del>50</del> 50.0 | <b>Special Considerations in Trauma:-</b> Demonstrate a complex depth, comprehensive breadth of knowledge of special considerations in trauma, patients of all ages. The student will be able to:                                                                                                                                                                           |
| 50.01              | Integrate the assessment and management differences associated with the following special populations: <ul style="list-style-type: none"> <li>• Pregnancy</li> <li>• Pediatric</li> <li>• Geriatric</li> <li>• Cognitively impaired patient</li> </ul>                                                                                                                      |
| 51.0               | <b>Environmental Emergencies:-</b> Demonstrate a complex depth, comprehensive breadth of knowledge of environmental emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                         |
| 51.01              | Discuss the pathophysiology, signs and symptoms, assessment and management and MOI of the following: <ul style="list-style-type: none"> <li>• Drowning and water related incidents</li> <li>• Temperature-related illness</li> <li>• Bites and envenomation</li> <li>• Diving injuries</li> <li>• Lightning (electrical) injury</li> <li>• High altitude illness</li> </ul> |
| 51.02              | Identify environmental factors that may cause illness, exacerbate preexisting illness and complicate treatment or transport decisions.                                                                                                                                                                                                                                      |
| 51.03              | Review several methods of temperature monitoring.                                                                                                                                                                                                                                                                                                                           |
| 51.04              | Describe the general process of thermal regulation, including substances used and wastes generated.                                                                                                                                                                                                                                                                         |
| 51.05              | Define fever and discuss its pathophysiologic mechanism.                                                                                                                                                                                                                                                                                                                    |
| 51.06              | Discuss the role of fluid therapy in the treatment of temperature related emergencies.                                                                                                                                                                                                                                                                                      |
| 51.07              | Review the gas laws related to the pathophysiology of injury in a submersion emergency.                                                                                                                                                                                                                                                                                     |
| 51.08              | Describe the function of the Divers Alert Network (DAN) and how its members may aid in the management of diving-related illnesses.                                                                                                                                                                                                                                          |
| 51.09              | Differentiate among the various treatments and interventions for the management of diving accidents.                                                                                                                                                                                                                                                                        |
| 51.10              | Describe the specific function and benefit of hyperbaric oxygen therapy for the management of diving accidents.                                                                                                                                                                                                                                                             |
| 52.0               | <b>Multi-Systems Trauma:-</b> Demonstrate a complex depth, comprehensive breadth of knowledge of multi-system trauma and blast injuries. The student will be able to:                                                                                                                                                                                                       |

| 55.0  | <b>Pediatrics:-</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the pediatric patient within the scope of practice of the paramedic. The student will be able to:                                                                                                                                                                                                                                                                                                                            |
| 55.01 | Discuss key anatomical, physiological, and developmental characteristics of infants and children and their implications.                                                                                                                                                                                                                                                                                                                                                                                                              |
| 55.02 | Review and demonstrate techniques for successful assessment and treatment of infants and children.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 55.03 | Review airway and ventilatory considerations and procedures for pediatric patients.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 55.04 | Discuss the indications and methods for gastric decompression for infants and children.                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 55.05 | Discuss the pathophysiology, signs and symptoms, assessment and management of the following, including but not limited to: <ul style="list-style-type: none"> <li>• Altered level of consciousness</li> <li>• Trauma</li> <li>• Hypo-perfusion</li> <li>• Respiratory distress/failure</li> <li>• Cardiac dysrhythmia</li> <li>• Neurological emergency</li> <li>• Abuse/neglect</li> <li>• SUIDS</li> <li>• FBO</li> <li>• Respiratory emergencies</li> <li>• Congenital heart disease</li> <li>• Hydrocephalus/VP shunts</li> </ul> |
| 55.06 | Discuss the appropriate procedure and equipment for vascular and intraosseous access.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 55.07 | Review basic cardiac life support (CPR) guidelines for infants and children.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 55.08 | Integrate advanced life support skills with basic cardiac life support for infants and children.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 55.09 | Discuss the indications, dosage, route of administration and special considerations for medication administration in infants and children.                                                                                                                                                                                                                                                                                                                                                                                            |
| 55.10 | Describe Sudden Unexplained Infant Death Syndrome (SUIDS), current theories, assessment and management, and the immediate needs of the family.                                                                                                                                                                                                                                                                                                                                                                                        |
| 55.11 | Discuss the parent/caregiver responses to the death of an infant or child.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 55.12 | Discuss and demonstrate the use of a length-based resuscitation tape and other methods for determining equipment sizes, drug doses, and other pertinent information for a pediatric patient.                                                                                                                                                                                                                                                                                                                                          |
| 55.13 | Discuss proper placement of a gastric tube in infants and children.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 55.14 | Review appropriate routes and techniques for medication administration.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 57.04 | Describe the characteristics associated with the profile of the typical abuser of: <ul style="list-style-type: none"> <li>• Domestic abuser</li> <li>• Elder abuser</li> <li>• Child abuser</li> </ul>                                                                                                                                                                                                                                                                                  |
| 57.05 | Discuss the role of the Paramedic as a patient advocate for vulnerable populations.                                                                                                                                                                                                                                                                                                                                                                                                     |
| 57.06 | Differentiate between hospice/palliative care and curative care.                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 57.07 | Describe paraplegia/quadruplegia.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 57.08 | Describe the various etiologies of mental illness.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 57.09 | Recognize the presenting signs of the following: <ul style="list-style-type: none"> <li>• Autism spectrum</li> <li>• Developmental disability</li> <li>• Down's syndrome</li> </ul>                                                                                                                                                                                                                                                                                                     |
| 57.10 | Describe the following diseases/illnesses and identify each of their possible presenting signs, including but not limited to: <ul style="list-style-type: none"> <li>• Arthritis</li> <li>• Cancer</li> <li>• Cerebral palsy</li> <li>• Cystic fibrosis</li> <li>• Multiple sclerosis</li> <li>• Muscular dystrophy</li> <li>• Myasthenia gravis</li> <li>• Poliomyelitis</li> <li>• Spina bifida,</li> <li>• Patients with a previous head injury</li> <li>• Mental illness</li> </ul> |
| 57.11 | Review hospice care, comfort care and DNR/DNAR as they relate to local practice, law and policy.                                                                                                                                                                                                                                                                                                                                                                                        |
| 57.12 | Describe the access and discuss indwelling catheters, implanted central IV ports and central line monitoring.                                                                                                                                                                                                                                                                                                                                                                           |

|       |                                                                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 57.13 | Describe complications of assessing each of the airway, vascular access, and GI/GU devices.                                                                                                        |
| 57.14 | Identify and describe the failure of wound drains.                                                                                                                                                 |
| 57.15 | Review the rights of the terminally ill.                                                                                                                                                           |
| 57.16 | Demonstrate proper tracheotomy care.                                                                                                                                                               |
| 57.17 | Demonstrate the insertion of a new inner cannula and/or the use of an endotracheal tube to temporarily maintain an airway in a tracheostomy patient.                                               |
| 58.0  | <b>Principles of Safely Operating a Ground Ambulance:-</b> Demonstrate a simple depth, foundational breadth of knowledge of risks and responsibilities of transport. The student will be able to:  |
| 58.01 | Review the EMT standards and benchmarks for the Principles of Safely Operating a Ground Ambulance.                                                                                                 |
| 58.02 | —Risks and responsibilities of emergency response and radio communications.                                                                                                                        |
| 58.03 | —Risks and responsibilities of operating emergency vehicles                                                                                                                                        |
| 58.04 | —Pediatric transport considerations                                                                                                                                                                |
| 58.05 | —Risks and responsibilities of transport                                                                                                                                                           |
| 59.0  | <b>Incident Management:-</b> Demonstrate a complex depth, comprehensive breadth of knowledge of establishing and working within the incident management system. The student will be able to:       |
| 59.01 | Review the EMT standards and benchmarks for Incident Management and apply a complex depth and comprehensive breadth of establishing and working within the incident management system.             |
| 60.0  | <b>Multiple Casualty Incidents:-</b> Demonstrate a simple depth, foundational breadth of knowledge of responding to an emergency during a multiple casualty incident. The student will be able to: |
| 60.01 | Review the EMT standards and benchmarks for Multiple Casualty Incidents.                                                                                                                           |
| 60.02 | ——Establish and work within the incident management system.                                                                                                                                        |
| 60.03 | ——Understand the principles of Crew Resource Management                                                                                                                                            |
| 61.0  | <b>Air Medical:-</b> Demonstrate a complex depth, comprehensive breadth of knowledge of air medical transport risks, needs and advantages. The student will be able to:                            |
| 61.01 | Describe the advantages and disadvantages of air medical transport.                                                                                                                                |
| 61.02 | Safe air medical operations                                                                                                                                                                        |
| 61.03 | Identify appropriate reasons for the use of air medical for emergency patient transport.                                                                                                           |
| 61.04 | Describe the risks involved with the use of air medical transport.                                                                                                                                 |

|                        |                                                                                                                                                                                                                                                 |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 61.05                  | Criteria for utilizing air medical response                                                                                                                                                                                                     |
| 61.06                  | Demonstrate the actions needed to ensure effective and safe ground operations involving air medical response.                                                                                                                                   |
| 61.07                  | Demonstrate appropriate communication of information needed for safe and effective interaction between the air medical crew and ground personnel.                                                                                               |
| 61.08                  | Medical risks/needs/advantages                                                                                                                                                                                                                  |
| 62.0                   | <b>Vehicle Extrication:</b> Demonstrate a simple depth, simple breadth of knowledge for safe vehicle extrication and use of simple hand tools. The student will be able to:                                                                     |
| 62.01                  | Review the EMT standards and benchmarks for Vehicle Extrication.                                                                                                                                                                                |
| 62.02                  | ——Safety principles of rescue operations                                                                                                                                                                                                        |
| 63.0                   | <b>Hazardous Materials Awareness:</b> Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating in a cold zone at a hazardous material or other special incident. The student will be able to:         |
| <del>62.03</del> 63.01 | Review the EMT standards and benchmarks for Hazardous Materials Awareness.                                                                                                                                                                      |

| 64.06                  | Treatment principles.                                                                                                                                                                                                                           |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

The Paramedic standards and benchmarks in this framework include all of the content, knowledge and skills at the EMT level in addition to the Paramedic objectives. For those standards that state “Review EMT Objectives.” Please refer to the EMT curriculum framework for specific objectives.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This is an instructional program that prepares students for employment as emergency medical technicians (Emergency Medical Technicians and Paramedics) to function at the basic pre-hospital emergency medical technician level and treat various medical/trauma conditions using appropriate equipment and materials. The program prepares students for certification as EMT's in accordance with Chapter 64J of the Florida Administrative Code. The program must be approved by the Department of Health, Office of Emergency Medical Services, and the curriculum must adhere to the US Department of Transportation (DOT) National EMS Education Standards for EMT. This is the initial level for a career in emergency medical services and the primary prerequisite for paramedic training and certification.

The content includes but is not limited to patient assessment, airway management, cardiac arrest, external and internal bleeding and shock, traumatic injuries, fractures, dislocations, sprains, poisoning, heart attack, stroke, diabetes, acute abdomen, communicable diseases, patients with

abnormal behavior, alcohol and drug abuse, the unconscious state, emergency childbirth, burns, environmental hazards, communications, reporting, extrication and transportation of patient. The student must be proficient in patient assessment and evaluation, the use of suctioning devices, oral and nasal airways, resuscitation devices, oxygen equipment, sphygmomanometer and stethoscope, splints of all types, pneumatic anti-shock garments, extrication tools, dressings and bandages, stretchers and patient carrying devices.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

~~"All **EMR/EMT/Paramedic** students are required to complete the 4-hour Traffic Incident Management Safety (TIMS) course at least once. This requirement can be fulfilled either as a prerequisite or as part of the curriculum, at the discretion of the EMS education program."~~

~~"It is highly recommended, though not mandatory, that courses in medical terminology, anatomy, and pharmacology be completed before enrolling in EMT and Paramedic training."~~

### Program Structure

This program is an Applied Technology Diploma (ATD) program that is part of a technical degree program, is less than 60 credit hours, and leads to employment in a specific occupation. An ATD program may consist of either technical credit or college credit. A public school district may offer an ATD program only as clock hour credit, with college credit awarded to a student upon articulation to a state college.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly

### Clock Hour Program

When offered at the district level, this program is a planned sequence of instruction consisting of 1 occupational completion point and the courses as shown below.

| OCP | Course Number | Course Title                 | Length    |
|-----|---------------|------------------------------|-----------|
| A   | EMS0110       | Emergency Medical Technician | 300 hours |

### **College Credit Program**

When offered at the college credit level, this ATD program is part of the Emergency Medical Services AS program (1351090402) and has a length of 12 credits.

### **Regulated Programs**

This program meets the Department of Health trauma score card methodologies and Sudden Unexpected Infant Death Syndrome (SUIDS) training education requirements. Upon completion of this program, the instructor will provide a certificate to the student verifying that these requirements have been met. This program also meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

Please refer to chapter 401, F.S. for more information on disqualification for the EMT license through the Office of Emergency Medical Services (EMS), Department of Health.

An EMT program must be taught by an instructor meeting the qualifications as set forth in 64J-1.0201, FAC.

Students must complete this program, or demonstrate the mastery of skills standards contained in this program, before advancing in either of the other programs in this cluster. Completion of this program should prepare the student for the certification examination approved for the state of Florida.

An American Heart Association or Red Cross certification or equivalent in "professional" BLS is required of all candidates for entrance into an EMT program.

The Student Performance Standards for Emergency Medical Technology-EMT were adapted from the US Department of Transportation (DOT) National EMS Educational Standards for EMT.

Once students have successfully completed the EMT Program, they may be given a certificate stating they have met all Emergency Medical Responder competency requirements.

Florida Statute 401.2701, requires that the instructor-student ratio should not exceed 1:6. Hospital activity shall include a minimum of 20 hours of supervised clinical supervision, including 10 hours in a hospital emergency department. Clinical activity shall include appropriate patient assessment skills, intervention and documentation relevant to each clinical rotation.

Field internship shall include a competency based program to assure appropriate pre-hospital assessment and management of medical and trauma patients, as well as associated manual skills. The field internship activity shall include a minimum of 5 emergency runs resulting in patient care and

transport appropriate for the EMT. In addition, the patient care component should include minimum competencies in patient assessment, airway management and ventilation, trauma and medical emergencies.

It is strongly recommended this program be accredited by Commission on Accreditation of Allied Health Education Programs (CAAHEP).

“It is highly recommended, though not mandatory, that courses in medical terminology, anatomy, and pharmacology be completed before enrolling in EMT and Paramedic training.”

“All EMT/Paramedic students are required to complete the 4-hour Traffic Incident Management Safety (TIMS) course at least once. This requirement can be fulfilled either as a prerequisite or as part of the curriculum, at the discretion of the EMS education program.”

**Job Attainment****10.0 Find, assess and apply to job opportunities.**10.01 Identify online job posts relevant to his or her career aspirations.10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.10.03 Define what information, documentation and writing prompts are required for the positions.**11.0 Communicate personal competence, character and fit for a job opportunity.**11.01 Develop a resume.11.02 Write a cover letter.11.03 Curate a professional portfolio that includes work products.11.04 Prepare for and experience a mock job interview.**12.0 Cultivate and leverage relationships to professionally advance.**12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.12.02 Develop a plan to cultivate a professional digital footprint.12.03 Develop a networking plan for a specific industry of interest.

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate a simple depth, foundational breadth of knowledge of EMS systems.
- 02.0 Demonstrate a simple depth, simple breadth of knowledge of research and evidence-based decision making.
- 03.0 Demonstrate a fundamental depth, foundational breadth of knowledge of workforce safety and wellness.
- 04.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the principles of medical documentation and report writing.
- 05.0 Demonstrate a simple depth, simple breadth of knowledge of the EMS communication system, communication with other health care professionals, and team communication.
- 06.0 Demonstrate a simple depth, simple breadth of knowledge of the principles of therapeutic communication.
- 07.0 Demonstrate a fundamental depth, foundational breadth of knowledge of medical legality and ethics.
- 08.0 Demonstrate a fundamental knowledge of the anatomy and function of all human systems to the practice of EMS.
- 09.0 Demonstrate a fundamental knowledge in the use of medical terminology.
- 10.0 Demonstrate a fundamental knowledge of the causes and pathophysiology of shock and the components of resuscitation.
- 11.0 Demonstrate a fundamental knowledge of life span development to patient assessment and management.
- 12.0 Demonstrate a simple knowledge of the principles of illness and injury prevention in emergency care.
- 13.0 Demonstrate a simple depth, simple breadth of knowledge of pharmacology, medication safety, and medication types used during an emergency.
- 14.0 Demonstrate a fundamental depth, simple breadth of knowledge of emergency medications within the scope of practice of the EMT.
- 15.0 Demonstrate a foundational depth, fundamental breadth of knowledge of airway management patients of all ages within the scope of practice of the EMT.
- 16.0 Demonstrate a fundamental depth, foundational breadth of knowledge of respiration.
- 17.0 Demonstrate a fundamental depth, foundational breadth of knowledge of assessment and management utilizing ventilation patients of all ages.
- 18.0 Demonstrate a fundamental depth, foundational breadth of knowledge of scene management and multiple patient situations.
- 19.0 Demonstrate a fundamental depth, simple breadth of knowledge of the primary assessment for all patient situations.
- 20.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the components of history taking.
- 21.0 Demonstrate a fundamental depth, foundational breadth of knowledge of techniques used for a secondary assessment.
- 22.0 Demonstrate a simple depth, simple breath of knowledge of monitoring devices within the scope of practice of the EMT.
- 23.0 Demonstrate a fundamental depth, foundational breadth of knowledge of how and when to perform a reassessment for all patient situations.
- 24.0 Demonstrate a simple depth, foundation breadth of knowledge of pathophysiology, assessment and management of medical complaints.
- 25.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of neurologic disorders/emergencies patients of all ages.
- 26.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of abdominal and gastrointestinal disorders/emergencies patients of all ages.
- 27.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of immunology disorders/emergencies patients of all ages.
- 28.0 Demonstrate a simple depth, simple breadth of knowledge of the assessment and management of a patient who may have an infectious disease patient of all ages.

- 29.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of endocrine disorders/emergencies patients of all ages.
- 30.0 Demonstrate a fundamental depth, foundational breadth of knowledge regarding the assessment and management of psychiatric emergencies patients of all ages.
- 31.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of cardiovascular emergencies patients of all ages.
- 32.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of toxicological (poisoning and overdose) emergencies patients of all ages.
- 33.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of respiratory disorders/emergencies patients of all ages.
- 34.0 Demonstrate a simple depth, simple breadth of knowledge of the assessment, and management of hematology disorders patients of all ages.
- 35.0 Demonstrate a simple depth, simple breath of knowledge of the assessment and management of genitourinary/ renal emergencies patients of all ages.
- 36.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of gynecologic emergencies patients of all ages.
- 37.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of non-traumatic fractures patients of all ages.
- 38.0 Demonstrate a simple depth, simple breadth of knowledge of assessment and management of diseases of the Eyes, Ears, Nose, and Throat patients of all ages.
- 39.0 Demonstrate a fundamental knowledge of the causes, pathophysiology, and management of shock and respiratory failure patients of all ages.
- 40.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of the trauma patient patients of all ages.
- 41.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of bleeding patients of all ages.
- 42.0 Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment, and management of chest trauma patients of all ages.
- 43.0 Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment, and management of abdominal and genitourinary trauma patients of all ages.
- 44.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of orthopedic trauma patients of all ages.
- 45.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of soft tissue trauma patients of all ages.
- 46.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of head, facial, neck, and spine trauma patients of all ages.
- 47.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of nervous system trauma patients of all ages.
- 48.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of trauma patients with special considerations patients of all ages.

- 49.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of environmental emergencies patients of all ages.
- 50.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the pathophysiology, assessment, and management of multi-system trauma and blast injuries patients of all ages.
- 51.0 Demonstrate a fundamental depth, foundational breadth of knowledge of management of the ~~obstetric~~pediatric patient within the scope of practice of the EMT.
- 52.0 Demonstrate a fundamental depth, foundational breadth of knowledge of management of the newborn and neonatal patient within the scope of practice of the EMT.
- 53.0 Demonstrate a fundamental depth, fundamental breadth of knowledge of the management of the pediatric patient within the scope of practice of the EMT.
- 54.0 Demonstrate a fundamental depth, foundational breadth of knowledge of management of the geriatric patient within the scope of practice of the EMT.
- 55.0 Demonstrate a simple depth, simple breadth of knowledge of management of the patient with special challenges patients of all ages.
- 56.0 Demonstrate a simple depth, foundational breadth of knowledge of risks and responsibilities of transport.
- 57.0 Demonstrate a fundamental depth, fundamental breadth of knowledge of establishing and working within the incident management system.
- 58.0 Demonstrate a simple depth, foundational breadth of knowledge of responding to an emergency during a multiple casualty incident.
- 59.0 Demonstrate a simple depth, simple breadth of knowledge of safe air medical operations and criteria for utilizing air medical response.
- 60.0 Demonstrate a simple depth, simple breadth of knowledge for safe vehicle extrication and use of simple hand tools.
- 61.0 Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating in a cold zone at a hazardous material or other special incident.
- 62.0 Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating on the scene of a natural or man-made disaster.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Emergency Medical Technician – ATD  
**Clock Hour Program Number:** W170212

**Course Number: EMS0110**  
**Occupational Completion Point: A**  
**Emergency Medical Technician – 300 Hours**

|                          |                                                                                                                                                                         |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>01.0 EMS Systems:</b> | Demonstrate a simple depth, foundational breadth of knowledge of EMS systems. – The student will be able to:                                                            |
| 01.01                    | Define Emergency Medical Services (EMS) systems.                                                                                                                        |
| 01.02                    | Discuss the historical background of the development of the EMS system.                                                                                                 |
| 01.03                    | Identify the four levels of national EMS providers (EMR, EMT, AEMT and PM) as well as the three levels (EMR, EMT, and PM) in the State of Florida.                      |
| 01.04                    | Discuss the specific statutes and regulations regarding the EMS system in Florida.                                                                                      |
| 01.05                    | Discuss vehicle and equipment readiness.                                                                                                                                |
| 01.06                    | Characterize the EMS system's role in prevention and public education.                                                                                                  |
| 01.07                    | Systems of care, e.g., Stroke, STEMI, Trauma, Pediatrics (S, F).                                                                                                        |
| 01.08                    | MIH/CP and other EMS-related specialty roles (S, S).                                                                                                                    |
| 01.09                    | Discuss the roles and responsibilities of the EMT related to personal safety of the crew, patient and by standers.                                                      |
| 01.10                    | Discuss the roles and responsibilities of the EMT to operate emergency vehicles, provide scene leadership and perform patient assessment and administer emergency care. |
| 01.11                    | Discuss the maintenance of and differences between certification and licensure for the EMS professional in the State of Florida and NREMT.                              |
| 01.12                    | Define quality improvement and discuss the EMT's role in the process.                                                                                                   |
| 01.13                    | Quality improvement vs. quality assurance (S, F).                                                                                                                       |
| 01.14                    | Role of medical oversight (S, S).                                                                                                                                       |
| 01.15                    | Culture of safety.                                                                                                                                                      |
| 01.16                    | Patient safety (SF)                                                                                                                                                     |
| 01.17                    | Identify the basics of common methods of payment for healthcare services.                                                                                               |

| 02.05 | Convert and use traditional and metric units.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 02.06 | Make estimations, approximations and judge the reasonableness of the result.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 02.07 | Convert time from a 12-hour format to a 24-hour format                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 02.08 | Demonstrate ability to evaluate and draw conclusions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|       |                                                                                                                                                                              |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.09 | Calculate ratios.                                                                                                                                                            |
| 02.10 | Explain the rationale for the EMS system gathering data.                                                                                                                     |
| 02.11 | Impact of research on EMT care (S, S).                                                                                                                                       |
| 02.12 | Data collection (S, S).                                                                                                                                                      |
| 02.13 | Evidence-based decision making (S,S).                                                                                                                                        |
| 03.0  | <b>Workforce Safety and Wellness:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of workforce safety and wellness.<br>— The student will be able to: |
| 03.01 | Explain the need to determine scene safety.                                                                                                                                  |
| 03.02 | Discuss the importance of body substance isolation (BSI).                                                                                                                    |
| 03.03 | Describe the steps and equipment the EMT should take for personal protection from airborne and blood borne pathogens and communicable disease.                               |
| 03.04 | List possible emotional reactions that an individual (EMT and EMT family, Patient and Patient family) may experience when faced with trauma, illness, death and dying.       |
| 03.05 | Discuss the steps the EMT should take when approaching a family confronted with death and dying.                                                                             |
| 03.06 | Recognize the warning signs of personal stress and discuss the strategies and resources available for EMTs to utilize.                                                       |
| 03.07 | Demonstrate good body mechanics while using a stretcher and other patient moving devices.                                                                                    |
| 03.08 | Discuss the guidelines and safety precautions to be followed when lifting and moving patients and equipment.                                                                 |
| 03.09 | Discuss patient positioning in common emergency situations.                                                                                                                  |
| 03.10 | Discuss situation that may require the use of medical restraints on the patient and explain guidelines and safety consideration for their use.                               |
| 03.11 | Define “infectious disease” and “communicable disease.”                                                                                                                      |
| 03.12 | Disease transmission (F, F).                                                                                                                                                 |
| 03.13 | Describe the routes of transmission and associated risks for infectious disease.                                                                                             |
| 03.14 | Explain the mode of transmission and the steps to prevent/deal with an exposure of hepatitis, meningitis, tuberculosis and HIV.                                              |
| 03.15 | Explain how immunity to infectious diseases is acquired.                                                                                                                     |
| 03.16 | Explain post exposure management of exposure to patient blood or body fluids, including proper notification documentation.                                                   |

|       |                                                                                                                                                                                        |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.17 | Describe the components of physical fitness and mental wellbeing.                                                                                                                      |
| 03.18 | Identify personal health practices and environmental factors which affect physical, mental, and emotional wellbeing.                                                                   |
| 03.19 | Prevention of work-related injuries and illnesses (F, F).                                                                                                                              |
| 03.20 | Responder mental health, resilience and suicide prevention (F, F).                                                                                                                     |
| 03.21 | Wellness principles (F, F).                                                                                                                                                            |
| 03.22 | Discuss complementary and alternative health practices.                                                                                                                                |
| 03.23 | Explain the basic concepts of positive self-image, wellness and stress.                                                                                                                |
| 03.24 | Discuss the need for a wellness and stress control plan that can be used in personal and professional life.                                                                            |
| 03.25 | Explore the importance of adequate nutrition (i.e. U.S. Department of Agriculture's MyPlate food guide ( <a href="http://www.choosemyplate.gov">www.choosemyplate.gov</a> )).          |
| 03.26 | Demonstrate safe behaviors in the proper use of medical equipment.                                                                                                                     |
| 03.27 | Explain the theory of root- cause analysis.                                                                                                                                            |
| 03.28 | Identify and describe methods in medical error reduction and prevention in the various healthcare settings.                                                                            |
| 03.29 | Identify and practice security procedures for medical supplies and equipment in various healthcare settings.                                                                           |
| 03.30 | Describe fire, safety, disaster and evacuation procedures in the various healthcare settings.                                                                                          |
| 03.31 | Discuss applicable accrediting and regulatory agency patient safety guidelines.                                                                                                        |
| 04.0  | <b>Documentation:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the principles of medical documentation and report writing. – The student will be able to: |
| 04.01 | Discuss applications of technology in healthcare.                                                                                                                                      |
| 04.02 | Demonstrate basic computer skills.                                                                                                                                                     |
| 04.03 | Interpret and utilize information from electronic health records.                                                                                                                      |
| 04.04 | Identify methods of electronic communication to access and distribute data.                                                                                                            |
| 04.05 | Describe the use and importance of properly written communication and patient care documentation.                                                                                      |
| 04.06 | Explain the legal implication of the patient care report.                                                                                                                              |
| 04.07 | Supporting medical necessity (S,S).                                                                                                                                                    |

|       |                                                                                                                                                                                                                                               |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 04.08 | Identify the minimum dataset reference patient information and administrative information on the patient care report.                                                                                                                         |
| 04.09 | Understand how to document refusal of care, including legal implications.                                                                                                                                                                     |
| 04.10 | Discuss the implications of the Health Insurance Portability and Accountability Act of 1996 on confidential documentation.                                                                                                                    |
| 04.11 | Describe the special considerations concerning mass casualty incident documentation.                                                                                                                                                          |
| 04.12 | Demonstrate completion of a patient care report for a medical and trauma patient.                                                                                                                                                             |
| 05.0  | <b>EMS System Communication:</b> Demonstrate a simple depth, simple breadth of knowledge of the EMS communication system, communication with other health care professionals, and team communication. – The student will be able to:          |
| 05.01 | Understand the basic principles of the various types of communications equipment used in EMS.                                                                                                                                                 |
| 05.02 | Describe the use of radio communication and correct radio procedures, including the proper methods of initiating and terminating the radio call/transmission.                                                                                 |
| 05.03 | Explain the rationale for providing efficient and effective radio communications and patient reports.                                                                                                                                         |
| 05.04 | Identify the essential components of the verbal report and legal aspects that need to be considered.                                                                                                                                          |
| 05.05 | Perform an organized and concise radio transmission.                                                                                                                                                                                          |
| 05.06 | Team communication and dynamics (S,S).                                                                                                                                                                                                        |
| 05.07 | Perform an organized, concise verbal patient report that would be given to the staff at a receiving facility.                                                                                                                                 |
| 05.08 | Perform a brief, organized verbal report that would be given during transfer of care at an incident scene.                                                                                                                                    |
| 06.0  | <b>Therapeutic Communication:</b> Demonstrate a simple depth, simple breadth of knowledge of the principles of therapeutic communication. – The student will be able to:                                                                      |
| 06.01 | Describe principles of therapeutic and effective communication with patients.                                                                                                                                                                 |
| 06.02 | Health care literacy (S, S).                                                                                                                                                                                                                  |
| 06.03 | Non-discriminatory communication that addresses inherent or unconscious bias, is culturally aware and sensitive, and intended to improve patient outcome (S, S).                                                                              |
| 06.04 | Discuss basic speaking and active listening skills.                                                                                                                                                                                           |
| 06.05 | Recognize the importance of patient/client education regarding healthcare.                                                                                                                                                                    |
| 06.06 | Discuss the adjustment of communication strategies to effectively communicate with patients with: <ul style="list-style-type: none"> <li>• Differing age groups</li> <li>• Differing developmental stages</li> <li>• Special needs</li> </ul> |

|       |                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Differing cultures, including language barriers</li> </ul>                                                                                                                                                          |
| 06.07 | Discuss the communication techniques that should be used to interact with the patient, patient family, bystanders, and individuals from other agencies including verbal diffusion and interview techniques.                                                  |
| 06.08 | Discuss the strategies for interviewing persons in special situations.                                                                                                                                                                                       |
| 06.09 | Distinguish between and respond to verbal and non-verbal cues.                                                                                                                                                                                               |
| 06.10 | Analyze elements of communication using a sender-receiver/close loop model.                                                                                                                                                                                  |
| 06.11 | Exhibit positive non-verbal behaviors.                                                                                                                                                                                                                       |
| 06.12 | Establish proper patient rapport.                                                                                                                                                                                                                            |
| 07.0  | <b>Medical/Legal and Ethics:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of medical legality and ethics. – The student will be able to:                                                                                           |
| 07.01 | Discuss the rational, importance, and limitations of patient autonomy.                                                                                                                                                                                       |
| 07.02 | Differentiate between expressed, implied and involuntary consent.                                                                                                                                                                                            |
| 07.03 | Discuss the methods of obtaining consent and procedures for minors.                                                                                                                                                                                          |
| 07.04 | Discuss the issues of abandonment, negligence, false imprisonment and battery and their implications to the EMT.                                                                                                                                             |
| 07.05 | Discuss the implications for the EMT in patient refusal of care and/or transport.                                                                                                                                                                            |
| 07.06 | Explain the importance, necessity and legality of patient confidentiality.                                                                                                                                                                                   |
| 07.07 | Discuss the importance of Do Not Resuscitate [DNR] (advance directives) and local or Florida provisions regarding EMS application.                                                                                                                           |
| 07.08 | Patient rights/advocacy (S, S).                                                                                                                                                                                                                              |
| 07.09 | Discuss State of Florida and Federal special reporting situations including: <ul style="list-style-type: none"> <li>• Abuse</li> <li>• Sexual assault</li> <li>• Gunshot and knife wounds</li> <li>• Communicable disease</li> <li>• Animal Bites</li> </ul> |
| 07.10 | Differentiate between civil tort and criminal actions.                                                                                                                                                                                                       |
| 07.11 | Discuss the elements of negligence and defenses/protections from liability.                                                                                                                                                                                  |
| 07.12 | Discuss the role of the EMT at crime scenes and preservation of evidence.                                                                                                                                                                                    |

|       |                                                                                                                                                                                                                                                                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.13 | Define ethics and morality and discuss their implication for the EMT.                                                                                                                                                                                                                                                                                              |
| 07.14 | Discuss Florida legislation such as: <ul style="list-style-type: none"> <li>• Baker Act (FS 394.451)</li> <li>• Marchman Act (FS 397.601 and FS 397.675)</li> <li>• Emergency Examination and Treatment of Incapacitated Persons Act (FS 401.445)</li> </ul>                                                                                                       |
| 07.15 | Differentiate between the scope of practice and the standard of care as applied to the EMT.                                                                                                                                                                                                                                                                        |
| 07.16 | Discuss the legal concepts and limitations of immunity, including Good Samaritan statutes and governmental immunity.                                                                                                                                                                                                                                               |
| 07.17 | Describe the appropriate patient management and care techniques in a refusal of care situation.                                                                                                                                                                                                                                                                    |
| 07.18 | Analyze the relationship between the law, morals and ethics in EMS and the premise that should under lie the EMTs ethical decisions.                                                                                                                                                                                                                               |
| 07.19 | Describe the criteria necessary to honor an advance directive.                                                                                                                                                                                                                                                                                                     |
| 07.20 | Explain the rationale for the needs, benefits and varying degrees of advance directives.                                                                                                                                                                                                                                                                           |
| 08.0  | <b>Anatomy and Physiology:</b> Demonstrate a fundamental knowledge of the anatomy and function of all human systems to the practice of EMS. —The student will be able to:                                                                                                                                                                                          |
| 08.01 | Identify the following topographic terms: <ul style="list-style-type: none"> <li>• Medial</li> <li>• Lateral</li> <li>• Proximal</li> <li>• Distal</li> <li>• Superior</li> <li>• Inferior</li> <li>• Anterior</li> <li>• Posterior</li> <li>• Midline</li> <li>• Right and left</li> <li>• Mid-clavicular</li> <li>• Bilateral</li> <li>• Mid-axillary</li> </ul> |
| 08.02 | Describe the life support chain, aerobic metabolism, and anaerobic metabolism.                                                                                                                                                                                                                                                                                     |
| 08.03 | Define anatomy, physiology, pathophysiology, and homeostasis.                                                                                                                                                                                                                                                                                                      |
| 08.04 | Identify and describe the anatomical structures and functions of the following: <ul style="list-style-type: none"> <li>• <del>skeletal</del><a href="#">Skeletal</a> system</li> <li>• Muscular system</li> </ul>                                                                                                                                                  |

|       |                                                                                                                                                                                                                                                                                                                                                                              |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Respiratory <del>System</del>system</li> <li>• Circulatory/-Cardiovascular system</li> <li>• Nervous <del>System</del>system</li> <li>• Integumentary system</li> <li>• Digestive system</li> <li>• Endocrine system</li> <li>• Renal system</li> <li>• Reproductive system</li> <li>• Lymphatic <del>System</del>system</li> </ul> |
| 08.05 | Explain cellular anatomy and physiology.                                                                                                                                                                                                                                                                                                                                     |
| 08.06 | Explain cellular respiration.                                                                                                                                                                                                                                                                                                                                                |
| 08.07 | Discuss cell division.                                                                                                                                                                                                                                                                                                                                                       |
| 08.08 | Describe the different types of muscle tissues including skeletal, smooth and cardiac.                                                                                                                                                                                                                                                                                       |
| 08.09 | Name and identify the location of the bones of the axial and appendicular skeleton.                                                                                                                                                                                                                                                                                          |
| 08.10 | Describe the classification and types of joints.                                                                                                                                                                                                                                                                                                                             |
| 08.11 | Discuss the mechanisms of breathing including: <ul style="list-style-type: none"> <li>• mechanical ventilation</li> <li>• pulmonary volumes</li> <li>• dead space</li> <li>• lung compliance</li> </ul>                                                                                                                                                                      |
| 08.12 | Explain the diffusion of gases in external and internal respiration.                                                                                                                                                                                                                                                                                                         |
| 08.13 | Describe oxygen and carbon dioxide transport in the blood.                                                                                                                                                                                                                                                                                                                   |
| 08.14 | Describe nervous and chemical mechanisms that regulate respirations.                                                                                                                                                                                                                                                                                                         |
| 08.15 | Discuss respiration and acid-base balance.                                                                                                                                                                                                                                                                                                                                   |
| 08.16 | Discuss the hemodynamics of blood pressure.                                                                                                                                                                                                                                                                                                                                  |
| 08.17 | Discuss the role of nutrition, metabolism and body temperature on body function.                                                                                                                                                                                                                                                                                             |
| 08.18 | Describe the causes, advantages, and disadvantages of a fever.                                                                                                                                                                                                                                                                                                               |
| 08.19 | Discuss the hypothalamus functions as the thermostat in the body.                                                                                                                                                                                                                                                                                                            |

|       |                                                                                                                                                                                                                                                                                        |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 09.0  | <b>Medical Terminology:</b> Demonstrate a fundamental knowledge in the use of medical terminology. – The student will be able to:                                                                                                                                                      |
| 09.01 | Identify medical terminology word parts such as: <ul style="list-style-type: none"> <li>• Root words</li> <li>• Prefixes</li> <li>• Suffixes</li> <li>• Combining forms</li> </ul>                                                                                                     |
| 09.02 | Correctly utilize medical terminology describing each of the following: <ul style="list-style-type: none"> <li>• Body structures</li> <li>• Functions</li> <li>• Conditions and disorders</li> <li>• Body regions</li> <li>• Cavities</li> <li>• Areas</li> <li>• Landmarks</li> </ul> |
| 09.03 | Correctly use medical abbreviations and symbols.                                                                                                                                                                                                                                       |
| 09.04 | Read and understand basic medical documentation in medical records and medical reports.                                                                                                                                                                                                |
| 09.05 | Communicate with healthcare professionals utilizing basic medical terminology.                                                                                                                                                                                                         |
| 09.06 | Explain the rationale for using accepted medical terminology correctly.                                                                                                                                                                                                                |
| 10.0  | <b>Pathophysiology:</b> Demonstrate a fundamental knowledge of the causes and pathophysiology of shock and the components of resuscitation. – The student will be able to:                                                                                                             |
| 10.01 | Discuss signs of irreversible death.                                                                                                                                                                                                                                                   |
| 10.02 | Review the anatomy and physiology of the respiratory and cardiovascular systems.                                                                                                                                                                                                       |
| 10.03 | Discuss and identify the pathophysiology of respiratory failure and respiratory and cardiac arrest.                                                                                                                                                                                    |
| 10.04 | Understand shock, including pathophysiology, causes, and the signs and symptoms associated with the various types of shock.                                                                                                                                                            |
| 10.05 | Discuss the variations in the pathophysiology of shock patients of all ages.                                                                                                                                                                                                           |
| 11.0  | <b>Life Span Development:</b> Demonstrate a fundamental knowledge of life span development to patient assessment and management. – The student will be able to:                                                                                                                        |
| 11.01 | Describe the major physiologic and psychosocial characteristics patients of all ages.                                                                                                                                                                                                  |
| 12.0  | <b>Public Health:</b> Demonstrate a simple knowledge of the principles of illness and injury prevention in emergency care. – The student will be able to:                                                                                                                              |

|       |                                                                                                                                                                                                                                                                                                                                 |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.01 | Define public health and explain the goal of the public health field.                                                                                                                                                                                                                                                           |
| 12.02 | Identify the EMS role within the public health field.                                                                                                                                                                                                                                                                           |
| 12.03 | Discuss basic concepts of epidemiology.                                                                                                                                                                                                                                                                                         |
| 12.04 | Discuss ways of EMS involvement in injury prevention.                                                                                                                                                                                                                                                                           |
| 12.05 | Identify areas of need for prevention programs in the community.                                                                                                                                                                                                                                                                |
| 13.0  | <b>Principles of Pharmacology:</b> Demonstrate a simple depth, simple breadth of knowledge of pharmacology, medication safety, and medication types used during an emergency. –The student will be able to:                                                                                                                     |
| 13.01 | Explain the “rights” of medication administration and describe how each one related to EMS.                                                                                                                                                                                                                                     |
| 13.02 | Discuss and differentiate the various medication forms and the appropriate routes of administration                                                                                                                                                                                                                             |
| 13.03 | Describe the difference between a generic medication name and trade name and provide an example of each.                                                                                                                                                                                                                        |
| 13.04 | Specific medication classes to be determined locally <ul style="list-style-type: none"> <li>• Class names (S, S)</li> <li>• Class indications (S, S)</li> <li>• Class complications (S, S)</li> <li>• Class side effects (S, S)</li> <li>• Polypharmacy (S, S)</li> </ul>                                                       |
| 13.05 | Discuss the components and elements of a drug profile including: <ul style="list-style-type: none"> <li>• Class</li> <li>• Actions</li> <li>• Contraindications</li> <li>• Side effects</li> <li>• Dose</li> <li>• Route</li> <li>• Adverse drug reactions (S, S)</li> <li>• Medication response relationships (F,F)</li> </ul> |
| 13.06 | Describe the role of medical direction in medication administration and explain the difference between direct orders (online) and standing orders (off-line).                                                                                                                                                                   |
| 14.0  | <b>Pharmacology:</b> Demonstrate a fundamental depth, simple breadth of knowledge of emergency medications within the scope of practice of the EMT. – The student will be able to:                                                                                                                                              |
| 14.01 | State the following for each medication that can be administered by an EMT as dictated by the State of Florida and local medical direction: <ul style="list-style-type: none"> <li>• Medication safety</li> <li>• Medication legislation</li> </ul>                                                                             |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Naming</li> <li>• Classifications</li> <li>• Storage and security</li> <li>• Medication interactions</li> <li>• Adverse drug reactions</li> <li>• Metabolism and excretion</li> <li>• Mechanism of action</li> <li>• Medication response relationships</li> </ul>                                                                                                                                                                                                   |
| 14.02 | <p>State the following for each medication that can be administered by an EMT as dictated by the State of Florida and local medical direction (Acute Medications):</p> <ul style="list-style-type: none"> <li>• Generic / Trade Names, Drug Classifications</li> <li>• Effects</li> <li>• Actions</li> <li>• Indication</li> <li>• Contraindications</li> <li>• Complications</li> <li>• Routes of administration</li> <li>• Side effects</li> <li>• Interactions</li> <li>• Doses of medications</li> </ul> |
| 14.03 | <p>Demonstrate the steps in properly inspecting each type of medication. (Medication Administration)</p> <ul style="list-style-type: none"> <li>• Use a Medication Cross Check procedure</li> <li>• Use an autoinjector</li> <li>• Use a unit-dose, premeasured intranasal device</li> <li>• Administer medications to a patient</li> <li>• Provide pain management, including ethical and safety considerations</li> <li>• Routes of administration</li> </ul>                                              |

|       | <ul style="list-style-type: none"> <li>• Special Considerations (MDI, In-Line Neb, Simple Face Mask, Venturi, CPAP/BiPAP)</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 16.02 | Describe appropriate assessment of the airway and the management for a patient with or without adequate breathing (Include age-related variations in pediatric and geriatric patients).                                                                                                                                                                                                                                                                                                                                                                            |
| 16.03 | <p>Describe the Techniques of assuring a patent airway, indications for airway management, and demonstrate the steps in performing the head-tilt chin-lift and jaw thrust in all age groups (Include age-related variations in pediatric and geriatric patients).</p> <ul style="list-style-type: none"> <li>• Demonstrate the techniques of suctioning.</li> <li>• Demonstrate relief of FBAO.</li> <li>• Demonstrate how to insert an oral and nasal -airway adjunct.</li> <li>• Demonstrate how to insert both esophageal and supra-glottic airways.</li> </ul> |
| 17.0  | <b>Artificial Ventilations:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of assessment and management utilizing ventilation patients of all ages. – The student will be able to:                                                                                                                                                                                                                                                                                                                                                         |
| 17.01 | <p>Effect of ventilation on cardiac output</p> <ul style="list-style-type: none"> <li>• E.g. Bag Valve Mask, Ventilator, CPAP, Hyper Mechanical Inflation</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                               |
| 17.02 | Demonstrate how to ventilate a patient with a pocket mask.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 17.03 | Demonstrate the safe and effective ventilation for a patient with a BVM for one or two rescuers using oral-nasal adjuncts with appropriate airway positioning.                                                                                                                                                                                                                                                                                                                                                                                                     |
| 17.04 | Discuss the signs of adequate and inadequate ventilation using the BVM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 17.05 | Describe the steps involved in performing a comprehensive assessment of ventilations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 17.06 | Demonstrate how to ventilate a patient with a stoma.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 17.07 | Demonstrate the use of various devices used in the assessment of supra-glottic airway placement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 17.08 | <p>Describe the following for a patient with an automatic transport ventilator (ATV):</p> <ul style="list-style-type: none"> <li>• Indications</li> <li>• Contraindications</li> <li>• Advantages</li> <li>• Disadvantages</li> <li>• Complications</li> <li>• Technique for ventilating</li> </ul>                                                                                                                                                                                                                                                                |
| 17.09 | <p>Describe the following for a patient with a CPAP:</p> <ul style="list-style-type: none"> <li>• Indications</li> <li>• Contraindications</li> <li>• Advantages</li> <li>• Disadvantages</li> <li>• Complications</li> <li>• Technique for ventilating</li> </ul>                                                                                                                                                                                                                                                                                                 |

|       |                                                                                                                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18.0  | <b>Scene Size-Up:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of scene management and multiple patient situations. – The student will be able to:                                         |
| 18.01 | Recognize and describe hazards/potential hazards at the scene.                                                                                                                                                       |
| 18.02 | Discuss common mechanisms of injury/nature of illness.                                                                                                                                                               |
| 18.03 | Discuss the priority considerations for multiple-patient situations.                                                                                                                                                 |
| 18.04 | Explain why it is important for the EMT to anticipate and determine the need of appropriate Scene management including but not limited to traffic incident management, additional resources, or specialty resources. |
| 18.05 | Discuss the importance of continuous scene assessment to ensure safety of the EMS Impact of the environment on team and the patient care.                                                                            |
| 18.06 | Explain why it is important for the EMT to anticipate and determine the need for additional or specialized resources.                                                                                                |
| 18.07 | Discuss the importance of continuous scene assessment to ensure safety of the EMS team and the patient.                                                                                                              |
| 18.08 | Discuss the minimum standard precautions that should be followed and PPE that should be worn as appropriate.                                                                                                         |
| 18.09 | Discuss special considerations for dealing with a violent scene.                                                                                                                                                     |
| 18.10 | Explain the rationale for crew members to evaluate scene safety prior to entering.                                                                                                                                   |
| 18.11 | Explain how patient situations affect your evaluation of mechanism of injury or illness.                                                                                                                             |
| 19.0  | <b>Primary Assessment:</b> Demonstrate a fundamental depth, simple breadth of knowledge of the primary assessment for all patient situations. – The student will be able to:                                         |
| 19.01 | Summarize the elements of a general impression of the patient.                                                                                                                                                       |
| 19.02 | Explain the reason for performing a primary assessment.                                                                                                                                                              |
| 19.03 | Discuss and demonstrate methods of assessing level of responsiveness using AVPU.                                                                                                                                     |
| 19.04 | Discuss and demonstrate methods of assessing the airway and providing airway care patients of all ages.                                                                                                              |
| 19.05 | Describe and demonstrate methods used for assessing if a patient is breathing patients of all ages.                                                                                                                  |
| 19.06 | Differentiate between a patient with adequate and inadequate breathing.                                                                                                                                              |
| 19.07 | Describe and demonstrate the methods used to obtain a pulse patients of all ages.                                                                                                                                    |
| 19.08 | Discuss and demonstrate assessing the patient for external bleeding.                                                                                                                                                 |
| 19.09 | Describe and demonstrate the assessment and interpretation of skin color, temperature, moisture and capillary refill patients of all ages.                                                                           |

|       |                                                                                                                                                                                                                                                                                                                                             |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.10 | Explain the reasons prioritizing a patient for care and transport.                                                                                                                                                                                                                                                                          |
| 19.11 | Describe when it is appropriate to expose the patient completely.                                                                                                                                                                                                                                                                           |
| 19.12 | Differentiate between critical life-threatening, potentially life-threatening, and non-life-threatening patient presentations.                                                                                                                                                                                                              |
| 20.0  | <b>History-Taking:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the components of history taking. – The student will be able to:                                                                                                                                                                               |
| 20.01 | Determine and investigate the chief complaint (MOI/NOI).                                                                                                                                                                                                                                                                                    |
| 20.02 | Describe components of the patient history.                                                                                                                                                                                                                                                                                                 |
| 20.03 | Explain the importance of obtaining a SAMPLE and OPQRST history.                                                                                                                                                                                                                                                                            |
| 20.04 | Acknowledge the feelings patients experience during assessment.                                                                                                                                                                                                                                                                             |
| 20.05 | Discuss the value of obtaining a family and social history.                                                                                                                                                                                                                                                                                 |
| 20.06 | Describe examples of different techniques the EMT may use to obtain information from patients, family or bystanders during the history taking process.                                                                                                                                                                                      |
| 21.0  | <b>Secondary Assessment:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of techniques used for a secondary assessment. – The student will be able to:                                                                                                                                                               |
| 21.01 | Discuss the components and techniques of the physical exam and skills involved.                                                                                                                                                                                                                                                             |
| 21.02 | Discuss the indications for performing: <ul style="list-style-type: none"> <li>• Rapid assessment</li> <li>• Focused exam</li> <li>• Head to toe exam</li> </ul>                                                                                                                                                                            |
| 21.03 | Demonstrate: <ul style="list-style-type: none"> <li>• Rapid exam</li> <li>• Focused exam</li> <li>• Head to toe exam</li> </ul>                                                                                                                                                                                                             |
| 21.04 | Describe and demonstrate the techniques of inspection, palpation, percussion, and auscultation. <ul style="list-style-type: none"> <li>• Respiratory system including breath sound quality</li> <li>• Cardiovascular system</li> <li>• Neurological system</li> <li>• Musculoskeletal system</li> <li>• Major anatomical regions</li> </ul> |
| 21.05 | Describe and demonstrate the importance of obtaining a baseline set of vital signs. <ul style="list-style-type: none"> <li>• E.g., Non-Invasive Blood Pressure, Blood Glucose, Temperature ...</li> </ul>                                                                                                                                   |
| 21.06 | Discuss blood pressure ranges patients of all ages.                                                                                                                                                                                                                                                                                         |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22.0  | <b>Monitoring Devices:</b> Demonstrate a simple depth, simple breath of knowledge of monitoring devices within the scope of practice of the EMT. – The student will be able to:                                                                                                                                                                                                                                            |
| 22.01 | Describe and demonstrate the purpose, indications, procedure, normal findings, and limitations of the following patient monitoring technologies. <ul style="list-style-type: none"> <li>• Pulse oximetry</li> <li>• Glucometry</li> <li>• Capnography</li> <li>• Noninvasive BP monitoring</li> <li>• Thermometry</li> <li>• Telemetry</li> <li>• Cardiac monitoring – 12 lead ECG acquisition and transmission</li> </ul> |
| 22.02 | Demonstrate proper placement of a cardiac monitor and diagnostic ECG leads.                                                                                                                                                                                                                                                                                                                                                |
| 23.0  | <b>Reassessment:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of how and when to perform a reassessment for all patient situations. – The student will be able to:                                                                                                                                                                                                                               |
| 23.01 | Describe the components of reassessment and demonstrate the skills involved.                                                                                                                                                                                                                                                                                                                                               |
| 23.02 | Discuss the reasons for repeating the primary assessment as part of the reassessment.                                                                                                                                                                                                                                                                                                                                      |
| 23.03 | Explain trending assessment components and its value to other health professionals who assume care of the patient.                                                                                                                                                                                                                                                                                                         |
| 23.04 | Demonstrate the reassessment of patients of all ages.                                                                                                                                                                                                                                                                                                                                                                      |
| 24.0  | <b>Medical Overview:</b> Demonstrate a simple depth, foundation breadth of knowledge of pathophysiology, assessment and management of medical complaints. – The student will be able to:                                                                                                                                                                                                                                   |
| 24.01 | Pathophysiology, assessment, and management of a medical complaints to include <ul style="list-style-type: none"> <li>• Identify factors that affect the patient Transport Decision and Medically Appropriate Destination</li> <li>• E.g. Scene Safety, Environmental Factors, Chief Complaint, Preconceptions.</li> </ul>                                                                                                 |
| 24.02 | Discuss forming a field impression and utilizing available information to determine a differential diagnosis.                                                                                                                                                                                                                                                                                                              |
| 25.0  | <b>Neurology:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of neurologic disorders/emergencies patients of all ages. – The student will be able to:                                                                                                                                                                                                             |
| 25.01 | Review the anatomy and physiology of the nervous system.                                                                                                                                                                                                                                                                                                                                                                   |
| 25.02 | Describe the pathophysiology of the following neurologic disorders: <ul style="list-style-type: none"> <li>• Altered mental status</li> <li>• Stroke</li> <li>• Transient ischemic attack</li> <li>• Headache</li> <li>• Seizures</li> <li>• Syncope</li> </ul>                                                                                                                                                            |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Dementia vs. delirium</li> <li>• Alzheimer's disease</li> <li>• Headache</li> <li>• Brief Resolved Unexplained Event (BRUE)</li> <li>• Other neurological disorders to be determined locally</li> </ul>                                                                                                                                                                                                                   |
| 25.03 | Discuss and identify the causes, signs and symptoms of ischemic strokes, hemorrhagic strokes, and transient ischemic attacks and their similarities and differences.                                                                                                                                                                                                                                                                                               |
| 25.04 | Discuss and demonstrate how to use a stroke scoring system in the assessment of patients with suspected stroke.                                                                                                                                                                                                                                                                                                                                                    |
| 25.05 | Define and differentiate generalize seizure, partial seizure and status epilepticus and list their possible causes.                                                                                                                                                                                                                                                                                                                                                |
| 25.06 | Define and differentiate migraine headache, sinus headache, tension headache and discuss how to distinguish harmless headaches from something more serious.                                                                                                                                                                                                                                                                                                        |
| 25.07 | Define "altered mental status" and identify the possible causes.                                                                                                                                                                                                                                                                                                                                                                                                   |
| 25.08 | Describe and demonstrate the assessment and management of the patient with various neurological emergencies in patients of all ages to include: <ul style="list-style-type: none"> <li>• Strokes</li> <li>• Headaches</li> <li>• Seizures</li> <li>• Altered mental status</li> </ul>                                                                                                                                                                              |
| 25.09 | Discuss the transport of the stroke patient to the appropriate treatment center.                                                                                                                                                                                                                                                                                                                                                                                   |
| 26.0  | <b>Abdominal and Gastrointestinal Disorder:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of abdominal and gastrointestinal disorders/emergencies patients of all ages. – The student will be able to:                                                                                                                                                                                                   |
| 26.01 | Review the basic anatomy and physiology the gastrointestinal, genital and urinary systems.                                                                                                                                                                                                                                                                                                                                                                         |
| 26.02 | Define and describe the pathophysiology of the following abdominal and gastrointestinal disorders: <ul style="list-style-type: none"> <li>• Abdominal pain</li> <li>• Acute abdomen</li> <li>• Peritonitis</li> <li>• Appendicitis</li> <li>• Pancreatitis</li> <li>• Cholecystitis</li> <li>• Gastrointestinal bleeding</li> <li>• Esophageal varices</li> <li>• Gastroenteritis</li> <li>• Ulcers</li> <li>• Intestinal obstruction</li> <li>• Hernia</li> </ul> |

|       |                                                                                                                                                                                                                                              |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>Abdominal aortic aneurysm</li> </ul>                                                                                                                                                                  |
| 26.03 | Identify the signs and symptoms of common GI disorders.                                                                                                                                                                                      |
| 26.04 | Describe and demonstrate the assessment and management of the patient with various gastrointestinal emergencies.                                                                                                                             |
| 26.05 | Differentiate between hemorrhagic and non-hemorrhagic abdominal pain.                                                                                                                                                                        |
| 27.0  | <b>Immunology:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of immunology disorders/emergencies patients of all ages. – The student will be able to:                              |
| 27.01 | Define and differentiate allergic reaction and anaphylaxis.                                                                                                                                                                                  |
| 27.02 | Describe the pathophysiology of the following immunology disorders: <ul style="list-style-type: none"> <li>allergic reaction</li> <li>anaphylaxis</li> <li>anaphylactic shock</li> </ul>                                                     |
| 27.03 | Describe and demonstrate the assessment and management of the patient in patients of all ages experiencing an allergic or anaphylactic reaction.                                                                                             |
| 27.04 | Review the following for the epinephrine auto-injector: <ul style="list-style-type: none"> <li>generic and trade names</li> <li>medication forms</li> <li>dose</li> <li>administration</li> <li>action</li> <li>contraindications</li> </ul> |
| 27.05 | Demonstrate the use of epinephrine auto-injector.                                                                                                                                                                                            |
| 27.06 | Review the anatomy and physiology of the organs and structures related to anaphylaxis.                                                                                                                                                       |
| 27.07 | Describe the incidence, morbidity and mortality of anaphylaxis.                                                                                                                                                                              |
| 27.08 | Recognize the signs and symptoms related to anaphylaxis.                                                                                                                                                                                     |
| 27.09 | Describe the risk factors for and prevention of anaphylaxis and appropriate patient education.                                                                                                                                               |
| 27.10 | Discuss common antigens most frequently associated with anaphylaxis.                                                                                                                                                                         |
| 27.11 | Explain the importance of separating the patient from the allergen when possible.                                                                                                                                                            |
| 28.0  | <b>Infectious Disease:</b> Demonstrate a simple depth, simple breadth of knowledge of the assessment and management of a patient who may have an infectious disease patients of all ages. – The student will be able to:                     |
| 28.01 | Discuss the causes of infectious diseases                                                                                                                                                                                                    |

|       |                                                                                                                                                                                                                                                                                                                                                                                                |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.02 | Describe the pathophysiology of infectious diseases of significant public health concern.                                                                                                                                                                                                                                                                                                      |
| 28.03 | Describe and demonstrate the assessment and management of the patient in patients of all ages experiencing an infectious disease.                                                                                                                                                                                                                                                              |
| 28.04 | Discuss mandatory notification to state or federal agencies of various diseases.                                                                                                                                                                                                                                                                                                               |
| 28.05 | Identify patients with risk factors for infectious disease.                                                                                                                                                                                                                                                                                                                                    |
| 28.06 | Explain the principles and practices of infection control in prehospital care.                                                                                                                                                                                                                                                                                                                 |
| 28.07 | Describe and discuss the rationale for the various types of PPE.                                                                                                                                                                                                                                                                                                                               |
| 28.08 | Discuss the proper disposal of contaminated supplies (sharps, gauze sponges, tourniquets, etc.).                                                                                                                                                                                                                                                                                               |
| 28.09 | Discuss decontamination of the ambulance and disinfection of patient care equipment, and areas in which care of the patient occurred.                                                                                                                                                                                                                                                          |
| 28.10 | Describe the actions to take if the EMS provider is exposed to an infectious disease.                                                                                                                                                                                                                                                                                                          |
| 28.11 | Demonstrate the ability to comply with body substance isolation guidelines.                                                                                                                                                                                                                                                                                                                    |
| 28.12 | Discuss the pathophysiology, risk factors, assessment, and prehospital management of sepsis/systemic inflammatory response syndrome (SIRS)                                                                                                                                                                                                                                                     |
| 28.13 | Identify the signs and symptoms and discuss the assessment and prehospital management of a patient in septic shock.                                                                                                                                                                                                                                                                            |
| 28.14 | Describe the risk factors for and prevention of infectious disease and appropriate patient education (including but not limited to hand-washing, PPE use, and disposal of contaminated supplies).                                                                                                                                                                                              |
| 29.0  | <b>Endocrine Disorders:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of endocrine disorders/emergencies patients of all ages. – The student will be able to:                                                                                                                                                                        |
| 29.01 | Review the anatomy and physiology of the endocrine system and its main function in the body.                                                                                                                                                                                                                                                                                                   |
| 29.02 | Describe the pathophysiology and signs and symptoms of the following endocrine disorders: <ul style="list-style-type: none"> <li>• Insulin dependent Diabetes Mellitus</li> <li>• Non-insulin dependent Diabetes Mellitus</li> <li>• Hypoglycemia</li> <li>• Hyperglycemia</li> <li>• Diabetic Ketoacidosis (DKA)</li> <li>• Hyperglycemic Hyperosmolar Non-ketotic Syndrome (HHNS)</li> </ul> |
| 29.03 | Define and differentiate between Type I and Type II Diabetes.                                                                                                                                                                                                                                                                                                                                  |
| 29.04 | Identify and demonstrate the steps in the management of the patient taking diabetic medicine with an altered mental status and a history of diabetes, patients of all ages.                                                                                                                                                                                                                    |
| 29.05 | Review the following for oral glucose:                                                                                                                                                                                                                                                                                                                                                         |

|                        |                                                                                                                                                                                                                                                  |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                        | <ul style="list-style-type: none"> <li>• Generic and trade names</li> <li>• Medication forms</li> <li>• Dose</li> <li>• Administration</li> <li>• Action</li> <li>• Contraindications</li> </ul>                                                 |
| 29.06                  | Demonstrate the steps of using a glucometer device and administering oral glucose.                                                                                                                                                               |
| 29.07                  | Describe and demonstrate the assessment and the management of the patient experiencing an endocrinologic emergency to include hypo- and hyper-glycemia.                                                                                          |
| 29.08                  | Discuss the general assessment findings associated with endocrinologic emergencies. Patients of all ages.                                                                                                                                        |
| 29.09                  | Describe the risk factors for and prevention of endocrine emergencies, including but not limited to healthy lifestyles and modifiable risk factors, the use of blood sugar monitoring devices and self-administration of prescribed medications. |
| 30.0                   | <b>Psychiatric:</b> Demonstrate a fundamental depth, foundational breadth of knowledge regarding the assessment and management of psychiatric emergencies patients of all ages. — The student will be able to:                                   |
| 30.01                  | Differentiate among behavior, psychiatric disorders and behavioral emergencies                                                                                                                                                                   |
| 30.02                  | Discuss common psychiatric disorders and behavioral emergencies.                                                                                                                                                                                 |
| 30.03                  | Discuss the general factors that may cause an alteration in a patient's behavior.                                                                                                                                                                |
| 30.04                  | Discuss patterns of violence, abuse, and neglect.                                                                                                                                                                                                |
| 30.05                  | Discuss the risk factors/signs or symptoms of various psychiatric emergencies to include acute psychosis, suicide ideation, excited delirium, anxiety, depression, medical fear, substance use disorder, and PTSD.                               |
| 30.06                  | Manage a behavioral emergency scenario applying knowledge of medical/legal Florida Statutes.                                                                                                                                                     |
| 30.07                  | Describe and demonstrate the assessment and management of the patient experiencing a behavioral or psychiatric emergency.                                                                                                                        |
| 30.08                  | Discuss the risk factors/signs or symptoms of various psychiatric emergencies to include acute psychosis, suicide ideation, excited delirium, anxiety, depression, medical fear, substance use disorder, and PTSD.                               |
| 30.09                  | Demonstrate an understanding of appropriate and available mental health resources and provide patient education.                                                                                                                                 |
| <del>30.10</del>       | <del>30.10</del> Describe and demonstrate the assessment and management of the patient experiencing a behavioral or psychiatric emergency, patients of all ages.                                                                                 |
| <del>30.10</del> 30.11 | Describe the biological, psychosocial, and sociocultural influences on psychiatric disorders.                                                                                                                                                    |
| <del>30.11</del> 30.12 | Describe the special considerations for the safety of the EMS provider and EMS crew, the patient and bystanders when dealing with behavioral and psychiatric emergencies.                                                                        |
| <del>30.12</del> 30.13 | Describe and demonstrate methods of restraint that may be used in the management of a patient with a behavioral emergency.                                                                                                                       |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <del>30.13</del> <u>30.14</u> Explain the importance of provider behavior and communication in the care of a patient with a behavioral emergency.                                                                                                                                                                                                                                                                                                |
| 31.0  | <b>Cardiovascular:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of cardiovascular emergencies patients of all ages. – The student will be able to:                                                                                                                                                                                                                                    |
| 31.01 | Review the basic anatomy and physiology of the cardiovascular system.                                                                                                                                                                                                                                                                                                                                                                            |
| 31.02 | Describe the pathophysiology and signs and symptoms of the following cardiovascular disorders: <ul style="list-style-type: none"> <li>• Acute coronary syndrome</li> <li>• Angina pectoris</li> <li>• Thromboembolism</li> <li>• Myocardial infarction</li> <li>• Hypertensive emergencies</li> <li>• Aortic aneurysm/dissection</li> <li>• Left and right sided heart failure</li> <li>• Cardiogenic shock</li> <li>• Cardiac arrest</li> </ul> |
| 31.03 | Describe and demonstrate the assessment and management of the patient experiencing a cardiac emergency.                                                                                                                                                                                                                                                                                                                                          |
| 31.04 | Discuss the indications and contraindications for automated external defibrillation (AED). (including automatic, manual and vest type).                                                                                                                                                                                                                                                                                                          |
| 31.05 | Explain the impact of age and weight on defibrillation.                                                                                                                                                                                                                                                                                                                                                                                          |
| 31.06 | Discuss the position of comfort for patients with various cardiac emergencies.                                                                                                                                                                                                                                                                                                                                                                   |
| 31.07 | Explain the rationale for early defibrillation.                                                                                                                                                                                                                                                                                                                                                                                                  |
| 31.08 | Discuss and differentiate among various types of external defibrillators.                                                                                                                                                                                                                                                                                                                                                                        |
| 31.09 | Discuss and differentiate among the various types of implanted cardiac devices.                                                                                                                                                                                                                                                                                                                                                                  |
| 31.10 | Understand the importance of maintenance and operators check list for AED's.                                                                                                                                                                                                                                                                                                                                                                     |
| 31.11 | Demonstrate the ability to use an AED according to the latest American Heart Association (AHA) guidelines.                                                                                                                                                                                                                                                                                                                                       |
| 31.12 | Explain the role medical direction plays in the use of automated external defibrillation.                                                                                                                                                                                                                                                                                                                                                        |
| 31.13 | Explain the rationale for administering nitroglycerin oxygen and ASA to a patient with chest pain or discomfort.                                                                                                                                                                                                                                                                                                                                 |
| 31.14 | Demonstrate the assessment and documentation of patient response to the automated external defibrillator.                                                                                                                                                                                                                                                                                                                                        |
| 31.15 | Demonstrate the assessment and documentation of patient response to nitroglycerin.                                                                                                                                                                                                                                                                                                                                                               |
| 31.16 | Discuss the purpose and use of CPR assist devices.                                                                                                                                                                                                                                                                                                                                                                                               |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 31.17 | Describe the risk factors for and prevention of cardiac related diseases and provide appropriate patient education.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 31.18 | Discuss the signs and symptoms of acute coronary syndrome and provide appropriate patient education to include self-administration of prescribed medications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 32.0  | <b>Toxicology:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of toxicological (poisoning and overdose) emergencies patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 32.01 | Define and differentiate among toxicology, poisoning, and overdose.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 32.02 | Describe the pathophysiology and signs and symptoms of the following toxicological emergencies, including but not limited to: <ul style="list-style-type: none"> <li>• Food poisoning</li> <li>• Carbon monoxide poisoning</li> <li>• Cyanide poisoning</li> <li>• Exposure to acid or alkaline substances</li> <li>• Exposure to hydrocarbons</li> <li>• Methanol ingestion</li> <li>• Isopropanol ingestion</li> <li>• ethylene glycol ingestion</li> <li>• Exposure to poisonous plants</li> <li>• Drug withdrawal</li> <li>• Alcoholic syndrome</li> <li>• Withdrawal syndrome (including delirium tremens)</li> <li>• Illicit drug use</li> <li>• Medication overdose</li> <li>• Opioid overdose</li> <li>• Organa phosphate overdose</li> <li>• Nerve agents</li> </ul> |
| 32.03 | Discuss various ways that toxins enter the body. Including inhalation, ingestion, injection, and absorption.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 32.04 | Discuss and demonstrate the assessment and management for the patient with a toxicological emergency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 32.05 | Discuss the role of the Poison Control Center with the nationwide contact number 800-222-1222 in the United States.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 32.06 | Explain the rationale for contacting medical direction early in the prehospital management of a patient with a toxicological emergency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 32.07 | Review the following for Narcan (naloxone): <ul style="list-style-type: none"> <li>• Generic and trade names</li> <li>• Medication forms</li> <li>• Dose</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 32.08 | Discuss the use of medication assisted treatments for substance misuse disorders including suboxone, methadone, and naltrexone and potential complications.                                                                                                                                                                                                                                                                                                                                                                           |
| 32.09 | Discuss safe uses and practices with potentially toxic substances while providing appropriate patient education                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 33.0  | <b>Respiratory:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of respiratory disorders/emergencies patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                       |
| 33.01 | Review the basic anatomy and physiology of the respiratory system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 33.02 | Describe the pathophysiology and signs and symptoms of the following respiratory disorders: <ul style="list-style-type: none"> <li>• Chronic Obstructive Pulmonary Disease</li> <li>• Asthma</li> <li>• Bronchiolitis</li> <li>• Pulmonary Edema</li> <li>• Spontaneous Pneumothorax</li> <li>• Hyperventilation Syndrome</li> <li>• Cystic Fibrosis</li> <li>• Pulmonary Embolism</li> <li>• Pneumonia</li> <li>• Viral Respiratory Infections</li> <li>• Poisonous Exposures</li> <li>• Bacterial respiratory infections</li> </ul> |
| 33.03 | Discuss signs of adequate air exchange.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 33.04 | Discuss the signs and symptoms of a patient across the continuum from respiratory distress to failure.                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 33.05 | Describe and demonstrate the assessment and management of the patient with a respiratory emergency. Patients of all ages.                                                                                                                                                                                                                                                                                                                                                                                                             |
| 33.06 | Review the following for the metered-dose inhalers and small volume nebulizers for medications within the scope of practice of the EMT: <ul style="list-style-type: none"> <li>• Generic name</li> <li>• Medication forms</li> <li>• Dose</li> <li>• Administration</li> <li>• Action</li> <li>• Indications</li> <li>• Contraindications</li> </ul>                                                                                                                                                                                  |

|       |                                                                                                                                                                                                                                     |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 33.07 | Describe and demonstrate the steps in facilitating the use of an inhaler and a small volume nebulizer.                                                                                                                              |
| 33.08 | Differentiate between upper and lower airway obstruction.                                                                                                                                                                           |
| 33.09 | Demonstrate assessment and interpretation of normal and abnormal lung and breath sounds. Patients of all ages.                                                                                                                      |
| 33.10 | Discuss common respiratory disorders, self-administered medications, and equipment (including, but not limited to home oxygen, nebulizers, and CPAP) and provide appropriate patient education.                                     |
| 34.0  | <b>Hematology:</b> Demonstrate a simple depth, simple breadth of knowledge of the assessment, and management of hematology disorders patients of all ages. The student will be able to:                                             |
| 34.01 | Review the compositions and functions of blood and plasma.                                                                                                                                                                          |
| 34.02 | Describe the pathophysiology of the following hematology disorders: <ul style="list-style-type: none"> <li>• Anemia</li> <li>• Sickle Cell Anemia / Sickle Cell Crisis</li> <li>• Hemophilia/Clotting disorders</li> </ul>          |
| 34.03 | Describe and demonstrate the assessment and the management of the patient with a hematological disorder. Patients of all ages.                                                                                                      |
| 34.04 | Discuss signs, symptoms, and potential complications of various hematological disorders and provide appropriate patient education                                                                                                   |
| 35.0  | <b>Genitourinary /Renal:</b> Demonstrate a simple depth, simple breadth of knowledge of the assessment and management of genitourinary/ renal emergency patients of all ages. The student will be able to:                          |
| 35.01 | Review the basic anatomy and physiology of the genitourinary and renal systems.                                                                                                                                                     |
| 35.02 | Describe the pathophysiology and signs and symptoms of the following genitourinary/ renal disorders: <ul style="list-style-type: none"> <li>• Urinary tract infection</li> <li>• Kidney stones</li> <li>• Kidney failure</li> </ul> |
| 35.03 | Discuss the basic principles and complications of kidney dialysis.                                                                                                                                                                  |
| 35.04 | Discuss the recognition and complications of urinary catheters.                                                                                                                                                                     |
| 35.05 | Describe and demonstrate the assessment and management of the patient with a dialysis emergency. Patients of all ages.                                                                                                              |
| 35.06 | Discuss traumatic injuries to the genitourinary system, including, but not limited to: sexual assault (female and male).                                                                                                            |
| 36.0  | <b>Gynecology:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of gynecologic emergencies patients of all ages. The student will be able to:                                |
| 36.01 | Review the basic anatomy and physiology of the female reproductive system.                                                                                                                                                          |
| 36.02 | Describe the pathophysiology and signs and symptoms of the following gynecologic disorders and emergencies, including but not limited to:                                                                                           |

|       |                                                                                                                                                                                                                                                                                                |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Sexual assault</li> <li>• Non-traumatic vaginal bleeding</li> <li>• Menstrual pain</li> <li>• Ovarian cyst</li> <li>• Endometritis</li> <li>• Endometriosis</li> <li>• Pelvic inflammatory disease</li> <li>• Sexually Transmitted Disease</li> </ul> |
| 36.03 | Describe and demonstrate the assessment and management of the patient experiencing a gynecologic emergency. Patients of all ages.                                                                                                                                                              |
| 36.04 | Describe the assessment and management of a patient who has experienced a sexual assault including the psychosocial impact and assessment findings/presentations.                                                                                                                              |
| 36.05 | Discuss the professional and psychological importance of maintaining a patient's modesty and privacy while still being able to obtain necessary information.                                                                                                                                   |
| 36.06 | Discuss the need to provide care for a patient of sexual assault, while still preventing destruction of crime scene information.                                                                                                                                                               |
| 37.0  | <b>Non-Traumatic Musculoskeletal Disorders:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of non-traumatic fractures patients of all ages. The student will be able to:                                                              |
| 37.01 | Review the basic anatomy and physiology of the musculoskeletal system.                                                                                                                                                                                                                         |
| 37.02 | Describe and demonstrate the assessment and management of the patient in all age groups with a non-traumatic musculoskeletal emergency.                                                                                                                                                        |
| 38.0  | <b>Diseases of the Eyes, Ears, Nose, and Throat:</b> Demonstrate a simple depth, simple breadth of knowledge of assessment and management of diseases of the Eyes, Ears, Nose, and Throat patients of all ages The student will be able to:                                                    |
| 38.01 | Describe and demonstrate the assessment and management of the patient in all age groups with abnormal conditions affecting the eyes, ears, nose and throat, including epistaxis.                                                                                                               |
| 39.0  | <b>Shock and Resuscitation:</b> Demonstrate a fundamental knowledge of the causes, pathophysiology, and management of shock and respiratory failure patients of all ages. The student will be able to:                                                                                         |
| 39.01 | Discuss and identify causes and pathophysiology of the categories of hemorrhage and shock.                                                                                                                                                                                                     |
| 39.02 | Review causes and pathophysiology of respiratory failure and arrest.                                                                                                                                                                                                                           |
| 39.03 | Review causes and pathophysiology of cardiac failure or arrest.                                                                                                                                                                                                                                |
| 39.04 | Discuss the various types and degrees of shock.                                                                                                                                                                                                                                                |
| 39.05 | Discuss post resuscitation management.                                                                                                                                                                                                                                                         |
| 39.06 | Explain the system components of CPR, the links in the AHA chain of survival and how each relates to patient survival.                                                                                                                                                                         |
| 39.07 | Define and differentiate between compensated and decompensated shock.                                                                                                                                                                                                                          |

|       |                                                                                                                                                                                                                   |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 39.08 | Discuss the importance of teamwork in the successful management of the critical patient.                                                                                                                          |
| 39.09 | Demonstrate how to perform one and two rescuer CPR, adult, child, and infant.                                                                                                                                     |
| 39.10 | Demonstrate how to perform rescuer level appropriate defibrillation in an adult, child, and infant patient.                                                                                                       |
| 39.11 | Demonstrate rapid decision making based on differential field diagnosis of the critical patient with a <b>special arrest</b> peri-arrest condition.                                                               |
| 39.12 | Describe and demonstrate the assessment and management of the patient with hemorrhage and shock.                                                                                                                  |
| 39.13 | Discuss ethical issues in resuscitation.                                                                                                                                                                          |
| 39.14 | Discuss options for termination resuscitation.                                                                                                                                                                    |
| 40.0  | <b>Trauma Overview:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment and management of the trauma patient patients of all ages. The student will be able to: |
| 40.01 | Discuss pathophysiology of the trauma patient.                                                                                                                                                                    |
| 40.02 | Discuss the components of a comprehensive trauma systems and levels of trauma centers.                                                                                                                            |
| 40.03 | Describe the considerations for different transportation modes, <b>transport and destination issues</b> to a trauma center.                                                                                       |
| 40.04 | Discuss the kinematics of blunt and penetrating trauma.                                                                                                                                                           |
| 40.05 | Discuss and describe significant and non-significant Mechanism of Injury (MOI) and provide examples of each.                                                                                                      |
| 40.06 | Demonstrate the application of the State of Florida's trauma scorecard methodologies as required in Florida Statute and Florida Administrative Code (F.A.C.).                                                     |
| 40.07 | Discuss the National Trauma Triage Protocol of injured Patients.                                                                                                                                                  |
| 40.08 | Discuss forming a field impression and utilizing available information to determine a differential diagnosis.                                                                                                     |
| 40.09 | Identify the need for rapid intervention transport of the trauma patient.                                                                                                                                         |
| 41.0  | <b>Bleeding:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of bleeding patients of all ages. The student will be able to:                 |
| 41.01 | Review the anatomy and physiology of the circulatory system.                                                                                                                                                      |
| 41.02 | Discuss the different types of bleeding and classes of hemorrhage.                                                                                                                                                |
| 41.03 | Review signs and symptoms of shock (hypo-perfusion).                                                                                                                                                              |
| 41.04 | Demonstrate effective hemorrhage control to include application of a tourniquet.                                                                                                                                  |

|       |                                                                                                                                                                                                                                                                                                        |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 41.05 | Review the pathophysiology of hemorrhagic shock.                                                                                                                                                                                                                                                       |
| 41.06 | Recognize the need for rapid transport for patients that are bleeding and showing signs of shock (hypo-perfusion).                                                                                                                                                                                     |
| 41.07 | Describe and demonstrate the assessment and management of a patient with hemorrhagic shock.                                                                                                                                                                                                            |
| 41.08 | Discuss the possible complications of an improperly applied dressing, bandage, tourniquet, and hemostatic agents.                                                                                                                                                                                      |
| 42.0  | <b>Chest Trauma:</b> Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment and management of chest trauma patients of all ages. The student will be able to:                                                                                                     |
| 42.01 | Review the anatomy and physiology of the thoracic/chest cavity and respiratory system.                                                                                                                                                                                                                 |
| 42.02 | Differentiate between a pneumothorax (open, simple and tension) and hemothorax.                                                                                                                                                                                                                        |
| 42.03 | Discuss the pathophysiology, signs and symptoms, and MOI of myocardial injuries, including the following: <ul style="list-style-type: none"> <li>• Pericardial tamponade</li> <li>• Myocardial contusion</li> <li>• Myocardial rupture</li> <li>• Commotio cordis</li> <li>• Aortic shearer</li> </ul> |
| 42.04 | Discuss the pathophysiology, signs and symptoms, and MOI of specific chest wall injuries, including the following: <ul style="list-style-type: none"> <li>• Rib fracture</li> <li>• Flail segment</li> <li>• Sternal fracture</li> <li>• Open chest wound</li> <li>• Impaled object</li> </ul>         |
| 42.05 | Describe and demonstrate the assessment and management of chest trauma <b>to include blunt versus penetrating trauma.</b>                                                                                                                                                                              |
| 43.0  | <b>Abdominal and Genitourinary Trauma:</b> Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment and management of abdominal and genitourinary trauma patients of all ages. The student will be able to:                                                         |
| 43.01 | Review the anatomy and physiology of the abdominal cavity and genitourinary system.                                                                                                                                                                                                                    |
| 43.02 | Discuss the pathophysiology, signs and symptoms, and MOI for abdominal trauma including <u>evisceration, impaled objects, blunt versus penetrating mechanisms</u> , hollow and solid <b>organ</b> injuries.                                                                                            |
| 43.03 | Describe and demonstrate the assessment and management of a patient with a suspected abdominal or genitourinary injury/trauma <u>to include internal/external genitalia.</u>                                                                                                                           |
| 44.0  | <b>Orthopedic Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of orthopedic trauma patients of all ages. The student will be able to:                                                                                    |
| 44.01 | Review the anatomy and physiology of the Musculo-skeletal system.                                                                                                                                                                                                                                      |
| 44.02 | Discuss pathophysiology, signs and symptoms, and MOI for orthopedic trauma including <u>evisceration, impaled objects, blunt versus penetrating mechanisms</u> , hollow and solid <b>organ</b> injuries.                                                                                               |

|       |                                                                                                                                                                                                                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 44.03 | Discuss the different types of orthopedic trauma including fracture classifications. To include: <ul style="list-style-type: none"> <li>• Open fracture</li> <li>• Closed fracture</li> <li>• Dislocation</li> <li>• Upper and Lower extremity orthopedic trauma</li> <li>• Sprains and Strains</li> <li>• Pelvic Fracture</li> </ul> |
| 44.04 | Explain the rationale for stabilization of an injured extremity. To include: <ul style="list-style-type: none"> <li>• Open fracture</li> <li>• Closed fracture</li> <li>• Dislocation</li> <li>• Upper and Lower extremity orthopedic trauma</li> <li>• Sprains and Strains</li> <li>• Pelvic Fracture</li> </ul>                     |
| 44.05 | Describe and demonstrate the assessment and management of a patient with a suspected orthopedic trauma.                                                                                                                                                                                                                               |
| 44.06 | Discuss the following management techniques: <ul style="list-style-type: none"> <li>• Heat therapy</li> <li>• Cold therapy</li> <li>• Splinting</li> </ul>                                                                                                                                                                            |
| 44.07 | List the six “P’s” of orthopedic injury assessment.                                                                                                                                                                                                                                                                                   |
| 44.08 | Discuss the need for assessment of distal pulses, motor, and sensation before and after splinting.                                                                                                                                                                                                                                    |
| 44.09 | Review age-associated changes in the bones.                                                                                                                                                                                                                                                                                           |
| 44.10 | Discuss the proper procedures to package an amputated body part for replantation.                                                                                                                                                                                                                                                     |
| 44.11 | Explain the rationale for splinting at the scene versus load and go.                                                                                                                                                                                                                                                                  |
| 44.12 | Demonstrate the proper use of various splinting materials and devices to include improvised and traction splints.                                                                                                                                                                                                                     |
| 45.0  | <b>Soft Tissue Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of soft tissue trauma patients of all ages. The student will be able to:                                                                                                                 |
| 45.01 | Review anatomy and physiology of the integumentary system to include the layers of the skin.                                                                                                                                                                                                                                          |
| 45.02 | Describe the pathophysiology, signs and symptoms, and MOI of soft tissue trauma.                                                                                                                                                                                                                                                      |
| 45.03 | Describe and demonstrate the assessment and management of various soft tissue injuries. <ul style="list-style-type: none"> <li>• Wounds (e.g., avulsion, bite, laceration, puncture, and incisions)</li> <li>• Crush and compartment syndrome</li> </ul>                                                                              |

|       |                                                                                                                                                                                                                                                                                                                                                                                                |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• High pressure injection injury</li> </ul>                                                                                                                                                                                                                                                                                                             |
| 45.04 | Identify types of burn injuries, including: <ul style="list-style-type: none"> <li>• Thermal burn</li> <li>• Chemical burn</li> <li>• Electrical burn</li> <li>• Radiation exposure</li> </ul>                                                                                                                                                                                                 |
| 45.05 | Describe the depth classifications of burn injuries, including: <ul style="list-style-type: none"> <li>• Superficial burn</li> <li>• Partial-thickness burn</li> <li>• Full-thickness burn</li> <li>• Other depth classifications</li> </ul>                                                                                                                                                   |
| 45.06 | Describe and demonstrate methods for determining body surface area percentage of a burn injury including the “rule of nines,” the “rule of palms,” and other methods.                                                                                                                                                                                                                          |
| 45.07 | Explain how the seriousness of a burn is related to its depth and percent of body surface area (BSA) involved.                                                                                                                                                                                                                                                                                 |
| 45.08 | Review the various management techniques for hemorrhage control.                                                                                                                                                                                                                                                                                                                               |
| 45.09 | Differentiate among the types of injuries requiring the use of an occlusive versus non- occlusive dressing.                                                                                                                                                                                                                                                                                    |
| 45.10 | Demonstrate the assessment and management of specific burn injuries including: <ul style="list-style-type: none"> <li>• Thermal</li> <li>• Inhalation</li> <li>• Chemical (<i>in the eye and on the skin</i>)</li> <li>• Electrical</li> <li>• Radiation</li> </ul>                                                                                                                            |
| 46.0  | <b>Head, Facial, Neck, and Spine Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of head, facial, neck and spine trauma patients of all ages. The student will be able to:                                                                                                                                       |
| 46.01 | Review the anatomy and physiology of the head, face, neck and spine.                                                                                                                                                                                                                                                                                                                           |
| 46.02 | Describe the pathophysiology, signs and symptoms, and MOI for head, face, neck, and spine trauma.                                                                                                                                                                                                                                                                                              |
| 46.03 | Describe and demonstrate the assessment and management of a patient with the following traumas to the head, face, neck, and spine: <ul style="list-style-type: none"> <li>• Penetrating neck trauma</li> <li>• Laryngotracheal injury</li> <li>• Skull fracture</li> <li>• Facial fracture</li> <li>• Eye injury (foreign body) <i>eyes, globe rupture</i></li> <li>• Dental trauma</li> </ul> |

|       |                                                                                                                                                                                                                                                             |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Shaken Baby Syndrome</li> <li>• Severe epistaxis</li> </ul>                                                                                                                                                        |
| 46.04 | Recognize and manage life threats due to face, head, neck, and spine trauma.                                                                                                                                                                                |
| 46.05 | Discuss and demonstrate the utilization of the Glasgow Coma Scale.                                                                                                                                                                                          |
| 47.0  | <b>Nervous System Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of nervous system trauma patients of all ages. The student will be able to:                                 |
| 47.01 | Review the anatomy and physiology of the nervous system.                                                                                                                                                                                                    |
| 47.02 | Discuss the pathophysiology, signs and symptoms, and MOI for <b>traumatic</b> brain <b>injury (TBI)</b> and spinal cord trauma.                                                                                                                             |
| 47.03 | Describe and demonstrate the assessment and management of a patient with a <b>traumatic</b> brain <b>injury (TBI)</b> and/or spinal cord trauma.                                                                                                            |
| 47.04 | Discuss the rationale and potential complications of spinal motion restriction of the entire spine when a cervical spine injury is suspected.                                                                                                               |
| 47.05 | Given a scenario, discuss whether or not to remove a helmet prior to transport of a patient.                                                                                                                                                                |
| 47.06 | Demonstrate various methods for stabilization and removal of a helmet.                                                                                                                                                                                      |
| 47.07 | Discuss documentation of assessment before, during, and after spinal motion restriction.                                                                                                                                                                    |
| 48.0  | <b>Special Considerations in Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment and management of trauma patients with special considerations patients of all ages. The student will be able to: |
| 48.01 | Review the anatomy and physiology for the following trauma patients: <ul style="list-style-type: none"> <li>• Pregnant</li> <li>• Pediatric</li> <li>• Geriatric</li> </ul>                                                                                 |
| 48.02 | Discuss the pathophysiology, signs and symptoms, and MOI of trauma in the following patients: <ul style="list-style-type: none"> <li>• Pregnant</li> <li>• Pediatric</li> <li>• Geriatric</li> </ul>                                                        |
| 48.03 | Discuss and demonstrate unique assessment and management considerations for the following trauma patients: <ul style="list-style-type: none"> <li>• Pregnant</li> <li>• Pediatric</li> </ul>                                                                |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Geriatric</li> <li>• Cognitively impaired</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                 |
| 49.0  | <b>Environmental Emergencies:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment and management of environmental emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                           |
| 49.01 | Define drowning and discuss its incidence, risk factors and prevention.                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 49.02 | Discuss the pathophysiology, signs and symptoms, and MOI of the following: <ul style="list-style-type: none"> <li>• Drowning and water related incidents</li> <li>• Temperature-related illness</li> <li>• Bites and envenomation</li> <li>• Dysbarism such as high-altitude injuries</li> <li>• Diving injuries</li> <li>• Lightning (electrical) injury</li> <li>• High altitude illness</li> <li>• Radiation exposure</li> <li>• Other environmental emergencies</li> </ul>                |
| 49.03 | Describes and demonstrate the assessment and management for a patient with the following: <ul style="list-style-type: none"> <li>• Drowning and water related incidents</li> <li>• Temperature-related illness</li> <li>• Bites and envenomation</li> <li>• Dysbarism such as high-altitude injuries</li> <li>• Diving injuries</li> <li>• Lightning (electrical) injury</li> <li>• High altitude illness</li> <li>• Radiation exposure</li> <li>• Other environmental emergencies</li> </ul> |
| 49.04 | Discuss the fundamental principles of the gas laws including Boyle's, Dalton, Henry and Charles.                                                                                                                                                                                                                                                                                                                                                                                              |
| 49.05 | Discuss scene management and provider safety considerations for a variety of environmental emergencies.                                                                                                                                                                                                                                                                                                                                                                                       |
| 49.06 | Explain the five ways a body can lose heat.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 49.07 | Discuss potentially life-threatening venomous species of insects, spiders and snakes in the U.S.                                                                                                                                                                                                                                                                                                                                                                                              |
| 50.0  | <b>Multi-Systems Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the pathophysiology, assessment, and management of multi-system trauma and blast injuries, patients of all ages. The student will be able to:                                                                                                                                                                                                                                              |
| 50.01 | Discuss the pathophysiology, signs and symptoms, and MOI of multi-system trauma and blast injuries.                                                                                                                                                                                                                                                                                                                                                                                           |
| 50.02 | Describe and demonstrate assessment and management considerations for a patient of multi system trauma and blast injuries.                                                                                                                                                                                                                                                                                                                                                                    |

|       |                                                                                                                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 50.03 | Describe and demonstrate assessment and management considerations for a patient of multi system trauma and blast injuries.                                                                                       |
| 50.04 | Formulate a field impression based upon the assessment findings for a patient with multi systems trauma and/ or blast injuries                                                                                   |
| 51.0  | <b>Obstetrics:</b> Demonstrate a fundamental depth, foundational breadth of management of the obstetric patient within the scope of practice of the EMT. The student will be able to:                            |
| 51.01 | Identify and describe the anatomical and the physiological changes during pregnancy.                                                                                                                             |
| 51.02 | Define the stages of labor and discuss how to assess them.                                                                                                                                                       |
| 51.03 | Differentiate between cephalic and abnormal delivery.                                                                                                                                                            |
| 51.04 | Describe the management of a patient with pre-delivery emergencies.                                                                                                                                              |
| 51.05 | Discuss and demonstrate the patient care measures for all stages of labor in a cephalic delivery for the mother and the newborn.                                                                                 |
| 51.06 | Describe the management of the mother post-delivery.                                                                                                                                                             |
| 51.07 | Discuss and demonstrate the patient care measures for all stages of labor in abnormal deliveries for the mother and the newborn.                                                                                 |
| 51.08 | Describe the procedures for handling complications of delivery.                                                                                                                                                  |
| 51.09 | Describe special considerations when meconium is present in amniotic fluid or during delivery.                                                                                                                   |
| 51.10 | Identify the factors that lead to premature birth and low birth weight newborns.                                                                                                                                 |
| 51.11 | Demonstrate the procedures for handling complications of pregnancy including pre-eclampsia, eclampsia, and high risk.                                                                                            |
| 52.0  | <b>Neonatal Care:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of management of the newborn and neonatal patient within the scope of practice of the EMT. The student will be able to: |
| 52.01 | Discuss and demonstrate assessment and management considerations of a neonate.                                                                                                                                   |
| 52.02 | Define the term neonate.                                                                                                                                                                                         |
| 52.03 | Describe special patient care considerations of a premature baby.                                                                                                                                                |
| 52.04 | Calculate the Apgar score given various newborn situations.                                                                                                                                                      |
| 52.05 | Discuss the common signs when ventilatory assistance is appropriate for a neonate.                                                                                                                               |
| 52.06 | Discuss and demonstrate the steps in resuscitation of a neonate.                                                                                                                                                 |
| 52.07 | Review the signs of hypovolemia in a newborn.                                                                                                                                                                    |

|       |                                                                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 52.08 | Discuss the effects maternal narcotic usage has on the newborn.                                                                                                                                    |
| 52.09 | Discuss the management/treatment plan for vomiting in the neonate.                                                                                                                                 |
| 52.10 | Discuss the assessment findings associated with common birth injuries in the neonate.                                                                                                              |
| 53.0  | <b>Pediatrics:</b> Demonstrate a fundamental depth, fundamental breadth of knowledge of management of the pediatric patient within the scope of practice of the EMT. The student will be able to:  |
| 53.01 | Review the anatomy, physiology and pathophysiology differences of patients.                                                                                                                        |
| 53.02 | Discuss the differences in approaching and assessing patients.                                                                                                                                     |
| 53.03 | Discuss and demonstrate assessment and management considerations for Sudden Unexplained Infant Death Syndrome (SUIDS).                                                                             |
| 53.04 | Describe the selection of appropriate airway adjuncts and ventilation devices.                                                                                                                     |
| 53.05 | Discuss complications of improper utilization of airway adjuncts and ventilation devices.                                                                                                          |
| 53.06 | Describe the common causes, assessment and management of respiratory distress, failure, or arrest.                                                                                                 |
| 53.07 | Discuss the common causes, assessment and management of hypo-perfusion.                                                                                                                            |
| 53.08 | Discuss the common causes, assessment and management of cardiopulmonary arrest.                                                                                                                    |
| 53.09 | Describe the common causes, assessment and management of altered level of consciousness.                                                                                                           |
| 53.10 | Describe the common causes, assessment and management of trauma.                                                                                                                                   |
| 53.11 | Describe the common causes, assessment and management of neurological emergencies.                                                                                                                 |
| 53.12 | Demonstrate proper technique for administering blow-by oxygen.                                                                                                                                     |
| 53.13 | Review proper technique for suctioning.                                                                                                                                                            |
| 53.14 | Review appropriate use of airway adjuncts and ventilation devices.                                                                                                                                 |
| 53.15 | Review age-appropriate basic airway clearing maneuvers for a completely obstructed airway.                                                                                                         |
| 54.0  | <b>Geriatrics:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of management of the geriatric patient within the scope of practice of the EMT. The student will be able to: |
| 54.01 | Define and discuss the term geriatrics.                                                                                                                                                            |
| 54.02 | Review the anatomy, physiology and pathophysiology of the geriatric patient.                                                                                                                       |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 54.03 | Discuss common emotional and psychological concerns and conditions of the geriatric patient.                                                                                                                                                                                                                                                                                                                                          |
| 54.04 | Discuss the importance of fall prevention with the geriatric patient.                                                                                                                                                                                                                                                                                                                                                                 |
| 54.05 | Describe principles that should be employed when assessing and communicating with the geriatric patient.                                                                                                                                                                                                                                                                                                                              |
| 54.06 | Describe the common causes, assessment, and management of the geriatric patient with a medical, trauma, or psychosocial complaint.                                                                                                                                                                                                                                                                                                    |
| 55.0  | <b>Patients with Special Challenges:</b> Demonstrate a simple depth, simple breadth of knowledge of the management of the patient with special challenges patients of all ages. The student will be able to:                                                                                                                                                                                                                          |
| 55.01 | Discuss the special considerations required when providing emergency care to patients with: <ul style="list-style-type: none"> <li>• Abuse/neglect of vulnerable populations</li> <li>• Homelessness</li> <li>• Poverty</li> <li>• Bariatrics</li> <li>• Tech dependent</li> <li>• Hospice/terminally ill</li> <li>• Tracheostomy</li> <li>• Home care</li> <li>• Sensory deficit/loss</li> <li>• Developmental disability</li> </ul> |
| 55.02 | Discuss special considerations regarding common medical devices used in the home care of patients with special challenges including: <ul style="list-style-type: none"> <li>• Respiratory devices</li> <li>• Cardiac devices</li> <li>• Gastro-urinary devices</li> <li>• Central &amp; peripheral IV catheters</li> </ul>                                                                                                            |
| 55.03 | Describe home care and the types of patients it serves and the services it encompasses.                                                                                                                                                                                                                                                                                                                                               |
| 55.04 | Differentiate between hospice/palliative care and curative care.                                                                                                                                                                                                                                                                                                                                                                      |
| 55.05 | Discuss the role of the EMT as a patient advocate for vulnerable populations.                                                                                                                                                                                                                                                                                                                                                         |
| 56.0  | <b>Principles of Safely Operating a Ground Ambulance:</b> Demonstrate a simple depth, foundational breadth of knowledge of risks and responsibilities of transport. The student will be able to:                                                                                                                                                                                                                                      |
| 56.01 | Discuss the importance of performing regular vehicle and equipment inspection.                                                                                                                                                                                                                                                                                                                                                        |
| 56.02 | Demonstrate how to perform a daily inspection of an ambulance.                                                                                                                                                                                                                                                                                                                                                                        |
| 56.03 | Review the general provisions of Florida laws relating to the operation of the ambulance.                                                                                                                                                                                                                                                                                                                                             |

|       |                                                                                                                                                                                                                                                                                                                                                                                      |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 56.04 | Discuss the guidelines for operating an ambulance safety during emergency and non-emergency situation/incident.                                                                                                                                                                                                                                                                      |
| 56.05 | Review considerations that are required for ensuring scene safety, including personal safety, patient safety, and traffic control.                                                                                                                                                                                                                                                   |
| 56.06 | Review how to clean and disinfect the ambulance and equipment.                                                                                                                                                                                                                                                                                                                       |
| 57.0  | <b>Incident Management:</b> Demonstrate a fundamental depth, fundamental breadth of knowledge of establishing and working within the incident management system. The student will be able to:                                                                                                                                                                                        |
| 57.01 | Discuss the importance of NIMS (National Incident Management System) and its functional components.                                                                                                                                                                                                                                                                                  |
| 57.02 | Discuss unified command and when it is applicable.                                                                                                                                                                                                                                                                                                                                   |
| 57.03 | Describe the role of command and the procedures for transfer of command.                                                                                                                                                                                                                                                                                                             |
| 57.04 | List and describe the functions of the following groups and leaders in ICS as it pertains to EMS incidents: <ul style="list-style-type: none"> <li>• Safety</li> <li>• Logistics</li> <li>• Rehabilitation</li> <li>• Staging,</li> <li>• Treatment</li> <li>• Triage</li> <li>• Transportation</li> <li>• Extrication/rescue</li> <li>• Morgue</li> <li>• Communications</li> </ul> |
| 57.05 | Discuss the physical and psychological signs of critical incident stress.                                                                                                                                                                                                                                                                                                            |
| 58.0  | <b>Multiple Casualty Incidents:</b> Demonstrate a simple depth, foundational breadth of knowledge of responding to an emergency during a multiple casualty incident. The student will be able to:                                                                                                                                                                                    |
| 58.01 | Review essential elements of scene size-up when arriving at a potential MCI.                                                                                                                                                                                                                                                                                                         |
| 58.02 | Describe the role of the rescuers and EMS systems in planning for MCIs and disasters.                                                                                                                                                                                                                                                                                                |
| 58.03 | Describe the role of the physician at multiple casualty incidents.                                                                                                                                                                                                                                                                                                                   |
| 58.04 | Define triage and describe the principles of triage.                                                                                                                                                                                                                                                                                                                                 |
| 58.05 | Describe the START (simple triage and rapid treatment) and JUMP START method of initial triage.                                                                                                                                                                                                                                                                                      |
| 58.06 | Describe techniques used to allocate patients to hospitals and track them.                                                                                                                                                                                                                                                                                                           |
| 58.07 | Discuss and describe the essential equipment to provide logistical support to MCI operations.                                                                                                                                                                                                                                                                                        |

|       |                                                                                                                                                                                                                                                                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 58.08 | Describe the role of critical incident stress management during and after MCIs.                                                                                                                                                                                                                                                                                 |
| 58.09 | Demonstrate the use of local/regional triage tagging system.                                                                                                                                                                                                                                                                                                    |
| 59.0  | <b>Air Medical:</b> Demonstrate a simple depth, simple breadth of knowledge of safe air medical operations and criteria for utilizing air medical response. The student will be able to:                                                                                                                                                                        |
| 59.01 | Describe key scene safety considerations when preparing for a helicopter medivac, including establishing a landing zone and approaching the aircraft.                                                                                                                                                                                                           |
| 59.02 | Describe the capabilities, protocols, and methods for accessing air medical transport.                                                                                                                                                                                                                                                                          |
| 59.03 | Review the advantages and disadvantages of air medical transport.                                                                                                                                                                                                                                                                                               |
| 59.04 | Review the conditions/situations in which air medical transport should be considered.                                                                                                                                                                                                                                                                           |
| 60.0  | <b>Vehicle Extrication:</b> Demonstrate a simple depth, simple breadth of knowledge for safe vehicle extrication and use of simple hand tools. The student will be able to:                                                                                                                                                                                     |
| 60.01 | Describe the role of the EMT in patient rescue and vehicle extrication                                                                                                                                                                                                                                                                                          |
| 60.02 | Describe personal and patient safety during vehicle extrication.                                                                                                                                                                                                                                                                                                |
| 60.03 | Explain the difference between simple access and complex access in vehicle extrication.                                                                                                                                                                                                                                                                         |
| 60.04 | Discuss patient care considerations related to assisting with rapid extrication, providing emergency care to the trapped patient and removing and transferring a patient.                                                                                                                                                                                       |
| 60.05 | Discuss the use of simple hand tools used for vehicle extrication.                                                                                                                                                                                                                                                                                              |
| 60.06 | Discuss and describe the hazards and safe practices associated with the following vehicle components: <ul style="list-style-type: none"> <li>• Energy absorbing bumpers</li> <li>• Air bag/supplemental restraint systems</li> <li>• Catalytic converters and conventional fuel systems</li> <li>• Stored energy</li> <li>• Hybrid-electric vehicles</li> </ul> |
| 60.07 | Describe methods for emergency stabilization using rope, cribbing, jacks, spare tire, and come-a-longs for vehicles.                                                                                                                                                                                                                                            |
| 60.08 | Describe the electrical hazards commonly found at highway incidents (above and below ground).                                                                                                                                                                                                                                                                   |
| 60.09 | Explain the difference between tempered and safety glass, identify its locations on a vehicle and how to break it safely.                                                                                                                                                                                                                                       |
| 60.10 | Explain typical door anatomy and methods to gain access to the patient.                                                                                                                                                                                                                                                                                         |
| 61.0  | <b>Hazardous Materials Awareness:</b> Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating in a cold zone at a hazardous material or other special incident. The student will be able to:                                                                                                                         |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 61.01 | Identify and describe resources for substance identification, decontamination, and treatment information, including but not limited to the following: <ul style="list-style-type: none"> <li>• Poison control center</li> <li>• Medical control</li> <li>• Material safety data sheets (MSDS),</li> <li>• Reference textbooks</li> <li>• Computer databases</li> <li>• Computer-Aided Management of Emergency Operations (CAMEO)</li> <li>• CHEMTREC</li> <li>• Technical specialists</li> <li>• Agency for toxic substances and disease registry</li> </ul> |
| 61.02 | Explain primary and secondary contamination risk.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 61.03 | Review routes of exposure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 61.04 | Discuss how the substance and route of contamination alters triage and decontamination methods.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 61.05 | Explain the common signs, symptoms, and treatment for the following substances: <ul style="list-style-type: none"> <li>• Corrosives</li> <li>• Pesticides</li> <li>• Chemical asphyxiants</li> <li>• Hydrocarbon solvents</li> </ul>                                                                                                                                                                                                                                                                                                                         |
| 61.06 | Identify local facilities and resources capable of treating patients exposed to hazardous materials.                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 61.07 | Determine the appropriate level of PPE by considering the following: <ul style="list-style-type: none"> <li>• Types</li> <li>• Application</li> <li>• Use and limitations</li> <li>• Use of chemical compatibility chart</li> </ul>                                                                                                                                                                                                                                                                                                                          |
| 61.08 | Explain specific decontamination procedures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 61.09 | Discuss the designated HAZMAT control zones (HOT, WARM, and COLD).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 61.10 | Discuss an emergency two-step decontamination process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 61.11 | Identify DOT Labels, placards and markings that are used to designate HAZMAT materials.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 61.12 | Demonstrate the ability to use a variety of reference materials to identify a HAZMAT material.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 62.0  | <b>Mass Casualty Incidents Due to Terrorism and Disaster:</b> Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating on the scene of a natural or man-made disaster. The student will be able to:                                                                                                                                                                                                                                                                                                                |

|       |                                                                                                                                                                                                                                                                                             |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 62.01 | Describe the role of the EMT on the scene of a natural or man-made disaster.                                                                                                                                                                                                                |
| 62.02 | Define the different types of terrorism and provide examples of incidents of each.                                                                                                                                                                                                          |
| 62.03 | Describe the factors related to ensuring situational safety at the site of a disaster and the procedures required.                                                                                                                                                                          |
| 62.04 | Discuss the National Terrorism Advisory System.                                                                                                                                                                                                                                             |
| 62.05 | Discuss factors to consider when responding to a terrorist situation.                                                                                                                                                                                                                       |
| 62.06 | Review important actions to take at the scene of a terrorist event such as: <ul style="list-style-type: none"> <li>• Scene safety</li> <li>• Personal protection</li> <li>• Notification procedures</li> <li>• Available resources</li> <li>• Working with in the command system</li> </ul> |
| 62.07 | List and describe the main categories of weapons of mass destruction.                                                                                                                                                                                                                       |
| 62.08 | Discuss the different types of chemical agents and their signs and symptoms.                                                                                                                                                                                                                |
| 62.09 | Review the treatment and management of patients exposed to various types of chemical agents and radiation.                                                                                                                                                                                  |
| 62.10 | Review the different types of radiations and their effect on the human body.                                                                                                                                                                                                                |
| 62.11 | Discuss the use of a nerve agent antidote kit.                                                                                                                                                                                                                                              |

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Emergency Medical Technician –ATD

**ATD CIP Number:** 0351090408

**SOC Code(s):**

When this program is offered at the college level, the following standards and benchmarks apply:

|             |                                                                                                                                                                         |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>01.0</b> | <b>EMS Systems:</b> Demonstrate a simple depth, foundational breadth of knowledge of EMS systems. – The student will be able to:                                        |
| 01.01       | Define Emergency Medical Services (EMS) systems.                                                                                                                        |
| 01.02       | Discuss the historical background of the development of the EMS system.                                                                                                 |
| 01.03       | Identify the four levels of national EMS providers (EMR, EMT, AEMT and PM) as well as the three levels (EMR, EMT, and PM) in the State of Florida.                      |
| 01.04       | Discuss the specific statutes and regulations regarding the EMS system in Florida.                                                                                      |
| 01.05       | Discuss vehicle and equipment readiness.                                                                                                                                |
| 01.06       | Characterize the EMS system's role in prevention and public education.                                                                                                  |
| 01.07       | Systems of care, e.g., Stroke, STEMI, Trauma, Pediatrics (S, F).                                                                                                        |
| 01.08       | MIH/CP and other EMS-related specialty roles (S, S).                                                                                                                    |
| 01.09       | Discuss the roles and responsibilities of the EMT related to personal safety of the crew, patient and by standers.                                                      |
| 01.10       | Discuss the roles and responsibilities of the EMT to operate emergency vehicles, provide scene leadership and perform patient assessment and administer emergency care. |
| 01.11       | Discuss the maintenance of and differences between certification and licensure for the EMS professional in the State of Florida and NREMT.                              |
| 01.12       | Define quality improvement and discuss the EMT's role in the process.                                                                                                   |
| 01.13       | Quality improvement vs. quality assurance (S, F).                                                                                                                       |
| 01.14       | Role of medical oversight (S, S).                                                                                                                                       |
| 01.15       | Culture of safety.                                                                                                                                                      |
| 01.16       | Patient safety (SF)                                                                                                                                                     |

| <del>03.47</del> 03.10                                                                                                                                                              | Discuss situation that may require the use of medical restraints on the patient and explain guidelines and safety consideration for their use.                         |
| <del>03.48</del> 03.11                                                                                                                                                              | Define “infectious disease” and “communicable disease.”                                                                                                                |
| <del>03.49</del> 03.12                                                                                                                                                              | Disease transmission (F, F).                                                                                                                                           |
| <del>03.50</del> 03.13                                                                                                                                                              | Describe the routes of transmission and associated risks for infectious disease.                                                                                       |
| <del>03.51</del> 03.14                                                                                                                                                              | Explain the mode of transmission and the steps to prevent/deal with an exposure of hepatitis, meningitis, tuberculosis and HIV.                                        |
| <del>03.52</del> 03.15                                                                                                                                                              | Explain how immunity to infectious diseases is acquired.                                                                                                               |

|                         |                                                                                                                                                                                        |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>03.53</del> 03.16  | Explain post exposure management of exposure to patient blood or body fluids, including proper notification documentation.                                                             |
| <del>03.54</del> 03.17  | Describe the components of physical fitness and mental wellbeing.                                                                                                                      |
| <del>03.55</del> 03.18  | Identify personal health practices and environmental factors which affect physical, mental, and emotional wellbeing.                                                                   |
| <del>03.56</del> 03.19  | Prevention of work-related injuries and illnesses (F, F).                                                                                                                              |
| <del>03.57</del> 03.20  | Responder mental health, resilience and suicide prevention (F, F).                                                                                                                     |
| <del>03.58</del> 03.21  | Wellness principles (F, F).                                                                                                                                                            |
| <del>03.59</del> 03.22  | Discuss complementary and alternative health practices.                                                                                                                                |
| <del>03.60</del> 03.23  | Explain the basic concepts of positive self-image, wellness and stress.                                                                                                                |
| <del>03.61</del> 03.24  | Discuss the need for a wellness and stress control plan that can be used in personal and professional life.                                                                            |
| <del>03.62</del> 03.25  | Explore the importance of adequate nutrition (i.e. U.S. Department of Agriculture's MyPlate food guide ( <a href="http://www.choosemyplate.gov">www.choosemyplate.gov</a> )).          |
| <del>03.63</del> 03.26  | Demonstrate safe behaviors in the proper use of medical equipment.                                                                                                                     |
| <del>03.64</del> 03.27  | Explain the theory of root- cause analysis.                                                                                                                                            |
| <del>03.65</del> 03.28  | Identify and describe methods in medical error reduction and prevention in the various healthcare settings.                                                                            |
| <del>03.66</del> 03.29  | Identify and practice security procedures for medical supplies and equipment in various healthcare settings.                                                                           |
| <del>03.67</del> 03.30  | Describe fire, safety, disaster and evacuation procedures in the various healthcare settings.                                                                                          |
| <del>03.68</del> 03.31  | Discuss applicable accrediting and regulatory agency patient safety guidelines.                                                                                                        |
| <del>04.04.0</del> 04.0 | <b>Documentation:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the principles of medical documentation and report writing. – The student will be able to: |
| <del>04.69</del> 04.01  | Discuss applications of technology in healthcare.                                                                                                                                      |
| <del>04.70</del> 04.02  | Demonstrate basic computer skills.                                                                                                                                                     |
| <del>04.71</del> 04.03  | Interpret and utilize information from electronic health records.                                                                                                                      |
| <del>04.72</del> 04.04  | Identify methods of electronic communication to access and distribute data.                                                                                                            |
| <del>04.73</del> 04.05  | Describe the use and importance of properly written communication and patient care documentation.                                                                                      |

|                        |                                                                                                                                                                                                                                      |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>04.74</del> 04.06 | Explain the legal implication of the patient care report.                                                                                                                                                                            |
| <del>04.75</del> 04.07 | Supporting medical necessity (S,S).                                                                                                                                                                                                  |
| <del>04.76</del> 04.08 | Identify the minimum dataset reference patient information and administrative information on the patient care report.                                                                                                                |
| <del>04.77</del> 04.09 | Understand how to document refusal of care, including legal implications.                                                                                                                                                            |
| <del>04.78</del> 04.10 | Discuss the implications of the Health Insurance Portability and Accountability Act of 1996 on confidential documentation.                                                                                                           |
| <del>04.79</del> 04.11 | Describe the special considerations concerning mass casualty incident documentation.                                                                                                                                                 |
| <del>04.80</del> 04.12 | Demonstrate completion of a patient care report for a medical and trauma patient.                                                                                                                                                    |
| <del>05.05</del> 05.0  | <b>EMS System Communication:</b> Demonstrate a simple depth, simple breadth of knowledge of the EMS communication system, communication with other health care professionals, and team communication. — The student will be able to: |
| <del>05.81</del> 05.01 | Understand the basic principles of the various types of communications equipment used in EMS.                                                                                                                                        |
| <del>05.82</del> 05.02 | Describe the use of radio communication and correct radio procedures, including the proper methods of initiating and terminating the radio call/transmission.                                                                        |
| <del>05.83</del> 05.03 | Explain the rationale for providing efficient and effective radio communications and patient reports.                                                                                                                                |
| <del>05.84</del> 05.04 | Identify the essential components of the verbal report and legal aspects that need to be considered.                                                                                                                                 |
| <del>05.85</del> 05.05 | Perform an organized and concise radio transmission.                                                                                                                                                                                 |
| <del>05.86</del> 05.06 | Team communication and dynamics (S,S).                                                                                                                                                                                               |
| <del>05.87</del> 05.07 | Perform an organized, concise verbal patient report that would be given to the staff at a receiving facility.                                                                                                                        |
| <del>05.88</del> 05.08 | Perform a brief, organized verbal report that would be given during transfer of care at an incident scene.                                                                                                                           |
| <del>06.06</del> 06.0  | <b>Therapeutic Communication:</b> Demonstrate a simple depth, simple breadth of knowledge of the principles of therapeutic communication. — The student will be able to:                                                             |
| <del>06.89</del> 06.01 | Describe principles of therapeutic and effective communication with patients.                                                                                                                                                        |
| <del>06.90</del> 06.02 | Health care literacy (S, S).                                                                                                                                                                                                         |
| <del>06.91</del> 06.03 | Non-discriminatory communication that addresses inherent or unconscious bias, is culturally aware and sensitive, and intended to improve patient outcome (S, S).                                                                     |
| <del>06.92</del> 06.04 | Discuss basic speaking and active listening skills.                                                                                                                                                                                  |
| <del>06.93</del> 06.05 | Recognize the importance of patient/client education regarding healthcare.                                                                                                                                                           |

|                         |                                                                                                                                                                                                                                                                                                          |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>06.94</del> 06.06  | Discuss the adjustment of communication strategies to effectively communicate with patients with: <ul style="list-style-type: none"> <li>• Differing age groups</li> <li>• Differing developmental stages</li> <li>• Special needs</li> <li>• Differing cultures, including language barriers</li> </ul> |
| <del>06.95</del> 06.07  | Discuss the communication techniques that should be used to interact with the patient, patient family, bystanders, and individuals from other agencies including verbal diffusion and interview techniques.                                                                                              |
| <del>06.96</del> 06.08  | Discuss the strategies for interviewing persons in special situations.                                                                                                                                                                                                                                   |
| <del>06.97</del> 06.09  | Distinguish between and respond to verbal and non-verbal cues.                                                                                                                                                                                                                                           |
| <del>06.98</del> 06.10  | Analyze elements of communication using a sender-receiver/close loop model.                                                                                                                                                                                                                              |
| <del>06.99</del> 06.11  | Exhibit positive non-verbal behaviors.                                                                                                                                                                                                                                                                   |
| <del>06.100</del> 06.12 | Establish proper patient rapport.                                                                                                                                                                                                                                                                        |
| <del>07.07.0</del> 07.0 | <b>Medical/Legal and Ethics:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of medical legality and ethics. – The student will be able to:                                                                                                                                       |
| <del>07.104</del> 07.01 | Discuss the rational, importance, and limitations of patient autonomy.                                                                                                                                                                                                                                   |
| <del>07.102</del> 07.02 | Differentiate between expressed, implied and involuntary consent.                                                                                                                                                                                                                                        |
| <del>07.103</del> 07.03 | Discuss the methods of obtaining consent and procedures for minors.                                                                                                                                                                                                                                      |
| <del>07.104</del> 07.04 | Discuss the issues of abandonment, negligence, false imprisonment and battery and their implications to the EMT.                                                                                                                                                                                         |
| <del>07.105</del> 07.05 | Discuss the implications for the EMT in patient refusal of care and/or transport.                                                                                                                                                                                                                        |
| <del>07.106</del> 07.06 | Explain the importance, necessity and legality of patient confidentiality.                                                                                                                                                                                                                               |
| <del>07.107</del> 07.07 | Discuss the importance of Do Not Resuscitate [DNR] (advance directives) and local or Florida provisions regarding EMS application.                                                                                                                                                                       |
| <del>07.108</del> 07.08 | Patient rights/advocacy (S, S).                                                                                                                                                                                                                                                                          |
| <del>07.109</del> 07.09 | Discuss State of Florida and Federal special reporting situations including: <ul style="list-style-type: none"> <li>• Abuse</li> <li>• Sexual assault</li> <li>• Gunshot and knife wounds</li> <li>• Communicable disease</li> <li>• Animal Bites</li> </ul>                                             |
| <del>07.110</del> 07.10 | Differentiate between civil tort and criminal actions.                                                                                                                                                                                                                                                   |

|                         |                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>07.111</del> 07.11 | Discuss the elements of negligence and defenses/protections from liability.                                                                                                                                                                                                                                                                                        |
| <del>07.112</del> 07.12 | Discuss the role of the EMT at crime scenes and preservation of evidence.                                                                                                                                                                                                                                                                                          |
| <del>07.113</del> 07.13 | Define ethics and morality and discuss their implication for the EMT.                                                                                                                                                                                                                                                                                              |
| <del>07.114</del> 07.14 | Discuss Florida legislation such as: <ul style="list-style-type: none"> <li>• Baker Act (FS 394.451)</li> <li>• Marchman Act (FS 397.601 and FS 397.675)</li> <li>• Emergency Examination and Treatment of Incapacitated Persons Act (FS 401.445)</li> </ul>                                                                                                       |
| <del>07.115</del> 07.15 | Differentiate between the scope of practice and the standard of care as applied to the EMT.                                                                                                                                                                                                                                                                        |
| <del>07.116</del> 07.16 | Discuss the legal concepts and limitations of immunity, including Good Samaritan statutes and governmental immunity.                                                                                                                                                                                                                                               |
| <del>07.117</del> 07.17 | Describe the appropriate patient management and care techniques in a refusal of care situation.                                                                                                                                                                                                                                                                    |
| <del>07.118</del> 07.18 | Analyze the relationship between the law, morals and ethics in EMS and the premise that should under lie the EMTs ethical decisions.                                                                                                                                                                                                                               |
| <del>07.119</del> 07.19 | Describe the criteria necessary to honor an advance directive.                                                                                                                                                                                                                                                                                                     |
| <del>07.120</del> 07.20 | Explain the rationale for the needs, benefits and varying degrees of advance directives.                                                                                                                                                                                                                                                                           |
| <del>08.08.0</del> 08.0 | <b>Anatomy and Physiology:</b> Demonstrate a fundamental knowledge of the anatomy and function of all human systems to the practice of EMS. – The student will be able to:                                                                                                                                                                                         |
| <del>08.121</del> 08.01 | Identify the following topographic terms: <ul style="list-style-type: none"> <li>• Medial</li> <li>• Lateral</li> <li>• Proximal</li> <li>• Distal</li> <li>• Superior</li> <li>• Inferior</li> <li>• Anterior</li> <li>• Posterior</li> <li>• Midline</li> <li>• Right and left</li> <li>• Mid-clavicular</li> <li>• Bilateral</li> <li>• Mid-axillary</li> </ul> |
| <del>08.122</del> 08.02 | Describe the life support chain, aerobic metabolism, and anaerobic metabolism.                                                                                                                                                                                                                                                                                     |
| <del>08.123</del> 08.03 | Define anatomy, physiology, pathophysiology, and homeostasis.                                                                                                                                                                                                                                                                                                      |

|        |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 08.124 | 08.04 | Identify and describe the anatomical structures and functions of the following:                                                                                                                                                                                                                                                                                                                                                                                                   |

| <del>47.184</del> <b>17.06</b> Demonstrate how to ventilate a patient with a stoma.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <del>47.07</del> <b>01.02</b> Demonstrate the use of various devices used in the assessment of supra-glottic airway placement.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <del>47.08</del> <b>17.07</b> Describe the following for a patient with an automatic transport ventilator (ATV): <ul style="list-style-type: none"> <li>• Indications</li> <li>• Contraindications</li> <li>• Advantages</li> <li>• Disadvantages</li> <li>• Complications</li> <li>• Technique for ventilating</li> </ul>                                                                                                                                                                                                                                                                  |
| <del>47.09</del> <b>17.08</b> Describe the following for a patient with a CPAP: <ul style="list-style-type: none"> <li>• Indications</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                             |

- Contraindications
- Advantages
- Disadvantages
- Complications
- Technique for ventilating

**18.0 Scene Size-Up:** Demonstrate a fundamental depth, foundational breadth of knowledge of scene management and multiple patient situations. — The student will be able to:

~~18.188~~ **18.01** Recognize and describe hazards/potential hazards at the scene.

~~18.189~~ **18.02** Discuss common mechanisms of injury/nature of illness.

~~18.190~~ **18.03** Discuss the priority considerations for multiple-patient situations.

~~18.191~~ **18.04** Explain why it is important for the EMT to anticipate and determine the need of appropriate Scene management including but not limited to traffic incident management, additional resources, or specialty resources.

~~18.192~~ **18.05** Discuss the importance of continuous scene assessment to ensure safety of the EMS Impact of the environment on team and the patient care.

~~18.193~~ **18.06** Explain why it is important for the EMT to anticipate and determine the need for additional or specialized resources.

~~18.194~~ **18.07** Discuss the importance of continuous scene assessment to ensure safety of the EMS team and the patient.

~~18.195~~ **18.08** Discuss the minimum standard precautions that should be followed and PPE that should be worn as appropriate.

~~18.196~~ **18.09** Discuss special considerations for dealing with a violent scene.

~~18.197~~ **18.10** Explain the rationale for crew members to evaluate scene safety prior to entering.

~~18.198~~ **18.11** Explain how patient situations affect your evaluation of mechanism of injury or illness.

**19.0 Primary Assessment:** Demonstrate a fundamental depth, simple breadth of knowledge of the primary assessment for all patient situations. —The student will be able to:

~~19.199~~ **19.01** Summarize the elements of a general impression of the patient.

~~19.200~~ **19.02** Explain the reason for performing a primary assessment.

~~19.201~~ **19.03** Discuss and demonstrate methods of assessing level of responsiveness using AVPU.

~~19.202~~ **19.04** Discuss and demonstrate methods of assessing the airway and providing airway care patients of all ages.

~~19.203~~ **19.05** Describe and demonstrate methods used for assessing if a patient is breathing patients of all ages.

~~19.204~~ **19.06** Differentiate between a patient with adequate and inadequate breathing.

|                         |                                                                                                                                                                                                                                                                       |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>19.205</del> 19.07 | Describe and demonstrate the methods used to obtain a pulse patients of all ages.                                                                                                                                                                                     |
| <del>19.206</del> 19.08 | Discuss and demonstrate assessing the patient for external bleeding.                                                                                                                                                                                                  |
| <del>19.207</del> 19.09 | Describe and demonstrate the assessment and interpretation of skin color, temperature, moisture and capillary refill patients of all ages.                                                                                                                            |
| <del>19.208</del> 19.10 | Explain the reasons prioritizing a patient for care and transport.                                                                                                                                                                                                    |
| <del>19.209</del> 19.11 | Describe when it is appropriate to expose the patient completely.                                                                                                                                                                                                     |
| <del>19.210</del> 19.12 | Differentiate between critical life-threatening, potentially life- threatening, and non-life-threatening patient presentations.                                                                                                                                       |
| <del>20.20</del> 20.0   | <b>History-Taking:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the components of history taking. – The student will be able to:                                                                                                         |
| <del>20.214</del> 20.01 | Determine and investigate the chief complaint (MOI/NOI).                                                                                                                                                                                                              |
| <del>20.212</del> 20.02 | Describe components of the patient history.                                                                                                                                                                                                                           |
| <del>20.213</del> 20.03 | Explain the importance of obtaining a SAMPLE and OPQRST history.                                                                                                                                                                                                      |
| <del>20.214</del> 20.04 | Acknowledge the feelings patients experience during assessment.                                                                                                                                                                                                       |
| <del>20.215</del> 20.05 | Discuss the value of obtaining a family and social history.                                                                                                                                                                                                           |
| <del>20.216</del> 20.06 | Describe examples of different techniques the EMT may use to obtain information from patients, family or bystanders during the history taking process.                                                                                                                |
| <del>21.21</del> 21.0   | <b>Secondary Assessment:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of techniques used for a secondary assessment. – The student will be able to:                                                                                         |
| <del>21.217</del> 21.01 | Discuss the components and techniques of the physical exam and skills involved.                                                                                                                                                                                       |
| <del>21.218</del> 21.02 | Discuss the indications for performing: <ul style="list-style-type: none"> <li>• Rapid assessment</li> <li>• Focused exam</li> <li>• Head to toe exam</li> </ul>                                                                                                      |
| <del>21.219</del> 21.03 | Demonstrate: <ul style="list-style-type: none"> <li>• Rapid exam</li> <li>• Focused exam</li> <li>• Head to toe exam</li> </ul>                                                                                                                                       |
| <del>21.220</del> 21.04 | Describe and demonstrate the techniques of inspection, palpation, percussion, and auscultation. <ul style="list-style-type: none"> <li>• Respiratory system including breath sound quality</li> <li>• Cardiovascular system</li> <li>• Neurological system</li> </ul> |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>• Musculoskeletal system</li> <li>• Major anatomical regions</li> </ul>                                                                                                                                                                                                                                                                                                                                     |
| <del>21.224</del> 21.05 Describe and demonstrate the importance of obtaining a baseline set of vital signs. <ul style="list-style-type: none"> <li>• E.g., Non-Invasive Blood Pressure, Blood Glucose, Temperature ...</li> </ul>                                                                                                                                                                                                                  |
| <del>21.222</del> 21.06 Discuss blood pressure ranges patients of all ages.                                                                                                                                                                                                                                                                                                                                                                        |
| <del>22.222</del> 22.0 <b>Monitoring Devices:</b> Demonstrate a simple depth, simple breadth of knowledge of monitoring devices within the scope of practice of the EMT. – The student will be able to:                                                                                                                                                                                                                                            |
| <del>22.223</del> 22.01 Describe and demonstrate the purpose, indications, procedure, normal findings, and limitations of the following patient monitoring technologies. <ul style="list-style-type: none"> <li>• Pulse oximetry</li> <li>• Glucometry</li> <li>• Capnography</li> <li>• Noninvasive BP monitoring</li> <li>• Thermometry</li> <li>• Telemetry</li> <li>• Cardiac monitoring – 12 lead ECG acquisition and transmission</li> </ul> |
| <del>22.224</del> 22.02 Demonstrate proper placement of a cardiac monitor and diagnostic ECG leads.                                                                                                                                                                                                                                                                                                                                                |
| <del>23.23.0</del> 23.0 <b>Reassessment:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of how and when to perform a reassessment for all patient situations. – The student will be able to:                                                                                                                                                                                                                               |
| <del>23.225</del> 23.01 Describe the components of reassessment and demonstrate the skills involved.                                                                                                                                                                                                                                                                                                                                               |
| <del>23.226</del> 23.02 Discuss the reasons for repeating the primary assessment as part of the reassessment.                                                                                                                                                                                                                                                                                                                                      |
| <del>23.227</del> 23.03 Explain trending assessment components and its value to other health professionals who assume care of the patient.                                                                                                                                                                                                                                                                                                         |
| <del>23.228</del> 23.04 Demonstrate the reassessment of patients of all ages.                                                                                                                                                                                                                                                                                                                                                                      |
| <del>24.24.0</del> 24.0 <b>Medical Overview:</b> Demonstrate a simple depth, foundation breadth of knowledge of pathophysiology, assessment and management of medical complaints. – The student will be able to:                                                                                                                                                                                                                                   |
| <del>24.229</del> 24.01 Pathophysiology, assessment, and management of a medical complaints to include <ul style="list-style-type: none"> <li>• Identify factors that affect the patient Transport Decision and Medically Appropriate Destination</li> <li>• E.g., Scene Safety, Environmental Factors, Chief Complaint, Preconceptions.</li> </ul>                                                                                                |
| <del>24.230</del> 24.02 Discuss forming a field impression and utilizing available information to determine a differential diagnosis.                                                                                                                                                                                                                                                                                                              |
| <del>25.25.0</del> 25.0 <b>Neurology:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of neurologic disorders/emergencies patients of all ages. – The student will be able to:                                                                                                                                                                                                             |
| <del>25.234</del> 25.01 Review the anatomy and physiology of the nervous system.                                                                                                                                                                                                                                                                                                                                                                   |

|        |       |                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 25.232 | 25.02 | Describe the pathophysiology of the following neurologic disorders:                                                                                                                                                                                                                                                                                                                                 |
|        |       | <ul style="list-style-type: none"> <li>• Altered mental status</li> <li>• Stroke</li> <li>• Transient ischemic attack</li> <li>• Headache</li> <li>• Seizures</li> <li>• Syncope</li> <li>• Dementia vs. delirium</li> <li>• Alzheimer's disease</li> <li>• Headache</li> <li>• Brief Resolved Unexplained Event (BRUE)</li> <li>• Other neurological disorders to be determined locally</li> </ul> |
| 25.233 | 25.03 | Discuss and identify the causes, signs and symptoms of ischemic strokes, hemorrhagic strokes, and transient ischemic attacks and their similarities and differences.                                                                                                                                                                                                                                |
| 25.234 | 25.04 | Discuss and demonstrate how to use a stroke scoring system in the assessment of patients with suspected stroke.                                                                                                                                                                                                                                                                                     |
| 25.235 | 25.05 | Define and differentiate generalize seizure, partial seizure and status epilepticus and list their possible causes.                                                                                                                                                                                                                                                                                 |
| 25.236 | 25.06 | Define and differentiate migraine headache, sinus headache, tension headache and discuss how to distinguish harmless headaches from something more serious.                                                                                                                                                                                                                                         |
| 25.237 | 25.07 | Define "altered mental status" and identify the possible causes.                                                                                                                                                                                                                                                                                                                                    |
| 25.238 | 25.08 | Describe and demonstrate the assessment and management of the patient with various neurological emergencies in patients of all ages to include: <ul style="list-style-type: none"> <li>• Strokes</li> <li>• Headaches</li> <li>• Seizures</li> <li>• Altered mental status</li> </ul>                                                                                                               |
| 25.239 | 25.09 | Discuss the transport of the stroke patient to the appropriate treatment center.                                                                                                                                                                                                                                                                                                                    |
| 26.240 | 26.0  | <b>Abdominal and Gastrointestinal Disorder:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of abdominal and gastrointestinal disorders/emergencies patients of all ages. – The student will be able to:                                                                                                                                    |
| 26.240 | 26.01 | Review the basic anatomy and physiology the gastrointestinal, genital and urinary systems.                                                                                                                                                                                                                                                                                                          |
| 26.241 | 26.02 | Define and describe the pathophysiology of the following abdominal and gastrointestinal disorders: <ul style="list-style-type: none"> <li>• Abdominal pain</li> <li>• Acute abdomen</li> <li>• Peritonitis</li> <li>• Appendicitis</li> <li>• Pancreatitis</li> </ul>                                                                                                                               |

- Cholecystitis
- Gastrointestinal bleeding
- Esophageal varices
- Gastroenteritis
- Ulcers
- Intestinal obstruction
- Hernia
- Abdominal aortic aneurysm

~~26.242~~26.03 Identify the signs and symptoms of common GI disorders.

~~26.243~~26.04 Describe and demonstrate the assessment and management of the patient with various gastrointestinal emergencies.

~~26.244~~26.05 Differentiate between hemorrhagic and non-hemorrhagic abdominal pain.

~~27.245~~27.0 Immunology: Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of immunology disorders/emergencies patients of all ages. – The student will be able to:

~~27.245~~27.01 Define and differentiate allergic reaction and anaphylaxis.

~~27.246~~27.02 Describe the pathophysiology of the following immunology disorders:

- allergic reaction
- anaphylaxis
- anaphylactic shock

~~27.247~~27.03 Describe and demonstrate the assessment and management of the patient in patients of all ages experiencing an allergic or anaphylactic reaction.

~~27.248~~27.04 Review the following for the epinephrine auto-injector:

- generic and trade names
- medication forms
- dose
- administration
- action
- contraindications

~~27.249~~27.05 Demonstrate the use of epinephrine auto-injector.

~~27.250~~27.06 Review the anatomy and physiology of the organs and structures related to anaphylaxis.

~~27.251~~27.07 Describe the incidence, morbidity and mortality of anaphylaxis.

~~27.252~~27.08 Recognize the signs and symptoms related to anaphylaxis.

~~27.253~~27.09 Describe the risk factors for and prevention of anaphylaxis and appropriate patient education.

|                                         |                                                                                                                                                                                                                                                                                       |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>27.254</del> <a href="#">27.10</a> | Discuss common antigens most frequently associated with anaphylaxis.                                                                                                                                                                                                                  |

|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>• Diabetic Ketoacidosis (DKA)</li> <li>• Hyperglycemic Hyperosmolar Non-ketotic Syndrome (HHNS)</li> </ul>                                                                                                                        |
| <del>29.272</del> 29.03 Define and differentiate between Type I and Type II Diabetes.                                                                                                                                                                                    |
| <del>29.273</del> 29.04 Identify and demonstrate the steps in the management of the patient taking diabetic medicine with an altered mental status and a history of diabetes, patients of all ages.                                                                      |
| <del>29.274</del> 29.05 Review the following for oral glucose: <ul style="list-style-type: none"> <li>• Generic and trade names</li> <li>• Medication forms</li> <li>• Dose</li> <li>• Administration</li> <li>• Action</li> <li>• Contraindications</li> </ul>          |
| <del>29.275</del> 29.06 Demonstrate the steps of using a glucometer device and administering oral glucose.                                                                                                                                                               |
| <del>29.276</del> 29.07 Describe and demonstrate the assessment and the management of the patient experiencing an endocrinologic emergency to include hypo- and hyper-glycemia.                                                                                          |
| <del>29.277</del> 29.08 Discuss the general assessment findings associated with endocrinologic emergencies. Patients of all ages.                                                                                                                                        |
| <del>29.278</del> 29.09 Describe the risk factors for and prevention of endocrine emergencies, including but not limited to healthy lifestyles and modifiable risk factors, the use of blood sugar monitoring devices and self-administration of prescribed medications. |
| <del>30.280</del> 30.0 <b>Psychiatric:</b> Demonstrate a fundamental depth, foundational breadth of knowledge regarding the assessment and management of psychiatric emergencies patients of all ages. – The student will be able to:                                    |
| <del>30.279</del> 30.01 Differentiate among behavior, psychiatric disorders and behavioral emergencies                                                                                                                                                                   |
| <del>30.280</del> 30.02 Discuss common psychiatric disorders and behavioral emergencies.                                                                                                                                                                                 |
| <del>30.281</del> 30.03 Discuss the general factors that may cause an alteration in a patient's behavior.                                                                                                                                                                |
| <del>30.282</del> 30.04 Discuss patterns of violence, abuse, and neglect.                                                                                                                                                                                                |
| <del>30.283</del> 30.05 Discuss the risk factors/signs or symptoms of various psychiatric emergencies to include acute psychosis, suicide ideation, excited delirium, anxiety, depression, medical fear, substance use disorder, and PTSD.                               |
| <del>30.284</del> 30.06 Manage a behavioral emergency scenario applying knowledge of medical/legal Florida Statutes.                                                                                                                                                     |
| <del>30.285</del> 30.07 Describe and demonstrate the assessment and management of the patient experiencing a behavioral or psychiatric emergency.                                                                                                                        |
| <del>30.286</del> 30.08 Discuss the risk factors/signs or symptoms of various psychiatric emergencies to include acute psychosis, suicide ideation, excited delirium, anxiety, depression, medical fear, substance use disorder, and PTSD.                               |
| <del>30.287</del> 30.09 Demonstrate an understanding of appropriate and available mental health resources and provide patient education.                                                                                                                                 |

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>30.10</del> <u>30.10</u>  | Describe and demonstrate the assessment and management of the patient experiencing a behavioral or psychiatric emergency, patients of all ages.                                                                                                                                                                                                                                                                                                  |
| <del>30.10</del> <u>30.11</u>  | Describe the biological, psychosocial, and sociocultural influences on psychiatric disorders.                                                                                                                                                                                                                                                                                                                                                    |
| <del>30.14</del> <u>30.12</u>  | Describe the special considerations for the safety of the EMS provider and EMS crew, the patient and bystanders when dealing with behavioral and psychiatric emergencies.                                                                                                                                                                                                                                                                        |
| <del>30.12</del> <u>30.13</u>  | Describe and demonstrate methods of restraint that may be used in the management of a patient with a behavioral emergency.                                                                                                                                                                                                                                                                                                                       |
| <del>30.13</del> <u>30.14</u>  | Explain the importance of provider behavior and communication in the care of a patient with a behavioral emergency.                                                                                                                                                                                                                                                                                                                              |
| <del>34</del> <u>31.0</u>      | <b>Cardiovascular:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of cardiovascular emergencies patients of all ages. – The student will be able to:                                                                                                                                                                                                                                    |
| <del>31.292</del> <u>31.01</u> | Review the basic anatomy and physiology of the cardiovascular system.                                                                                                                                                                                                                                                                                                                                                                            |
| <del>31.293</del> <u>31.02</u> | Describe the pathophysiology and signs and symptoms of the following cardiovascular disorders: <ul style="list-style-type: none"> <li>• Acute coronary syndrome</li> <li>• Angina pectoris</li> <li>• Thromboembolism</li> <li>• Myocardial infarction</li> <li>• Hypertensive emergencies</li> <li>• Aortic aneurysm/dissection</li> <li>• Left and right sided heart failure</li> <li>• Cardiogenic shock</li> <li>• Cardiac arrest</li> </ul> |
| <del>31.294</del> <u>31.03</u> | Describe and demonstrate the assessment and management of the patient experiencing a cardiac emergency.                                                                                                                                                                                                                                                                                                                                          |
| <del>31.295</del> <u>31.04</u> | Discuss the indications and contraindications for automated external defibrillation (AED). (including automatic, manual and vest type).                                                                                                                                                                                                                                                                                                          |
| <del>31.296</del> <u>31.05</u> | Explain the impact of age and weight on defibrillation.                                                                                                                                                                                                                                                                                                                                                                                          |
| <del>31.297</del> <u>31.06</u> | Discuss the position of comfort for patients with various cardiac emergencies.                                                                                                                                                                                                                                                                                                                                                                   |
| <del>31.298</del> <u>31.07</u> | Explain the rationale for early defibrillation.                                                                                                                                                                                                                                                                                                                                                                                                  |
| <del>31.299</del> <u>31.08</u> | Discuss and differentiate among various types of external defibrillators.                                                                                                                                                                                                                                                                                                                                                                        |
| <del>31.300</del> <u>31.09</u> | Discuss and differentiate among the various types of implanted cardiac devices.                                                                                                                                                                                                                                                                                                                                                                  |
| <del>31.301</del> <u>31.10</u> | Understand the importance of maintenance and operators check list for AED's.                                                                                                                                                                                                                                                                                                                                                                     |
| <del>31.302</del> <u>31.11</u> | Demonstrate the ability to use an AED according to the latest American Heart Association (AHA) guidelines.                                                                                                                                                                                                                                                                                                                                       |

|                         |                                                                                                                                                               |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>31.303</del> 31.12 | Explain the role medical direction plays in the use of automated external defibrillation.                                                                     |
| <del>31.304</del> 31.13 | Explain the rationale for administering nitroglycerin oxygen and ASA to a patient with chest pain or discomfort.                                              |
| <del>31.305</del> 31.14 | Demonstrate the assessment and documentation of patient response to the automated external defibrillator.                                                     |
| <del>31.306</del> 31.15 | Demonstrate the assessment and documentation of patient response to nitroglycerin.                                                                            |
| <del>31.307</del> 31.16 | Discuss the purpose and use of CPR assist devices.                                                                                                            |
| <del>31.308</del> 31.17 | Describe the risk factors for and prevention of cardiac related diseases and provide appropriate patient education.                                           |
| <del>31.309</del> 31.18 | Discuss the signs and symptoms of acute coronary syndrome and provide appropriate patient education to include self-administration of prescribed medications. |

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

Patients of all ages.                                                                                                                                                                                                                                                                                                        |
| <del>36.342</del> <a href="#">36.04</a> | Describe the assessment and management of a patient who has experienced a sexual assault including the psychosocial impact and assessment findings/presentations.                                                                                                                                                                                                                                                                        |
| <del>36.343</del> <a href="#">36.05</a> | Discuss the professional and psychological importance of maintaining a patient's modesty and privacy while still being able to obtain necessary information.                                                                                                                                                                                                                                                                             |
| <del>36.344</del> <a href="#">36.06</a> | Discuss the need to provide care for a patient of sexual assault, while still preventing destruction of crime scene information.                                                                                                                                                                                                                                                                                                         |
| <del>37.345</del> <a href="#">37.0</a>  | <b>Non-Traumatic Musculoskeletal Disorders:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of non-traumatic fractures patients of all ages. The student will be able to:                                                                                                                                                                                                        |
| <del>37.345</del> <a href="#">37.01</a> | Review the basic anatomy and physiology of the musculoskeletal system.                                                                                                                                                                                                                                                                                                                                                                   |
| <del>37.346</del> <a href="#">37.02</a> | Describe and demonstrate the assessment and management of the patient in all age groups with a non-traumatic musculoskeletal emergency.                                                                                                                                                                                                                                                                                                  |
| <del>38.347</del> <a href="#">38.0</a>  | <b>Diseases of the Eyes, Ears, Nose, and Throat:</b> Demonstrate a simple depth, simple breadth of knowledge of assessment and management of diseases of the Eyes, Ears, Nose, and Throat patients of all ages The student will be able to:                                                                                                                                                                                              |
| <del>38.347</del> <a href="#">38.01</a> | Describe and demonstrate the assessment and management of the patient in all age groups with abnormal conditions affecting the eyes, ears, nose and throat, including epistaxis.                                                                                                                                                                                                                                                         |
| <del>39.348</del> <a href="#">39.0</a>  | <b>Shock and Resuscitation:</b> Demonstrate a fundamental knowledge of the causes, pathophysiology, and management of shock and respiratory failure patients of all ages. The student will be able to:                                                                                                                                                                                                                                   |
| <del>39.348</del> <a href="#">39.01</a> | Discuss and identify causes and pathophysiology of the categories of hemorrhage and shock.                                                                                                                                                                                                                                                                                                                                               |

|                                         |                                                                                                                                                                                                                   |
|-----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>39.349</del> <a href="#">39.02</a> | Review causes and pathophysiology of respiratory failure and arrest.                                                                                                                                              |
| <del>39.350</del> <a href="#">39.03</a> | Review causes and pathophysiology of cardiac failure or arrest.                                                                                                                                                   |
| <del>39.351</del> <a href="#">39.04</a> | Discuss the various types and degrees of shock.                                                                                                                                                                   |
| <del>39.352</del> <a href="#">39.05</a> | Discuss post resuscitation management.                                                                                                                                                                            |
| <del>39.353</del> <a href="#">39.06</a> | Explain the system components of CPR, the links in the AHA chain of survival and how each relates to patient survival.                                                                                            |
| <del>39.354</del> <a href="#">39.07</a> | Define and differentiate between compensated and decompensated shock.                                                                                                                                             |
| <del>39.355</del> <a href="#">39.08</a> | Discuss the importance of teamwork in the successful management of the critical patient.                                                                                                                          |
| <del>39.356</del> <a href="#">39.09</a> | Demonstrate how to perform one and two rescuer CPR, adult, child, and infant.                                                                                                                                     |
| <del>39.357</del> <a href="#">39.10</a> | Demonstrate how to perform rescuer level appropriate defibrillation in an adult, child, and infant patient.                                                                                                       |
| <del>39.358</del> <a href="#">39.11</a> | Demonstrate rapid decision making based on differential field diagnosis of the critical patient with a <b>special arrest</b> peri-arrest condition.                                                               |
| <del>39.359</del> <a href="#">39.12</a> | Describe and demonstrate the assessment and management of the patient with hemorrhage and shock.                                                                                                                  |
| <del>39.360</del> <a href="#">39.13</a> | Discuss ethical issues in resuscitation.                                                                                                                                                                          |
| <del>39.361</del> <a href="#">39.14</a> | Discuss options for termination resuscitation.                                                                                                                                                                    |
| <del>40.40.0</del> <a href="#">40.0</a> | <b>Trauma Overview:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment and management of the trauma patient patients of all ages. The student will be able to: |
| <del>40.362</del> <a href="#">40.01</a> | Discuss pathophysiology of the trauma patient.                                                                                                                                                                    |
| <del>40.363</del> <a href="#">40.02</a> | Discuss the components of a comprehensive trauma systems and levels of trauma centers.                                                                                                                            |
| <del>40.364</del> <a href="#">40.03</a> | Describe the considerations for different transportation modes, <b>transport and destination issues</b> to a trauma center.                                                                                       |
| <del>40.365</del> <a href="#">40.04</a> | Discuss the kinematics of blunt and penetrating trauma.                                                                                                                                                           |
| <del>40.366</del> <a href="#">40.05</a> | Discuss and describe significant and non-significant Mechanism of Injury (MOI) and provide examples of each.                                                                                                      |
| <del>40.367</del> <a href="#">40.06</a> | Demonstrate the application of the State of Florida's trauma scorecard methodologies as required in Florida Statute and Florida Administrative Code (F.A.C.).                                                     |
| <del>40.368</del> <a href="#">40.07</a> | Discuss the National Trauma Triage Protocol of injured Patients.                                                                                                                                                  |
| <del>40.369</del> <a href="#">40.08</a> | Discuss forming a field impression and utilizing available information to determine a differential diagnosis.                                                                                                     |
| <del>40.370</del> <a href="#">40.09</a> | Identify the need for rapid intervention transport of the trauma patient.                                                                                                                                         |

|                         |                                                                                                                                                                                                                                                                                                        |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>41.371</del> 41.0  | <b>Bleeding:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of bleeding patients of all ages. The student will be able to:                                                                                                      |
| <del>41.374</del> 41.01 | Review the anatomy and physiology of the circulatory system.                                                                                                                                                                                                                                           |
| <del>41.372</del> 41.02 | Discuss the different types of bleeding and classes of hemorrhage.                                                                                                                                                                                                                                     |
| <del>41.373</del> 41.03 | Review signs and symptoms of shock (hypo-perfusion).                                                                                                                                                                                                                                                   |
| <del>41.374</del> 41.04 | Demonstrate effective hemorrhage control to include application of a tourniquet.                                                                                                                                                                                                                       |
| <del>41.375</del> 41.05 | Review the pathophysiology of hemorrhagic shock.                                                                                                                                                                                                                                                       |
| <del>41.376</del> 41.06 | Recognize the need for rapid transport for patients that are bleeding and showing signs of shock (hypo-perfusion).                                                                                                                                                                                     |
| <del>41.377</del> 41.07 | Describe and demonstrate the assessment and management of a patient with hemorrhagic shock.                                                                                                                                                                                                            |
| <del>41.378</del> 41.08 | Discuss the possible complications of an improperly applied dressing, bandage, tourniquet, and hemostatic agents.                                                                                                                                                                                      |
| <del>42.379</del> 42.0  | <b>Chest Trauma:</b> Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment and management of chest trauma patients of all ages. The student will be able to:                                                                                                     |
| <del>42.380</del> 42.01 | Review the anatomy and physiology of the thoracic/chest cavity and respiratory system.                                                                                                                                                                                                                 |
| <del>42.381</del> 42.02 | Differentiate between a pneumothorax (open, simple and tension) and hemothorax.                                                                                                                                                                                                                        |
| <del>42.382</del> 42.03 | Discuss the pathophysiology, signs and symptoms, and MOI of myocardial injuries, including the following: <ul style="list-style-type: none"> <li>• Pericardial tamponade</li> <li>• Myocardial contusion</li> <li>• Myocardial rupture</li> <li>• Commotio cordis</li> <li>• Aortic shearer</li> </ul> |
| <del>42.383</del> 42.04 | Discuss the pathophysiology, signs and symptoms, and MOI of specific chest wall injuries, including the following: <ul style="list-style-type: none"> <li>• Rib fracture</li> <li>• Flail segment</li> <li>• Sternal fracture</li> <li>• Open chest wound</li> <li>• Impaled object</li> </ul>         |
| <del>42.384</del> 42.05 | Describe and demonstrate the assessment and management of chest trauma <b>to include blunt versus penetrating trauma.</b>                                                                                                                                                                              |
| <del>43.384</del> 43.0  | <b>Abdominal and Genitourinary Trauma:</b> Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment and management of abdominal and genitourinary trauma patients of all ages. The student will be able to:                                                         |
| <del>43.384</del> 43.01 | Review the anatomy and physiology of the abdominal cavity and genitourinary system.                                                                                                                                                                                                                    |

|                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <del>44.396</del> 44.10                                                                                                                                                                                                         | Discuss the proper procedures to package an amputated body part for replantation.                                                                                                                                                                                                                                                     |
| <del>44.397</del> 44.11                                                                                                                                                                                                         | Explain the rationale for splinting at the scene versus load and go.                                                                                                                                                                                                                                                                  |

|                         |                                                                                                                                                                                                                                                                                                    |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>44.398</del> 44.12 | Demonstrate the proper use of various splinting materials and devices to include improvised and traction splints.                                                                                                                                                                                  |
| <del>45.45.0</del> 45.0 | <b>Soft Tissue Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of soft tissue trauma patients of all ages. The student will be able to:                                                                              |
| <del>45.399</del> 45.01 | Review anatomy and physiology of the integumentary system to include the layers of the skin.                                                                                                                                                                                                       |
| <del>45.400</del> 45.02 | Describe the pathophysiology, signs and symptoms, and MOI of soft tissue trauma.                                                                                                                                                                                                                   |
| <del>45.401</del> 45.03 | Describe and demonstrate the assessment and management of various soft tissue injuries. <ul style="list-style-type: none"> <li>• Wounds (e.g., avulsion, bite, laceration, puncture, and incisions)</li> <li>• Crush and compartment syndrome</li> <li>• High pressure injection injury</li> </ul> |
| <del>45.402</del> 45.04 | Identify types of burn injuries, including: <ul style="list-style-type: none"> <li>• Thermal burn</li> <li>• Chemical burn</li> <li>• Electrical burn</li> <li>• Radiation exposure</li> </ul>                                                                                                     |
| <del>45.403</del> 45.05 | Describe the depth classifications of burn injuries, including: <ul style="list-style-type: none"> <li>• Superficial burn</li> <li>• Partial-thickness burn</li> <li>• Full-thickness burn</li> <li>• Other depth classifications</li> </ul>                                                       |
| <del>45.404</del> 45.06 | Describe and demonstrate methods for determining body surface area percentage of a burn injury including the “rule of nines,” the “rule of palms,” and other methods.                                                                                                                              |
| <del>45.405</del> 45.07 | Explain how the seriousness of a burn is related to its depth and percent of body surface area (BSA) involved.                                                                                                                                                                                     |
| <del>45.406</del> 45.08 | Review the various management techniques for hemorrhage control.                                                                                                                                                                                                                                   |
| <del>45.407</del> 45.09 | Differentiate among the types of injuries requiring the use of an occlusive versus non- occlusive dressing.                                                                                                                                                                                        |
| <del>45.408</del> 45.10 | Demonstrate the assessment and management of specific burn injuries including: <ul style="list-style-type: none"> <li>• Thermal</li> <li>• Inhalation</li> <li>• Chemical (<i>in the eye and on the skin</i>)</li> <li>• Electrical</li> <li>• Radiation</li> </ul>                                |
| <del>46.46.0</del> 46.0 | <b>Head, Facial, Neck, and Spine Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of head, facial, neck and spine trauma patients of all ages. The student will be able to:                                           |
| <del>46.409</del> 46.01 | Review the anatomy and physiology of the head, face, neck and spine.                                                                                                                                                                                                                               |

|         |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 46.410  | 46.02 | Describe the pathophysiology, signs and symptoms, and MOI for head, face, neck, and spine trauma.                                                                                                                                                                                                                                                                                                                                                          |
| 46.411  | 46.03 | Describe and demonstrate the assessment and management of a patient with the following traumas to the head, face, neck, and spine: <ul style="list-style-type: none"> <li>• Penetrating neck trauma</li> <li>• Laryngotracheal injury</li> <li>• Skull fracture</li> <li>• Facial fracture</li> <li>• Eye injury (foreign body) <i>eyes, globe rupture</i></li> <li>• Dental trauma</li> <li>• Shaken Baby Syndrome</li> <li>• Severe epistaxis</li> </ul> |
| 46.412  | 46.04 | Recognize and manage life threats due to face, head, neck, and spine trauma.                                                                                                                                                                                                                                                                                                                                                                               |
| 46.413  | 46.05 | Discuss and demonstrate the utilization of the Glasgow Coma Scale.                                                                                                                                                                                                                                                                                                                                                                                         |
| 47.47.0 |       | <b>Nervous System Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of nervous system trauma patients of all ages. The student will be able to:                                                                                                                                                                                                                                |
| 47.414  | 47.01 | Review the anatomy and physiology of the nervous system.                                                                                                                                                                                                                                                                                                                                                                                                   |
| 47.415  | 47.02 | Discuss the pathophysiology, signs and symptoms, and MOI for <b>traumatic</b> brain <b>injury (TBI)</b> and spinal cord trauma.                                                                                                                                                                                                                                                                                                                            |
| 47.416  | 47.03 | Describe and demonstrate the assessment and management of a patient with a <b>traumatic</b> brain <b>injury (TBI)</b> and/or spinal cord trauma.                                                                                                                                                                                                                                                                                                           |
| 47.417  | 47.04 | Discuss the rationale and potential complications of spinal motion restriction of the entire spine when a cervical spine injury is suspected.                                                                                                                                                                                                                                                                                                              |
| 47.418  | 47.05 | Given a scenario, discuss whether or not to remove a helmet prior to transport of a patient.                                                                                                                                                                                                                                                                                                                                                               |
| 47.419  | 47.06 | Demonstrate various methods for stabilization and removal of a helmet.                                                                                                                                                                                                                                                                                                                                                                                     |
| 47.420  | 47.07 | Discuss documentation of assessment before, during, and after spinal motion restriction.                                                                                                                                                                                                                                                                                                                                                                   |
| 48.48.0 |       | <b>Special Considerations in Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment and management of trauma patients with special considerations patients of all ages. The student will be able to:                                                                                                                                                                                                |
| 48.421  | 48.01 | Review the anatomy and physiology for the following trauma patients: <ul style="list-style-type: none"> <li>• Pregnant</li> <li>• Pediatric</li> <li>• Geriatric</li> </ul>                                                                                                                                                                                                                                                                                |
| 48.422  | 48.02 | Discuss the pathophysiology, signs and symptoms, and MOI of trauma in the following patients: <ul style="list-style-type: none"> <li>• Pregnant</li> <li>• Pediatric</li> </ul>                                                                                                                                                                                                                                                                            |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| • Geriatric                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <del>48.423</del> 48.03 Discuss and demonstrate unique assessment and management considerations for the following trauma patients:                                                                                                                                                                                                                                                                                                                                                                                    |

The student will be able to:                                                                                                                                                                                                                                                            |
| <del>49.424</del> 49.01 Define drowning and discuss its incidence, risk factors and prevention.                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <del>49.425</del> 49.02 Discuss the pathophysiology, signs and symptoms, and MOI of the following: <ul style="list-style-type: none"> <li>• Drowning and water related incidents</li> <li>• Temperature-related illness</li> <li>• Bites and envenomation</li> <li>• Dysbarism such as high-altitude injuries</li> <li>• Diving injuries</li> <li>• Lightning (electrical) injury</li> <li>• High altitude illness</li> <li>• Radiation exposure</li> <li>• Other environmental emergencies</li> </ul>                |
| <del>49.426</del> 49.03 Describes and demonstrate the assessment and management for a patient with the following: <ul style="list-style-type: none"> <li>• Drowning and water related incidents</li> <li>• Temperature-related illness</li> <li>• Bites and envenomation</li> <li>• Dysbarism such as high-altitude injuries</li> <li>• Diving injuries</li> <li>• Lightning (electrical) injury</li> <li>• High altitude illness</li> <li>• Radiation exposure</li> <li>• Other environmental emergencies</li> </ul> |
| <del>49.427</del> 49.04 Discuss the fundamental principles of the gas laws including Boyle's, Dalton, Henry and Charles.                                                                                                                                                                                                                                                                                                                                                                                              |
| <del>49.428</del> 49.05 Discuss scene management and provider safety considerations for a variety of environmental emergencies.                                                                                                                                                                                                                                                                                                                                                                                       |
| <del>49.429</del> 49.06 Explain the five ways a body can lose heat.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <del>49.430</del> 49.07 Discuss potentially life-threatening venomous species of insects, spiders and snakes in the U.S.                                                                                                                                                                                                                                                                                                                                                                                              |

|                                |                                                                                                                                                                                                                                                  |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>50</del> <b>50.0</b>      | <b>Multi-Systems Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the pathophysiology, assessment, and management of multi-system trauma and blast injuries, patients of all ages. The student will be able to: |
| <del>50.434</del> <b>50.01</b> | Discuss the pathophysiology, signs and symptoms, and MOI of multi-system trauma and blast injuries.                                                                                                                                              |
| <del>50.432</del> <b>50.02</b> | Describe and demonstrate assessment and management considerations for a patient of multi system trauma and blast injuries.                                                                                                                       |
| <del>50.433</del> <b>50.03</b> | Describe and demonstrate assessment and management considerations for a patient of multi system trauma and blast injuries.                                                                                                                       |
| <del>50.434</del> <b>50.04</b> | Formulate a field impression based upon the assessment findings for a patient with multi systems trauma and/ or blast injuries                                                                                                                   |
| <del>51</del> <b>51.0</b>      | <b>Obstetrics:</b> Demonstrate a fundamental depth, foundational breadth of management of the obstetric patient within the scope of practice of the EMT. The student will be able to:                                                            |
| <del>51.435</del> <b>51.01</b> | Identify and describe the anatomical and the physiological changes during pregnancy.                                                                                                                                                             |
| <del>51.436</del> <b>51.02</b> | Define the stages of labor and discuss how to assess them.                                                                                                                                                                                       |
| <del>51.437</del> <b>51.03</b> | Differentiate between cephalic and abnormal delivery.                                                                                                                                                                                            |
| <del>51.438</del> <b>51.04</b> | Describe the management of a patient with pre-delivery emergencies.                                                                                                                                                                              |
| <del>51.439</del> <b>51.05</b> | Discuss and demonstrate the patient care measures for all stages of labor in a cephalic delivery for the mother and the newborn.                                                                                                                 |
| <del>51.440</del> <b>51.06</b> | Describe the management of the mother post-delivery.                                                                                                                                                                                             |
| <del>51.441</del> <b>51.07</b> | Discuss and demonstrate the patient care measures for all stages of labor in abnormal deliveries for the mother and the newborn.                                                                                                                 |
| <del>51.442</del> <b>51.08</b> | Describe the procedures for handling complications of delivery.                                                                                                                                                                                  |
| <del>51.443</del> <b>51.09</b> | Describe special considerations when meconium is present in amniotic fluid or during delivery.                                                                                                                                                   |
| <del>51.444</del> <b>51.10</b> | Identify the factors that lead to premature birth and low birth weight newborns.                                                                                                                                                                 |
| <del>51.445</del> <b>51.11</b> | Demonstrate the procedures for handling complications of pregnancy including pre-eclampsia, eclampsia, and high risk.                                                                                                                            |
| <del>52</del> <b>52.0</b>      | <b>Neonatal Care:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of management of the newborn and neonatal patient within the scope of practice of the EMT. The student will be able to:                                 |
| <del>52.446</del> <b>52.01</b> | Discuss and demonstrate assessment and management considerations of a neonate.                                                                                                                                                                   |
| <del>52.447</del> <b>52.02</b> | Define the term neonate.                                                                                                                                                                                                                         |
| <del>52.448</del> <b>52.03</b> | Describe special patient care considerations of a premature baby.                                                                                                                                                                                |
| <del>52.449</del> <b>52.04</b> | Calculate the Apgar score given various newborn situations.                                                                                                                                                                                      |

|                                         |                                                                                                                                                                                                   |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>52.450</del> <a href="#">52.05</a> | Discuss the common signs when ventilatory assistance is appropriate for a neonate.                                                                                                                |
| <del>52.451</del> <a href="#">52.06</a> | Discuss and demonstrate the steps in resuscitation of a neonate.                                                                                                                                  |
| <del>52.452</del> <a href="#">52.07</a> | Review the signs of hypovolemia in a newborn.                                                                                                                                                     |
| <del>52.453</del> <a href="#">52.08</a> | Discuss the effects maternal narcotic usage has on the newborn.                                                                                                                                   |
| <del>52.454</del> <a href="#">52.09</a> | Discuss the management/treatment plan for vomiting in the neonate.                                                                                                                                |
| <del>52.455</del> <a href="#">52.10</a> | Discuss the assessment findings associated with common birth injuries in the neonate.                                                                                                             |
| <del>53.53.0</del>                      | <b>Pediatrics:</b> Demonstrate a fundamental depth, fundamental breadth of knowledge of management of the pediatric patient within the scope of practice of the EMT. The student will be able to: |
| <del>53.456</del> <a href="#">53.01</a> | Review the anatomy, physiology and pathophysiology differences of patients.                                                                                                                       |
| <del>53.457</del> <a href="#">53.02</a> | Discuss the differences in approaching and assessing patients.                                                                                                                                    |

| <del>62.538</del> <a href="#">62.11</a> | Discuss the use of a nerve agent antidote kit.                                                                                                                                                                                                                                              |

## **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOSs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

## **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

### **Program Length**

In accordance with Rule 6A-10.024, F.A.C. an ATD program consists of a course of study that is part of an AS or AAS degree program, is less than 60 credit hours, is approximately 50% of the technical component (non-general education), and leads to employment in a specific occupation. An ATD program may consist of either technical credit or college credit.

Students must have a high school diploma, a GED, or a certificate of completion to be admitted to an ATD program. Within six weeks of entry, students in ATD programs of 450 or more hours must be tested pursuant to Rule 6A-10.040, F.A.C. and if below minimum standards for completion from the program, must receive remedial instruction. The minimum standards must be at least the equivalent of a score of ten (10) on all sections of basic skills test approved in Rule 6A-10.040, F.A.C. Students must successfully complete all remedial instruction before completing the ATD.

Community Colleges may offer either college or career credit toward the ATD. A Career Center in a public school district may offer an ATD program only as technical credit, with college credit awarded to a student upon articulation to a community college (Section 1004.02, F.S.)

When offered at a community college the standard length of this program is 12 credits. When offered at a technical center the standard length of this program is 300 clock hours.

Section 401.2701, Florida Statutes provides that college credit programs must meet occupational completion point hours of instructional and skills practice components.

In accordance with Rule 6A-10.024, F.A.C. all faculty providing instruction must have at least a baccalaureate degree or an associate degree with demonstrated competencies in the specific instructional program as defined by the Southern Association of Colleges and Schools.

### **Purpose**

This certificate program is part of the Emergency Medical Services AS degree program (1351090402).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This is an instructional program that prepares students for employment as emergency medical technicians (Emergency Medical Technicians and Paramedics) to function at the basic pre-hospital emergency medical technician level and treat various medical/trauma conditions using appropriate equipment and materials. The program prepares students for certification as EMT's in accordance with Chapter 64J of the Florida Administrative Code (F.A.C.). The program must be approved by the Department of Health, Office of Emergency Medical Services, and the curriculum must adhere to the US Department of Transportation (DOT) National EMS Education Standards for EMT. This is the initial level for a career in emergency medical services and the primary prerequisite for paramedic training and certification.

The content includes but is not limited to patient assessment, airway management, cardiac arrest, external and internal bleeding and shock, traumatic injuries, fractures, dislocations, sprains, poisoning, heart attack, stroke, diabetes, acute abdomen, communicable diseases, patients with

abnormal behavior, alcohol and drug abuse, the unconscious state, emergency childbirth, burns, environmental hazards, communications, reporting, extrication and transportation of patient. The student must be proficient in patient assessment and evaluation, the use of suctioning devices, oral and nasal airways, resuscitation devices, oxygen equipment, sphygmomanometer and stethoscope, splints of all types, pneumatic anti-shock garments, extrication tools, dressings and bandages, stretchers and patient carrying devices.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**"All EMR/EMT/Paramedic students are required to complete the 4-hour Traffic Incident Management Safety (TIMS) course at least once. This requirement can be fulfilled either as a prerequisite or as part of the curriculum, at the discretion of the EMS education program."**

**"It is highly recommended, though not mandatory, that courses in medical terminology, anatomy, and pharmacology be completed before enrolling in EMT and Paramedic training."**

### **Regulated Programs**

Florida Statute 401.2701 requires that the instructor-student ratio should not exceed 1:6. Hospital activity shall include a minimum of 20 hours of supervised clinical supervision, including 10 hours in a hospital emergency department. Clinical activity shall include appropriate patient assessment skills, intervention and documentation relevant to each clinical rotation.

**Field Internship Activities:** Field internship shall include a competency based program to assure appropriate pre-hospital assessment and management of medical and trauma patients, as well as associated manual skills. The field internship activity shall include a minimum of 5 emergency runs resulting in patient care and transport appropriate for the EMT. In addition, the patient care components should include minimum competencies in patient assessment, airway management and ventilation, trauma and medical emergencies. This program meets the Department of Health trauma score card methodologies and Sudden Unexpected Infant Death Syndrome (SUIDS) training education requirements. Upon completion of this program, the instructor will provide a certificate to the student verifying that these requirements have been met. This program also meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

Please refer to Chapter 401, F.S. for more information on disqualification for the EMT license through the Office of Emergency Medical Services (EMS), Department of Health.

An EMT program must be taught by an instructor meeting the qualifications as set forth in 64J-1.201, F.A.C.

An American Heart Association or Red Cross certification or equivalent in "professional" BLS is required of all candidates for entrance into an EMT program.

The Student Performance Standards for Emergency Medical Technology-EMT were adapted and condensed from the US Department of Transportation (DOT) National EMS Educational Standards for EMT.

It is strongly recommended this program be accredited by Commission on Accreditation of Allied Health Education Programs (CAAHEP).

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |

| <b><u>12.0</u></b>           | <b><u>Cultivate and leverage relationships to professionally advance.</u></b>                                                 |
| <b><u>12.01</u></b>          | <b><u>Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.</u></b> |
| <b><u>12.02</u></b>          | <b><u>Develop a plan to cultivate a professional digital footprint.</u></b>                                                   |
| <b><u>12.03</u></b>          | <b><u>Develop a networking plan for a specific industry of interest.</u></b>                                                  |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate a simple depth, foundational breadth of knowledge of EMS systems.
- 02.0 Demonstrate a simple depth, simple breadth of knowledge of research and evidence-based decision making.
- 03.0 Demonstrate a fundamental depth, foundational breadth of knowledge of workforce safety and wellness.
- 04.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the principles of medical documentation and report writing.
- 05.0 Demonstrate a simple depth, simple breadth of knowledge of the EMS communication system, communication with other health care professionals, and team communication.
- 06.0 Demonstrate a simple depth, simple breadth of knowledge of the principles of therapeutic communication.
- 07.0 Demonstrate a fundamental depth, foundational breadth of knowledge of medical legality and ethics.
- 08.0 Demonstrate a fundamental knowledge of the anatomy and function of all human systems to the practice of EMS.
- 09.0 Demonstrate a fundamental knowledge in the use of medical terminology.
- 10.0 Demonstrate a fundamental knowledge of the causes and pathophysiology of shock and the components of resuscitation.
- 11.0 Demonstrate a fundamental knowledge of life span development to patient assessment and management.
- 12.0 Demonstrate a simple knowledge of the principles of illness and injury prevention in emergency care.
- 13.0 Demonstrate a simple depth, simple breadth of knowledge of pharmacology, medication safety, and medication types used during an emergency.
- 14.0 Demonstrate a fundamental depth, simple breadth of knowledge of emergency medications within the scope of practice of the EMT.
- 15.0 Demonstrate a foundational depth, fundamental breadth of knowledge of airway management patients of all ages within the scope of practice of the EMT.
- 16.0 Demonstrate a fundamental depth, foundational breadth of knowledge of respiration.
- 17.0 Demonstrate a fundamental depth, foundational breadth of knowledge of assessment and management utilizing ventilation patients of all ages.
- 18.0 Demonstrate a fundamental depth, foundational breadth of knowledge of scene management and multiple patient situations.
- 19.0 Demonstrate a fundamental depth, simple breadth of knowledge of the primary assessment for all patient situations.
- 20.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the components of history taking.
- 21.0 Demonstrate a fundamental depth, foundational breadth of knowledge of techniques used for a secondary assessment.
- 22.0 Demonstrate a simple depth, simple breath of knowledge of monitoring devices within the scope of practice of the EMT.
- 23.0 Demonstrate a fundamental depth, foundational breadth of knowledge of how and when to perform a reassessment for all patient situations.
- 24.0 Demonstrate a simple depth, foundation breadth of knowledge of pathophysiology, assessment and management of medical complaints.
- 25.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of neurologic disorders/emergencies patients of all ages.
- 26.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of abdominal and gastrointestinal disorders/emergencies patients of all ages.
- 27.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of immunology disorders/emergencies patients of all ages.
- 28.0 Demonstrate a simple depth, simple breadth of knowledge of the assessment and management of a patient who may have an infectious disease patient of all ages.

- 29.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of endocrine disorders/emergencies patients of all ages.
- 30.0 Demonstrate a fundamental depth, foundational breadth of knowledge regarding the assessment and management of psychiatric emergencies patients of all ages.
- 31.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of cardiovascular emergencies patients of all ages.
- 32.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of toxicological (poisoning and overdose) emergencies patients of all ages.
- 33.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of respiratory disorders/emergencies patients of all ages.
- 34.0 Demonstrate a simple depth, simple breadth of knowledge of the assessment, and management of hematology disorders patients of all ages.
- 35.0 Demonstrate a simple depth, simple breath of knowledge of the assessment and management of genitourinary/ renal emergencies patients of all ages.
- 36.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of gynecologic emergencies patients of all ages.
- 37.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of non-traumatic fractures patients of all ages.
- 38.0 Demonstrate a simple depth, simple breadth of knowledge of assessment and management of diseases of the Eyes, Ears, Nose, and Throat patients of all ages.
- 39.0 Demonstrate a fundamental knowledge of the causes, pathophysiology, and management of shock and respiratory failure patients of all ages.
- 40.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of the trauma patient patients of all ages.
- 41.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of bleeding patients of all ages.
- 42.0 Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment, and management of chest trauma patients of all ages.
- 43.0 Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment, and management of abdominal and genitourinary trauma patients of all ages.
- 44.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of orthopedic trauma patients of all ages.
- 45.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of soft tissue trauma patients of all ages.
- 46.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of head, facial, neck, and spine trauma patients of all ages.
- 47.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of nervous system trauma patients of all ages.
- 48.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of trauma patients with special considerations patients of all ages.

- 49.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of environmental emergencies patients of all ages.
- 50.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the pathophysiology, assessment, and management of multi-system trauma and blast injuries patients of all ages.
- 51.0 Demonstrate a fundamental depth, foundational breadth of knowledge of management of the obstetric patient within the scope of practice of the EMT.
- 52.0 Demonstrate a fundamental depth, foundational breadth of knowledge of management of the newborn and neonatal patient within the scope of practice of the EMT.
- 53.0 Demonstrate a fundamental depth, fundamental breadth of knowledge of the management of the pediatric patient within the scope of practice of the EMT.
- 54.0 Demonstrate a fundamental depth, foundational breadth of knowledge of management of the geriatric patient within the scope of practice of the EMT.
- 55.0 Demonstrate a simple depth, simple breadth of knowledge of management of the patient with special challenges patients of all ages.
- 56.0 Demonstrate a simple depth, foundational breadth of knowledge of risks and responsibilities of transport.
- 57.0 Demonstrate a fundamental depth, fundamental breadth of knowledge of establishing and working within the incident management system.
- 58.0 Demonstrate a simple depth, foundational breadth of knowledge of responding to an emergency during a multiple casualty incident.
- 59.0 Demonstrate a simple depth, simple breadth of knowledge of safe air medical operations and criteria for utilizing air medical response.
- 60.0 Demonstrate a simple depth, simple breadth of knowledge for safe vehicle extrication and use of simple hand tools.
- 61.0 Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating in a cold zone at a hazardous material or other special incident.
- 62.0 Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating on the scene of a natural or man-made disaster.

**Florida Department of Education  
Student Performance Standards**

**Program Title:**        **Emergency Medical Technician**  
**CIP Number:**        **0351090415**  
**Program Length:**    **12 credit hours**

**This certificate program is part of the Emergency Medical Services AS degree program (1351090402). At the completion of this program, the student will be able to:**

|             |                                                                                                                                                                         |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>01.0</b> | <b>EMS Systems:</b> Demonstrate a simple depth, foundational breadth of knowledge of EMS systems. The student will be able to:                                          |
| 01.01       | Define Emergency Medical Services (EMS) systems.                                                                                                                        |
| 01.02       | Discuss the historical background of the development of the EMS system.                                                                                                 |
| 01.03       | Identify the four levels of national EMS providers (EMR, EMT, AEMT and PM) as well as the three levels (EMR, EMT, and PM) in the State of Florida.                      |
| 01.04       | Discuss the specific statutes and regulations regarding the EMS system in Florida.                                                                                      |
| 01.05       | Discuss vehicle and equipment readiness.                                                                                                                                |
| 01.06       | Characterize the EMS system's role in prevention and public education.                                                                                                  |
| 01.07       | Systems of care, e.g., Stroke, STEMI, Trauma, Pediatrics (S, F).                                                                                                        |
| 01.08       | MIH/CP and other EMS-related specialty roles (S, S).                                                                                                                    |
| 01.09       | Discuss the roles and responsibilities of the EMT related to personal safety of the crew, patient and by standers.                                                      |
| 01.10       | Discuss the roles and responsibilities of the EMT to operate emergency vehicles, provide scene leadership and perform patient assessment and administer emergency care. |
| 01.11       | Discuss the maintenance of and differences between certification and licensure for the EMS professional in the State of Florida and NREMT.                              |
| 01.12       | Define quality improvement and discuss the EMT's role in the process.                                                                                                   |
| 01.13       | Quality improvement vs. quality assurance (S, F).                                                                                                                       |
| 01.14       | Role of medical oversight (S, S).                                                                                                                                       |
| 01.15       | Culture of safety.                                                                                                                                                      |
| 01.16       | Patient safety (SF)                                                                                                                                                     |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.17 | Identify the basics of common methods of payment for healthcare services.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 01.18 | Analyze attributes and attitudes of an effective leader.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 01.19 | Demonstrate effective techniques for managing team conflict.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 01.20 | Describe factors that influence the current delivery system of healthcare.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 01.21 | Discuss the importance of continuing medical education and skills retention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 01.22 | Continuum of care (S, F).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 01.23 | Assess personal attitudes and demeanor that may distract from professionalism.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 01.24 | <p>Serve as a role model and exhibit professional behaviors in the following areas:</p> <ul style="list-style-type: none"> <li>• Integrity</li> <li>• Empathy</li> <li>• Self-motivation</li> <li>• Appearance and personal hygiene</li> <li>• Self-confidence</li> <li>• Communications (including phone, email and social media etiquette)</li> <li>• Time management</li> <li>• Teamwork and diplomacy</li> <li>• Respect</li> <li>• Patient advocacy (inclusive of those with special needs, alternate lifestyles and cultural diversity)</li> <li>• Careful delivery of service</li> </ul> |
| 02.0  | <b>Research:</b> Demonstrate a simple depth, simple breadth of knowledge of research and evidence-based decision making. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 02.01 | <p>Discuss EMS research and evidence-based decision making</p> <ul style="list-style-type: none"> <li>• Conduct scientific literature searches</li> <li>• Read, interpret, and extract information from journal articles relevant to a project</li> </ul>                                                                                                                                                                                                                                                                                                                                       |
| 02.02 | Explain the importance of assessing and treating patients based on evidence-based decision-making.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 02.03 | Interpret graphs, charts, and tables.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 02.04 | Measure time, temperature, distance, capacity, and mass/weight.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 02.05 | Convert and use traditional and metric units.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 02.06 | Make estimations, approximations and judge the reasonableness of the result.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 02.07 | Convert time from a 12-hour format to a 24-hour format                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.08 | Demonstrate ability to evaluate and draw conclusions.                                                                                                                   |
| 02.09 | Calculate ratios.                                                                                                                                                       |
| 02.10 | Explain the rationale for the EMS system gathering data.                                                                                                                |
| 02.11 | Impact of research on EMT care (S, S).                                                                                                                                  |
| 02.12 | Data collection (S, S).                                                                                                                                                 |
| 02.13 | Evidence-based decision making (S, S).                                                                                                                                  |
| 03.0  | <b>Workforce Safety and Wellness:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of workforce safety and wellness. The student will be able to: |
| 03.01 | Explain the need to determine scene safety.                                                                                                                             |
| 03.02 | Discuss the importance of body substance isolation (BSI).                                                                                                               |
| 03.03 | Describe the steps and equipment the EMT should take for personal protection from airborne and blood borne pathogens and communicable disease.                          |
| 03.04 | List possible emotional reactions that an individual (EMT and EMT family, Patient and Patient family) may experience when faced with trauma, illness, death and dying.  |
| 03.05 | Discuss the steps the EMT should take when approaching a family confronted with death and dying.                                                                        |
| 03.06 | Recognize the warning signs of personal stress and discuss the strategies and resources available for EMTs to utilize.                                                  |
| 03.07 | Demonstrate good body mechanics while using a stretcher and other patient moving devices.                                                                               |
| 03.08 | Discuss the guidelines and safety precautions to be followed when lifting and moving patients and equipment.                                                            |
| 03.09 | Discuss patient positioning in common emergency situations.                                                                                                             |
| 03.10 | Discuss situation that may require the use of medical restraints on the patient and explain guidelines and safety consideration for their use.                          |
| 03.11 | Define “infectious disease” and “communicable disease.”                                                                                                                 |
| 03.12 | Disease transmission (F, F).                                                                                                                                            |
| 03.13 | Describe the routes of transmission and associated risks for infectious disease.                                                                                        |
| 03.14 | Explain the mode of transmission and the steps to prevent/deal with an exposure of hepatitis, meningitis, tuberculosis and HIV.                                         |
| 03.15 | Explain how immunity to infectious diseases is acquired.                                                                                                                |

|       |                                                                                                                                                                                      |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.16 | Explain post exposure management of exposure to patient blood or body fluids, including proper notification documentation.                                                           |
| 03.17 | Describe the components of physical fitness and mental wellbeing.                                                                                                                    |
| 03.18 | Identify personal health practices and environmental factors which affect physical, mental, and emotional wellbeing.                                                                 |
| 03.19 | Prevention of work-related injuries and illnesses (F, F).                                                                                                                            |
| 03.20 | Responder mental health, resilience and suicide prevention (F, F).                                                                                                                   |
| 03.21 | Wellness principles (F, F).                                                                                                                                                          |
| 03.22 | Discuss complementary and alternative health practices.                                                                                                                              |
| 03.23 | Explain the basic concepts of positive self-image, wellness and stress.                                                                                                              |
| 03.24 | Discuss the need for a wellness and stress control plan that can be used in personal and professional life.                                                                          |
| 03.25 | Explore the importance of adequate nutrition (i.e. U.S. Department of Agriculture's MyPlate food guide ( <a href="http://www.choosemyplate.gov">www.choosemyplate.gov</a> )).        |
| 03.26 | Demonstrate safe behaviors in the proper use of medical equipment.                                                                                                                   |
| 03.27 | Explain the theory of root- cause analysis.                                                                                                                                          |
| 03.28 | Identify and describe methods in medical error reduction and prevention in the various healthcare settings.                                                                          |
| 03.29 | Identify and practice security procedures for medical supplies and equipment in various healthcare settings.                                                                         |
| 03.30 | Describe fire, safety, disaster and evacuation procedures in the various healthcare settings.                                                                                        |
| 03.31 | Discuss applicable accrediting and regulatory agency patient safety guidelines.                                                                                                      |
| 04.0  | <b>Documentation:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the principles of medical documentation and report writing. The student will be able to: |
| 04.01 | Discuss applications of technology in healthcare.                                                                                                                                    |
| 04.02 | Demonstrate basic computer skills.                                                                                                                                                   |
| 04.03 | Interpret and utilize information from electronic health records.                                                                                                                    |
| 04.04 | Identify methods of electronic communication to access and distribute data.                                                                                                          |
| 04.05 | Describe the use and importance of properly written communication and patient care documentation.                                                                                    |
| 04.06 | Explain the legal implication of the patient care report.                                                                                                                            |

|       |                                                                                                                                                                                                                                    |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 04.07 | Supporting medical necessity (S,S).                                                                                                                                                                                                |
| 04.08 | Identify the minimum dataset reference patient information and administrative information on the patient care report.                                                                                                              |
| 04.09 | Understand how to document refusal of care, including legal implications.                                                                                                                                                          |
| 04.10 | Discuss the implications of the Health Insurance Portability and Accountability Act of 1996 on confidential documentation.                                                                                                         |
| 04.11 | Describe the special considerations concerning mass casualty incident documentation.                                                                                                                                               |
| 04.12 | Demonstrate completion of a patient care report for a medical and trauma patient.                                                                                                                                                  |
| 05.0  | <b>EMS System Communication:</b> Demonstrate a simple depth, simple breadth of knowledge of the EMS communication system, communication with other health care professionals, and team communication. The student will be able to: |
| 05.01 | Understand the basic principles of the various types of communications equipment used in EMS.                                                                                                                                      |
| 05.02 | Describe the use of radio communication and correct radio procedures, including the proper methods of initiating and terminating the radio call/transmission.                                                                      |
| 05.03 | Explain the rationale for providing efficient and effective radio communications and patient reports.                                                                                                                              |
| 05.04 | Identify the essential components of the verbal report and legal aspects that need to be considered.                                                                                                                               |
| 05.05 | Perform an organized and concise radio transmission.                                                                                                                                                                               |
| 05.06 | Team communication and dynamics (S,S).                                                                                                                                                                                             |
| 05.07 | Perform an organized, concise verbal patient report that would be given to the staff at a receiving facility.                                                                                                                      |
| 05.08 | Perform a brief, organized verbal report that would be given during transfer of care at an incident scene.                                                                                                                         |
| 06.0  | <b>Therapeutic Communication:</b> Demonstrate a simple depth, simple breadth of knowledge of the principles of therapeutic communication. The student will be able to:                                                             |
| 06.01 | Describe principles of therapeutic and effective communication with patients.                                                                                                                                                      |
| 06.02 | Health care literacy (S, S).                                                                                                                                                                                                       |
| 06.03 | Non-discriminatory communication that addresses inherent or unconscious bias, is culturally aware and sensitive, and intended to improve patient outcome (S, S).                                                                   |
| 06.04 | Discuss basic speaking and active listening skills.                                                                                                                                                                                |
| 06.05 | Recognize the importance of patient/client education regarding healthcare.                                                                                                                                                         |
| 06.06 | Discuss the adjustment of communication strategies to effectively communicate with patients with: <ul style="list-style-type: none"> <li>• Differing age groups</li> </ul>                                                         |

|       |                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Differing developmental stages</li> <li>• Special needs</li> <li>• Differing cultures, including language barriers</li> </ul>                                                                                       |
| 06.07 | Discuss the communication techniques that should be used to interact with the patient, patient family, bystanders, and individuals from other agencies including verbal diffusion and interview techniques.                                                  |
| 06.08 | Discuss the strategies for interviewing persons in special situations.                                                                                                                                                                                       |
| 06.09 | Distinguish between and respond to verbal and non-verbal cues.                                                                                                                                                                                               |
| 06.10 | Analyze elements of communication using a sender-receiver/close loop model.                                                                                                                                                                                  |
| 06.11 | Exhibit positive non-verbal behaviors.                                                                                                                                                                                                                       |
| 06.12 | Establish proper patient rapport.                                                                                                                                                                                                                            |
| 07.0  | <b>Medical/Legal and Ethics:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of medical legality and ethics. The student will be able to:                                                                                             |
| 07.01 | Discuss the rational, importance, and limitations of patient autonomy.                                                                                                                                                                                       |
| 07.02 | Differentiate between expressed, implied and involuntary consent.                                                                                                                                                                                            |
| 07.03 | Discuss the methods of obtaining consent and procedures for minors.                                                                                                                                                                                          |
| 07.04 | Discuss the issues of abandonment, negligence, false imprisonment and battery and their implications to the EMT.                                                                                                                                             |
| 07.05 | Discuss the implications for the EMT in patient refusal of care and/or transport.                                                                                                                                                                            |
| 07.06 | Explain the importance, necessity and legality of patient confidentiality.                                                                                                                                                                                   |
| 07.07 | Discuss the importance of Do Not Resuscitate [DNR] (advance directives) and local or Florida provisions regarding EMS application.                                                                                                                           |
| 07.08 | Patient rights/advocacy (S, S).                                                                                                                                                                                                                              |
| 07.09 | Discuss State of Florida and Federal special reporting situations including: <ul style="list-style-type: none"> <li>• Abuse</li> <li>• Sexual assault</li> <li>• Gunshot and knife wounds</li> <li>• Communicable disease</li> <li>• Animal Bites</li> </ul> |
| 07.10 | Differentiate between civil tort and criminal actions.                                                                                                                                                                                                       |
| 07.11 | Discuss the elements of negligence and defenses/protections from liability.                                                                                                                                                                                  |

|       |                                                                                                                                                                                                                                                                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.12 | Discuss the role of the EMT at crime scenes and preservation of evidence.                                                                                                                                                                                                                                                                                          |
| 07.13 | Define ethics and morality and discuss their implication for the EMT.                                                                                                                                                                                                                                                                                              |
| 07.14 | Discuss Florida legislation such as: <ul style="list-style-type: none"> <li>• Baker Act (FS 394.451)</li> <li>• Marchman Act (FS 397.601 and FS 397.675)</li> <li>• Emergency Examination and Treatment of Incapacitated Persons Act (FS 401.445)</li> </ul>                                                                                                       |
| 07.15 | Differentiate between the scope of practice and the standard of care as applied to the EMT.                                                                                                                                                                                                                                                                        |
| 07.16 | Discuss the legal concepts and limitations of immunity, including Good Samaritan statutes and governmental immunity.                                                                                                                                                                                                                                               |
| 07.17 | Describe the appropriate patient management and care techniques in a refusal of care situation.                                                                                                                                                                                                                                                                    |
| 07.18 | Analyze the relationship between the law, morals and ethics in EMS and the premise that should under lie the EMTs ethical decisions.                                                                                                                                                                                                                               |
| 07.19 | Describe the criteria necessary to honor an advance directive.                                                                                                                                                                                                                                                                                                     |
| 07.20 | Explain the rationale for the needs, benefits and varying degrees of advance directives.                                                                                                                                                                                                                                                                           |
| 08.0  | <b>Anatomy and Physiology:</b> Demonstrate a fundamental knowledge of the anatomy and function of all human systems to the practice of EMS. The student will be able to:                                                                                                                                                                                           |
| 08.01 | Identify the following topographic terms: <ul style="list-style-type: none"> <li>• Medial</li> <li>• Lateral</li> <li>• Proximal</li> <li>• Distal</li> <li>• Superior</li> <li>• Inferior</li> <li>• Anterior</li> <li>• Posterior</li> <li>• Midline</li> <li>• Right and left</li> <li>• Mid-clavicular</li> <li>• Bilateral</li> <li>• Mid-axillary</li> </ul> |
| 08.02 | Describe the life support chain, aerobic metabolism, and anaerobic metabolism.                                                                                                                                                                                                                                                                                     |
| 08.03 | Define anatomy, physiology, pathophysiology, and homeostasis.                                                                                                                                                                                                                                                                                                      |
| 08.04 | Identify and describe the anatomical structures and functions of the following:                                                                                                                                                                                                                                                                                    |

08.05 Explain cellular anatomy and physiology.

08.06 Explain cellular respiration.

08.07 Discuss cell division.

08.08 Describe the different types of muscle tissues including skeletal, smooth and cardiac.

08.09 Name and identify the location of the bones of the axial and appendicular skeleton.

08.10 Describe the classification and types of joints.

08.11 Discuss the mechanisms of breathing including:

- mechanical ventilation
- pulmonary volumes
- dead space
- lung compliance

08.12 Explain the diffusion of gases in external and internal respiration.

08.13 Describe oxygen and carbon dioxide transport in the blood.

08.14 Describe nervous and chemical mechanisms that regulate respirations.

08.15 Discuss respiration and acid-base balance.

08.16 Discuss the hemodynamics of blood pressure.

08.17 Discuss the role of nutrition, metabolism and body temperature on body function.

|       |                                                                                                                                                                                                                                                                                        |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 08.18 | Describe the causes, advantages, and disadvantages of a fever.                                                                                                                                                                                                                         |
| 08.19 | Discuss the hypothalamus functions as the thermostat in the body.                                                                                                                                                                                                                      |
| 09.0  | <b>Medical Terminology:</b> Demonstrate a fundamental knowledge in the use of medical terminology. The student will be able to:                                                                                                                                                        |
| 09.01 | Identify medical terminology word parts such as: <ul style="list-style-type: none"> <li>• Root words</li> <li>• Prefixes</li> <li>• Suffixes</li> <li>• Combining forms</li> </ul>                                                                                                     |
| 09.02 | Correctly utilize medical terminology describing each of the following: <ul style="list-style-type: none"> <li>• Body structures</li> <li>• Functions</li> <li>• Conditions and disorders</li> <li>• Body regions</li> <li>• Cavities</li> <li>• Areas</li> <li>• Landmarks</li> </ul> |
| 09.03 | Correctly use medical abbreviations and symbols.                                                                                                                                                                                                                                       |
| 09.04 | Read and understand basic medical documentation in medical records and medical reports.                                                                                                                                                                                                |
| 09.05 | Communicate with healthcare professionals utilizing basic medical terminology.                                                                                                                                                                                                         |
| 09.06 | Explain the rationale for using accepted medical terminology correctly.                                                                                                                                                                                                                |
| 10.0  | <b>Pathophysiology:</b> Demonstrate a fundamental knowledge of the causes and pathophysiology of shock and the components of resuscitation. The student will be able to:                                                                                                               |
| 10.01 | Discuss signs of irreversible death.                                                                                                                                                                                                                                                   |
| 10.02 | Review the anatomy and physiology of the respiratory and cardiovascular systems.                                                                                                                                                                                                       |
| 10.03 | Discuss and identify the pathophysiology of respiratory failure and respiratory and cardiac arrest.                                                                                                                                                                                    |
| 10.04 | Understand shock, including pathophysiology, causes, and the signs and symptoms associated with the various types of shock.                                                                                                                                                            |
| 10.05 | Discuss the variations in the pathophysiology of shock patients of all ages.                                                                                                                                                                                                           |
| 11.0  | <b>Life Span Development:</b> Demonstrate a fundamental knowledge of life span development to patient assessment and management. The student will be able to:                                                                                                                          |
| 11.01 | Describe the major physiologic and psychosocial characteristics patients of all ages.                                                                                                                                                                                                  |

|       |                                                                                                                                                                                                                                                                                                                                 |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.0  | <b>Public Health:</b> Demonstrate a simple knowledge of the principles of illness and injury prevention in emergency care. The student will be able to:                                                                                                                                                                         |
| 12.01 | Define public health and explain the goal of the public health field.                                                                                                                                                                                                                                                           |
| 12.02 | Identify the EMS role within the public health field.                                                                                                                                                                                                                                                                           |
| 12.03 | Discuss basic concepts of epidemiology.                                                                                                                                                                                                                                                                                         |
| 12.04 | Discuss ways of EMS involvement in injury prevention.                                                                                                                                                                                                                                                                           |
| 12.05 | Identify areas of need for prevention programs in the community.                                                                                                                                                                                                                                                                |
| 13.0  | <b>Principles of Pharmacology:</b> Demonstrate a simple depth, simple breadth of knowledge of pharmacology, medication safety, and medication types used during an emergency. The student will be able to:                                                                                                                      |
| 13.01 | Explain the “rights” of medication administration and describe how each one related to EMS.                                                                                                                                                                                                                                     |
| 13.02 | Discuss and differentiate the various medication forms and the appropriate routes of administration                                                                                                                                                                                                                             |
| 13.03 | Describe the difference between a generic medication name and trade name and provide an example of each.                                                                                                                                                                                                                        |
| 13.04 | Specific medication classes to be determined locally <ul style="list-style-type: none"> <li>• Class names (S, S)</li> <li>• Class indications (S, S)</li> <li>• Class complications (S, S)</li> <li>• Class side effects (S, S)</li> <li>• Polypharmacy (S, S)</li> </ul>                                                       |
| 13.05 | Discuss the components and elements of a drug profile including: <ul style="list-style-type: none"> <li>• Class</li> <li>• Actions</li> <li>• Contraindications</li> <li>• Side effects</li> <li>• Dose</li> <li>• Route</li> <li>• Adverse drug reactions (S, S)</li> <li>• Medication response relationships (F,F)</li> </ul> |
| 13.06 | Describe the role of medical direction in medication administration and explain the difference between direct orders (online) and standing orders (off-line).                                                                                                                                                                   |
| 14.0  | <b>Pharmacology:</b> Demonstrate a fundamental depth, simple breadth of knowledge of emergency medications within the scope of practice of the EMT. The student will be able to:                                                                                                                                                |
| 14.01 | State the following for each medication that can be administered by an EMT as dictated by the State of Florida and local medical direction:                                                                                                                                                                                     |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| 15.05 | Demonstrate the use of low, medium, high, and variable concentration oxygen delivery devices for all age groups.                                                                                                                                                                                             |
| 15.06 | Describe assessment and management for adequate and inadequate respiration, including the use of pulse oximetry and capnography.                                                                                                                                                                             |
| 15.07 | Explain the rationale for providing adequate oxygenation through high inspired oxygen concentrations to patients who, in the past, may have received low concentrations.                                                                                                                                     |
| 15.08 | Discuss the use of an oxygen humidifier and the requirements needed for its use.                                                                                                                                                                                                                             |
| 15.09 | Discuss the differences between negative pressure and positive pressure ventilation.                                                                                                                                                                                                                         |
| 16.0  | <b>Airway Management:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of airway management patients of all ages within the scope of practice of the EMT. The student will be able to:                                                                                                 |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.01 | Review the structures and functions of the Anatomy of the Airway and the Respiratory System (Include age- related variations in pediatric and geriatric patients). <ul style="list-style-type: none"> <li>• Normal</li> <li>• Abnormal</li> <li>• Special Considerations (MDI, In-Line Neb, Simple Face Mask, Venturi, CPAP/BiPAP)</li> </ul>                                                                                                                                                                                                                |
| 16.02 | Describe appropriate assessment of the airway and the management for a patient with or without adequate breathing (Include age-related variations in pediatric and geriatric patients).                                                                                                                                                                                                                                                                                                                                                                      |
| 16.03 | Describe the Techniques of assuring a patent airway, indications for airway management, and demonstrate the steps in performing the head-tilt chin-lift and jaw thrust in all age groups (Include age- related variations in pediatric and geriatric patients). <ul style="list-style-type: none"> <li>• Demonstrate the techniques of suctioning.</li> <li>• Demonstrate relief of FBAO.</li> <li>• Demonstrate how to insert an oral and nasal -airway adjunct.</li> <li>• Demonstrate how to insert both esophageal and supra-glottic airways.</li> </ul> |
| 17.0  | <b>Artificial Ventilations:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of assessment and management utilizing ventilation patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                     |
| 17.01 | Effect of ventilation on cardiac output <ul style="list-style-type: none"> <li>• E.g., Bag Valve Mask, Ventilator, CPAP, Hyper Mechanical Inflation</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                               |
| 17.02 | Demonstrate how to ventilate a patient with a pocket mask.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 17.03 | Demonstrate the safe and effective ventilation for a patient with a BVM for one or two rescuers using oral-nasal adjuncts with appropriate airway positioning.                                                                                                                                                                                                                                                                                                                                                                                               |
| 17.04 | Discuss the signs of adequate and inadequate ventilation using the BVM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 17.05 | Describe the steps involved in performing a comprehensive assessment of ventilations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 17.06 | Demonstrate how to ventilate a patient with a stoma.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 17.07 | Demonstrate the use of various devices used in the assessment of supra-glottic airway placement.                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 17.08 | Describe the following for a patient with an automatic transport ventilator (ATV): <ul style="list-style-type: none"> <li>• Indications</li> <li>• Contraindications</li> <li>• Advantages</li> <li>• Disadvantages</li> <li>• Complications</li> <li>• Technique for ventilating</li> </ul>                                                                                                                                                                                                                                                                 |
| 17.09 | Describe the following for a patient with a CPAP: <ul style="list-style-type: none"> <li>• Indications</li> <li>• Contraindications</li> <li>• Advantages</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                         |

|       |                                                                                                                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Disadvantages</li> <li>• Complications</li> <li>• Technique for ventilating</li> </ul>                                                                                      |
| 18.0  | <b>Scene Size-Up:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of scene management and multiple patient situations. The student will be able to:                                           |
| 18.01 | Recognize and describe hazards/potential hazards at the scene.                                                                                                                                                       |
| 18.02 | Discuss common mechanisms of injury/nature of illness.                                                                                                                                                               |
| 18.03 | Discuss the priority considerations for multiple-patient situations.                                                                                                                                                 |
| 18.04 | Explain why it is important for the EMT to anticipate and determine the need of appropriate Scene management including but not limited to traffic incident management, additional resources, or specialty resources. |
| 18.05 | Discuss the importance of continuous scene assessment to ensure safety of the EMS Impact of the environment on team and the patient care.                                                                            |
| 18.06 | Explain why it is important for the EMT to anticipate and determine the need for additional or specialized resources.                                                                                                |
| 18.07 | Discuss the importance of continuous scene assessment to ensure safety of the EMS team and the patient.                                                                                                              |
| 18.08 | Discuss the minimum standard precautions that should be followed and PPE that should be worn as appropriate.                                                                                                         |
| 18.09 | Discuss special considerations for dealing with a violent scene.                                                                                                                                                     |
| 18.10 | Explain the rationale for crew members to evaluate scene safety prior to entering.                                                                                                                                   |
| 18.11 | Explain how patient situations affect your evaluation of mechanism of injury or illness.                                                                                                                             |
| 19.0  | <b>Primary Assessment:</b> Demonstrate a fundamental depth, simple breadth of knowledge of the primary assessment for all patient situations. The student will be able to:                                           |
| 19.01 | Summarize the elements of a general impression of the patient.                                                                                                                                                       |
| 19.02 | Explain the reason for performing a primary assessment.                                                                                                                                                              |
| 19.03 | Discuss and demonstrate methods of assessing level of responsiveness using AVPU.                                                                                                                                     |
| 19.04 | Discuss and demonstrate methods of assessing the airway and providing airway care patients of all ages.                                                                                                              |
| 19.05 | Describe and demonstrate methods used for assessing if a patient is breathing patients of all ages.                                                                                                                  |
| 19.06 | Differentiate between a patient with adequate and inadequate breathing.                                                                                                                                              |
| 19.07 | Describe and demonstrate the methods used to obtain a pulse patients of all ages.                                                                                                                                    |

|       |                                                                                                                                                                                                                                                                                                                                             |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.08 | Discuss and demonstrate assessing the patient for external bleeding.                                                                                                                                                                                                                                                                        |
| 19.09 | Describe and demonstrate the assessment and interpretation of skin color, temperature, moisture and capillary refill patients of all ages.                                                                                                                                                                                                  |
| 19.10 | Explain the reasons prioritizing a patient for care and transport.                                                                                                                                                                                                                                                                          |
| 19.11 | Describe when it is appropriate to expose the patient completely.                                                                                                                                                                                                                                                                           |
| 19.12 | Differentiate between critical life-threatening, potentially life- threatening, and non-life-threatening patient presentations.                                                                                                                                                                                                             |
| 20.0  | <b>History-Taking:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the components of history taking. The student will be able to:                                                                                                                                                                                 |
| 20.01 | Determine and investigate the chief complaint (MOI/NOI).                                                                                                                                                                                                                                                                                    |
| 20.02 | Describe components of the patient history.                                                                                                                                                                                                                                                                                                 |
| 20.03 | Explain the importance of obtaining a SAMPLE and OPQRST history.                                                                                                                                                                                                                                                                            |
| 20.04 | Acknowledge the feelings patients experience during assessment.                                                                                                                                                                                                                                                                             |
| 20.05 | Discuss the value of obtaining a family and social history.                                                                                                                                                                                                                                                                                 |
| 20.06 | Describe examples of different techniques the EMT may use to obtain information from patients, family or bystanders during the history taking process.                                                                                                                                                                                      |
| 21.0  | <b>Secondary Assessment:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of techniques used for a secondary assessment. The student will be able to:                                                                                                                                                                 |
| 21.01 | Discuss the components and techniques of the physical exam and skills involved.                                                                                                                                                                                                                                                             |
| 21.02 | Discuss the indications for performing: <ul style="list-style-type: none"> <li>• Rapid assessment</li> <li>• Focused exam</li> <li>• Head to toe exam</li> </ul>                                                                                                                                                                            |
| 21.03 | Demonstrate: <ul style="list-style-type: none"> <li>• Rapid exam</li> <li>• Focused exam</li> <li>• Head to toe exam</li> </ul>                                                                                                                                                                                                             |
| 21.04 | Describe and demonstrate the techniques of inspection, palpation, percussion, and auscultation. <ul style="list-style-type: none"> <li>• Respiratory system including breath sound quality</li> <li>• Cardiovascular system</li> <li>• Neurological system</li> <li>• Musculoskeletal system</li> <li>• Major anatomical regions</li> </ul> |

|       |                                                                                                                                                                                                                                                                                                                                         |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21.05 | Describe and demonstrate the importance of obtaining a baseline set of vital signs.<br>• E.g., Non-Invasive Blood Pressure, Blood Glucose, Temperature ...                                                                                                                                                                              |
| 21.06 | Discuss blood pressure ranges patients of all ages.                                                                                                                                                                                                                                                                                     |
| 22.0  | <b>Monitoring Devices:</b> Demonstrate a simple depth, simple breadth of knowledge of monitoring devices within the scope of practice of the EMT. The student will be able to:                                                                                                                                                          |
| 22.01 | Describe and demonstrate the purpose, indications, procedure, normal findings, and limitations of the following patient monitoring technologies.<br>• Pulse oximetry<br>• Glucometry<br>• Capnography<br>• Noninvasive BP monitoring<br>• Thermometry<br>• Telemetry<br>• Cardiac monitoring – 12 lead ECG acquisition and transmission |
| 22.02 | Demonstrate proper placement of a cardiac monitor and diagnostic ECG leads.                                                                                                                                                                                                                                                             |
| 23.0  | <b>Reassessment:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of how and when to perform a reassessment for all patient situations. The student will be able to:                                                                                                                                              |
| 23.01 | Describe the components of reassessment and demonstrate the skills involved.                                                                                                                                                                                                                                                            |
| 23.02 | Discuss the reasons for repeating the primary assessment as part of the reassessment.                                                                                                                                                                                                                                                   |
| 23.03 | Explain trending assessment components and its value to other health professionals who assume care of the patient.                                                                                                                                                                                                                      |
| 23.04 | Demonstrate the reassessment of patients of all ages.                                                                                                                                                                                                                                                                                   |
| 24.0  | <b>Medical Overview:</b> Demonstrate a simple depth, foundation breadth of knowledge of pathophysiology, assessment and management of medical complaints. The student will be able to:                                                                                                                                                  |
| 24.01 | Pathophysiology, assessment, and management of a medical complaints to include<br>• Identify factors that affect the patient Transport Decision and Medically Appropriate Destination<br>• E.g., Scene Safety, Environmental Factors, Chief Complaint, Preconceptions.                                                                  |
| 24.02 | Discuss forming a field impression and utilizing available information to determine a differential diagnosis.                                                                                                                                                                                                                           |
| 25.0  | <b>Neurology:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of neurologic disorders/emergencies patients of all ages. The student will be able to:                                                                                                                            |
| 25.01 | Review the anatomy and physiology of the nervous system.                                                                                                                                                                                                                                                                                |
| 25.02 | Describe the pathophysiology of the following neurologic disorders:<br>• Altered mental status<br>• Stroke                                                                                                                                                                                                                              |

|       |                                                                                                                                                                                                                                                                                                                                                                   |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Transient ischemic attack</li> <li>• Headache</li> <li>• Seizures</li> <li>• Syncope</li> <li>• Dementia vs. delirium</li> <li>• Alzheimer's disease</li> <li>• Headache</li> <li>• Brief Resolved Unexplained Event (BRUE)</li> <li>• Other neurological disorders to be determined locally</li> </ul>                  |
| 25.03 | Discuss and identify the causes, signs and symptoms of ischemic strokes, hemorrhagic strokes, and transient ischemic attacks and their similarities and differences.                                                                                                                                                                                              |
| 25.04 | Discuss and demonstrate how to use a stroke scoring system in the assessment of patients with suspected stroke.                                                                                                                                                                                                                                                   |
| 25.05 | Define and differentiate generalized seizure, partial seizure and status epilepticus and list their possible causes.                                                                                                                                                                                                                                              |
| 25.06 | Define and differentiate migraine headache, sinus headache, tension headache and discuss how to distinguish harmless headaches from something more serious.                                                                                                                                                                                                       |
| 25.07 | Define "altered mental status" and identify the possible causes.                                                                                                                                                                                                                                                                                                  |
| 25.08 | Describe and demonstrate the assessment and management of the patient with various neurological emergencies in patients of all ages to include: <ul style="list-style-type: none"> <li>• Strokes</li> <li>• Headaches</li> <li>• Seizures</li> <li>• Altered mental status</li> </ul>                                                                             |
| 25.09 | Discuss the transport of the stroke patient to the appropriate treatment center.                                                                                                                                                                                                                                                                                  |
| 26.0  | <b>Abdominal and Gastrointestinal Disorder:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of abdominal and gastrointestinal disorders/emergencies patients of all ages. The student will be able to:                                                                                                    |
| 26.01 | Review the basic anatomy and physiology the gastrointestinal, genital and urinary systems.                                                                                                                                                                                                                                                                        |
| 26.02 | Define and describe the pathophysiology of the following abdominal and gastrointestinal disorders: <ul style="list-style-type: none"> <li>• Abdominal pain</li> <li>• Acute abdomen</li> <li>• Peritonitis</li> <li>• Appendicitis</li> <li>• Pancreatitis</li> <li>• Cholecystitis</li> <li>• Gastrointestinal bleeding</li> <li>• Esophageal varices</li> </ul> |

|       |                                                                                                                                                                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Gastroenteritis</li> <li>• Ulcers</li> <li>• Intestinal obstruction</li> <li>• Hernia</li> <li>• Abdominal aortic aneurysm</li> </ul>                                                                           |
| 26.03 | Identify the signs and symptoms of common GI disorders.                                                                                                                                                                                                  |
| 26.04 | Describe and demonstrate the assessment and management of the patient with various gastrointestinal emergencies.                                                                                                                                         |
| 26.05 | Differentiate between hemorrhagic and non-hemorrhagic abdominal pain.                                                                                                                                                                                    |
| 27.0  | <b>Immunology:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of immunology disorders/emergencies patients of all ages. The student will be able to:                                            |
| 27.01 | Define and differentiate allergic reaction and anaphylaxis.                                                                                                                                                                                              |
| 27.02 | Describe the pathophysiology of the following immunology disorders: <ul style="list-style-type: none"> <li>• allergic reaction</li> <li>• anaphylaxis</li> <li>• anaphylactic shock</li> </ul>                                                           |
| 27.03 | Describe and demonstrate the assessment and management of the patient in patients of all ages experiencing an allergic or anaphylactic reaction.                                                                                                         |
| 27.04 | Review the following for the epinephrine auto-injector: <ul style="list-style-type: none"> <li>• generic and trade names</li> <li>• medication forms</li> <li>• dose</li> <li>• administration</li> <li>• action</li> <li>• contraindications</li> </ul> |
| 27.05 | Demonstrate the use of epinephrine auto-injector.                                                                                                                                                                                                        |
| 27.06 | Review the anatomy and physiology of the organs and structures related to anaphylaxis.                                                                                                                                                                   |
| 27.07 | Describe the incidence, morbidity and mortality of anaphylaxis.                                                                                                                                                                                          |
| 27.08 | Recognize the signs and symptoms related to anaphylaxis.                                                                                                                                                                                                 |
| 27.09 | Describe the risk factors for and prevention of anaphylaxis and appropriate patient education.                                                                                                                                                           |
| 27.10 | Discuss common antigens most frequently associated with anaphylaxis.                                                                                                                                                                                     |
| 27.11 | Explain the importance of separating the patient from the allergen when possible.                                                                                                                                                                        |

|       |                                                                                                                                                                                                                                                                                                                                                                                                |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.0  | <b>Infectious Disease:</b> Demonstrate a simple depth, simple breadth of knowledge of the assessment and management of a patient who may have an infectious disease patients of all ages. The student will be able to:                                                                                                                                                                         |
| 28.01 | Discuss the causes of infectious diseases                                                                                                                                                                                                                                                                                                                                                      |
| 28.02 | Describe the pathophysiology of infectious diseases of significant public health concern.                                                                                                                                                                                                                                                                                                      |
| 28.03 | Describe and demonstrate the assessment and management of the patient in patients of all ages experiencing an infectious disease.                                                                                                                                                                                                                                                              |
| 28.04 | Discuss mandatory notification to state or federal agencies of various diseases.                                                                                                                                                                                                                                                                                                               |
| 28.05 | Identify patients with risk factors for infectious disease.                                                                                                                                                                                                                                                                                                                                    |
| 28.06 | Explain the principles and practices of infection control in prehospital care.                                                                                                                                                                                                                                                                                                                 |
| 28.07 | Describe and discuss the rationale for the various types of PPE.                                                                                                                                                                                                                                                                                                                               |
| 28.08 | Discuss the proper disposal of contaminated supplies (sharps, gauze sponges, tourniquets, etc.).                                                                                                                                                                                                                                                                                               |
| 28.09 | Discuss decontamination of the ambulance and disinfection of patient care equipment, and areas in which care of the patient occurred.                                                                                                                                                                                                                                                          |
| 28.10 | Describe the actions to take if the EMS provider is exposed to an infectious disease.                                                                                                                                                                                                                                                                                                          |
| 28.11 | Demonstrate the ability to comply with body substance isolation guidelines.                                                                                                                                                                                                                                                                                                                    |
| 28.12 | Discuss the pathophysiology, risk factors, assessment, and prehospital management of sepsis/systemic inflammatory response syndrome (SIRS)                                                                                                                                                                                                                                                     |
| 28.13 | Identify the signs and symptoms and discuss the assessment and prehospital management of a patient in septic shock.                                                                                                                                                                                                                                                                            |
| 28.14 | Describe the risk factors for and prevention of infectious disease and appropriate patient education (including but not limited to hand-washing, PPE use, and disposal of contaminated supplies).                                                                                                                                                                                              |
| 29.0  | <b>Endocrine Disorders:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of endocrine disorders/emergencies patients of all ages. The student will be able to:                                                                                                                                                                          |
| 29.01 | Review the anatomy and physiology of the endocrine system and its main function in the body.                                                                                                                                                                                                                                                                                                   |
| 29.02 | Describe the pathophysiology and signs and symptoms of the following endocrine disorders: <ul style="list-style-type: none"> <li>• Insulin dependent Diabetes Mellitus</li> <li>• Non-insulin dependent Diabetes Mellitus</li> <li>• Hypoglycemia</li> <li>• Hyperglycemia</li> <li>• Diabetic Ketoacidosis (DKA)</li> <li>• Hyperglycemic Hyperosmolar Non-ketotic Syndrome (HHNS)</li> </ul> |
| 29.03 | Define and differentiate between Type I and Type II Diabetes.                                                                                                                                                                                                                                                                                                                                  |

|       |                                                                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 29.04 | Identify and demonstrate the steps in the management of the patient taking diabetic medicine with an altered mental status and a history of diabetes. Patients of all ages.                                                                      |
| 29.05 | Review the following for oral glucose: <ul style="list-style-type: none"> <li>• Generic and trade names</li> <li>• Medication forms</li> <li>• Dose</li> <li>• Administration</li> <li>• Action</li> <li>• Contraindications</li> </ul>          |
| 29.06 | Demonstrate the steps of using a glucometer device and administering oral glucose.                                                                                                                                                               |
| 29.07 | Describe and demonstrate the assessment and the management of the patient experiencing an endocrinologic emergency to include hypo- and hyper-glycemia.                                                                                          |
| 29.08 | Discuss the general assessment findings associated with endocrinologic emergencies. Patients of all ages.                                                                                                                                        |
| 29.09 | Describe the risk factors for and prevention of endocrine emergencies, including but not limited to healthy lifestyles and modifiable risk factors, the use of blood sugar monitoring devices and self-administration of prescribed medications. |
| 30.0  | <b>Psychiatric:</b> Demonstrate a fundamental depth, foundational breadth of knowledge regarding the assessment and management of psychiatric emergencies patients of all ages. The student will be able to:                                     |
| 30.01 | Differentiate among behavior, psychiatric disorders and behavioral emergencies                                                                                                                                                                   |
| 30.02 | Discuss common psychiatric disorders and behavioral emergencies.                                                                                                                                                                                 |
| 30.03 | Discuss the general factors that may cause an alteration in a patient's behavior.                                                                                                                                                                |
| 30.04 | Discuss patterns of violence, abuse, and neglect.                                                                                                                                                                                                |
| 30.05 | Discuss the risk factors/signs or symptoms of various psychiatric emergencies to include acute psychosis, suicide ideation, excited delirium, anxiety, depression, medical fear, substance use disorder, and PTSD.                               |
| 30.06 | Manage a behavioral emergency scenario applying knowledge of medical/legal Florida Statutes.                                                                                                                                                     |
| 30.07 | Describe and demonstrate the assessment and management of the patient experiencing a behavioral or psychiatric emergency across patients of all ages.                                                                                            |
| 30.08 | Describe the biological, psychosocial, and sociocultural influences on psychiatric disorders.                                                                                                                                                    |
| 30.09 | Describe the special considerations for the safety of the EMS provider and EMS crew, the patient and bystanders when dealing with behavioral and psychiatric emergencies.                                                                        |
| 30.10 | Describe and demonstrate methods of restraint that may be used in the management of a patient with a behavioral emergency.                                                                                                                       |
| 30.11 | Explain the importance of provider behavior and communication in the care of a patient with a behavioral emergency.                                                                                                                              |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30.12 | Demonstrate an understanding of appropriate and available mental health resources and provide patient education.                                                                                                                                                                                                                                                                                                                                 |
| 31.0  | <b>Cardiovascular:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of cardiovascular emergencies patients of all ages. The student will be able to:                                                                                                                                                                                                                                      |
| 31.01 | Review the basic anatomy and physiology of the cardiovascular system.                                                                                                                                                                                                                                                                                                                                                                            |
| 31.02 | Describe the pathophysiology and signs and symptoms of the following cardiovascular disorders: <ul style="list-style-type: none"> <li>• Acute coronary syndrome</li> <li>• Angina pectoris</li> <li>• Thromboembolism</li> <li>• Myocardial infarction</li> <li>• Hypertensive emergencies</li> <li>• Aortic aneurysm/dissection</li> <li>• Left and right sided heart failure</li> <li>• Cardiogenic shock</li> <li>• Cardiac arrest</li> </ul> |
| 31.03 | Describe and demonstrate the assessment and management of the patient experiencing a cardiac emergency.                                                                                                                                                                                                                                                                                                                                          |
| 31.04 | Discuss the indications and contraindications for automated external defibrillation (AED).                                                                                                                                                                                                                                                                                                                                                       |
| 31.05 | Explain the impact of age and weight on defibrillation.                                                                                                                                                                                                                                                                                                                                                                                          |
| 31.06 | Discuss the position of comfort for patients with various cardiac emergencies.                                                                                                                                                                                                                                                                                                                                                                   |
| 31.07 | Explain the rationale for early defibrillation.                                                                                                                                                                                                                                                                                                                                                                                                  |
| 31.08 | Discuss and differentiate among various types of external defibrillators.                                                                                                                                                                                                                                                                                                                                                                        |
| 31.09 | Discuss and differentiate among the various types of implanted cardiac devices.                                                                                                                                                                                                                                                                                                                                                                  |
| 31.10 | Understand the importance of maintenance and operators check list for AED's.                                                                                                                                                                                                                                                                                                                                                                     |
| 31.11 | Demonstrate the ability to use an AED according to the latest American Heart Association (AHA) guidelines.                                                                                                                                                                                                                                                                                                                                       |
| 31.12 | Explain the role medical direction plays in the use of automated external defibrillation.                                                                                                                                                                                                                                                                                                                                                        |
| 31.13 | Explain the rationale for administering nitroglycerin and ASA to a patient with chest pain or discomfort.                                                                                                                                                                                                                                                                                                                                        |
| 31.14 | Demonstrate the assessment and documentation of patient response to the automated external defibrillator.                                                                                                                                                                                                                                                                                                                                        |
| 31.15 | Demonstrate the assessment and documentation of patient response to nitroglycerin.                                                                                                                                                                                                                                                                                                                                                               |
| 31.16 | Discuss the purpose and use of CPR assist devices.                                                                                                                                                                                                                                                                                                                                                                                               |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 32.08 | Discuss the use of medication assisted treatments for substance misuse disorders including suboxone, methadone, and naltrexone and potential complications.                                                                                                                                                                                                                                                                                                                                                                           |
| 32.09 | Discuss safe uses and practices with potentially toxic substances while providing appropriate patient education                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 33.0  | <b>Respiratory:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of respiratory disorders/emergencies patients of all ages The student will be able to:                                                                                                                                                                                                                                                                                                                        |
| 33.01 | Review the basic anatomy and physiology of the respiratory system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 33.02 | Describe the pathophysiology and signs and symptoms of the following respiratory disorders: <ul style="list-style-type: none"> <li>• Chronic Obstructive Pulmonary Disease</li> <li>• Asthma</li> <li>• Bronchiolitis</li> <li>• Pulmonary Edema</li> <li>• Spontaneous Pneumothorax</li> <li>• Hyperventilation Syndrome</li> <li>• Cystic Fibrosis</li> <li>• Pulmonary Embolism</li> <li>• Pneumonia</li> <li>• Viral Respiratory Infections</li> <li>• Poisonous Exposures</li> <li>• Bacterial respiratory infections</li> </ul> |
| 33.03 | Discuss signs of adequate air exchange.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 33.04 | Discuss the signs and symptoms of a patient across the continuum from respiratory distress to failure.                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 33.05 | Describe and demonstrate the assessment and management of the patient with a respiratory emergency. Patients of all ages.                                                                                                                                                                                                                                                                                                                                                                                                             |
| 33.06 | Review the following for the metered-dose inhalers and small volume nebulizers for medications within the scope of practice of the EMT: <ul style="list-style-type: none"> <li>• Generic name</li> <li>• Medication forms</li> <li>• Dose</li> <li>• Administration</li> <li>• Action</li> <li>• Indications</li> <li>• Contraindications</li> </ul>                                                                                                                                                                                  |
| 33.07 | Describe and demonstrate the steps in facilitating the use of an inhaler and a small volume nebulizer.                                                                                                                                                                                                                                                                                                                                                                                                                                |

|       |                                                                                                                                                                                                                                                        |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 33.08 | Differentiate between upper and lower airway obstruction.                                                                                                                                                                                              |
| 33.09 | Demonstrate assessment and interpretation of normal and abnormal lung and breath sounds. Patients of all ages.                                                                                                                                         |
| 33.10 | Discuss common respiratory disorders, self-administered medications, and equipment (including, but not limited to home oxygen, nebulizers, and CPAP) and provide appropriate patient education.                                                        |
| 34.0  | <b>Hematology:</b> Demonstrate a simple depth, simple breadth of knowledge of the assessment, and management of hematology disorders patients of all ages. The student will be able to:                                                                |
| 34.01 | Review the compositions and functions of blood and plasma.                                                                                                                                                                                             |
| 34.02 | Describe the pathophysiology of the following hematology disorders: <ul style="list-style-type: none"> <li>• Anemia</li> <li>• Sick Cell Anemia / Sick Cell Crisis</li> <li>• Hemophilia/Clotting disorders</li> </ul>                                 |
| 34.03 | Describe and demonstrate the assessment and the management of the patient with a hematological disorder. Patients of all ages.                                                                                                                         |
| 34.04 | Discuss signs, symptoms, and potential complications of various hematological disorders and provide appropriate patient education                                                                                                                      |
| 35.0  | <b>Genitourinary /Renal:</b> Demonstrate a simple depth, simple breadth of knowledge of the assessment and management of genitourinary/ renal emergency patients of all ages. The student will be able to:                                             |
| 35.01 | Review the basic anatomy and physiology of the genitourinary and renal systems.                                                                                                                                                                        |
| 35.02 | Describe the pathophysiology and signs and symptoms of the following genitourinary/ renal disorders: <ul style="list-style-type: none"> <li>• Urinary tract infection</li> <li>• Kidney stones</li> <li>• Kidney failure</li> </ul>                    |
| 35.03 | Discuss the basic principles and complications of kidney dialysis.                                                                                                                                                                                     |
| 35.04 | Discuss the recognition and complications of urinary catheters.                                                                                                                                                                                        |
| 35.05 | Describe and demonstrate the assessment and management of the patient with a dialysis emergency.                                                                                                                                                       |
| 35.06 | Discuss traumatic injuries to the genitourinary system, including, but not limited to: sexual assault (female and male).                                                                                                                               |
| 36.0  | <b>Gynecology:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of gynecologic emergencies patients of all ages. The student will be able to:                                                   |
| 36.01 | Review the basic anatomy and physiology of the female reproductive system.                                                                                                                                                                             |
| 36.02 | Describe the pathophysiology and signs and symptoms of the following gynecologic disorders and emergencies, including but not limited to: <ul style="list-style-type: none"> <li>• Sexual assault</li> <li>• Non-traumatic vaginal bleeding</li> </ul> |

|       |                                                                                                                                                                                                                                              |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Menstrual pain</li> <li>• Ovarian cyst</li> <li>• Endometritis</li> <li>• Endometriosis</li> <li>• Pelvic inflammatory disease</li> <li>• Sexually Transmitted Disease</li> </ul>                   |
| 36.03 | Describe and demonstrate the assessment and management of the patient experiencing a gynecologic emergency. Patients of all ages.                                                                                                            |
| 36.04 | Describe the assessment and management of a patient who has experienced a sexual assault including the psychosocial impact and assessment findings/presentations.                                                                            |
| 36.05 | Discuss the professional and psychological importance of maintaining a patient's modesty and privacy while still being able to obtain necessary information.                                                                                 |
| 36.06 | Discuss the need to provide care for a patient of sexual assault, while still preventing destruction of crime scene information.                                                                                                             |
| 37.0  | <b>Non-Traumatic Musculoskeletal Disorders:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of non-traumatic fractures patients of all ages. The student will be able to:            |
| 37.01 | Review the basic anatomy and physiology of the musculoskeletal system.                                                                                                                                                                       |
| 37.02 | Describe and demonstrate the assessment and management of the patient in all age groups with a non-traumatic musculoskeletal emergency.                                                                                                      |
| 38.0  | <b>Diseases of the Eyes, Ears, Nose, and Throat:</b> Demonstrate a simple depth, simple breadth of knowledge of assessment and management of diseases of the Eyes, Ears, Nose, and Throat patients of all ages. The student will be able to: |
| 38.01 | Describe and demonstrate the assessment and management of the patient in all age groups with abnormal conditions affecting the eyes, ears, nose and throat, including epistaxis.                                                             |
| 39.0  | <b>Shock and Resuscitation:</b> Demonstrate a fundamental knowledge of the causes, pathophysiology, and management of shock and respiratory failure patients of all ages. The student will be able to:                                       |
| 39.01 | Discuss and identify causes and pathophysiology of the categories of hemorrhage and shock.                                                                                                                                                   |
| 39.02 | Review causes and pathophysiology of respiratory failure and arrest.                                                                                                                                                                         |
| 39.03 | Review causes and pathophysiology of cardiac failure or arrest.                                                                                                                                                                              |
| 39.04 | Discuss the various types and degrees of shock.                                                                                                                                                                                              |
| 39.05 | Discuss post resuscitation management.                                                                                                                                                                                                       |
| 39.06 | Explain the system components of CPR, the links in the AHA chain of survival and how each relates to patient survival.                                                                                                                       |
| 39.07 | Define and differentiate between compensated and decompensated shock.                                                                                                                                                                        |
| 39.08 | Discuss the importance of teamwork in the successful management of the critical patient.                                                                                                                                                     |

|       |                                                                                                                                                                                                                   |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 39.09 | Demonstrate how to perform one and two rescuer CPR, adult, child, and infant.                                                                                                                                     |
| 39.10 | Demonstrate how to perform rescuer level appropriate defibrillation in an adult, child, and infant patient.                                                                                                       |
| 39.11 | Demonstrate rapid decision making based on differential field diagnosis of the critical patient with a <b>special arrest</b> peri-arrest condition.                                                               |
| 39.12 | Describe and demonstrate the assessment and management of the patient with hemorrhage and shock.                                                                                                                  |
| 39.13 | Discuss ethical issues in resuscitation.                                                                                                                                                                          |
| 39.14 | Discuss options for termination resuscitation.                                                                                                                                                                    |
| 40.0  | <b>Trauma Overview:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment and management of the trauma patient patients of all ages. The student will be able to: |
| 40.01 | Discuss pathophysiology of the trauma patient.                                                                                                                                                                    |
| 40.02 | Discuss the components of a comprehensive trauma systems and levels of trauma centers.                                                                                                                            |
| 40.03 | Describe the considerations for different transportation modes <b>transport and destination issues</b> to a trauma center.                                                                                        |
| 40.04 | Discuss the kinematics of blunt and penetrating trauma.                                                                                                                                                           |
| 40.05 | Discuss and describe significant and non-significant Mechanism of Injury (MOI) and provide examples of each.                                                                                                      |
| 40.06 | Demonstrate the application of the State of Florida's trauma scorecard methodologies as required in Florida Statute and Florida Administrative Code (F.A.C.).                                                     |
| 40.07 | Discuss the National Trauma Triage Protocol of injured Patients.                                                                                                                                                  |
| 40.08 | Discuss forming a field impression and utilizing available information to determine a differential diagnosis.                                                                                                     |
| 40.09 | Identify the need for rapid intervention transport of the trauma patient.                                                                                                                                         |
| 41.0  | <b>Bleeding:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of bleeding patients of all ages. The student will be able to:                 |
| 41.01 | Review the anatomy and physiology of the circulatory system.                                                                                                                                                      |
| 41.02 | Discuss the different types of bleeding and classes of hemorrhage.                                                                                                                                                |
| 41.03 | Review signs and symptoms of shock (hypo-perfusion).                                                                                                                                                              |
| 41.04 | Demonstrate effective hemorrhage control to include application of a tourniquet.                                                                                                                                  |
| 41.05 | Review the pathophysiology of hemorrhagic shock.                                                                                                                                                                  |

|       |                                                                                                                                                                                                                                                                                                        |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 41.06 | Recognize the need for rapid transport for patients that are bleeding and showing signs of shock (hypo-perfusion).                                                                                                                                                                                     |
| 41.07 | Describe and demonstrate the assessment and management of a patient with hemorrhagic shock.                                                                                                                                                                                                            |
| 41.08 | Discuss the possible complications of an improperly applied dressing, bandage, tourniquet, and hemostatic agents.                                                                                                                                                                                      |
| 42.0  | <b>Chest Trauma:</b> Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment and management of chest trauma patients of all ages. The student will be able to:                                                                                                     |
| 42.01 | Review the anatomy and physiology of the thoracic/chest cavity and respiratory system.                                                                                                                                                                                                                 |
| 42.02 | Differentiate between a pneumothorax (open, simple and tension) and hemothorax.                                                                                                                                                                                                                        |
| 42.03 | Discuss the pathophysiology, signs and symptoms, and MOI of myocardial injuries, including the following: <ul style="list-style-type: none"> <li>• Pericardial tamponade</li> <li>• Myocardial contusion</li> <li>• Myocardial rupture</li> <li>• Commotio cordis</li> <li>• Aortic shearer</li> </ul> |
| 42.04 | Discuss the pathophysiology, signs and symptoms, and MOI of specific chest wall injuries, including the following: <ul style="list-style-type: none"> <li>• Rib fracture</li> <li>• Flail segment</li> <li>• Sternal fracture</li> <li>• Open chest wound</li> <li>• Impaled object</li> </ul>         |
| 42.05 | Describe and demonstrate the assessment and management of chest trauma <b>to include blunt versus penetrating trauma.</b>                                                                                                                                                                              |
| 43.0  | <b>Abdominal and Genitourinary Trauma:</b> Demonstrate a fundamental depth, simple breadth of knowledge of pathophysiology, assessment and management of abdominal and genitourinary trauma patients of all ages. The student will be able to:                                                         |
| 43.01 | Review the anatomy and physiology of the abdominal cavity and genitourinary system.                                                                                                                                                                                                                    |
| 43.02 | Discuss the pathophysiology, signs and symptoms, and MOI for abdominal trauma including hollow and solid injuries.                                                                                                                                                                                     |
| 43.03 | Describe and demonstrate the assessment and management of a patient with a suspected abdominal or genitourinary injury/trauma.                                                                                                                                                                         |
| 44.0  | <b>Orthopedic Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of orthopedic trauma patients of all ages. The student will be able to:                                                                                    |
| 44.01 | Review the anatomy and physiology of the Musculo-skeletal system.                                                                                                                                                                                                                                      |
| 44.02 | Discuss pathophysiology, signs and symptoms, and MOI for orthopedic trauma including <i>evisceration, impaled objects, blunt versus penetrating mechanisms</i> , hollow and solid <b>organ</b> injuries.                                                                                               |
| 44.03 | Discuss the different types of orthopedic trauma including fracture classifications. To include internal/external genitalia.                                                                                                                                                                           |

|       |                                                                                                                                                                                                                                                                                                                   |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 44.04 | Explain the rationale for stabilization of an injured extremity. To include: <ul style="list-style-type: none"> <li>• Open fracture</li> <li>• Closed fracture</li> <li>• Dislocation</li> <li>• Upper and Lower extremity orthopedic trauma</li> <li>• Sprains and Strains</li> <li>• Pelvic Fracture</li> </ul> |
| 44.05 | Describe and demonstrate the assessment and management of a patient with a suspected orthopedic trauma.                                                                                                                                                                                                           |
| 44.06 | Discuss the following management techniques: <ul style="list-style-type: none"> <li>• Heat therapy</li> <li>• Cold therapy</li> <li>• Splinting</li> </ul>                                                                                                                                                        |
| 44.07 | List the six “P’s” of orthopedic injury assessment.                                                                                                                                                                                                                                                               |
| 44.08 | Discuss the need for assessment of distal pulses, motor, and sensation before and after splinting.                                                                                                                                                                                                                |
| 44.09 | Review age-associated changes in the bones.                                                                                                                                                                                                                                                                       |
| 44.10 | Discuss the proper procedures to package an amputated body part for replantation.                                                                                                                                                                                                                                 |
| 44.11 | Explain the rationale for splinting at the scene versus load and go.                                                                                                                                                                                                                                              |
| 44.12 | Demonstrate the proper use of various splinting materials and devices to include improvised and traction splints.                                                                                                                                                                                                 |
| 45.0  | <b>Soft Tissue Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of soft tissue trauma patients of all ages. The student will be able to:                                                                                             |
| 45.01 | Review anatomy and physiology of the integumentary system to include the layers of the skin.                                                                                                                                                                                                                      |
| 45.02 | Describe the pathophysiology, signs and symptoms, and MOI of soft tissue trauma.                                                                                                                                                                                                                                  |
| 45.03 | Describe and demonstrate the assessment and management of various soft tissue injuries. <ul style="list-style-type: none"> <li>• Wounds (e.g., avulsion, bite, laceration, puncture, and incisions)</li> <li>• Crush and compartment syndrome</li> <li>• High pressure injection injury</li> </ul>                |
| 45.04 | Identify types of burn injuries, including: <ul style="list-style-type: none"> <li>• Thermal burn</li> <li>• Chemical burn</li> <li>• Electrical burn</li> <li>• Radiation exposure</li> </ul>                                                                                                                    |
| 45.05 | Describe the depth classifications of burn injuries, including:                                                                                                                                                                                                                                                   |

|       |                                                                                                                                                                                                                                                                                                                                                                     |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Superficial burn</li> <li>• Partial-thickness burn</li> <li>• Full-thickness burn</li> <li>• Other depth classifications</li> </ul>                                                                                                                                                                                        |
| 45.06 | Describe and demonstrate methods for determining body surface area percentage of a burn injury including the “rule of nines,” the “rule of palms,” and other methods.                                                                                                                                                                                               |
| 45.07 | Explain how the seriousness of a burn is related to its depth and percent of body surface area (BSA) involved.                                                                                                                                                                                                                                                      |
| 45.08 | Review the various management techniques for hemorrhage control.                                                                                                                                                                                                                                                                                                    |
| 45.09 | Differentiate among the types of injuries requiring the use of an occlusive versus non- occlusive dressing.                                                                                                                                                                                                                                                         |
| 45.10 | Demonstrate the assessment and management of specific burn injuries including: <ul style="list-style-type: none"> <li>• Thermal</li> <li>• Inhalation</li> <li>• Chemical (<i>in the eye and on the skin</i>)</li> <li>• Electrical</li> <li>• Radiation</li> </ul>                                                                                                 |
| 46.0  | <b>Head, Facial, Neck, and Spine Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of head, facial, neck and spine trauma patients of all ages. The student will be able to:                                                                                                            |
| 46.01 | Review the anatomy and physiology of the head, face, neck and spine.                                                                                                                                                                                                                                                                                                |
| 46.02 | Describe the pathophysiology, signs and symptoms, and MOI for head, face, neck, and spine trauma.                                                                                                                                                                                                                                                                   |
| 46.03 | Describe and demonstrate the assessment and management of a patient with the following traumas to the head, face, neck, and spine: <ul style="list-style-type: none"> <li>• Penetrating neck trauma</li> <li>• Laryngotracheal injury</li> <li>• Skull fracture</li> <li>• Facial fracture</li> <li>• Eye injury (foreign body)</li> <li>• Dental trauma</li> </ul> |
| 46.04 | Recognize and manage life threats due to face, head, neck, and spine trauma.                                                                                                                                                                                                                                                                                        |
| 46.05 | Discuss and demonstrate the utilization of the Glasgow Coma Scale.                                                                                                                                                                                                                                                                                                  |
| 47.0  | <b>Nervous System Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of nervous system trauma patients of all ages. The student will be able to:                                                                                                                                         |
| 47.01 | Review the anatomy and physiology of the nervous system.                                                                                                                                                                                                                                                                                                            |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 47.02 | Discuss the pathophysiology, signs and symptoms, and MOI for <b>traumatic</b> brain <b>injury (TBI)</b> and spinal cord trauma.                                                                                                                                                                                                                                                                                                     |
| 47.03 | Describe and demonstrate the assessment and management of a patient with a <b>traumatic</b> brain <b>injury (TBI)</b> and/or spinal cord trauma.                                                                                                                                                                                                                                                                                    |
| 47.04 | Discuss the rationale and potential complications of spinal motion restriction of the entire spine when a cervical spine injury is suspected.                                                                                                                                                                                                                                                                                       |
| 47.05 | Given a scenario, discuss whether or not to remove a helmet prior to transport of a patient.                                                                                                                                                                                                                                                                                                                                        |
| 47.06 | Demonstrate various methods for stabilization and removal of a helmet.                                                                                                                                                                                                                                                                                                                                                              |
| 47.07 | Discuss documentation of assessment before, during, and after spinal motion restriction.                                                                                                                                                                                                                                                                                                                                            |
| 48.0  | <b>Special Considerations in Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment and management of trauma patients with special considerations patients of all ages. The student will be able to:                                                                                                                                                                         |
| 48.01 | Review the anatomy and physiology for the following trauma patients: <ul style="list-style-type: none"> <li>• Pregnant</li> <li>• Pediatric</li> <li>• Geriatric</li> </ul>                                                                                                                                                                                                                                                         |
| 48.02 | Discuss the pathophysiology, signs and symptoms, and MOI of trauma in the following patients: <ul style="list-style-type: none"> <li>• Pregnant</li> <li>• Pediatric</li> <li>• Geriatric</li> </ul>                                                                                                                                                                                                                                |
| 48.03 | Discuss and demonstrate unique assessment and management considerations for the following trauma patients: <ul style="list-style-type: none"> <li>• Pregnant</li> <li>• Pediatric</li> <li>• Geriatric</li> <li>• Cognitively impaired</li> </ul>                                                                                                                                                                                   |
| 49.0  | <b>Environmental Emergencies:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment and management of environmental emergencies patients of all ages. The student will be able to:                                                                                                                                                                                                  |
| 49.01 | Define drowning and discuss its incidence, risk factors and prevention.                                                                                                                                                                                                                                                                                                                                                             |
| 49.02 | Discuss the pathophysiology, signs and symptoms, and MOI of the following: <ul style="list-style-type: none"> <li>• Drowning and water related incidents</li> <li>• Temperature-related illness</li> <li>• Bites and envenomation</li> <li>• Dysbarism such as high-altitude injuries</li> <li>• Diving injuries</li> <li>• Lightning (electrical) injury</li> <li>• High altitude illness</li> <li>• Radiation exposure</li> </ul> |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Other environmental emergencies</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 49.03 | <p>Describes and demonstrate the assessment and management for a patient with the following:</p> <ul style="list-style-type: none"> <li>• Drowning and water related incidents</li> <li>• Temperature-related illness</li> <li>• Bites and envenomation</li> <li>• Dysbarism such as high-altitude injuries</li> <li>• Diving injuries</li> <li>• Lightning (electrical) injury</li> <li>• High altitude illness</li> <li>• Radiation exposure</li> <li>• Other environmental emergencies</li> </ul> |
| 49.04 | Discuss the fundamental principles of the gas laws including Boyle's, Dalton, Henry and Charles.                                                                                                                                                                                                                                                                                                                                                                                                     |
| 49.05 | Discuss scene management and provider safety considerations for a variety of environmental emergencies.                                                                                                                                                                                                                                                                                                                                                                                              |
| 49.06 | Explain the five ways a body can lose heat.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 49.07 | Discuss potentially life-threatening venomous species of insects, spiders and snakes in the U.S.                                                                                                                                                                                                                                                                                                                                                                                                     |
| 50.0  | <b>Multi-Systems Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the pathophysiology, assessment, and management of multi-system trauma and blast injuries patients of all ages. The student will be able to:                                                                                                                                                                                                                                                      |
| 50.01 | Discuss the pathophysiology, signs and symptoms, and MOI of multi-system trauma and blast injuries.                                                                                                                                                                                                                                                                                                                                                                                                  |
| 50.02 | Describe and demonstrate assessment and management considerations for a patient of multi system trauma and blast injuries.                                                                                                                                                                                                                                                                                                                                                                           |
| 51.0  | <b>Obstetrics:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of management of the obstetric patient within the scope of practice of the EMT. The student will be able to:                                                                                                                                                                                                                                                                                                   |
| 51.01 | Identify and describe the anatomical and the physiological changes during pregnancy.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 51.02 | Define the stages of labor and discuss how to assess them.                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 51.03 | Differentiate between cephalic and abnormal delivery.                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 51.04 | Describe the management of a patient with pre-delivery emergencies.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 51.05 | Discuss and demonstrate the patient care measures for all stages of labor in a cephalic delivery for the mother and the newborn.                                                                                                                                                                                                                                                                                                                                                                     |
| 51.06 | Describe the management of the mother post-delivery.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 51.07 | Discuss and demonstrate the patient care measures for all stages of labor in abnormal deliveries for the mother and the newborn.                                                                                                                                                                                                                                                                                                                                                                     |

|       |                                                                                                                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 51.08 | Describe the procedures for handling complications of delivery.                                                                                                                                                  |
| 51.09 | Describe special considerations when meconium is present in amniotic fluid or during delivery.                                                                                                                   |
| 51.10 | Identify the factors that lead to premature birth and low birth weight newborns.                                                                                                                                 |
| 51.11 | Demonstrate the procedures for handling complications of pregnancy including pre-eclampsia, eclampsia, and high risk.                                                                                            |
| 52.0  | <b>Neonatal Care:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of management of the newborn and neonatal patient within the scope of practice of the EMT. The student will be able to: |
| 52.01 | Discuss and demonstrate assessment and management considerations of a neonate.                                                                                                                                   |
| 52.02 | Define the term neonate.                                                                                                                                                                                         |
| 52.03 | Describe special patient care considerations of a premature baby.                                                                                                                                                |
| 52.04 | Calculate the Apgar score given various newborn situations.                                                                                                                                                      |
| 52.05 | Discuss the common signs when ventilatory assistance is appropriate for a neonate.                                                                                                                               |
| 52.06 | Discuss and demonstrate the steps in resuscitation of a neonate.                                                                                                                                                 |
| 52.07 | Review the signs of hypovolemia in a newborn.                                                                                                                                                                    |
| 52.08 | Discuss the effects maternal narcotic usage has on the newborn.                                                                                                                                                  |
| 52.09 | Discuss the management/treatment plan for vomiting in the neonate.                                                                                                                                               |
| 52.10 | Discuss the assessment findings associated with common birth injuries in the neonate.                                                                                                                            |
| 53.0  | <b>Pediatrics:</b> Demonstrate a fundamental depth, fundamental breadth of knowledge of management of the pediatric patient within the scope of practice of the EMT. The student will be able to:                |
| 53.01 | Review the anatomy, physiology and pathophysiology differences of patients.                                                                                                                                      |
| 53.02 | Discuss the differences in approaching and assessing patients.                                                                                                                                                   |
| 53.03 | Discuss and demonstrate assessment and management considerations for Sudden Unexplained Infant Death Syndrome (SUIDS).                                                                                           |
| 53.04 | Describe the selection of appropriate airway adjuncts and ventilation devices.                                                                                                                                   |
| 53.05 | Discuss complications of improper utilization of airway adjuncts and ventilation devices.                                                                                                                        |
| 53.06 | Describe the common causes, assessment and management of respiratory distress, failure, or arrest.                                                                                                               |

|       |                                                                                                                                                                                                                                                                                                                                                                   |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 53.07 | Discuss the common causes, assessment and management of hypo-perfusion.                                                                                                                                                                                                                                                                                           |
| 53.08 | Discuss the common causes, assessment and management of cardiopulmonary arrest.                                                                                                                                                                                                                                                                                   |
| 53.09 | Describe the common causes, assessment and management of altered level of consciousness.                                                                                                                                                                                                                                                                          |
| 53.10 | Describe the common causes, assessment and management of trauma.                                                                                                                                                                                                                                                                                                  |
| 53.11 | Describe the common causes, assessment and management of neurological emergencies.                                                                                                                                                                                                                                                                                |
| 53.12 | Demonstrate proper technique for administering blow-by oxygen.                                                                                                                                                                                                                                                                                                    |
| 53.13 | Review proper technique for suctioning.                                                                                                                                                                                                                                                                                                                           |
| 53.14 | Review appropriate use of airway adjuncts and ventilation devices.                                                                                                                                                                                                                                                                                                |
| 53.15 | Review age-appropriate basic airway clearing maneuvers for a completely obstructed airway.                                                                                                                                                                                                                                                                        |
| 54.0  | <b>Geriatrics:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of management of the geriatric patient within the scope of practice of the EMT. The student will be able to:                                                                                                                                                                |
| 54.01 | Define and discuss the term geriatrics.                                                                                                                                                                                                                                                                                                                           |
| 54.02 | Review the anatomy, physiology and pathophysiology of the geriatric patient.                                                                                                                                                                                                                                                                                      |
| 54.03 | Discuss common emotional and psychological concerns and conditions of the geriatric patient.                                                                                                                                                                                                                                                                      |
| 54.04 | Discuss the importance of fall prevention with the geriatric patient.                                                                                                                                                                                                                                                                                             |
| 54.05 | Describe principles that should be employed when assessing and communicating with the geriatric patient.                                                                                                                                                                                                                                                          |
| 54.06 | Describe the common causes, assessment, and management of the geriatric patient with a medical, trauma, or psychosocial complaint.                                                                                                                                                                                                                                |
| 55.0  | <b>Patients with Special Challenges:</b> Demonstrate a simple depth, simple breadth of knowledge of the management of the patient with special challenges patients of all ages. The student will be able to:                                                                                                                                                      |
| 55.01 | Discuss the special considerations required when providing emergency care to patients with: <ul style="list-style-type: none"> <li>• Abuse/neglect of vulnerable populations</li> <li>• Homelessness</li> <li>• Poverty</li> <li>• Bariatrics</li> <li>• Tech dependent</li> <li>• Hospice/terminally ill</li> <li>• Tracheostomy</li> <li>• Home care</li> </ul> |

|       |                                                                                                                                                                                                                                                                                                                            |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Sensory deficit/loss</li> <li>• Developmental disability</li> </ul>                                                                                                                                                                                                               |
| 55.02 | Discuss special considerations regarding common medical devices used in the home care of patients with special challenges including: <ul style="list-style-type: none"> <li>• Respiratory devices</li> <li>• Cardiac devices</li> <li>• Gastro-urinary devices</li> <li>• Central &amp; peripheral IV catheters</li> </ul> |
| 55.03 | Describe home care and the types of patients it serves and the services it encompasses.                                                                                                                                                                                                                                    |
| 55.04 | Differentiate between hospice/palliative care and curative care.                                                                                                                                                                                                                                                           |
| 55.05 | Discuss the role of the EMT as a patient advocate for vulnerable populations.                                                                                                                                                                                                                                              |
| 56.0  | <b>Principles of Safely Operating a Ground Ambulance:</b> Demonstrate a simple depth, foundational breadth of knowledge of risks and responsibilities of transport. The student will be able to:                                                                                                                           |
| 56.01 | Discuss the importance of performing regular vehicle and equipment inspection.                                                                                                                                                                                                                                             |
| 56.02 | Demonstrate how to perform a daily inspection of an ambulance.                                                                                                                                                                                                                                                             |
| 56.03 | Review the general provisions of Florida laws relating to the operation of the ambulance.                                                                                                                                                                                                                                  |
| 56.04 | Discuss the guidelines for operating an ambulance safely during emergency and non-emergency situation/incident.                                                                                                                                                                                                            |
| 56.05 | Review considerations that are required for ensuring scene safety, including personal safety, patient safety, and traffic control.                                                                                                                                                                                         |
| 56.06 | Review how to clean and disinfect the ambulance and equipment.                                                                                                                                                                                                                                                             |
| 57.0  | <b>Incident Management:</b> Demonstrate a fundamental depth, fundamental breadth of knowledge of establishing and working within the incident management system. The student will be able to:                                                                                                                              |
| 57.01 | Discuss the importance of NIMS (National Incident Management System) and its functional components.                                                                                                                                                                                                                        |
| 57.02 | Discuss unified command and when it is applicable.                                                                                                                                                                                                                                                                         |
| 57.03 | Describe the role of command and the procedures for transfer of command.                                                                                                                                                                                                                                                   |
| 57.04 | List and describe the functions of the following groups and leaders in ICS as it pertains to EMS incidents: <ul style="list-style-type: none"> <li>• Safety</li> <li>• Logistics</li> <li>• Rehabilitation</li> <li>• Staging,</li> <li>• Treatment</li> </ul>                                                             |

|      |                                                                                                                                                                                                   |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | <ul style="list-style-type: none"> <li>• Triage</li> <li>• Transportation</li> <li>• Extrication/rescue</li> <li>• Morgue</li> <li>• Communications</li> </ul>                                    |
|      | 57.05 Discuss the physical and psychological signs of critical incident stress.                                                                                                                   |
| 58.0 | <b>Multiple Casualty Incidents:</b> Demonstrate a simple depth, foundational breadth of knowledge of responding to an emergency during a multiple casualty incident. The student will be able to: |
|      | 58.01 Review essential elements of scene size-up when arriving at a potential MCI.                                                                                                                |
|      | 58.02 Describe the role of the rescuers and EMS systems in planning for MCIs and disasters.                                                                                                       |
|      | 58.03 Describe the role of the physician at multiple casualty incidents.                                                                                                                          |
|      | 58.04 Define triage and describe the principles of triage.                                                                                                                                        |
|      | 58.05 Describe the START (simple triage and rapid treatment) and JUMP START method of initial triage.                                                                                             |
|      | 58.06 Describe techniques used to allocate patients to hospitals and track them.                                                                                                                  |
|      | 58.07 Discuss and describe the essential equipment to provide logistical support to MCI operations.                                                                                               |
|      | 58.08 Describe the role of critical incident stress management during and after MCIs.                                                                                                             |
|      | 58.09 Demonstrate the use of local/regional triage tagging system.                                                                                                                                |
| 59.0 | <b>Air Medical:</b> Demonstrate a simple depth, simple breadth of knowledge of safe air medical operations and criteria for utilizing air medical response. The student will be able to:          |
|      | 59.01 Describe key scene safety considerations when preparing for a helicopter medivac, including establishing a landing zone and approaching the aircraft.                                       |
|      | 59.02 Describe the capabilities, protocols, and methods for accessing air medical transport.                                                                                                      |
|      | 59.03 Review the advantages and disadvantages of air medical transport.                                                                                                                           |
|      | 59.04 Review the conditions/situations in which air medical transport should be considered.                                                                                                       |
| 60.0 | <b>Vehicle Extrication:</b> Demonstrate a simple depth, simple breadth of knowledge for safe vehicle extrication and use of simple hand tools. The student will be able to:                       |
|      | 60.01 Describe the role of the EMT in patient rescue and vehicle extrication                                                                                                                      |
|      | 60.02 Describe personal and patient safety during vehicle extrication.                                                                                                                            |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 60.03 | Explain the difference between simple access and complex access in vehicle extrication.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 60.04 | Discuss patient care considerations related to assisting with rapid extrication, providing emergency care to the trapped patient and removing and transferring a patient.                                                                                                                                                                                                                                                                                                                                                                                    |
| 60.05 | Discuss the use of simple hand tools used for vehicle extrication.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 60.06 | Discuss and describe the hazards and safe practices associated with the following vehicle components: <ul style="list-style-type: none"> <li>• Energy absorbing bumpers</li> <li>• Air bag/supplemental restraint systems</li> <li>• Catalytic converters and conventional fuel systems</li> <li>• Stored energy</li> <li>• Hybrid-electric vehicles</li> </ul>                                                                                                                                                                                              |
| 60.07 | Describe methods for emergency stabilization using rope, cribbing, jacks, spare tire, and come-a-longs for vehicles.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 60.08 | Describe the electrical hazards commonly found at highway incidents (above and below ground).                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 60.09 | Explain the difference between tempered and safety glass, identify its locations on a vehicle and how to break it safely.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 60.10 | Explain typical door anatomy and methods to gain access to the patient.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 61.0  | <b>Hazardous Materials Awareness:</b> Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating in a cold zone at a hazardous material or other special incident. The student will be able to:                                                                                                                                                                                                                                                                                                                      |
| 61.01 | Identify and describe resources for substance identification, decontamination, and treatment information, including but not limited to the following: <ul style="list-style-type: none"> <li>• Poison control center</li> <li>• Medical control</li> <li>• Material safety data sheets (MSDS),</li> <li>• Reference textbooks</li> <li>• Computer databases</li> <li>• Computer-Aided Management of Emergency Operations (CAMEO)</li> <li>• CHEMTREC</li> <li>• Technical specialists</li> <li>• Agency for toxic substances and disease registry</li> </ul> |
| 61.02 | Explain primary and secondary contamination risk.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 61.03 | Review routes of exposure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 61.04 | Discuss how the substance and route of contamination alters triage and decontamination methods.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 61.05 | Explain the common signs, symptoms, and treatment for the following substances: <ul style="list-style-type: none"> <li>• Corrosives</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                               |

|       |                                                                                                                                                                                                                                                                                             |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Pesticides</li> <li>• Chemical asphyxiants</li> <li>• Hydrocarbon solvents</li> </ul>                                                                                                                                                              |
| 61.06 | Identify local facilities and resources capable of treating patients exposed to hazardous materials.                                                                                                                                                                                        |
| 61.07 | Determine the appropriate level of PPE by considering the following: <ul style="list-style-type: none"> <li>• Types</li> <li>• Application</li> <li>• Use and limitations</li> <li>• Use of chemical compatibility chart</li> </ul>                                                         |
| 61.08 | Explain specific decontamination procedures.                                                                                                                                                                                                                                                |
| 61.09 | Discuss the designated HAZMAT control zones (HOT, WARM, and COLD).                                                                                                                                                                                                                          |
| 61.10 | Discuss an emergency two-step decontamination process.                                                                                                                                                                                                                                      |
| 61.11 | Identify DOT Labels, placards and markings that are used to designate HAZMAT materials.                                                                                                                                                                                                     |
| 61.12 | Demonstrate the ability to use a variety of reference materials to identify a HAZMAT material.                                                                                                                                                                                              |
| 62.0  | <b>Mass Casualty Incidents Due to Terrorism and Disaster:</b> Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating on the scene of a natural or man-made disaster. The student will be able to:                                               |
| 62.01 | Describe the role of the EMT on the scene of a natural or man-made disaster.                                                                                                                                                                                                                |
| 62.02 | Define the different types of terrorism and provide examples of incidents of each.                                                                                                                                                                                                          |
| 62.03 | Describe the factors related to ensuring situational safety at the site of a disaster and the procedures required.                                                                                                                                                                          |
| 62.04 | Discuss the National Terrorism Advisory System.                                                                                                                                                                                                                                             |
| 62.05 | Discuss factors to consider when responding to a terrorist situation.                                                                                                                                                                                                                       |
| 62.06 | Review important actions to take at the scene of a terrorist event such as: <ul style="list-style-type: none"> <li>• Scene safety</li> <li>• Personal protection</li> <li>• Notification procedures</li> <li>• Available resources</li> <li>• Working with in the command system</li> </ul> |
| 62.07 | List and describe the main categories of weapons of mass destruction.                                                                                                                                                                                                                       |
| 62.08 | Discuss the different types of chemical agents and their signs and symptoms.                                                                                                                                                                                                                |

|       |                                                                                                            |
|-------|------------------------------------------------------------------------------------------------------------|
| 62.09 | Review the treatment and management of patients exposed to various types of chemical agents and radiation. |
| 62.10 | Review the different types of radiations and their effect on the human body.                               |
| 62.11 | Discuss the use of a nerve agent antidote kit.                                                             |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

The standard length of this program is 300 clock hours or 12 credit hours.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Health Science career cluster.

This is an instructional program that prepares students for employment as paramedics (Emergency Medical Technicians & Paramedics) to function at the basic pre-hospital emergency medical technician - paramedic level and treat various medical/trauma conditions, using appropriate equipment and materials. The program prepares students for certification as paramedics in accordance with Chapter 64E-2 of the Florida Administrative Code.

The content includes but is not limited to: patient assessment, advanced airway management, cardiovascular emergencies, external and internal bleeding and shock, traumatic injuries, fractures, dislocations, sprains, poisoning, heart attack, stroke, diabetes, pharmacology, medication administration, respiratory emergencies, endocrine emergencies, acute abdomen, communicable diseases, patients with abnormal behavior, substance abuse, the unconscious state, emergency childbirth, pediatric and geriatric emergencies, burns, environmental hazards, communications, documentation, extrication, mass casualty incident, incident command system, and transportation of patient.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is an Applied Technology Diploma (ATD) program that is part of a technical degree program, is less than 60 credit hours, and leads to employment in a specific occupation. An ATD program may consist of either technical credit or college credit. A public school district may offer an ATD program only as clock hour, with college credit awarded to a student upon articulation to a state college.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

### **Clock Hour Program**

When offered at the district level, this program is a planned sequence of instruction consisting of 1 occupational completion point and the courses as shown below.

| OCP | Course Number | Course Title  | Length    |
|-----|---------------|---------------|-----------|
| A   | EMS0210       | Paramedic I   | 248 hours |
|     | EMS0211       | Paramedic II  | 426 hours |
|     | EMS0212       | Paramedic III | 426 hours |

### **College Credit Program**

When offered at the college credit level, this ATD program is part of the Emergency Medical Services AS program (1351090402) and has a program length of 42 credits.

### **Regulated Programs**

**The Paramedic standards and benchmarks in this framework include all of the content, knowledge and skills at the EMT level in addition to the Paramedic objectives. For those standards that state “Review EMT standards and benchmarks”, please refer to the EMT curriculum framework for specific objectives.**

This program meets the Department of Health trauma score card methodologies and Sudden Unexpected Infant Death Syndrome (SUIDS) training education requirements. Upon completion of this program, the instructor will provide a certificate to the student verifying that these requirements have been met. This program also meets the Department of Health’s education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor may provide a certificate for renewal purposes to the student verifying these requirements have been met.

A Paramedic program must be taught by faculty meeting the qualifications as set forth in 64J-1.020, F.A.C.

Florida Statute (F.S.) 401.2701 requires that the instructor-student ratio should not exceed 1:6.

Field internship shall include a competency-based program to assure appropriate pre-hospital assessment and management of medical and trauma patients, as well as associated manual skills. The field internship activity shall include supervised experience in the field setting with a certified ALS transport EMS agency or ALS fire department. Refer to 64J-1.20, F.A.C., for additional requirements of the field internship inside of the paramedic program.

Pursuant 401.2701, F.S. to Paramedic programs must be available only to Florida-certified emergency medical technicians or an emergency medical technician applicant who will obtain Florida certification prior to completion of phase one of the paramedic program and EMT certification must be maintained through the program.

It is strongly recommended this program be accredited by Commission on Accreditation of Allied Health Education Programs (CAAHEP). **NREMT requires that all paramedic students graduate from a CAAHEP-accredited Paramedic program (or an education program that has been issued a CoAEMSP "Letter of Review") that meets or exceeds the National Emergency Medical Services Education Standards for Paramedic.**

The Student Performance Standards for Paramedic were adapted and condensed from the most current US Department of Transportation, National EMS Educational Standards for the Paramedic. Administrators and instructors should refer to these materials for additional detail.

**“It is highly recommended, though not mandatory, that courses in medical terminology, anatomy, and pharmacology be completed before enrolling in EMT and Paramedic training.”**

**"All EMT/Paramedic students are required to complete the 4-hour Traffic Incident Management Safety (TIMS) course at least once. This requirement can be fulfilled either as a prerequisite or as part of the curriculum, at the discretion of the EMS education program."**

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |
|-----------------------------|--------------------------------------------------------------------------------------------------|
| <u>01.0</u>                 | <u>Apply academic skills to workplace scenarios.</u>                                             |
| <u>01.01</u>                | <u>Use reading skills.</u>                                                                       |
| <u>01.02</u>                | <u>Use writing skills.</u>                                                                       |
| <u>01.03</u>                | <u>Use mathematical strategies and procedures.</u>                                               |
| <u>01.04</u>                | <u>Use scientific principles and procedures.</u>                                                 |
| <u>02.0</u>                 | <u>Design a solution to an industry problem.</u>                                                 |
| <u>02.01</u>                | <u>Use critical thinking.</u>                                                                    |
| <u>02.02</u>                | <u>Use creativity.</u>                                                                           |
| <u>02.03</u>                | <u>Make sound decisions.</u>                                                                     |
| <u>02.04</u>                | <u>Solve problems.</u>                                                                           |
| <u>02.05</u>                | <u>Reason.</u>                                                                                   |
| <u>02.06</u>                | <u>Plan and organize.</u>                                                                        |
| <u>03.0</u>                 | <u>Manage resources within an industry project</u>                                               |
| <u>03.01</u>                | <u>Manage time.</u>                                                                              |
| <u>03.02</u>                | <u>Manage money or resources.</u>                                                                |
| <u>03.03</u>                | <u>Manage materials.</u>                                                                         |
| <u>03.04</u>                | <u>Manage personnel.</u>                                                                         |
| <u>04.0</u>                 | <u>Oversee the subcomponents, operations and output of a technical or organizational system.</u> |
| <u>04.01</u>                | <u>Manage systems.</u>                                                                           |
| <u>04.02</u>                | <u>Monitor systems.</u>                                                                          |
| <u>04.03</u>                | <u>Improve systems.</u>                                                                          |
| <u>05.0</u>                 | <u>Use information for decision making.</u>                                                      |
| <u>05.01</u>                | <u>Locate information.</u>                                                                       |
| <u>05.02</u>                | <u>Organize information.</u>                                                                     |
| <u>05.03</u>                | <u>Use information.</u>                                                                          |

|                                                                                                 |

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the History of EMS and a complex depth, comprehensive breadth of knowledge of EMS Systems.
- 02.0 Demonstrate a fundamental depth, foundational breath of knowledge of research principles to interpret literature and advocate evidence-based practice.
- 03.0 Demonstrate a complex depth, comprehensive breadth of knowledge of workforce safety and wellness.
- 04.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the principles of medical documentation and report writing.
- 05.0 Demonstrate a complex depth, comprehensive breadth of knowledge of EMS communication system.
- 06.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the therapeutic communication principles.
- 07.0 Demonstrate a complex depth, comprehensive breadth of knowledge of medical legal and ethical concepts related to EMS.
- 08.0 Integrate a comprehensive knowledge of anatomy and physiology of all human systems.
- 09.0 Integrate a comprehensive knowledge in the use of medical terminology and abbreviations into written and oral communication with health care professionals.
- 10.0 Demonstrate a complex knowledge of pathophysiology of major systems.
- 11.0 Integrate the knowledge of the physiological, psychological, and sociological changes throughout human development.
- 12.0 Demonstrate a fundamental knowledge of the principles of public health.
- 13.0 Demonstrate a complex depth, comprehensive breadth of knowledge in the principles of pharmacology.
- 14.0 Demonstrate a complex depth, comprehensive breadth of knowledge of medication administration within the scope of practice of the paramedic.
- 15.0 Demonstrate a complex depth, comprehensive breadth of knowledge of emergency medications within the scope of practice for the paramedic.
- 16.0 Demonstrate a complex depth, comprehensive breadth of knowledge of airway management within the scope of practice of the paramedic, patients of all ages.
- 17.0 Demonstrate a complex depth, comprehensive breadth of knowledge of respiration within the scope of practice of the paramedic, patients of all ages.
- 18.0 Demonstrate a complex breadth, comprehensive breadth of knowledge of ventilator assessment and management, patients of all ages.
- 19.0 Demonstrate a complex depth, comprehensive breadth of knowledge of scene management.
- 20.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the primary assessment for all patient situations.
- 21.0 Demonstrate a complex depth, comprehensive breath of knowledge of the components of history taking.
- 22.0 Demonstrate a complex depth, comprehensive breadth of knowledge of techniques used for a secondary assessment, patients of all ages
- 23.0 Demonstrate a fundamental depth, foundational breadth of knowledge of monitoring devices within the scope of practice of the paramedic.
- 24.0 Demonstrate a complex depth, comprehensive breadth of knowledge of how and when to perform a reassessment for all patient situations.
- 25.0 Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of medical complaints.
- 26.0 Demonstrate a complex depth, comprehensive breadth of knowledge of neurologic disorders/emergencies, patients of all ages.
- 27.0 Demonstrate a complex depth, comprehensive breadth of knowledge of abdominal and gastrointestinal disorders/emergencies, patients of all ages.
- 28.0 Demonstrate a complex depth, comprehensive breadth of knowledge of immunology disorders/emergencies, patients of all ages.

- 29.0 Demonstrate a complex depth, comprehensive breadth of knowledge of assessment and management of a patient who may have an infectious disease, patient of all ages.
- 30.0 Demonstrate a complex depth, comprehensive breadth of knowledge in endocrine disorders/emergencies, patients of all ages.
- 31.0 Demonstrate a complex depth, comprehensive breadth of knowledge regarding the assessment and management of psychiatric disorders, cognitive and behavioral emergencies.
- 32.0 Demonstrate a complex depth, comprehensive breadth of knowledge of cardiovascular disorders/ emergencies, patients of all ages.
- 33.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment and management of toxicology emergencies including psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and patients of all ages.
- 34.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment and management of respiratory disorders, include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/ or emergencies associated emergencies, patients of all ages.
- 35.0 Demonstrate a complex depth, foundational breadth of knowledge of the assessment and management of hematology disorders/ emergencies, patients of all ages.
- 36.0 Demonstrate a complex depth, comprehensive breadth of knowledge of genitourinary and renal emergencies to include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/or emergencies, patients of all ages.
- 37.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment findings and the management of gynecology disorders Include psychosocial aspects of age-related assessment and treatment modifications for the major or common diseases and/or /emergencies, patients of all ages.
- 38.0 Demonstrate a fundamental depth, foundation breadth of knowledge of the assessment and management of non-traumatic fractures, patients of all ages.
- 39.0 Demonstrate a fundamental depth, foundational breadth of knowledge of the assessment and management of common or major diseases of the eyes, ears, nose, and throat, patients of all ages.
- 40.0 Demonstrate the integration of comprehensive knowledge of cause and pathophysiology into management of shock (include psychosocial aspect of age-related assessment and treatment modifications for pediatric and geriatric patients).
- 41.0 Demonstrate the integration of a comprehensive knowledge of causes and pathophysiology into the management of cardiac arrest and respiratory failure (including psychosocial aspects of age-related assessment and treatment modifications for pediatric and geriatric patients).
- 42.0 Demonstrate a complex depth, comprehension breadth of knowledge of pathophysiology, assessment and management of bleeding, patients of all ages.
- 43.0 Demonstrate a complex depth, comprehensive breadth of knowledge of multi-system trauma and blast injuries.
- 44.0 Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of chest trauma, patients of all ages.
- 45.0 Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of abdominal and genitourinary trauma, patients of all ages.
- 46.0 Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of orthopedic trauma, patients of all ages.
- 47.0 Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of soft tissue trauma. patients of all ages. (Include psychosocial aspects of age- related assessment and treatment modifications for pediatric and geriatric patients).

- 48.0 Demonstrate a fundamental depth, foundational breadth of knowledge of head, face, neck, and spine trauma, patients of all ages.
- 49.0 Demonstrate a fundamental depth, foundational breadth of knowledge of nervous system trauma, patients of all ages.
- 50.0 Demonstrate a complex depth, comprehensive breadth of knowledge of special considerations in trauma, patients of all ages.
- 51.0 Demonstrate a complex depth, comprehensive breadth of knowledge of environmental emergencies, patients of all ages.
- 52.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the obstetric patient within the scope of practice of the paramedic.
- 53.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the neonatal patient within the scope of practice of the paramedic.
- 54.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the pediatric patient within the scope of practice of the paramedic.
- 55.0 Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the geriatric patient within the scope of practice of the paramedic.
- 56.0 Demonstrate a complex depth, comprehensive breadth of knowledge of management of the patient with special challenges within the scope of practice of the paramedic, patients of all ages.
- 57.0 Demonstrate a simple depth, foundational breadth of knowledge of risks and responsibilities of transport.
- 58.0 Demonstrate a complex depth, comprehensive breadth of knowledge of establishing and working within the incident management system.
- 59.0 Demonstrate a simple depth, foundational breadth of knowledge of responding to an emergency during a multiple casualty incident.
- 60.0 Demonstrate a complex depth, comprehensive breadth of knowledge of air medical transport risks, needs, and advantages.
- 61.0 Demonstrate a simple depth, simple breadth of knowledge for safe vehicle extrication and use of simple hand tools.
- 62.0 Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating in a cold zone at a hazardous material or other special incident.
- 63.0 Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating on the scene of a natural or man-made disaster.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Paramedic - ATD  
**Clock Hour Program Number:** H170212

When this program is offered at the district level, the following organization of courses, standards, and benchmarks apply.

The Paramedic standards and benchmarks in this framework include all of the content, knowledge and skills at the EMT level in addition to the Paramedic objectives. For those standards that state “Review EMT standards and benchmarks”, please refer to the EMT curriculum framework for specific objectives.

| <b>Course Number: EMS0210</b><br><b>Occupational Completion Point: A</b><br><b>Paramedic I – 248 hours</b> |                                                                                                                                                                                                                                                                                     |
|------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                                                                                                       | <b>EMS Systems:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the History of EMS and a complex depth, comprehensive breadth of knowledge of EMS Systems. The student will be able to:                                                                   |
| 01.01                                                                                                      | Define terms, including but not limited to: EMS systems, licensure, registration, profession, professionalism, health care professional, ethics, peer review, medical direction, and protocols.                                                                                     |
| 01.02                                                                                                      | Knowledge of EMS History.                                                                                                                                                                                                                                                           |
| 01.03                                                                                                      | Describe the attributes of a paramedic as a health care professional.                                                                                                                                                                                                               |
| 01.04                                                                                                      | Explain paramedic licensure/ certification, recertification, and reciprocity requirements in Florida.                                                                                                                                                                               |
| 01.05                                                                                                      | Explain the importance of maintaining one’s paramedic license/certification.                                                                                                                                                                                                        |
| 01.06                                                                                                      | Describe the benefits of paramedic continuing education.                                                                                                                                                                                                                            |
| 01.07                                                                                                      | Discuss the role of national associations and of a national certification agency.                                                                                                                                                                                                   |
| 01.08                                                                                                      | Discuss Chapter 401, Florida Statutes (F.S.), and Chapter 64-E, Florida Administrative Code (F.A.C.).                                                                                                                                                                               |
| 01.09                                                                                                      | Discuss the roles of various EMS standard setting agencies.                                                                                                                                                                                                                         |
| 01.10                                                                                                      | Identify the standards (components) of an EMS System as defined by the National Highway Traffic Safety Administration.                                                                                                                                                              |
| 01.11                                                                                                      | Describe and demonstrate professional behaviors in the following areas: integrity, empathy, self-motivation, appearance and personal hygiene, self-confidence, communications, time management, teamwork and diplomacy, respect, patient advocacy, and careful delivery of service. |
| 01.12                                                                                                      | Describe the role of the EMS physician in providing medical direction.                                                                                                                                                                                                              |

|       |                                                                                                                                                                                                               |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.13 | Discuss examples of local protocols.                                                                                                                                                                          |
| 01.14 | Differentiate between quality improvement and quality assurance.                                                                                                                                              |
| 01.15 | Describe the relationship between a physician on the scene, the paramedic on the scene, and the EMS physician providing on-line medical direction.                                                            |
| 01.16 | Describe the role of the paramedic relative to the safety of the crew, the patient, and bystanders.                                                                                                           |
| 01.17 | Assess personal practices relative to the responsibility for personal safety, the safety of the crew, the patient, and bystanders.                                                                            |
| 01.18 | Advocate the need for injury prevention.                                                                                                                                                                      |
| 01.19 | Discuss the diverse types of EMS services and differences in their provision of care. Including mobile integrated health and community paramedic and discuss the paramedics role in community risk reduction. |
| 02.0  | <b>Research:</b> Demonstrate a fundamental depth, foundational breath of knowledge of research principles to interpret literature and advocate evidence-based practice. The student will be able to:          |
| 02.01 | Interpret results and reach conclusions.                                                                                                                                                                      |
| 02.02 | Discuss the importance of evidenced based medicine and medical research and its role in refining EMS practices.                                                                                               |
| 03.0  | <b>Workforce Safety and Wellness:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of workforce safety and wellness. The student will be able to:                                          |
| 03.01 | Discuss the concept of wellness and its benefits.                                                                                                                                                             |
| 03.02 | Discuss how cardiovascular endurance, muscle strength, and flexibility contribute to physical fitness.                                                                                                        |
| 03.03 | Describe the impact of shift work on circadian rhythms.                                                                                                                                                       |
| 03.04 | Discuss the role of risk assessments and warning signs in cancer and cardiovascular disease.                                                                                                                  |
| 03.05 | Differentiate between proper from improper body mechanics for lifting and moving patients in emergency and non-emergency situations.                                                                          |
| 03.06 | Discuss the principles of crew resource management.                                                                                                                                                           |
| 03.07 | Describe the problems that a paramedic might encounter in a hostile situation and the techniques used to manage the situation.                                                                                |
| 03.08 | Describe the equipment available for self-protection when confronted with a variety of adverse situations.                                                                                                    |
| 03.09 | Describe the three phases and factors that trigger the stress response.                                                                                                                                       |
| 03.10 | Differentiate between normal/ healthy and detrimental reactions to anxiety and stress.                                                                                                                        |
| 03.11 | Identify and describe the defense mechanisms and management techniques and resources commonly used to deal with stress.                                                                                       |

|       |                                                                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.12 | Describe the components of critical incident stress management (CISM).                                                                                                            |
| 03.13 | Describe the needs of the paramedic when dealing with death and dying.                                                                                                            |
| 03.14 | Discuss the importance of standard precautions and body substance isolation practices.                                                                                            |
| 03.15 | Discuss the principles of disease transmission and prevention measures                                                                                                            |
| 03.16 | Discuss the need to treat each patient as an individual, with respect and dignity.                                                                                                |
| 03.17 | Discuss the need to respect the emotional needs of dying patients and their families.                                                                                             |
| 03.18 | Discuss the paramedics' role in performing community risk assessment.                                                                                                             |
| 04.0  | <b>Documentation:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the principles of medical documentation and report writing. The student will be able to: |
| 04.01 | Identify the general principles regarding the importance of EMS documentation and ways in which documents are used.                                                               |
| 04.02 | Demonstrate proper use of medical terminology.                                                                                                                                    |
| 04.03 | Record pertinent administrative information to a given standard.                                                                                                                  |
| 04.04 | Analyze the documentation for accuracy and completeness, including spelling.                                                                                                      |
| 04.05 | Describe the differences between subjective and objective elements of documentation.                                                                                              |
| 04.06 | Describe the potential consequences of illegible, incomplete, or inaccurate documentation.                                                                                        |
| 04.07 | Describe the special considerations concerning patient refusal of transport.                                                                                                      |
| 04.08 | Explain how to properly record direct patient or bystander comments.                                                                                                              |
| 04.09 | Describe the special considerations concerning mass casualty incident documentation.                                                                                              |
| 04.10 | Identify and record the pertinent, reportable clinical data of each patient interaction.                                                                                          |
| 04.11 | Note and record pertinent negative clinical findings.                                                                                                                             |
| 04.12 | Demonstrate proper completion of an EMS PCR (patient care record).                                                                                                                |
| 05.0  | <b>EMS Communication:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of EMS communication system. The student will be able to:                               |
| 05.01 | Identify the role of verbal, written, and electronic communications in the provision of EMS.                                                                                      |

|                 |                                                                                                                                                                                     |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 05.02           | Describe the phases of communications necessary for an emergency response and transport.                                                                                            |
| 05.03           | Discuss the importance of proper terminology when communicating during an emergency.                                                                                                |
| 05.04           | Discuss factors that impede or enhance effective verbal and written communications.                                                                                                 |
| 05.05           | Discuss the legal implications of written communications.                                                                                                                           |
| 05.06           | Identify the components of the local EMS communications system and describe their function and use.                                                                                 |
| 05.07           | Identify and differentiate among the following communications systems: simplex, multiplex, duplex, trunked, digital communications, and cellular telephone.                         |
| 05.08           | Describe the functions and responsibilities of the Federal Communications Commission.                                                                                               |
| 05.09           | Describe how emergency medical dispatch (EMD) functions as an integral part of the EMS system.                                                                                      |
| 05.10           | List appropriate information to be gathered by the telecommunicator.                                                                                                                |
| 05.11           | Demonstrate an organized and concise radio transmission                                                                                                                             |
| 05.12           | Demonstrate an organized and concise patient report upon transfer of care.                                                                                                          |
| <del>06.0</del> | <b>Therapeutic Communication:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the therapeutic communication principles. The student will be able to:         |
| 06.0            |                                                                                                                                                                                     |
| 06.01           | Demonstrate health care literacy when communicating with patients.                                                                                                                  |
| 06.02           | Identify internal and external factors that affect a patient/ bystander interview conducted by a paramedic.                                                                         |
| 06.03           | Review the strategies for developing patient rapport.                                                                                                                               |
| 06.04           | Summarize the methods to assess mental status based on interview techniques.                                                                                                        |
| 06.05           | Discuss the strategies for interviewing difficult patients.                                                                                                                         |
| 06.06           | Summarize developmental considerations, patients of all ages that influence patient interviewing.                                                                                   |
| 06.07           | Review unique interviewing techniques necessary to employ with patients who have special needs.                                                                                     |
| 06.08           | Discuss interviewing considerations used by paramedics in cross-cultural communications.                                                                                            |
| 07.0            | <b>Medical/Legal and Ethics:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of medical legal and ethical concepts related to EMS. The student will be able to: |
| 07.01           | Differentiate between legal and ethical responsibilities.                                                                                                                           |

|       |                                                                                                                                                                                                                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.02 | Discuss State of Florida and Federal special reporting situations including: <ul style="list-style-type: none"> <li>• Abuse</li> <li>• Sexual assault</li> <li>• Gunshot and knife wounds</li> <li>• Communicable disease</li> <li>• Animal bites</li> </ul>                                             |
| 07.03 | Review terms, including but not limited to, the following: abandonment, battery, breach of duty, consent (expressed, implied, informed, voluntary), DNR orders, duty to act, emancipated minor, false imprisonment, liability, libel, negligence, proximate cause, scope of practice, slander, and tort. |
| 07.04 | Differentiate between the scope of practice and the standard of care for paramedic practice.                                                                                                                                                                                                             |
| 07.05 | Discuss the concept of medical direction, including off-line medical direction and on-line medical direction, and its relationship to the standard of care of a paramedic.                                                                                                                               |
| 07.06 | Review the four elements that must be present in order to prove negligence.                                                                                                                                                                                                                              |
| 07.07 | Review the legal concept and limitations of immunity, including Good Samaritan statutes and governmental immunity, as it applies to the paramedic.                                                                                                                                                       |
| 07.08 | Review the importance and necessity of patient confidentiality and the standards for maintaining patient confidentiality that apply to the paramedic.                                                                                                                                                    |
| 07.09 | Review consent to include expressed, informed, implied, and involuntary.                                                                                                                                                                                                                                 |
| 07.10 | Discuss the importance of patient rights and advocating for the patient's best interest.                                                                                                                                                                                                                 |
| 07.11 | Demonstrate appropriate patient management techniques in a refusal of care situation.                                                                                                                                                                                                                    |
| 07.12 | Discuss the issues of abandonment, negligence, false imprisonment, and battery and their implications to the paramedic.                                                                                                                                                                                  |
| 07.13 | Describe the actions that the paramedic should take to preserve evidence at a crime or accident scene.                                                                                                                                                                                                   |
| 07.14 | Describe the importance of providing accurate communication (oral and written) in substantiating an incident.                                                                                                                                                                                            |
| 07.15 | Describe the criteria necessary to honor an advance directive in Florida.                                                                                                                                                                                                                                |
| 08.0  | <b>Anatomy and Physiology:</b> Integrate comprehensive knowledge of anatomy and physiology of all human systems. The student will be able to:                                                                                                                                                            |
| 08.01 | Review the EMT standards and benchmarks for the anatomy & physiology.                                                                                                                                                                                                                                    |
| 08.02 | Demonstrate comprehensive knowledge of anatomy and physiology as it applies to paramedic practice.                                                                                                                                                                                                       |
| 09.0  | <b>Medical Terminology:</b> Integrate a comprehensive knowledge in the use of medical terminology and abbreviations into written and oral communication with health care professionals. The student will be able to:                                                                                     |
| 09.01 | Review the EMT standards and benchmarks for medical terminology.                                                                                                                                                                                                                                         |

|       |                                                                                                                                                                                |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 09.02 | Demonstrate a comprehensive knowledge of medical terminology as it applies to paramedic practice.                                                                              |
| 10.0  | <b>Pathophysiology:</b> Demonstrate a complex knowledge of pathophysiology of major systems. The student will be able to:                                                      |
| 10.01 | Describe the factors that precipitate disease in the human body including genetics familial, diseases and risk factors.                                                        |
| 10.02 | Describe environmental risk factors.                                                                                                                                           |
| 10.03 | Define and discuss the pathogenesis, signs, and symptoms of distributive, obstructive, neurogenic, anaphylactic, and septic shock.                                             |
| 10.04 | Discuss multiple organ dysfunction syndrome (MODS).                                                                                                                            |
| 10.05 | Describe alterations in cells and tissues including cellular adaptation, cellular injury, manifestation of cellular injury, and cellular death/necrosis.                       |
| 10.06 | Describe genetics and familial diseases and the role they play in pathophysiology.                                                                                             |
| 10.07 | Describe the self–defense mechanisms of inflammation and immune responses and their relationships to pathophysiology.                                                          |
| 11.0  | <b>Life Span Development:</b> Integrate the knowledge of the physiological, psychological, and sociological changes throughout human development. The student will be able to: |
| 11.01 | Compare, contrast, and analyze the physiological and psychosocial characteristics of patients of all ages .                                                                    |
| 12.0  | <b>Public Health:</b> Demonstrate a fundamental knowledge of principles of public health. The student will be able to:                                                         |
| 12.01 | Review the EMT standards and benchmarks for the public health.                                                                                                                 |
| 12.02 | Apply a fundamental knowledge of the principles of public health, epidemiology, health promotion, and illness and injury prevention.                                           |
| 12.03 | Discuss human trafficking and the need to recognize potential victims.                                                                                                         |
| 12.04 | Review Electronic Health Records in EMS.                                                                                                                                       |
| 12.05 | Discuss the roles of governmental and nongovernmental agencies in public health.                                                                                               |
| 12.06 | Review the mission and goals of public health.                                                                                                                                 |
| 12.07 | Discuss the social, geographic, economic, and demographic factors that influence public health.                                                                                |
| 12.08 | Demonstrate the ability to provide patient and community education on public health topics.                                                                                    |
| 12.09 | Discuss unique concerns in the pediatric, geriatric, and special populations.                                                                                                  |
| 12.10 | Describe the role of EMS in health screenings, vaccinations, and immunizations.                                                                                                |

|       |                                                                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.11 | Discuss the impacts of the political, social, and economic environments on public health.                                                                          |
| 12.12 | Review the various types of infectious disease that are a threat to public health.                                                                                 |
| 12.13 | Describe the various patient dispositions, choosing appropriate destinations, and transport modes.                                                                 |
| 12.14 | Define and understand bioinformatics and its role in EMS and public health.                                                                                        |
| 12.15 | Analyze the principles and practices of Mobile Integrated Health in enhancing community healthcare delivery.                                                       |
| 12.16 | Evaluate technology integration and data sharing in Mobile Integrated Health initiatives.                                                                          |
| 12.17 | Review the collaboration between EMS and other healthcare providers within Mobile Integrated Health frameworks.                                                    |
| 12.18 | Demonstrate strategies for addressing the social determinants of health through Mobile Integrated Health Services.                                                 |
| 12.19 | Evaluate the integration of community resources and services in the primary assessment process within Mobile Integrated Health.                                    |
| 12.20 | Review and understand substance abuse disorders and how they impact public health                                                                                  |
| 13.0  | <b>Principles of Pharmacology:</b> Demonstrate a complex depth, comprehensive breadth of knowledge in the principles of pharmacology. The student will be able to: |
| 13.01 | Discuss medication administration safety.                                                                                                                          |
| 13.02 | Differentiate among the chemical, generic (nonproprietary), and trade (proprietary) names of a drug.                                                               |
| 13.03 | List the four main sources of drug products.                                                                                                                       |
| 13.04 | Describe how drugs are classified.                                                                                                                                 |
| 13.05 | List legislative acts controlling drug use and abuse in the United States.                                                                                         |
| 13.06 | Differentiate among Schedule I, II, III, IV, and V substances.                                                                                                     |
| 13.07 | Use reference materials to research medications.                                                                                                                   |
| 13.08 | Discuss standardization of drugs.                                                                                                                                  |
| 13.09 | Discuss investigational drugs, including the Food and Drug Administration (FDA) approval process and the FDA classifications for newly approved drugs.             |
| 13.10 | Discuss the paramedic's responsibilities and scope of practice pertinent to the administration of medications.                                                     |
| 13.11 | Review best practices and legal requirements for the storage and security of medications.                                                                          |

|       |                                                                                                                                                                                                                                                                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.12 | List and describe available drug forms.                                                                                                                                                                                                                                                                                                                                  |
| 13.13 | List and differentiate all methods and routes of medication administration covered in the current National EMS Scope of Practice Model.                                                                                                                                                                                                                                  |
| 13.14 | Describe the process of: <ul style="list-style-type: none"> <li>• Pharmacokinetics</li> <li>• Pharmacodynamics</li> <li>• Theories of drug action</li> <li>• Drug-response relationship</li> <li>• Factors altering drug responses</li> <li>• Predictable drug responses</li> <li>• Iatrogenic drug responses</li> <li>• Unpredictable adverse drug responses</li> </ul> |
| 13.15 | Discuss the prevention, recognition and management of adverse medication reactions.                                                                                                                                                                                                                                                                                      |
| 13.16 | Discuss the prevention, recognition and management of medication interactions.                                                                                                                                                                                                                                                                                           |
| 13.17 | Select the optimal medication and method of medication administration for patients with a particular clinical condition or situation.                                                                                                                                                                                                                                    |
| 14.0  | <b>Medication Administration:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of medication administration within the scope of practice of the paramedic. The student will be able to:                                                                                                                                                               |
| 14.01 | Review the specific anatomy and physiology pertinent to medication administration.                                                                                                                                                                                                                                                                                       |
| 14.02 | Discuss the paramedic's responsibilities and scope of practice pertinent to the administration of medications.                                                                                                                                                                                                                                                           |
| 14.03 | Review mathematical principles and demonstrate equations necessary for performing drug calculations. <b><i>include resources for safe administration of weight-based dosing.</i></b>                                                                                                                                                                                     |
| 14.04 | Describe the indications, contraindications, procedure, equipment and risks associated with peripheral intravenous or external jugular access.                                                                                                                                                                                                                           |
| 14.05 | Describe the indications, equipment needed, technique used, precautions, and general principles of intraosseous needle placement and infusion.                                                                                                                                                                                                                           |
| 14.06 | Describe complications that can occur as a result of IV therapy.                                                                                                                                                                                                                                                                                                         |
| 14.07 | Review <b><i>medication cross-check procedure and</i></b> the "six rights" of drug administration and correlate these with the principles of medication administration.                                                                                                                                                                                                  |
| 14.08 | Describe the use of standard precautions and body substance isolation (BSI) procedures when administering a medication.                                                                                                                                                                                                                                                  |
| 14.09 | Prepare medications for administration from a variety of types of packaging, including vials, non-constituted vials, ampules, prefilled syringes, and packaging for intravenous solutions.                                                                                                                                                                               |
| 14.10 | Describe the role of medical direction in medication administration and describe the difference between direct orders (online) and standing orders (off-line).                                                                                                                                                                                                           |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.11 | Describe the indications, equipment needed, techniques used, precautions, and general principles of administering medications by the following routes: <ul style="list-style-type: none"> <li>• Inhalation route</li> <li>• Gastric tube</li> <li>• Rectal route</li> </ul>                                                                                                                                                                                                                                                 |
| 14.12 | Differentiate among the different percutaneous routes of medication administration.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 14.13 | Describe the purpose, equipment needed, techniques used, complications, and general principles for obtaining a blood sample.                                                                                                                                                                                                                                                                                                                                                                                                |
| 14.14 | Obtain venous and capillary blood for testing and discuss blood chemistry and normal values.                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 14.15 | Demonstrate principles of medical asepsis in the administration of medications.                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 14.16 | Demonstrate the procedure for disposal of contaminated items and supplies.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 14.17 | Demonstrate cannulation of peripheral, intravenous and/or external jugular veins.                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 14.18 | Demonstrate intraosseous access.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 14.19 | Demonstrate administration of medications by the following routes: <ul style="list-style-type: none"> <li>• Oral</li> <li>• Sublingual</li> <li>• Buccal</li> <li>• Auto-injector</li> <li>• Inhalation route</li> <li>• Intranasal route</li> <li>• Subcutaneous route</li> <li>• Intramuscular route</li> <li>• Intravenous route</li> <li>• Intraosseous route</li> </ul>                                                                                                                                                |
| 15.0  | <b>Emergency Medications:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of emergency medications within the scope of practice for the paramedic. The student will be able to:                                                                                                                                                                                                                                                                                                                         |
| 15.01 | Discuss medications <b>acute and maintenance/chronic</b> ) used by the paramedic, including indications, <b>name, effects, medication action, routes of administration</b> , contraindications, dosages, adverse reactions, side effects, <b>complications</b> and interactions for the following: <ul style="list-style-type: none"> <li>• Airway management</li> <li>• Respiratory</li> <li>• Cardiovascular</li> <li>• Neurologic conditions</li> <li>• Gastrointestinal</li> <li>• Miscellaneous medications</li> </ul> |

- Pain management

15.02 Discuss polypharmacy.

16.0 **Airway Management:** Demonstrate a complex depth, comprehensive breadth of knowledge of airway management within the scope of practice of the paramedic, patients of all ages. The student will be able to:

16.01 Explain the primary objective of airway maintenance. ***to include proper airway assessment and techniques of assuring a patient airway.***

16.02 Explain the differences in airway anatomy.

16.03 Define, identify and describe a tracheostomy, laryngectomy, stoma, and tracheostomy tube.

16.04 Describe the special considerations in airway management and ventilation for the pediatric patient.

16.05 Describe the indications, contraindications, advantages, disadvantages, complications and equipment for rapid sequence intubation with neuromuscular blockade.

16.06 Identify neuromuscular blocking drugs and other agents used in rapid sequence intubation.

16.07 Describe the indications, contraindications, advantages, disadvantages, complications and equipment for sedation during intubation.

16.08 Describe the indications, contraindications, advantages, disadvantages and complications for performing cricothyrotomy.

16.09 Demonstrate the procedure for percutaneous cricothyrotomy.

16.10 Review the function of the structures located in the upper and lower airway.

16.11 Demonstrate effective techniques of advanced airway management of the following:

- Orotracheal,
- Nasotracheal,
- Subglottic,
- Supraglottic,
- Digital intubation

16.12 Describe and demonstrate methods of assessment for confirming correct placement of any airway device.

16.13 Describe the indications, contraindications, advantages, disadvantages, complications, equipment and technique for extubation.

|       |                                                                                                                                                                                                                                                                                               |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 17.0  | <b>Respiration:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of respiration within the scope of practice of the paramedic, patients of all ages. The student will be able to:                                                                                          |
| 17.01 | List the concentration of gases that comprise atmospheric air.                                                                                                                                                                                                                                |
| 17.02 | Describe the measurement of oxygen in the blood.                                                                                                                                                                                                                                              |
| 17.03 | Describe the measurement of carbon dioxide in the blood.                                                                                                                                                                                                                                      |
| 17.04 | Describe peak expiratory flow.                                                                                                                                                                                                                                                                |
| 17.05 | Describe factors that cause decreased oxygen concentrations in the blood.                                                                                                                                                                                                                     |
| 17.06 | Describe the factors that increase and decrease carbon dioxide production in the body.                                                                                                                                                                                                        |
| 17.07 | Define pulsus paradoxus.                                                                                                                                                                                                                                                                      |
| 17.08 | Describe the indications, contraindications, advantages, disadvantages, complications, liter flow range, and concentration of delivered oxygen for supplemental oxygen delivery devices.                                                                                                      |
| 17.09 | Review the <b>anatomy</b> , physiology and <b>pathophysiology</b> of ventilation and respiration to include <ul style="list-style-type: none"> <li>• Pulmonary ventilation</li> <li>• Oxygenation</li> <li>• Respiration</li> <li>• External</li> <li>• Internal</li> </ul> <p>● Cellular</p> |
|       | <del>17.10 Discuss assessment and management of adequate and inadequate respiration to include,</del> <ul style="list-style-type: none"> <li>• <del>Supplemental oxygen therapy</del></li> </ul>                                                                                              |
|       | <a href="#">17.10 Discuss assessment and management of adequate and inadequate respiration to include, supplemental oxygen therapy.</a>                                                                                                                                                       |
| 18.0  | <b>Ventilation:</b> Demonstrate a complex breadth, comprehensive breadth of knowledge of ventilatory assessment and management, patients of all ages. The student will be able to:                                                                                                            |
| 18.01 | Perform and interpret pulse oximetry and capnography.                                                                                                                                                                                                                                         |
| 18.02 | Describe indications, contraindications, advantages, disadvantages, complications, and technique for ventilating a patient with an automatic transport ventilator (ATV), BIPAP/CPAP, AND PEEP devices.                                                                                        |
| 18.03 | Assessment and management of adequate and inadequate ventilation to include effect of ventilation on cardiac output.                                                                                                                                                                          |
| 19.0  | <b>Scene Size-Up:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of scene management. The student will be able to:                                                                                                                                                       |
| 19.01 | Describe common hazards found at the scene of a trauma and a medical patient.                                                                                                                                                                                                                 |

|       |                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.02 | Discuss common mechanisms of injury/ nature of illness. <u>(MOI/NOI)</u> .                                                                                                                                                                                                                                                                                                                                |
| 19.03 | Explain the rationale for crew members to evaluate scene safety prior to entering.                                                                                                                                                                                                                                                                                                                        |
| 19.04 | Demonstrate the scene-size-up to include: <ul style="list-style-type: none"> <li>• Scene safety/situational awareness</li> <li>• Scene management</li> <li>• Impact of the environment on patient care</li> <li>• Addressing hazards</li> <li>• Violence</li> <li>• Need for additional or specialized resources</li> <li>• Standard precautions</li> <li>• <u>Multiple patient situations</u></li> </ul> |
| 20.0  | <b>Primary Assessment:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the primary assessment for all patient situations. The student will be able to:                                                                                                                                                                                                                             |
| 20.01 | Summarize the elements of a general impression of the patient.                                                                                                                                                                                                                                                                                                                                            |
| 20.02 | Explain the reason for performing a primary assessment.                                                                                                                                                                                                                                                                                                                                                   |
| 20.03 | Discuss and demonstrate methods of assessing levels of responsiveness using AVPU.                                                                                                                                                                                                                                                                                                                         |
| 20.04 | Discuss and demonstrate methods of assessing the airway, patients of all ages.                                                                                                                                                                                                                                                                                                                            |
| 20.05 | Describe and demonstrate methods used for assessing if a patient is breathing, patients of all ages.                                                                                                                                                                                                                                                                                                      |
| 20.06 | Differentiate between a patient with adequate and inadequate breathing.                                                                                                                                                                                                                                                                                                                                   |
| 20.07 | Describe and demonstrate the methods used to obtain a pulse, patients of all ages.                                                                                                                                                                                                                                                                                                                        |
| 20.08 | Discuss and demonstrate assessing the patient for external bleeding.                                                                                                                                                                                                                                                                                                                                      |
| 20.09 | Describe and demonstrate the assessment and interruption of skin color, temperature, moisture, and capillary refill patients of all ages.                                                                                                                                                                                                                                                                 |
| 20.10 | Explain the reasons for prioritizing a patient for care and transport.                                                                                                                                                                                                                                                                                                                                    |
| 20.11 | Describe when it is appropriate to expose the patient completely.                                                                                                                                                                                                                                                                                                                                         |
| 20.12 | Differentiate between critical, and non-life-threatening patient presentations. <u>and integration of treatment/procedures needed to preserve life.</u>                                                                                                                                                                                                                                                   |
| 21.0  | <b>History Taking:</b> Demonstrate a complex depth, comprehensive breath of knowledge of the components of history taking. The student will be able to:                                                                                                                                                                                                                                                   |
| 21.01 | Determine and investigate the chief complaint. <u>(i.e., MOI, NOI)</u> .                                                                                                                                                                                                                                                                                                                                  |

|       |                                                                                                                                                                                                                                            |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21.02 | Describe the components of the patient history.                                                                                                                                                                                            |
| 21.03 | Explain the importance of obtaining a SAMPLE and OPQRST history.                                                                                                                                                                           |
| 21.04 | Acknowledge the feelings patients experience during assessment.                                                                                                                                                                            |
| 21.05 | Discuss the value of obtaining a family and social history.                                                                                                                                                                                |
| 21.06 | Describe examples of different techniques ( <i>i.e., therapeutic communication and adaptive interview techniques</i> ) the paramedic may use to obtain information from patients, family, or bystanders during the history taking process. |
| 21.07 | Analyze the impact of cultural and linguistic factors on history-taking in diverse patient populations served by Mobile Integrated Health.                                                                                                 |
| 21.08 | Evaluate the use of technology, such as electronic health records and telemedicine, to enhance the history-taking process within MIH.                                                                                                      |
| 21.09 | Discuss the importance of integrating community resources and support systems into the patient's history to inform care planning.                                                                                                          |
| 21.10 | Demonstrate the ability to identify and address potential mental health concerns during the history-taking process in MIH settings.                                                                                                        |
| 21.11 | Explain the significance of continuity of care in history-taking and how it influences treatment decisions and patient outcomes in Mobile Integrated Health.                                                                               |
| 22.0  | <b>Secondary Assessment: Demonstrate</b> a complex depth, comprehensive breadth of knowledge of techniques used for secondary assessment patients of all ages. The student will be able to:                                                |
| 22.01 | Review EMT standards and benchmarks for secondary assessment. ( <i>i.e., assessment of vital signs, pain, techniques of physical exam</i> ).                                                                                               |
| 22.02 | Describe the techniques of inspection, palpation, percussion, and auscultation.                                                                                                                                                            |
| 22.03 | Discuss the limitations of conducting a physical exam in the out-of-hospital environment.                                                                                                                                                  |
| 22.04 | Demonstrate the examination of the patient including all major body systems and anatomical regions.                                                                                                                                        |
| 22.05 | Distinguish the importance of abnormal assessment findings in all the major body systems and anatomical regions.                                                                                                                           |
| 22.06 | Describe the evaluation of patient's perfusion status based on findings in the initial assessment.                                                                                                                                         |
| 22.07 | State the reasons for performing a rapid trauma assessment.                                                                                                                                                                                |
| 22.08 | Discuss the reason for performing a focused history and physical exam.                                                                                                                                                                     |
| 22.09 | Discuss appropriate gender and cultural considerations regarding assessment.                                                                                                                                                               |
| 22.10 | Discuss medical identification devices/ systems.                                                                                                                                                                                           |
| 23.0  | <b>Monitoring Devices:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of monitoring devices within the scope of practice of the paramedic. The student will be able to:                                            |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 23.01 | Describe the purpose, indications, procedure, normal findings, and limitations of the following patient monitoring technologies, including but not limited to: <ul style="list-style-type: none"> <li>• Continuous ECG monitoring</li> <li>• 12-Lead ECG</li> <li>• <b>EtCO<sub>2</sub></b> capnography (wave form)</li> <li>• Methemoglobin monitoring</li> <li>• Total hemoglobin</li> <li>• Basic blood chemistry</li> <li>• Ultrasound</li> <li>• Other devices identified at the EMT level</li> </ul> |
| 23.02 | Demonstrate the use of the following patient monitoring technologies, including but not limited to: <ul style="list-style-type: none"> <li>• Continuous ECG monitoring</li> <li>• 12-Lead ECG (<i>i.e., acquisition, interpretation, and transmission</i>).</li> <li>• Capnography (wave form)</li> <li>• Other devices identified at the EMT level</li> </ul>                                                                                                                                             |

**Course Number: EMS0211**

**Occupational Completion Point: A**

**Paramedic II – 426 hours**

|       |                                                                                                                                                                                                                                                                                                                         |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 24.0  | <b>Reassessment:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of how and when to perform a reassessment for all patient situations. The student will be able to:                                                                                                                                 |
| 24.01 | Describe the components of reassessment and demonstrate the skills involved.                                                                                                                                                                                                                                            |
| 24.02 | Discuss the reasons for reassessment. <i>of the patient.</i>                                                                                                                                                                                                                                                            |
| 24.03 | Explain trending assessment components and its value to other health professionals who assume care of the patient.                                                                                                                                                                                                      |
| 24.04 | Demonstrate reassessment of patients, patients of all ages.                                                                                                                                                                                                                                                             |
| 25.0  | <b>Medical Overview: Demonstrate</b> a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of medical complaints. The student will be able to:                                                                                                                             |
| 25.01 | Identify factors that complicate patient assessment including: <ul style="list-style-type: none"> <li>• Scene safety</li> <li>• Environmental factors</li> <li>• Chief complaint</li> <li>• Paramedic preconceptions</li> <li>• Distracting injuries</li> <li>• Tunnel vision</li> <li>• Patient cooperation</li> </ul> |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>Paramedic attitude</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 25.02 | Discuss forming a field impression and utilizing available information to determine a different diagnosis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 25.03 | Discuss pathophysiology, assessment, and management of a medical complaints to include. <ul style="list-style-type: none"> <li>Transport mode</li> <li>Destination decisions</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 26.0  | <b>Neurology:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of neurologic disorders/emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 26.01 | Identify the risk factors associated with nervous system dysfunction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 26.02 | Review the anatomy and physiology of the organs and structures related to the nervous system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 26.03 | Discuss the pathophysiology, signs and symptoms and demonstrate the assessment and management of patients with the following neurological conditions, including but not limited to: <ul style="list-style-type: none"> <li>Coma</li> <li><b>Decreased level of responsiveness</b></li> <li>Seizures</li> <li>Syncope</li> <li>Transient ischemic attack</li> <li>Stroke and intracranial hemorrhage</li> <li>Degenerative neurologic diseases (i.e., <b>dementia, Alzheimer's and Parkinson's disease</b>)</li> <li>Chronic alcoholism</li> <li>Back disorders</li> <li>Headache</li> <li>Brief Resolved Unexplained Event (BRUE)</li> <li>Hydrocephalus – CSF diversion devices or shunts</li> <li>Other neurological disorders to be determined locally</li> </ul> |
| 26.04 | Describe and differentiate the major types of seizures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 26.05 | Describe the types of stroke.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 26.06 | Describe the significance of the prevalence of neurologic disorders in the United States.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 26.07 | Discuss screen tools for assessment of stroke and large vessel occlusion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 26.08 | Demonstrate the use of stroke screening tools and appropriate decision-making regarding transport destination for a stroke patient.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 27.0  | <b>Abdominal and Gastrointestinal Disorders:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of abdominal and gastrointestinal disorders/emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 27.01 | Review the anatomy and physiology of the organs and structures related to gastrointestinal diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 27.02 | Differentiate between hemorrhagic and non-hemorrhagic causes of abdominal pain.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 27.03 | Describe the technique for performing a comprehensive physical examination on a patient complaining of abdominal pain.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 27.04 | Discuss the pathophysiology, signs, and symptoms, and demonstrate the assessment, and management of patients with the following abdominal and gastrointestinal disorders, including but not limited to: <ul style="list-style-type: none"> <li>• Both upper and lower gastrointestinal bleeding</li> <li>• Acute gastroenteritis.</li> <li>• Colitis.</li> <li>• Diverticulitis.</li> <li>• Appendicitis.</li> <li>• Peptic ulcer disease.</li> <li>• Bowel obstruction.</li> <li>• Crohn's disease.</li> <li>• Pancreatitis.</li> <li>• Esophageal varices.</li> <li>• Hemorrhoids.</li> <li>• Cholecystitis.</li> <li>• Acute hepatitis.</li> </ul> |
| 27.05 | Identify patients at risk for gastrointestinal emergencies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 27.06 | Demonstrate how to auscultate the abdomen to assess for diminished, absent or abnormal bowel sounds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 28.0  | <b>Immunology:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of immunology disorders/emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 28.01 | Define and differentiate: <ul style="list-style-type: none"> <li>• Allergic reaction.</li> <li>• Anaphylaxis</li> <li>• Antigens</li> <li>• Antibodies</li> <li>• Anaphylactoid reaction</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 28.02 | Review the anatomy and physiology of the organs and structures related to anaphylaxis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 28.03 | Describe the prevention of anaphylaxis and appropriate patient education.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 28.04 | Review the pathophysiology of allergy and anaphylaxis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 28.05 | Describe the common methods of entry of allergens into the body.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 28.06 | Review common antigens most frequently associated with anaphylaxis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|       |                                                                                                                                                                                                                              |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.07 | Differentiate among the various treatment and pharmacological interventions used in the management of anaphylaxis and allergic reaction.                                                                                     |
| 29.0  | <b>Infectious Diseases:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of assessment and management of a patient who may have an infectious disease, patients of all ages. The student will be able to: |
| 29.01 | Review EMT standards and benchmarks for infectious disease.                                                                                                                                                                  |
| 29.02 | Review the specific anatomy and physiology pertinent to infectious and communicable diseases.                                                                                                                                |
| 29.03 | Describe the steps of an infectious process.                                                                                                                                                                                 |
| 29.04 | Describe and differentiate infectious agents, including bacteria, viruses, fungi, protozoans, and helminths (worms).                                                                                                         |
| 29.05 | Review characteristics of the immune system.                                                                                                                                                                                 |
| 29.06 | Perform an assessment of a patient with an infectious/communicable disease.                                                                                                                                                  |
| 29.07 | Effectively and safely manage a patient with an infectious/communicable disease.                                                                                                                                             |
| 29.08 | Review public health principles related to infectious disease.                                                                                                                                                               |
| 29.09 | Review the roles of local, state, and federal agencies involved in infectious disease surveillance and outbreaks.                                                                                                            |
| 29.10 | Describe the interactions of the agent, host, and environment as determining factors in disease transmission.                                                                                                                |
| 29.11 | Describes the EMS professional's responsibilities as well as their rights under the Ryan White Act.                                                                                                                          |
| 29.12 | Discuss the pathophysiology, signs, symptoms, assessment, and management and risk factors of significant health concerns.                                                                                                    |
| 29.13 | Discuss the characteristics of, and organisms associated with, febrile and afebrile respiratory disease.                                                                                                                     |
| 29.14 | Describe the EMS provider's role in patient education and preventing disease transmission.                                                                                                                                   |
| 29.15 | Review the pathophysiology, risk factors, assessment, and prehospital management of sepsis/systemic inflammatory response syndrome (SIRS).                                                                                   |
| 29.16 | Knowledge of: <ul style="list-style-type: none"> <li>• Antibiotic resistance infections</li> <li>• Vaccine-preventable diseases</li> <li>• Emerging infectious disease</li> </ul>                                            |
| 30.0  | <b>Endocrine Disorders: Demonstrate</b> a complex depth, comprehensive breadth of knowledge in endocrine disorders/emergencies, patients of all ages. The student will be able to:                                           |
| 30.01 | Identify the risk factors related to disorders of the endocrine system.                                                                                                                                                      |
| 30.02 | Review the anatomy and physiology of organs and structures related to endocrinologic diseases.                                                                                                                               |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 40.11 | Describe the effects of decreased perfusion at the capillary level.                                                                                                                                                                                                                                                                                                                                                                          |
| 40.12 | Relate pulse pressure changes to perfusion status.                                                                                                                                                                                                                                                                                                                                                                                           |
| 40.13 | Relate orthostatic vital sign changes to perfusion status.                                                                                                                                                                                                                                                                                                                                                                                   |
| 40.14 | Discuss and differentiate the physiological manifestations of shock, patients of all ages.                                                                                                                                                                                                                                                                                                                                                   |
| 41.0  | <b>Resuscitation from Cardiac Arrest:</b> Demonstrate the integration of a comprehensive knowledge of causes and pathophysiology into the management of cardiac arrest and respiratory failure (Include psychosocial aspects of age- related assessment and treatment modifications for pediatric and geriatric patients). The student will be able to:                                                                                      |
| 41.01 | Review the following for the cardiac arrest victim: <ul style="list-style-type: none"> <li>• Epidemiology</li> <li>• CPR Pathophysiology</li> <li>• Physiology of blood flow during external chest compressions</li> <li>• Resuscitation success/research</li> <li>• Ethical issues in resuscitation</li> </ul>                                                                                                                              |
| 41.02 | Describe the epidemiology, including premorbid and comorbid conditions and prevention strategies, for Cardiac Arrest <ul style="list-style-type: none"> <li>• Termination of resuscitation</li> </ul>                                                                                                                                                                                                                                        |
| 41.03 | Review defibrillation and cardioversion to include manual techniques, automatic and semi-automated devices. <ul style="list-style-type: none"> <li>• Resuscitation system components</li> </ul>                                                                                                                                                                                                                                              |
| 41.04 | Discuss causes, pathophysiology, signs, and symptoms and management of special arrest and peri-arrest conditions, including but not limited to: <ul style="list-style-type: none"> <li>• Electrolyte disorders</li> <li>• Toxic exposures</li> <li>• Drowning</li> <li>• Hypothermia</li> <li>• Near-Fatal Asthma</li> <li>• Anaphylaxis</li> <li>• Trauma</li> <li>• Pregnancy</li> <li>• Electrical shock and lightning strikes</li> </ul> |
| 41.05 | Review post resuscitative care include, temperature regulation, glucose/electrolyte management.                                                                                                                                                                                                                                                                                                                                              |
| 42.0  | <b>Trauma Overview:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of trauma patients, patients of all ages. The student will be able to:                                                                                                                                                                                                                                |
| 42.01 | Review the pathophysiology of the trauma patient.                                                                                                                                                                                                                                                                                                                                                                                            |
| 42.02 | Review the components of comprehensive trauma systems and levels of trauma centers.                                                                                                                                                                                                                                                                                                                                                          |

|       |                                                                                                                                                                                                                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 42.03 | Review the considerations for different transportation modes to a trauma center.                                                                                                                                                                                                                                         |
| 42.04 | Discuss the kinematics of blunt and penetrating trauma.                                                                                                                                                                                                                                                                  |
| 42.05 | Discuss and describe significant and non-significant mechanism of injury (MOI) and provide examples of each.                                                                                                                                                                                                             |
| 42.06 | Discuss and demonstrate the application of State of Florida's trauma scorecard methodologies as required in Florida Statute and Florida Administrative Code.                                                                                                                                                             |
| 42.07 | Review the National Trauma Triage Protocol of Injured Patients.                                                                                                                                                                                                                                                          |
| 42.08 | Review forming a field impression and utilizing available information to determine a differential diagnosis.                                                                                                                                                                                                             |
| 42.09 | Review the need for rapid intervention transport of the trauma patient.                                                                                                                                                                                                                                                  |
| 43.0  | <b>Multi-Systems Trauma:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of multi-system trauma and blast injuries. The student will be able to:                                                                                                                                                     |
| 43.01 | Review the priority of care in the multisystem trauma patient.                                                                                                                                                                                                                                                           |
| 43.02 | Identify and Explain Blast Injuries.                                                                                                                                                                                                                                                                                     |
| 43.03 | Explain which ALS interventions should occur prior to a transport decision and during transport                                                                                                                                                                                                                          |
| 44.0  | <b>Bleeding: Demonstrate</b> a complex depth, comprehension breadth of knowledge of pathophysiology, assessment and management of bleeding, patients of all ages. The student will be able to:                                                                                                                           |
| 44.01 | Review the compensatory mechanism in hemorrhagic shock.                                                                                                                                                                                                                                                                  |
| 44.02 | Review the administration of medications to assist in the maintenance of homeostasis.                                                                                                                                                                                                                                    |
| 44.03 | Review the maintenance of tissue oxygenation in a bleeding patient.                                                                                                                                                                                                                                                      |
| 44.04 | Discuss appropriate fluid resuscitation for the patient in hemorrhagic shock.                                                                                                                                                                                                                                            |
| 44.05 | Review the different methods/modalities of controlling bleeding.                                                                                                                                                                                                                                                         |
| 45.0  | <b>Chest Trauma: Demonstrate</b> a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of chest trauma, patients of all ages. The student will be able to:                                                                                                                  |
| 45.01 | Review the anatomy and physiology of the organs and structures related to thoracic injuries. <ul style="list-style-type: none"> <li>• Blunt vs Penetrating Mechanisms</li> </ul>                                                                                                                                         |
| 45.02 | Review the pathophysiology, signs and symptoms and mechanism of injury (MOI) of the following injuries, including but not limited to: <ul style="list-style-type: none"> <li>• Myocardial injuries <ul style="list-style-type: none"> <li>○ Pericardial tamponade</li> <li>○ Myocardial contusion</li> </ul> </li> </ul> |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>○ Myocardial rupture</li> <li>• Vascular injury <ul style="list-style-type: none"> <li>○ Aortic dissection / disruption</li> <li>○ Pulmonary contusion</li> </ul> </li> <li>• Hemothorax</li> <li>• Pneumothorax</li> <li>• Hemopneumothorax</li> <li>• Open chest wound</li> <li>• Cardiac tamponade</li> <li>• Commotio cordis</li> <li>• Tracheobronchial disruption</li> <li>• Diaphragmatic rupture and injury</li> <li>• Traumatic asphyxia</li> <li>• Rib fracture</li> <li>• Flail segment</li> <li>• Sternal fracture</li> <li>• Vascular injuries</li> <li>• Impaled objects</li> <li>• Evisceration/shock</li> </ul> |
| 45.03 | Discuss monitoring of chest tubes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 45.04 | Demonstrate the following techniques of management for thoracic injuries: needle decompression, elective intubation, ECG monitoring, oxygenation, and ventilation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 46.0  | <b>Abdominal and Genitourinary Trauma:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of abdominal and genitourinary trauma, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 46.01 | Review the anatomy and physiology of organs and structures related to abdominal injuries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 46.02 | Describe the mechanism of injury for and types of open and closed abdominal and retroperitoneal injuries involving seat belts, penetrating, blunt and evisceration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 46.03 | Describe and demonstrate the pathophysiology, signs and symptoms and the assessment and management for, including but not limited to: <ul style="list-style-type: none"> <li>• Pelvic fractures.</li> <li>• Solid organ injuries</li> <li>• Hollow organ injuries</li> <li>• Abdominal vascular injuries</li> <li>• Retroperitoneal space (kidneys)</li> <li>• Genitourinary system</li> </ul>                                                                                                                                                                                                                                                                         |
| 46.04 | Review the psychological considerations associated with genitourinary injuries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|       |                                                                                                                                                                                                                                                                                                                                                 |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 47.0  | <b>Orthopedic Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of orthopedic trauma patients of all ages. (Include psychosocial aspects of age- related assessment and treatment modifications for pediatric and geriatric patients). The student will be able to: |
| 47.01 | Review the anatomy and physiology of the musculoskeletal system, include the healing process.                                                                                                                                                                                                                                                   |
| 47.02 | Discuss pathophysiology, signs and symptoms, and MOI for orthopedic trauma.                                                                                                                                                                                                                                                                     |
| 47.03 | Define the different types of orthopedic trauma including fracture classifications. <ul style="list-style-type: none"> <li>• Upper Vs Lower</li> <li>• Open <del>+</del> Closed Fractures</li> <li>• Pelvic</li> <li>• Dislocations</li> <li>• Sprains</li> <li>• Strains</li> </ul>                                                            |
| 47.04 | List the 6 “P” orthopedic injury assessment. <ul style="list-style-type: none"> <li>• Pain</li> <li>• Paresthesia</li> <li>• Poikilothermia</li> <li>• Pallor</li> <li>• Paralysis</li> <li>• Pulselessness</li> </ul>                                                                                                                          |
| 47.05 | Discuss the following management techniques: <ul style="list-style-type: none"> <li>• Heat therapy</li> <li>• Cold therapy</li> <li>• Splinting</li> </ul>                                                                                                                                                                                      |
| 47.06 | Describe and demonstrate the assessment and management of a patient with a suspected orthopedic trauma including medication administration (analgesics and anxiolytics).                                                                                                                                                                        |
| 47.07 | Discuss the need for assessment of distal pulses, motor, and sensation before and after splinting.                                                                                                                                                                                                                                              |
| 47.08 | Define Luxation and Subluxation.                                                                                                                                                                                                                                                                                                                |
| 47.09 | Explain the rationale for splinting at the scene versus load and go.                                                                                                                                                                                                                                                                            |
| 47.10 | Demonstrate the proper use various splinting materials and devices to include improvised and traction splints.                                                                                                                                                                                                                                  |
| 47.11 | Discuss and demonstrate the assessment and management of compartment and crush syndrome: <ul style="list-style-type: none"> <li>• destination decision</li> <li>• rhabdomyolysis</li> </ul>                                                                                                                                                     |
| 47.12 | Discuss the pathophysiology and demonstrate the assessment and management of a tendon injury to the knee (patellar), shoulder, and Achilles.                                                                                                                                                                                                    |

|       |                                                                                                                                                                                                                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 47.13 | Discuss the proper procedure to package an amputated body part for replantation.                                                                                                                                                                                                                                            |
| 48.0  | <b>Soft Tissue Trauma:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of soft tissue trauma, patients of all ages . The student will be able to:                                                                                                        |
| 48.01 | Review anatomy and physiology and identify the major functions of the integumentary system.                                                                                                                                                                                                                                 |
| 48.02 | Discuss the pathophysiology of soft tissue injuries and the healing process including: <ul style="list-style-type: none"> <li>• Inflammation</li> <li>• Epithelialization</li> <li>• Neovascularization</li> <li>• Collagen Synthesis</li> <li>• Alterations in wound healing</li> <li>• Abnormal scar formation</li> </ul> |
| 48.03 | Describe and demonstrate the assessment and management of various soft tissue injuries. <ul style="list-style-type: none"> <li>• Wounds (avulsion, bite, laceration, puncture, incision)</li> <li>• Crush/compartment syndrome</li> <li>• High-pressure injection injury</li> </ul>                                         |
| 48.04 | Identify types of burn injuries including: <ul style="list-style-type: none"> <li>• Thermal burn</li> <li>• Chemical burn</li> <li>• Electrical burn</li> <li>• Radiation burn</li> </ul>                                                                                                                                   |
| 48.05 | Describe the depth classification of burn injuries including: <ul style="list-style-type: none"> <li>• Superficial burn</li> <li>• Partial-thickness burn</li> <li>• Full-thickness burn</li> <li>• Other depth classification</li> </ul>                                                                                   |
| 48.06 | Describe and demonstrate methods for determining body surface area percentage of a burn injury including the “rule of nines”, the “rule of palms”, and other methods.                                                                                                                                                       |
| 48.07 | Explain how the seriousness of a burn is related to its depth and percentage of body surface area (BSA) involved.                                                                                                                                                                                                           |
| 48.08 | Review the various management techniques for hemorrhage control.                                                                                                                                                                                                                                                            |
| 48.09 | Differentiate among the types of injuries requiring the use of occlusive versus non-occlusive dressing.                                                                                                                                                                                                                     |
| 48.10 | Demonstrate the assessment and management of specific burn injuries including: <ul style="list-style-type: none"> <li>• Thermal</li> <li>• Inhalation</li> <li>• Chemical</li> <li>• Electrical</li> </ul>                                                                                                                  |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|      | <ul style="list-style-type: none"> <li>• Penetrating neck trauma</li> <li>• Spine trauma</li> <li>• Shaken baby syndrome.</li> <li>• Laryngotracheal injuries</li> </ul>                                                                                                                                                                                                                                                                                                                                                               |
|      | 49.07 Review various methods for stabilization and removal of a helmet.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 50.0 | <b>Nervous System Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of nervous system trauma, patients of all ages-. The student will be able to:                                                                                                                                                                                                                                                                                                                                                         |
|      | 50.01 Review the anatomy and physiology of the central nervous system, brain, spinal cord, skull and spinal column.                                                                                                                                                                                                                                                                                                                                                                                                                    |
|      | 50.02 Discuss pathophysiology, signs and symptoms, assessment, and management of the following nervous system injury including: <ul style="list-style-type: none"> <li>• Cauda Equine syndrome</li> <li>• Peripheral / Root nerve injuries</li> <li>• Intracerebral hemorrhage</li> <li>• Cranial fractures</li> <li>• Traumatic Brain / Brain tissue injuries</li> <li>• Spinal cord injuries</li> <li>• Brown-Sequard Syndrome</li> <li>• Anterior cord syndrome</li> <li>• Central cord syndrome</li> <li>• Spinal shock</li> </ul> |
|      | 50.03 Discuss the mechanism of injury which would result in a nervous system injury.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|      | 50.04 Review the rationale for and potential for motion restriction for the entire spine when a cervical spine injury is suspected                                                                                                                                                                                                                                                                                                                                                                                                     |
|      | 50.05 Discuss the research involving the management of nervous system injuries and patient management.                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 51.0 | <b>Special Considerations in Trauma:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of special considerations in trauma, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                       |
|      | 51.01 Integrate the assessment and management differences associated with the following special populations: <ul style="list-style-type: none"> <li>• Pregnancy</li> <li>• Pediatric</li> <li>• Geriatric</li> <li>• Cognitively impaired patient</li> </ul>                                                                                                                                                                                                                                                                           |

**Course Number: EMS0212**  
**Occupational Completion Point: A**  
**Paramedic III – 426 hours**

|                  |                                                                                                                                                                                                                                                                                                                                                                             |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>52.0</b>      | <b>Environmental Emergencies:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of environmental emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                          |
| 52.01            | Discuss the pathophysiology, signs and symptoms, assessment and management and MOI of the following: <ul style="list-style-type: none"> <li>• Drowning and water related incidents</li> <li>• Temperature-related illness</li> <li>• Bites and envenomation</li> <li>• Diving injuries</li> <li>• Lightning (electrical) injury</li> <li>• High altitude illness</li> </ul> |
| <del>52.02</del> | Identify environmental factors that may cause illness, exacerbate preexisting illness and complicate treatment or transport decisions.                                                                                                                                                                                                                                      |
| <u>52.02</u>     |                                                                                                                                                                                                                                                                                                                                                                             |
| 52.03            | Review several methods of temperature monitoring.                                                                                                                                                                                                                                                                                                                           |
| 52.04            | Describe the general process of thermal regulation, including substances used and wastes generated.                                                                                                                                                                                                                                                                         |
| 52.05            | Define fever and discuss its pathophysiologic mechanism.                                                                                                                                                                                                                                                                                                                    |
| 52.06            | Discuss the role of fluid therapy in the treatment of temperature related emergencies.                                                                                                                                                                                                                                                                                      |
| 52.07            | Review the gas laws related to the pathophysiology of injury in a submersion emergency.                                                                                                                                                                                                                                                                                     |
| 52.08            | Describe the function of the Divers Alert Network (DAN) and how its members may aid in the management of diving-related illnesses.                                                                                                                                                                                                                                          |
| 52.09            | Differentiate among the various treatments and interventions for the management of diving accidents.                                                                                                                                                                                                                                                                        |
| 52.10            | Describe the specific function and benefit of hyperbaric oxygen therapy for the management of diving accidents.                                                                                                                                                                                                                                                             |
| <b>53.0</b>      | <b>Obstetrics:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the obstetric patient within the scope of practice of the paramedic. The student will be able to:                                                                                                                                                                   |
| 53.01            | Review the anatomy and physiology of the reproductive system.                                                                                                                                                                                                                                                                                                               |

| 55.05 | Discuss the pathophysiology, signs and symptoms, assessment and management of the following, including but not limited to: <ul style="list-style-type: none"> <li>• Altered level of consciousness</li> <li>• Trauma</li> <li>• Hypo-perfusion</li> <li>• Respiratory distress/failure</li> </ul>                                                                                                                                                                                                                                                                                                                                                       |

|       |                                                                                                                                                                                                                                                                               |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <ul style="list-style-type: none"> <li>• Cardiac dysrhythmia</li> <li>• Neurological emergency</li> <li>• Abuse/neglect</li> <li>• SUIDS</li> <li>• FABO</li> <li>• Respiratory emergencies</li> <li>• Congenital heart disease</li> <li>• Hydrocephalus/VP shunts</li> </ul> |
| 55.06 | Discuss the appropriate procedure and equipment for vascular and intraosseous access.                                                                                                                                                                                         |
| 55.07 | Review basic cardiac life support (CPR) guidelines for infants and children.                                                                                                                                                                                                  |
| 55.08 | Integrate advanced life support skills with basic cardiac life support for infants and children.                                                                                                                                                                              |
| 55.09 | Discuss the indications, dosage, route of administration and special considerations for medication administration in infants and children.                                                                                                                                    |
| 55.10 | Describe Sudden Unexplained Infant Death Syndrome (SUIDS), current theories, assessment and management, and the immediate needs of the family.                                                                                                                                |
| 55.11 | Discuss the parent/caregiver responses to the death of an infant or child.                                                                                                                                                                                                    |
| 55.12 | Discuss and demonstrate the use of a length-based resuscitation tape and other methods for determining equipment sizes, drug doses, and other pertinent information for a pediatric patient.                                                                                  |
| 55.13 | Discuss proper placement of a gastric tube in infants and children.                                                                                                                                                                                                           |
| 55.14 | Review appropriate routes and techniques for medication administration.                                                                                                                                                                                                       |
| 55.15 | Demonstrate appropriate parent/caregiver interviewing techniques for infant and child death situations.                                                                                                                                                                       |
| 56.0  | <b>Geriatrics:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the geriatric patient within the scope of practice of the paramedic. The student will be able to:                                                                     |
| 56.01 | Review and discuss the term geriatrics                                                                                                                                                                                                                                        |
| 56.02 | Review the anatomy, physiology, and pathophysiology of the geriatric patient.                                                                                                                                                                                                 |
| 56.03 | Discuss common emotional and psychological concerns and conditions of the geriatric patient.                                                                                                                                                                                  |
| 56.04 | Discuss the importance of fall prevention with the geriatric patient.                                                                                                                                                                                                         |
| 56.05 | Describe principles that should be employed when assessing and communicating with the geriatric patient.                                                                                                                                                                      |
| 56.06 | Describe the common causes, assessment and management of the geriatric patient with a medical, trauma, or psychosocial complaint.                                                                                                                                             |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 56.07 | Discuss the impact of polypharmacy and medication non-compliance on patient assessment and management.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 56.08 | Discuss medication issues of the elderly including polypharmacy, dosing errors and increased drug sensitivity and toxicology.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 57.0  | <b>Patients with Special Challenges:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of management of the patient with special challenges within the scope of practice of the paramedic, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                           |
| 57.01 | Discuss the special considerations required when providing emergency care to patients with: <ul style="list-style-type: none"> <li>• Abuse/neglect of vulnerable populations</li> <li>• Homelessness</li> <li>• Poverty</li> <li>• Bariatrics</li> <li>• Tech dependent</li> <li>• Technology dependent (vagal nerve stimulators, CSF diversion devices or shunts, VAD, pacemakers, gastric tubes and others to be locally determined)</li> <li>• Hospice/terminally ill</li> <li>• Tracheostomy</li> <li>• Home care</li> <li>• Sensory deficit/loss</li> <li>• Developmental disability</li> <li>• Autism Spectrum Disorder</li> <li>• Orthotics/prosthetics</li> </ul> |
| 57.02 | Discuss special considerations regarding common medical devices used in the home care of patients with special challenges including: <ul style="list-style-type: none"> <li>• Respiratory devices</li> <li>• Cardiac devices</li> <li>• Gastro-urinary devices</li> <li>• Central &amp; peripheral IV catheters</li> </ul>                                                                                                                                                                                                                                                                                                                                                |
| 57.03 | Describe home care and the types of patients it serves and the services it encompasses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 57.04 | Describe the characteristics associated with the profile of the typical abuser of: <ul style="list-style-type: none"> <li>• Domestic abuser</li> <li>• Elder abuser</li> <li>• Child abuser</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 57.05 | Discuss the role of the Paramedic as a patient advocate for vulnerable populations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 57.06 | Differentiate between hospice/palliative care and curative care.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 57.07 | Describe paraplegia/quadruplegia.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 57.08 | Describe the various etiologies of mental illness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 57.09 | Recognize the presenting signs of the following: <ul style="list-style-type: none"> <li>• Autism spectrum</li> <li>• Developmental disability</li> <li>• Down's syndrome</li> </ul>                                                                                                                                                                                                                                                                                                     |
| 57.10 | Describe the following diseases/illnesses and identify each of their possible presenting signs, including but not limited to: <ul style="list-style-type: none"> <li>• Arthritis</li> <li>• Cancer</li> <li>• Cerebral palsy</li> <li>• Cystic fibrosis</li> <li>• Multiple sclerosis</li> <li>• Muscular dystrophy</li> <li>• Myasthenia gravis</li> <li>• Poliomyelitis</li> <li>• Spina bifida,</li> <li>• Patients with a previous head injury</li> <li>• Mental illness</li> </ul> |
| 57.11 | Review hospice care, comfort care and DNR/DNAR as they relate to local practice, law and policy.                                                                                                                                                                                                                                                                                                                                                                                        |
| 57.12 | Describe the access and discuss indwelling catheters, implanted central IV ports and central line monitoring.                                                                                                                                                                                                                                                                                                                                                                           |
| 57.13 | Describe complications of assessing each of the airway, vascular access, and GI/GU devices.                                                                                                                                                                                                                                                                                                                                                                                             |
| 57.14 | Identify and describe the failure of wound drains.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 57.15 | Review the rights of the terminally ill.                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 57.16 | Demonstrate proper tracheotomy care.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 57.17 | Demonstrate the insertion of a new inner cannula and/or the use of an endotracheal tube to temporarily maintain an airway in a tracheostomy patient.                                                                                                                                                                                                                                                                                                                                    |
| 58.0  | <b>Principles of Safely Operating a Ground Ambulance:</b> Demonstrate a simple depth, foundational breadth of knowledge of risks and responsibilities of transport. The student will be able to:                                                                                                                                                                                                                                                                                        |
| 58.01 | Review the EMT standards and benchmarks for the Principles of Safely Operating a Ground Ambulance.                                                                                                                                                                                                                                                                                                                                                                                      |
| 58.02 | Risks and responsibilities of emergency response and radio communications.                                                                                                                                                                                                                                                                                                                                                                                                              |
| 58.03 | Risks and responsibilities of operating emergency vehicles                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 58.04 | Pediatric transport considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 58.05 | Risks and responsibilities of transport                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|       |                                                                                                                                                                                                                                         |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 59.0  | <b>Incident Management:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of establishing and working within the incident management system. The student will be able to:                                             |
| 59.01 | Review the EMT standards and benchmarks for Incident Management and apply a complex depth and comprehensive breadth of establishing and working within the incident management system.                                                  |
| 60.0  | <b>Multiple Casualty Incidents:</b> Demonstrate a simple depth, foundational breadth of knowledge of responding to an emergency during a multiple casualty incident. The student will be able to:                                       |
| 60.01 | Review the EMT standards and benchmarks for Multiple Casualty Incidents.                                                                                                                                                                |
| 60.02 | Establish and work within the incident management system.                                                                                                                                                                               |
| 60.03 | Understand the principles of Crew Resource Management                                                                                                                                                                                   |
| 61.0  | <b>Air Medical:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of air medical transport risks, needs and advantages. The student will be able to:                                                                  |
| 61.01 | Describe the advantages and disadvantages of air medical transport.                                                                                                                                                                     |
| 61.02 | Safe air medical operations                                                                                                                                                                                                             |
| 61.03 | Identify appropriate reasons for the use of air medical for emergency patient transport.                                                                                                                                                |
| 61.04 | Describe the risks involved with the use of air medical transport.                                                                                                                                                                      |
| 61.05 | Criteria for utilizing air medical response                                                                                                                                                                                             |
| 61.06 | Demonstrate the actions needed to ensure effective and safe ground operations involving air medical response.                                                                                                                           |
| 61.07 | Demonstrate appropriate communication of information needed for safe and effective interaction between the air medical crew and ground personnel.                                                                                       |
| 61.08 | Medical risks/needs/advantages                                                                                                                                                                                                          |
| 62.0  | <b>Vehicle Extrication:</b> Demonstrate a simple depth, simple breadth of knowledge for safe vehicle extrication and use of simple hand tools. The student will be able to:                                                             |
| 62.01 | Review the EMT standards and benchmarks for Vehicle Extrication.                                                                                                                                                                        |
| 62.02 | Safety principles of rescue operations                                                                                                                                                                                                  |
| 63.0  | <b>Hazardous Materials Awareness:</b> Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating in a cold zone at a hazardous material or other special incident. The student will be able to: |
| 63.01 | Review the EMT standards and benchmarks for Hazardous Materials Awareness.                                                                                                                                                              |
| 63.02 | Risks and responsibilities of operating on the scene of a hazardous materials incident                                                                                                                                                  |

|       |                                                                                                                                                                                                                                                 |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 64.0  | <b>Mass Casualty Incidents due to Terrorism and Disasters:</b> Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating on the scene of a natural or man- made disaster. The student will be able to: |
| 64.01 | Review the EMT standards and benchmarks for Mass Casualty Incidents.                                                                                                                                                                            |
| 64.02 | Risks and responsibilities of operating on the scene of a natural or man-made disaster.                                                                                                                                                         |
| 64.03 | Operational goals.                                                                                                                                                                                                                              |
| 64.04 | Field triage.                                                                                                                                                                                                                                   |
| 64.05 | Destination determination.                                                                                                                                                                                                                      |
| 64.06 | Treatment principles.                                                                                                                                                                                                                           |

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Paramedic - ATD  
**ATD CIP Number:** 0351090417

When this program is offered at the college level, the following standards and benchmarks apply:

**The Paramedic standards and benchmarks in this framework include all of the content, knowledge and skills at the EMT level in addition to the Paramedic objectives. For those standards that state “Review EMT standards and benchmarks”, please refer to the EMT curriculum framework for specific objectives.**

|       |                                                                                                                                                                                                                                                                                     |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | <b>EMS Systems:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of the History of EMS and a complex depth, comprehensive breadth of knowledge of EMS Systems. The student will be able to:                                                                   |
| 01.01 | Define terms, including but not limited to: EMS systems, licensure, registration, profession, professionalism, health care professional, ethics, peer review, medical direction, and protocols.                                                                                     |
| 01.02 | Describe the attributes of a paramedic as a health care professional.                                                                                                                                                                                                               |
| 01.03 | Explain paramedic licensure/ certification, recertification, and reciprocity requirements in Florida.                                                                                                                                                                               |
| 01.04 | Explain the importance of maintaining one’s paramedic license/certification.                                                                                                                                                                                                        |
| 01.05 | Describe the benefits of paramedic continuing education.                                                                                                                                                                                                                            |
| 01.06 | Discuss the role of national associations and of a national certification agency.                                                                                                                                                                                                   |
| 01.07 | Discuss Chapter 401, Florida Statutes (F.S.), and Chapter 64-E, Florida Administrative Code (F.A.C.).                                                                                                                                                                               |
| 01.08 | Discuss the roles of various EMS standard setting agencies.                                                                                                                                                                                                                         |
| 01.09 | Identify the standards (components) of an EMS System as defined by the National Highway Traffic Safety Administration.                                                                                                                                                              |
| 01.10 | Describe and demonstrate professional behaviors in the following areas: integrity, empathy, self-motivation, appearance and personal hygiene, self-confidence, communications, time management, teamwork and diplomacy, respect, patient advocacy, and careful delivery of service. |
| 01.11 | Describe the role of the EMS physician in providing medical direction.                                                                                                                                                                                                              |
| 01.12 | Discuss examples of local protocols.                                                                                                                                                                                                                                                |
| 01.13 | Describe the relationship between a physician on the scene, the paramedic on the scene, and the EMS physician providing on-line medical direction.                                                                                                                                  |
| 01.14 | Describe the role of the paramedic relative to the safety of the crew, the patient, and bystanders.                                                                                                                                                                                 |

|       |                                                                                                                                                                                                      |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.15 | Assess personal practices relative to the responsibility for personal safety, the safety of the crew, the patient, and bystanders.                                                                   |
| 01.16 | Advocate the need for injury prevention.                                                                                                                                                             |
| 01.17 | Discuss the diverse types of EMS services and differences in their provision of care.                                                                                                                |
| 02.0  | <b>Research:</b> Demonstrate a fundamental depth, foundational breath of knowledge of research principles to interpret literature and advocate evidence-based practice. The student will be able to: |
| 02.01 | Interpret results and reach conclusions.                                                                                                                                                             |
| 02.02 | Discuss the importance of evidenced based medicine and medical research and its role in refining EMS practices.                                                                                      |
| 03.0  | <b>Workforce Safety and Wellness:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of workforce safety and wellness. The student will be able to:                                 |
| 03.01 | Discuss the concept of wellness and its benefits.                                                                                                                                                    |
| 03.02 | Discuss how cardiovascular endurance, muscle strength, and flexibility contribute to physical fitness.                                                                                               |
| 03.03 | Describe the impact of shift work on circadian rhythms.                                                                                                                                              |
| 03.04 | Discuss the role of risk assessments and warning signs in cancer and cardiovascular disease.                                                                                                         |
| 03.05 | Differentiate between proper from improper body mechanics for lifting and moving patients in emergency and non-emergency situations.                                                                 |
| 03.06 | Describe the problems that a paramedic might encounter in a hostile situation and the techniques used to manage the situation.                                                                       |
| 03.07 | Describe the equipment available for self-protection when confronted with a variety of adverse situations.                                                                                           |
| 03.08 | Describe the three phases and factors that trigger the stress response.                                                                                                                              |
| 03.09 | Differentiate between normal/ healthy and detrimental reactions to anxiety and stress.                                                                                                               |
| 03.10 | Identify and describe the defense mechanisms and management techniques and resources commonly used to deal with stress.                                                                              |
| 03.11 | Describe the components of critical incident stress management (CISM).                                                                                                                               |
| 03.12 | Describe the needs of the paramedic when dealing with death and dying.                                                                                                                               |
| 03.13 | Discuss the importance of standard precautions and body substance isolation practices.                                                                                                               |
| 03.14 | Discuss the need to treat each patient as an individual, with respect and dignity.                                                                                                                   |
| 03.15 | Discuss the need to respect the emotional needs of dying patients and their families.                                                                                                                |

|      |                                                                                                                                                                                   |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | 03.16 Discuss the paramedics' role in performing community risk assessment.                                                                                                       |
| 04.0 | <b>Documentation:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the principles of medical documentation and report writing. The student will be able to: |
|      | 04.01 Identify the general principles regarding the importance of EMS documentation and ways in which documents are used.                                                         |
|      | 04.02 Demonstrate proper use of medical terminology.                                                                                                                              |
|      | 04.03 Record pertinent administrative information to a given standard.                                                                                                            |
|      | 04.04 Analyze the documentation for accuracy and completeness, including spelling.                                                                                                |
|      | 04.05 Describe the differences between subjective and objective elements of documentation.                                                                                        |
|      | 04.06 Describe the potential consequences of illegible, incomplete, or inaccurate documentation.                                                                                  |
|      | 04.07 Describe the special considerations concerning patient refusal of transport.                                                                                                |
|      | 04.08 Explain how to properly record direct patient or bystander comments.                                                                                                        |
|      | 04.09 Describe the special considerations concerning mass casualty incident documentation.                                                                                        |
|      | 04.10 Identify and record the pertinent, reportable clinical data of each patient interaction.                                                                                    |
|      | 04.11 Note and record pertinent negative clinical findings.                                                                                                                       |
|      | 04.12 Demonstrate proper completion of an EMS PCR (patient care record).                                                                                                          |
| 05.0 | <b>EMS Communication:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of EMS communication system. The student will be able to:                               |
|      | 05.01 Identify the role of verbal, written, and electronic communications in the provision of EMS.                                                                                |
|      | 05.02 Describe the phases of communications necessary for an emergency response and transport.                                                                                    |
|      | 05.03 Discuss the importance of proper terminology when communicating during an emergency.                                                                                        |
|      | 05.04 Discuss factors that impede or enhance effective verbal and written communications.                                                                                         |
|      | 05.05 Discuss the legal implications of written communications.                                                                                                                   |
|      | 05.06 Identify the components of the local EMS communications system and describe their function and use.                                                                         |
|      | 05.07 Identify and differentiate among the following communications systems: simplex, multiplex, duplex, trunked, digital communications, and cellular telephone.                 |

|       |                                                                                                                                                                                                                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 05.08 | Describe the functions and responsibilities of the Federal Communications Commission.                                                                                                                                                                                                                    |
| 05.09 | Describe how emergency medical dispatch (EMD) functions as an integral part of the EMS system.                                                                                                                                                                                                           |
| 05.10 | List appropriate information to be gathered by the telecommunicator.                                                                                                                                                                                                                                     |
| 05.11 | Demonstrate an organized and concise radio transmission                                                                                                                                                                                                                                                  |
| 05.12 | Demonstrate an organized and concise patient report upon transfer of care.                                                                                                                                                                                                                               |
| 06.0  | <b>Therapeutic Communication:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the therapeutic communication principles. The student will be able to:                                                                                                                              |
| 06.01 | Identify internal and external factors that affect a patient/ bystander interview conducted by a paramedic.                                                                                                                                                                                              |
| 06.02 | Review the strategies for developing patient rapport.                                                                                                                                                                                                                                                    |
| 06.03 | Summarize the methods to assess mental status based on interview techniques.                                                                                                                                                                                                                             |
| 06.04 | Discuss the strategies for interviewing difficult patients.                                                                                                                                                                                                                                              |
| 06.05 | Summarize developmental considerations, patients of all ages that influence patient interviewing.                                                                                                                                                                                                        |
| 06.06 | Review unique interviewing techniques necessary to employ with patients who have special needs.                                                                                                                                                                                                          |
| 06.07 | Discuss interviewing considerations used by paramedics in cross-cultural communications.                                                                                                                                                                                                                 |
| 07.0  | <b>Medical/Legal and Ethics:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of medical legal and ethical concepts related to EMS. The student will be able to:                                                                                                                      |
| 07.01 | Differentiate between legal and ethical responsibilities.                                                                                                                                                                                                                                                |
| 07.02 | Discuss State of Florida and Federal special reporting situations including: <ul style="list-style-type: none"> <li>• Abuse</li> <li>• Sexual assault</li> <li>• Gunshot and knife wounds</li> <li>• Communicable disease</li> <li>• Animal bites</li> </ul>                                             |
| 07.03 | Review terms, including but not limited to, the following: abandonment, battery, breach of duty, consent (expressed, implied, informed, voluntary), DNR orders, duty to act, emancipated minor, false imprisonment, liability, libel, negligence, proximate cause, scope of practice, slander, and tort. |
| 07.04 | Differentiate between the scope of practice and the standard of care for paramedic practice.                                                                                                                                                                                                             |
| 07.05 | Discuss the concept of medical direction, including off-line medical direction and on-line medical direction, and its relationship to the standard of care of a paramedic.                                                                                                                               |

|       |                                                                                                                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.06 | Review the four elements that must be present in order to prove negligence.                                                                                                                                          |
| 07.07 | Review the legal concept and limitations of immunity, including Good Samaritan statutes and governmental immunity, as it applies to the paramedic.                                                                   |
| 07.08 | Review the importance and necessity of patient confidentiality and the standards for maintaining patient confidentiality that apply to the paramedic.                                                                |
| 07.09 | Review consent to include expressed, informed, implied, and involuntary.                                                                                                                                             |
| 07.10 | Demonstrate appropriate patient management techniques in a refusal of care situation.                                                                                                                                |
| 07.11 | Discuss the issues of abandonment, negligence, false imprisonment, and battery and their implications to the paramedic.                                                                                              |
| 07.12 | Describe the actions that the paramedic should take to preserve evidence at a crime or accident scene.                                                                                                               |
| 07.13 | Describe the importance of providing accurate communication (oral and written) in substantiating an incident.                                                                                                        |
| 07.14 | Describe the criteria necessary to honor an advance directive in Florida.                                                                                                                                            |
| 08.0  | <b>Anatomy and Physiology:</b> Integrate a complex depth, comprehensive breadth of knowledge of anatomy and physiology of all human systems. The student will be able to:                                            |
| 08.01 | Review the EMT standards and benchmarks for the anatomy & physiology.                                                                                                                                                |
| 08.02 | Demonstrate comprehensive knowledge of anatomy and physiology as it applies to paramedic practice.                                                                                                                   |
| 09.0  | <b>Medical Terminology:</b> Integrate a comprehensive knowledge in the use of medical terminology and abbreviations into written and oral communication with health care professionals. The student will be able to: |
| 09.01 | Review the EMT standards and benchmarks for medical terminology.                                                                                                                                                     |
| 09.02 | Demonstrate a comprehensive knowledge of medical terminology as it applies to paramedic practice.                                                                                                                    |
| 10.0  | <b>Pathophysiology:</b> Demonstrate a complex knowledge of pathophysiology of major systems. The student will be able to:                                                                                            |
| 10.01 | Describe the factors that precipitate disease in the human body including familial diseases and risk factors.                                                                                                        |
| 10.02 | Describe environmental risk factors.                                                                                                                                                                                 |
| 10.03 | Define and discuss the pathogenesis, signs, and symptoms of distributive, obstructive, neurogenic, anaphylactic, and septic shock.                                                                                   |
| 10.04 | Discuss multiple organ dysfunction syndrome (MODS).                                                                                                                                                                  |
| 10.05 | Describe alterations in cells and tissues including cellular adaptation, cellular injury, manifestation of cellular injury, and cellular death/necrosis.                                                             |
| 10.06 | Describe genetics and familial diseases and the role they play in pathophysiology.                                                                                                                                   |

|       |                                                                                                                                                                                |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10.07 | Describe the self–defense mechanisms of inflammation and immune responses and their relationships to pathophysiology.                                                          |
| 11.0  | <b>Life Span Development:</b> Integrate the knowledge of the physiological, psychological, and sociological changes throughout human development. The student will be able to: |
| 11.01 | Compare, contrast, and analyze the physiological and psychosocial characteristics of patients of all ages.                                                                     |
| 12.0  | <b>Public Health:</b> Demonstrate a fundamental knowledge of principles of public health. The student will be able to:                                                         |
| 12.01 | Review the EMT standards and benchmarks for the public health.                                                                                                                 |
| 12.02 | Apply a fundamental knowledge of the principles of public health, epidemiology, health promotion, and illness and injury prevention.                                           |
| 13.0  | <b>Principles of Pharmacology:</b> Demonstrate a complex depth, comprehensive breadth of knowledge in the principles of pharmacology. The student will be able to:             |
| 13.01 | Differentiate among the chemical, generic (nonproprietary), and trade (proprietary) names of a drug.                                                                           |
| 13.02 | List the four main sources of drug products.                                                                                                                                   |
| 13.03 | Describe how drugs are classified.                                                                                                                                             |
| 13.04 | List legislative acts controlling drug use and abuse in the United States.                                                                                                     |
| 13.05 | Differentiate among Schedule I, II, III, IV, and V substances.                                                                                                                 |
| 13.06 | Use reference materials to research medications.                                                                                                                               |
| 13.07 | Discuss standardization of drugs.                                                                                                                                              |
| 13.08 | Discuss investigational drugs, including the Food and Drug Administration (FDA) approval process and the FDA classifications for newly approved drugs.                         |
| 13.09 | Discuss the paramedic's responsibilities and scope of practice pertinent to the administration of medications.                                                                 |
| 13.10 | List and describe available drug forms.                                                                                                                                        |
| 13.11 | List and differentiate all methods and routes of medication administration covered in the current National EMS Scope of Practice Model.                                        |

|       |                                                                                                                                                                                                                                                                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.12 | Describe the process of: <ul style="list-style-type: none"> <li>• Pharmacokinetics</li> <li>• Pharmacodynamics</li> <li>• Theories of drug action</li> <li>• Drug-response relationship</li> <li>• Factors altering drug responses</li> <li>• Predictable drug responses</li> <li>• Iatrogenic drug responses</li> <li>• Unpredictable adverse drug responses</li> </ul> |
| 13.13 | Discuss the prevention, recognition and management of adverse medication reactions.                                                                                                                                                                                                                                                                                      |
| 13.14 | Select the optimal medication and method of medication administration for patients with a particular clinical condition or situation.                                                                                                                                                                                                                                    |
| 14.0  | <b>Medication Administration:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of medication administration within the scope of practice of the paramedic. The student will be able to:                                                                                                                                                               |
| 14.01 | Review the specific anatomy and physiology pertinent to medication administration.                                                                                                                                                                                                                                                                                       |
| 14.02 | Discuss the paramedic's responsibilities and scope of practice pertinent to the administration of medications.                                                                                                                                                                                                                                                           |
| 14.03 | Review mathematical principles and demonstrate equations necessary for performing drug calculations.                                                                                                                                                                                                                                                                     |
| 14.04 | Describe the indications, contraindications, procedure, equipment and risks associated with peripheral intravenous or external jugular access.                                                                                                                                                                                                                           |
| 14.05 | Describe the indications, equipment needed, technique used, precautions, and general principles of intraosseous needle placement and infusion.                                                                                                                                                                                                                           |
| 14.06 | Describe complications that can occur as a result of IV therapy.                                                                                                                                                                                                                                                                                                         |
| 14.07 | Review the "six rights" of drug administration and correlate these with the principles of medication administration.                                                                                                                                                                                                                                                     |
| 14.08 | Describe the use of standard precautions and body substance isolation (BSI) procedures when administering a medication.                                                                                                                                                                                                                                                  |
| 14.09 | Prepare medications for administration from a variety of types of packaging, including vials, non-constituted vials, ampules, prefilled syringes, and packaging for intravenous solutions.                                                                                                                                                                               |
| 14.10 | Describe the role of medical direction in medication administration and describe the difference between direct orders (online) and standing orders (off-line).                                                                                                                                                                                                           |
| 14.11 | Describe the indications, equipment needed, techniques used, precautions, and general principles of administering medications by the following routes: <ul style="list-style-type: none"> <li>• inhalation route</li> <li>• gastric tube</li> <li>• rectal route</li> </ul>                                                                                              |
| 14.12 | Differentiate among the different percutaneous routes of medication administration.                                                                                                                                                                                                                                                                                      |

|       |                                                                                                                                                                                                                                                                                                                                                                                             |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.13 | Describe the purpose, equipment needed, techniques used, complications, and general principles for obtaining a blood sample.                                                                                                                                                                                                                                                                |
| 14.14 | Obtain venous and capillary blood for testing and discuss blood chemistry and normal values.                                                                                                                                                                                                                                                                                                |
| 14.15 | Demonstrate principles of medical asepsis in the administration of medications.                                                                                                                                                                                                                                                                                                             |
| 14.16 | Demonstrate the procedure for disposal of contaminated items and supplies.                                                                                                                                                                                                                                                                                                                  |
| 14.17 | Demonstrate cannulation of peripheral, intravenous and/or external jugular veins.                                                                                                                                                                                                                                                                                                           |
| 14.18 | Demonstrate intraosseous access.                                                                                                                                                                                                                                                                                                                                                            |
| 14.19 | Demonstrate administration of medications by the following routes: <ul style="list-style-type: none"> <li>• Oral</li> <li>• Sublingual</li> <li>• Buccal</li> <li>• Auto-injector</li> <li>• Inhalation route</li> <li>• Intranasal route</li> <li>• Subcutaneous route</li> <li>• Intramuscular route</li> <li>• Intravenous route</li> <li>• Intraosseous route</li> </ul>                |
| 15.0  | <b>Emergency Medications:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of emergency medications within the scope of practice for the paramedic. The student will be able to:                                                                                                                                                                                         |
| 15.01 | Discuss medications used by the paramedic, including indications, contraindications, dosages, adverse reactions, side effects, and interactions for the following: <ul style="list-style-type: none"> <li>• Airway management</li> <li>• Respiratory</li> <li>• Cardiovascular</li> <li>• Neurologic conditions</li> <li>• Gastrointestinal</li> <li>• Miscellaneous medications</li> </ul> |
| 16.0  | <b>Airway Management:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of airway management within the scope of practice of the paramedic, patients of all ages. The student will be able to:                                                                                                                                                                            |
| 16.01 | Explain the primary objective of airway maintenance.                                                                                                                                                                                                                                                                                                                                        |
| 16.02 | Explain the differences in airway anatomy.                                                                                                                                                                                                                                                                                                                                                  |
| 16.03 | Define, identify and describe a tracheostomy, laryngectomy, stoma, and tracheostomy tube.                                                                                                                                                                                                                                                                                                   |

|       |                                                                                                                                                                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.04 | Describe the special considerations in airway management and ventilation for the pediatric patient.                                                                                                                                                      |
| 16.05 | Describe the indications, contraindications, advantages, disadvantages, complications and equipment for rapid sequence intubation with neuromuscular blockade.                                                                                           |
| 16.06 | Identify neuromuscular blocking drugs and other agents used in rapid sequence intubation.                                                                                                                                                                |
| 16.07 | Describe the indications, contraindications, advantages, disadvantages, complications and equipment for sedation during intubation.                                                                                                                      |
| 16.08 | Describe the indications, contraindications, advantages, disadvantages and complications for performing cricothyrotomy.                                                                                                                                  |
| 16.09 | Demonstrate the procedure for percutaneous cricothyrotomy.                                                                                                                                                                                               |
| 16.10 | Review the function of the structures located in the upper and lower airway.                                                                                                                                                                             |
| 16.11 | Demonstrate effective techniques of advanced airway management of the following: <ul style="list-style-type: none"> <li>• Orotracheal,</li> <li>• Nasotracheal,</li> <li>• Subglottic,</li> <li>• Supraglottic,</li> <li>• Digital intubation</li> </ul> |
| 16.12 | Describe and demonstrate methods of assessment for confirming correct placement of any airway device.                                                                                                                                                    |
| 16.13 | Describe the indications, contraindications, advantages, disadvantages, complications, equipment and technique for extubation.                                                                                                                           |
| 17.0  | <b>Respiration:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of respiration within the scope of practice of the paramedic, patients of all ages. The student will be able to:                                                     |
| 17.01 | List the concentration of gases that comprise atmospheric air.                                                                                                                                                                                           |
| 17.02 | Describe the measurement of oxygen in the blood.                                                                                                                                                                                                         |
| 17.03 | Describe the measurement of carbon dioxide in the blood.                                                                                                                                                                                                 |
| 17.04 | Describe peak expiratory flow.                                                                                                                                                                                                                           |
| 17.05 | Describe factors that cause decreased oxygen concentrations in the blood.                                                                                                                                                                                |
| 17.06 | Describe the factors that increase and decrease carbon dioxide production in the body.                                                                                                                                                                   |
| 17.07 | Define pulsus paradoxus.                                                                                                                                                                                                                                 |
| 17.08 | Describe the indications, contraindications, advantages, disadvantages, complications, liter flow range, and concentration of delivered oxygen for supplemental oxygen delivery devices.                                                                 |

|       |                                                                                                                                                                                                        |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 17.09 | Review the physiology of ventilation and respiration.                                                                                                                                                  |
| 18.0  | <b>Ventilation:</b> Demonstrate a complex breadth, comprehensive breadth of knowledge of ventilatory assessment and management, patients of all ages. The student will be able to:                     |
| 18.01 | Perform and interpret pulse oximetry and capnography.                                                                                                                                                  |
| 18.02 | Describe indications, contraindications, advantages, disadvantages, complications, and technique for ventilating a patient with an automatic transport ventilator (ATV), BIPAP/CPAP, AND PEEP devices. |
| 19.0  | <b>Scene Size-Up:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of scene management. The student will be able to:                                                                |
| 19.01 | Describe common hazards found at the scene of a trauma and a medical patient.                                                                                                                          |
| 19.02 | Discuss common mechanisms of injury/ nature of illness.                                                                                                                                                |
| 19.03 | Explain the rationale for crew members to evaluate scene safety prior to entering.                                                                                                                     |
| 19.04 | Demonstrate the scene-size-up.                                                                                                                                                                         |
| 20.0  | <b>Primary Assessment:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the primary assessment for all patient situations. The student will be able to:                          |
| 20.01 | Summarize the elements of a general impression of the patient.                                                                                                                                         |
| 20.02 | Explain the reason for performing a primary assessment.                                                                                                                                                |
| 20.03 | Discuss and demonstrate methods of assessing levels of responsiveness using AVPU.                                                                                                                      |
| 20.04 | Discuss and demonstrate methods of assessing the airway. patients of all ages.                                                                                                                         |
| 20.05 | Describe and demonstrate methods used for assessing if a patient is breathing, patients of all ages.                                                                                                   |
| 20.06 | Differentiate between a patient with adequate and inadequate breathing.                                                                                                                                |
| 20.07 | Describe and demonstrate the methods used to obtain a pulse, patients of all ages.                                                                                                                     |
| 20.08 | Discuss and demonstrate assessing the patient for external bleeding.                                                                                                                                   |
| 20.09 | Describe and demonstrate the assessment and interruption of skin color, temperature, moisture, and capillary refill, patients of all ages                                                              |
| 20.10 | Explain the reasons for prioritizing a patient for care and transport.                                                                                                                                 |
| 20.11 | Describe when it is appropriate to expose the patient completely.                                                                                                                                      |
| 20.12 | Differentiate between critical life-threatening, potentially life-threatening, and non-life-threatening patient presentations.                                                                         |

|       |                                                                                                                                                                                                 |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21.0  | <b>History Taking:</b> Demonstrate a complex depth, comprehensive breath of knowledge of the components of history taking. The student will be able to:                                         |
| 21.01 | Determine and investigate the chief complaint.                                                                                                                                                  |
| 21.02 | Describe the components of the patient history.                                                                                                                                                 |
| 21.03 | Explain the importance of obtaining a SAMPLE and OPQRST history.                                                                                                                                |
| 21.04 | Acknowledge the feelings patients experience during assessment.                                                                                                                                 |
| 21.05 | Discuss the value of obtaining a family and social history.                                                                                                                                     |
| 21.06 | Describe examples of different techniques the paramedic may use to obtain information from patients, family, or bystanders during the history taking process.                                   |
| 22.0  | <b>Secondary Assessment:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of techniques used for secondary assessment patients of all ages. The student will be able to:     |
| 22.01 | Review EMT standards and benchmarks for secondary assessment.                                                                                                                                   |
| 22.02 | Describe the techniques of inspection, palpation, percussion, and auscultation.                                                                                                                 |
| 22.03 | Discuss the limitations of conducting a physical exam in the out-of-hospital environment.                                                                                                       |
| 22.04 | Demonstrate the examination of the patient including all major body systems and anatomical regions.                                                                                             |
| 22.05 | Distinguish the importance of abnormal assessment findings in all the major body systems and anatomical regions.                                                                                |
| 22.06 | Describe the evaluation of patient's perfusion status based on findings in the initial assessment.                                                                                              |
| 22.07 | State the reasons for performing a rapid trauma assessment.                                                                                                                                     |
| 22.08 | Discuss the reason for performing a focused history and physical exam.                                                                                                                          |
| 22.09 | Discuss appropriate gender and cultural considerations regarding assessment.                                                                                                                    |
| 22.10 | Discuss medical identification devices/ systems.                                                                                                                                                |
| 23.0  | <b>Monitoring Devices:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of monitoring devices within the scope of practice of the paramedic. The student will be able to: |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 23.01 | Describe the purpose, indications, procedure, normal findings, and limitations of the following patient monitoring technologies, including but not limited to: <ul style="list-style-type: none"> <li>• Continuous ECG monitoring</li> <li>• 12-Lead ECG</li> <li>• Capnography (wave form)</li> <li>• Co-oximetry</li> <li>• Methemoglobin monitoring</li> <li>• Total hemoglobin</li> <li>• Basic blood chemistry</li> <li>• Ultrasound</li> <li>• Other devices identified at the EMT level</li> </ul> |
| 23.02 | Demonstrate the use of the following patient monitoring technologies, including but not limited to: <ul style="list-style-type: none"> <li>• Continuous ECG monitoring</li> <li>• 12-Lead ECG</li> <li>• Capnography (wave form)</li> <li>• Other devices identified at the EMT level</li> </ul>                                                                                                                                                                                                          |
| 24.0  | <b>Reassessment:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of how and when to perform a reassessment for all patient situations. The student will be able to:                                                                                                                                                                                                                                                                                                                   |
| 24.01 | Describe the components of reassessment and demonstrate the skills involved.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 24.02 | Discuss the reasons for repeating the primary assessment as part of the reassessment.                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 24.03 | Explain trending assessment components and its value to other health professionals who assume care of the patient.                                                                                                                                                                                                                                                                                                                                                                                        |
| 24.04 | Demonstrate reassessment of patients of all ages                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 25.0  | <b>Medical Overview:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of medical complaints. The student will be able to:                                                                                                                                                                                                                                                                                                               |
| 25.01 | Identify factors that complicate patient assessment including: <ul style="list-style-type: none"> <li>• Scene safety</li> <li>• Environmental factors</li> <li>• Chief complaint</li> <li>• Paramedic preconceptions</li> <li>• Distracting injuries</li> <li>• Tunnel vision</li> <li>• Patient cooperation</li> <li>• Paramedic attitude</li> </ul>                                                                                                                                                     |
| 25.02 | Discuss forming a field impression and utilizing available information to determine a different diagnosis.                                                                                                                                                                                                                                                                                                                                                                                                |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 26.0  | <b>Neurology:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of neurologic disorders/emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                   |
| 26.01 | Identify the risk factors associated with nervous system dysfunction.                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 26.02 | Review the anatomy and physiology of the organs and structures related to nervous system.                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 26.03 | Discuss the pathophysiology, signs and symptoms and demonstrate the assessment and management of patients with the following neurological conditions, including but not limited to: <ul style="list-style-type: none"> <li>• Coma</li> <li>• Altered mental status</li> <li>• Seizures</li> <li>• Syncope</li> <li>• Transient ischemic attack</li> <li>• Stroke and intracranial hemorrhage</li> <li>• Degenerative neurologic diseases</li> <li>• Chronic alcoholism</li> <li>• Back disorders</li> </ul> |
| 26.04 | Describe and differentiate the major types of seizures.                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 26.05 | Describe the types of stroke.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 26.06 | Describe the significance of the prevalence of neurologic disorders in the United States.                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 26.07 | Discuss screen tools for assessment of stroke and large vessel occlusion.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 26.08 | Demonstrate the use of stroke screening tools and appropriate decision-making regarding transport destination for a stroke patient.                                                                                                                                                                                                                                                                                                                                                                         |
| 27.0  | <b>Abdominal and Gastrointestinal Disorders:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of abdominal and gastrointestinal disorders/emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                |
| 27.01 | Review the anatomy and physiology of the organs and structures related to gastrointestinal diseases.                                                                                                                                                                                                                                                                                                                                                                                                        |
| 27.02 | Differentiate between hemorrhagic and non-hemorrhagic causes of abdominal pain.                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 27.03 | Describe the technique for performing a comprehensive physical examination on a patient complaining of abdominal pain.                                                                                                                                                                                                                                                                                                                                                                                      |

|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 29.01 | Review EMT standards and benchmarks for infectious disease.                                                                                                                        |
| 29.02 | Review the specific anatomy and physiology pertinent to infectious and communicable diseases.                                                                                      |
| 29.03 | Describe the steps of an infectious process.                                                                                                                                       |
| 29.04 | Describe and differentiate infectious agents, including bacteria, viruses, fungi, protozoans, and helminths (worms).                                                               |
| 29.05 | Review characteristics of the immune system.                                                                                                                                       |
| 29.06 | Perform an assessment of a patient with an infectious/communicable disease.                                                                                                        |
| 29.07 | Effectively and safely manage a patient with an infectious/communicable disease.                                                                                                   |
| 29.08 | Review public health principles related to infectious disease.                                                                                                                     |
| 29.09 | Review the roles of local, state, and federal agencies involved in infectious disease surveillance and outbreaks.                                                                  |
| 29.10 | Describe the interactions of the agent, host, and environment as determining factors in disease transmission.                                                                      |
| 29.11 | Describes the EMS professional's responsibilities as well as their rights under the Ryan White Act.                                                                                |
| 29.12 | Discuss the pathophysiology, signs, symptoms, assessment, and management and risk factors of significant health concerns.                                                          |
| 29.13 | Discuss the characteristics of, and organisms associated with, febrile and afebrile respiratory disease.                                                                           |
| 29.14 | Describe the EMS provider's role in patient education and preventing disease transmission.                                                                                         |
| 29.15 | Review the pathophysiology, risk factors, assessment, and prehospital management of sepsis/systemic inflammatory response syndrome (SIRS).                                         |
| 30.0  | <b>Endocrine Disorders:</b> Demonstrate a complex depth, comprehensive breadth of knowledge in endocrine disorders/emergencies, patients of all ages. The student will be able to: |
| 30.01 | Identify the risk factors related to disorders of the endocrine system.                                                                                                            |
| 30.02 | Review the anatomy and physiology of organs and structures related to endocrinologic diseases.                                                                                     |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30.03 | Discuss the pathophysiology, signs and symptoms and demonstrate the assessment, and management of patients with the following endocrinologic emergencies: <ul style="list-style-type: none"> <li>• Hypoglycemia</li> <li>• Hyperglycemia</li> <li>• Diabetic ketoacidosis</li> <li>• Cushing's syndrome</li> <li>• Adrenal insufficiency</li> <li>• Pituitary disorders</li> <li>• Thyroid disorders</li> </ul> |
| 31.0  | <b>Psychiatric:</b> Demonstrate a complex depth, comprehensive breadth of knowledge regarding the assessment and management of psychiatric disorders/emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                            |
| 31.01 | Differentiate among behavior, psychiatric disorders, and behavioral emergencies.                                                                                                                                                                                                                                                                                                                                |
| 31.02 | Discuss the pathophysiology of common psychiatric disorders and behavioral emergencies.                                                                                                                                                                                                                                                                                                                         |
| 31.03 | Discuss the general factors that may cause an alteration in a patient's behavior.                                                                                                                                                                                                                                                                                                                               |
| 31.04 | Discuss the factors/signs or symptoms of various psychiatric emergencies to include suicide.                                                                                                                                                                                                                                                                                                                    |
| 31.05 | Manage a behavioral emergency scenario applying knowledge of medical/legal Florida Statutes.                                                                                                                                                                                                                                                                                                                    |
| 31.06 | Describe and demonstrate the assessment and management of the patient experiencing a behavioral or psychiatric emergency.                                                                                                                                                                                                                                                                                       |
| 31.07 | Describe the biological, psychosocial, and sociocultural influences on psychiatric disorders.                                                                                                                                                                                                                                                                                                                   |
| 31.08 | Describe the special considerations for the safety of the EMS provider, and EMS crew, the patient and bystanders when dealing with behavioral and psychiatric emergencies.                                                                                                                                                                                                                                      |
| 31.09 | Explain the importance of provider behavior and communication in the care of a patient with a behavioral emergency.                                                                                                                                                                                                                                                                                             |
| 31.10 | Describe and demonstrate methods of restraint that may be used in the management of a patient with a behavioral emergency and possible legal implication.                                                                                                                                                                                                                                                       |
| 31.11 | List the risk factors (including behaviors) for suicide.                                                                                                                                                                                                                                                                                                                                                        |
| 32.0  | <b>Cardiovascular:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of cardiovascular disorders/emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                              |
| 32.01 | Describe the epidemiology, incidence, morbidity and mortality of cardiovascular disease.                                                                                                                                                                                                                                                                                                                        |
| 32.02 | Identify the risk factors of coronary artery disease.                                                                                                                                                                                                                                                                                                                                                           |
| 32.03 | Review the anatomy and physiology of the heart and circulatory system.                                                                                                                                                                                                                                                                                                                                          |
| 32.04 | Discuss the electrophysiology of the heart.                                                                                                                                                                                                                                                                                                                                                                     |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 33.03 | Discuss the role of the Poison Control Center with the nationwide contact number 800-222-1222 in the United States.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 33.04 | Review various ways that toxins enter the body.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 33.05 | Discuss and demonstrate the assessment and management for the patient with a toxicological emergency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 33.06 | Explain the rationale for contacting medical direction early in the prehospital management of a patient with a toxicological emergency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|       |                                                                                                                                                                                                                            |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 33.07 | Review the following for Narcan (naloxone): <ul style="list-style-type: none"> <li>• Generic and trade names</li> <li>• Medication forms</li> <li>• Dose</li> <li>• Administration</li> <li>• Contraindications</li> </ul> |
| 34.0  | <b>Respiratory:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the assessment and management of respiratory disorders/emergencies, patients of all ages. The student will be able to:              |
| 34.01 | Discuss the epidemiology, morbidity, and mortality of respiratory illness in the United States.                                                                                                                            |
| 34.02 | Review hypoventilation and hyperventilation and outline the conditions with which they are often associated.                                                                                                               |
| 34.03 | Review the anatomy, physiology and functions of the respiratory system.                                                                                                                                                    |
| 34.04 | Discuss those factors that contribute to the formation of a general impression and degree of respiratory distress.                                                                                                         |
| 34.05 | Identify breathing patterns that are associated with respiratory distress and neurologic insults and their correlation with the signs of increased work of breathing.                                                      |
| 34.06 | Review between normal and abnormal breath/lung sounds and its physiologic significance.                                                                                                                                    |
| 34.07 | Explain the concepts of hypoxic drive and auto-PEEP as they relate to the COPD patient.                                                                                                                                    |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 34.08 | Discuss the pathophysiology, signs and symptoms and demonstrate the assessment, and management of patients with the following respiratory conditions, including but not limited to: <ul style="list-style-type: none"> <li>• Pulmonary infections (upper and lower airway)</li> <li>• Atelectasis</li> <li>• Anatomic or foreign body obstruction</li> <li>• Aspiration</li> <li>• Asthma</li> <li>• Emphysema</li> <li>• Chronic bronchitis</li> <li>• Spontaneous pneumothorax</li> <li>• Pleural effusion</li> <li>• Pulmonary embolism</li> <li>• Cancer</li> <li>• Toxic inhalations</li> <li>• Pulmonary edema</li> <li>• Acute respiratory distress syndrome (ARDS)</li> <li>• Pneumonia</li> <li>• Neoplasms of the lung</li> <li>• Hyperventilation syndrome</li> </ul> |
| 35.0  | <b>Hematology:</b> Demonstrate a complex depth, foundational breadth of knowledge of the assessment, and management of hematology disorders/emergencies, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 35.01 | Identify the role of heredity in the risk for hematologic disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 35.02 | Review the anatomy and physiology of the hematopoietic system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 35.03 | Describe volume and volume-control related to the hematopoietic system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 35.04 | Explain the significance of the hematocrit with respect to red cell size and number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 35.05 | Explain the correlation of the RBC count, hematocrit and hemoglobin values.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 35.06 | Recognize medications used to decrease the risk of thrombosis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 35.07 | Identify blood groups.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 40.0  | <b>Shock and Resuscitation:</b> Demonstrate the integration of a comprehensive knowledge of causes and pathophysiology into the management of shock and respiratory failure. The student will be able to:                                                                                                                                                                                                                                                                                                                                                 |
| 40.01 | Describe the epidemiology, including premorbid and comorbid conditions and prevention strategies, for shock and hemorrhage.                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 40.02 | Review the anatomy and physiology of the cardiovascular and respiratory systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 40.03 | Contrast the physiology of blood flow during normal states, peri-arrest, cardiac arrest and shock.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 40.04 | Discuss and demonstrate the assessment and management of shock.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 40.05 | Review the management of external hemorrhage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 40.06 | Discuss appropriate fluid resuscitation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 40.07 | Review the following for the cardiac arrest victim: <ul style="list-style-type: none"> <li>• Epidemiology</li> <li>• Pathophysiology</li> <li>• Physiology of blood flow during external chest compressions</li> <li>• Resuscitation success/research</li> </ul>                                                                                                                                                                                                                                                                                          |
| 40.08 | Review defibrillation and cardioversion to include manual techniques, automatic and semi-automated devices.                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 40.09 | Discuss causes, pathophysiology, signs, and symptoms and management of special arrest and peri-arrest conditions, including but not limited to: <ul style="list-style-type: none"> <li>• Electrolyte disorders</li> <li>• Toxic exposures</li> <li>• Drowning</li> <li>• Hypothermia</li> <li>• Near-Fatal Asthma</li> <li>• Anaphylaxis</li> <li>• Trauma</li> <li>• Pregnancy</li> <li>• Electrical shock and lightning strikes</li> </ul> |
| 40.10 | Review post resuscitative care include, temperature regulation, glucose/electrolyte management.                                                                                                                                                                                                                                                                                                                                              |
| 40.11 | Discuss and demonstrate the assessment and management of internal hemorrhage.                                                                                                                                                                                                                                                                                                                                                                |
| 40.12 | Review the stages and classifications of hemorrhage.                                                                                                                                                                                                                                                                                                                                                                                         |
| 40.13 | Review the pathophysiology and demonstrate the assessment and management of the different types of shock.                                                                                                                                                                                                                                                                                                                                    |
| 40.14 | Describe the effects of decreased perfusion at the capillary level.                                                                                                                                                                                                                                                                                                                                                                          |
| 40.15 | Relate pulse pressure changes to perfusion status.                                                                                                                                                                                                                                                                                                                                                                                           |
| 40.16 | Relate orthostatic vital sign changes to perfusion status.                                                                                                                                                                                                                                                                                                                                                                                   |
| 40.17 | Define and differentiate between compensated and decompensated shock for all types of shock.                                                                                                                                                                                                                                                                                                                                                 |
| 40.18 | Discuss and differentiate the physiological manifestations of shock patients of all ages.                                                                                                                                                                                                                                                                                                                                                    |
| 41.0  | <b>Trauma Overview:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of the trauma patient, patients of all ages. The student will be able to:                                                                                                                                                                                                                             |
| 41.01 | Review the pathophysiology of the trauma patient.                                                                                                                                                                                                                                                                                                                                                                                            |
| 41.02 | Review the components of comprehensive trauma systems and levels of trauma centers.                                                                                                                                                                                                                                                                                                                                                          |
| 41.03 | Review the considerations for different transportation modes to a trauma center.                                                                                                                                                                                                                                                                                                                                                             |
| 41.04 | Discuss the kinematics of blunt and penetrating trauma.                                                                                                                                                                                                                                                                                                                                                                                      |
| 41.05 | Discuss and describe significant and non-significant mechanism of injury (MOI) and provide examples of each.                                                                                                                                                                                                                                                                                                                                 |
| 41.06 | Discuss and demonstrate the application of State of Florida's trauma scorecard methodologies as required in Florida Statute and Florida Administrative Code.                                                                                                                                                                                                                                                                                 |

|       |                                                                                                                                                                                                        |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 41.07 | Review the National Trauma Triage Protocol of Injured Patients.                                                                                                                                        |
| 41.08 | Review forming a field impression and utilizing available information to determine a differential diagnosis.                                                                                           |
| 41.09 | Review the need for rapid intervention transport of the trauma patient.                                                                                                                                |
| 42.0  | <b>Bleeding:</b> Demonstrate a complex depth, comprehension breadth of knowledge of pathophysiology, assessment and management of bleeding, patients of all ages. The student will be able to:         |
| 42.01 | Review the compensatory mechanism in hemorrhagic shock.                                                                                                                                                |
| 42.02 | Review the administration of medications to assist in the maintenance of homeostasis.                                                                                                                  |
| 42.03 | Review the maintenance of tissue oxygenation in a bleeding patient.                                                                                                                                    |
| 42.04 | Discuss appropriate fluid resuscitation for the patient in hemorrhagic shock.                                                                                                                          |
| 42.05 | Review the different methods/modalities of controlling bleeding.                                                                                                                                       |
| 43.0  | <b>Chest Trauma:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of chest trauma patients of all ages. The student will be able to: |
| 43.01 | Review the anatomy and physiology of the organs and structures related to thoracic injuries.                                                                                                           |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 43.02 | Review the pathophysiology, signs and symptoms and mechanism of injury (MOI) of the following injuries, including but not limited to: <ul style="list-style-type: none"> <li>• Myocardial injuries <ul style="list-style-type: none"> <li>○ Pericardial tamponade</li> <li>○ Myocardial contusion</li> <li>○ Myocardial rupture</li> </ul> </li> <li>• Vascular injury <ul style="list-style-type: none"> <li>○ Aortic dissection</li> <li>○ Pulmonary contusion</li> </ul> </li> <li>• Hemothorax</li> <li>• Pneumothorax</li> <li>• Hemopneumothorax</li> <li>• Cardiac Tamponade</li> <li>• Commotio cordis</li> <li>• Tracheobronchial disruption</li> <li>• Diaphragmatic rupture and injury</li> <li>• Traumatic asphyxia</li> <li>• Rib fracture</li> <li>• Flail segment</li> <li>• Sternal fracture</li> <li>• Vascular injuries</li> <li>• Impaled objects</li> <li>• Evisceration/shock</li> </ul> |
| 43.03 | Discuss monitoring of chest tubes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 43.04 | Demonstrate the following techniques of management for thoracic injuries: needle decompression, elective intubation, ECG monitoring, oxygenation, and ventilation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 44.0  | <b>Abdominal and Genitourinary Trauma:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of abdominal and genitourinary trauma, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 44.01 | Review the anatomy and physiology of organs and structures related to abdominal injuries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 44.02 | Describe the mechanism of injury for and types of open and closed abdominal and retroperitoneal injuries involving seat belts, penetrating, blunt and evisceration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|       |                                                                                                                                                                                                                                                                                                                                                                                                |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 44.03 | Describe and demonstrate the pathophysiology, signs and symptoms and the assessment and management for, including but not limited to: <ul style="list-style-type: none"> <li>• Pelvic fractures.</li> <li>• Solid organ injuries</li> <li>• Hollow organ injuries</li> <li>• Abdominal vascular injuries</li> <li>• Retroperitoneal space (kidneys)</li> <li>• Genitourinary system</li> </ul> |
| 44.04 | Review the psychological considerations associated with genitourinary injuries.                                                                                                                                                                                                                                                                                                                |
| 45.0  | <b>Orthopedic Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of pathophysiology, assessment, and management of orthopedic trauma, patients of all ages. The student will be able to:                                                                                                                                                                           |
| 45.01 | Review the anatomy and physiology of the musculoskeletal system, include the healing process.                                                                                                                                                                                                                                                                                                  |
| 45.02 | Discuss pathophysiology, signs and symptoms, and MOI for orthopedic trauma.                                                                                                                                                                                                                                                                                                                    |
| 45.03 | Define the different types of orthopedic trauma including fracture classifications.                                                                                                                                                                                                                                                                                                            |
| 45.04 | List the 6 “P” orthopedic injury assessment.                                                                                                                                                                                                                                                                                                                                                   |
| 45.05 | Discuss the following management techniques: <ul style="list-style-type: none"> <li>• Heat therapy</li> <li>• Cold therapy</li> <li>• Splinting</li> </ul>                                                                                                                                                                                                                                     |
| 45.06 | Describe and demonstrate the assessment and management of a patient with a suspected orthopedic trauma including medication administration (analgesics and anxiolytics).                                                                                                                                                                                                                       |
| 45.07 | Discuss the need for assessment of distal pulses, motor, and sensation before and after splinting.                                                                                                                                                                                                                                                                                             |
| 45.08 | Review age-associated changes in bones.                                                                                                                                                                                                                                                                                                                                                        |
| 45.09 | Define luxation and subluxation.                                                                                                                                                                                                                                                                                                                                                               |
| 45.10 | Explain the rationale for splinting at the scene versus load and go.                                                                                                                                                                                                                                                                                                                           |
| 45.11 | Demonstrate the proper use various splinting materials and devices to include improvised and traction splints.                                                                                                                                                                                                                                                                                 |
| 45.12 | Discuss and demonstrate the assessment and management of compartment and crush syndrome: <ul style="list-style-type: none"> <li>• destination decision</li> <li>• rhabdomyolysis</li> </ul>                                                                                                                                                                                                    |
| 45.13 | Discuss the pathophysiology and demonstrate the assessment and management of a tendon injury to the knee (patellar), shoulder, and Achilles.                                                                                                                                                                                                                                                   |

|       |                                                                                                                                                                                                                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 45.14 | Discuss the proper procedure to package an amputated body part for replantation.                                                                                                                                                                                                                                            |
| 46.0  | <b>Soft Tissue Trauma:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of pathophysiology, assessment, and management of soft tissue trauma, patients of all ages. The student will be able to:                                                                                                         |
| 46.01 | Review anatomy and physiology and identify the major functions of the integumentary system.                                                                                                                                                                                                                                 |
| 46.02 | Discuss the pathophysiology of soft tissue injuries and the healing process including: <ul style="list-style-type: none"> <li>• Inflammation</li> <li>• Epithelialization</li> <li>• Neovascularization</li> <li>• Collagen Synthesis</li> <li>• Alterations in wound healing</li> <li>• Abnormal scar formation</li> </ul> |
| 46.03 | Describe and demonstrate the assessment and management of various soft tissue injuries.                                                                                                                                                                                                                                     |
| 46.04 | Identify types of burn injuries including: <ul style="list-style-type: none"> <li>• Thermal burn</li> <li>• Chemical burn</li> <li>• Electrical burn</li> <li>• Radiation burn</li> </ul>                                                                                                                                   |
| 46.05 | Describe the depth classification of burn injuries including: <ul style="list-style-type: none"> <li>• Superficial burn</li> <li>• Partial-thickness burn</li> <li>• Full-thickness burn</li> <li>• Other depth classification</li> </ul>                                                                                   |
| 46.06 | Describe and demonstrate methods for determining body surface area percentage of a burn injury including the “rule of nines”, the “rule of palms”, and other methods.                                                                                                                                                       |
| 46.07 | Explain how the seriousness of a burn is related to its depth and percentage of body surface area (BSA) involved.                                                                                                                                                                                                           |
| 46.08 | Review the various management techniques for hemorrhage control.                                                                                                                                                                                                                                                            |
| 46.09 | Differentiate among the types of injuries requiring the use of occlusive versus non-occlusive dressing.                                                                                                                                                                                                                     |
| 46.10 | Demonstrate the proper use of any Morgan□ type lens for irrigation of the eye.                                                                                                                                                                                                                                              |
| 46.11 | Demonstrate the assessment and management of specific burn injuries including: <ul style="list-style-type: none"> <li>• Thermal</li> <li>• Inhalation</li> <li>• Chemical</li> <li>• Electrical</li> <li>• Radiation</li> </ul>                                                                                             |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 46.12 | Describe the pathophysiologic complications and systemic complications of a burn injury.                                                                                                                                                                                                                                                                                                                                                  |
| 46.13 | Discuss comorbidities in burn patients.                                                                                                                                                                                                                                                                                                                                                                                                   |
| 46.14 | Describe the management of a burn injury, including airway and ventilation, circulation, pharmacological, non-pharmacological, transport considerations, psychological support/ communication strategies, and other management.                                                                                                                                                                                                           |
| 46.15 | Describe the types of chemicals and their burning processes and a chemical burn injury to the eye.                                                                                                                                                                                                                                                                                                                                        |
| 46.16 | Discuss appropriate fluid resuscitation for burn patients.                                                                                                                                                                                                                                                                                                                                                                                |
| 47.0  | <b>Head, Face, Neck, and Spine:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of head, face, neck, and spine trauma, patients of all ages. The student will be able to:                                                                                                                                                                                                                                          |
| 47.01 | Discuss types of and potential complications of facial injuries.                                                                                                                                                                                                                                                                                                                                                                          |
| 47.02 | Discuss pathophysiology, signs and symptoms, assessment and management, and a field impression for injuries to the following areas: <ul style="list-style-type: none"> <li>• Eye(s)</li> <li>• Nose</li> <li>• Throat/neck</li> <li>• Face</li> <li>• Mouth</li> <li>• Ear(s)</li> </ul>                                                                                                                                                  |
| 47.03 | Distinguish between an open and closed head injury.                                                                                                                                                                                                                                                                                                                                                                                       |
| 47.04 | Define and explain the process involved with increasing ICP.                                                                                                                                                                                                                                                                                                                                                                              |
| 47.05 | Describe and demonstrate the assessment and general management of the head/ brain injury patient, including pharmacological and non-pharmacological treatment.                                                                                                                                                                                                                                                                            |
| 47.06 | Discuss the pathophysiology, signs and symptoms, and assessment and management for a patient for each of the following conditions: <ul style="list-style-type: none"> <li>• Skull fracture</li> <li>• Cerebral contusion</li> <li>• Intracranial hemorrhage</li> <li>• Epidural, subdural, intracerebral, and subarachnoid</li> <li>• Perforated tympanic membranes</li> <li>• Orbital fracture</li> <li>• Mandibular fracture</li> </ul> |
| 47.07 | Review various methods for stabilization and removal of a helmet.                                                                                                                                                                                                                                                                                                                                                                         |
| 48.0  | <b>Nervous System Trauma:</b> Demonstrate a fundamental depth, foundational breadth of knowledge of nervous system trauma, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                             |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 48.01 | Review the anatomy and physiology of the central nervous system, brain, spinal cord, skull and spinal column.                                                                                                                                                                                                                                                                                                                                                                                           |
| 48.02 | Discuss pathophysiology, signs and symptoms, assessment, and management of the following nervous system injury including: <ul style="list-style-type: none"> <li>• Cauda Equine syndrome</li> <li>• Peripheral nerve injuries</li> <li>• Intracerebral hemorrhage</li> <li>• Cranial fractures</li> <li>• Brain tissue injuries</li> <li>• Spinal cord injuries</li> <li>• Brown-Sequard Syndrome</li> <li>• Anterior cord syndrome</li> <li>• Central cord syndrome</li> <li>• Spinal shock</li> </ul> |
| 48.03 | Discuss the mechanism of injury which would result in a nervous system injury.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 48.04 | Review the rationale for and potential for motion restriction for the entire spine when a cervical spine injury is suspected                                                                                                                                                                                                                                                                                                                                                                            |
| 48.05 | Discuss the research involving the management of nervous system injuries and patient management.                                                                                                                                                                                                                                                                                                                                                                                                        |
| 49.0  | <b>Special Considerations in Trauma:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of special considerations in trauma, patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                        |
| 49.01 | Integrate the assessment and management differences associated with the following special populations: <ul style="list-style-type: none"> <li>• Pregnancy</li> <li>• Pediatric</li> <li>• Geriatric</li> </ul>                                                                                                                                                                                                                                                                                          |
| 50.0  | <b>Environmental Emergencies:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of environmental emergencies patients of all ages. The student will be able to:                                                                                                                                                                                                                                                                                                                       |
| 50.01 | Discuss the pathophysiology, signs and symptoms, assessment and management and MOI of the following: <ul style="list-style-type: none"> <li>• Drowning and water related incidents</li> <li>• Temperature-related illness</li> <li>• Bites and envenomation</li> <li>• Diving injuries</li> <li>• Lightning (electrical) injury</li> <li>• High altitude illness</li> </ul>                                                                                                                             |
| 50.02 | Identify environmental factors that may cause illness, exacerbate preexisting illness and complicate treatment or transport decisions.                                                                                                                                                                                                                                                                                                                                                                  |
| 50.03 | Review several methods of temperature monitoring.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 50.04 | Describe the general process of thermal regulation, including substances used and wastes generated.                                                                                                                                                                                                                                                                                                                                                                                                     |

|       |                                                                                                                                                                                                             |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 50.05 | Define fever and discuss its pathophysiologic mechanism.                                                                                                                                                    |
| 50.06 | Discuss the role of fluid therapy in the treatment of temperature related emergencies.                                                                                                                      |
| 50.07 | Review the gas laws related to the pathophysiology of injury in a submersion emergency.                                                                                                                     |
| 50.08 | Describe the function of the Divers Alert Network (DAN) and how its members may aid in the management of diving-related illnesses.                                                                          |
| 50.09 | Differentiate among the various treatments and interventions for the management of diving accidents.                                                                                                        |
| 50.10 | Describe the specific function and benefit of hyperbaric oxygen therapy for the management of diving accidents.                                                                                             |
| 51.0  | <b>Multi-Systems Trauma:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of multi-system trauma and blast injuries. The student will be able to:                                        |
| 51.01 | Review the priority of care in the multisystem trauma patient.                                                                                                                                              |
| 51.02 | Explain which ALS interventions should occur prior to a transport decision and during transport.                                                                                                            |
| 52.0  | <b>Obstetrics:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the obstetric patient within the scope of practice of the paramedic. The student will be able to:   |
| 52.01 | Review the anatomy and physiology of the reproductive system.                                                                                                                                               |
| 52.02 | Define the stages of labor and discuss how to assess them.                                                                                                                                                  |
| 52.03 | Differentiate between cephalic and abnormal delivery.                                                                                                                                                       |
| 52.04 | Describe the management of a patient with pre-delivery emergencies.                                                                                                                                         |
| 52.05 | Discuss and demonstrate the patient care for all stages of labor in a cephalic delivery for the mother and the newborn.                                                                                     |
| 52.06 | Describe the procedures for handling complications of delivery.                                                                                                                                             |
| 52.07 | Describe the management of the mother post-delivery.                                                                                                                                                        |
| 52.08 | Demonstrate the procedures for handling complications of pregnancy including per-eclampsia and high risk.                                                                                                   |
| 52.09 | Describe the management of the mother post-delivery.                                                                                                                                                        |
| 52.10 | Discuss and demonstrate the patient care measures for all stages of labor in abnormal deliveries for the mother and the newborn.                                                                            |
| 52.11 | Describe special considerations when meconium is present in amniotic fluid or during delivery.                                                                                                              |
| 53.0  | <b>Neonatal Care:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the neonatal patient within the scope of practice of the paramedic. The student will be able to: |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 54.03 | Review airway and ventilatory considerations and procedures for pediatric patients.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 54.04 | Discuss the indications and methods for gastric decompression for infants and children.                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 54.05 | Discuss the pathophysiology, signs and symptoms, assessment and management of the following, including but not limited to: <ul style="list-style-type: none"> <li>• Altered level of consciousness</li> <li>• Trauma</li> <li>• Hypo-perfusion</li> <li>• Respiratory distress/failure</li> <li>• Cardiac dysrhythmia</li> <li>• Neurological emergency</li> <li>• Abuse/neglect</li> <li>• SUIDS</li> <li>• FBO</li> <li>• Respiratory emergencies</li> <li>• Congenital heart disease</li> <li>• Hydrocephalus/VP shunts</li> </ul> |
| 54.06 | Discuss the appropriate procedure and equipment for vascular and intraosseous access.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 54.07 | Review basic cardiac life support (CPR) guidelines for infants and children.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 54.08 | Integrate advanced life support skills with basic cardiac life support for infants and children.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 54.09 | Discuss the indications, dosage, route of administration and special considerations for medication administration in infants and children.                                                                                                                                                                                                                                                                                                                                                                                            |
| 54.10 | Describe Sudden Unexplained Infant Death Syndrome (SUIDS), current theories, assessment and management, and the immediate needs of the family.                                                                                                                                                                                                                                                                                                                                                                                        |
| 54.11 | Discuss the parent/caregiver responses to the death of an infant or child.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 54.12 | Discuss and demonstrate the use of a length-based resuscitation tape and other methods for determining equipment sizes, drug doses, and other pertinent information for a pediatric patient.                                                                                                                                                                                                                                                                                                                                          |
| 54.13 | Discuss proper placement of a gastric tube in infants and children.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 54.14 | Review appropriate routes and techniques for medication administration.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 54.15 | Demonstrate appropriate parent/caregiver interviewing techniques for infant and child death situations.                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 55.0  | <b>Geriatrics:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of the management of the geriatric patient within the scope of practice of the paramedic. The student will be able to:                                                                                                                                                                                                                                                                                                                             |
| 55.01 | Review and discuss the term geriatrics                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 55.02 | Review the anatomy, physiology, and pathophysiology of the geriatric patient.                                                                                                                                                                                                                                                                                                                                                                |
| 55.03 | Discuss common emotional and psychological concerns and conditions of the geriatric patient.                                                                                                                                                                                                                                                                                                                                                 |
| 55.04 | Discuss the importance of fall prevention with the geriatric patient.                                                                                                                                                                                                                                                                                                                                                                        |
| 55.05 | Describe principles that should be employed when assessing and communicating with the geriatric patient.                                                                                                                                                                                                                                                                                                                                     |
| 55.06 | Describe the common causes, assessment and management of the geriatric patient with a medical, trauma, or psychosocial complaint.                                                                                                                                                                                                                                                                                                            |
| 55.07 | Discuss the impact of polypharmacy and medication non-compliance on patient assessment and management.                                                                                                                                                                                                                                                                                                                                       |
| 55.08 | Discuss medication issues of the elderly including polypharmacy, dosing errors and increased drug sensitivity and toxicology.                                                                                                                                                                                                                                                                                                                |
| 56.0  | <b>Patients with Special Challenges:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of management of the patient with special challenges within the scope of practice of the paramedic patients of all ages. The student will be able to:                                                                                                                                                                               |
| 56.01 | <p>Discuss the special considerations required when providing emergency care to patients with:</p> <ul style="list-style-type: none"> <li>• Abuse/neglect of vulnerable populations</li> <li>• Homelessness</li> <li>• Poverty</li> <li>• Bariatrics</li> <li>• Tech dependent</li> <li>• Hospice/terminally ill</li> <li>• Tracheostomy</li> <li>• Home care</li> <li>• Sensory deficit/loss</li> <li>• Developmental disability</li> </ul> |
| 56.02 | <p>Discuss special considerations regarding common medical devices used in the home care of patients with special challenges including:</p> <ul style="list-style-type: none"> <li>• Respiratory devices</li> <li>• Cardiac devices</li> <li>• Gastro-urinary devices</li> <li>• Central &amp; peripheral IV catheters</li> </ul>                                                                                                            |
| 56.03 | Describe home care and the types of patients it serves and the services it encompasses.                                                                                                                                                                                                                                                                                                                                                      |
| 56.04 | <p>Describe the characteristics associated with the profile of the typical abuser of:</p> <ul style="list-style-type: none"> <li>• Domestic abuser</li> <li>• Elder abuser</li> <li>• Child abuser</li> </ul>                                                                                                                                                                                                                                |
| 56.05 | Discuss the role of the Paramedic as a patient advocate for vulnerable populations.                                                                                                                                                                                                                                                                                                                                                          |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 56.06 | Differentiate between hospice/palliative care and curative care.                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 56.07 | Describe paraplegia/quadruplegia.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 56.08 | Describe the various etiologies of mental illness.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 56.09 | Recognize the presenting signs of the following: <ul style="list-style-type: none"> <li>• Autism spectrum</li> <li>• Developmental disability</li> <li>• Down's syndrome</li> </ul>                                                                                                                                                                                                                                                                                                     |
| 56.10 | Describe the following diseases/illnesses and identify each of their possible presenting signs, including but not limited to: <ul style="list-style-type: none"> <li>• Arthritis</li> <li>• Cancer</li> <li>• Cerebral palsy</li> <li>• Cystic fibrosis</li> <li>• Multiple sclerosis</li> <li>• Muscular dystrophy</li> <li>• Myasthenia gravis</li> <li>• Poliomyelitis</li> <li>• Spina bifida,</li> <li>• Patients with a previous head injury</li> <li>• Mental illness</li> </ul> |
| 56.11 | Review hospice care, comfort care and DNR/DNAR as they relate to local practice, law and policy.                                                                                                                                                                                                                                                                                                                                                                                        |
| 56.12 | Describe the access and discuss indwelling catheters, implanted central IV ports and central line monitoring.                                                                                                                                                                                                                                                                                                                                                                           |
| 56.13 | Describe complications of assessing each of the airway, vascular access, and GI/GU devices.                                                                                                                                                                                                                                                                                                                                                                                             |
| 56.14 | Identify and describe the failure of wound drains.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 56.15 | Review the rights of the terminally ill.                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 56.16 | Demonstrate proper tracheotomy care.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 56.17 | Demonstrate the insertion of a new inner cannula and/or the use of an endotracheal tube to temporarily maintain an airway in a tracheostomy patient.                                                                                                                                                                                                                                                                                                                                    |
| 57.0  | <b>Principles of Safely Operating a Ground Ambulance:</b> Demonstrate a simple depth, foundational breadth of knowledge of risks and responsibilities of transport. The student will be able to:                                                                                                                                                                                                                                                                                        |
| 57.01 | Review the EMT standards and benchmarks for the Principles of Safely Operating a Ground Ambulance.                                                                                                                                                                                                                                                                                                                                                                                      |
| 58.0  | <b>Incident Management:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of establishing and working within the incident management system. The student will be able to:                                                                                                                                                                                                                                                                                             |

|       |                                                                                                                                                                                                                                                |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 58.01 | Review the EMT standards and benchmarks for Incident Management and apply a complex depth and comprehensive breadth of establishing and working within the incident management system.                                                         |
| 59.0  | <b>Multiple Casualty Incidents:</b> Demonstrate a simple depth, foundational breadth of knowledge of responding to an emergency during a multiple casualty incident. The student will be able to:                                              |
| 59.01 | Review the EMT standards and benchmarks for Multiple Casualty Incidents.                                                                                                                                                                       |
| 60.0  | <b>Air Medical:</b> Demonstrate a complex depth, comprehensive breadth of knowledge of air medical transport risks, needs and advantages. The student will be able to:                                                                         |
| 60.01 | Describe the advantages and disadvantages of air medical transport.                                                                                                                                                                            |
| 60.02 | Identify appropriate reasons for the use of air medical for emergency patient transport.                                                                                                                                                       |
| 60.03 | Describe the risks involved with the use of air medical transport.                                                                                                                                                                             |
| 60.04 | Demonstrate the actions needed to ensure effective and safe ground operations involving air medical response.                                                                                                                                  |
| 60.05 | Demonstrate appropriate communication of information needed for safe and effective interaction between the air medical crew and ground personnel.                                                                                              |
| 61.0  | <b>Vehicle Extrication:</b> Demonstrate a simple depth, simple breadth of knowledge for safe vehicle extrication and use of simple hand tools. The student will be able to:                                                                    |
| 61.01 | Review the EMT standards and benchmarks for Vehicle Extrication.                                                                                                                                                                               |
| 62.0  | <b>Hazardous Materials Awareness:</b> Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating in a cold zone at a hazardous material or other special incident. The student will be able to:        |
| 62.01 | Review the EMT standards and benchmarks for Hazardous Materials Awareness.                                                                                                                                                                     |
| 63.0  | <b>Mass Casualty Incidents due to Terrorism and Disasters:</b> Demonstrate a simple depth, simple breadth of knowledge of risks and responsibilities of operating on the scene of a natural or man-made disaster. The student will be able to: |
| 63.01 | Review the EMT standards and benchmarks for Mass Casualty Incidents.                                                                                                                                                                           |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

**The Paramedic standards and benchmarks in this framework include all of the content, knowledge and skills at the EMT level in addition to the Paramedic objectives. For those standards that state “Review EMT Objectives.” Please refer to the EMT curriculum framework for specific objectives.**

The Student Performance Standards for Paramedic were adapted and condensed from the most current U S Department of Transportation, National EMS Educational Standards for the Paramedic. Administrators and instructors should refer to these materials for additional detail.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professional is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization(s)~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### Basic Skills

[In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation \(Mathematics\) and Communications \(Reading and Language Arts\). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.](#)

[Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements \(Rule 6A-10.040\). Students served in exceptional student education \(except gifted\) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.](#)

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

## **Program Length**

In accordance with Rule 6A-10.024, F.A.C. an ATD program consists of a course of study that is part of an AS or AAS degree program, is less than 60 credit hours, is approximately 50% of the technical component (non-general education), and leads to employment in a specific occupation. An ATD program may consist of either technical credit or college credit.

Students must have a high school diploma, a GED, or a certificate of completion to be admitted to an ATD program. Within six weeks of entry, students in ATD programs of 450 or more hours must be tested pursuant to Rule 6A-10.040, F.A.C. and if below minimum standards for completion from the program, must receive remedial instruction. The minimum standards must be at least the equivalent of a score of ten (10) on all sections of basic skills test approved in Rule 6A-10.040, F.A.C. Students must successfully complete all remedial instruction before completing the ATD.

Community Colleges may offer either college or career credit toward the ATD. A Career Center in a public school district may offer an ATD program only as technical credit, with college credit awarded to a student upon articulation to a community college (Section 1004.02, F.S.)

When offered at a state college the standard length of this program is 42 credits. When offered at a technical college the standard length of this program is 1100 clock hours.

Section 401.2701, Florida Statutes, provides that college credit programs must meet occupational completion point hours of instructional and skills practice components.

In accordance with Rule 6A-10.024, F.A.C. all faculty providing instruction must have at least a baccalaureate degree or an associate degree with demonstrated competencies in the specific instructional program as defined by the Southern Association of Colleges and Schools.

Florida Department of Education  
Curriculum Framework

Program Title: The standards and benchmarks for this program were updated for the 2026-27 academic year. This program title has changed, formerly Surgical Technology Specialist.

Program Title: Surgical Technician  
Career Cluster: Health Science

### Purpose

This certificate program is part of [the](#) Surgical Services AS degree program (1351090901).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as surgical ~~technologists~~ [technicians](#).

The content includes but is not limited to communication and interpersonal skills, legal and ethical responsibilities, anatomy, physiology, pathophysiology, microbiology, aseptic techniques, patient care procedures, surgical technology procedures, patient safety, use and care of equipment and supplies, CPR, Heart saver, employability skills, and basic computer literacy.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |
|-----------------------------|--------------------------------------------------------------------------------------------------|
| <u>01.0</u>                 | <u>Apply academic skills to workplace scenarios.</u>                                             |
| <u>01.01</u>                | <u>Use reading skills.</u>                                                                       |
| <u>01.02</u>                | <u>Use writing skills.</u>                                                                       |
| <u>01.03</u>                | <u>Use mathematical strategies and procedures.</u>                                               |
| <u>01.04</u>                | <u>Use scientific principles and procedures.</u>                                                 |
| <u>02.0</u>                 | <u>Design a solution to an industry problem.</u>                                                 |
| <u>02.01</u>                | <u>Use critical thinking.</u>                                                                    |
| <u>02.02</u>                | <u>Use creativity.</u>                                                                           |
| <u>02.03</u>                | <u>Make sound decisions.</u>                                                                     |
| <u>02.04</u>                | <u>Solve problems.</u>                                                                           |
| <u>02.05</u>                | <u>Reason.</u>                                                                                   |
| <u>02.06</u>                | <u>Plan and organize.</u>                                                                        |
| <u>03.0</u>                 | <u>Manage resources within an industry project</u>                                               |
| <u>03.01</u>                | <u>Manage time.</u>                                                                              |
| <u>03.02</u>                | <u>Manage money or resources.</u>                                                                |
| <u>03.03</u>                | <u>Manage materials.</u>                                                                         |
| <u>03.04</u>                | <u>Manage personnel.</u>                                                                         |
| <u>04.0</u>                 | <u>Oversee the subcomponents, operations and output of a technical or organizational system.</u> |
| <u>04.01</u>                | <u>Manage systems.</u>                                                                           |
| <u>04.02</u>                | <u>Monitor systems.</u>                                                                          |
| <u>04.03</u>                | <u>Improve systems.</u>                                                                          |
| <u>05.0</u>                 | <u>Use information for decision making.</u>                                                      |
| <u>05.01</u>                | <u>Locate information.</u>                                                                       |
| <u>05.02</u>                | <u>Organize information.</u>                                                                     |
| <u>05.03</u>                | <u>Use information.</u>                                                                          |

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate ~~central supply~~ sterile processing skills.
- 13.0 Use communication and interpersonal skills ~~as~~ related to surgical technology.
- 14.0 Demonstrate an understanding of the basic sciences related to surgical technology.
- 15.0 Demonstrate knowledge of anesthesia, pharmacology, and math calculation principles related to the surgical environment.
- 16.0 Describe and ~~practice~~ demonstrate safety measures in the surgical environment.
- 17.0 Assist the Registered Nurse (RN-circulator) with patient care procedures related to the surgical environment and describe methods for meeting ~~patient's~~ patients' needs.
- 18.0 Demonstrate knowledge of the skills necessary ~~to function safely and effectively~~ for perioperative case management.
- 19.0 Demonstrate knowledge of and assist with surgical procedures.
- 20.0 Demonstrate an understanding of legal and ethical responsibilities specific to surgical technology.

Florida Department of Education  
Student Performance Standards

**Program Title:** Surgical ~~Technology Specialist~~ Technician  
**CIP Numbers:** 0351090904  
**Program Length:** 49 credit hours ~~——~~

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

**This certificate program is part of the Surgical Services AS degree program (1351090901). At the completion of this program, the student will be able to:**

**Students completing intended outcomes 12-20, in addition to the health careers core, will meet the requirements of the Surgical ~~Technology Specialist~~ Technician CCC.**

12.0 Demonstrate ~~central supply~~ sterile processing skills. -The student will be able to:

12.01 Apply the principles of medical/surgical asepsis, including attire, environmental control, and traffic patterns, to control and manage dirty, clean, and sterile areas of the operating room and ~~central supply~~ sterile processing.

12.02 Apply infection control techniques following ~~Center~~ the Centers for Disease Control (CDC) guidelines.

12.03 Inspect and send out for repair instruments, equipment, and supplies regarding condition and ~~quantity~~ quality.

12.04 Describe the methods of disinfection and sterilization.

12.05 Demonstrate the handling, inspection, and notification process regarding package integrity.

12.06 Demonstrate correctly decontamination techniques for instruments, equipment, and the environment used for surgical procedures.

12.07 Describe clean and sterile transportation, restocking, and storage principles for instruments, supplies, and equipment.

12.08 Identify instruments, supplies, and equipment used for ~~any surgical~~ procedure ~~procedures~~.

~~12.09—Describe various supply distribution and inventory control methods.~~

~~12.10~~ 12.09 Demonstrate the ability to prepare and label items for high-level disinfection and sterilization correctly.

| <del>12.11</del> 12.10 | Demonstrate the techniques of high-level disinfection and sterilization for <del>immediate-use items</del> surgical instruments.                                                                                                          |
| <del>12.12</del> 12.11 | Demonstrate case cart preparation and management.                                                                                                                                                                                         |
| 13.0                   | Use communication and interpersonal skills <del>as</del> -related to surgical technology. -The student will be able to:                                                                                                                   |
| 13.01                  | Describe various forms of communication <del>in</del> within the role of surgical technologist.                                                                                                                                           |
| 13.02                  | Discuss the goals of effective communication.                                                                                                                                                                                             |
| 13.03                  | Demonstrate appropriate body language and non-verbal communication in the surgical environment.                                                                                                                                           |
| <del>13.02</del> 13.04 | Analyze and select the appropriate behavioral response <del>unique</del> -to <u>meet</u> the patient's <u>individual</u> needs.                                                                                                           |
| <del>13.03</del> 13.05 | <del>Describe</del> Identify the concepts of conflict resolution, assertive behavior, and the principles of teamwork in the surgical environment.                                                                                         |
| 13.06                  | Advocate for patients to ensure that they are included in the healthcare decision-making processes.                                                                                                                                       |
| 14.0                   | Demonstrate an understanding of the basic sciences related to surgical technology. -The student will be able to:                                                                                                                          |
| 14.01                  | Identify prefixes, roots, and suffixes for medical terms used by surgical technologists.                                                                                                                                                  |
| 14.02                  | Pronounce and write medical terms correctly, along with identifying abbreviations.                                                                                                                                                        |
| 14.03                  | Identify the basic organizational structures of the human body, including body planes, regions, quadrants, and terms of reference.                                                                                                        |
| 14.04                  | Analyze the basic structure of cells and relate cellular components to integrated cell function.                                                                                                                                          |
| 14.05                  | Analyze the types of tissue that make up organs and the characteristics of each.                                                                                                                                                          |
| 14.06                  | Describe the relationship between organs and systems in the body.                                                                                                                                                                         |
| 14.07                  | Analyze the different body systems for composition and function.                                                                                                                                                                          |
| <del>14.01</del> 14.08 | <del>Describe</del> Correlate the <del>concepts</del> impact of microbiology <del>and relate key principles to</del> on the <del>surgical environment</del> practice of sterile technique and infection control in the operative setting. |
| <del>14.02</del> 14.09 | Compare and contrast the structure and characteristics of microorganisms found in the surgical environment.                                                                                                                               |
| <del>14.03</del> 14.10 | Relate medical terminology, medical abbreviations, and anatomy and physiology to surgical specialties and specific procedures.                                                                                                            |
| 14.11                  | Analyze the various immune responses that occur in the body as defenses against invasion by pathogens.                                                                                                                                    |
| <del>14.04</del> 14.12 | <del>Analyze patient defense mechanisms, the chain of infection and</del> Identify the infectious process <del>as related to</del> in surgical practice.                                                                                  |

|       |       |                                                                                                                                                                                                                                                                                            |
|-------|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.05 | 14.13 | Demonstrate infection and disease transmission control techniques following the <del>Center</del> <u>Centers</u> for Disease Control (CDC) and Occupational Safety and Health Administration (OSHA) guidelines for surgery.                                                                |
| 14.06 | 14.14 | <del>Correlate</del> <u>Identify</u> wound classifications and wound healing principles <del>with</del> <u>within</u> wound management guidelines.                                                                                                                                         |
| 14.07 | 14.15 | Discuss the principles of information technology, electricity, and robotics as they relate to surgery.                                                                                                                                                                                     |
|       | 14.16 | <u>Relate pathophysiology to surgical interventions.</u>                                                                                                                                                                                                                                   |
|       | 14.17 | <u>Examine hemodynamic disorders, inflammation, and infection.</u>                                                                                                                                                                                                                         |
| 15.0  |       | Demonstrate knowledge of <u>anesthesia</u> , pharmacology, and math calculation principles related to the surgical environment. -The student will be able to:                                                                                                                              |
| 15.01 |       | Describe the roles of the anesthesia provider and circulating nurse.                                                                                                                                                                                                                       |
| 15.02 |       | Analyze the <u>principles of anesthesia</u> administration <del>of anesthesia including</del> <u>and explain</u> the <del>methods, agents, and techniques</del> <u>necessity of each component of anesthesia preparation for the surgical patient.</u>                                     |
| 15.03 |       | <del>Describe the preoperative examination</del> <u>Compare and contrast methods, agents, and techniques of anesthesia administration</u> and preparation <del>process for both surgery and anesthesia.</del>                                                                              |
|       | 15.04 | <u>Examine anesthesia monitoring devices with patient homeostasis.</u>                                                                                                                                                                                                                     |
| 15.04 | 15.05 | Describe potential anesthesia and operative complications and interventions for each.                                                                                                                                                                                                      |
| 15.05 | 15.06 | Define the terminology and describe the basic concepts of pharmacology, including pharmacokinetics and pharmacodynamics.                                                                                                                                                                   |
| 15.06 | 15.07 | Identify the classifications, actions, effects, and precautions for common drugs used at the sterile field and within the surgical environment.                                                                                                                                            |
| 15.07 | 15.08 | Demonstrate the application of the six rights of medication administration (right patient, right medication, right dosage, right route, right time/frequency, and right documentation).                                                                                                    |
| 15.08 | 15.09 | Analyze and assemble correctly all medication supplies, <del>for each drug</del> to be used <u>with drugs</u> on the sterile field.                                                                                                                                                        |
| 15.09 | 15.10 | Demonstrate the appropriate methods of transferring and accepting medications onto the sterile field.                                                                                                                                                                                      |
| 15.10 | 15.11 | Prepare, manage, and label sterile solutions and medications accurately within the sterile field.                                                                                                                                                                                          |
| 15.11 | 15.12 | <del>Correctly</del> <u>Calculate</u> common medication conversions and dosages.                                                                                                                                                                                                           |
| 15.12 | 15.13 | Demonstrate preparation and passing of medication mixtures using <del>ratio</del> <u>ratios</u> and proportions correctly. -                                                                                                                                                               |
| 15.13 | 15.14 | <del>Maintains</del> <u>Maintain</u> an accurate account of the amount of each medication and/or solution used <del>at</del> <u>and notify</u> the <del>field and notifies circulator as appropriate to the situation</del> <u>Registered Nurse (RN)</u> to ensure accurate documentation. |
| 16.0  |       | Describe and <del>practice</del> <u>demonstrate</u> safety measures in the surgical environment. -The student will be able to:                                                                                                                                                             |

|                               |                                                                                                                                                                                                                           |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.01                         | Describe the role, job duties, and responsibilities of the surgical technologist in the <del>healthcare</del> surgical setting.                                                                                           |
| 16.02                         | Inspect equipment and supplies for condition and <del>quantity</del> quality.                                                                                                                                             |
| 16.03                         | Demonstrate appropriate safety measures to prevent operating room fires and electrical shock from equipment.→                                                                                                             |
| 16.04                         | Describe appropriate safety measures for laser and electrosurgical unit usage in surgery.                                                                                                                                 |
| 16.05                         | <del>Implement</del> Describe appropriate regulatory and accreditation agency patient safety guidelines.                                                                                                                  |
| 16.06                         | Describe the role of the surgical technologist in a disaster situation.                                                                                                                                                   |
| 16.07                         | Describe the role of the surgical technologist in an emergency patient situation.                                                                                                                                         |
| 16.08                         | <del>Prepare</del> Assist with the preparation of the operative site.                                                                                                                                                     |
| 17.0                          | Assist the <u>Registered Nurse (RN-circulator)</u> with patient care procedures related to the surgical environment and describe methods for meeting <del>patient's</del> patients' needs. -The student will be able to:  |
| 17.01                         | Demonstrate patient transfer/transportation techniques used in the operating room (OR).                                                                                                                                   |
| <del>17.02</del>              | <del>Describe appropriate review of the chart including preoperative identification, preoperative checklists, diagnostic tests, lab values and surgical consent.</del>                                                    |
| <del>17.03</del> <u>17.02</u> | <del>Monitor</del> Demonstrate the ability to monitor OR traffic, <del>placement of sterile tables</del> and ensure <del>steps are taken to reduce microbial fallout</del> that the sterility of the room is kept secure. |
| <del>17.04</del> <u>17.03</u> | Assist with positioning and apply safety devices correctly to the patient for surgery.                                                                                                                                    |
| <del>17.05</del> <u>17.04</u> | Describe the function, assembly, application, and care of critical specialty equipment utilized.→                                                                                                                         |
| <del>17.06</del> <u>17.05</u> | <del>Correlate</del> Identify anesthesia monitoring devices, patient complications, and interventions <del>with</del> for maintaining patient homeostasis.                                                                |
| <del>17.07</del> <u>17.06</u> | Demonstrate correctly the connection and operation of essential equipment for the surgical procedure.                                                                                                                     |
| <del>17.08</del> <u>17.07</u> | Perform steps for Foley catheter insertion and connecting to drainage correctly.                                                                                                                                          |
| <del>17.09</del> <u>17.08</u> | Demonstrate applicable wound management principles, including the placement and security of catheters, wound drainage systems, sterile dressings, and splint applications.                                                |
| <del>17.10</del> <u>17.09</u> | Discuss relevant and unique factors regarding postoperative care specific to the procedure.                                                                                                                               |
| 18.0                          | Demonstrate knowledge of the skills necessary <del>to function safely and effectively.</del> for perioperative case management. The student will be able to:                                                              |
| 18.01                         | <del>Demonstrate</del> Identify the <del>use of various forms of communication in the role</del> types of surgical <del>technologist</del> attire, accessory attire, and the roles of each.                               |

|                        |                                                                                                                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18.02                  | <del>Maintain current documentation in</del> <u>Demonstrate</u> the <del>clinical setting relative to the</del> <u>principles</u> associated with donning or doffing surgical <del>technologist role</del> <u>attire</u> .  |
| 18.03                  | <del>Demonstrate proper use of the communication systems.</del> <u>Describe the principles associated with establishing the sterile field.</u>                                                                              |
| 18.04                  | Select and verify required instrumentation, equipment, and supplies, including any implants needed for specific surgical procedures, using <del>core</del> knowledge and the applicable surgeon preference/procedure cards. |
| 18.05                  | <u>Demonstrate and explain the sequence of opening sterile supplies.</u>                                                                                                                                                    |
| 18.06                  | <u>Explain the steps for organizing a back table.</u>                                                                                                                                                                       |
| 18.07                  | <u>Explain the steps for organizing a mayo stand.</u>                                                                                                                                                                       |
| 18.08                  | <u>Describe the final steps required to finish establishing the sterile field.</u>                                                                                                                                          |
| 18.09                  | <u>Analyze special circumstances that require adjusting the normal routine for establishing the sterile field.</u>                                                                                                          |
| <del>18.05</del> 18.10 | <u>Demonstrate the surgical scrub and donning of a sterile gown and gloves.</u>                                                                                                                                             |
| <del>18.06</del> 18.11 | <del>Demonstrate</del> <u>Recognize the</u> application of sterile technique principles, including the appropriate corrective action for common breaks in sterile technique.                                                |
| <del>18.07</del> 18.12 | <u>Demonstrate proper draping of tables, solution stands, mayo stand, patient, and equipment.</u>                                                                                                                           |
| <del>18.08</del> 18.13 | <u>Demonstrate the <del>set up</del> <u>setup</u> and management of the sterile mayo stand and/or instrument table(s).</u>                                                                                                  |
| <del>18.09</del> 18.14 | <u>Select suture and needle appropriately for each scenario given based on function and type.</u>                                                                                                                           |
| <del>18.10</del> 18.15 | <u>Prepare, pass, and monitor sharps, sutures, ligatures, ties, and staples.</u>                                                                                                                                            |
| <del>18.11</del> 18.16 | <u>Demonstrate assisting gowning/ <del>and</del> <u>and</u> gloving of other sterile team members.</u>                                                                                                                      |
| <del>18.12</del> 18.17 | <u>Participate in the surgical time out to prevent wrong-site surgery and delays in the surgical procedure.</u>                                                                                                             |
| <del>18.13</del> 18.18 | <u>Prepare and pass instruments, equipment, tissue replacement materials, implants, and supplies <del>efficiently</del> <u>appropriately</u>.</u>                                                                           |
| <del>18.14</del> 18.19 | <del>Monitor</del> <u>Observe</u> the surgical site regarding counted items, stage of surgery, tissue appearance, and patient's body fluids.                                                                                |
| <del>18.15</del> 18.20 | <u>Demonstrate correctly the initiation and completion of counts regarding sponges, sharps, instruments, and miscellaneous countable items</u> <del>used within the patients wound to prevent foreign body retention.</del> |
| <del>18.16</del> 18.21 | <u>Demonstrate ability to maintain retraction, cut suture, <del>provide retraction</del> and hold instruments in the second <del>assistant</del> <u>scrub</u> role as directed by the surgeon.</u>                          |
| <del>18.17</del> 18.22 | <u>Demonstrate ability to prepare, validate, handle, and preserve <del>specimen</del> <u>specimens</u> on and off the sterile field accurately for laboratory analysis.</u>                                                 |
| 19.0                   | Demonstrate knowledge of and assist with surgical procedures. -The student will be able to:                                                                                                                                 |

|            |                                                                                                                                                                                                                       |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.01      | <del>Correlate</del> <u>Identify</u> the preoperative diagnosis, diagnostic interventions, <del>common</del> -complications, and operative pathophysiology relative to <del>specific</del> -surgical procedures.      |
| 19.02      | Describe the types of incisions, methods of wound closure, and mechanisms of wound management <u>care</u> .                                                                                                           |
| 19.03      | Describe the usual sequence of <del>a common-surgical procedure (i.e., incision into the anatomy, dissection of the anatomy, operative steps of the procedure, and closing of the anatomy.)</del> <u>procedures</u> . |
| 19.04      | Select the appropriate instrument, equipment, or supply for each step of the procedure.                                                                                                                               |
| 19.05      | Demonstrate effective perioperative case management, ensuring cost control and time/motion <del>economy</del> <u>economic</u> methods are utilized to maximize the efficiency of the OR team.                         |
| 20.0       | Demonstrate an understanding of legal and ethical responsibilities specific to surgical technology. -The student will be able to:                                                                                     |
| 20.01      | State methods, standards, and aids that assist a surgical technologist with interpreting and following legal responsibilities.                                                                                        |
| 20.02      | <u>Understand the influence of ethics in professional practice.</u>                                                                                                                                                   |

| 20.08      | <u>Define the various types of legal doctrines.</u>                                                                                                                                                                   |
| 20.09      | <u>Discuss the standards of conduct.</u>                                                                                                                                                                              |
| 20.10      | <u>Analyze the legal elements of proper documentation.</u>                                                                                                                                                            |
| 20.11      | <u>Describe the types of sentinel events.</u>                                                                                                                                                                         |
| 20.12      | <u>Describe the importance of risk management.</u>                                                                                                                                                                    |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

The Human Patient Simulator (HPS) or other accepted simulation scenarios may be used for a limited number of clinical hours. A low teacher-student ratio in the lab and clinical area is strongly recommended. The recommended maximum ratio is 1:6.

### Special Notes

Selected portions of this program may be utilized to provide additional skills to enable nursing graduates to become employable in operating rooms as surgical technologists. The program should meet the requirements of the Commission on Accreditation of Allied Health Education Programs (CAAHEP) or Accrediting Bureau of Health Education Schools (ABHES).

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

After successful completion of a Commission on Accreditation of Allied Health Education Programs (CAAHEP) or Accrediting Bureau of Health Education Schools (ABHES) accredited program, students are eligible to take the National Board of Surgical ~~Technologist~~ Technologists and Surgical Assisting (NBSTSA) Certified Surgical Technologist exam.

Please contact NBSTSA for more information on this exam:

National Board of Surgical ~~Technologist~~ Technologists and Surgical Assisting (NBSTSA) ~~<http://nbtsa.org/>~~ <http://nbtsa.org/>  
6 West Dry Creek Circle, Suite 100, Littleton, Colorado 80120  
Toll-free: (800) 707-0057

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~CTSOs are co-curricular career and technical student ~~organization~~organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

### Purpose

This certificate program is part of the Surgical First Assisting AS degree program (1351090900).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as a Surgical First Assistant ~~Expanded Function (Surgical Technologists)~~.

The content includes, but is not limited to, communication and interpersonal skills, legal and ethical responsibilities, anatomy, physiology, pathophysiology, microbiology, aseptic techniques, patient care procedures, surgical procedures, patient safety, use and care of equipment and supplies, CPR, Heartsaver, employability skills, basic computer literacy and surgical first assistant skills such as preoperative duties, aid in exposure, hemostasis, closure, intraoperative technical functions, and postoperative duties under the direction and supervision of the surgeon.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the health care delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate ~~central~~ sterile processing skills.
- 13.0 Demonstrate competencies in the ~~core~~ components of the ~~surgical first assistant~~ [Surgical First Assistant](#) related to communication and interpersonal skills.
- 14.0 Demonstrate an understanding of the basic sciences related to ~~surgical first assisting~~ [Surgical First Assisting](#).
- 15.0 Describe and practice safety measures in the surgical environment.
- 16.0 Perform patient care procedures related to the surgical environment and describe methods for meeting ~~patient's~~ [patients'](#) needs.
- 17.0 Demonstrate knowledge of pharmacology and math calculation principles related to the surgical environment.
- 18.0 Demonstrate knowledge of the basic surgical skills necessary to function safely and effectively.
- 19.0 Demonstrate competencies in the ~~core~~ components of the ~~surgical first assistant~~ [Surgical First Assistant](#) related to knowledge and skills.
- 20.0 Demonstrate competencies in the ~~core~~ components of the ~~surgical first assistant~~ [Surgical First Assistant](#) related to legal and ethical responsibilities.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Surgical First Assistant  
**CIP Number:** 0351090908  
**Program Length:** 59 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

**This certificate program is part of the Surgical First Assisting AS degree program (1351090900). At the completion of this program, the student will be able to:**

**Students completing intended outcomes 12-20 will meet the requirements of the Surgical First Assistant CCC.**

12.0 Demonstrate ~~central~~ sterile processing skills. -The student will be able to:

- |       |                                                                                                                                                                                                                                                     |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.01 | Apply the principles of medical/surgical asepsis, including attire, environmental control, and traffic patterns, to control and manage dirty, clean, and sterile areas of the operating room and central supply.                                    |
| 12.02 | Identify relevant federal, state, and local guidelines, standards, and regulations.                                                                                                                                                                 |
| 12.03 | Apply ergonomic considerations and appropriate body mechanics for lifting, turning, pulling, pushing, reaching, and other work-related activities.                                                                                                  |
| 12.04 | Describe the methods of disinfection and sterilization.                                                                                                                                                                                             |
| 12.05 | Describe the importance of following the device, equipment, instrument, or supply manufacturer's instructions for decontamination, processing, operation, and troubleshooting.                                                                      |
| 12.06 | Demonstrate correctly decontamination techniques for instruments, equipment, and the environment used during surgical procedures.                                                                                                                   |
| 12.07 | Demonstrate appropriate techniques for inspection, testing, and sending out for repair instruments, equipment, and supplies regarding condition, quantity, and quality.                                                                             |
| 12.08 | Describe clean and sterile transportation, restocking, and storage principles for instruments.                                                                                                                                                      |
| 12.09 | Analyze the results of sterilization process monitors used in sterilization units, <del>sterilizations</del> sterilization cycles, and <del>ensures</del> ensure documentation meets the safe parameters for each item prior to its use-of an item. |

|       |                                                                                                                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.10 | Describe <u>the</u> clean and sterile transportation, restocking, and storage principles for supplies in the facility (receivables, sterile, <u>and clean, or contaminated</u> ).                                                                                                                                                                            |
| 12.11 | Demonstrates the ability to identify and <del>select</del> <u>communicate the</u> appropriate instruments, equipment, and supplies <u>to the surgical team</u> for any surgical procedure.                                                                                                                                                                   |
| 12.12 | Demonstrate the ability to prepare and label items for high-level disinfection and sterilization as required.                                                                                                                                                                                                                                                |
| 12.13 | Demonstrate the techniques of high-level disinfection and <del>sterilization</del> <u>the process</u> for <del>immediate use</del> <u>Immediate Use Steam Sterilization when necessary (i.e., one-of-a-kind items-)</u> .                                                                                                                                    |
| 12.14 | Describe various supply, distribution, and inventory control methods.                                                                                                                                                                                                                                                                                        |
| 12.15 | Demonstrate <u>the ability to verify</u> case cart preparation and management.                                                                                                                                                                                                                                                                               |
| 13.0  | Demonstrate competencies in the <del>core</del> components of the <del>surgical first assistant</del> <u>Surgical First Assistant</u> related to communication and interpersonal skills.<br>-The student will be able to:                                                                                                                                    |
| 13.01 | Demonstrate proper use of communication systems.                                                                                                                                                                                                                                                                                                             |
| 13.02 | Use various forms of communication in the role of Surgical First Assistant to communicate relevant, accurate, and complete information in a concise and clear manner.                                                                                                                                                                                        |
| 13.03 | Collaborate with the patient, surgeon, and other members of the <del>Healthcare</del> <u>healthcare</u> team to assess, plan, implement, and evaluate the patient's surgical care to promote positive outcomes, including the use of preoperative checklists <del>and</del> , preoperative assessment, and <del>evaluations</del> <u>evaluation</u> methods. |
| 13.04 | Demonstrate <u>effective</u> patient <del>interviewing</del> <u>communication</u> techniques.                                                                                                                                                                                                                                                                |
| 13.05 | Demonstrate the ability to analyze and communicate specific patient care factors or needs and the surgeon's preferences to the surgical team, including suture needs, specialty supplies and instrumentation, and equipment.                                                                                                                                 |
| 13.06 | Describe the concepts of conflict resolution, assertive behavior, and the principles of teamwork as a patient advocate and assistant to the surgeon.                                                                                                                                                                                                         |
| 13.07 | Demonstrate competency regarding reporting and documentation responsibilities in the clinical setting.                                                                                                                                                                                                                                                       |
| 13.08 | Employ leadership skills to accomplish <del>organizations</del> <u>the organization's</u> goals and objectives.                                                                                                                                                                                                                                              |
| 13.09 | Establish and maintain effective working relationships with others, in order to accomplish objectives and tasks.                                                                                                                                                                                                                                             |
| 13.10 | Conduct and participate in meetings to accomplish work tasks.                                                                                                                                                                                                                                                                                                |
| 13.11 | Employ mentoring skills to <del>inspire and teach others</del> <u>support inexperienced team members</u> .                                                                                                                                                                                                                                                   |
| 14.0  | Demonstrate an understanding of the basic sciences related to <del>surgical first assisting-</del> <u>Surgical First Assisting</u> . The student will be able to:                                                                                                                                                                                            |
| 14.01 | Apply knowledge of the microbial environment to the surgical care of the patient.                                                                                                                                                                                                                                                                            |

|                               |                                                                                                                                                                                                                                                                                                                   |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.02                         | Analyze patient defense mechanisms, the chain of infection, and the infectious process as related to surgical practice and the prevention of surgical site infections.                                                                                                                                            |
| 14.03                         | Correlate wound classifications and wound healing principles with wound management guidelines and complications.                                                                                                                                                                                                  |
| 14.04                         | Demonstrate infection and disease transmission control techniques following the <del>Center</del> <u>Centers</u> for Disease Control (CDC) and Occupational Safety and Health Administration (OSHA) guidelines for surgery.                                                                                       |
| 14.05                         | Describe the causes, clinical signs and symptoms, and prevention measures for surgical infections.                                                                                                                                                                                                                |
| 14.06                         | Describe the basic composition, principles, clinical signs, and symptoms regarding electrolytes and fluid balance <del>including the mechanism of hypovolemic, septic, hemorrhagic and cardiogenic shock.</del>                                                                                                   |
| <del>14.07</del>              | <u>Assess the clinical signs of hypovolemic, septic, hemorrhage, neurogenic, and cardiogenic shock.</u>                                                                                                                                                                                                           |
| <del>14.07</del> <u>14.08</u> | <del>Correlates</del> <u>Correlate</u> the principles and disorders of hematology, hemostasis, types of blood components, and coagulation with hemostasis in surgery.                                                                                                                                             |
| <del>14.08</del> <u>14.09</u> | <u>Discuss the principles of information technology, electricity, and robotics as they relate to surgery.</u>                                                                                                                                                                                                     |
| 15.0                          | Describe and practice safety measures in the surgical environment. -The student will be able to:                                                                                                                                                                                                                  |
| 15.01                         | Inspect emergency equipment and supplies for condition and quantity.                                                                                                                                                                                                                                              |
| 15.02                         | Implement appropriate Joint Commission patient safety goals.                                                                                                                                                                                                                                                      |
| 15.03                         | Demonstrate appropriate safety measures to prevent operating room fires and electrical shock from equipment.                                                                                                                                                                                                      |
| 15.04                         | Apply knowledge of surgical hazards to safe patient care.                                                                                                                                                                                                                                                         |
| 15.05                         | Demonstrate the safe inspection and utilization of laser, electrical, endoscopic, and robotic equipment.                                                                                                                                                                                                          |
| 15.06                         | Describe and practice appropriate safety measures for laser, electrical, <del>endoscopy</del> <u>endoscopic</u> , and robotic surgery.                                                                                                                                                                            |
| 15.07                         | Describe the role preventive maintenance, prevention, correction, and documentation <del>plays</del> <u>play</u> in patient and personnel safety and the prevention of medical errors in the surgical setting.                                                                                                    |
| <del>15.08</del>              | <del>Explain the purpose of Florida's "Right to Know" law and its provisions.</del>                                                                                                                                                                                                                               |
| <del>15.09</del> <u>15.08</u> | <u>Describe the role of the surgical technologist and surgical first assistant in an emergency patient situation.</u>                                                                                                                                                                                             |
| <del>15.10</del> <u>15.09</u> | <u>Describe the protocol for personal injury, including the completion of incident/occupancy reports and follow-up.</u>                                                                                                                                                                                           |
| <del>15.11</del> <u>15.10</u> | <u>Describe the preparation and planning, detection and communication, incident management and support systems, safety and security, clinical/public health assessment and intervention, contingency, continuity and recovery, and the public health law and ethics of All-Hazards Preparation for disasters.</u> |
| <del>15.12</del> <u>15.11</u> | <u>Conduct technical research to gather information for decision-making.</u>                                                                                                                                                                                                                                      |

|       |                                                                                                                                                                                                                                                                                        |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <del>15.13</del> 15.12 List and describe quality control systems and/or practices common to the workplace.                                                                                                                                                                             |
|       | <del>15.14</del> 15.13 Employ critical thinking skills independently and in teams to solve problems, resolve conflicts, and make decisions.                                                                                                                                            |
| 16.0  | Perform patient care procedures related to the surgical environment and describe methods for meeting <del>patient's</del> patients' needs. -The student will be able to:                                                                                                               |
| 16.01 | Identify the roles of the members of the surgical team during each phase of surgery.                                                                                                                                                                                                   |
| 16.02 | Assist surgeon with the perioperative care of the surgical patient.                                                                                                                                                                                                                    |
| 16.03 | <del>Correlate</del> Participate in the preoperative examination and preparation process for both surgery and anesthesia, with the identification of potential patient factors that may inhibit positive outcomes.                                                                     |
| 16.04 | Describe appropriate review and identification of patient factors regarding the chart, including preoperative identification, preoperative checklists, diagnostic tests, lab values, and surgical consent.                                                                             |
| 16.05 | Demonstrate safe patient transfer/transportation techniques used in the perioperative setting.                                                                                                                                                                                         |
| 16.06 | Monitor OR traffic, placement of sterile tables, and ensure steps are taken to reduce microbial fallout.                                                                                                                                                                               |
| 16.07 | <del>Correlate</del> Describe anesthesia monitoring devices, patient complications-and interventions-with, and maintaining patient homeostasis.                                                                                                                                        |
| 16.08 | Demonstrate the principles of safe positioning, and application of safety devices, and restraining to ensure patient for surgery correlating the prevention of potential complications with the need for patient stabilitysafety.                                                      |
| 16.09 | Demonstrate the selection of the appropriate solution and preparation of the operative site for the surgical procedure.                                                                                                                                                                |
| 16.10 | Perform steps for Foley catheter insertion and connection to drainage.                                                                                                                                                                                                                 |
| 16.11 | Describe the safe usage of critical instruments, equipment, and supplies utilized intraoperatively, including the electrosurgical unit, Lasers, Ultrasonic equipment, endoscopy equipment, robotics, insufflators, light sources, microscopes, power tools, suction, tourniquets, etc. |
| 16.12 | Demonstrate correctly the connection and operation of essential instruments, equipment, and supplies for the surgical procedure.                                                                                                                                                       |
| 16.13 | Demonstrate correct mathematical skills related to dosage available versus dosage <del>needing</del> needed when drawing up or administering medications.                                                                                                                              |
|       | <del>16.14 Demonstrate correctly the techniques for injection of local anesthetics.</del>                                                                                                                                                                                              |
|       | <del>16.15</del> 16.14 Demonstrate knowledge of wound management techniques, including suturing techniques in the operating room, perioperative care of special needs patients, and perioperative assessment of the skin.                                                              |
|       | <del>16.16</del> 16.15 Demonstrate applicable wound management principles, including the placement and security of catheters, wound drainage systems, sterile dressings, and cast applications.                                                                                        |
|       | <del>16.17</del> 16.16 Discuss relevant and unique factors regarding postoperative care specific to the procedure.                                                                                                                                                                     |
| 17.0  | Demonstrate knowledge of pharmacology and math calculation principles related to the surgical environment. -The student will be able to:                                                                                                                                               |

|                        |                                                                                                                                                                                                                                                                                               |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 17.01                  | Analyze the terminology <u>and</u> the basic concepts of pharmacology and drug administration, including pharmacokinetics and pharmacodynamics.                                                                                                                                               |
| 17.02                  | Describe pharmacological concepts relative to the administration of all anesthesia methods, agents, and techniques, including the role of the anesthetist, the first assistant, and the circulator during induction and extubation.                                                           |
| 17.03                  | <u>Analyze preoperative principles of patient assessment and how they relate to anesthesia.</u>                                                                                                                                                                                               |
| <del>17.03</del> 17.04 | Identify the classification, actions, effects, and precautions of common drugs used at the field, <del>and</del> within the surgical environment.                                                                                                                                             |
| <del>17.04</del> 17.05 | Apply knowledge of the pharmacologic agents used in the treatment of the surgical patient.                                                                                                                                                                                                    |
| <del>17.05</del> 17.06 | Describe potential anesthesia and operative complications and interventions for each.                                                                                                                                                                                                         |
| <del>17.06</del> 17.07 | Demonstrate the application of the <del>six rights</del> <u>Six Rights</u> of <del>medication administration</del> <u>Medication Administration</u> .                                                                                                                                         |
| <del>17.07</del> 17.08 | Identify the correct medication form and method of application.                                                                                                                                                                                                                               |
| 17.09                  | <u>Demonstrate correct techniques for injection of local anesthetics.</u>                                                                                                                                                                                                                     |
| <del>17.08</del> 17.10 | Analyze and assemble correctly all medication supplies, for each drug to be used on the sterile field.                                                                                                                                                                                        |
| <del>17.09</del> 17.11 | <del>Pour or receive, measure, prepare and manage</del> <u>Manage</u> sterile solutions accurately within the sterile field.                                                                                                                                                                  |
| <del>17.10</del> 17.12 | Demonstrate the appropriate methods of transferring and accepting medications onto the sterile field.                                                                                                                                                                                         |
| <del>17.11</del> 17.13 | Label properly all fluids and medications used within the sterile field.                                                                                                                                                                                                                      |
| <del>17.12</del> 17.14 | <del>Demonstrates</del> <u>Demonstrate the</u> ability to correctly calculate common medication conversions and dosages.                                                                                                                                                                      |
| <del>17.13</del> 17.15 | <del>Apply correct unit of measure for each medication.</del> <u>Assess the risks and adverse effects of anesthesia, conscious sedation, local anesthesia agents, and pain management in the surgical setting.</u>                                                                            |
| <del>17.14</del> 17.16 | <del>Demonstrates preparation and passing of medication mixtures using ratio and proportions correctly.</del> <u>Describe the function and its implications of anesthesia, conscious sedation, local anesthesia agents, and pain management as they relate to the preoperative patient.</u>   |
| <del>17.15</del> 17.17 | <del>Maintains an</del> <u>Maintain</u> accurate <del>account</del> <u>documentation</u> of the amount of each medication and/or solution used at the field and <del>notifies</del> <u>notify the</u> circulator as appropriate <del>to the situation to ensure accurate documentation.</del> |
| <del>17.16</del> 17.18 | <del>Describe</del> <u>Explain</u> the <del>adverse effects</del> <u>principles</u> of local <u>injection techniques</u> and topical <del>anesthetics</del> <u>anesthetic agents</u> .                                                                                                        |
| 18.0                   | Demonstrate knowledge of the basic surgical skills necessary to function safely and effectively. -The student will be able to:                                                                                                                                                                |
| 18.01                  | Demonstrate an understanding of advanced anatomy, physiology, <del>the</del> disease processes, and the relationship of the processes to the specific types of pathologies according to body systems.                                                                                         |
| 18.02                  | Correlate the preoperative diagnosis, diagnostic interventions, common complications, and operative pathophysiology relative to specific surgical procedures.                                                                                                                                 |

|                        |                                                                                                                                                                                                                                             |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18.03                  | Correlate the preoperative diagnosis, operative anatomy, physiology and pathology, usual incision, wound closure techniques, medications utilized, common complications, and the usual sequence as related to specific surgical procedures. |
| 18.04                  | Select and verify required instrumentation, equipment, and supplies, including any implants needed for specific surgical procedures using core knowledge and the applicable surgeon preference/procedure cards.                             |
| 18.05                  | Demonstrate an understanding of diagnostic images as related to surgical anatomy.                                                                                                                                                           |
| 18.06                  | Demonstrate application of aseptic and sterile technique principles, including the appropriate corrective action for common breaks in sterile technique that may occur.                                                                     |
| 18.07                  | Demonstrate the surgical scrub and donning of a sterile gown and gloves.                                                                                                                                                                    |
| 18.08                  | Demonstrate the principles of sterile draping.                                                                                                                                                                                              |
| <del>18.09</del>       | <del>Demonstrate the set up and management of the sterile mayo stand and/or instrument table(s).</del>                                                                                                                                      |
| <del>18.10</del>       | <del>Demonstrate the set up and management of the sterile mayo stand and/or instrument table(s).</del>                                                                                                                                      |
| <del>18.11</del>       | <del>Prepare, pass, utilize, and monitor sharps, sutures, ligatures, ties and staples correctly.</del>                                                                                                                                      |
| <del>18.12</del>       | <del>Prepare, pass, utilize, and monitor amount given for medications and solutions utilized on the sterile field.</del>                                                                                                                    |
| <del>18.13</del> 18.09 | Demonstrate assisted gowning/gloving for others.                                                                                                                                                                                            |
| <del>18.14</del> 18.10 | Participate in the surgical time out to prevent wrong-site surgery and delays in the surgical procedure.                                                                                                                                    |
| <del>18.15</del> 18.11 | Select, prepare, pass, and utilize instruments, equipment, tissue replacement materials, implants, and supplies efficiently.                                                                                                                |
| <del>18.16</del> 18.12 | Monitor the surgical site regarding counted items, stage of surgery, tissue appearance, and patient's body fluids, e.g., blanching, desiccation, color of blood, blood loss, bile leaks, ascites, etc.                                      |
| <del>18.17</del> 18.13 | Demonstrate correctly the initiation and completion of counts regarding sponges, sharps, instruments, and miscellaneous items used within the patient's wound to prevent foreign body retention.                                            |
| <del>18.18</del> 18.14 | Describe the types of incisions, methods of wound closure, and mechanisms of wound management.                                                                                                                                              |
| <del>18.19</del> 18.15 | Describe the usual sequence of a common surgical procedure. (i.e., incision into the anatomy, dissection of the anatomy, operative steps of the procedure, and closing of the anatomy).                                                     |
| <del>18.20</del> 18.16 | Selects the appropriate instrument, equipment, or supply for each step of the procedure.                                                                                                                                                    |
| <del>18.24</del> 18.17 | Demonstrate ability to prepare, validate, handle, and preserve <del>specimen</del> specimens accurately for laboratory analysis.                                                                                                            |
| <del>18.22</del> 18.18 | Demonstrates knowledge of and assists as needed with surgical procedures while functioning in the roles of scrub and assistant circulator.                                                                                                  |
| <del>18.23</del> 18.19 | Demonstrate effective perioperative case management, ensuring cost control and time/motion economy methods are utilized to maximize the efficiency of the OR team.                                                                          |

|       |                                                                                                                                                                                                                                                                                  |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.0  | Demonstrate competencies in the <del>core</del> components of the <del>surgical first assistant</del> <u>Surgical First Assistant</u> related to knowledge and skills. The student will be able to:                                                                              |
| 19.01 | Prioritize care or actions to be taken in a given circumstance to expedite the operative procedure or emergency situation.                                                                                                                                                       |
| 19.02 | Describe preoperative diagnosis, common complications, operative pathophysiology, and postoperative care related to the specific surgical procedures performed.                                                                                                                  |
| 19.03 | Analyze common patient assessments, including skin and chart review, relating relevant diagnostic and monitoring results to the surgeon as applicable to the surgical specialty.                                                                                                 |
| 19.04 | Demonstrate preoperative preparation of the patient to facilitate proper patient care, including but not limited to positioning, application of tourniquet, surgical skin preparation, <del>catherization</del> <u>catheterization</u> , draping, and sterile setup preparation. |
| 19.05 | Demonstrate and describe types of incisions and insertion of trocars.                                                                                                                                                                                                            |
| 19.06 | Identify types of tissue, organs, and gross anatomical structures correctly during surgical procedures.                                                                                                                                                                          |
| 19.07 | Demonstrate appropriate tissue handling techniques, including the care of the surgical specimens.                                                                                                                                                                                |
| 19.08 | Provide appropriate exposure and visualization of the operative field for the surgeon.                                                                                                                                                                                           |
| 19.09 | Describe the appropriate sequence for common surgical procedures.                                                                                                                                                                                                                |
| 19.10 | Utilize appropriate techniques to assist with hemostasis.                                                                                                                                                                                                                        |
| 19.11 | Demonstrate appropriate safe surgical techniques when the case involves either thermal, radiological, laparoscopic, environmental, or <del>other</del> <u>another</u> known surgical hazard.                                                                                     |
| 19.12 | Participate in volume replacement or autotransfusion techniques and medication administration as appropriate.                                                                                                                                                                    |
| 19.13 | Select appropriate instruments and supplies for the type of tissue.                                                                                                                                                                                                              |
| 19.14 | Demonstrate competence with technology, the use of instruments, equipment, supplies, and medications for the surgical procedure.                                                                                                                                                 |
| 19.15 | Use surgical instruments skillfully in ways consistent with their design and purpose.                                                                                                                                                                                            |
| 19.16 | Utilize appropriate techniques to assist with the closure of body planes.                                                                                                                                                                                                        |
| 19.17 | Select and apply appropriate wound dressings.                                                                                                                                                                                                                                    |
| 19.18 | Assist <u>the</u> surgeon in securing drainage systems to tissue.                                                                                                                                                                                                                |
| 19.19 | Evaluate <u>the</u> patient and report appropriately any abnormal condition found post-op related to positioning.                                                                                                                                                                |
| 19.20 | Assist <u>the</u> surgeon with postoperative care of the patient to facilitate proper patient care.                                                                                                                                                                              |

|                               |                                                                                                                                                                                                                                                                                                                          |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.21                         | Demonstrate appropriate response to emergency situations, including respiratory/cardiac arrest situations, sudden hypoxia, hemorrhage, shock, surgical misadventures, contamination, perforation of <del>viscous</del> viscus or cavity, critical equipment failure, and exposure, retraction, and compression injuries. |
| 19.22                         | Facilitate the continuity of care within and across the healthcare settings to access available resources and services.                                                                                                                                                                                                  |
| 20.0                          | Demonstrate competencies in the <del>core</del> components of the <del>surgical first assistant</del> <u>Surgical First Assistant</u> related to legal and ethical responsibilities. -The student will be able to:                                                                                                       |
| 20.01                         | State methods, standards, and aids that assist a surgical first assistant with interpreting and following legal responsibilities.                                                                                                                                                                                        |
| 20.02                         | Describe the importance of maintaining credentials and following the appropriate credentialing policy in accordance with hospital policy and appropriate laws and regulations.                                                                                                                                           |
| 20.03                         | Explain the <del>job requirements</del> <u>scope of practice for the surgical first assistant</u> .                                                                                                                                                                                                                      |
| 20.04                         | Describe the key elements related to the development of a surgical conscience.                                                                                                                                                                                                                                           |
| <u>20.05</u>                  | <u>Explain the purpose of Florida's "Right to Know" law and its provisions.</u>                                                                                                                                                                                                                                          |
| <del>20.05</del> <u>20.06</u> | Demonstrate an understanding of the legal, ethical, moral, and professional responsibilities of working as a surgical assistant, and the professional skills necessary to fulfill the role.                                                                                                                              |
| <del>20.06</del> <u>20.07</u> | Provide health care within the ethical/legal framework of the job description, including role responsibilities and limitations.                                                                                                                                                                                          |
| <del>20.07</del> <u>20.08</u> | Describe the principles of problem solving and confidentiality in ethical decision making and risk management.                                                                                                                                                                                                           |
| <u>20.09</u>                  | <u>Define current strategies that promote patient safety and continuous improvement (i.e., Six Sigma and Lean Management).</u>                                                                                                                                                                                           |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

In a simulated surgical environment, students practice preparing, setting up, and maintaining a sterile field, sterilization and disinfection procedures, preparation of supplies and equipment for surgery, and patient preparation.

Clinical learning experiences in an operating room and related areas are an integral part of this program.

The Human Patient Simulator (HPS) or other accepted simulation scenarios may be used for a limited number of clinical hours. A low teacher-student ratio in the lab and clinical area is strongly recommended. The recommended maximum ratio is 1:8.

### Special Notes

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry: planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

In accordance with Rule 6A-10.024, F.A.C., all faculty providing instruction must have at least a baccalaureate degree or an associate degree with demonstrated competencies in the specific instructional program as defined by the Southern Association of Colleges and Schools.

The Surgical First Assistant Core Curriculum should be taught by qualified staff as outlined in the most recent approved CAAHEP (Commission on Accreditation on Allied Health Education Programs) accreditation standards and guidelines.

Entering students who have successfully completed the program 0351090905 or 0351090904, Surgical Technology, or are currently Nationally Certified as a CST (Certified Surgical Technologist) or SA-C (Surgical Assistant-Certified) should be given appropriate advanced standing.

After successful completion of an approved and accredited surgical first assistant program, students are eligible to take the National Board of Surgical Technology and Surgical Assisting First Assistant exam as approved.

The CORE should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~CTSOs are co-curricular career and technical student ~~organization~~organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

### Purpose

This certificate program is part of the Surgical Services AS degree program (1351090901).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as ~~an~~ Endoscopic ~~Technician~~ [Technicians](#).

The content includes but is not limited to communication and interpersonal skills, legal and ethical responsibilities, anatomy, physiology, pathophysiology, microbiology, aseptic techniques, patient care endoscopy procedures, endoscopy procedures, patient safety, use and care of equipment and supplies, CPR, Heart saver, employability skills, basic computer literacy and endoscopic technician duties such as disinfection and processing endoscopic instruments, completing the setup -and assisting during the endoscopy procedures, assisting with patient positioning and splinting as indicated, transportation of patients, and manage the endoscopy accessories, related supplies and equipment.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the health care delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate language arts knowledge and skills.
- 13.0 Solve problems using critical thinking skills, creativity, and innovation.
- 14.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment.
- 15.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 16.0 Demonstrate ~~central supply~~ endoscopic technician skills.
- 17.0 Demonstrate competencies in the ~~core~~ components of the ~~endoscopy~~ endoscopic technician related to communication and interpersonal ~~Skills~~ skills.
- 18.0 Demonstrate an understanding of the basic sciences related to endoscopy.
- 19.0 Describe and practice safety measures in the ~~endoscopy~~ endoscopic environment.
- 20.0 Perform patient care ~~endoscopy~~ endoscopic procedures related to the ~~endoscopy~~ endoscopic environment and describe methods for meeting ~~patient's~~ patients' needs.
- 21.0 Demonstrate knowledge of the basic endoscopy skills necessary to function safely and effectively.
- 22.0 Demonstrate competencies in the ~~core~~ components of the ~~endoscopy~~ endoscopic technician related to knowledge and skills.
- 23.0 Demonstrate competencies in the ~~core~~ components of the ~~endoscopy~~ endoscopic technician related to legal and ethical responsibilities.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Endoscopic Technician  
**CIP Number:** 0351099902  
**Program Length:** 24 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

**This certificate program is part of the Surgical Services AS degree program (1351090901). At the completion of this program, the student will be able to:**

**Students completing intended outcomes 12-23, in addition to the health careers core, will meet the requirements of the Endoscopic Technician CCC.**

12.0 Demonstrate language arts knowledge and skills. -The ~~students~~student will be able to:

12.01 Locate, comprehend, and evaluate key elements of oral and written information.

12.02 Draft, revise, and edit written documents using correct grammar, punctuation, and vocabulary.

12.03 Present information formally and informally for specific purposes and audiences.

13.0 Solve problems using critical thinking skills, creativity, and innovation. -The ~~students~~student will be able to:

13.01 Employ critical thinking skills independently and in teams to solve problems and make decisions.

13.02 Employ critical thinking and interpersonal skills to resolve conflicts.

13.03 Identify and document workplace performance goals and monitor progress toward those goals.

13.04 Conduct technical research to gather information necessary for decision-making.

14.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. -The ~~students~~student will be able to:

14.01 Describe the nature and types of healthcare organizations.

|       |                                                                                                                                                                                         |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.02 | <del>Explain</del> <u>Describe</u> the effect of key organizational systems on performance and quality.                                                                                 |
| 14.03 | List and describe quality control systems and/or practices common to the workplace.                                                                                                     |
| 14.04 | <del>Explain</del> <u>Describe</u> the impact of the global economy on healthcare organizations.                                                                                        |
| 15.0  | Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. -The <del>students</del> <u>student</u> will be able to:                                     |
| 15.01 | Employ leadership skills to accomplish organizational goals and objectives.                                                                                                             |
| 15.02 | Establish and maintain effective working relationships <del>with others, in order</del> to accomplish objectives and tasks.                                                             |
| 15.03 | Conduct and participate in meetings to accomplish work tasks.                                                                                                                           |
| 15.04 | Employ mentoring skills to inspire and teach others.                                                                                                                                    |
| 15.05 | Analyze attributes and attitudes of an effective leader.                                                                                                                                |
| 15.06 | Recognize factors and situations that may lead to conflict.                                                                                                                             |
| 15.07 | Demonstrate effective techniques for managing team conflict.                                                                                                                            |
| 15.08 | <u>Demonstrate an understanding of the importance of effective interdepartmental relationships.</u>                                                                                     |
| 16.0  | Demonstrate <del>central supply</del> <u>endoscopic</u> technician skills. –The student will be able to:                                                                                |
| 16.01 | Apply the principles of medical and sterile asepsis to the processing and use of instruments, equipment, and supplies.                                                                  |
| 16.02 | Apply infection control techniques following <del>Center</del> <u>the Centers</u> for Disease Control (CDC) guidelines.                                                                 |
| 16.03 | Inspect equipment and supplies for condition and <del>quantity</del> <u>quality</u> .                                                                                                   |
| 16.04 | Identify principles and demonstrate techniques of <u>achieving</u> disinfection and sterilization.                                                                                      |
| 16.05 | Decontaminate instruments, equipment, and environment.                                                                                                                                  |
| 16.06 | <del>Identify</del> <u>Demonstrate the ability to identify</u> , correct, and/or report <del>package</del> <u>on sterile packaging</u> integrity.                                       |
| 16.07 | <del>Replenish</del> <u>Restock</u> supplies and equipment.                                                                                                                             |
| 16.08 | Identify instruments, equipment, and supplies for <del>any procedure</del> <u>endoscopic procedures</u> .                                                                               |
| 16.09 | Demonstrate the ability to label, <u>and</u> package <del>goods and supplies</del> <u>materials</u> as required.                                                                        |
| 16.10 | Demonstrate <del>various</del> <u>supply</u> storage, <del>case cart preparation and supply distribution</del> methods for instruments, <u>and</u> equipment, <del>and supplies</del> . |

|                                                                                                                                                            |                                                                                                                                                                                                                                                     |

| <del>20.07</del> <u>20.05</u> | Describe the perioperative techniques, methods, and management of anesthesia related to the type of endoscopy procedure.                                                                                                                     |
| <del>20.08</del> <u>20.06</u> | Apply knowledge of <del>endoscopy assisting</del> <u>endoscopic</u> techniques, such as <del>splinting and</del> assisting with <del>specimens</del> <u>proper specimen handling methods</u> .                                               |
| 21.0                          | Demonstrate knowledge of the basic endoscopy skills necessary to function safely and effectively. -The student will be able to:                                                                                                              |
| 21.01                         | Demonstrate an understanding of the gastrointestinal system, respiratory system, and <del>relevant</del> <u>stages of</u> disease <del>processes</del> .                                                                                     |
| 21.02                         | Select instruments, equipment, and supplies for <del>endoscopy</del> <u>endoscopic</u> procedures using physician preference/procedure cards.                                                                                                |
| 21.03                         | <del>Measure and pour sterile solutions and medications.</del> <u>Demonstrate the ability to prepare and/or update physician preference cards.</u>                                                                                           |
| 21.04                         | <del>Differentiates appropriately the</del> <u>Differentiate appropriate</u> use of medical sterile technique regarding the donning of sterile gloves and the use of instruments, supplies, and equipment <del>for the scenario given.</del> |
| <del>21.05</del>              | <del>Describes the principles of positioning, draping patient, passing instruments, monitoring field, and manipulation of scope.</del>                                                                                                       |
| <del>21.06</del>              | <del>Demonstrates the preparation and/or updates procedure cards to meet a specific surgeon's preferences correctly.</del>                                                                                                                   |
| 22.0                          | Demonstrate competencies in the <del>core</del> components of the <del>endoscopy</del> <u>endoscopic</u> technician related to knowledge and skills. -The student will be able to:                                                           |
| 22.01                         | Prioritize <u>patient</u> care <del>or actions to be taken in a</del> <u>any</u> given circumstance to expedite the procedure <del>or emergency situation</del> .                                                                            |
| 22.02                         | Describe preoperative diagnosis, <del>common and</del> complications, <del>and operative pathophysiology</del> related to the specific <del>endoscopy</del> <u>endoscopic</u> procedures <del>performed</del> .                              |
| 22.03                         | Describe and apply <del>common</del> patient diagnostic and monitoring devices as applicable to the endoscopy specialty.                                                                                                                     |
| 22.04                         | Assist the surgical team with preoperative preparation of the patient to facilitate proper patient care, including, but not limited to, positioning, draping, and setup preparation.                                                         |
| 22.05                         | Identify <del>gross</del> anatomical structures correctly during endoscopy procedures.                                                                                                                                                       |
| 22.06                         | Demonstrate appropriate tissue handling techniques, including the care of the <del>endoscopy</del> <u>endoscopic</u> specimens.                                                                                                              |
| 22.07                         | Describe the appropriate sequence for <del>common endoscopy</del> <u>endoscopic</u> procedures.                                                                                                                                              |
| 22.08                         | Utilize appropriate techniques to assist with facilitating visualization.                                                                                                                                                                    |

|                               |                                                                                                                                                                                                                                                                                          |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22.09                         | Demonstrate appropriate safe <del>endoscopy</del> <u>endoscopic</u> techniques when the case involves either thermal, radiological, laparoscopic, environmental, or other known endoscopy <del>hazard</del> <u>hazards</u> .                                                             |
| <del>22.10</del>              | <del>Select appropriate instruments, equipment and supplies for the procedure.</del>                                                                                                                                                                                                     |
| <del>22.11</del> <u>22.10</u> | Demonstrate competence <del>with technology including of</del> the <del>use of</del> <u>appropriate usage of endoscopic</u> instruments, equipment, and supplies <del>for the endoscopy procedure.</del>                                                                                 |
| <del>22.12</del> <u>22.11</u> | Assist the surgical team with postoperative care of the patient <del>to facilitate proper patient care.</del>                                                                                                                                                                            |
| <del>22.13</del> <u>22.12</u> | Demonstrate appropriate response to emergency situations, including respiratory/cardiac arrest situations, sudden hypoxia, hemorrhage, shock, endoscopy misadventures, contamination, perforation of <del>viscous</del> <u>viscus</u> or cavity, critical equipment failure, and injury. |
| <del>22.14</del>              | <del>Facilitate the continuity of care within the healthcare setting to access available resources and services.</del>                                                                                                                                                                   |
| 23.0                          | Demonstrate competencies in the <del>core</del> components of the <del>endoscopy</del> <u>endoscopic</u> technician related to legal and ethical responsibilities. The student will be able to:                                                                                          |
| 23.01                         | State methods, standards, and aids that assist an <del>Endoscopy Technician</del> <u>endoscopic technician</u> with interpreting and following legal responsibilities.                                                                                                                   |
| 23.02                         | Explain the job requirements <u>of an endoscopic technician</u> .                                                                                                                                                                                                                        |
| 23.03                         | Demonstrate an understanding of the legal, ethical, moral, and professional responsibilities of working as an <del>endoscopy</del> <u>endoscopic</u> technician, and the professional skills necessary to fulfill the role.                                                              |
| 23.04                         | Provide health care within the ethical/legal framework of the <u>endoscopic technician's</u> job description, including role responsibilities and limitations.                                                                                                                           |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

The Human Patient Simulator (HPS) or other accepted simulation scenarios may be used for a limited number of clinical hours. A low teacher-student ratio in the lab and clinical area is strongly recommended. The recommended maximum ratio is 1:8.

### Special Notes

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry: planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues, and health, safety, and environmental issues.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S., for more information on disqualification for a license, certificate, or registration through the Department of Health.

The Endoscopy Technician Core Curriculum should be taught by qualified staff, including but not limited to physicians, registered nurses, certified endoscopic technicians, and experienced endoscopic technicians.

Entering students who have successfully completed the program, Nursing Assistant, or currently Nationally Certified as a CNA (Certified Nursing Assistant), should be given appropriate advanced standing.

The CORE should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student organization organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral

part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Medical Clinical Laboratory Technician  
**Program Type:** ATD (Applied Technology Diploma)  
**Career Cluster:** Health Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The content includes but is not limited to didactic and laboratory performance of routine procedures in hematology, immunology, urinalysis, immunohematology, microbiology, and clinical chemistry, including the use of common laboratory instruments. A clinical component is a necessary element of this program.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is an Applied Technology Diploma (ATD) program that is part of a technical degree program, is less than 60 credit hours, and leads to employment in a specific occupation. An ATD program may consist of either technical credit or college credit. A public school district may offer an ATD program only as clock hour credit, with college credit awarded to a student upon articulation to a state college.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

### Regulated Programs

~~This program is regulated by the Florida Board of Clinical Laboratory Personnel:~~ <http://floridasclinicalabs.gov/>

### Clock Hour Program

When offered at the district level, this program is a planned sequence of instruction consisting of 3 occupational completion points and the courses as shown below.

| OCP | Course Number | Course Title                                                               | Length    |
|-----|---------------|----------------------------------------------------------------------------|-----------|
| A   | HSC0003       | Basic Healthcare Worker                                                    | 90 hours  |
| B   | MEA0520       | Phlebotomist                                                               | 75 hours  |
| C   | MLT0009       | Introduction to Medical <del>laboratory</del> <u>Laboratory</u> Technology | 90 hours  |
|     | MLT0220       | Urinalysis and Body Fluids                                                 | 135 hours |
|     | MLT0335       | Hematology and Hemostasis                                                  | 280 hours |
|     | MLT0505       | Immunology                                                                 | 60 hours  |
|     | MLT0640       | Clinical Chemistry                                                         | 255 hours |
|     | MLT0520       | Immunochemistry                                                            | 255 hours |
|     | MLT0450       | Microbiology and Parasitology                                              | 275 hours |

### **College Credit Program**

When offered at the college credit level, this ATD program is part of the Medical Laboratory Technology AS program (1351100405) and has a program length of 40 credits.

### Regulated Programs

This program is regulated by the Florida Board of Clinical Laboratory Personnel: <http://floridasclinicallabs.gov/>

## Florida's Career Readiness Skills for CTE Programs

| <b><u>Employability Skills</u></b> |                                                                                                         |
|------------------------------------|---------------------------------------------------------------------------------------------------------|
| <b><u>01.0</u></b>                 | <b><u>Apply academic skills to workplace scenarios.</u></b>                                             |
| 01.01                              | <u>Use reading skills.</u>                                                                              |
| 01.02                              | <u>Use writing skills.</u>                                                                              |
| 01.03                              | <u>Use mathematical strategies and procedures.</u>                                                      |
| 01.04                              | <u>Use scientific principles and procedures.</u>                                                        |
| <b><u>02.0</u></b>                 | <b><u>Design a solution to an industry problem.</u></b>                                                 |
| 02.01                              | <u>Use critical thinking.</u>                                                                           |
| 02.02                              | <u>Use creativity.</u>                                                                                  |
| 02.03                              | <u>Make sound decisions.</u>                                                                            |
| 02.04                              | <u>Solve problems.</u>                                                                                  |
| 02.05                              | <u>Reason.</u>                                                                                          |
| 02.06                              | <u>Plan and organize.</u>                                                                               |
| <b><u>03.0</u></b>                 | <b><u>Manage resources within an industry project</u></b>                                               |
| 03.01                              | <u>Manage time.</u>                                                                                     |
| 03.02                              | <u>Manage money or resources.</u>                                                                       |
| 03.03                              | <u>Manage materials.</u>                                                                                |
| 03.04                              | <u>Manage personnel.</u>                                                                                |
| <b><u>04.0</u></b>                 | <b><u>Oversee the subcomponents, operations and output of a technical or organizational system.</u></b> |
| 04.01                              | <u>Manage systems.</u>                                                                                  |
| 04.02                              | <u>Monitor systems.</u>                                                                                 |
| 04.03                              | <u>Improve systems.</u>                                                                                 |
| <b><u>05.0</u></b>                 | <b><u>Use information for decision making.</u></b>                                                      |
| 05.01                              | <u>Locate information.</u>                                                                              |
| 05.02                              | <u>Organize information.</u>                                                                            |

|                                                                                                 |

| <a href="#"><u>12.03 Develop a networking plan for a specific industry of interest.</u></a>                                                  |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of ~~blood-borne~~ bloodborne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate accepted professional, communication, and interpersonal skills.
- 13.0 Discuss phlebotomy in relation to the ~~health-care~~ healthcare setting.
- 14.0 Identify the anatomic structure and function of body systems in relation to services performed by the phlebotomist.
- 15.0 Recognize and identify collection reagents supplies, equipment, and interfering chemical substances.
- 16.0 Demonstrate skills and knowledge necessary to perform phlebotomy.
- 17.0 Practice infection control following standard precautions.
- 18.0 Practice accepted procedures of transporting, accessioning, and processing specimens.
- 19.0 Practice quality assurance and safety.
- 20.0 Demonstrate knowledge and use of basic laboratory equipment and techniques.
- 21.0 Demonstrate basic knowledge of and perform clinical laboratory Point of Care (POC) testing (Waived).
- 22.0 Demonstrate basic knowledge of and perform Point-of-Care (POC) Testing using CLIA-approved ~~Waived~~ waived instrumentation.
- 23.0 Discuss the general responsibilities and functions encountered by a medical laboratory technician.
- 24.0 Apply quality assurance principles and ~~safety~~ protocols for laboratory equipment.
- 25.0 Demonstrate knowledge of the operation of computer systems.
- 26.0 Demonstrate an understanding of the basic principles of molecular diagnostics.
- 27.0 Demonstrate knowledge of urinalysis and body fluids principles and procedures.
- 28.0 Demonstrate knowledge of hematological principles and procedures.
- 29.0 Demonstrate knowledge of hemostasis and related diagnostic principles and procedures.
- 30.0 Demonstrate knowledge of immunology principles and procedures.
- 31.0 Demonstrate knowledge of clinical chemistry principles and procedures.
- 32.0 Demonstrate knowledge of immunohematology principles and procedures.
- 33.0 Demonstrate knowledge of microbiological principles and procedures.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Medical Clinical Laboratory Technician-ATD  
**Clock Hour Program Number:** H170600

When this program is offered at the district level, the following organization of courses, standards, and benchmarks apply.

The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Clock Hour Program health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**Course Number: HSC0003**  
**Occupational Completion Point: A**  
**Basic Healthcare Worker – 90 Hours**

To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

**Course Number: MEA0520**  
**Occupational Completion Point: B**  
**Phlebotomist – 75 Hours**

- |                        |                                                                                                                                                                    |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.0                   | Demonstrate accepted professional, communication, and interpersonal skills. -The student will be able to:                                                          |
| 12.01                  | Demonstrate the appropriate professional behavior of a phlebotomist <a href="#">and describe the scope of practice (job skills and duties) for a phlebotomist.</a> |
| 12.02                  | Explain to the patient the procedure to be used in specimen collection.                                                                                            |
| 12.03                  | Explain in detail the importance of identifying patients correctly when drawing blood.                                                                             |
| <del>12.04</del>       | <del>Describe the scope of practice (job skills and duties) for a phlebotomist.</del>                                                                              |
| <del>12.05</del>       | <del>List and describe professional organizations that provide accreditation for phlebotomy programs and provide certifications for phlebotomists.</del>           |
| <del>12.06</del> 12.04 | Explain the importance of continuing education in relation to certification to maintain competency and skills.                                                     |
| 13.0                   | Discuss phlebotomy in relation to the <del>health care</del> <a href="#">healthcare</a> setting. -The student will be able to:                                     |

|       |                                                                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.01 | List, classify, and discuss various departments and services within the health care setting in which the phlebotomist must interact with to obtain laboratory specimens from patients.             |
| 13.02 | Identify the major departments/sections with the clinical laboratory, the major types of procedures run in each department/section, and their specimen requirements.                               |
| 13.03 | Describe roles of the major classifications of clinical laboratory personnel (i.e., pathologist, chief/administrative technologist, CLS, MLS, MLT, MT, phlebotomist, lab assistant, etc.).         |
| 14.0  | Identify the anatomic structure and function of body systems in relation to services performed by <u>the</u> phlebotomist. -The student will be able to:                                           |
| 14.01 | Describe and define major body systems with emphasis on the circulatory system.                                                                                                                    |
| 14.02 | List and describe the main superficial veins used in performing venipuncture.                                                                                                                      |
| 14.03 | -Locate the most appropriate sites(s) for capillary and venipuncture.                                                                                                                              |
| 14.04 | Describe the function of the following blood components: erythrocytes, thrombocytes, leukocytes, and plasma.                                                                                       |
| 14.05 | Compare and contrast <del>between</del> serum and plasma as <del>it relates</del> <u>they relate</u> to blood collection.                                                                          |
| 14.06 | Discuss hemostasis, <u>hemolysis, and methods of prevention</u> as <del>it relates</del> <u>they relate</u> to blood collection.                                                                   |
| 15.0  | Recognize and identify collection reagents supplies, equipment, and interfering chemical substances. -The student will be able to:                                                                 |
| 15.01 | Identify and discuss proper use of appropriate types of equipment needed to collect various clinical laboratory blood specimens by venipuncture.                                                   |
| 15.02 | Explain the special precautions and types of equipment needed to collect blood from the pediatric patient.                                                                                         |
| 15.03 | Identify and discuss proper use of supplies used in collecting <del>micro-short-draw</del> specimens <u>or difficult draws</u> .                                                                   |
| 15.04 | Identify and discuss the proper use of the various types of anticoagulants, preservatives, and gels used in blood collection and the vacuum tube color-codes for these additives.                  |
| 15.05 | Describe the types of <del>patient's</del> specimens that are analyzed in the clinical laboratory and the phlebotomist's role in collecting and/or transporting these specimens to the laboratory. |
| 15.06 | Describe substances potentially encountered during phlebotomy <del>which</del> <u>that</u> can interfere in <u>the</u> analysis of blood constituents.                                             |
| 15.07 | Define and utilize correct medical terminology and metric measurement needed for specimen collection.                                                                                              |
| 16.0  | Demonstrate skills and knowledge necessary to perform phlebotomy. -The student will be able to:                                                                                                    |
| 16.01 | Follow approved procedure for completing a laboratory requisition form: <u>and recognize a properly completed form.</u>                                                                            |
| 16.02 | <del>Recognize a properly completed requisition and apply established protocol for patient and specimen identification for transport to a reference lab.</del>                                     |

|                        |                                                                                                                                                                                                                                                                                                                                     |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>16.03</del> 16.02 | Demonstrate knowledge of established protocol for patient and specimen identification.                                                                                                                                                                                                                                              |
| <del>16.04</del> 16.03 | Discuss appropriate methods for facilitating and preparing the patient for capillary and venipuncture collection.                                                                                                                                                                                                                   |
| <del>16.05</del> 16.04 | List appropriate antiseptic agents useful in preparing sites for capillary and venipuncture <u>for adult and pediatric patients</u> .                                                                                                                                                                                               |
| <del>16.06</del> 16.05 | Perform venipuncture by evacuated tube, butterfly, and syringe systems, demonstrating <del>appropriated</del> <u>appropriate</u> use of supplies, proper handling of equipment and specimens, and appropriate patient care.                                                                                                         |
| <del>16.07</del> 16.06 | Describe the correct order of draw <del>according to CLSI guidelines</del> .                                                                                                                                                                                                                                                        |
| <del>16.08</del> 16.07 | Describe the use of barcoding systems used for specimen <del>collection</del> <u>identification</u> .                                                                                                                                                                                                                               |
| <del>16.09</del> 16.08 | Convey an understanding of capillary puncture using appropriate supplies and techniques for <del>both adults</del> <u>adult</u> and pediatric patients.                                                                                                                                                                             |
| <del>16.10</del> 16.09 | Describe the most common complications associated with capillary and venipuncture, their causes, prevention, and treatment.                                                                                                                                                                                                         |
| <del>16.11</del> 16.10 | Recognize and respond to possible adverse patient reactions such as allergies, convulsions, syncope, <u>lightheadedness</u> , <u>vomiting</u> , and <del>light headedness</del> <u>nerve involvement</u> .                                                                                                                          |
| <del>16.12</del> 16.11 | Perform appropriate procedures for disposing of used or contaminated capillary and venipuncture supplies.                                                                                                                                                                                                                           |
| 16.12                  | <u>Perform appropriate techniques for making a peripheral blood smear for hematologic evaluation.</u>                                                                                                                                                                                                                               |
| 16.13                  | Demonstrate the proper procedure for collecting blood cultures.                                                                                                                                                                                                                                                                     |
| <del>16.14</del>       | <del>Discuss the effects of hemolysis and methods of prevention.</del>                                                                                                                                                                                                                                                              |
| <del>16.15</del> 16.14 | Demonstrate a working understanding of how <u>the</u> age and weight of patients <del>impacts</del> <u>impact</u> the maximum amount of blood that can be safely drawn.                                                                                                                                                             |
| 17.0                   | Practice infection control following standard precautions. -The student will be able to:                                                                                                                                                                                                                                            |
| 17.01                  | Define the term <u>"hospital-acquired infection".</u>                                                                                                                                                                                                                                                                               |
| 17.02                  | <del>Describe</del> <u>Demonstrate</u> and practice procedures for infection <del>in</del> <u>prevention, including</u> hand washing skills.                                                                                                                                                                                        |
| 17.03                  | Discuss transmission-based precautions.                                                                                                                                                                                                                                                                                             |
| 17.04                  | Identify potential routes of infection and their complications.                                                                                                                                                                                                                                                                     |
| 18.0                   | Practice accepted procedures of transporting, accessioning, and processing specimens. -The student will be able to:                                                                                                                                                                                                                 |
| 18.01                  | <u>Instruct patients in the proper collection of urine (clean catch, mid-stream), sputum, and stool samples.</u> <del>Follow the approved procedure for preparation and processing (e.g., centrifugation, separation, aliquoting, labeling, and storage) of serum, plasma, urine, sputum, stool, and wound culture specimens.</del> |

|       |                                                                                                                                                                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18.02 | <u>Follow the approved procedure for preparation and processing (e.g., centrifugation, separation, aliquoting, labeling, and storage) of serum, plasma, urine, sputum, stool, and wound culture specimens.</u> <del>Demonstrate knowledge of accessioning procedures.</del> |
| 18.03 | Describe the <del>significance</del> <u>importance</u> of time <del>constraints</del> <u>considerations</u> for specimen collection, transporting, and delivery.                                                                                                            |
| 18.04 | <del>-</del> Describe routine procedures for transporting and processing specimens, including DOT packaging requirements.                                                                                                                                                   |
| 19.0  | Practice quality assurance and safety. <del>-</del> The student will be able to:                                                                                                                                                                                            |
| 19.01 | Distinguish and perform procedures <del>which</del> <u>that</u> ensure <u>the</u> reliability of test results when collecting blood specimens.                                                                                                                              |
| 19.02 | Practice appropriate patient safety.                                                                                                                                                                                                                                        |
| 19.03 | Practice safety in accordance with OSHA (State & Federal guidelines) for chemical, biological, and PPE established procedures, including proper disposal of sharps <del>-</del> <u>and biohazardous materials.</u>                                                          |
| 19.04 | Follow documentation procedures for work <del>-</del> related accidents.                                                                                                                                                                                                    |
| 19.05 | Implement appropriate Joint Commission patient safety goals and other accrediting/regulatory agency guidelines.                                                                                                                                                             |

**Course Number: MLT0009**  
**Occupational Completion Point: C**  
**Introduction to Medical Laboratory Technology – 90 Hours**

|       |                                                                                                                                                                               |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20.0  | Demonstrate knowledge and use of basic laboratory equipment and techniques. <del>-</del> The student will be able to:                                                         |
| 20.01 | Identify the parts of the microscope and explain the function of each.                                                                                                        |
| 20.02 | Demonstrate the proper technique for <del>operation</del> <u>use</u> of the microscope.                                                                                       |
| 20.03 | Demonstrate use of standard laboratory equipment, including <del>glassware, pipettes</del> <u>pipetting skills</u> and <del>centrifuge</del> <u>preventative maintenance.</u> |
| 20.04 | Perform basic laboratory math calculations, <u>including serial dilutions and making solutions.</u>                                                                           |
| 20.05 | Understand the principles of quality assurance to correct problems encountered in monitoring daily quality control.                                                           |
| 20.06 | Evaluate laboratory findings to confirm results according to standard operating procedure <u>and best laboratory practices.</u>                                               |
| 20.07 | Demonstrate knowledge of principles and operation of <u>basic</u> laboratory instruments.                                                                                     |
| 21.0  | Demonstrate basic knowledge of and perform clinical laboratory Point <del>-</del> of <del>-</del> Care (POC) testing (Waived). <del>-</del> The student will be able to:      |

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21.01                  | Demonstrate the ability to interpret instructions of point-of-care testing, including, but not limited to, the following: <ul style="list-style-type: none"> <li>• Test principle</li> <li>• Storage and Stability</li> <li>• Internal vs. External Quality Control</li> <li>• Specimen collection and preparation</li> <li>• Directions for use</li> <li>• Interpretation of results</li> <li>• Interfering substances</li> </ul> |
| <del>21.01</del> 21.02 | <del>Explain the purpose of lot to lot correlations.</del> <u>Demonstrate and discuss knowledge of lot numbers use and importance regarding both kits and reagents.</u>                                                                                                                                                                                                                                                            |
| 21.02                  | Demonstrate knowledge of the frequency in <del>which performing</del> quality control procedures <del>should be performed</del> .                                                                                                                                                                                                                                                                                                  |
| <del>21.03</del> 21.02 | <del>Understand the</del> <u>Clinical Laboratory Improvement Amendments (CLIA 88)</u> classification of laboratory testing into waived, moderate, and highly complex, including the personnel qualified to perform each.                                                                                                                                                                                                           |
| 22.0                   | Demonstrate basic knowledge of and perform Point-of-Care (POC) Testing using CLIA-approved <del>Waived</del> <u>waived</u> instrumentation. The student will be able to:                                                                                                                                                                                                                                                           |
| 22.01                  | Demonstrate and perform POC testing specific to microbiology, hematology, urinalysis, and clinical chemistry.                                                                                                                                                                                                                                                                                                                      |
| 22.02                  | Perform instrument maintenance.                                                                                                                                                                                                                                                                                                                                                                                                    |
| 22.03                  | Demonstrate knowledge of quality control and calibrations involved <del>within</del> <u>with</u> the POC instruments.                                                                                                                                                                                                                                                                                                              |
| 22.04                  | Identify normal limits and associate abnormal results with disease or disorders.                                                                                                                                                                                                                                                                                                                                                   |
| 22.05                  | Discuss the significance of reporting critical values as it applies to <del>Point-of-Care</del> <u>POC</u> testing <u>as soon as possible</u> .                                                                                                                                                                                                                                                                                    |
| 23.0                   | Discuss the general responsibilities and functions encountered by a medical <u>laboratory</u> technician. <del>The students</del> will be able to:                                                                                                                                                                                                                                                                                 |
| 23.01                  | Ask appropriate scientific questions and recognize what is involved in experimental approaches to the solutions of such questions.                                                                                                                                                                                                                                                                                                 |
| 23.02                  | Communicate laboratory results to healthcare professionals.                                                                                                                                                                                                                                                                                                                                                                        |
| 23.03                  | Demonstrate ability to evaluate laboratory results <u>under the supervision of a medical laboratory scientist</u> .                                                                                                                                                                                                                                                                                                                |
| 23.04                  | Demonstrate ability to report laboratory results in written or oral form <u>under the supervision of a medical laboratory scientist</u> .                                                                                                                                                                                                                                                                                          |
| 23.05                  | <del>Discuss the</del> <u>List</u> licensure and certification requirements of the major classifications of clinical laboratory personnel.                                                                                                                                                                                                                                                                                         |
| 24.0                   | Apply quality assurance principles and <del>safety</del> protocols <del>for laboratory equipment</del> . The student will be able to:                                                                                                                                                                                                                                                                                              |
| 24.01                  | Assess specimen acceptability using standard operating procedure, including rejection/recollection criteria.                                                                                                                                                                                                                                                                                                                       |

|                                        |                                                                                                                                                              |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 24.02                                  | Describe procedures for transporting and processing specimens.                                                                                               |
| 24.03                                  | Describe <a href="#">the</a> clinical laboratory role in providing quality assurance in laboratory testing, reporting, and use and maintenance of equipment. |
| 24.04                                  | Understand the need for calibration of laboratory equipment.                                                                                                 |
| 24.05                                  | Demonstrate and record quality control procedures required for the tests performed and recognize unacceptable results.                                       |
| 24.06                                  | Report identified problems encountered in daily quality control according to standard operating procedures.                                                  |
| 24.07                                  | Comply with current <a href="#">Occupational Safety and Health Administration (OSHA)</a> regulations regarding laboratory hazards.                           |
| 25.0                                   | Demonstrate knowledge of the operation of computer systems. -The student will be able to:                                                                    |
| 25.01                                  | Discuss the role of computer systems in laboratory data management.                                                                                          |
| 25.02                                  | Demonstrate knowledge of common computer terminology.                                                                                                        |
| 25.03                                  | Demonstrate entry-level computer operations for specimen accessioning, data reporting, and quality control recording.                                        |
| 25.04                                  | Demonstrate entry-level operational skills in the use of computer-interfaced analytical instrumentation.                                                     |
| 26.0                                   | Demonstrate an understanding of the basic principles of molecular diagnostics. -The student will be able to:                                                 |
| 26.01                                  | Discuss the principles and major steps of the polymerase chain reaction (PCR).                                                                               |
| <del>26.02</del>                       | <del>Label the organelles and important parts of a eukaryotic animal cell.</del>                                                                             |
| <del>26.03</del>                       | <del>Describe the function of the organelles and important parts of a eukaryotic animal cell.</del>                                                          |
| <del>26.04</del> <a href="#">26.02</a> | Discuss the structure, function, and components of DNA and RNA.                                                                                              |
| <del>26.05</del> <a href="#">26.03</a> | Define the key terms of molecular diagnostics.                                                                                                               |
| <del>26.06</del> <a href="#">26.04</a> | <del>Understand</del> <a href="#">List and describe</a> the principles of <a href="#">DNA, RNA, and</a> molecular diagnostic testing.                        |
| <del>26.07</del> <a href="#">26.05</a> | <del>Compare the advantages and disadvantages of molecular techniques over traditional diagnostic tests for infectious diseases.</del>                       |
| <del>26.08</del>                       | <del>List molecular tests associated with the identification of microorganisms.</del>                                                                        |
| <del>26.09</del> <a href="#">26.06</a> | <del>Identify the types of samples appropriate for molecular diagnostics.</del>                                                                              |
| <a href="#">26.07</a>                  | <a href="#">Discuss the ethical impact of genetic technologies.</a>                                                                                          |
| <a href="#">26.08</a>                  | <a href="#">Outline requirements for reducing contamination in a molecular lab.</a>                                                                          |

26.09 Discuss nucleic acid probes and their role in clinical laboratory diagnostics.

**Course Number: MLT0220**  
**Occupational Completion Point: C**  
**Urinalysis and Body Fluids – 135 Hours**

27.0 Demonstrate knowledge of urinalysis and body fluids principles and procedures. -The student will be able to:

27.01 Identify the components of the urinary system and explain their functions.

27.02 Discuss diseases affecting the urinary system.

27.03 Describe collection, transport, and storage procedures for random and timed urine specimens.

27.04 Discuss specific gravity techniques; ~~calibration and use of the refractometer.~~

27.05 Perform ~~dipstick or tablet (non-automated)~~ urinalysis techniques for chemical exam of the urine and interpret results.

27.06 Demonstrate the proper use of automated ~~urinalysis~~ urinalysis analyzers.

27.07 Describe renal function tests.

27.08 Describe principles of and perform routine physical and chemical analyses on urine.

27.09 Prepare urine sediments and perform identification and quantitation of microscopic formed elements.

27.10 Correlate abnormal physical, chemical, and microscopic urine results with associated pathological conditions.

27.11 Differentiate between transudates and exudates.

~~27.12 Discuss miscellaneous body fluids to include cerebral spinal, serous, seminal and joint fluids.~~

~~27.13~~ 27.12 Perform physical, chemical, and microscopic evaluations of common body fluids.

**Course Number: MLT0335:**  
**Occupational Completion Point: C**  
**Hematology and Hemostasis – 280 Hours**

28.0 Demonstrate knowledge of hematological principles and procedures. -The student will be able to:

28.01 Discuss the organs, cells, and cellular ~~interaction~~ interactions of the lymphoid, myeloid, and reticuloendothelial systems.

|       |                                                                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.02 | Demonstrate an understanding of basic concepts of hematopoiesis.                                                                                                                      |
| 28.03 | Identify the components of blood.                                                                                                                                                     |
| 28.04 | Discuss the function of formed elements of blood.                                                                                                                                     |
| 28.05 | Demonstrate an understanding of the synthesis of normal and abnormal molecular structure of hemoglobin, common hemoglobinopathies, and associated tests.                              |
| 28.06 | Describe normal hemoglobin-oxygen function using the Oxygen Dissociation Curve (ODC).                                                                                                 |
| 28.07 | Discuss assessment and impact of preanalytical, analytical, and post-analytical factors on hematology testing.                                                                        |
| 28.08 | Calculate red blood cell indices.                                                                                                                                                     |
| 28.09 | Discuss selected cytochemical staining and <del>flow cytometry</del> flow cytometry procedures.                                                                                       |
| 28.10 | Evaluate red blood cell morphology.                                                                                                                                                   |
| 28.11 | State the review process of histogram/scatterplot/scattergram analysis.                                                                                                               |
| 28.12 | Describe the categories used in a morphological classification of anemias.                                                                                                            |
| 28.13 | Correlate complete blood cell results with a peripheral exam of blood smear.                                                                                                          |
| 28.14 | List the white blood cell maturation sequence and identify distinguishing morphology for the stages of developing white blood cells.                                                  |
| 28.15 | Discuss normal and abnormal hematology findings, reference ranges, and associated diseases.                                                                                           |
| 28.16 | Demonstrate an understanding of normal and abnormal white cell morphology, related disease states, and associated tests.                                                              |
| 28.17 | Discuss the principles of and perform routine hematology procedures, applying quality control procedures, as necessary.                                                               |
| 28.18 | Perform commonly used methods to evaluate leukocytes, correlate, and verify automated cell counts with established criteria.                                                          |
| 28.19 | Identify characteristic findings of nonmalignant leukocytic disorders, (e.g., shift to the left, toxic granulation, Döhle bodies, etc.).                                              |
| 28.20 | Perform techniques of manual blood smear evaluation, including white blood cell differential, red cell, and platelet morphology.                                                      |
| 28.21 | Correlate peripheral blood evaluation with automated cell analysis.                                                                                                                   |
| 28.22 | Perform platelet and white blood cell counts on <del>patient and control</del> specimens using manual and automated techniques, diluents, and correlate counts with peripheral smear. |
| 29.0  | Demonstrate knowledge of hemostasis and related diagnostic principles and procedures. -The student will be able to:                                                                   |

- 29.01 Discuss and define the mechanisms of hemostasis, including bleeding and clotting.
- 29.02 Discuss common coagulopathies and associated treatments.
- 29.03 Discuss assessment and impact of preanalytical factors on hemostasis testing.
- 29.04 Describe the principles of and perform routine testing used in the evaluation of primary and secondary hemostasis.
- [29.05 Demonstrate use of hemostasis laboratory equipment.](#)
- ~~29.05~~[29.06](#) Discuss additional hemostasis tests performed to differentiate the cause of abnormal routine tests.

**Course Number: MLT0505**  
**Occupational Completion Point: C**  
**Immunology – 60 Hours**

- 30.0 Demonstrate knowledge of immunology principles and procedures. -The student will be able to:
- 30.01 Discuss the functions of the cells of the immune system, cytokines, and regulatory molecules.
- 30.02 Discuss physical and chemical properties of immunogens (antigens), immunoglobulins (antibodies), and complement.
- 30.03 Compare and contrast the principles of basic agglutination, flocculation, and precipitation procedures in immunology/serology.
- 30.04 Perform basic procedures in immunology/serology.
- 30.05 Discuss principles of serum protein electrophoresis and immunofixation.
- 30.06 Discuss the clinical significance of the commonly performed immunological tests.
- 30.07 Discuss selected serological tests ~~such as immuneassays.~~

**Course Number: MLT0640**  
**Occupational Completion Point: C**  
**Clinical Chemistry – 255 Hours**

- 31.0 Demonstrate knowledge of clinical chemistry principles and procedures. -The student will be able to:
- 31.01 -Identify the chemistry analytes used to evaluate various organ ~~function~~[functions](#).
- ~~31.02 Discuss the renal system and related analytes.~~

|                                                                                                                 |                                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| <del>31.03</del> 31.02                                                                                          | Discuss principles of and perform common renal function tests.                                                                        |
| <del>31.04</del> 31.03                                                                                          | Discuss carbohydrate, protein, and lipid metabolism.                                                                                  |
| <del>31.05</del> 31.04                                                                                          | Discuss principles of and perform commonly ordered tests related to carbohydrate, protein, and lipid metabolism.                      |
| <del>31.06</del> 31.05                                                                                          | Discuss the liver and its functions and related analytes.                                                                             |
| <del>31.07</del> 31.06                                                                                          | Discuss principles of and perform commonly ordered liver function tests.                                                              |
| <del>31.08</del> 31.07                                                                                          | Discuss enzyme classification, origin, activity, and function.                                                                        |
| <del>31.09</del> 31.08                                                                                          | Discuss principles of and perform commonly ordered enzyme procedures.                                                                 |
| <del>31.10</del> 31.09                                                                                          | Discuss electrolyte balance as related to health and disease.                                                                         |
| <del>31.11</del> 31.10                                                                                          | Discuss principles of and perform electrolyte analyses.                                                                               |
| <del>31.12</del> 31.11                                                                                          | Discuss principles of and perform commonly ordered tests to evaluate cardiac function.                                                |
| <del>31.13</del> 31.12                                                                                          | Discuss the physiology of the endocrine system and the principal tests used to evaluate endocrine function.                           |
| <del>31.14</del> 31.13                                                                                          | Discuss the role of the laboratory in therapeutic drug monitoring and toxicology.                                                     |
| <del>31.15</del> 31.14                                                                                          | Discuss and perform general electrophoresis techniques.                                                                               |
| <del>31.16</del> 31.15                                                                                          | Discuss the clinical significance of commonly ordered clinical chemistry tests.                                                       |
| <del>31.17</del> 31.16                                                                                          | Demonstrate knowledge of principles of instrumentation as related to the clinical chemistry laboratory.                               |
| <del>31.18</del> 31.17                                                                                          | Discuss techniques of clinical chemistry related to the standardization of procedureprocedures and the use of standards and controls. |
| <del>31.19</del> 31.18                                                                                          | Discuss other techniques of clinical chemistry.                                                                                       |
| <del>31.20</del> 31.19                                                                                          | Discuss basic techniques of clinical chemistry related to normal and abnormal physiology.                                             |
| <b>Course Number: MLT0520</b><br><b>Occupational Completion Point: C</b><br><b>Immunohematology – 255 Hours</b> |                                                                                                                                       |
| 32.0                                                                                                            | Demonstrate knowledge of immunohematology principles and procedures. -The student will be able to:                                    |
| 32.01                                                                                                           | Discuss donor interviewinterviews, criteria for selection, phlebotomy preparation, and donor blood processing.                        |

|                                                                                                                              |                                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 32.02                                                                                                                        | Discuss blood component collection and, preparation, storage, and use.                                                                                                                  |
| 32.03                                                                                                                        | Describe the roles of <a href="#">the Federal Drug Administration (FDA)</a> , <a href="#">American Association of Blood Banks (AABB)</a> , and state agencies, and how to contact each. |
| 32.04                                                                                                                        | Compare <a href="#">the</a> advantages and disadvantages <del>for</del> <a href="#">of</a> autologous, versus homologous (allogenic) blood collection, and transfusion.                 |
| 32.05                                                                                                                        | Discuss basic genetics of the blood group antigens.                                                                                                                                     |
| 32.06                                                                                                                        | Discuss the ABO blood group systems testing procedures and recognize ABO discrepancies.                                                                                                 |
| 32.07                                                                                                                        | Describe required tests on recipient blood samples.                                                                                                                                     |
| 32.08                                                                                                                        | Discuss and differentiate other blood group systems such as Duffy, Kell, Kidd, S,s, Lu, and the common cold-reacting antibodies such as Le, P, I, M, and N.                             |
| 32.09                                                                                                                        | Perform Rh testing to determine Rh phenotypes.                                                                                                                                          |
| 32.10                                                                                                                        | Perform and interpret antibody screening.                                                                                                                                               |
| 32.11                                                                                                                        | Perform antibody identification tests to detect clinically significant antibodies.                                                                                                      |
| 32.12                                                                                                                        | Discuss the safety and determine <a href="#">the</a> compatibility of blood components for transfusion.                                                                                 |
| 32.13                                                                                                                        | Discuss and perform routine compatibility testing, including the immediate spin crossmatch and the electronic crossmatch.                                                               |
| 32.14                                                                                                                        | Discuss and perform phenotyping on recipient and donor specimens.                                                                                                                       |
| 32.15                                                                                                                        | Identify symptoms of the suspected transfusion reaction and the required laboratory work-up.                                                                                            |
| 32.16                                                                                                                        | Discuss immune hemolytic disorders and perform the direct antiglobulin test.                                                                                                            |
| 32.17                                                                                                                        | Discuss specialized techniques <a href="#">in immunohematology</a> .                                                                                                                    |
| 32.18                                                                                                                        | Perform quality control (QC) on reagents.                                                                                                                                               |
| 32.19                                                                                                                        | Describe the pathophysiology of hemolytic disease of the fetus and newborn.                                                                                                             |
| <b>Course Number: MLT0450</b><br><b>Occupational Completion Point: C</b><br><b>Microbiology and Parasitology – 275 Hours</b> |                                                                                                                                                                                         |
| 33.0                                                                                                                         | Demonstrate knowledge of microbiological principles and procedures. -The student will be able to:                                                                                       |
| 33.01                                                                                                                        | Discuss microbial taxonomy and nomenclature.                                                                                                                                            |

|       |                                                                                                                                                            |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 33.02 | Discuss bacterial metabolism, reproduction, cell structures, and their functions.                                                                          |
| 33.03 | Discuss classification, composition, and preparation of culture media.                                                                                     |
| 33.04 | Discuss the human pathogenesis of bacteria.                                                                                                                |
| 33.05 | Discuss and perform sterilization techniques.                                                                                                              |
| 33.06 | Perform culturing techniques for urine, stool, wound, respiratory, body fluids, and blood specimens.                                                       |
| 33.07 | Perform techniques of microbiology related to inoculation and transfer of cultures.                                                                        |
| 33.08 | Discuss the principles of Gram and <a href="#">Acid-Fast Bacilli (AFB)</a> stains.                                                                         |
| 33.09 | Accurately perform, read, and report <del>gram</del> <a href="#">Gram</a> stains.                                                                          |
| 33.10 | Perform techniques necessary for isolation and identification of aerobic <del>-and</del> , anaerobic, <a href="#">and facultative</a> bacterial organisms. |
| 33.11 | Identify commonly encountered aerobic bacteria through morphological, physical, and biochemical properties.                                                |
| 33.12 | Perform and interpret antimicrobial susceptibility tests.                                                                                                  |
| 33.13 | Discuss <a href="#">the</a> collection and handling of specimens for fungal, mycobacterial, and viral culture.                                             |
| 33.14 | Prepare and examine specimens, and identify ova and parasites when present.                                                                                |

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Medical Clinical Laboratory Technician - ATD  
**ATD CIP Number:** 0351100401

When this program is offered at the college level, the following standards and benchmarks apply:

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

| <b>Phlebotomy</b>      |                                                                                                                                                                                            |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.0                   | Demonstrate accepted professional, communication, and interpersonal skills. -The student will be able to:                                                                                  |
| 12.01                  | Demonstrate the appropriate professional behavior of a phlebotomist <a href="#">and describe the scope of practice (job skills and duties) for a phlebotomist.</a>                         |
| 12.02                  | Explain to the patient the procedure to be used in specimen collection.                                                                                                                    |
| 12.03                  | Explain in detail the importance of identifying patients correctly when drawing blood.                                                                                                     |
| <del>12.04</del>       | <del>Describe the scope of practice (job skills and duties) for a phlebotomist.</del>                                                                                                      |
| <del>12.05</del>       | <del>List and describe professional organizations that provide accreditation for phlebotomy programs and provide certification for phlebotomists.</del>                                    |
| <del>12.06</del> 12.04 | Explain the importance of continuing education in relation to certification to maintain competency and skills.                                                                             |
| 13.0                   | Discuss phlebotomy in relation to the <del>health care</del> <a href="#">healthcare</a> setting. -The student will be able to:                                                             |
| 13.01                  | List, classify, and discuss various departments and services within the health care setting in which the phlebotomist must interact with to obtain laboratory specimens from patients.     |
| 13.02                  | Identify the major departments/sections with the clinical laboratory, the major types of procedures run in each department/section, and their specimen requirements.                       |
| 13.03                  | Describe roles of the major classifications of clinical laboratory personnel (i.e., pathologist, chief/administrative technologist, CLS, MLS, MLT, MT, phlebotomist, lab assistant, etc.). |

|                               |                                                                                                                                                                                                                                           |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.0                          | Identify the anatomic structure and function of body systems in relation to services performed by <u>the</u> phlebotomist. The student will be able to:                                                                                   |
| 14.01                         | Describe and define major body systems with emphasis on the circulatory system.                                                                                                                                                           |
| 14.02                         | List and describe the main superficial veins used in performing venipuncture.                                                                                                                                                             |
| 14.03                         | Locate the most appropriate sites(s) for capillary and venipuncture.                                                                                                                                                                      |
| 14.04                         | Describe the function of the following blood components: erythrocytes, thrombocytes, leukocytes, and plasma.                                                                                                                              |
| 14.05                         | Compare and contrast <del>between</del> serum and plasma as <del>it relates</del> <u>they relate</u> to blood collection.                                                                                                                 |
| 14.06                         | Discuss hemostasis, <u>hemolysis, and methods of prevention</u> as <del>it relates</del> <u>they relate</u> to blood collection.                                                                                                          |
| 15.0                          | Recognize and identify collection reagents supplies, equipment, and interfering chemical substances. -The student will be able to:                                                                                                        |
| 15.01                         | Identify and discuss proper use of appropriate types of equipment needed to collect various clinical laboratory blood specimens by venipuncture.                                                                                          |
| 15.02                         | Explain the special precautions and types of equipment needed to collect blood from the pediatric patient.                                                                                                                                |
| 15.03                         | Identify and discuss proper use of supplies used in collecting <del>micro-short-draw</del> specimens <u>or difficult draws</u> .                                                                                                          |
| 15.04                         | Identify and discuss the proper use of the various types of anticoagulants, preservatives, and gels used in blood collection, and the vacuum tube color-codes for these additives.                                                        |
| 15.05                         | Describe the types of <del>patient's</del> specimens that are analyzed in the clinical laboratory and the phlebotomist's role in collecting and/or transporting these specimens to the laboratory.                                        |
| 15.06                         | Describe substances potentially encountered during phlebotomy <del>which</del> <u>that</u> can interfere in <u>the</u> analysis of blood constituents.                                                                                    |
| 15.07                         | Define and utilize correct medical terminology and metric measurement needed for specimen collection.                                                                                                                                     |
| 16.0                          | Demonstrate skills and knowledge necessary to perform phlebotomy. -The student will be able to:                                                                                                                                           |
| 16.01                         | Follow approved procedure for completing a laboratory requisition form- <u>and recognize a properly completed form.</u>                                                                                                                   |
| <del>16.02</del>              | <del>Recognize a properly completed requisition and apply established protocol for patient and specimen identification for transport to a reference lab.</del>                                                                            |
| <del>16.03</del> <u>16.02</u> | Demonstrate knowledge of established protocol for patient and specimen identification.                                                                                                                                                    |
| <del>16.04</del> <u>16.03</u> | Discuss appropriate methods for facilitating and preparing the patient for capillary and venipuncture collection.                                                                                                                         |
| <del>16.05</del> <u>16.04</u> | List appropriate antiseptic agents useful in preparing sites for capillary and venipuncture- <u>for adult and pediatric patients.</u>                                                                                                     |
| <del>16.06</del> <u>16.05</u> | <del>Know how to perform</del> <u>Perform</u> venipuncture by evacuated tube, butterfly, and syringe systems- <u>demonstrating appropriate use of supplies, proper handling of equipment and specimens, and appropriate patient care.</u> |

|                        |                                                                                                                                                                                                         |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>16.07</del> 16.06 | Describe the correct order of draw <del>according to CLSI guidelines.</del>                                                                                                                             |
| <del>16.08</del> 16.07 | Describe the use of barcoding systems used for positive patient identification and specimen identification.                                                                                             |
| <del>16.09</del> 16.08 | Convey an understanding of capillary puncture using appropriate supplies and techniques for <del>both adults</del> adult and pediatric patients.                                                        |
| <del>16.10</del> 16.09 | Describe the most common complications associated with capillary and venipuncture, their causes, prevention, and treatment.                                                                             |
| <del>16.11</del> 16.10 | Recognize and respond to possible adverse patient reactions such as allergies, convulsions, syncope, <u>lightheadedness</u> , <u>vomiting</u> , and <u>light headedness nerve involvement</u> .         |
| <del>16.12</del> 16.11 | Perform appropriate procedures for disposing of used or contaminated capillary and venipuncture supplies.                                                                                               |
| <del>16.13</del>       | <del>Perform appropriate techniques for making a peripheral blood smear for hematologic evaluation.</del>                                                                                               |
| <del>16.14</del> 16.12 | Demonstrate the proper procedure for collecting blood cultures.                                                                                                                                         |
| <del>16.15</del>       | <del>Discuss the effects of hemolysis and methods of prevention.</del>                                                                                                                                  |
| <del>16.16</del> 16.13 | Demonstrate a working understanding of how <u>the</u> age and weight of patients <del>impacts</del> <u>impact</u> the maximum amount of blood that can be safely drawn.                                 |
| 17.0                   | Practice infection control following standard precautions. -The student will be able to:                                                                                                                |
| 17.01                  | Define the term <del>"hospital-acquired infection".</del>                                                                                                                                               |
| 17.02                  | Demonstrate <del>proper</del> <u>and practice procedures for infection prevention, including</u> hand <del>hygiene</del> <u>washing skills</u> .                                                        |
| 17.03                  | <del>Comply with universal/standard</del> <u>Discuss transmission-based</u> precautions.                                                                                                                |
| 17.04                  | Identify potential routes of infection and their complications.                                                                                                                                         |
| 18.0                   | Practice accepted procedures of transporting, accessioning, and processing specimens. -The student will be able to:                                                                                     |
| <del>18.01</del>       | <u>Instruct patients in the proper collection of urine (clean catch, mid-stream), sputum, and stool samples.</u>                                                                                        |
| <del>18.01</del> 18.02 | Follow the approved procedure for preparation and processing (e.g., centrifugation, separation, aliquoting, labeling, and storage) of serum, plasma, urine, sputum, stool, and wound culture specimens. |
| <del>18.02</del>       | <del>Demonstrate knowledge of accessioning procedures.</del>                                                                                                                                            |
| 18.03                  | Describe the significance of time constraints for specimen collection, transporting, and delivery.                                                                                                      |
| 18.04                  | Describe routine procedures for transporting and processing specimens, including DOT packaging requirements.                                                                                            |
| 19.0                   | Practice <del>quality assurance</del> <u>laboratory</u> and <u>patient</u> safety. <del>procedures.</del> The student will be able to:                                                                  |

|                                      |                                                                                                                                                                                                                                                                        |
|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.01                                | Distinguish and perform procedures <del>which</del> <u>that</u> ensure <u>the</u> reliability of test results when collecting <del>blood</del> <u>laboratory</u> specimens.                                                                                            |
| 19.02                                | <del>Demonstrate knowledge of and practice</del> <u>Practice</u> appropriate patient safety.                                                                                                                                                                           |
| 19.03                                | Practice safety in accordance with OSHA (State & Federal guidelines) for chemical, biological, and PPE established procedures, including proper disposal of sharps, <u>and biohazardous materials.</u>                                                                 |
| 19.04                                | Follow documentation procedures for work- <u>related</u> accidents.                                                                                                                                                                                                    |
| 19.05                                | <del>Understand</del> <u>Implement appropriate</u> Joint Commission patient safety goals and other accrediting/regulatory agency guidelines.                                                                                                                           |
| <b>Medical Laboratory Technician</b> |                                                                                                                                                                                                                                                                        |
| 20.0                                 | Demonstrate knowledge and use of basic laboratory equipment and techniques. -The student will be able to:                                                                                                                                                              |
| 20.01                                | Identify the parts of the microscope and explain the function of each.                                                                                                                                                                                                 |
| 20.02                                | Demonstrate the proper technique for <del>operation</del> <u>use</u> of the microscope.                                                                                                                                                                                |
| 20.03                                | Demonstrate use of standard laboratory equipment, including <del>glassware, pipettes</del> <u>pipetting skills</u> and <del>centrifuge</del> <u>preventative maintenance.</u>                                                                                          |
| 20.04                                | Perform basic laboratory math calculations, <u>including serial dilutions and making solutions.</u>                                                                                                                                                                    |
| 20.05                                | Understand the principles of quality assurance to correct problems encountered in monitoring daily quality control.                                                                                                                                                    |
| 20.06                                | Evaluate laboratory findings to confirm results according to standard operating procedure <u>and best laboratory practices.</u>                                                                                                                                        |
| 20.07                                | Demonstrate knowledge of principles and operation of <u>basic</u> laboratory instruments.                                                                                                                                                                              |
| 21.0                                 | Demonstrate basic knowledge of and perform clinical laboratory Point of Care (POC) testing (Waived). -The student will be able to                                                                                                                                      |
| 21.01                                | Demonstrate the ability to interpret instructions of point of care testing, including, but not limited to the following:                                                                                                                                               |
|                                      | <ul style="list-style-type: none"> <li>• Test principle</li> <li>• Storage and Stability</li> <li>• Internal vs. External Quality Control</li> <li>• Specimen collection and preparation</li> <li>• Directions for use</li> <li>• Interpretation of results</li> </ul> |

|       |                                                                                                                                                                                                               |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | • Interfering substances                                                                                                                                                                                      |
| 21.02 | <del>Explain the purpose of performing lot to lot correlations.</del> <u>Demonstrate and discuss knowledge of lot numbers and their importance in regard to both kits and reagents.</u>                       |
| 21.03 | Demonstrate knowledge of the frequency in <del>which performing</del> <u>quality control procedures</u> <del>should be performed.</del>                                                                       |
| 21.04 | Understand the <u>Clinical Laboratory Improvement Amendments (CLIA)</u> 88 classification of laboratory testing into waived, moderate, and highly complex, including the personnel qualified to perform each. |
| 22.0  | Demonstrate basic knowledge of and perform Point of Care (POC) Testing using CLIA approved <del>Waived</del> <u>waived</u> instrumentation. -The student will be able to:                                     |
| 22.01 | Demonstrate and perform POC testing specific to microbiology, hematology, urinalysis, and clinical chemistry.                                                                                                 |
| 22.02 | Perform instrument maintenance.                                                                                                                                                                               |
| 22.03 | Demonstrate knowledge of quality control and calibrations involved <del>within</del> <u>with</u> the POC instruments.                                                                                         |
| 22.04 | Identify normal limits and associate abnormal results with disease or disorders.                                                                                                                              |
| 22.05 | Discuss the significance of reporting critical values as it applies to <del>Point of Care</del> <u>POC</u> testing <u>as soon as possible</u> .                                                               |
| 23.0  | Discuss the general responsibilities and functions encountered by a medical <u>laboratory</u> technician. -The students will be able to:                                                                      |
| 23.01 | Ask appropriate scientific questions and recognize what is involved in experimental approaches to the solutions of such questions.                                                                            |
| 23.02 | Communicate laboratory results to healthcare professionals.                                                                                                                                                   |
| 23.03 | Demonstrate ability to evaluate laboratory results <u>under the supervision of a medical laboratory scientist</u> .                                                                                           |
| 23.04 | Demonstrate ability to report laboratory results in written or oral form <u>under the supervision of a medical laboratory scientist</u> .                                                                     |
| 23.05 | <del>Discuss the</del> <u>List</u> licensure and certification requirements of the major classifications of clinical laboratory personnel.                                                                    |
| 24.0  | Apply quality assurance principles and <del>safety</del> protocols. <del>for laboratory equipment.</del> The student will be able to:                                                                         |
| 24.01 | Assess specimen acceptability using standard operating procedure, including rejection/recollection criteria.                                                                                                  |
| 24.02 | Describe procedures for transporting and processing specimens.                                                                                                                                                |
| 24.03 | Describe <u>the</u> clinical laboratory role in providing quality assurance in laboratory testing, reporting, and <u>the</u> use and maintenance of equipment.                                                |
| 24.04 | Understand the need for calibration of laboratory equipment.                                                                                                                                                  |
| 24.05 | Demonstrate and record quality control procedures required for the tests performed and recognize unacceptable results.                                                                                        |

|                        |                                                                                                                                    |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| 24.06                  | Report identified problems encountered in daily quality control according to standard operating procedures.                        |
| 24.07                  | Comply with current <a href="#">Occupational Safety and Health Administration (OSHA)</a> regulations regarding laboratory hazards. |
| 25.0                   | Demonstrate knowledge of the operation of computer systems. -The student will be able to:                                          |
| 25.01                  | Discuss the role of computer systems in laboratory data management.                                                                |
| 25.02                  | Demonstrate knowledge of common computer terminology.                                                                              |
| 25.03                  | Demonstrate entry-level computer operations for specimen accessioning, data reporting, and quality control recording.              |
| 25.04                  | Demonstrate entry-level operational skills in the use of computer-interfaced analytical instrumentation.                           |
| 26.0                   | Demonstrate an understanding of the basic principles of molecular diagnostics. -The student will be able to:                       |
| 26.01                  | Discuss the principles and major steps of the polymerase chain reaction (PCR).                                                     |
| <del>26.02</del>       | <del>Label the organelles and important parts of a eukaryotic animal cell.</del>                                                   |
| <del>26.03</del>       | <del>Describe the function of the organelles and important parts of a eukaryotic animal cell.</del>                                |
| <del>26.04</del> 26.02 | Discuss the structure, function, and components of DNA and RNA.                                                                    |
| <del>26.05</del> 26.03 | Define the key terms of molecular diagnostics.                                                                                     |
| <del>26.06</del> 26.04 | <del>Understand</del> List and describe the principles of <a href="#">DNA, RNA, and</a> molecular diagnostic testing.              |
| <del>26.07</del> 26.05 | Compare the advantages and disadvantages of molecular techniques over traditional diagnostic tests for infectious diseases.        |
| <del>26.08</del>       | <del>List molecular tests associated with the identification of microorganisms.</del>                                              |
| <del>26.09</del> 26.06 | Identify the types of samples appropriate for molecular diagnostics.                                                               |
| <del>26.10</del> 26.07 | Discuss the ethical impact of genetic technologies.                                                                                |
| <del>26.11</del> 26.08 | Outline requirements for reducing contamination in a molecular lab.                                                                |
| <del>26.12</del> 26.09 | Discuss nucleic acid probes and their role in clinical laboratory diagnostics.                                                     |
| 27.0                   | Demonstrate knowledge of urinalysis and body fluids principles and procedures. -The student will be able to:                       |
| 27.01                  | Identify the components of the urinary system and explain their functions.                                                         |
| 27.02                  | Discuss diseases affecting the urinary system.                                                                                     |

|                        |                                                                                                                                                          |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27.03                  | Describe collection, transport, and storage procedures for random and timed urine specimens.                                                             |
| 27.04                  | Discuss specific gravity techniques; <del>calibration and use of the refractometer.</del>                                                                |
| 27.05                  | Perform <del>dipstick or tablet (non-automated)</del> urinalysis techniques for chemical exam of the urine and interpret results.                        |
| 27.06                  | Demonstrate the proper use of automated <del>urinalysise</del> <u>urinalysis</u> analyzers.                                                              |
| 27.07                  | Describe renal function tests.                                                                                                                           |
| 27.08                  | Describe principles of and perform routine physical and chemical analyses on urine.                                                                      |
| 27.09                  | Prepare urine sediments and perform identification and quantitation of microscopic formed elements.                                                      |
| 27.10                  | Correlate abnormal physical, chemical, and microscopic urine results with associated pathological conditions.                                            |
| 27.11                  | Differentiate between transudates and exudates.                                                                                                          |
| <del>27.12</del>       | <del>Discuss miscellaneous body fluids to include cerebral spinal, serous, seminal and joint fluids.</del>                                               |
| <del>27.13</del> 27.12 | Perform physical, chemical, and microscopic evaluations of common body fluids.                                                                           |
| 28.0                   | Demonstrate knowledge of hematological principles and procedures. -The student will be able to:                                                          |
| 28.01                  | Discuss the organs, cells, and cellular <del>interaction</del> <u>interactions</u> of the lymphoid, myeloid, and reticuloendothelial systems.            |
| 28.02                  | Demonstrate an understanding of basic concepts of hematopoiesis.                                                                                         |
| 28.03                  | Identify the components of blood.                                                                                                                        |
| 28.04                  | Discuss the function of formed elements of blood.                                                                                                        |
| 28.05                  | Demonstrate an understanding of the synthesis of normal and abnormal molecular structure of hemoglobin, common hemoglobinopathies, and associated tests. |
| 28.06                  | Describe normal hemoglobin-oxygen function using the Oxygen Dissociation Curve (ODC).                                                                    |
| 28.07                  | Discuss assessment and impact of preanalytical, analytical, and post-analytical factors on hematology testing.                                           |
| 28.08                  | Calculate red blood cell indices.                                                                                                                        |
| 28.09                  | Discuss selected cytochemical staining and <del>flowcytometry</del> <u>flow cytometry</u> procedures.                                                    |
| 28.10                  | Evaluate red blood cell morphology.                                                                                                                      |
| 28.11                  | State the review process of histogram/scatterplot/scattergram analysis.                                                                                  |

|                        |                                                                                                                                                                                                                 |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.12                  | Describe the categories used in a morphological classification of anemias.                                                                                                                                      |
| 28.13                  | Correlate complete blood cell results with <u>a</u> peripheral exam of blood smear.                                                                                                                             |
| 28.14                  | List the white blood cell maturation sequence and identify distinguishing morphology for <u>the</u> stages of developing white blood cells.                                                                     |
| 28.15                  | Discuss normal and abnormal hematology findings, reference ranges, and associated diseases.                                                                                                                     |
| 28.16                  | Demonstrate an understanding of normal and abnormal white cell morphology, related disease states, and associated tests.                                                                                        |
| 28.17                  | Discuss the principles of and perform routine hematology procedures, applying quality control procedures, as necessary.                                                                                         |
| 28.18                  | Perform commonly used methods to evaluate leukocytes, correlate and verify automated cell counts with established criteria.                                                                                     |
| 28.19                  | Identify <del>characteristics</del> <u>characteristic</u> findings of nonmalignant leukocytic disorders, (e.g., shift to the left, toxic granulation, Döhle bodies, etc.).                                      |
| 28.20                  | Perform techniques of manual blood smear evaluation, including white blood cell differential, red cell, and platelet morphology.                                                                                |
| 28.21                  | Correlate peripheral blood evaluation with automated cell analysis.                                                                                                                                             |
| 28.22                  | Perform platelet <u>and white blood cell</u> counts on <del>patient and control</del> specimens using manual <del>and automated</del> techniques, <u>diluents</u> , and correlate counts with peripheral smear. |
| 29.0                   | Demonstrate knowledge of hemostasis and related diagnostic principles and procedures. -The student will be able to:                                                                                             |
| 29.01                  | Discuss and define the mechanisms of hemostasis, including bleeding and clotting.                                                                                                                               |
| 29.02                  | Discuss common coagulopathies and associated treatments.                                                                                                                                                        |
| 29.03                  | Discuss assessment and impact of preanalytical factors on hemostasis testing.                                                                                                                                   |
| 29.04                  | Describe the principles of and perform routine testing used in the evaluation of primary and secondary hemostasis.                                                                                              |
| 29.05                  | <u>Demonstrate use of hemostasis laboratory equipment.</u>                                                                                                                                                      |
| <del>29.05</del> 29.06 | Discuss additional hemostasis tests performed to differentiate the cause of abnormal routine tests.                                                                                                             |
| 30.0                   | Demonstrate knowledge of immunology principles and procedures. -The student will be able to:                                                                                                                    |
| 30.01                  | Discuss the functions of the cells of the immune system, cytokines, and regulatory molecules.                                                                                                                   |
| 30.02                  | Discuss physical and chemical properties of immunogens (antigens), immunoglobulins (antibodies), and complement.                                                                                                |
| 30.03                  | Compare and contrast the principles of basic agglutination, flocculation, and precipitation procedures in immunology/serology.                                                                                  |

|                               |                                                                                                                                                                                 |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30.04                         | Perform basic procedures in immunology/serology.                                                                                                                                |
| 30.05                         | Discuss principles of serum protein electrophoresis and immunofixation.                                                                                                         |
| 30.06                         | Discuss the clinical significance of the commonly performed immunological tests.                                                                                                |
| 30.07                         | Discuss selected serological tests <del>such as immunoassays.</del>                                                                                                             |
| 31.0                          | Demonstrate knowledge of clinical chemistry principles and procedures. -The student will be able to:                                                                            |
| 31.01                         | Identify the chemistry analytes used to evaluate various organ <del>function</del> <u>functions</u> .                                                                           |
| <del>31.02</del>              | <del>Discuss the renal system and related analytes.</del>                                                                                                                       |
| <del>31.03</del> <u>31.02</u> | Discuss principles of and perform common renal function tests.                                                                                                                  |
| <del>31.04</del> <u>31.03</u> | Discuss carbohydrate, protein, and lipid metabolism.                                                                                                                            |
| <del>31.05</del> <u>31.04</u> | Discuss principles of and perform commonly ordered tests related to carbohydrate, protein, and lipid metabolism.                                                                |
| <del>31.06</del> <u>31.05</u> | Discuss the liver and its functions and related analytes.                                                                                                                       |
| <del>31.07</del> <u>31.06</u> | Discuss principles of and perform commonly ordered liver function tests.                                                                                                        |
| <del>31.08</del> <u>31.07</u> | Discuss enzyme classification, origin, activity, and function.                                                                                                                  |
| <del>31.09</del> <u>31.08</u> | Discuss principles of and perform commonly ordered enzyme procedures.                                                                                                           |
| <del>31.10</del> <u>31.09</u> | Discuss electrolyte balance as related to health and disease.                                                                                                                   |
| <del>31.11</del> <u>31.10</u> | Discuss principles of and perform electrolyte analyses.                                                                                                                         |
| <del>31.12</del> <u>31.11</u> | Discuss principles of and perform commonly ordered tests to evaluate cardiac function.                                                                                          |
| <del>31.13</del> <u>31.12</u> | Discuss the physiology of the endocrine system and the principal tests used to evaluate endocrine function.                                                                     |
| <del>31.14</del> <u>31.13</u> | Discuss the role of the laboratory in therapeutic drug monitoring and toxicology.                                                                                               |
| <del>31.15</del> <u>31.14</u> | Discuss and perform general electrophoresis techniques.                                                                                                                         |
| <del>31.16</del> <u>31.15</u> | Discuss the clinical significance of commonly ordered clinical chemistry tests.                                                                                                 |
| <del>31.17</del> <u>31.16</u> | Demonstrate knowledge of principles of instrumentation as related to the clinical chemistry laboratory.                                                                         |
| <del>31.18</del> <u>31.17</u> | Discuss techniques of clinical chemistry related to <u>the</u> standardization of <del>procedure</del> <u>procedures</u> and <u>the</u> use of standards, blanks, and controls. |

|                        |                                                                                                                                                                                             |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>31.19</del> 31.18 | Discuss other techniques of clinical chemistry related to visual colorimetry, calibration, and use of the spectrophotometer.                                                                |
| <del>31.20</del> 31.19 | Discuss basic techniques of clinical chemistry related to normal and abnormal physiology.                                                                                                   |
| 32.0                   | Demonstrate knowledge of immunohematology principles and procedures. -The student will be able to:                                                                                          |
| 32.01                  | Discuss donor <del>interview</del> interviews, criteria for selection, phlebotomy preparation, and donor blood processing.                                                                  |
| 32.02                  | Discuss blood component collection and, preparation, storage, and use.                                                                                                                      |
| 32.03                  | Describe the roles of <a href="#">the Federal Drug Administration (FDA)</a> , <a href="#">the American Association of Blood Banks (AABB)</a> , and state agencies, and how to contact each. |
| 32.04                  | Compare <a href="#">the</a> advantages and disadvantages <del>for</del> of autologous, versus homologous (allogenic) blood collection and transfusion.                                      |
| 32.05                  | Discuss basic genetics of the blood group antigens.                                                                                                                                         |
| 32.06                  | Discuss the ABO blood group system testing procedures and recognize ABO discrepancies.                                                                                                      |
| 32.07                  | Describe required tests on recipient blood samples.                                                                                                                                         |
| 32.08                  | Discuss and differentiate other blood group systems such as Duffy, Kell, Kidd, S,s, Lu, and the common cold-reacting antibodies such as Le, P, I, M, and N.                                 |
| 32.09                  | Perform Rh testing to determine Rh phenotypes.                                                                                                                                              |
| 32.10                  | Perform and interpret antibody screening.                                                                                                                                                   |
| 32.11                  | Perform antibody identification tests to detect clinically significant antibodies.                                                                                                          |
| 32.12                  | Discuss the safety and determine <a href="#">the</a> compatibility of blood components for transfusion.                                                                                     |
| 32.13                  | Discuss and perform routine compatibility testing, including the immediate spin crossmatch and the electronic crossmatch.                                                                   |
| 32.14                  | Discuss and perform phenotyping on recipient and donor specimens.                                                                                                                           |
| 32.15                  | Identify symptoms of the suspected transfusion reaction and the required laboratory work-up.                                                                                                |
| 32.16                  | Discuss immune hemolytic disorders and perform the direct antiglobulin test.                                                                                                                |
| 32.17                  | Discuss specialized techniques <a href="#">in immunohematology</a> .                                                                                                                        |
| 32.18                  | Perform quality control (QC) on reagents.                                                                                                                                                   |
| 32.19                  | Describe <a href="#">the</a> pathophysiology of hemolytic disease of the fetus and newborn.                                                                                                 |

|       |                                                                                                                                                   |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| 33.0  | Demonstrate knowledge of microbiological principles and procedures. -The student will be able to:                                                 |
| 33.01 | Discuss microbial taxonomy and nomenclature.                                                                                                      |
| 33.02 | Discuss bacterial metabolism, reproduction, cell structures, and their functions.                                                                 |
| 33.03 | Discuss classification, composition, and preparation of culture media.                                                                            |
| 33.04 | Discuss the human pathogenesis of bacteria.                                                                                                       |
| 33.05 | Discuss and perform sterilization techniques.                                                                                                     |
| 33.06 | Perform culturing techniques for urine, stool, wound, respiratory, body fluids, and blood specimens.                                              |
| 33.07 | Perform techniques of microbiology related to inoculation and transfer of cultures.                                                               |
| 33.08 | Discuss the principles of Gram and <u>Acid-Fast Bacilli (AFB)</u> stains.                                                                         |
| 33.09 | Accurately perform, read and report <del>gram</del> <u>Gram</u> stains.                                                                           |
| 33.10 | Perform techniques necessary for isolation and identification of aerobic <del>-and</del> , anaerobic, <u>and facultative</u> bacterial organisms. |
| 33.11 | Identify commonly encountered aerobic bacteria through morphological, physical, and biochemical properties.                                       |
| 33.12 | Perform and interpret antimicrobial susceptibility tests.                                                                                         |
| 33.13 | Discuss <u>the</u> collection and handling of specimens for fungal, mycobacterial, and viral culture.                                             |
| 33.14 | Prepare and examine specimens, and identify ova and parasites when present.                                                                       |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

**Clinical learning experiences in a clinical laboratory and related areas are an integral part of this program. Clinical learning experiences should reflect the full breadth of responsibilities expected of a Medical Laboratory Technician and should include appropriate experience in each of the areas of the laboratory described herein. The specified length for each of the courses listed is inclusive of clinical experience for each of the respective laboratory sections.**

### Special Notes

This program meets the Department of Health HIV/AIDS Domestic Violence, and Prevention of Medical Errors education requirements. Upon completion of this program, the instructor will provide a certificate to the student verifying that these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

Either a community college or school district may offer the ATD program. When offered at the community college, college credit shall be awarded for completion of this program. When offered at the school district, vocational credit will be awarded. Vocational credit will be converted to college credit upon transfer to the AS degree at the community college.

In accordance with Rule 6A-10.024, F.A.C. all faculty providing instruction must have at least a baccalaureate degree or an associate degree with demonstrated competencies in the specific instructional program as defined by the Southern Association of Colleges and Schools. The programs should be accredited by:

The Accrediting Bureau of Health Education Schools (ABHES)  
7777 Leesburg Pike, Suite 314, North Falls Church, VA 22403  
(703) 917-9503 /Fax (703) 917-4109 [info@abhes.org](mailto:info@abhes.org)[info@abhes.org](http://info@abhes.org)

Or any other agency as specified by the Division of Medical Quality Administration, Board of Clinical Laboratory Personnel Chapter 483, F.S., Rule 590. F.A.C., "Florida Clinical Laboratory Personnel Law". The graduate of a board-approved program should be prepared to take the appropriate licensing examination to practice in Florida and an appropriate national certifying examination.

For further information contact:

Board of Clinical Laboratory Personnel  
4052 Bald Cypress Way, Bin CO7, Tallahassee, FL 32399-3257  
(850) 245-4444 x3625

National Certification is voluntary and may be obtained from the:

American Medical Technologists  
710 Higgins Rd., Park Ridge, IL. 60068  
(847) 823-5169 or 800-275-1268

Or

National Healthcareer Association  
7500 West 160<sup>th</sup> Street, Stilwell, Kansas 66085  
800-499-9092 or (973) 644-4797 [www.nhanow.com](http://www.nhanow.com)[www.nhanow.com](http://www.nhanow.com)

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

### **Program Length**

In accordance with Rule 6A-10.024, F.A.C. an ATD program consists of a course of study that is part of an AS or AAS degree program, is less than 60 credit hours, is approximately 50% of the technical component (non-general education), and leads to employment in a specific occupation. An ATD program may consist of either technical credit or college credit.

Students must have a high school diploma, a GED, or a certificate of completion to be admitted to an ATD program. Within six weeks of entry, students in ATD programs of 450 or more hours must be tested pursuant to Rule 6A-10.040, F.A.C. and if below minimum standards for completion from the program, must receive remedial instruction. The minimum standards must be at least the equivalent of a score of ten (10) on all sections of basic skills test approved in Rule 6A-10.040, F.A.C. Students must successfully complete all remedial instruction before completing the ATD.

Community Colleges may offer either college or career credit toward the ATD. A Career Center in a public school district may offer an ATD program only as technical credit, with college credit awarded to a student upon articulation to a community college (Section 1004.02, F.S.)

When offered at a community college the standard length of this program is 40 credits. When offered at a technical center the standard length of this program is 1515 clock hours.

In accordance with Rule 6A-10.024, F.A.C. all faculty providing instruction must have at least a baccalaureate degree or an associate degree with demonstrated competencies in the specific instructional program as defined by the Southern Association of Colleges and Schools.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Ophthalmic Laboratory Technician  
**Career Cluster:** Health Science

### Purpose

This certificate program is part of the Opticianry AS degree program (1351180100).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as Ophthalmic Laboratory Technicians (Ophthalmic Laboratory Technicians).

The content includes but is not limited to basic instruction in anatomy and physiology, CPR, Heartsaver, office practices and dispensing of visual devices. Because optometrists now deal with certain drugs, students need knowledge of diagnostic and therapeutic drugs under supervision.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Program Structure** \*\*only if applicable\*\*

This program is a planned sequence of instruction consisting ----- credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## Job Attainment

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the health care delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Surface ophthalmic lenses.
- 13.0 Edge and finish lenses.
- 14.0 Insert and mount lenses.
- 15.0 Select and order frames and lenses.
- 16.0 Fit and dispense prescriptions.
- 17.0 Fit contact lenses.
- 18.0 Repair frames.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Ophthalmic Laboratory Technician  
**CIP Number:** 0351100600  
**Program Length:** 24 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

**This certificate program is part of the Opticianry AS degree program (1351180100). At the completion of this program, the student will be able to:**

**12.0** Surface ophthalmic lenses. The student will be able to:

12.01 Demonstrate knowledge of layout single vision and multi-focal lenses.

12.02 Demonstrate knowledge of fabrication of single vision lenses and/or multi-focal lenses.

12.03 Demonstrate knowledge of selecting ophthalmic lenses and supplies.

12.04 Perform lens verification and inspection.

**13.0** Edge and finish lenses. The student will be able to:

13.01 Layout and block lenses.

13.02 Machine and hand edge lenses.

13.03 Perform lens verification and inspection.

~~13.04 Demonstrate knowledge of air temper glass lenses.~~

~~13.04~~ ~~13.05~~ Select appropriate lenses.

**14.0** Insert and mount lenses. The student will be able to:

|       |                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------|
| 14.01 | Insert lenses into <del>z</del> plasticplastic frames.                                                           |
| 14.02 | Insert lenses into metal frames.                                                                                 |
| 14.03 | Mount lenses into rimless and semi-rimless mountings or other appropriate designs.                               |
| 14.04 | Perform final inspection of eye glasses.                                                                         |
| 14.05 | Demonstrate knowledge of lens enhancements/treatments.                                                           |
| 15.0  | Select and order frames and lenses. The student will be able to:                                                 |
| 15.01 | Analyze written prescriptions.                                                                                   |
| 15.02 | Duplicate prescriptions from existing lenses.                                                                    |
| 15.03 | Evaluate patient's life-style needs.                                                                             |
| 15.04 | Use selected instruments to assist in the calculation of fitting measurements, including position of wear (POW). |
| 15.05 | Discuss charges with patients.                                                                                   |
| 15.06 | Order lenses and frames, including enhancements/treatments.                                                      |
| 16.0  | Fit and dispense prescriptions. The students will be able to:                                                    |
| 16.01 | Verify finished prescriptions to specifications.                                                                 |
| 16.02 | Align frames.                                                                                                    |
| 16.03 | Adjust and fit optical devices to patients.                                                                      |
| 17.0  | Fit contact lenses. The student will be able to:                                                                 |
| 17.01 | Analyze prescriptions.                                                                                           |
| 17.02 | Evaluate patient suitability.                                                                                    |
| 17.03 | Use selected instruments to conduct and assess fittings.                                                         |
| 17.04 | Identify types of contact lenses.                                                                                |
| 17.05 | Perform patient training.                                                                                        |
| 18.0  | Repair frames. The student will be able to:                                                                      |

|       |                                                                 |
|-------|-----------------------------------------------------------------|
| 18.01 | Replace/repair nose pieces on plastic or metal frames.          |
| 18.02 | Replace/repair frame-front, temples, monofilament, and rimless. |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

Students are prepared to assist in performing tests to determine defects in vision, preparing and fitting eyeglasses and contact lenses, and administering corrective eye exercises and other treatments under the supervision of a person licensed under 458, 459, 463 or 484, F.S.

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.

Students should be strongly encouraged to take the Certification examination offered by the Paraoptometric Section of the American Optometric Association.

Cooperative training - OJT is appropriate for this program. Whenever cooperative training - OJT is offered, the following are required for each student: a training plan, signed by the student, teacher, and employer, which includes instructional objectives and a list of on-the-job and in-school learning experiences; a workstation that reflects equipment, skills and tasks that are relevant to the occupation which the student has chosen as a career goal. The student must receive compensation for work performed.

The CORE should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

**Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

**Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

**Program Title:** The standards and benchmarks for this program were updated for the 2026-27 academic year. This program title has changed, formerly Central Sterile Processing Technologist.

**Program Title:** Sterile Processing Technician  
**Career Cluster:** Health Science

### Purpose

This certificate program is part of the Surgical Services AS degree program (1351090901).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as ~~central~~ sterile processing technicians (Medical Equipment Preparers), central service technicians.

The content includes but is not limited to central services departmental organization and function; basic anatomy, physiology, microbiology and chemistry related to central service activities; quality assurance; infection control and isolation techniques, principles of safety; principles, methods

and controls of sterilization processes; cleaning, processing, packaging, distributing, storing, and inventory control of sterile goods, instruments, trays, and equipment; medical terminology; surgical instrumentation; basic computer skills, interpersonal and job seeking skills, fundamentals of communication, case cart management, laparoscopic specialty, orthopedic specialty, flexible scope processing-, shift supervisory skills and procurement of supplies and equipment.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- ~~12.0 Describe supply distribution systems and the principles of inventory control.~~
- ~~13.0 Demonstrate the ability to recall and dispose of or reprocess sterile supplies.~~
- ~~14.001.0 Identify fundamentals of the supply chain.~~
- ~~15.0~~12.0 Demonstrate language arts knowledge and skills.
- ~~16.0~~13.0 Solve problems using critical thinking skills, creativity, and innovation.
- ~~17.0~~14.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment.
- ~~18.0~~15.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 16.0 Demonstrate the ability to recall, dispose of, or reprocess sterile supplies/instruments.
- 17.0 Identify fundamentals of the supply chain.
- ~~19.0~~18.0 Demonstrate the roles and responsibilities of the ~~central supply worker~~sterile processing technician.
- ~~20.0~~19.0 Recognize basic principles of microbiology.
- ~~21.0~~20.0 Interpret and apply medical terminology and anatomical terms as they relate to equipment and supplies issued by ~~central service personnel~~the sterile processing department.
- ~~22.0~~21.0 Describe how ~~central service~~sterile processing is involved in controlling infections in ~~hospitals.~~healthcare facilities.
- ~~23.0~~22.0 Explain the purpose of the Occupational Safety and Health Act- (OSHA).
- ~~24.0~~23.0 Receive, decontaminate, clean, prepare, disinfect, and sterilize reusable items.
- ~~25.0~~24.0 Demonstrate the use of sterilization process monitors, including ~~temperature and frequency~~proper utilization of appropriate chemical indicators and bacterial spore tests for all sterilizers.

~~26.0~~25.0

Demonstrate the ability to identify and select appropriate instrumentation or equipment that meets the needs of the surgical specialty.

Florida Department of Education  
Student Performance Standards

Program Title: ~~Central~~ Sterile Processing ~~Technologist~~Technician  
 CIP Number: 0351101202  
 Program Length: 30 credit hours  
 SOC Code(s):

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

**This certificate program is part of the Surgical Services AS degree program (1351090901). At the completion of this program, the student will be able to:**

Students completing intended outcomes (12-~~26~~25), in addition to the ~~health science core~~Health Science Core, will meet the requirements of ~~Central~~the Sterile Processing ~~Technologist~~Technician CCC.

~~12.0 Describe supply distribution systems and the principles of inventory control. The student will be able to:~~

~~12.01 Define the benefits of inventory control.~~

~~12.02 Describe the methods of inventory control.~~

~~12.03 Compare the advantages and disadvantages of each distribution methods.~~

~~12.04 Process a requisition marked "stat" locate article, price, etc.~~

~~12.05 Demonstrate the process of stock rotation.~~

~~12.06 Describe the processes for loaner instrumentation and equipment.~~

~~12.07 Describe the process of product evaluation.~~

~~12.08 Describe the procedures for tracking the usage of medical/surgical supplies, patient care equipment and specialty carts.~~

~~12.09 Describe the procedures for documenting supply and equipment charges.~~

| <del>13.01</del>              | <del>Explain the factors that affect how long a package can be considered safe for use.</del>                                  |
| <del>13.02</del>              | <del>Explain the differences between event related, date related, and manufacturer recommendations.</del>                      |
| <del>13.03</del>              | <del>State the methods of determining expiration dates.</del>                                                                  |
| <del>13.04</del>              | <del>List the steps in reprocessing outdated hospital packaged items.</del>                                                    |
| <del>13.05</del>              | <del>List conditions that would make a product unsafe for use</del>                                                            |
| <del>13.06</del>              | <del>Describe the use of tamper evident seals.</del>                                                                           |
| <del>13.07</del>              | <del>Describe the methods of reprocessing.</del>                                                                               |
| <del>13.08</del>              | <del>Identify standards and facility policies on reprocessing of single use items.</del>                                       |
| <del>13.09</del>              | <del>Describe the process of recall for medical/surgical supplies.</del>                                                       |
| <del>14.0</del>               | <del>Identify fundamentals of the supply chain. The student will be able to:</del>                                             |
| <del>14.01</del>              | <del>Describe the process of supply chain management.</del>                                                                    |
| <del>14.02</del>              | <del>Communicate with other hospitals, facilities, or company representatives for procurement of supplies and equipment.</del> |
| <del>14.03</del>              | <del>Describe several different methods of procurement of supplies.</del>                                                      |
| <del>14.04</del>              | <del>Describe basics of receiving items, including documentation of receiving and release to other facilities.</del>           |
| <del>15.0</del> <u>12.0</u>   | Demonstrate language arts knowledge and skills. -The students will be able to:                                                 |
| <del>15.01</del> <u>12.01</u> | Locate, comprehend, and evaluate key elements of oral and written information.                                                 |
| <del>15.02</del> <u>12.02</u> | Draft, revise, and edit written documents using correct grammar, punctuation, and vocabulary.                                  |
| <del>15.03</del> <u>12.03</u> | Present information formally and informally for specific purposes and audiences.                                               |
| <del>16.0</del> <u>13.0</u>   | Solve problems using critical thinking skills, creativity, and innovation. -The students will be able to:                      |
| <del>16.01</del> <u>13.01</u> | Employ critical thinking skills independently and in teams to solve problems and make decisions.                               |
| <del>16.02</del> <u>13.02</u> | Employ critical thinking and interpersonal skills to resolve conflicts.                                                        |

|                        |                                                                                                                                                                   |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>16.03</del> 13.03 | Identify and document workplace performance goals and monitor progress toward those goals.                                                                        |
| <del>16.04</del> 13.04 | Conduct technical research to gather information necessary for decision-making.                                                                                   |
| <del>17.0</del> 14.0   | Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. -The students will be able to: |
| <del>17.01</del> 14.01 | Describe the nature and types of healthcare organizations.                                                                                                        |
| <del>17.02</del> 14.02 | <del>Explain</del> Describe the effect of key organizational systems on performance and quality:                                                                  |
| <del>17.03</del> 14.03 | List and describe quality control systems and/or practices common to the workplace.                                                                               |
| <del>17.04</del> 14.04 | <del>Explain</del> Describe the impact of the global economy on healthcare organizations.                                                                         |
| <del>18.0</del> 15.0   | Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. —The students will be able to:                                         |
| <del>18.01</del> 15.01 | Employ leadership skills to accomplish organizational goals and objectives.                                                                                       |
| <del>18.02</del> 15.02 | Establish and maintain effective working relationships <del>with others, in order</del> to accomplish objectives and tasks.                                       |
| <del>18.03</del> 15.03 | Conduct and participate in meetings to accomplish work tasks.                                                                                                     |
| <del>18.04</del> 15.04 | Employ mentoring skills to inspire and teach others.                                                                                                              |
| <del>18.05</del> 15.05 | Analyze attributes and attitudes of an effective leader.                                                                                                          |
| <del>18.06</del> 15.06 | Recognize factors and situations that may lead to conflict.                                                                                                       |
| <del>18.07</del> 15.07 | Demonstrate effective techniques for managing team conflict.                                                                                                      |
| 15.08                  | <u>Demonstrate an understanding of the importance of effective interdepartmental relationships.</u>                                                               |
| 16.0                   | <u>Demonstrate the ability to recall, dispose of, or reprocess sterile supplies/instruments. The student will be able to:</u>                                     |
| 16.01                  | <u>Explain the factors that affect how long a package can be considered safe for use.</u>                                                                         |
