### Purpose

The purpose of this course is to provide students with learning opportunities in a prescribed program of study within the Health Science cluster that will enhance opportunities for employment in the career field chosen by the student.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Course Structure

The content is prescribed by the instructor based upon the individual student's assessed needs for directed study.

This course may be taken only by a student who has completed or is currently completing a specific secondary job preparatory program or occupational completion point for additional study in this career cluster. [Students need to have taken the Health Science Core before enrolling in this course.](#) A student may earn multiple credits in this course.

The selected standards and benchmarks, which the student must master to earn credit, must be outlined in an instructional plan developed by the instructor.

To teach the course listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary course structure:

| Course Number | Course Title                  | Teacher Certification                                            | Length           | Level | Graduation Requirement |
|---------------|-------------------------------|------------------------------------------------------------------|------------------|-------|------------------------|
| 8400100       | Health Science Directed Study | ANY HEALTH OCCUP G<br>*( <a href="#">See DOE approved list</a> ) | Multiple credits | 2     | CT                     |

(Graduation Requirement Codes: CT= Career & Technical Education, EQ= Equally Rigorous Science, EC= Economics, MA= Mathematics, PL= Personal Financial Literacy)

## ~~Common~~Florida's Career ~~Technical Core — Career Ready Practices~~Readiness Skills for CTE Programs

~~Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.~~

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- ~~12. Work productively in teams while using cultural/global competence.~~

| <u>Employability Skills</u> |                                                                                                  |

**Career Exploration & Planning****10.0 Explain career opportunities aligned with the regional economy and personal aspirations.**10.01 Describe regional occupations that are high-demand, high-growth, high-wage and/or high-skill.10.02 Describe careers aligned with his or her interests, skills and values based on career assessment, experiential learning, career informational interviews, research and/or reflection.**11.0 Explain postsecondary pathways aligned with his or her career aspirations.**11.01 Compare and contrast postsecondary pathways, including education, employment, entrepreneurship and enlistment (the “Four Es”).11.02 Compare and contrast regional postsecondary training provider options, including apprenticeships, technical colleges, state colleges, universities and industry-recognized certification providers.11.03 Define postsecondary credentialing and stacking options, including industry-recognized certifications, apprenticeship certificates of completion, career certificates, licenses and associate or baccalaureate degrees.11.04 Compare postsecondary training data for training programs of interest, such as total costs, average student loan debt, and median earnings and job placement rates after program completion.**12.0 Develop a personalized career and academic plan.**12.01 Prioritize an occupation, credential and postsecondary training provider for plan formation.12.02 Self-assess progress toward meeting graduation requirements and skill-development goals.12.03 Develop and complete a chronological checklist of steps and deadlines prior to postsecondary training or national service application that includes any required documentation to gather, writing prompts and examinations.12.04 Identify a variety of financial aid opportunities, including scholarships, grants, savings, work, work-study programs, private loans and federal loans.12.05 Develop a postsecondary training budget that is inclusive of living and school expenses.**Job Attainment****13.0 Find, assess and apply to job opportunities.**13.01 Identify online job posts relevant to his or her career aspirations.13.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.13.03 Define what information, documentation and writing prompts are required for the positions.**14.0 Communicate personal competence, character and fit for a job opportunity.**14.01 Develop a resume.14.02 Write a cover letter.14.03 Curate a professional portfolio that includes work products.14.04 Prepare for and experience a mock job interview.

|                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------|
| <u>15.0 Cultivate and leverage relationships to professionally advance.</u>                                                  |
| <u>15.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.</u> |
| <u>15.02 Develop a plan to cultivate a professional digital footprint.</u>                                                   |
| <u>15.03 Develop a networking plan for a specific industry of interest.</u>                                                  |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate ~~expertise~~mastery in a specific occupation ~~contained~~-within the career cluster.
- 02.0 Conduct investigative research ~~on a selected topic related to~~demonstrating an understanding of the career ~~cluster~~and skills within the career using approved research methodology, interpret findings, and prepare ~~presentation~~presentations to defend results.
- 03.0 Apply enhanced leadership and professional career skills.
- 04.0 Demonstrate higher-order critical thinking and reasoning skills appropriate for the selected ~~program of~~health study.

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                                                                                                                                        |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                         | Demonstrate <del>expertise</del> <u>mastery</u> in a specific occupation within the career cluster. -The student will be able to:                                                                                                                                                                                                                      |
| 01.01                        | The benchmarks will be selected from the appropriate curriculum frameworks and determined by the instructor based upon the individual <del>students assessed</del> <u>students' current health science</u> needs.                                                                                                                                      |
| 02.0                         | Conduct investigative research <del>on a selected topic related to</del> <u>demonstrating an understanding of</u> the career <del>cluster</del> <u>and skills within the career</u> using approved research methodology, interpret findings, and prepare <del>presentation</del> <u>presentations</u> to defend results. -The student will be able to: |
| 02.01                        | Select investigative study referencing prior research and knowledge.                                                                                                                                                                                                                                                                                   |
| 02.02                        | Collect, organize, and analyze data accurately and precisely.                                                                                                                                                                                                                                                                                          |
| 02.03                        | Design procedures to <del>test</del> <u>support</u> the research <u>or contact knowledgeable professionals to confirm researched data</u> .                                                                                                                                                                                                            |
| 02.04                        | <del>Report</del> <u>Develop</u> , display, and defend the results of investigations to audiences that may include professionals and technical experts.                                                                                                                                                                                                |
| 03.0                         | Apply enhanced leadership and professional career skills. -The student will be able to:                                                                                                                                                                                                                                                                |
| 03.01                        | <del>Develop and present a professional presentation offering potential solutions to a current issue.</del> <u>Create an education plan to further career goals.</u>                                                                                                                                                                                   |
| 03.02                        | Enhance leadership and career skills through work-based learning including job placement, job shadowing, entrepreneurship, internship, or a virtual experience.                                                                                                                                                                                        |
| 03.03                        | Participate in leadership development opportunities available through the appropriate student organization and/or other professional organizations. <u>Research potential educational opportunities to develop and further ever-changing healthcare knowledge.</u>                                                                                     |
| 03.04                        | Enhance <del>written and oral communications</del> <u>soft skills</u> through the development of presentations, public speaking, and live and/or virtual interviews. <u>Learn proper oral reporting and written documentation related to healthcare.</u>                                                                                               |
| 04.0                         | Demonstrate higher-order critical thinking and reasoning skills appropriate for the selected <del>program of</del> <u>health</u> study. -The student will be able to:                                                                                                                                                                                  |
| 04.01                        | <del>Use mathematical</del> <u>Apply problem solving</u> and <del>or scientific</del> <u>prioritizing</u> skills <del>to solve problems</del> encountered in the <del>chosen</del> <u>Health Care</u> occupation.                                                                                                                                      |
| 04.02                        | Read and interpret information relative to the chosen occupation.                                                                                                                                                                                                                                                                                      |
| 04.03                        | Locate and evaluate key elements of oral and written information. <u>differentiating between subjective and objective data.</u>                                                                                                                                                                                                                        |
| 04.04                        | Analyze and apply data and/or measurements to <del>solve problems</del> <u>justify</u> and <del>interpret documents</del> <u>explain to others.</u>                                                                                                                                                                                                    |

04.05 ~~Construct charts/tables/graphs using functions and data.~~ Understand chain of command, or organized structure within the Health Care system, and parameters for abiding by HIPAA guidelines.

### Additional Information

#### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

#### **Career and Technical Student Organization (CTSO)**

~~Florida HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

#### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

**Purpose**

The purpose of this course is to assist students in making informed decisions regarding their future academic and occupational goals and to provide information regarding careers in the Health Science career cluster.

The content includes but is not limited to basic information about the kinds of jobs and workers involved the various career paths, financial rewards, occupational hazards, and educational requirements. Information concerning the practices for promoting good health is included.

Instruction and learning activities are provided in a laboratory setting using hands-on experiences with the equipment, materials and technology appropriate to the course content and in accordance with current practices.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Course Structure**

This program is a planned sequence of instruction consisting of 1 course.

The length of this course is one semester. It may be offered for two semesters when appropriate. When offered for one semester, it is recommended that it be at the exploratory level and more in-depth when offered for two semesters.

To teach the course listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the course structure:

| Course Number | Course Title                              | Teacher Certification                                                         | Length   |
|---------------|-------------------------------------------|-------------------------------------------------------------------------------|----------|
| 8400110       | Orientation to Health Science Professions | ANY HEALTH OCCUP G *<br>( <a href="#">See DOE approved list</a> )<br>HEALTH 6 | Semester |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Recognize progress in health care service.
- 02.0 Demonstrate an awareness of health careers and related employability skills.
- 03.0 Recognize basic communication skills in the healthcare setting.
- 04.0 Perform basic mathematical calculations and demonstrate problem solving skills used by the health care worker.
- 05.0 Demonstrate an understanding of principles of wellness and disease.
- 06.0 Perform basic health care skills.
- 07.0 Demonstrate occupational safety skills related to the employer, employee and the patient in the healthcare setting.

**Course Title:** Orientation to Health Science Professions  
**Course Number:** 8400110  
**Course Length:** Semester

| <b>CTE Standards and Benchmarks</b> |                                                                                                                                                                                                                |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                                | Recognize progress in health care service. The student will be able to:                                                                                                                                        |
| 01.01                               | Compare medical progress from ancient times to the present. For example: surgical techniques, anesthesia, treatment and equipment.                                                                             |
| 01.02                               | Discuss health care leaders who brought about change and progress from ancient times to the present. For example: Hippocrates, Edward Jenner, Joseph Lister, Alexander Fleming, Marie Curie, and Clara Barton. |
| 01.03                               | Demonstrate knowledge of how advances in science have impacted beliefs and practices from ancient times to the present.                                                                                        |
| 02.0                                | Demonstrate an awareness of health careers and related employability skills. The student will be able to:                                                                                                      |
| 02.01                               | Complete a career inventory to match student interest with potential healthcare careers.                                                                                                                       |
| 02.02                               | List employability/soft skills and characteristics needed to be successful in the workplace. For Example: punctuality, dependability, and communication skills.                                                |
| 02.03                               | Identify the characteristics of healthcare professionals.                                                                                                                                                      |
| 02.04                               | Identify several professions in each of the Health Science Career Pathways: Therapeutic Services, Diagnostic Services, Health Informatics, Support Services, Bio-technology Research and Development.          |
| 02.05                               | List the advantages and disadvantages of one occupation in each pathway including the following factors; job description, career pathway/area of interest, and salary range.                                   |
| 03.0                                | Recognize basic communication skills in the healthcare setting. The student will be able to:                                                                                                                   |
| 03.01                               | Demonstrate an understanding of interpersonal communication skills such as active listening, verbal, non-verbal and written language.                                                                          |
| 03.02                               | Demonstrate the ability to break medical terms into their word parts.                                                                                                                                          |
| 03.03                               | Discuss common abbreviations and symbols used in healthcare professions.                                                                                                                                       |
| 03.04                               | Identify technology used for communication in healthcare professions and proper etiquette for its' use.                                                                                                        |
| 04.0                                | Perform basic mathematical calculations and demonstrate problem solving skills used by the health care worker. The student will be able to:                                                                    |

| CTE Standards and Benchmarks |                                                                                                                                                                                               |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 04.01                        | Describe the importance of why accurate calculations and effective problem solving skills are required.                                                                                       |
| 04.02                        | Calculate mathematical problems and measurements related to health care.                                                                                                                      |
| 04.03                        | Convert common weights, measure, and volumes to metric as applied in the health care setting.                                                                                                 |
| 04.04                        | Accurately tell time using both standard and international/military time formats.                                                                                                             |
| 05.0                         | Demonstrate an understanding of principles of wellness and disease. The student will be able to:                                                                                              |
| 05.01                        | Describe how cultural and individual differences relate to wellness and quality of life and how these differences impact health problems of society.                                          |
| 05.02                        | Demonstrate an understanding of the risk factors that contribute to illness.                                                                                                                  |
| 05.03                        | Identify consequences of substance abuse and high risk behaviors.                                                                                                                             |
| 05.04                        | Describe strategies for prevention of diseases including health screenings and examinations.                                                                                                  |
| 05.05                        | Explain basic concepts of positive self-image, body and mental wellness and the effect stress has on both.                                                                                    |
| 05.06                        | Explore the need for proper nutrition and water intake to maintain wellness.                                                                                                                  |
| 06.0                         | Perform basic health care skills. The student will be able to:                                                                                                                                |
| 06.01                        | Measure and record (graph) height and weight.                                                                                                                                                 |
| 06.02                        | Measure and record temperature, pulse, and respiration (TPR).                                                                                                                                 |
| 06.03                        | Demonstrate medical aseptic technique by using proper hand washing skills.                                                                                                                    |
| 06.04                        | Demonstrate hands-only CPR.                                                                                                                                                                   |
| 07.0                         | Demonstrate occupational safety skills related to the employer, employee and the patient in the healthcare setting. The student will be able to:                                              |
| 07.01                        | Recognize safety concerns related to the practice of health care.                                                                                                                             |
| 07.02                        | Demonstrate an understanding for the importance of fire safety practices including prevention, evacuation plans (R.A.C.E.) and the use of a fire extinguisher (P.A.S.S.).                     |
| 07.03                        | Demonstrate safety habits that will prevent injury to health care workers, co-workers, and patients including proper use personal protective equipment (PPE) and infection control practices. |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. –For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL’s need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org) [SALA@fldoe.org](mailto:SALA@fldoe.org).

### **Special Notes**

The intended progression for the Health Science Middle School courses is Introduction to Health Science Career Pathways (8709350 & 8709360), Orientation to Health Science Professions (8400110) and Exploration of Health Science Professions (8400310 & 8400210). By offering the middle school courses in the intended progression, each course increases in complexity, rigor and skill level as appropriate.

Special projects that are related to occupational clusters are provided, including making dental molds, designing eye glasses, fingerprinting, and role playing activities of daily living as a handicapped individual, developing an emergency evacuation plan for their own home, menu planning, and visualizing x-rays. Team teaching and integration of the curriculum with English, Math and Science is encouraged. Guest speakers from industry make an important contribution to the effectiveness of this course.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Florida Department of Education  
Curriculum Framework

**Course Title:** Exploration of Health Science Professions and Career Planning  
**Course Type:** Orientation/Exploratory and Career Planning  
**Career Cluster:** Health Science

**Secondary – Middle School**

### **Purpose**

The purpose of this course is to assist students in making informed decisions regarding their future academic and occupational goals and to provide information regarding careers in the Health Science career cluster. The content includes but is not limited to exploratory activities relating to all health occupational clusters. The course also includes an introduction to medical ethics, consumerism, and characteristics of health care workers, community health agencies and basic computer literacy.

Instruction and learning activities are provided in a laboratory setting using hands-on experiences with the equipment, materials and technology appropriate to the course content and in accordance with current practices.

The purpose of this course is to give students initial exposure to the skills and attitudes associated with a broad range of occupations relating to careers in health, including job requirements and tasks performed, to assist students in making informed decisions regarding their future academic and occupational goals.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Course Structure**

This program is a planned sequence of instruction consisting of 1 course.

The length of this course is one semester. It may be offered for two semesters when appropriate. When offered for one semester, it is recommended that it be at the exploratory level and more in-depth when offered for two semesters.

To teach the course listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the course/[program](#) structure:

| Course Number | Course Title                                                  | Teacher Certification                                                                                                                                               | Length   |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate a well-rounded understanding of healthcare professions.
- 02.0 Demonstrate an understanding of the importance of legal and ethical behavior related to health care.
- 03.0 Perform basic communication skills in the healthcare setting.
- 04.0 Perform basic mathematical calculations and demonstrate problem solving skills used by the health care worker.
- 05.0 Apply scientific principles to the health care field.
- 06.0 Perform basic health care skills.
- 07.0 Demonstrate occupational safety skills related to the employer, employee and the patient in the healthcare setting.

~~Listed below are the standards that~~Career and Education Planning ~~[these~~ must be met to satisfy the requirements of Section 1003.4156, Florida Statutes.

08.0 Explain his or her career interests, skills and values.

~~08.0 Describe the influences that societal, economic, and technological changes have on employment trends and future training.~~

~~09.0 Develop skills to locate, evaluate, occupations and interpret career information.~~

~~10.0 Identify and demonstrate processes for making short and long term goals.~~

09.0 Demonstrate employability skills such as working industries in his or her region.

~~11.0 Describe a group, problem-solving and organizational skills, and the importance variety of entrepreneurship.~~

~~12.0 Understand the relationship between educational achievement and career choices/postsecondary options.~~

~~13.0~~10.0 ~~Identify a career cluster and related pathways through an interest assessment that match career and education goals.~~

~~14.0 Develop a career and education plan that includes short and long term goals, high school program of study, and postsecondary/career goals.~~

11.0 Demonstrate knowledge of technology and its application in career fields/clusters. Describe a variety of postsecondary pathways.

**Course Number:** 8400210  
**Course Length:** Semester

| <b>CTE Standards and Benchmarks</b> |                                                                                                                                                                                                                           |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                                | Demonstrate a well-rounded understanding of healthcare professions. The student will be able to:                                                                                                                          |
| 01.01                               | Explore the major scientific advancements that have contributed to the evolution of healthcare.                                                                                                                           |
| 01.02                               | Research contributions made in the field of medical science and their impact on the health care field.                                                                                                                    |
| 01.03                               | Identify types of education and training levels (OJT, HSTE, AA, BS/BA, MS, and Doctoral) as related to health careers.                                                                                                    |
| 01.04                               | Compare and contrast the health science career pathways: Therapeutic Services, Diagnostic Services, Health Informatics, Support Services, Bio-technology Research and Development.                                        |
| 01.05                               | List the advantages and disadvantages of one occupation in each pathway including the following factors; job description, career pathway/area of interest, salary range, educational requirements, and job outlook.       |
| 01.06                               | Research and describe a healthcare profession of interest identified through a career inventory assessment.                                                                                                               |
| 02.0                                | Demonstrate an understanding of the importance of legal and ethical behavior related to health care. The student will be able to:                                                                                         |
| 02.01                               | Identify responsibilities in maintaining ethical standards, confidentiality, and the patient's rights.                                                                                                                    |
| 02.02                               | Identify and define terms related to the legal and ethical aspects of the health care industry. For example: malpractice, negligence, invasion of privacy, quackery, ethics and law, Patients' Bill of Rights, licensure. |
| 03.0                                | Perform basic communication skills in the healthcare setting. The student will be able to:                                                                                                                                |
| 03.01                               | Demonstrate interpersonal communication skills such as active listening, verbal, non-verbal and written language in the health care setting.                                                                              |
| 03.02                               | Identify technology used for communication in healthcare professions and proper etiquette for its' use.                                                                                                                   |
| 03.03                               | Demonstrate use of medical terminology and abbreviations associated with healthcare professions.                                                                                                                          |
| 04.0                                | Perform basic mathematical calculations and demonstrate problem solving skills used by the health care worker. The student will be able to:                                                                               |
| 04.01                               | Analyze case studies or current events where adverse consequences resulted from mathematical medical error.                                                                                                               |
| 04.02                               | Convert common weights, measure, and volumes to metric as applied in the health care setting.                                                                                                                             |

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 04.03                        | Accurately identify and perform appropriate numeric procedures with problems found in numeric, symbolic, or word form as they relate to the occupations.                                                                                                                                                                                                                                                                        |
| 04.04                        | Accurately tell time using both standard and international/military time formats.                                                                                                                                                                                                                                                                                                                                               |
| 05.0                         | Apply scientific principles to the health care field. The student will be able to:                                                                                                                                                                                                                                                                                                                                              |
| 05.01                        | Identify the overall organization of the human body.                                                                                                                                                                                                                                                                                                                                                                            |
| 05.02                        | Describe the basic structure and function of the body systems of the human body.                                                                                                                                                                                                                                                                                                                                                |
| 05.03                        | Describe how the systems of the human body work together to maintain homeostasis.                                                                                                                                                                                                                                                                                                                                               |
| 05.04                        | Describe mechanisms of disease transmission, the Chain of Infection, prevention, and standard precautions.                                                                                                                                                                                                                                                                                                                      |
| 06.0                         | Perform basic health care skills. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                  |
| 06.01                        | Measure and record (graph) height and weight.                                                                                                                                                                                                                                                                                                                                                                                   |
| 06.02                        | Measure and record temperature, pulse, blood pressure, and respiration while recognizing the normal ranges for each.                                                                                                                                                                                                                                                                                                            |
| 06.03                        | Demonstrate medical aseptic technique by hand washing, gloving and application of personal protective equipment (PPE).                                                                                                                                                                                                                                                                                                          |
| 06.04                        | Demonstrate basic first aid skills (i.e., bleeding, fractures, and musculoskeletal emergencies).                                                                                                                                                                                                                                                                                                                                |
| 06.05                        | Demonstrate Cardiopulmonary Resuscitation (CPR) and care for a choking victim.                                                                                                                                                                                                                                                                                                                                                  |
| 06.06                        | Demonstrate basic skills used within the healthcare professions may include the following: <ul style="list-style-type: none"> <li>• Visualizing X-rays</li> <li>• Conduct vision testing (Snellen chart, peripheral vision, color blindness)</li> <li>• Conduct basic hearing test</li> <li>• Measure respiratory capacity/output</li> <li>• Range-of-Motion exercises</li> <li>• Conduct simulated ABO blood-typing</li> </ul> |
| 07.0                         | Demonstrate occupational safety skills related to the employer, employee and the patient in the healthcare setting. The student will be able to:                                                                                                                                                                                                                                                                                |
| 07.01                        | Recognize safety concerns related to the practice of health care.                                                                                                                                                                                                                                                                                                                                                               |
| 07.02                        | Demonstrate safety habits that will prevent injury to health care workers, co-workers, and patients including proper use personal protective equipment (PPE) and infection control practices.                                                                                                                                                                                                                                   |
| 07.03                        | Identify poisons and hazardous materials to include the use and interpretation of a Safety Data Sheet (SDS) form.                                                                                                                                                                                                                                                                                                               |

**CTE Standards and Benchmarks**

- |       |                                                                                                                                                                           |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.04 | Demonstrate an understanding for the importance of fire safety practices including prevention, evacuation plans (R.A.C.E.) and the use of a fire extinguisher (P.A.S.S.). |
| 07.05 | Explore basic information on the dangers of blood borne diseases in healthcare including but not limited to HIV/AIDS and Hepatitis B.                                     |
| 07.06 | Perform proper body mechanics to prevent self and patient injuries.                                                                                                       |

~~Listed below are the standards that~~ Career and Education Planning [these must be met to satisfy the requirements of Section 1003.4156, Florida Statutes;

The student will be able to:

1

**Standards and Benchmarks**

8.0 Explain his or her career interests, skills and values. The student will be able to:

8.01 Describe his or her career interests based on a career interest assessment, personal experience, career informational interviews, research and/or reflection.

~~08.02 Describe the influences that societal, economic, and technological changes have on employment trends and future training.~~  
Describe what career-related skills are his or her current strengths or could become strengths in the future with practice and training based on a career skill assessment, personal experience and/or reflection.

~~09.03 Develop skills to locate, evaluate, and interpret career information.~~ Describe what lifestyle and workplace values are most important to them to consider during career decision making, such as salary and benefits, work environment, the nature of the work and work/life balance.

8.04 Describe what values that relate to positively impacting others and the world are most important to them to weigh during career decision making.

9.0 Describe occupations and industries in his or her region. The student will be able to:

9.01 Define Career Clusters, industries and occupations.

9.02 Define regional poverty, average and family-sustaining wage thresholds.

9.03 Review local labor market data to identify the top five regional occupations as relates to each of the following: employment, growth and salary.

9.04 List three occupations that align with his or her personal career interests, skills and values.

9.05 List the regional salary, employment and growth of three occupations they are most interested in learning more about.

9.06 Summarize occupational content learned through a career informational interview, career fair, job shadowing, service learning, guest speaker, project-based learning, work-based learning, worksite visit or other firsthand experience.

10.0 Describe a variety of postsecondary pathways. The student will be able to:

|                       |                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10.01                 | Evaluate the pros and cons of pursuing education, employment, entrepreneurship or enlistment immediately following high school.                                                                                                                                                                                                                                           |
| <del>10.0</del> 10.02 | <del>Identify and demonstrate processes for making short and long term goals.</del> Define postsecondary training provider options and their admissions requirements, including apprenticeships, technical colleges, state or community colleges, universities and industry-recognized certification providers.                                                           |
| 10.03                 | Define postsecondary credentialing and stacking options, including industry-recognized certifications, apprenticeship certificates of completion, career certificates, licenses and associate or baccalaureate degrees                                                                                                                                                    |
| 10.04                 | Explain training options aligned with his or her career assessment results and occupational exploration.                                                                                                                                                                                                                                                                  |
| 10.05                 | Review postsecondary training data and list the total cost, average debt after graduation and median earnings and job placement rates of students who completed the student's preferred postsecondary training option.                                                                                                                                                    |
| 10.06                 | Summarize what they learned about his or her preferred postsecondary training provider through online research; virtual or in-person tours; a college fair; and/or interviewing a current student, alumni or staff member.                                                                                                                                                |
| 11.0                  | Create a personalized career and academic plan. The student will be able to:                                                                                                                                                                                                                                                                                              |
| 11.01                 | Prioritize an occupation for plan formation using one or more decision making techniques, such as a decision matrix, pros and cons analysis or other means                                                                                                                                                                                                                |
| 11.02                 | Explain the reasoning for choosing to pursue his or her preferred occupation                                                                                                                                                                                                                                                                                              |
| <del>11.0</del> 11.03 | <del>Demonstrate</del> Identify which credentials, technical skills, and employability skills such as working in a group, problem-solving and organizational skills, and the importance of or entrepreneurship skills are relevant to his or her preferred career pathway.                                                                                                |
| 11.04                 | Prioritize a recognized postsecondary credential (industry-recognized certifications, apprenticeship certificates of completion, career certificates, licenses and associate or baccalaureate degrees) aligned with his or her chosen occupation using a decision-making technique, such as a decision matrix and/or pros and cons analysis, etc.                         |
| <del>12.0</del> 11.05 | <del>Understand the relationship between educational achievement and career choices/postsecondary options.</del> Prioritize a postsecondary training provider aligned with his or her recognized postsecondary credential goal using a decision-making technique, such as a decision matrix and/or pros and cons analysis, etc.                                           |
| 11.06                 | Define means of paying for postsecondary training, including scholarships (must include State scholarships), grants, savings, work, work-study programs, private loans and Federal loans.                                                                                                                                                                                 |
| <del>13.0</del> 11.07 | <del>Identify a career cluster and related pathways through an interest assessment that match career and education goals.</del> Describe ways of meeting the requirements of Florida's graduation pathways and obtaining accelerated credit, work-based learning experience, career and technical education credit and industry-recognized certifications in high school. |
| <del>14.0</del> 11.08 | <del>Develop a career and education plan</del> freshman year course schedule that includes short and long term goals, meets high school program of study, and postsecondary/graduation requirements and that provides academic and career preparation aligned with the student's career goals.                                                                            |
| <del>15.0</del> 11.09 | <del>Demonstrate knowledge of technology and its application in career fields/clusters.</del> Identify extracurricular activities aligned with his or her occupational and postsecondary training goals.                                                                                                                                                                  |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org).

### **Special Notes**

The intended progression for the Health Science Middle School courses is Introduction to Health Science Career Pathways (8709350 & 8709360), Orientation to Health Science Professions (8400110) and Exploration of Health Science Professions (8400310 & 8400210). By offering the middle school courses in the intended progression, each course increases in complexity, rigor and skill level as appropriate.

Special projects that are related to each occupational cluster are provided, including role playing activities related to specific careers, visualizing x-rays and crutch-walking, operating the microscope, and specific lab procedures. Team teaching and integration of the curriculum with English, Math and Science is encouraged.

Guest speakers from industry and related field trips make important contributions to the effectiveness of this course.

### **Career Planning**

**Effective July 1, 2019, per Section 1003.4156, Florida Statutes (F.S.), for students to meet middle grades promotion requirements, a Career and Education Planning course must be completed in either sixth, seventh, or eighth grade.** These courses should be taught integrating the eight career and education planning course standards.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

### **Purpose**

The purpose of this course is to assist students in making informed decisions regarding their future academic and occupational goals and to provide information regarding careers in the Health Science career cluster. -The content includes but is not limited to exploratory activities relating to all health occupational clusters. The course also includes an introduction to medical ethics, consumerism, and characteristics of health care workers, community health agencies and basic computer literacy.

Instruction and learning activities are provided in a laboratory setting using hands-on experiences with the equipment, materials and technology appropriate to the course content and in accordance with current practices.

The purpose of this course is to give students initial exposure to the skills and attitudes associated with a broad range of occupations relating to careers in health, including job requirements and tasks performed, to assist students in making informed decisions regarding their future academic and occupational goals.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Course Structure**

This program is a planned sequence of instruction consisting of 1 course.

The length of this course is one semester. It may be offered for two semesters when appropriate. When offered for one semester, it is recommended that it be at the exploratory level and more in-depth when offered for two semesters.

To teach the course listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the course/[program](#) structure:

| Course Number | Course Title                              | Teacher Certification                                                                                                                                            | Length   |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate a well-rounded understanding of healthcare professions.
- 02.0 Demonstrate an understanding of the importance of legal and ethical behavior related to health care.
- 03.0 Perform basic communication skills in the healthcare setting.
- 04.0 Perform basic mathematical calculations and demonstrate problem solving skills used by the health care worker.
- 05.0 Apply scientific principles to the health care field.
- 06.0 Perform basic health care skills.
- 07.0 Demonstrate occupational safety skills related to the employer, employee and the patient in the healthcare setting.

|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                                | Demonstrate a well-rounded understanding of healthcare professions. The student will be able to:                                                                                                                          |
| 01.01                               | Explore the major scientific advancements that have contributed to the evolution of healthcare.                                                                                                                           |
| 01.02                               | Research contributions made in the field of medical science and their impact on the health care field.                                                                                                                    |
| 01.03                               | Identify types of education and training levels (OJT, HSTE, AA, BS/BA, MS, and Doctoral) as related to health careers.                                                                                                    |
| 01.04                               | Compare and contrast the health science career pathways: Therapeutic Services, Diagnostic Services, Health Informatics, Support Services, Bio-technology Research and Development.                                        |
| 01.05                               | List the advantages and disadvantages of one occupation in each pathway including the following factors; job description, career pathway/area of interest, salary range, educational requirements and job outlook.        |
| 01.06                               | Research and describe a healthcare profession of interest identified through a career inventory assessment.                                                                                                               |
| 02.0                                | Demonstrate an understanding of the importance of legal and ethical behavior related to health care. The student will be able to:                                                                                         |
| 02.01                               | Identify responsibilities in maintaining ethical standards, confidentiality, and the patient's rights.                                                                                                                    |
| 02.02                               | Identify and define terms related to the legal and ethical aspects of the health care industry. For example: malpractice, negligence, invasion of privacy, quackery, ethics and law, Patients' Bill of Rights, licensure. |
| 03.0                                | Perform basic communication skills in the healthcare setting. The student will be able to:                                                                                                                                |
| 03.01                               | Demonstrate interpersonal communication skills such as active listening, verbal, non-verbal and written language in the health care setting.                                                                              |
| 03.02                               | Identify technology used for communication in healthcare professions and proper etiquette for its' use.                                                                                                                   |
| 03.03                               | Demonstrate use of medical terminology and abbreviations associated with healthcare professions.                                                                                                                          |
| 04.0                                | Perform basic mathematical calculations and demonstrate problem solving skills used by the health care worker. The student will be able to:                                                                               |
| 04.01                               | Analyze case studies or current events where adverse consequences resulted from mathematical medical error.                                                                                                               |
| 04.02                               | Convert common weights, measure, and volumes to metric as applied in the health care setting.                                                                                                                             |

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 04.03                        | Accurately identify and perform appropriate numeric procedures with problems found in numeric, symbolic, or word form as they relate to the occupations.                                                                                                                                                                                                                                                                        |
| 04.04                        | Accurately tell time using both standard and international/military time formats.                                                                                                                                                                                                                                                                                                                                               |
| 05.0                         | Apply scientific principles to the health care field. The student will be able to:                                                                                                                                                                                                                                                                                                                                              |
| 05.01                        | Identify the overall organization of the human body.                                                                                                                                                                                                                                                                                                                                                                            |
| 05.02                        | Describe the basic structure and function of the body systems of the human body.                                                                                                                                                                                                                                                                                                                                                |
| 05.03                        | Describe how the systems of the human body work together to maintain homeostasis.                                                                                                                                                                                                                                                                                                                                               |
| 05.04                        | Describe mechanisms of disease transmission, the Chain of Infection, prevention and standard precautions.                                                                                                                                                                                                                                                                                                                       |
| 06.0                         | Perform basic health care skills. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                  |
| 06.01                        | Measure and record (graph) height and weight.                                                                                                                                                                                                                                                                                                                                                                                   |
| 06.02                        | Measure and record temperature, pulse, blood pressure and respiration while recognizing the normal ranges for each.                                                                                                                                                                                                                                                                                                             |
| 06.03                        | Demonstrate medical aseptic technique by hand washing, gloving and application of personal protective equipment (PPE).                                                                                                                                                                                                                                                                                                          |
| 06.04                        | Demonstrate basic first aid skills (i.e., bleeding, fractures, and musculoskeletal emergencies).                                                                                                                                                                                                                                                                                                                                |
| 06.05                        | Demonstrate Cardiopulmonary Resuscitation (CPR) and care for a choking victim.                                                                                                                                                                                                                                                                                                                                                  |
| 06.06                        | Demonstrate basic skills used within the healthcare professions may include the following: <ul style="list-style-type: none"> <li>• Visualizing X-rays</li> <li>• Conduct vision testing (Snellen chart, peripheral vision, color blindness)</li> <li>• Conduct basic hearing test</li> <li>• Measure respiratory capacity/output</li> <li>• Range-of-Motion exercises</li> <li>• Conduct simulated ABO blood-typing</li> </ul> |
| 07.0                         | Demonstrate occupational safety skills related to the employer, employee, and the patient in the healthcare setting. The student will be able to:                                                                                                                                                                                                                                                                               |
| 07.01                        | Recognize safety concerns related to the practice of health care.                                                                                                                                                                                                                                                                                                                                                               |
| 07.02                        | Demonstrate safety habits that will prevent injury to health care workers, co-workers, and patients including proper use personal protective equipment (PPE) and infection control practices.                                                                                                                                                                                                                                   |
| 07.03                        | Identify poisons and hazardous materials to include the use and interpretation of a Safety Data Sheet (SDS) form.                                                                                                                                                                                                                                                                                                               |

**CTE Standards and Benchmarks**

- |       |                                                                                                                                                                           |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.04 | Demonstrate an understanding for the importance of fire safety practices including prevention, evacuation plans (R.A.C.E.) and the use of a fire extinguisher (P.A.S.S.). |
| 07.05 | Explore basic information on the dangers of blood borne diseases in healthcare including but not limited to HIV/AIDS and Hepatitis B.                                     |
| 07.06 | Perform proper body mechanics to prevent self and patient injuries.                                                                                                       |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. –For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL’s need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org) [SALA@fldoe.org](mailto:SALA@fldoe.org).

### **Special Notes**

The intended progression for the Health Science Middle School courses is Introduction to Health Science Career Pathways (8709350 & 8709360), Orientation to Health Science Professions (8400110) and Exploration of Health Science Professions (8400310 & 8400210). By offering the middle school courses in the intended progression, each course increases in complexity, rigor and skill level as appropriate.

Special projects that are related to each occupational cluster are provided, including role playing activities related to specific careers, visualizing x-rays and crutch-walking, operating the microscope, and specific lab procedures. Team teaching and integration of the curriculum with English, Math and Science is encouraged.

Guest speakers from industry and related field trips make important contributions to the effectiveness of this course.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Florida Department of Education  
Curriculum Framework

The standards and/or benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Medical Skills and Services  
**Program Type:** Non Career Preparatory  
**Career Cluster:** Health Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Health Science career cluster.

~~The purpose of this program is to give students an opportunity to apply knowledge and skills related to the area of Health Science career cluster.~~

The content includes but is not limited to practical generic skills in health occupations.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Course Structure

This program is a planned sequence of instruction totaling one credit.

To teach the course(s) listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary ~~course~~/program structure:

| Course Number | Course Title                | Teacher Certification                                                                                                          | Length   | Level | Graduation Requirement |
|---------------|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------|----------|-------|------------------------|
| 8400320       | Medical Skills and Services | <del>ANY HEALTH OCCUP G<br/>(See DOE approved list)</del><br><u>ANY HEALTH OCCUP G<br/>(See DOE approved list)</u><br>HEALTH 6 | 1 credit | 2     | CT                     |

(Graduation Requirement Codes: CT= Career & Technical Education, EQ= Equally Rigorous Science, EC= Economics, MA= Mathematics, PL= Personal Financial Literacy)

~~Common~~Florida's ~~Career~~ ~~Technical Core — Career Ready Practices~~Readiness Skills for CTE Programs

~~Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.~~

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- ~~12. Work productively in teams while using cultural/global competence.~~

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate the ability to communicate effectively.
- 02.0 Apply basic mathematics skills used in health care.
- 03.0 Demonstrate knowledge of the services provided by health occupations career clusters.
- 04.0 Recognize and practice basic health skills.
- 05.0 Demonstrate first aid, CPR, and BLS.
- 06.0 Demonstrate knowledge of legal aspects of healthcare delivery.
- 07.0 Demonstrate an understanding of ~~and apply concepts of whole body wellness~~ factors that affect mental and emotional health.
- 08.0 Demonstrate knowledge of blood-borne diseases, ~~including AIDS~~.
- 09.0 Demonstrate ~~and an~~ understanding of technology applications in healthcare.
- 10.0 Demonstrate employability skills.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** \_\_\_\_\_ **Medical Skills and Services**  
**Course Number:** 8400320  
**Course Credit:** 1

**Course Description:**

The purpose of this course is to assist students in making informed decisions about their future academic and occupational goals and to provide information regarding careers and skills in the Health Science career cluster. The content of this course includes, but is not limited to: employability and communication skills, legal and technological aspects of health care, medical mathematics, services provided by health science professions, mental health and wellness, occupational safety, and basic health science skills.

**CTE Standards and Benchmarks**

|       |                                                                                                                                              |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Demonstrate the ability to communicate effectively. -The student will be able to:                                                            |
| 01.01 | <del>Respond to</del> Differentiate between verbal <del>and</del> non-verbal <del>and written</del> communication.                           |
| 01.02 | Develop active listening skills.                                                                                                             |
| 01.03 | Demonstrate ability to follow written and oral directions.                                                                                   |
| 01.04 | Analyze elements of constructive and non-constructive criticism.                                                                             |
| 01.05 | Define, pronounce and spell common medical terms and abbreviations necessary to safely carry out medical instructions.                       |
| 01.06 | Demonstrate awareness of and sensitivity to barriers to communication, including cultural differences, language, and disability.             |
| 02.0  | Apply basic mathematics skills used in health care. -The student will be able to:                                                            |
| 02.01 | Measure and record height and weight using a variety of measurement systems used in health care.                                             |
| 02.02 | Convert common weights, measures and volumes to and from metric as applied in the healthcare setting.                                        |
| 02.03 | Convert <del>from</del> between regular <del>to</del> and 24-hour clock time.                                                                |
| 02.04 | Perform mathematical calculations to solve numeric, symbolic, and word problems relevant to healthcare occupations and/or medical scenarios. |
| 03.0  | Demonstrate knowledge of the services provided by health occupations career clusters. -The student will be able to:                          |

## CTE Standards and Benchmarks

03.01 Discuss the history of health care services and medical progress in the (5) health science career pathway, such as developments in diagnostic technology, sterilization, electronic health records, etc.

~~03.02 Identify the basic components of the health care delivery system.~~

~~03.03~~03.02 Describe at least 2 occupations for each health science pathway, 3 types of services provided by each career chosen, and perform at least 2 skills for each career chosen:

- Therapeutic Services
- Diagnostic Services
- Health Informatics
- Support Services
- Biotechnology Research and Development

~~03.04~~03.03 Research and/or explore at least 3 “alternative medicine” occupations and services of each.

04.0 Recognize and practice basic health skills. -The student will be able to:

04.01 Demonstrate proper hand cleansing, including proper hand-washing and proper use of alcohol-based hand gel.

04.02 Demonstrate proper application and disposal of Personal Protective Equipment (gloves, gown, mask, goggles)

04.03 Perform proper body mechanics to prevent injury to patients and self.

04.04 Apply infection control techniques designed to prevent the spread of diseases to the care of all patients following Centers for Disease Control and Prevention (CDC) guidelines.

04.05 Analyze the parts of the chain of infection and how to break it.

~~04.05~~04.06 Demonstrate how to prevent accidents, injuries and infection in accordance with OSHA standards.

~~04.06~~04.07 Demonstrate fire safety in medical facilities including RACE and PASS procedures.

~~04.07 Analyze the parts of the chain of infection and how to break it.~~

04.08 Demonstrate and record vital signs to include temperature, pulse, blood pressure, and respirations while recognizing the normal range for each.

04.09 Demonstrate vision screening.

04.10 Demonstrate ability to test for hearing using simple tools.

04.11 Demonstrate ability to test reflexes.

05.0 Demonstrate first aid, CPR, and BLS. -The student will be able to:

## CTE Standards and Benchmarks

05.01 Describe wounds and the appropriate first aid treatment.

05.02 Identify various types of shock and their treatments.

05.03 Recognize types of poisoning and treatment.

05.04 Identify classifications of burns and their appropriate treatment.

05.05 Describe ill effects of heat and cold and the appropriate first aid for each.

05.06 Demonstrate immobilization for suspected fractures.

05.07 Recognize the signs, symptoms, and appropriate first aid for heart attack.

~~05.07~~ Recognize the signs, symptoms, and appropriate first aid for ~~each of the following~~:

- ~~Heart attack~~
- ~~Fainting~~fainting and seizures
- ~~Diabetic reactions~~

• ~~05.08 Stroke~~.

05.09 Recognize the signs, symptoms, and appropriate first aid for diabetic reactions.

05.10 Recognize the signs, symptoms, and appropriate first aid for stroke.

~~05.08~~05.11 Describe first aid for foreign objects in the eye and ear.

~~05.09~~05.12 Perform skills in BLS.

~~05.10~~05.13 Demonstrate first aid for choking.

~~05.11 Demonstrate activation of the Emergency Medical System (EMS).~~

06.0 Demonstrate knowledge of legal aspects of healthcare delivery. -The student will be able to:

06.01 Identify how laws (i.e., “Good Samaritan”) protect ~~first responders with healthcare delivery~~individuals in ~~all settings including~~ emergent situations.

06.02 Describe the need for advanced directives and health care ~~surrogate~~surrogates.

06.03 Describe legal procedures for donating organs.

06.04 Describe the need for health insurance and the different types available.

## CTE Standards and Benchmarks

|                               |                                                                                                                                                                                                                                                           |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.0                          | Demonstrate an understanding of <u>factors that affect mental</u> and <del>apply concepts of whole body wellness-</del> <u>emotional health</u> . The student will be able to:                                                                            |
| 07.01                         | <del>Define</del> <u>Analyze causes of</u> stress/stressors.                                                                                                                                                                                              |
| 07.02                         | Identify problem solving skills to resolve stress.                                                                                                                                                                                                        |
| 07.03                         | Demonstrate stress reduction techniques.                                                                                                                                                                                                                  |
| 07.04                         | Demonstrate knowledge of <del>Mental Health-</del> <u>mental health</u> as a legitimate illness, equivalent to all general health conditions.                                                                                                             |
| 07.05                         | Identify factors that explain why health occupations are emotionally and physically demanding.                                                                                                                                                            |
| 07.06                         | Demonstrate coping strategies for dealing with mental and emotional health issues.                                                                                                                                                                        |
| <del>07.07</del>              | <del>Identify the needs of the terminally ill.</del>                                                                                                                                                                                                      |
| <del>07.08</del> <u>07.07</u> | <u>Recognize the steps in the grief process.</u>                                                                                                                                                                                                          |
| <del>07.09</del>              | <del>Describe special considerations when working with terminally ill patients and their families.</del>                                                                                                                                                  |
| 08.0                          | Demonstrate knowledge of blood-borne diseases, <del>including HIV/AIDS-</del> . The student will be able to:                                                                                                                                              |
| 08.01                         | <del>Distinguish</del> <u>Describe the differences</u> between fact and fallacy about the transmission and treatment of diseases caused by blood-borne pathogens.                                                                                         |
| 08.02                         | <del>Distinguish</del> <u>Evaluate the differences</u> between outbreak, epidemic, endemic, and pandemic.                                                                                                                                                 |
| 08.03                         | Identify community resources and services available to the individual with diseases caused by blood-borne pathogens.                                                                                                                                      |
| 08.04                         | Identify at risk behaviors <del>which promote the spread of HIV/AIDS</del> <u>for blood-borne disease</u> and the public education necessary to <del>combat the spread of diseases caused by blood borne pathogens</del> <u>reduce community spread</u> . |
| 08.05                         | Demonstrate knowledge of the legal aspect of <del>HIV/AIDS, including testing</del> <u>blood-borne disease</u> .                                                                                                                                          |
| 09.0                          | Demonstrate an understanding of technology applications in healthcare. -The student will be able to:                                                                                                                                                      |
| 09.01                         | Differentiate between the various computer based diagnostic studies in healthcare (e.g., X-ray, MRI, CT scan, and CPET).                                                                                                                                  |
| 09.02                         | Discuss how computers affect legal and ethical questions in the health field.                                                                                                                                                                             |
| <del>09.03</del>              | <del>Analyze how HIPPA regulations affect the privacy of electronic health records.</del>                                                                                                                                                                 |
| <del>09.04</del> <u>09.03</u> | <u>Discuss the use of Electronic Health Records, including information included</u> <del>and necessary protections.</del>                                                                                                                                 |

## CTE Standards and Benchmarks

~~09.05~~09.04 Demonstrate how to ~~scan, fax, and send by email~~patient information/~~documents~~ digitally.

~~09.06~~09.05 Discuss the security and necessary protections of Electronic Health Records and other electronic communications as determined by HIPAA regulations.

10.0 Demonstrate employability skills. -The student will be able to:

10.01 ~~Identify local job openings in health care.~~Explore steps for getting a job in health care, such as identifying local job openings, completing a job application, and participating in a mock job interview.

10.02 Examine levels of education, credentialing requirements including licensure and certification, employment opportunities, workplace environments, and career growth potential.

~~10.03—Complete a job application.~~

~~10.04—Participate in a job interview.~~

~~10.05~~10.03 Create a cover letter and resume.

~~10.06~~10.04 Discuss professionalism and the ethical role and responsibility of the healthcare worker.

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Instruction and learning activities are provided in a laboratory setting using hands-on experiences with the equipment, materials and technology appropriate to the course content and in accordance with current practices.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org) [sala@fldoe.org](mailto:sala@fldoe.org).

### **Special Notes**

The cooperative method of instruction is not appropriate for this course.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization for~~ organizations providing leadership training and reinforcing specific career and technical skills. - Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. - Other CTOSs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

Florida Department of Education  
Curriculum Framework

No new students may be enrolled in this program starting 2026-27. The last year to report any enrollment is 2026-27. This program was replaced by Cooperative Education On-the-Job Training (OJT) 9601500 (1032011103).

| CTSO                                    | HOSA                                                                                                                                                                                        |
| CTE Program Resources                   | <a href="http://www.fldoe.org/academics/career-adult-edu/career-tech-edu/program-resources.stml">http://www.fldoe.org/academics/career-adult-edu/career-tech-edu/program-resources.stml</a> |

**Purpose**

This course offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science cluster(s); provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Health Science cluster(s).

**Each student job placement must be related to the job preparatory program in which the student is enrolled or has completed.**

The purpose of this course is to provide the on-the-job training component when the **cooperative method of instruction** is appropriate. Whenever the cooperative method is offered, the following is required for each student: a training agreement; a training plan signed by the student, teacher and employer, including instructional objectives; a list of on-the-job and in-school learning experiences; a workstation which reflects equipment, skills and tasks which are relevant to the occupation which the student has chosen as a career goal; and a site supervisor with a working knowledge of the selected occupation. The workstation may be in an industry setting or in a virtual learning environment. The student **must be compensated** for work performed.

The teacher/coordinator must meet with the site supervisor a minimum of once during each grading period for the purpose of evaluating the student's progress in attaining the competencies listed in the training plan.

Health Science Cooperative [Education](#) - OJT may be taken by a student for one or more semesters. A student may earn multiple credits in this course. The specific student performance standards which the student must achieve to earn credit are specified in the Cooperative Education - OJT Training Plan.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Course Structure**

To teach the course listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary course structure:

| Course Number | Course Title                               | Teacher Certification                                           | Length           | Level | Graduation Requirement |
|---------------|--------------------------------------------|-----------------------------------------------------------------|------------------|-------|------------------------|
| 8400410       | Health Science Cooperative Education - OJT | ANY HEALTH OCCUP G<br>( <a href="#">See DOE approved list</a> ) | Multiple credits | 2     | CT                     |

*(Graduation Requirement Codes: CT= Career & Technical Education, EQ= Equally Rigorous Science, EC= Economics, MA= Mathematics, PL= Personal Financial Literacy)*

**CommonFlorida’s Career Technical Core — Career Ready Practices**Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- 12. Work productively in teams while using cultural/global competence.**

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Perform designated job skills.
- 02.0 Demonstrate work ethics.

Florida Department of Education  
Student Performance Standards

Program Title: Health Science Cooperative Education - OJT  
Secondary Number: 8400410

| Standards and Benchmarks |                                                             |
|--------------------------|-------------------------------------------------------------|
| 01.0                     | Perform designated job skills. The student will be able to: |
| 01.01                    | Perform tasks as outlined in the training plan.             |
| 01.02                    | Demonstrate job performance skills.                         |
| 01.03                    | Demonstrate safety procedures on the job.                   |
| 01.04                    | Maintain appropriate records.                               |
| 01.05                    | Attain an acceptable level of productivity.                 |
| 01.06                    | Demonstrate appropriate dress and grooming habits.          |
| 02.0                     | Demonstrate work ethics. The student will be able to:       |
| 02.01                    | Follow directions.                                          |
| 02.02                    | Demonstrate good human relations skills on the job.         |
| 02.03                    | Demonstrate good work habits.                               |
| 02.04                    | Demonstrate acceptable business ethics.                     |

## Additional Information

### Special Notes

~~There is a~~The Cooperative Education Manual ~~is~~ available ~~online that~~on-line and has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the ~~DOE website~~FDOE Website at: <http://fldoe.org/academics/career-adult-edu/career-tech-edu/additional-cte-programs-courses/diversified-edu.stml>

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is/are the~~CTSOs are co-curricular career and technical student ~~organization~~organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### Accommodations

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

Florida Department of Education  
Curriculum Framework

The standards and/or benchmarks for this program were updated for the 2026-27 academic year.

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The content includes but is not limited to planning, management, finance, technical and production skills, applied aspect of leadership, underlying principles of technology, labor issues, community issues, and health, safety, and environmental issues. Work-based learning experiences are an integral part of this program.

The purpose of this program is to prepare students for the wellness and fitness marketplace and its various components, such as instructing or coaching groups or individuals in exercise activities and the fundamentals of an individual's health and wellness. Personal trainers demonstrate

techniques and methods of participation and observe participants, and inform them of corrective measures necessary to improve their skills and personal health.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of ~~instruction~~ instructions totaling three credits. The two-credit Health Science Core (Health Science Anatomy & Physiology 8417100 and Health Science Foundations 8417100) is required as a prerequisite for all programs and options. Secondary students completing the two required core courses will not have to repeat the core in postsecondary.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary program structure:

| Course Number                                                             | Course Title                                                                                                             | Teacher Certification                                                                           | Length   | SOC Code | Level | Graduation Requirement |

Common

**Florida’s Career Technical Core — Career Ready Practices**Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

- 1. Act as a responsible and contributing citizen and employee.
- 2. Apply appropriate academic and technical skills.
- 3. Attend to personal health and financial well-being.
- 4. Communicate clearly, effectively and with reason.
- 5. Consider the environmental, social and economic impacts of decisions.
- 6. Demonstrate creativity and innovation.
- 7. Employ valid and reliable research strategies.
- 8. Utilize critical thinking to make sense of problems and persevere in solving them.
- 9. Model integrity, ethical leadership and effective management.
- 10. Plan education and career path aligned to personal goals.
- 11. Use technology to enhance productivity.
- 12. Work productively in teams while using cultural/global competence.

| Employability Skills |                                               |
|----------------------|-----------------------------------------------|
| 01.0                 | Apply academic skills to workplace scenarios. |
| 01.01                | Use reading skills.                           |
| 01.02                | Use writing skills.                           |
| 01.03                | Use mathematical strategies and procedures.   |
| 01.04                | Use scientific principles and procedures.     |
| 02.0                 | Design a solution to an industry problem.     |

|                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------|

## Standards

After successfully completing this program, the student will be able to perform the following:

### **Health Science Core**

- 01.0 Analyze and interpret an overview of the human body, including organization and chemical process.
- 02.0 Apply correct medical terminology relating to body structure and function within a real-world application.
- 03.0 Evaluate cells and tissues microscopically and macroscopically and relate their specialized functions.
- 04.0 Analyze the integumentary system in relation to health and disease.
- 05.0 Analyze the skeletal system in relation to health and disease.
- 06.0 Analyze the muscular system in relation to health and disease.
- 07.0 Analyze the nervous system in relation to health and disease.
- 08.0 Analyze the endocrine system in relation to health and disease.
- 09.0 Analyze the cardiovascular/circulatory system in relation to health and disease.
- 10.0 Analyze the lymphatic and immune systems in relation to health and disease.
- 11.0 Analyze the respiratory system in relation to health and disease.
- 12.0 Analyze the digestive system in relation to health and disease.
- 13.0 Analyze the urinary system in relation to health and disease.
- 14.0 Analyze both the male and female reproductive systems in relation to health and disease.
- 15.0 Identify and explain factors relating to genetics and disease.
- 16.0 Evaluate and apply the principles of disease transmission and control to real-world scenarios.
- 17.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 18.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 19.0 Demonstrate legal and ethical responsibilities.
- 20.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 21.0 Recognize and practice safety and security procedures.
- 22.0 Recognize and respond to emergency situations.
- 23.0 Recognize and practice infection control procedures.
- 24.0 Demonstrate an understanding of information technology applications in healthcare.
- 25.0 Demonstrate employability skills.
- 26.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 27.0 Apply basic math and science skills.

### **Exercise Science**

- 28.0 Demonstrate a working knowledge of ~~current and~~ legal and ethical issues in the fitness and wellness industry as it relates to professional development, continuing education, and the code of professional conduct of a Certified Personal Trainer.
- 29.0 Outline the process of developing a successful personal training business.
- 30.0 Identify and describe basic human anatomy and physiology ~~in relation to personal fitness or personal training.~~
- 31.0 Understand the theories and practices of human movement science and exercise ~~physiology~~ metabolism.

- 32.0 Classify ~~and demonstrate competence and skill in the care and prevention of athletic injuries~~ risk factors for fitness and exercise activities and identify proper medical referrals needed to modify a fitness plan.
- 33.0 Apply basic principles of nutrition and wellness in assessing health and wellness.
- 34.0 ~~Describe the characteristics of positive client experience and customer service.~~ Understand and define the psychosocial aspects of health and fitness.

## Florida Department of Education Student Performance Standards

### Health Science Core

The first two courses in this program are referred to as the Health Science Core and consist of the courses Health Science Anatomy & Physiology (8417100) and Health Science Foundations (8417110). **To ensure consistency whenever these courses are offered, the standards and benchmarks for the health science core have been placed in a separate document. To access this document, visit this link:**

~~<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-secondary-2425.rtf>~~

<https://www.fldoe.org/file/20894/health-sci-core-secondary-2627.rtf>

The two credit core is required as a prerequisite for all secondary programs except for Practical Nursing and Pharmacy Technician. -Secondary students completing the two required courses will not have to repeat the core in postsecondary. -When the recommended sequence is followed, the structure allows students to complete ~~at~~ specified courses for employment or remain for advanced training or cross-training.

**Course Title:** Health Science Anatomy & Physiology  
**Course Number:** 8417100  
**Course Credit:** 1

#### **Course Description:**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental quality, and safety procedures will be an integral part of this course. Students will interact with materials and primary sources of data or with secondary sources of data to observe and understand the natural world. Students will develop an understanding of measurement error, and develop the skills to aggregate, interpret, and present the data and resulting conclusions. Equipment and supplies will be provided to enhance these hands-on experiences for students. A minimum of 20% of classroom time will be dedicated to laboratory experiences.

This course is part of the secondary Health Core, consisting of an overview of the human body, both structurally and functionally, with emphasis on the pathophysiology and transmission of disease. Medical terminology is an integral part of the course.

The course Anatomy and Physiology (2000350) or Anatomy and Physiology Honors (2000360) may be substituted for the course Health Science Anatomy & Physiology (8417100) ~~and their standards can be found at [www.cpalms.org](http://www.cpalms.org)~~.

The course Health Science Anatomy & Physiology (8417100) is designated as an equally rigorous (EQ) science credit.

**Course Title:** Health Science Foundations  
**Course Number:** 8417110  
**Course Credit:** 1

**Course Description:**

This course is part of the Secondary Health Core, designed to provide the student with an in-depth knowledge of the health care system and associated occupations. -Emphasis is placed on communication and interpersonal skills, use of technology, ethics, and the development of critical thinking and problem-solving skills.- Students may shadow professionals throughout the course.

## Florida Department of Education Student Performance Standards

Course Title: **Exercise Science**  
 Course Number: **8417120**  
 Course Credit: **1**

### Course Description:

This course prepares students to be employed as Personal Trainers.- Content includes, but not limited to, identifying and practicing within the appropriate scope of practice for a personal trainer, ~~develop~~developing and implement exercise programs for apparently healthy individuals or those who have medical clearance to exercise, proficiency in the appropriate fitness equipment used, as well as a foundation in the ~~musculo-skeletal~~musculoskeletal system of the body.

### CTE Standards and Benchmarks

|       |                                                                                                                                                                                                                                                                                                                                               |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.0  | Demonstrate a working knowledge of <del>current and</del> legal <u>and ethical</u> issues in <u>the</u> fitness and wellness- <u>industry as it relates to professional development, continuing education, and the code of professional conduct of a Certified Personal Trainer</u> . The <del>student</del> <u>students</u> will be able to: |
| 28.01 | <del>Demonstrate an understanding of negligence and basic legal terms.</del> <u>Distinguish a fitness professional's role within the allied health industry.</u>                                                                                                                                                                              |
| 28.02 | <del>Demonstrate an understanding of contract law.</del>                                                                                                                                                                                                                                                                                      |
| 28.03 | <del>Demonstrate an understanding of labor laws and their purpose in Florida.</del>                                                                                                                                                                                                                                                           |
| 28.04 | <del>Demonstrate an understanding of workers compensation law.</del>                                                                                                                                                                                                                                                                          |
| 28.05 | <u>28.02</u> <del>Demonstrate an understanding of tort law</del> <u>Identify requirements</u> and <del>its significance</del> <u>opportunities for continuing education</u> in the <del>health field.</del> <u>fitness industry.</u>                                                                                                          |
| 28.06 | <del>Demonstrate an understanding of disability laws.</del>                                                                                                                                                                                                                                                                                   |
| 28.07 | <u>28.03</u> Identify <u>and define</u> the <del>personal trainers'</del> <u>Certified Personal Trainers'</u> responsibilities and duties within their legal scope of practice.                                                                                                                                                               |
| 28.04 | <u>Demonstrate the professional code of conduct of a Certified Personal Trainer.</u>                                                                                                                                                                                                                                                          |
| 28.08 | <u>28.05</u> Discuss the legal and ethical <u>benefits and the</u> consequences of <del>drug use with a focus on</del> performance- <u>enhancing drugs and supplements.</u>                                                                                                                                                                   |
| 28.09 | <u>28.06</u> Outline and present a current <u>legal</u> and/or <del>legal</del> <u>ethical</u> issue related to fitness and wellness.                                                                                                                                                                                                         |
| 28.10 | <u>28.07</u> Demonstrate knowledge of the Health Insurance Portability and Accountability Act (HIPAA)- <u>when working with a healthcare provider.</u>                                                                                                                                                                                        |

## CTE Standards and Benchmarks

- [conducting physiological assessments](#)
- [conducting cardiorespiratory assessments](#)
- [conduct posture assessments](#)
- [conduct movement assessments](#)
- 31.02 • [conduct performance assessments](#)

~~31.03—Compare and contrast lifestyle factors that improve health and increase longevity.~~

~~31.04—Describe the relationship between the agonist, antagonist, fixators and synergist for muscle movement.~~

~~31.05—Demonstrate an understanding of common training types.~~

~~31.06—Identify risk factors that may interfere with safe participation in exercise~~

~~31.07~~31.02 Assess and research various techniques to assess body composition and its relationship to [the](#) assessment of recommended body weight.

~~31.08~~31.03 Evaluate and explain the physiology of weight loss and management. [Demonstrate an understanding of common training types, including Flexibility, Cardiorespiratory, Core, Balance, Plyometric \(Reactive\), Resistance, Speed, Agility, and Quickness.](#)

~~31.09—Prepare and explain a beneficial lifetime exercise program and staying healthy in relation to cardio-respiratory exercise prescriptions.~~

~~31.10~~31.04 Define cardio-respiratory endurance and the benefits of cardio-respiratory endurance training.

~~31.11—Define aerobic and anaerobic exercise and examples of each.~~

~~31.12~~31.05 Define and identify the principles that govern cardio-respiratory exercise prescription: Frequency, Intensity, Time, [Type](#), and [Type](#) [Enjoyment](#) of Exercise. [\(FITTE\).](#)

~~31.13—Demonstrate an understanding of length tension relationship and how it relates to muscles.~~

~~31.14—Demonstrate an understanding of the concept of force coupling and how it relates to muscles.~~

~~31.15~~31.06 Differentiate between muscular strength and muscular endurance and types.

~~31.16~~31.07 Define and understand muscular flexibility.

~~31.17~~31.08 Define and understand the role of fitness in relation to stress management and maintaining health. [Summarize the scientific terminology that governs exercise and movement, such as directional terms and body planes. \(From 30.01\)](#)

~~31.18~~31.09 Evaluate the physiological effects of illness, alcohol, tobacco and drugs. [Compare and contrast the different muscle contractions, including concentric, eccentric, and isometric. \(From 30.03\)](#)

[31.10 Identify the origin, insertion, and action for each major muscle.](#)

~~31.19~~31.11 Describe the relationship between ~~fitness~~ [the agonist, antagonist, fixators,](#) and ~~aging~~ [synergist for muscle movement.](#)

| 34.10 | <u>Describe the relationship between fitness and aging.</u>                                                                                                                                                                                                   |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

**This program requires a clinical component of approximately 50% the length of the courses following the health science core. A portion of the clinical experience can be achieved through simulation when appropriate.**

Clinical courses require contact hours in the clinical setting in order to complete the health science program. Hospitals, nursing homes, and other clinical facilities with clinical affiliation agreements limit the number of students that can rotate and/or be on site at one time. Most facilities, including hospitals and nursing homes, limit the number of students to 15. Due to these industry limitations, it is recommended that the student ratio be 15:1 (student/teacher) based on the clinical facilities that students attend to for clinical training.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org) [sala@fldoe.org](mailto:sala@fldoe.org).

### **Special Notes**

The purpose of the programs in this cluster is to prepare students for employment or advanced training in the health occupations industry. The programs in this cluster also provide students the opportunity to be cross-trained in a variety of entry level positions.

Following the completion of the Health Science Core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

However, in order for students to participate in the ACSM Certified Personal Trainer Certification exam they must be 18 years of age, have earned a high school diploma, and hold a current Adult AHA CPR certification. For more information on this exam please visit [www.acsm.org](http://www.acsm.org) [www.acsm.org](http://www.acsm.org)

This program meets the Department of Health’s education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

### **Career and Technical Student Organization (CTSO)**

~~Florida HOSA: Future Health Professionals is the~~CTSOs are co-curricular career and technical student ~~organization~~organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. -Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student’s Individual Educational Plan (IEP) or 504 plan or postsecondary student’s accommodations’ plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district’s information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

**Purpose**

The purpose of this course is to assist students in making informed decisions regarding their future academic and occupational goals and to provide information regarding careers in the Health Science career cluster.

The content includes but is not limited to basic information about the skills required, available, career paths, specializations, financial rewards, occupational hazards, and educational requirements. Information concerning the practices for promoting good health is included. [Reinforcement of academic skills occurs through classroom instruction and applied laboratory procedures.](#)

Instruction and learning activities are provided in a laboratory setting using hands-on experiences with the equipment, materials and technology appropriate to the course content and in accordance with current practices.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Course Structure**

This program is a planned sequence of instruction consisting of 1 course.

The length of this course is one semester. It may be offered for two semesters when appropriate. When offered for one semester, it is recommended that it be at the exploratory level and more in-depth when offered for two semesters.

To teach the course listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the course/[program](#) structure:

| Course Number | Course Title           | Teacher Certification                                                       | Length   |
|---------------|------------------------|-----------------------------------------------------------------------------|----------|
| 8417106       | Orientation to Nursing | REG NURSE 7 G<br>PRAC NURSE @7 %7%G (Must be a Registered Nurse)<br>LPN 7 G | Semester |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Discuss the history of nursing.
- 02.0 Discuss personal qualities essential to nurses.
- 03.0 Demonstrate an awareness of various career pathways for nursing and occupations.
- 04.0 Identify skills performed by various levels of nursing occupations.
- 05.0 Identify life stages and the health care needs of each.
- 06.0 Demonstrate basic communication skills.
- 07.0 Perform basic mathematical calculations and demonstrate problem solving skills used by nurses.
- 08.0 Demonstrate an understanding of the principles of wellness and disease.
- 09.0 Identify the general plan of anatomy and physiology of the human body and perform nursing skills utilized for each system.
- 10.0 Discuss various job settings for nurses.
- 11.0 Demonstrate employability skills related to nursing.
- 12.0 Demonstrate how to take vital signs and analyze the results.
- 13.0 Perform a basic head to toe assessment & document the findings.

**Course Title:** Orientation to Nursing  
**Course Number:** 8417106  
**Course Length:** Semester

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                         | Discuss the history of nursing. The student will be able to:                                                                                                                                                                   |
| 01.01                        | Compare nursing care from ancient times to the present. For example: families, religious orders, wars, modern treatment and equipment.                                                                                         |
| 01.02                        | Discuss early pioneers in nursing such as Clara Barton and Florence Nightingale.                                                                                                                                               |
| 01.03                        | Demonstrate knowledge of how advances in science have impacted beliefs and practices from ancient times to the present.                                                                                                        |
| 02.0                         | Discuss personal qualities essential to nurses. The student will be able to:                                                                                                                                                   |
| 02.01                        | Describe the personal traits of an ideal nurse.                                                                                                                                                                                |
| 02.02                        | List their own personal traits that would assist them in nursing and those that would need to be improved or developed.                                                                                                        |
| 02.03                        | Discuss the importance of legal and ethical behaviors as related to nursing.                                                                                                                                                   |
| 03.0                         | Demonstrate an awareness of various career pathways for nursing and occupations. The student will be able to:                                                                                                                  |
| 03.01                        | Identify and classify what careers fall under the nursing service category and cluster (e.g., C.N.A.s, PCTs, LPNs, ADNs, diploma R.N.s, B.S.N.s, M.S.N.s, PhDs, and DNPs) and identify various pathways to reach these levels. |
| 03.02                        | List various institutions where training for nursing careers is available.                                                                                                                                                     |
| 03.03                        | Identify types of education and training levels as it relates to nursing services/occupations.                                                                                                                                 |
| 03.04                        | List the advantages and disadvantages of one occupation including the following factors: job opportunities, salary ranges, fringe benefits, working conditions, and occupational hazards.                                      |
| 04.0                         | Identify skills performed by various levels of nursing occupations. The student will be able to:                                                                                                                               |
| 04.01                        | Identify representative skills of nursing assistants and home health aides.                                                                                                                                                    |
| 04.02                        | Identify representative skills of patient care technicians.                                                                                                                                                                    |
| 04.03                        | Identify representative skills of practical nurses.                                                                                                                                                                            |

| CTE Standards and Benchmarks |                                                                                                                                                                    |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 04.04                        | Identify representative skills of professional nurses.                                                                                                             |
| 04.05                        | Identify representative skills of nursing specialties.                                                                                                             |
| 05.0                         | Identify life stages and the health care needs of each. The student will be able to:                                                                               |
| 05.01                        | Describe common health care needs from birth to death and identify how nurses help address those needs.                                                            |
| 05.02                        | Identify how nurses promote optimum health.                                                                                                                        |
| 05.03                        | Identify how cultural diversity/transcultural nursing affects health care needs at different life stages.                                                          |
| 06.0                         | Demonstrate basic communication skills. The student will be able to:                                                                                               |
| 06.01                        | Demonstrate interpersonal communication skills such as active listening, verbal, non-verbal and written language.                                                  |
| 06.02                        | Demonstrate the ability to break medical terms into their word parts.                                                                                              |
| 06.03                        | Discuss common abbreviations and symbols used in nursing.                                                                                                          |
| 06.04                        | Identify technology used in Nursing and the proper communication etiquette required for its' use.                                                                  |
| 07.0                         | Perform basic mathematical calculations and demonstrate problem solving skills used by nurses. The student will be able to:                                        |
| 07.01                        | Describe the importance of why accurate calculations and effective problem solving skills are required.                                                            |
| 07.02                        | Calculate mathematical problems and measurements related to nursing.                                                                                               |
| 07.03                        | Measure artificial medication in various forms, for example syringes or medicine cups.                                                                             |
| 07.04                        | Convert common weights, measure, and volumes to metric as applied in the health care setting.                                                                      |
| 07.05                        | Accurately tell time using both standard and international/military time formats.                                                                                  |
| 08.0                         | Demonstrate an understanding of the principles of wellness and disease. The student will be able to:                                                               |
| 08.01                        | Describe how cultural and individual differences in lifestyles relate to wellness and quality of life and how these differences impact health problems of society. |
| 08.02                        | Demonstrate an understanding of the risk factors that contribute to illness.                                                                                       |
| 08.03                        | Identify consequences of substance abuse and high risk factors.                                                                                                    |
| 08.04                        | Describe strategies for prevention of diseases including health screenings and examinations.                                                                       |

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                                                          |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 08.05                        | Explain basic concepts of positive self-image, body and mental wellness and the effect stress has on both.                                                                                                                                                               |
| 08.06                        | Explore the need for proper nutrition and water intake to maintain wellness.                                                                                                                                                                                             |
| 09.0                         | Identify the general plan of anatomy and physiology of the human body and perform nursing skills utilized for each system. The student will be able to:                                                                                                                  |
| 09.01                        | Describe the anatomical position of the body, defining basic body planes and directional terms.                                                                                                                                                                          |
| 09.02                        | Describe the anatomy and physiology of the respiratory system. <ul style="list-style-type: none"> <li>Describe illnesses/diseases related to the respiratory system.</li> <li>Perform a basic assessment of respiratory rate and lung sounds.</li> </ul>                 |
| 09.03                        | Describe the anatomy and physiology of the integumentary system. <ul style="list-style-type: none"> <li>Describe illnesses/diseases related to the integumentary system.</li> <li>Identify the various wounds related to the skin and their treatment.</li> </ul>        |
| 09.04                        | Describe the anatomy and physiology of the skeletal system. <ul style="list-style-type: none"> <li>Describe illnesses/diseases of the skeletal system.</li> <li>Identify types of fractures and splint/sling techniques.</li> </ul>                                      |
| 09.05                        | Describe the anatomy and physiology of the muscle system. <ul style="list-style-type: none"> <li>Describe illnesses/diseases of the muscular system.</li> <li>Perform ROM exercises.</li> </ul>                                                                          |
| 09.06                        | Describe the anatomy and physiology of the digestive system. <ul style="list-style-type: none"> <li>Describe illnesses/diseases related to the digestive system.</li> <li>Assess bowel sounds.</li> </ul>                                                                |
| 09.07                        | Describe the anatomy and physiology of the ear. <ul style="list-style-type: none"> <li>Describe illnesses/diseases related to the ear.</li> <li>Perform the Rhinnes and Weber hearing test with a tuning fork. If available, test hearing with an audiometer.</li> </ul> |
| 09.08                        | Describe the anatomy and physiology of the eye. <ul style="list-style-type: none"> <li>Describe illnesses/diseases related to the eye.</li> <li>Perform a vision exam using a Snellen eye chart</li> </ul>                                                               |
| 09.09                        | Describe the anatomy and physiology of the nervous system. <ul style="list-style-type: none"> <li>Describe illnesses/diseases related to the nervous system.</li> <li>Perform a reflex exam using a reflex hammer.</li> </ul>                                            |
| 09.10                        | Describe the anatomy and physiology of the circulatory system, including the heart. <ul style="list-style-type: none"> <li>Describe illnesses/diseases related to the circulatory system.</li> <li>Demonstrate how to take a blood pressure.</li> </ul>                  |
| 09.11                        | Describe the anatomy and physiology of the excretory system. <ul style="list-style-type: none"> <li>Describe illnesses/diseases related to the excretory system.</li> <li>Measure input &amp; output.</li> </ul>                                                         |

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 09.12                        | Describe the anatomy and physiology of the immune system. <ul style="list-style-type: none"> <li>Describe the illnesses/disease related to the immune system.</li> <li>Perform hand washing,</li> <li>Demonstrate the operation of a microscope.</li> <li>Demonstrate the streaking of an agar plate.</li> </ul>                                                                                                                                                                                                                          |
| 10.0                         | Discuss various job settings for nurses. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 10.01                        | Recognize various settings that employ nurses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 10.02                        | Compare salaries and benefits of various levels of nursing and various employment settings.                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 10.03                        | Discuss pros and cons of nursing jobs in various settings.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 11.0                         | Demonstrate employability skills related to nursing. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 11.01                        | Identify skills needed for employment as a nurse.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 11.02                        | At a minimum, demonstrate the skills used within nursing from the following list: <ul style="list-style-type: none"> <li>Basic First Aid and CPR.</li> <li>Patient menu planning and feeding techniques.</li> <li>Measure and record temperature, pulse and respiration (TPR).</li> <li>Use of wheelchairs, crutches and/or walkers.</li> <li>Perform a weight, height and BMI assessment.</li> <li>Graph the development of infant/child on a growth chart.</li> <li>Correctly perform making an occupied and unoccupied bed.</li> </ul> |
| 12.0                         | Demonstrate how to take vital signs and analyze the results. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 12.01                        | Demonstrate how to take an oral, temporal, axillary and tympanic temperature and analyze the results.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 12.02                        | Demonstrate how to take a radial, carotid and apical pulse and analyze the results.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 12.03                        | Demonstrate how to take respiration and analyze the results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 12.04                        | Demonstrate how to take a blood pressure and analyze the results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 13.0                         | Perform a basic head to toe assessment & document the findings. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 13.01                        | Perform a basic head to toe assessment and document the findings using correct terminology.                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 13.02                        | Demonstrate how to take a health history.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. –For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org) [SALA@fldoe.org](mailto:SALA@fldoe.org).

### **Special Notes**

The purpose of this course is to acquaint students with career opportunities and job requirements in the field of nursing which will enable students to consider career objectives and interests.

Reinforcement of basic skills in English, mathematics, and science appropriate for the job preparatory programs occurs through vocational classroom instruction and applied laboratory procedures or practice.

Special projects that are related to nursing are provided, including role playing activities of daily living as a handicapped individual, developing an emergency evacuation plan for their own home, menu planning and feeding techniques, applying slings, use of wheelchairs, and creating their own nursing career plan. Team teaching and integration of the curriculum with English, Math and Science is encouraged.

Guest speakers from industry make an important contribution to the effectiveness of this course.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral

part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of several aspects of Health Science career cluster.

The content includes performing skills representative of one to three areas of allied health care in the laboratory and clinical settings. Major areas of allied health are defined as physical therapy, radiation, laboratory and respiratory medicine, and occupational therapy. **Such competencies must remain at the aide level and not go beyond the scope of practice of unlicensed assistive personnel. Invasive procedures that fall into the nursing scope of practice are not to be added.** Clinical experience is defined as activities performed in the clinical setting under the supervision of a health professional duly certified/licensed in the selected occupational fields. Simulated labs are not a substitute for clinical experience. School certificates for this module must be for “Allied Health Assistant”. Specific competencies may be listed on the back.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## Program Structure

This program is a planned sequence of instruction totaling three credits. The two credit Health Science Core (Health Science Anatomy & Physiology 8417100 and Health Science Foundations 8417110) is required as a prerequisite for all programs and options. Secondary students completing the two required core courses will not have to repeat the core in postsecondary.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary program structure:

| Course Number            | Course Title                                                  | Teacher Certification                                                                            | Length   | SOC Code | Level | Graduation Requirement |

(Graduation Requirement Codes: CT= Career & Technical Education, EQ= Equally Rigorous Science, EC= Economics, MA= Mathematics, PL= Personal Financial Literacy)

**CommonFlorida's Career Technical Core—Career Ready Practices**Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

**Employability Skills****01.0** Apply academic skills to workplace scenarios.01.01 Use reading skills.01.02 Use writing skills.01.03 Use mathematical strategies and procedures.01.04 Use scientific principles and procedures.**02.0** Design a solution to an industry problem.02.01 Use critical thinking.02.02 Use creativity.02.03 Make sound decisions.02.04 Solve problems.02.05 Reason.02.06 Plan and organize.**03.0** Manage resources within an industry project03.01 Manage time.03.02 Manage money or resources.03.03 Manage materials.03.04 Manage personnel.**04.0** Oversee the subcomponents, operations and output of a technical or organizational system.04.01 Manage systems.04.02 Monitor systems.04.03 Improve systems.**05.0** Use information for decision making.05.01 Locate information.05.02 Organize information.05.03 Use information.05.04 Analyze information.

| <a href="#"><u>09.09 Take responsibility for professional growth.</u></a>                              |

## **Career Exploration & Planning**

**10.0 Explain career opportunities aligned with the regional economy and personal aspirations.**

10.01 Describe regional occupations that are high-demand, high-growth, high-wage and/or high-skill.

10.02 Describe careers aligned with his or her interests, skills and values based on career assessment, experiential learning, career informational interviews, research and/or reflection.

**11.0 Explain postsecondary pathways aligned with his or her career aspirations.**

11.01 Compare and contrast postsecondary pathways, including education, employment, entrepreneurship and enlistment (the “Four Es”).

11.02 Compare and contrast regional postsecondary training provider options, including apprenticeships, technical colleges, state colleges, universities and industry-recognized certification providers.

11.03 Define postsecondary credentialing and stacking options, including industry-recognized certifications, apprenticeship certificates of completion, career certificates, licenses and associate or baccalaureate degrees.

11.04 Compare postsecondary training data for training programs of interest, such as total costs, average student loan debt, and median earnings and job placement rates after program completion.

**12.0 Develop a personalized career and academic plan.**

12.01 Prioritize an occupation, credential and postsecondary training provider for plan formation.

12.02 Self-assess progress toward meeting graduation requirements and skill-development goals.

12.03 Develop and complete a chronological checklist of steps and deadlines prior to postsecondary training or national service application that includes any required documentation to gather, writing prompts and examinations.

12.04 Identify a variety of financial aid opportunities, including scholarships, grants, savings, work, work-study programs, private loans and federal loans.

12.05 Develop a postsecondary training budget that is inclusive of living and school expenses.

## **Job Attainment**

**13.0 Find, assess and apply to job opportunities.**

13.01 Identify online job posts relevant to his or her career aspirations.

13.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

13.03 Define what information, documentation and writing prompts are required for the positions.

**14.0 Communicate personal competence, character and fit for a job opportunity.**

14.01 Develop a resume.

14.02 Write a cover letter.

14.03 Curate a professional portfolio that includes work products.

14.04 Prepare for and experience a mock job interview.

|                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------|
| <u>15.0 Cultivate and leverage relationships to professionally advance.</u>                                                  |
| <u>15.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.</u> |
| <u>15.02 Develop a plan to cultivate a professional digital footprint.</u>                                                   |
| <u>15.03 Develop a networking plan for a specific industry of interest.</u>                                                  |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

### **Health Science Core**

- 01.0 Analyze and interpret an overview of the human body, including organization and chemical process.
- 02.0 Apply correct medical terminology relating to body structure and function within a real-world application.
- 03.0 Evaluate cells and tissues microscopically and macroscopically and relate their specialized functions.
- 04.0 Analyze the integumentary system in relation to health and disease.
- 05.0 Analyze the skeletal system in relation to health and disease.
- 06.0 Analyze the muscular system in relation to health and disease.
- 07.0 Analyze the nervous system in relation to health and disease.
- 08.0 Analyze the endocrine system in relation to health and disease.
- 09.0 Analyze the cardiovascular/circulatory system in relation to health and disease.
- 10.0 Analyze the lymphatic and immune systems in relation to health and disease.
- 11.0 Analyze the respiratory system in relation to health and disease.
- 12.0 Analyze the digestive system in relation to health and disease.
- 13.0 Analyze the urinary system in relation to health and disease.
- 14.0 Analyze both the male and female reproductive systems in relation to health and disease.
- 15.0 Identify and explain factors relating to genetics and disease.
- 16.0 Evaluate and apply the principles of disease transmission and control to real-world scenarios.
- 17.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 18.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 19.0 Demonstrate legal and ethical responsibilities.
- 20.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 21.0 Recognize and practice safety and security procedures.
- 22.0 Recognize and respond to emergency situations.
- 23.0 Recognize and practice infection control procedures.
- 24.0 Demonstrate an understanding of information technology applications in healthcare.
- 25.0 Demonstrate employability skills.
- 26.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 27.0 Apply basic math and science skills.

### **Allied Health Assisting 3**

- 28.0 Perform skills representative of at least one (1) to three (3) major allied health areas in the school laboratory before beginning the observational phase.
- 29.0 Successfully complete an observational rotation in at least one (1) to three (3) major allied health areas.

## Florida Department of Education Student Performance Standards

### Health Science Core

The first two courses in this program are referred to as the Health Science Core and consist of the courses Health Science Anatomy & Physiology (8417100) and Health Science Foundations (8417110). **To ensure consistency whenever these courses are offered, the standards and benchmarks for the health science core have been placed in a separate document. To access this document, visit this link:**

~~<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-secondary-2425.rtf>~~

<https://www.fldoe.org/file/20894/health-sci-core-secondary-2627.rtf>

The two-credit core is required as a prerequisite for all secondary programs except for Practical Nursing and Pharmacy Technician. Secondary students completing the two required courses will not have to repeat the core in postsecondary. When the recommended sequence is followed, the structure allows students to complete at specified courses for employment or remain for advanced training or cross-training.

**Course Title:** Health Science Anatomy & Physiology  
**Course Number:** 8417100  
**Course Credit:** 1

### **Course Description:**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental quality, and safety procedures will be an integral part of this course. Students will interact with materials and primary sources of data or with secondary sources of data to observe and understand the natural world. Students will develop an understanding of measurement error, and develop the skills to aggregate, interpret, and present the data and resulting conclusions. Equipment and supplies will be provided to enhance these hands-on experiences for students. A minimum of 20% of classroom time will be dedicated to laboratory experiences.

This course is part of the secondary Health Core consisting of an overview of the human body, both structurally and functionally with emphasis on the pathophysiology and transmission of disease. Medical terminology is an integral part of the course.

**The course *Anatomy and Physiology (2000350)* or *Anatomy and Physiology Honors (2000360)* may be substituted for the course Health Science Anatomy & Physiology (8417100) and their standards can be found at [www.cpalms.org](http://www.cpalms.org).**

The course Health Science Anatomy & Physiology (8417100) is designated as an equally rigorous (EQ) science credit.

**Course Title:** Health Science Foundations  
**Course Number:** 8417110  
**Course Credit:** 1

**Course Description:**

This course is part of the Secondary Health Core designed to provide the student with an in depth knowledge of the health care system and associated occupations. Emphasis is placed on communication and interpersonal skills, use of technology, ethics and the development of critical thinking and problem solving skills. Students may shadow professionals throughout the course.

Florida Department of Education  
Student Performance Standards

Course Title: Allied Health Assisting 3  
Course Number: 8417131  
Course Credit: 1

Course Description:

In this course, students will perform skills representative of one to three areas of allied health care in the laboratory and clinical settings.

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                 |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.0                         | Perform skills representative of 1-3 major allied health areas in the school laboratory before beginning the observational phase. The student will be able to:                                                                  |
| 28.01                        | If clinical laboratory aide type skills is one of the selected allied health areas to be taught, only procedures that are exempt from clinical laboratory personnel licensure requirements will be presented and students will: |
|                              | <ul style="list-style-type: none"><li>• Perform waived testing on blood and urine.</li></ul>                                                                                                                                    |
|                              | <ul style="list-style-type: none"><li>• Describe the process for preparing a blood slides for differential blood count.</li></ul>                                                                                               |
|                              | <ul style="list-style-type: none"><li>• Report urine specific gravity, color and characteristics.</li></ul>                                                                                                                     |

| 28.02                        | If physical restorative aide type skills is one of the selected allied health areas to be taught, students will:                                                                                                                |
|                              | <ul style="list-style-type: none"><li>• Describe the functions of bones and muscles as related to the practice of physical therapy.</li></ul>                                                                                   |

**CTE Standards and Benchmarks**

- Define disability and identify types of disabilities.
  - Name and discuss the pathways of physical therapy practice.
  - Describe equipment used in physical therapy.
  - Perform safe body mechanics and transfer
  - Demonstrate an understanding of the use of modalities (i.e., Ultrasound, heat and cold therapeutic massage, E-STEM, wound care, elastic stockings, etc.).
  - Describe the process of hydrotherapy.
  - Perform communication skills specifically related to physical therapy aide.
  - Identify, describe, and demonstrate the use of devices such as crutches, walkers, canes, and wheelchairs, etc.
  - Demonstrate techniques used in active and passive range of motion exercises.
  - Instruct patients in bed/wheelchair mobility.
  - Describe the relationship between long-term and short-term goals.
- 28.03 If occupational restorative aide type skills is one of the selected allied health areas to be taught, students will:
- Assist clients to eat using prompting.
  - Identify augmented communication devices and purposes of each.
  - Describe equipment used in occupational therapy.
  - Describe the splint making process.
  - Perform feeding and dressing skills using adaptive equipment.
  - Perform feeding and dressing skills using one hand.
  - Perform communication skills specifically related to occupational therapy.
  - Perform and instruct range of motion exercises.
  - Name and discuss the pathways of occupational therapy practice.
  - Educate the client in activities of daily living skills such as clothing care skills, food preparation, and money management, etc.

## CTE Standards and Benchmarks

28.04 If respiratory restorative aide type skills is one of the selected allied health areas to be taught, students will:

- Name and discuss the pathways of respiratory care practice.
- Describe common respiratory diseases (asthma, emphysema, chronic bronchitis, and atelectasis, etc.) and common medications used to treat respiratory diseases.
- Recognize normal breath sounds when auscultating the chest with a stethoscope.
- Describe the use of oxygen flow regulating equipment.
- Demonstrate and discuss the use of incentive spirometers.
- Differentiate between various oxygen delivery devices (nasal cannulas, simple and re-breathing masks, oxy-hoods, and enclosures, etc.).
- Check emergency equipment assigned to respiratory care.
- Discuss the use of postural drainage and percussion.
- Discuss and practice the use of the pulse oximeter.
- Describe the equipment and use of humidity/aerosol.

28.05 If medical administrative assisting type skills is one of the selected allied health areas to be taught, students will:

- Demonstrate an understanding of basic medical terminology e.g., prefixes, suffixes, abbreviations, and root words related to major body systems.
- Demonstrate an understanding of straight numerical, alphabetical and terminal digit filing.
- Demonstrate computer literacy, keyboarding and retrieval skills.
- List procedures for scheduling and referring patients, handling walk-in emergency patients, and telephone etiquette.
- Understand what is required to create and submit a medical bill
- Define a release of medical information, explanation of benefit, assignment of benefit, and electronic remittance advice.
- Develop an understanding of healthcare coverage and be able to interpret the information contained on the patient's insurance card.
- Discuss the various types of medical records such as electronic health record (EHR), digital records, and paper records with regard to content and security.
- Understand the financial terms and procedures involved in operating a medical office practice including, income, expense, accounts receivable, accounts payable, cash and accrual accounting, write-off adjustments.

## CTE Standards and Benchmarks

28.06 If radiologic aide type skills is one of the selected allied health areas to be taught, students will:

- Compare and contrast the development of x-rays through digital media or through film.
- Identify the function of a cassette, film, and screen.
- Describe how radiation produces an image on film and through digital technology.
- Identify the process by which x-ray film is developed.
- Identify anatomical position and terminology medial, lateral, superior, inferior, anterior/ventral, and posterior/dorsal).
- Identify patient properly to include doing the correct procedure on the correct patient in the right location (check identification band, etc.).
- Explain appropriate exam(s) to the patient.
- Perform safe body mechanics and transferring skills of patient onto x-ray table.
- Position patient for exam(s) (chest, KUB, hand and foot, etc.).
- Position x-ray tube to simulate exposure for exam(s) (chest, KUB, hand, and foot, etc.).
- Position patient in supine, prone, lateral, oblique, AP, PA, etc. of appropriate part.

28.07 If geriatric aide type skills are to be taught, students will:

- Recognize types of long term care facilities and levels of care.
- Be familiar with legislation affecting long-term care.
- Discuss physical and emotional effects of aging and appropriate ways of dealing with them.
- Recognize the stages of dementia and the care of residents in each stage.
- Discuss reality orientation, reminiscing, and validation therapy.
- Describe ways to meet the nutritional needs through diet, dietary supplements, and mechanisms to provide supplements.
- Provide for the safety of the elderly and chronically ill patient, including prevention of falls, prevention of infections, provision of a safe environment and prompt attendance to patients' needs, etc.
- Check integrity of patient's skin condition and take appropriate actions when needed.
- Recognize common chronic illnesses and the special care required.

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 29.0  | Successfully complete an observational rotation in at least one (1) to Three (3) major allied health areas. The student will be able to:                                                                                       |
| 29.01 | Observe skills in the clinical setting as outlined in the above standard.                                                                                                                                                      |
| 29.02 | Complete One (1) - three (3) observational rotations under the supervision of a duly licensed/certified allied health care professional.                                                                                       |
| 29.03 | Exhibit behavior consistent with the professional ethics required of each of the allied health areas being studied.                                                                                                            |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

**This program requires a clinical component of approximately 50% the length of the courses following the health science core. A portion of the clinical experience can be achieved through simulation when appropriate.**

Clinical courses require contact hours in the clinical setting in order to complete the health science program. Hospitals, nursing homes, and other clinical facilities with clinical affiliation agreements limit the number of students that can rotate and/or be on site at one time. Most facilities, including hospitals and nursing homes, limit the number of students to 15. Due to these industry limitations, it is recommended that the student ratio be 15:1 (student/teacher) based on the clinical facilities that students attend to for clinical training.

### Florida Standards for English Language Development (ELD)

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org).

### Special Notes

For each skill set, the teacher certification used must also be able to teach programs that encompass the competencies being taught. The teacher certifications that teach the individual skill sets should be experienced and capable in the skills themselves in order to teach.

Following the completion of the Health Science Anatomy and Physiology and Health Science Foundations courses, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

### **Career and Technical Student Organization (CTSO)**

~~Florida HOSA: Future Health Professionals is the~~CTSOs are co-curricular career and technical student ~~organization~~organizations providing leadership training and reinforcing specific career and technical skills.- Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to provide classroom theory and practical application in tasks related to dental office asepsis and sterilization and disinfection procedures in the dental environment. It is designed to prepare students for employment as dental aides specializing as dental sterilization technicians (industry title) SOC 31-9099 (Healthcare Support Workers, all other) in a dental office or clinic, or to pursue advanced postsecondary dental science education.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## Program Structure

This program is a planned sequence of instruction totaling three credits. The two credit Health Science Core (Health Science Anatomy & Physiology 8417100 and Health Science Foundations 8417110) is required as a prerequisite for all programs and options. Secondary students completing the two required core courses will not have to repeat the core in postsecondary.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary program structure:

| Course Number            | Course Title                                                  | Teacher Certification                                                        | Length   | SOC Code | Level | Graduation Requirement |

## CommonFlorida's Career Technical Core—Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                       |

| <a href="#"><u>15.02</u></a> | <a href="#"><u>Develop a plan to cultivate a professional digital footprint.</u></a>                                                                                                                                                               |
| <a href="#"><u>15.03</u></a> | <a href="#"><u>Develop a networking plan for a specific industry of interest.</u></a>                                                                                                                                                              |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

### **Health Science Core**

- 01.0 Analyze and interpret an overview of the human body, including organization and chemical process.
- 02.0 Apply correct medical terminology relating to body structure and function within a real-world application.
- 03.0 Evaluate cells and tissues microscopically and macroscopically and relate their specialized functions.
- 04.0 Analyze the integumentary system in relation to health and disease.
- 05.0 Analyze the skeletal system in relation to health and disease.
- 06.0 Analyze the muscular system in relation to health and disease.
- 07.0 Analyze the nervous system in relation to health and disease.
- 08.0 Analyze the endocrine system in relation to health and disease.
- 09.0 Analyze the cardiovascular/circulatory system in relation to health and disease.
- 10.0 Analyze the lymphatic and immune systems in relation to health and disease.
- 11.0 Analyze the respiratory system in relation to health and disease.
- 12.0 Analyze the digestive system in relation to health and disease.
- 13.0 Analyze the urinary system in relation to health and disease.
- 14.0 Analyze both the male and female reproductive systems in relation to health and disease.
- 15.0 Identify and explain factors relating to genetics and disease.
- 16.0 Evaluate and apply the principles of disease transmission and control to real-world scenarios.
- 17.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 18.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 19.0 Demonstrate legal and ethical responsibilities.
- 20.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 21.0 Recognize and practice safety and security procedures.
- 22.0 Recognize and respond to emergency situations.
- 23.0 Recognize and practice infection control procedures.
- 24.0 Demonstrate an understanding of information technology applications in healthcare.
- 25.0 Demonstrate employability skills.
- 26.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 27.0 Apply basic math and science skills.

### **Dental Aide 3**

- 28.0 Use dental terminology.
- 29.0 Identify structures and explain functions and pathologies of dental anatomy.
- 30.0 Identify disease prevention and perform infection control procedures.
- 31.0 Describe the legal and ethical responsibilities of the dental health care worker.
- 32.0 Identify, describe, and maintain dental instruments and equipment.

- 33.0 Identify properties and uses of dental materials which include gypsum, restorative material, acrylics, dental cements, impression materials and waxes.
- 34.0 Describe basic dental laboratory procedures.
- 35.0 Describe dental assisting duties.
- 36.0 Identify specialty dental procedures.
- 37.0 Identify dental business office procedures.

## Florida Department of Education Student Performance Standards

### Health Science Core

The first two courses in this program are referred to as the Health Science Core and consist of the courses Health Science Anatomy & Physiology (8417100) and Health Science Foundations (8417110). **To ensure consistency whenever these courses are offered, the standards and benchmarks for the health science core have been placed in a separate document. To access this document, visit this link:**

~~<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-secondary-2425.rtf>~~ <https://www.fldoe.org/file/20894/health-sci-core-secondary-2627.rtf>

The two credit core is required as a prerequisite for all secondary programs except for Practical Nursing and Pharmacy Technician. Secondary students completing the two required courses will not have to repeat the core in postsecondary. When the recommended sequence is followed, the structure allows students to complete at specified courses for employment or remain for advanced training or cross-training.

**Course Title:** Health Science Anatomy & Physiology  
**Course Number:** 8417100  
**Course Credit:** 1

### **Course Description:**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental quality, and safety procedures will be an integral part of this course. Students will interact with materials and primary sources of data or with secondary sources of data to observe and understand the natural world. Students will develop an understanding of measurement error, and develop the skills to aggregate, interpret, and present the data and resulting conclusions. Equipment and supplies will be provided to enhance these hands-on experiences for students. A minimum of 20% of classroom time will be dedicated to laboratory experiences.

This course is part of the secondary Health Core consisting of an overview of the human body, both structurally and functionally with emphasis on the pathophysiology and transmission of disease. Medical terminology is an integral part of the course.

**The course Anatomy and Physiology (2000350) or Anatomy and Physiology Honors (2000360) may be substituted for the course Health Science Anatomy & Physiology (8417100) and their standards can be found at [www.cpalms.org](http://www.cpalms.org).**

The course Health Science Anatomy & Physiology (8417100) is designated as an equally rigorous (EQ) science credit.

**Course Title:** Health Science Foundations  
**Course Number:** 8417110  
**Course Credit:** 1

**Course Description:**

This course is part of the Secondary Health Core designed to provide the student with an in depth knowledge of the health care system and associated occupations. Emphasis is placed on communication and interpersonal skills, use of technology, ethics and the development of critical thinking and problem solving skills. Students may shadow professionals throughout the course.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Dental Aide 3  
**Course Number:** 8417141  
**Course Credit:** 1

**Course Description:**

This course provides classroom theory and practical application in tasks related to dental office asepsis and sterilization and disinfection procedures in the dental environment. It is designed to prepare completers for employment as dental aides specializing as dental sterilization technicians. It also provides an introduction to dentistry and dental assisting.

| <b>CTE Standards and Benchmarks</b> |                                                                                                                                                                                                          |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.0                                | Use dental terminology. The student will be able to:                                                                                                                                                     |
| 28.01                               | Identify and define common dental terms.                                                                                                                                                                 |
| 28.02                               | Demonstrate the use of proper dental terminology in the dental environment.                                                                                                                              |
| 29.0                                | Identify structures and explain functions and pathologies of dental and general head and neck anatomy. The student will be able to:                                                                      |
| 29.01                               | Identify structures and functions of head and neck anatomy including bones, muscles, sinuses, salivary glands, nerves and blood vessels. Identify embryonic development of head, oral cavity, and teeth. |
| 29.02                               | Identify teeth and their landmarks.                                                                                                                                                                      |
| 29.03                               | Describe the histological components of the head, oral cavity, and elements of the teeth and supporting structures.                                                                                      |
| 29.04                               | Recognize and describe oral pathological conditions.                                                                                                                                                     |
| 30.0                                | Identify principles of microbiology and disease prevention and perform infection control procedures. The student will be able to:                                                                        |
| 30.01                               | Differentiate between pathogenic and non-pathogenic microorganisms.                                                                                                                                      |
| 30.02                               | Describe pathogens and modes of disease transmission.                                                                                                                                                    |
| 30.03                               | Differentiate between aseptic and non-aseptic environments.                                                                                                                                              |
| 30.04                               | Perform aseptic handwashing technique.                                                                                                                                                                   |
| 30.05                               | Describe and apply methods of cleaning, disinfection and sterilization.                                                                                                                                  |

**CTE Standards and Benchmarks**

|       |                                                                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30.06 | Identify chemicals and their uses for controlling the spread of disease in the dental environment.                                                                                    |
| 30.07 | Identify and practice the current CDC guidelines for infection control in dental healthcare settings.                                                                                 |
| 30.08 | Describe the duties of the dental office safety coordinator.                                                                                                                          |
| 30.09 | Identify areas of the OSHA Blood borne Pathogens Standard (29CFR-1910.1030) applicable to the dental office environment.                                                              |
| 31.0  | Describe the legal and ethical responsibilities of the dental health care worker. The student will be able to:                                                                        |
| 31.01 | Define commonly used legal vocabulary relating to dentistry.                                                                                                                          |
| 31.02 | Describe legal and ethical consideration/obligations in the dental team-patient relationship.                                                                                         |
| 31.03 | Explain risk management.                                                                                                                                                              |
| 31.04 | Identify areas of Florida Statute 466 and Rule 64B5-16, FAC applicable to practice by the dental health workers.                                                                      |
| 32.0  | Identify, describe, and maintain dental instruments and equipment. The student will be able to:                                                                                       |
| 32.01 | Identify various types, functions, and operations of dental operatory and laboratory equipment.                                                                                       |
| 32.02 | Identify types and functions of operative, restorative, surgical, prosthodontic, orthodontic and endodontic dental instruments.                                                       |
| 32.03 | Maintain dental operatory equipment-and instruments.                                                                                                                                  |
| 32.04 | Identify types and functions of specific dental hygiene instruments with emphasis on category rather than individual instruments.                                                     |
| 33.0  | Identify properties and uses of dental materials which include gypsum, restorative material, acrylics, dental cements, impression materials, and waxes. The student will be able to:  |
| 33.01 | Demonstrate an understanding of the composition of dental materials, their physical properties and chemical properties and the manner in which the properties relate to manipulation. |
| 33.02 | Describe the manipulative skills necessary to properly prepare dental materials for use both intraorally and extra orally.                                                            |
| 33.03 | Identify the primary objectives of the Council on Dental Materials and Devices of the American Dental Association.                                                                    |
| 33.04 | Identify organizations responsible for establishing standards for dental materials.                                                                                                   |
| 33.05 | Describe the physical conditions in the oral cavity which influence the selection of dental materials.                                                                                |
| 33.06 | Describe the biological characteristics of dental materials which may limit their use in the oral cavity.                                                                             |

**CTE Standards and Benchmarks**

|       |                                                                                        |
|-------|----------------------------------------------------------------------------------------|
| 33.07 | List factors which must be considered when selecting dental materials.                 |
| 33.08 | Define terms related to dental materials and science.                                  |
| 34.0  | Describe basic dental laboratory procedures. The student will be able to:              |
| 34.01 | Identify properties and manipulate gypsum.                                             |
| 34.02 | Identify properties and manipulate impression materials.                               |
| 34.03 | Identify properties and manipulate extra orally used waxes.                            |
| 34.04 | Perform laboratory infection control.                                                  |
| 35.0  | Describe dental assisting duties. The student will be able to:                         |
| 35.01 | Describe and demonstrate procedures used to evacuate and maintain the operating field. |
| 35.02 | Assemble instruments for general/and specialty dental procedures.                      |
| 36.0  | Identify specialty dental procedures. The student will be able to:                     |
| 36.01 | Identify and describe oral maxillofacial surgery.                                      |
| 36.02 | Identify and describe orthodontics.                                                    |
| 36.03 | Identify and describe periodontics.                                                    |
| 36.04 | Identify and describe prosthodontics.                                                  |
| 36.05 | Identify and describe pedodontics.                                                     |
| 36.06 | Identify and describe endodontics.                                                     |
| 36.07 | Identify and describe public health dentistry.                                         |
| 37.0  | Identify dental business office procedures. The student will be able to:               |
| 37.01 | Describe appointment control.                                                          |
| 37.02 | Describe an active recall system.                                                      |
| 37.03 | Describe steps for maintaining accurate patient records.                               |

| CTE Standards and Benchmarks |                                                                               |
|------------------------------|-------------------------------------------------------------------------------|
| 37.04                        | Describe steps for maintaining patient financial records and collecting fees. |
| 37.05                        | Describe methods of dental office inventory control.                          |
| 37.06                        | Describe public relations responsibilities of the secretary/receptionist.     |
| 37.07                        | Identify skills required for operating on office equipment.                   |
| 37.08                        | Describe an optimal dental office environment.                                |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students

**This program requires a clinical component of approximately 50% the length of the courses following the health science core. A portion of the clinical experience can be achieved through simulation when appropriate.**

Clinical courses require contact hours in the clinical setting in order to complete the health science program. Hospitals, nursing homes, and other clinical facilities with clinical affiliation agreements limit the number of students that can rotate and/or be on site at one time. Most facilities, including hospitals and nursing homes, limit the number of students to 15. Due to these industry limitations, it is recommended that the student ratio be 15:1 (student/teacher) based on the clinical facilities that students attend to for clinical training.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org).

### **Special Notes**

Following the completion of the Health Science Core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

### **Career and Technical Student Organization (CTSO)**

Florida HOSA: Future Health Professionals is the CTSOs are co-curricular career and technical student organization organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The ~~program~~[content includes but is designed not limited to a design](#) to prepare students for employment as dental laboratory technician apprentices or dental laboratory assistants (51-9081 Dental Laboratory Technicians) or to pursue further education in the dental health field. Simulation laboratory experiences are integrated with the didactic portion of this program. Students perform tasks representative of dental laboratory practice.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Program Structure**

This program is a planned sequence of instruction totaling four credits. The two credit Health Science Core (Health Science Anatomy & Physiology 841700 and Health Science Foundations 8417110) is required as a prerequisite for all programs and options. Secondary students completing the two required courses will not have to repeat the core in postsecondary.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary program structure:

| Course Number                                           | Course Title                                                                                                             | Teacher Certification                                                                           | Length   | SOC Code | Level | Graduation Requirement |

Common Florida's Career Technical Core—Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- ~~12. Work productively in teams while using cultural/global competence.~~

## **Standards**

After successfully completing this program, the student will be able to perform the following:

### **Health Science Core**

- 01.0 Analyze and interpret an overview of the human body, including organization and chemical process.
- 02.0 Apply correct medical terminology relating to body structure and function within a real-world application.
- 03.0 Evaluate cells and tissues microscopically and macroscopically and relate their specialized functions.
- 04.0 Analyze the integumentary system in relation to health and disease.
- 05.0 Analyze the skeletal system in relation to health and disease.
- 06.0 Analyze the muscular system in relation to health and disease.
- 07.0 Analyze the nervous system in relation to health and disease.
- 08.0 Analyze the endocrine system in relation to health and disease.
- 09.0 Analyze the cardiovascular/circulatory system in relation to health and disease.
- 10.0 Analyze the lymphatic and immune systems in relation to health and disease.
- 11.0 Analyze the respiratory system in relation to health and disease.
- 12.0 Analyze the digestive system in relation to health and disease.
- 13.0 Analyze the urinary system in relation to health and disease.
- 14.0 Analyze the both the male and female reproductive systems in relation to health and disease.
- 15.0 Identify and explain factors relating to genetics and disease.
- 16.0 Evaluate and apply the principles of disease transmission and control to real-world scenarios.
- 17.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 18.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 19.0 Demonstrate legal and ethical responsibilities.
- 20.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 21.0 Recognize and practice safety and security procedures.
- 22.0 Recognize and respond to emergency situations.
- 23.0 Recognize and practice infection control procedures.
- 24.0 Demonstrate an understanding of information technology applications in healthcare.
- 25.0 Demonstrate employability skills.
- 26.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 27.0 Apply basic math and science skills.

### **Dental Laboratory Assisting 3 & 4**

- 28.0 Demonstrate communication and computational skills used in a dental laboratory.
- 29.0 Identify anatomic structure and function of body systems in relation to dental laboratory science.
- 30.0 Demonstrate computer literacy for dental labs.
- 31.0 Practice selected dental laboratory techniques.
- 32.0 Practice accepted principles of safety in the laboratory setting.

## Florida Department of Education Student Performance Standards

### Health Science Core

The first two courses in this program are referred to as the Health Science Core and consist of the courses Health Science Anatomy & Physiology (8417100) and Health Science Foundations (8417110). **To ensure consistency whenever these courses are offered, the standards and benchmarks for the health science core have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-secondary-2425.rtf>

<https://www.fldoe.org/file/20894/health-sci-core-secondary-2627.rtf>

The two credit core is required as a prerequisite for all secondary programs except for Practical Nursing and Pharmacy Technician. Secondary students completing the two required courses will not have to repeat the core in postsecondary. When the recommended sequence is followed, the structure allows students to complete at specified courses for employment or remain for advanced training or cross-training.

**Course Title:** Health Science Anatomy & Physiology  
**Course Number:** 8417100  
**Course Credit:** 1

#### **Course Description:**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental quality, and safety procedures will be an integral part of this course. Students will interact with materials and primary sources of data or with secondary sources of data to observe and understand the natural world. Students will develop an understanding of measurement error, and develop the skills to aggregate, interpret, and present the data and resulting conclusions. Equipment and supplies will be provided to enhance these hands-on experiences for students. A minimum of 20% of classroom time will be dedicated to laboratory experiences.

This course is part of the secondary Health Core consisting of an overview of the human body, both structurally and functionally with emphasis on the pathophysiology and transmission of disease. Medical terminology is an integral part of the course.

The course Anatomy and Physiology (2000350) or Anatomy and Physiology Honors (2000360) may be substituted for the course Health Science Anatomy & Physiology (8417100) ~~and their standards can be found at [www.cpalms.org](http://www.cpalms.org).~~

The course Health Science Anatomy & Physiology (8417100) is designated as an equally rigorous (EQ) science credit.

**Course Title:** Health Science Foundations  
**Course Number:** 8417110  
**Course Credit:** 1

**Course Description:**

This course is part of the Secondary Health Core designed to provide the student with an in-depth knowledge of the health care system and associated occupations. Emphasis is placed on communication and interpersonal skills, use of technology, ethics and the development of critical thinking and problem-solving skills. Students may shadow professionals throughout the course.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Dental Laboratory Assisting 3  
**Course Number:** 8417151  
**Course Credit:** 1

**Course Description:**

This course provides an introduction to dental laboratory techniques and procedures while preparing the student for entry-level employment as a dental laboratory assistant in a dental laboratory.

| CTE Standards and Benchmarks |                                                                                                                                 |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| 28.0                         | Demonstrate communication and computational skills used in a dental laboratory. The student will be able to:                    |
| 28.01                        | Use appropriate dental terminology and abbreviations.                                                                           |
| 28.02                        | Demonstrate the ability to interpret dental laboratory prescriptions.                                                           |
| 28.03                        | Demonstrate communication skills specific to the dental laboratory setting.                                                     |
| 29.0                         | Identify anatomic structure and function of body systems in relation to dental laboratory science. The student will be able to: |
| 29.01                        | Describe the structure and function of head and neck anatomy.                                                                   |
| 29.02                        | Apply understanding of head and neck anatomy in relation to patient use of dental appliances.                                   |
| 30.0                         | Demonstrate computer literacy for dental lab. The student will be able to:                                                      |
| 30.01                        | Describe the uses of computers in the health occupation being studied.                                                          |
| 30.02                        | Demonstrate computational, keyboarding and retrieval skills relevant to job requirements of the dental laboratory industry.     |
| 30.03                        | Demonstrate computer skills in each clinical rotation.                                                                          |
| 30.04                        | Describe the use of CAD/CAM technology in the dental laboratory.                                                                |
| 31.0                         | Practice selected dental laboratory techniques. The student will be able to:                                                    |
| 31.01                        | Fabricate a variety of dental models from impressions using appropriate gypsum products and techniques,                         |
| 31.02                        | Fabricate selected provisional dental restorations.                                                                             |

| CTE Standards and Benchmarks |                                                                                                       |
|------------------------------|-------------------------------------------------------------------------------------------------------|
| 31.03                        | Fabricate selected provisional dental prostheses.                                                     |
| 31.04                        | Fabricate selected dental appliances such as athletic guards, night guards, and bleaching trays.      |
| 31.05                        | Fabricate custom impression trays and bite rims.                                                      |
| 32.0                         | Practice accepted principles of safety in the dental laboratory setting. The student will be able to: |
| 32.01                        | Demonstrate safe use, care and maintenance of equipment and materials.                                |
| 32.02                        | Properly identify and label models, prostheses, etc.                                                  |
| 32.03                        | Recognize atypical behavior.                                                                          |
| 32.04                        | Follow emergency procedures for a dental laboratory.                                                  |
| 32.05                        | Demonstrate knowledge of sterile technique and disease prevention in the dental lab.                  |
| 32.06                        | Implement appropriate joint commission patient safety goals.                                          |

Florida Department of Education  
Student Performance Standards

**Course Title:** Dental Laboratory Assisting 4  
**Course Number:** 8417152  
**Course Credit:** 1

**Course Description:**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental quality, and safety procedures will be an integral part of this course. Students will interact with materials and primary sources of data or with secondary sources of data to observe and understand the natural world. Students will develop an understanding of measurement error, and develop the skills to aggregate, interpret, and present the data and resulting conclusions. Equipment and supplies will be provided to enhance these hands-on experiences for students. A minimum of 20% of classroom time will be dedicated to laboratory experiences.

This course may be taken concurrently with Dental Laboratory Assisting 3.- This course is a continuation of Dental Laboratory Assisting 3 and will allow the student to practice all aspects of Dental Laboratory Assisting.

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

**This program requires a clinical component of approximately 50% the length of the courses following the health science core. A portion of the clinical experience can be achieved through simulation when appropriate.**

Clinical courses require contact hours in the clinical setting in order to complete the health science program. Hospitals, nursing homes, and other clinical facilities with clinical affiliation agreements limit the number of students that can rotate and/or be on site at one time. Most facilities, including hospitals and nursing homes, limit the number of students to 15. Due to these industry limitations, it is recommended that the student ratio be 15:1 (student/teacher) based on the clinical facilities that students attend to for clinical training.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org).

### **Special Notes**

Following the completion of the Health Science Core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

This program meets the Department of Health HIV/AIDS Domestic Violence and Prevention of Medical Errors education requirements. -Upon completion of this program, the instructor will provide a certificate to the student verifying that these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

### **Career and Technical Student Organization (CTSO)**

~~Florida HOSA: Future Health Professionals is the CO~~CTSOs are co-curricular career and technical student ~~organization~~organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The content includes but is not limited to planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues. Clinical learning experiences are an integral part of this program.

This instructional program prepares individuals to provide initial care to sick or injured persons or as ambulance drivers and attendants SOC 53-3011. An Emergency Medical Responder may use this training for employment. The Emergency Medical Responder is the first to arrive at the scene of an injury but does not have the primary responsibility for treating and transporting the injured person(s). Emergency Medical Responders may include law enforcement, lifeguard, fire services or basic life support non-licensed personnel who act as part of an organized emergency medical services team.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

~~"All EMR/EMT/Paramedic students are required to complete the 4-hour Traffic Incident Management Safety (TIMS) course at least once. This requirement can be fulfilled either as a prerequisite or as part of the curriculum, at the discretion of the EMS education program."~~

### Program Structure

This program is a planned sequence of instruction totaling three credits. The two credit Health Science Core (Health Science Anatomy & Physiology 8417100 and Health Science Foundations 8417110) is required as a prerequisite for all programs. Secondary students completing the two required courses will not have to repeat the core in postsecondary.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary program structure:

| Course Number            | Course Title                                                                | Teacher Certification                                                                                                                                                               | Length   | SOC Code | Level | Graduation Requirement |

(Graduation Requirement Codes: CT= Career & Technical Education, EQ= Equally Rigorous Science, EC= Economics, MA= Mathematics, PL= Personal Financial Literacy)

**National Standards (NS)**

The student performance standards for Emergency Medical Responder were adapted and condensed from U. S. Department of Transportation Emergency Medical Services; National EMS Education Standards; Emergency Medical Responder Instructional Guidelines and American Society for Testing and Materials, Committee F-30. Administrators and instructors should refer to these materials for additional details.

~~Common~~Florida's ~~Career~~ ~~Technical Core — Career Ready Practices~~Readiness Skills for CTE Programs

~~Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.~~

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- ~~12. Work productively in teams while using cultural/global competence.~~

| <a href="#"><u>15.03</u></a> | <a href="#"><u>Develop a networking plan for a specific industry of interest.</u></a>                                                                                                                                                              |

## Standards

After successfully completing this program, the student will be able to perform the following:

### **Health Science Core**

- 01.0 Analyze and interpret an overview of the human body, including organization and chemical process.
- 02.0 Apply correct medical terminology relating to body structure and function within a real-world application.
- 03.0 Evaluate cells and tissues microscopically and macroscopically and relate their specialized functions.
- 04.0 Analyze the integumentary system in relation to health and disease.
- 05.0 Analyze the skeletal system in relation to health and disease.
- 06.0 Analyze the muscular system in relation to health and disease.
- 07.0 Analyze the nervous system in relation to health and disease.
- 08.0 Analyze the endocrine system in relation to health and disease.
- 09.0 Analyze the cardiovascular/circulatory system in relation to health and disease.
- 10.0 Analyze the lymphatic and immune systems in relation to health and disease.
- 11.0 Analyze the respiratory system in relation to health and disease.
- 12.0 Analyze the digestive system in relation to health and disease.
- 13.0 Analyze the urinary system in relation to health and disease.
- 14.0 Analyze both the male and female reproductive systems in relation to health and disease.
- 15.0 Identify and explain factors relating to genetics and disease.
- 16.0 Evaluate and apply the principles of disease transmission and control to real-world scenarios.
- 17.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 18.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 19.0 Demonstrate legal and ethical responsibilities.
- 20.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 21.0 Recognize and practice safety and security procedures.
- 22.0 Recognize and respond to emergency situations.
- 23.0 Recognize and practice infection control procedures.
- 24.0 Demonstrate an understanding of information technology applications in healthcare.
- 25.0 Demonstrate employability skills.
- 26.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 27.0 Apply basic math and science skills.

### **Emergency Medical Responder 3**

- 28.0 Demonstrate an understanding of the roles and responsibilities of the Emergency Medical Responder.
- 29.0 Demonstrate an ability to communicate effectively as part of the EMS team.

#### 30.0 Workforce Safety and Wellness

- ~~30.0~~31.0 Demonstrate an understanding of medicolegal aspects.

#### 32.0 Determine Recording patient findings.

- ~~31.0~~33.0 Document, Notate Medical Identification Devices, and record vital signs of a sick or injured person- (Recording patient findings).

~~32.0 Use medical identification devices.~~

~~33.0 Conduct a primary assessment of problems that are a threat to life if not corrected immediately.~~

~~34.0 Demonstrate BLS procedures.~~

34.0 Patient Education, Therapeutic Communication, & Mobile Integrated Health

35.0 Anatomy and Physiology

36.0 Medical Terminology.

37.0 Pathophysiology.

38.0 Pathophysiology.

39.0 Public Health Overview: Has an awareness of local public health resources and their role in public health.

~~35.0 Pharmacology: Uses knowledge of~~ Recognize and control bleeding.

~~36.0 Recognize and control shock.~~

~~37.0~~ 40.0 Understand the importance of emergency medications. that the EMR may administer in an emergency.

~~38.0~~ 41.0 Demonstrate understanding of airway management, respiration, and artificial ventilation.

42.0 Conduct a scene size-up and primary assessment of problems that are a threat to life if not corrected immediately. to (Include age-related variations in pediatric and geriatric patients):

~~39.0~~ 43.0 Provide secondary assessment.

44.0 Demonstrate Cardiopulmonary Resuscitation at the Basic Life Support (BLS) level.

45.0 Recognize and control shock.

46.0 Recognize and control bleeding.

~~40.0~~ 47.0 Identify musculoskeletal injuries.

~~41.0~~ 48.0 Demonstrate proper spinal motion restriction of a Cervical/Spinal cervical/spinal injury.

~~42.0~~ 49.0 Demonstrate proper extremity immobilization as well as other immobilization for other injuries (Chest, pelvis, ribs).

~~43.0~~ 50.0 Provide emergency evacuation transport and transfer movement of a sick and/or injured person.

~~44.0~~ 51.0 Identify and provide initial care for a sick and/or injured patient. (Include age-related variations in pediatric and geriatric patients).

~~45.0~~ 52.0 Identify and care for patients who are in special situations.

~~46.0~~ 53.0 Provide triage to victims of multiple casualty incidents.

~~47.0~~ 54.0 Recognize life-threatening situations.

~~48.0~~ 55.0 Recognize entrapment situations.

~~49.0~~ 56.0 Ob/Gyn Assist with emergency childbirth.

~~50.0 Identify critical incident stressors.~~

57.0 EMS Operations

## Florida Department of Education Student Performance Standards

### Health Science Core

The first two courses in this program are referred to as the Health Science Core and consist of the courses Health Science Anatomy & Physiology (8417100) and Health Science Foundations (8417110). **To ensure consistency whenever these courses are offered, the standards and benchmarks for the health science core have been placed in a separate document. To access this document, visiting this link:**

~~<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-secondary-2425.rtf>~~

<https://www.fldoe.org/file/20894/health-sci-core-secondary-2627.rtf>

The two-credit core is required as a prerequisite for all secondary programs except for Practical Nursing and Pharmacy Technician. Secondary students completing the two required courses will not have to repeat the core in postsecondary. When the recommended sequence is followed, the structure allows students to complete at specified courses for employment or remain for advanced training or cross training.

**Course Title:** ~~\_\_\_\_\_~~ **Health Science Anatomy & Physiology**

**Course Number:** ~~\_\_\_\_\_~~ **8417100**

**Course Credit:** ~~\_\_\_\_\_~~ **1**

### **Course Description:**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental quality, and safety procedures will be an integral part of this course. Students will interact with materials and primary sources of data or with secondary sources of data to observe and understand the natural world. Students will develop an understanding of measurement error, and develop the skills to aggregate, interpret, and present the data and resulting conclusions. Equipment and supplies will be provided to enhance these hands-on experiences for students. A minimum of 20% of classroom time will be dedicated to laboratory experiences.

This course is part of the secondary Health Core consisting of an overview of the human body, both structurally and functionally with emphasis on the pathophysiology and transmission of disease. Medical terminology is an integral part of the course.

The course Anatomy and Physiology (2000350) or Anatomy and Physiology Honors (2000360) may be substituted for the course Health Science Anatomy & Physiology (8417100) ~~and their standards can be found at [www.cpalms.org](http://www.cpalms.org).~~

The course Health Science Anatomy & Physiology (8417100) is designated as an equally rigorous (EQ) science credit.

**Course Title:** ~~\_\_\_\_\_~~Health Science Foundations

**Course Number:** ~~\_\_\_\_\_~~8417110

**Course Credit:** 1

**Course Description:**

This course is part of the Secondary Health Core designed to provide the student with an in depth knowledge of the health care system and associated occupations. Emphasis is placed on communication and interpersonal skills, use of technology, ethics and the development of critical thinking and problem-solving skills. Students may shadow professionals throughout the course.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** ~~Emergency Medical Responder 3~~

**Course Number:** ~~8417171~~

**Course Credit:** ~~1~~

**Course Description:**

This course prepares students to be employed as Emergency Medical Responders. Content includes, but not limited to, identifying and practicing within the appropriate scope of practice for an Emergency Medical Responder, demonstrating correct medical procedures for various emergency situations, proficiency in the appropriate instruments used, as well as a foundation in the musculoskeletal system of the body.

| CTE Standards and Benchmarks           |                                                                                                                                                                                   |
|----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.0                                   | Demonstrate an understanding of the roles and responsibilities of the Emergency Medical Responder. -The student will be able to:                                                  |
| 28.01                                  | Describe the role of Emergency Medical Responder as a member of the EMS team. ( <a href="#">EMS System</a> )                                                                      |
| 28.02                                  | List and describe the responsibilities of the Emergency Medical Responder for the provision of pre-hospital emergency care within the local EMS system. ( <a href="#">Roles</a> ) |
| <a href="#">28.03</a>                  | <a href="#">Quality improvement vs. quality assurance</a>                                                                                                                         |
| <a href="#">28.04</a>                  | <a href="#">Medical Direction (Role of medical oversight)</a>                                                                                                                     |
| <del>28.03</del> <a href="#">28.05</a> | Describe principles of safely operating a ground ambulance. ( <a href="#">Culture Safety</a> )                                                                                    |
| <del>28.04</del>                       | <del>Understand the guidelines of operating safety in and around a landing zone during air medical operations and transport.</del>                                                |
| <del>28.05</del> <a href="#">28.06</a> | Implement appropriate Joint Commission patient safety goals. ( <a href="#">Patient Safety</a> )                                                                                   |
| 29.0                                   | Demonstrate an ability to communicate effectively as part of the EMS <del>team.</del> <a href="#">System.</a> The student will be able to:                                        |
| 29.01                                  | Demonstrate the proper procedure for the transfer of patient care to other EMS personnel. <a href="#">Interact within the team's structure (Continuum of care)</a>                |
| 29.02                                  | Describe information regarding a patient's condition and treatment that needs to be communicated. ( <a href="#">Continuum of care</a> )                                           |
| 29.03                                  | Communicate the Emergency Medical Responder's observations and actions to whomever patient care is transferred. ( <a href="#">Continuum of care</a> )                             |
| 29.04                                  | Describe and apply the principles of communicating with patients in a manner that achieves a positive relationship. ( <a href="#">Continuum of care</a> )                         |

**CTE Standards and Benchmarks**

[29.05 Call for resources \(BLS, ALS, Air Transport, Fire, LEO, and Any additional needed resources\)](#)

[30.0 Workforce Safety and Wellness. The student will be able to:](#)

[30.01 Standard safety precautions](#)

[30.02 Personal protective equipment](#)

[30.03 Lifting and moving patients](#)

[30.04 Crew resource management](#)

[30.05 Identify stressors which may affect the performance of an Emergency Medical Responder \(Stress management\)](#)

~~29.05~~[30.06 Recognize simple medical prefixes, suffixes, combining vowels, and words. Carry out procedures to minimize critical incident stress & Identify signs and symptoms of PTSD and the resources available for treatment. \(Responder mental health, resilience and suicide prevention\)](#)

[30.07 Wellness principles](#)

[30.08 Disease transmission](#)

~~30.0~~[31.0 Demonstrate an understanding of medicolegal aspects. -The student will be able to:](#)

~~30.04~~[31.01 Describe and demonstrate an understanding of the medicolegal aspects of an Emergency Medical Responder's provision of emergency medical care in the jurisdiction having authority, including, but not limited to, duty to act, standard of care, consent/refusal to care, forcible restraint, abandonment, documentation and any applicable Good Samaritan Laws. \(Consent/refusal of care\)](#)

[31.02 Confidentiality/HIPAA](#)

~~30.02~~[31.07 Practice within medicolegal standards. \(Ethical principles/moral obligations\)](#)

[32.0 Recording patient findings. The student will be able to:](#)

[32.01 Impact of research on EMR care](#)

[32.02 Data collection](#)

**CTE Standards and Benchmarks**

~~31.0~~33.0 ~~Determine~~Document, Notate Medical Identification Devices, and record vital signs of a sick or injured person. ~~(Recording patient findings).~~ The student will be able to:

~~31.04~~33.01 Determine and record skin color, temperature and moistness.

~~31.02~~33.02 Demonstrate ability to accurately measure and record vital signs including manual blood pressure.

~~32.0 — Use medical identification devices. The student will be able to:~~

~~32.04~~33.03 Identify the most commonly used digital medical identification devices.

~~32.02~~33.04 Apply the information contained on or in the medical identification devices to patient assessment and patient care procedures.

34.0 Patient Education, Therapeutic Communication, & Mobile Integrated Health. The student will be able to:

34.01 Health care literacy

34.02 Interviewing techniques

34.03 Active Listening, Be nonbiased, Remain Calm, Reframe Conflict, Verbal defusing strategies, Managing communication challenges

34.04 Family centered care, Mobile Integrated Health Candidate

35.0 Anatomy and Physiology. The student will be able to:

35.01 Uses knowledge of the anatomy and function of the upper airway, heart, vessels, blood, lungs, skin, muscles and bones as the foundation of emergency care.

36.0 Medical Terminology. The student will be able to:

36.01 Uses medical and anatomical terms.

37.0 Pathophysiology. The student will be able to:

37.01 Uses knowledge of shock and respiratory compromise to respond to life threats.

38.0 Pathophysiology. The student will be able to:

38.01 Uses knowledge of age-related differences to assess and care for patients.

39.0 Public Health Overview: Has an awareness of local public health resources and their role in public health. The student will be able to:

39.01 EMS roles in public health and Mobile Integrated Health

39.02 Infection prevention and control

## CTE Standards and Benchmarks

### 39.03 Human trafficking

### 40.0 Pharmacology: Uses knowledge of the medications that the EMR may administer in an emergency. The student will be able to:

#### 40.01 Principles of Pharmacology, Medication safety, Kinds of medications used during an emergency

#### 40.02 Understand the advantages, disadvantages, and techniques of self and peer administration of an intramuscular injection by auto injector.

#### 40.03 Describe in Acute Medications the names, effects, indications, routes of administration, and dosages for specific medications (i.e., chemical antidote auto injector devices).

#### 40.04 Demonstrate how to observe and respond to patient's need for narcotic antagonists.

#### 40.05 Demonstrate accurate dosage calculation.

#### 40.06 Demonstrate the **5,6,7?** rights of administering narcotic antagonists.

#### 40.07 Demonstrate how to administer narcotic antagonists

#### 40.08 Document administration of narcotic antagonists and patient's response on medical record.

#### 40.09 Observe and communicate effects of medications to the patient's assigned EMT/Paramedic.

### 41.0 Demonstrate understanding of airway management, respiration, and artificial ventilation. The student will be able to:

#### 41.01 Apply knowledge of anatomy and physiology i.e. Pulmonary Ventilation, Oxygenation, Respiration (External, Internal, and Cellular) to airway management procedures.

#### 41.02 Understand the pathophysiology of respiratory dysfunction and management of adequate and inadequate respiration.

#### 41.03 Assessment and management of adequate and inadequate ventilation including the use of available mechanical devices to assure the maintenance of an open airway and assist ventilation according to The International Committee on Resuscitation (ILCOR) standards. Including the effects of ventilations on Cardiac Arrest and Cardiac Output

#### 41.04 Demonstrate proficiency in supplemental oxygen therapy including portable oxygen cylinder and oxygen delivery devices.

#### 41.05 Describe and demonstrate airway management utilizing upper airway suctioning.

### ~~33.0~~42.0 Conduct a scene size-up and primary assessment of problems that are a threat to life if not corrected immediately. to (Include age-related variations in pediatric and geriatric patients): The student will be able to:

#### 42.01 Scene safety/situational awareness, Scene management Impact of the environment on patient care, Addressing hazards, Violence, Need for additional or specialized resources, Standard precautions, Multiple patient situations

#### 42.02 Determining the chief complaint, Mechanism of injury/ nature of illness, Associated signs and symptoms

**CTE Standards and Benchmarks**

~~33.01~~42.03 Determine and record the level of consciousness of the injured person including person, place, time, and events.

~~33.02~~42.04 Assess for an inadequate airway, inadequate respirations, inadequate circulation, and profuse bleeding.

~~33.03~~42.05 Recognize when immediate correction is necessary.

~~33.04~~42.06 Assess patient and determine if the patient has a life-threatening condition.

~~33.05~~42.07 Use spinal precautions as appropriate.

43.0 Provide secondary assessment. The student will be able to:

43.01 Conduct a methodical head-to-toe physical examination to discover conditions not found during the primary assessment.

43.02 Interview the sick or injured person to obtain facts relevant to the person's condition.

43.03 Interview co-workers, witnesses, family members, or other individuals to obtain facts relevant to the person's condition.

43.04 Reassessment: How and when to reassess patients

~~34.0~~44.0 Demonstrate Cardiopulmonary Resuscitation at the Basic Life Support (BLS) procedures. ~~level.~~ The student will be able to:

~~34.01~~44.01 Establish and maintain an open airway using both manual and mechanical airway techniques.

~~34.02~~44.02 Restore breathing and circulation by means of cardiopulmonary resuscitation (CPR).

~~34.03~~44.03 Demonstrate proficiency in the use of an automated external defibrillator (AED).

44.04 Ethical issues in resuscitation, Special arrest and peri-arrest situations

45.0 Recognize and control shock. The student will be able to:

45.01 Recognize the likelihood that shock may occur or be present based on patient assessment and observation of a mechanism of injury.

45.02 Provide anti-shock measures as a part of routine patient care.

~~35.0~~46.0 Recognize and control bleeding. -The student will be able to:

~~35.01~~46.01 Identify items that can be used to control external bleeding and minimize the contamination of open wounds.

~~35.02~~46.02 Apply pressure dressings, tourniquets, and wound packing that will control bleeding/hemorrhage and minimize the contamination of open wounds.

~~35.03~~46.03 Identify the likelihood of internal bleeding through observations of signs, symptoms, and mechanisms of injury.

## CTE Standards and Benchmarks

~~35.04~~46.04 Care for a patient who exhibits the signs and symptoms of internal bleeding.

46.05 Identify the likelihood of Abdominal and Genitourinary Trauma Blunt versus penetrating mechanisms, Evisceration, and Impaled object

~~35.05~~46.06 Apply current trauma treatment standards when applying a tourniquet, which may include ~~Pre-Hospital Trauma-Life Support (PHTLS)~~ American College of Surgeons standards.

~~36.0 Recognize and control shock. The student will be able to:~~

~~36.01 Recognize the likelihood that shock may occur or be present based on patient assessment and observation of a mechanism of injury.~~

~~36.02 Provide anti-shock measures as a part of routine patient care.~~

~~37.0 Understand the importance of emergency medications. The student will be able to:~~

~~37.01 Understand the advantages, disadvantages, and techniques of self and peer administration of an intramuscular injection by auto injector.~~

~~37.02 Describe the names, effects, indications, routes of administration, and dosages for specific medications (i.e., chemical antidote auto injector devices).~~

~~37.03 Demonstrate how to observe and respond to patient's need for narcotic antagonists.~~

~~37.04 Demonstrate accurate dosage calculation.~~

~~37.05 Demonstrate the six rights of administering narcotic antagonists.~~

~~37.06 Demonstrate how to administer narcotic antagonists.~~

~~37.07 Document administration of narcotic antagonists and patient's response on medical record.~~

~~37.08 Observe and communicate effects of medications to the patient's assigned EMT/Paramedic.~~

~~38.0 Demonstrate understanding of airway management, respiration, and artificial ventilation. The student will be able to:~~

~~38.01 Apply knowledge of anatomy and physiology to airway management procedures (i.e., oxygenation and perfusion).~~

~~38.02 Understand the pathophysiology of respiratory dysfunction.~~

~~38.03 Use available mechanical devices to assure the maintenance of an open airway and assist ventilation according to American Heart Association (AHA) standards.~~

~~38.04 Demonstrate proficiency in supplemental oxygen therapy including portable oxygen cylinder and oxygen delivery devices.~~

~~38.05 Describe and demonstrate airway management utilizing upper airway suctioning.~~

## CTE Standards and Benchmarks

~~39.0~~ Provide secondary assessment. The student will be able to:

~~39.01~~ Conduct a methodical head-to-toe physical examination to discover conditions not found during the primary assessment.

~~39.02~~ Interview the sick or injured person to obtain facts relevant to the person's condition.

~~39.03~~ Interview co-workers, witnesses, family members, or other individuals to obtain facts relevant to the person's condition.

~~40.0~~47.0 Identify musculoskeletal injuries. -The student will be able to:

~~40.01~~47.01 Identify the various types of musculoskeletal injuries.

~~40.02~~47.02 Immobilize and otherwise care for suspected fractures, dislocations, sprains, and strains with available supplies and equipment, including commercially available and improvised devices.

~~40.03~~47.03 Demonstrate an understanding of the function and need for traction splints.

47.04 Identify and care for patients with Multisystem Trauma

~~41.0~~48.0 Demonstrate proper spinal motion restriction of a cervical/spinal injury. -The student will be able to:

~~41.01~~48.01 Identify need for spinal motion restriction.

~~41.02~~48.02 Maintain in-line spinal motion restriction of cervical spine.

~~41.03~~48.03 Place proper fitting rigid extrication-type cervical collar.

~~41.04~~48.04 Place patient in supine position on appropriate spine board based on patient condition.

~~41.05~~48.05 Secure patient to spinal motion restriction device.

48.06 Identify and care for patients with Head, Traumatic Brain Injuries, Facial, and Neck Injuries

~~42.0~~49.0 Demonstrate proper extremity immobilization as well as other immobilization for other injuries (Chest, pelvis, ribs). -The student will be able to:

49.01 Identify Blunt versus penetrating mechanisms, Open chest wound, Impaled object

~~42.01~~49.02 Identify need for extremity immobilization.

~~42.02~~49.03 Assesses motor, sensory, and distal circulation in extremities.

~~42.03~~49.04 Place proper fitting splint on extremity.

~~42.04~~49.05 Reassess motor, sensory, and distal circulation in extremities.

|                        | <u>51.05 Identify and care for patients with Disorders of the Eyes, Ears, Nose, and Throat utilizing patient assessment.</u>                                                                                                                               |
| <del>44.03</del> 51.06 | Identify and care for patients experiencing a diabetic emergency <u>or in an altered state of consciousness</u> utilizing patient assessment.                                                                                                              |
|                        | <u>51.07 Identify and care for patients experiencing a Genitourinary/Renal emergency utilizing patient assessment.</u>                                                                                                                                     |
|                        | <u>51.08 Identify and care for patients experiencing an Acute Immunological (Anaphylaxis) emergency utilizing patient assessment.</u>                                                                                                                      |
| <del>44.04</del> 51.09 | Identify and care for a patient who is experiencing a seizure utilizing patient assessment.                                                                                                                                                                |
| <del>44.05</del> 51.10 | Identify and care for a patient who has ingested, inhaled, absorbed, or been injected with a poisonous substance.                                                                                                                                          |
| <del>44.06</del> 51.11 | Identify and care for a patient who <del>is in</del> <u>may have</u> an <del>altered state of consciousness</del> <u>infectious disease</u> utilizing patient assessment <u>and how to disinfect and decontaminate equipment after treating a patient.</u> |
| <del>44.07</del> 51.12 | Identify and care for a patient who is experiencing a stroke utilizing patient assessment.                                                                                                                                                                 |
|                        | <u>51.13 Identify and care for a patient who is experiencing a non-traumatic fracture utilizing patient assessment.</u>                                                                                                                                    |
|                        | <u>51.14 Identify and care for a patient who is experiencing behaviors that pose a risk to the EMR, patient or others and recognition of suicide risk</u>                                                                                                  |
| <del>44.08</del> 51.15 | Identify and care for a patient who has a foreign body in the eye utilizing patient assessment.                                                                                                                                                            |

**CTE Standards and Benchmarks**

~~44.09~~51.16 Identify and care for a patient with thermal, chemical, or electrical burns, determining the severity including degree, body surface area, type, and location.

~~44.10~~51.17 Identify and care for a patient suffering from an environmental emergency including heat cramps, heat exhaustion, heat stroke, and frostbite, utilizing patient assessment.

~~45.0~~52.0 Identify and care for patients who are in special situations. -The student will be able to:

~~45.01~~52.01 Identify patients who have special needs (including but not limited to abuse, domestic violence, and sex trafficking).

~~45.02—Care for injured/ill children.~~

~~45.03—Care for the injured/ill elderly.~~

~~45.04~~52.02 Care for the injured/ill physically disabled.

~~45.05~~52.03 Care for the injured/ill developmentally disabled.

~~46.0~~53.0 Provide triage to victims of multiple casualty incidents. -The student will be able to:

~~46.01~~53.01 Categorize the victims of multiple casualty incidents according to the severity of injury or illness based on patient assessments.

~~46.02~~53.02 Use triage tags or other identification devices available locally to indicate priorities for pre-hospital emergency care and transportation to medical facilities.

~~46.03~~53.03 Work as a member of a team to perform triage at locations of multiple casualty incidents.

~~46.04~~53.04 Work as a member of a team to perform patient assessments at locations of multiple casualty incidents.

~~46.05~~53.05 Work as a member of a team to carry out patient care procedures at the locations of multiple casualty incidents.

~~46.06~~53.06 Demonstrate knowledge of the operating procedures during a terrorist event or during a natural or man-made disaster.

~~46.07~~53.07 Demonstrate a basic understanding of the Incident Command System (ICS) implemented by the Federal Emergency Management Agency (FEMA).

~~46.08~~53.08 Discuss and demonstrate Hazardous Waste Operations and Emergency Response (HAZWOPER) standard, 29 CFR 1910.120 –First Responder Awareness Level (<https://www.osha.gov/emergency-preparedness/hazardous-waste-operations/standards>).

53.09 Identify the need for Safe air medical operations, Criteria for utilizing air medical response, Medical risks/needs/advantages

~~47.0~~54.0 Recognize life-threatening situations. -The student will be able to:

~~47.01~~54.01 Take steps to minimize the chance of injury or death to all involved when confronted with a potentially life-threatening situation based on scene assessment.

| <del>49.04</del> 56.02 | Evaluate a mother to determine whether delivery is imminent.                                                                                                                                                                                                                  |
| <del>49.02</del> 56.03 | Assist with a normal delivery.                                                                                                                                                                                                                                                |
| 56.04                  | <u>Assist with and identify newborn stabilization and neonatal resuscitation</u>                                                                                                                                                                                              |
| <del>49.03</del> 56.05 | Care for the mother and baby.                                                                                                                                                                                                                                                 |
| <del>49.04</del> 56.06 | Identify abnormal childbirth situations and care for the mother and baby within the Emergency Medical Responder's capabilities.                                                                                                                                               |
| <del>50.0</del> 57.0   | <del>Identify critical incident stressors. -The student will be able to:</del> <u>EMS Operations</u>                                                                                                                                                                          |
| <del>50.01</del>       | <del>Identify stressors which may affect the performance of an Emergency Medical Responder.</del>                                                                                                                                                                             |
| <del>50.02</del>       | <del>Identify stressors which may affect the behavior of a sick or injured person.</del>                                                                                                                                                                                      |
| <del>50.03</del>       | <del>Carry out procedures to minimize critical incident stress.</del>                                                                                                                                                                                                         |
| <del>50.04</del> 57.01 | <del>Identify signs and symptoms of PTSD and the resources available for treatment.</del> <u>Emergency Response Vehicles to include Risks and responsibilities of emergency response and radio communications, Risks and responsibilities of operating emergency vehicles</u> |
| 57.02                  | <u>Safety principles of rescue operations</u>                                                                                                                                                                                                                                 |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

**This program requires a clinical component of approximately 50% the length of the courses following the health science core. A portion of the clinical experience can be achieved through simulation when appropriate.**

Clinical courses require contact hours in the clinical setting in order to complete the health science program. Hospitals, nursing homes, and other clinical facilities with clinical affiliation agreements limit the number of students that can rotate and/or be on site at one time. Most facilities, including hospitals and nursing homes, limit the number of students to 15. Due to these industry limitations, it is recommended that the student ratio be 15:1 (student/teacher) based on the clinical facilities that students attend to for clinical training.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org).

### **Special Notes**

Following the completion of the Health Science Core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

In order for students to take the NREMT003 Emergency Medical Responder exam the program must be approved by the National Registry for Emergency Medical Technicians. To receive approval from NREMT each program must be “authorized” by the Bureau of Emergency Medical Services (EMS) by completing the instructor qualifications form required by Bureau of EMS.

The Emergency Medical Responder instructor shall issue to each student documentation of successful course completion which shall include date of issuance, student's name, name of sponsoring agency (DOE), name of training agency, and instructor's printed name and signature, plus the

wording "issued pursuant to section 401.435, F.S." The instructor must also maintain on file following course completion, a roster listing the names of students who successfully completed the course, the dates and location of the course, and the name of the instructor.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal; therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

### **Career and Technical Student Organization (CTSO)**

~~Florida HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. -Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student

earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

Program Title: Home Health Aide  
Program Type: Career Preparatory  
Career Cluster: Health Science

| Secondary – Career Preparatory |                                                                                                                                                                                                                                                                                                                                                                                        |

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as home attendants or home health aides (SOC 31-1011).

The content includes, but is not limited to, instruction in those supportive services that are required to provide and maintain bodily and emotional comfort and to assist the patient toward independent living in a safe environment, as stated in Rules of the Department of Health and Rehabilitative Services, Division of Health, Chapter 10D-68 - Minimum Standards for Home Health Agencies. Clinical experiences, where the student may practice, demonstrate and perform the procedures associated with bedside client care, are an appropriate part of this program.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction totaling 2.5 credits. The two credit Health Science Core (Health Science Anatomy & Physiology 8417100 and Health Science Foundations 8417110) is required as a prerequisite for all programs. Secondary students completing the two required courses will not have to repeat the core in postsecondary.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary program structure:

| Course Number                                           | Course Title                                                                                                             | Teacher Certification                                                                           | Length    | SOC Code | Level | Graduation Requirement |

Common Florida's Career Technical Core—Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

- 1. Act as a responsible and contributing citizen and employee.
- 2. Apply appropriate academic and technical skills.
- 3. Attend to personal health and financial well-being.
- 4. Communicate clearly, effectively and with reason.
- 5. Consider the environmental, social and economic impacts of decisions.
- 6. Demonstrate creativity and innovation.
- 7. Employ valid and reliable research strategies.
- 8. Utilize critical thinking to make sense of problems and persevere in solving them.
- 9. Model integrity, ethical leadership and effective management.
- 10. Plan education and career path aligned to personal goals.
- 11. Use technology to enhance productivity.
- 12. Work productively in teams while using cultural/global competence.

| Employability Skills |                                               |
|----------------------|-----------------------------------------------|
| 01.0                 | Apply academic skills to workplace scenarios. |
| 01.01                | Use reading skills.                           |
| 01.02                | Use writing skills.                           |
| 01.03                | Use mathematical strategies and procedures.   |
| 01.04                | Use scientific principles and procedures.     |
| 02.0                 | Design a solution to an industry problem.     |

|                                                                                                                       |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

### **Health Science Core**

- 01.0 Analyze and interpret an overview of the human body, including organization and chemical process.
- 02.0 Apply correct medical terminology relating to body structure and function within a real-world application.
- 03.0 Evaluate cells and tissues microscopically and macroscopically and relate their specialized functions.
- 04.0 Analyze the integumentary system in relation to health and disease.
- 05.0 Analyze the skeletal system in relation to health and disease.
- 06.0 Analyze the muscular system in relation to health and disease.
- 07.0 Analyze the nervous system in relation to health and disease.
- 08.0 Analyze the endocrine system in relation to health and disease.
- 09.0 Analyze the cardiovascular/circulatory system in relation to health and disease.
- 10.0 Analyze the lymphatic and immune systems in relation to health and disease.
- 11.0 Analyze the respiratory system in relation to health and disease.
- 12.0 Analyze the digestive system in relation to health and disease.
- 13.0 Analyze the urinary system in relation to health and disease.
- 14.0 Analyze both the male and female reproductive systems in relation to health and disease.
- 15.0 Identify and explain factors relating to genetics and disease.
- 16.0 Evaluate and apply the principles of disease transmission and control to real-world scenarios.
- 17.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 18.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 19.0 Demonstrate legal and ethical responsibilities.
- 20.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 21.0 Recognize and practice safety and security procedures.
- 22.0 Recognize and respond to emergency situations.
- 23.0 Recognize and practice infection control procedures.
- 24.0 Demonstrate an understanding of information technology applications in healthcare.
- 25.0 Demonstrate employability skills.
- 26.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 27.0 Apply basic math and science skills.

### **Home Health Aide 3**

- 28.0 Use verbal and written communications specific to [the](#) Home Health Aide.
- 29.0 Demonstrate legal and ethical responsibilities specific to [the](#) Home Health Aide.
- 30.0 Perform physical comfort and safety functions specific to [the](#) Home Health Aide.
- 31.0 Provide personal patient care.
- 32.0 Perform patient care procedures.
- 33.0 Apply principles of nutrition.

- 34.0 Provide care for geriatric patients.
- 35.0 Apply the principles of infection control specific to [the](#) Home Health Aide.
- 36.0 Provide bio-psycho-social support.
- 37.0 Prioritize and perform functions following the patient care plan.
- 38.0 Assist with rehabilitative activities.
- 39.0 Perform home health-care services.

## Florida Department of Education Student Performance Standards

### Health Science Core

The first two courses in this program are referred to as the Health Science Core and consist of the courses Health Science Anatomy & Physiology (8417100) and Health Science Foundations (8417110). **To ensure consistency whenever these courses are offered, the standards and benchmarks for the health science core have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-secondary-2425.rtf>

<https://www.fldoe.org/file/20894/health-sci-core-secondary-2627.rtf>

The two credit core is required as a prerequisite for all secondary programs except for Practical Nursing and Pharmacy Technician. Secondary students completing the two required courses will not have to repeat the core in postsecondary. When the recommended sequence is followed, the structure allows students to complete at specified courses for employment or remain for advanced training or cross-training.

**Course Title:** Health Science Anatomy & Physiology  
**Course Number:** 8417100  
**Course Credit:** 1

#### **Course Description:**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental quality, and safety procedures will be an integral part of this course. Students will interact with materials and primary sources of data or with secondary sources of data to observe and understand the natural world. Students will develop an understanding of measurement error, and develop the skills to aggregate, interpret, and present the data and resulting conclusions. Equipment and supplies will be provided to enhance these hands-on experiences for students. A minimum of 20% of classroom time will be dedicated to laboratory experiences.

This course is part of the secondary Health Core consisting of an overview of the human body, both structurally and functionally with emphasis on the pathophysiology and transmission of disease. Medical terminology is an integral part of the course.

The course Anatomy and Physiology (2000350) or Anatomy and Physiology Honors (2000360) may be substituted for the course Health Science Anatomy & Physiology (8417100) ~~and their standards can be found at [www.cpalms.org](http://www.cpalms.org).~~

The course Health Science Anatomy & Physiology (8417100) is designated as an equally rigorous (EQ) science credit.

**Course Title:** Health Science Foundations  
**Course Number:** 8417110  
**Course Credit:** 1

**Course Description:**

This course is part of the Secondary Health Core designed to provide the student with an in-depth knowledge of the health care system and associated occupations. - Emphasis is placed on communication and interpersonal skills, use of technology, ethics and the development of critical thinking and problem solving skills. -Students may shadow professionals throughout the course.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Home Health Aide 3  
**Course Number:** 8417191  
**Course Credit:** .5

**Course Description:**

This course prepares students to be employed as Home Health Aides. Content includes but is not limited to patient care and safety, geriatric patient care, nutrition principles, rehabilitation services, as well as supervised management functions.

| CTE Standards and Benchmarks |                                                                                                                                                                            |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.0                         | Use verbal and written communications specific to <del>home health aide</del> . <u>the Home Health Aide</u> . The student will be able to:                                 |
| 28.01                        | Obtain specified data from <u>the</u> patient and family.                                                                                                                  |
| 28.02                        | Utilize verbal and written information to assist with the patient's care plan.                                                                                             |
| 29.0                         | Demonstrate legal and ethical responsibilities specific to <del>home health aide</del> . <u>the Home Health Aide</u> . The student will be able to:                        |
| 29.01                        | Demonstrate legal and ethical behavior within the role and scope of home health aide responsibilities.                                                                     |
| 29.02                        | Follow policies and procedures concerning care as directed by the employer affecting the health, safety, and well-being of patients in the home setting.                   |
| 29.03                        | Recognize and report signs of abuse, physical, verbal, and substance.                                                                                                      |
| 29.04                        | Follow legal guidelines in documentation.                                                                                                                                  |
| 29.05                        | Exhibit behavior supporting and promoting residents' rights.                                                                                                               |
| 29.06                        | <del>Recognizes</del> <u>Recognize</u> and <del>follows</del> <u>follow the</u> scope of <del>proactive</del> <u>practice</u> and role limitations for a home health aide. |
| 30.0                         | Perform physical comfort and safety functions specific to <del>home health aide</del> . <u>Home Health Aide</u> . The student will be able to:                             |
| 30.01                        | Maintain a clean and safe home environment for the patient.                                                                                                                |
| 30.02                        | Adjust bed and/or side- <u> rails</u> .                                                                                                                                    |
| 30.03                        | Transfer patient with mechanical lift using proper body mechanics and patient safety measures.                                                                             |
| 30.04                        | Demonstrate proper turning and positioning according to <u>the</u> care plan.                                                                                              |

**CTE Standards and Benchmarks**

|       |                                                                                                                                                                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30.05 | Implement fall prevention measures as directed, i.e., clutter-free pathways, locked wheelchair, etc.                                                                                                                                                     |
| 30.06 | Apply supportive comfort devices as directed (e.g., footboard, over-bed cradle, alternating pressure mattress).                                                                                                                                          |
| 30.07 | Demonstrate and assist <u>the</u> patient <del>to dangle</del> <u>in dangling</u> .                                                                                                                                                                      |
| 30.08 | Assist patient in ambulation, including the use of <u>a</u> crutch, cane, or walker.                                                                                                                                                                     |
| 30.09 | Demonstrate the proper <del>wheel chair</del> <u>wheelchair</u> safety technique and assist the patient as needed with use.                                                                                                                              |
| 30.10 | Assist patient with care and use of prosthetic/orthotic devices.                                                                                                                                                                                         |
| 30.11 | Describe emergency evacuation procedures with adaptations to the home setting.                                                                                                                                                                           |
| 30.12 | Implement appropriate regulatory and accrediting agency patient safety guidelines.                                                                                                                                                                       |
| 31.0  | Provide personal patient care. -The student will be able to:                                                                                                                                                                                             |
| 31.01 | Perform bed bath; observe and report changes in a patient.                                                                                                                                                                                               |
| 31.02 | Perform back rub.                                                                                                                                                                                                                                        |
| 31.03 | Demonstrate procedures for safety in the bathroom including the use of adaptive shower equipment such as shower chairs, long handled bath sponge, grab bars, extended shower hose, rubber mat in tub or shower, and rubber-based rug outside the shower. |
| 31.04 | Assist with shower or tub bath, including use of specialty tubs.                                                                                                                                                                                         |
| 31.05 | Assist patient with sink, tub, shower, shower cap, or bed shampoo.                                                                                                                                                                                       |
| 31.06 | Demonstrate the use of a safety and/or electric razor to shave the patient.                                                                                                                                                                              |
| 31.07 | Demonstrate how to groom patient, including hair, skin, foot, and nail care.                                                                                                                                                                             |
| 31.08 | Assist with and/or administer oral hygiene, including denture care.                                                                                                                                                                                      |
| 31.09 | Assist patient with toileting, using various types of restorative and rehabilitative equipment.                                                                                                                                                          |
| 31.10 | Assist patient to dress.                                                                                                                                                                                                                                 |
| 31.11 | Assist patient with meals.                                                                                                                                                                                                                               |
| 32.0  | Perform patient care procedures. -The student will be able to:                                                                                                                                                                                           |
| 32.01 | Make <u>an</u> unoccupied <del>/and</del> <u>and</u> occupied bed.                                                                                                                                                                                       |

**CTE Standards and Benchmarks**

32.02 Provide passive range-of-motion exercises.

32.03 Apply anti-embolic hose and sequential compression devices.

32.04 Understand and demonstrate proper collection of urine, strained, timed urine, and/or routine urine specimen.

32.05 Observe skin while bathing for allergic reaction to a catheter or any leaking.

32.06 Monitor fluid intake and output (I&O), including encouraging and restricting fluids.

32.07 Observe, record, and report the patient's emesis.

32.08 Assist with ostomy care and alert the nurse of any unusual observations while performing skin care.

32.09 Collect stool specimen and alert nurse of unusual odors, colors, or ~~character~~characteristics.

32.10 Care for patients receiving oxygen therapy, making sure the patient receives the correct flow of oxygen.

33.0 Apply principles of nutrition. -The student will be able to:

33.01 Identify nutrients and food groups.

33.02 Identify and implement regional, cultural, and religious food guidelines/preferences.

33.03 Describe special diets.

33.04 List factors that must be considered when purchasing food.

33.05 Follow the prescribed basic food plan.

33.06 List factors that must be considered when storing food.

33.07 Identify methods of maintaining fluid balance, including encouraging and restricting fluids.

33.08 Identify methods of food preparation.

33.09 Discuss the preparation and serving of trays in the home.

34.0 Provide care for geriatric patients. -The student will be able to:

34.01 Identify safety principles as related to the elderly.

34.02 Describe general characteristics, particular needs, and problems of the elderly.

**CTE Standards and Benchmarks**

|       |                                                                                                                                                                            |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 34.03 | Identify attitudes and living habits that promote positive mental and physical health for the elderly.                                                                     |
| 34.04 | Distinguish between fact and fallacy about the aging process.                                                                                                              |
| 34.05 | Identify community resources and services available to the elderly and their caregiver.                                                                                    |
| 34.06 | Apply reality orientation techniques and validation therapy.                                                                                                               |
| 34.07 | Provide and involve patients in diversional activities.                                                                                                                    |
| 34.08 | Identify common alterations in elderly patient behavior or health status and follow up within the home health <del>aide</del> <a href="#">aide's</a> scope of performance. |
| 34.09 | Provide care for patients with special needs (e.g., impaired hearing, impaired vision, immobility, impaired body functions).                                               |
| 35.0  | Apply the principles of infection control specific to <del>home health aide-</del> <a href="#">the Home Health Aide</a> . The student will be able to:                     |
| 35.01 | Provide care for patients with infectious diseases in the home.                                                                                                            |
| 35.02 | Follow isolation procedures with food tray, personal protective equipment (PPE), supplies/equipment, and other materials in the home.                                      |
| 35.03 | Utilize standard precautions in all home care.                                                                                                                             |
| 35.04 | Discuss transmission-based precautions.                                                                                                                                    |
| 36.0  | Provide bio-psycho-social support. -The student will be able to:                                                                                                           |
| 36.01 | Discuss family roles and their significance to health.                                                                                                                     |
| 36.02 | Respond to patient and family emotional needs.                                                                                                                             |
| 37.0  | Prioritize and perform functions following the patient care plan. -The student will be able to:                                                                            |
| 37.01 | Organize patient-care assignments.                                                                                                                                         |
| 37.02 | Complete assignments accurately and in a timely manner per <a href="#">the</a> care plan.                                                                                  |
| 38.0  | Assist with rehabilitative activities. -The student will be able to:                                                                                                       |
| 38.01 | List the purposes of restorative (rehabilitation) programs.                                                                                                                |
| 38.02 | Assist patient with specified restorative (rehabilitation) needs.                                                                                                          |
| 38.03 | Assist patients/residents to reach the optimum level of independence.                                                                                                      |

| CTE Standards and Benchmarks |                                                                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 39.0                         | Perform home health-care services. -The student will be able to:                                                                                                                                        |
| 39.01                        | Establish and follow a collaborative care plan with <u>the</u> patient and family.                                                                                                                      |
| 39.02                        | Perform patient-related cleaning tasks and laundry per care plan.                                                                                                                                       |
| 39.03                        | Identify methods for medication storage.                                                                                                                                                                |
| 39.04                        | Assist patient with taking self-administered prescribed medication in the home, and identify possible side effects and emergency procedures for adverse reactions in accordance with 59A-8.0095, F.A.C. |
| 39.05                        | Demonstrate how to utilize equipment and supplies in the home.                                                                                                                                          |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Please refer to [42CFR§484](#) for the clinical requirements for the Home Health Aide program.

Clinical courses require contact hours in the clinical setting in order to complete the health science program. Hospitals, nursing homes, and other clinical facilities with clinical affiliation agreements limit the number of students that can rotate and/or be on site at one time. Most facilities, including hospitals and nursing homes, limit the number of students to 15. Due to these industry limitations, it is recommended that the student ratio be 15:1 (student/teacher) based on the clinical facilities that students attend to for clinical training.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org) [sala@fldoe.org](mailto:sala@fldoe.org).

### **Special Notes**

Following the completion of the Health Science Core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

Section 59A-8.0095 Home Health Aide, Administrative Rules, Department of Health and Rehabilitative Services contain much valuable information for program planning. These rules require that if the Home Health Aide receives training through a vocational school where professional standards have been established in accordance with the State Board of Education, a certificate of successful completion shall be on file with the employer.

Students who have completed this program and the secondary program Nursing Assistant have met competencies for and may be known as Patient Care Assistants. This program may be taken simultaneously with Nursing Assistant.

### **Career and Technical Student Organization (CTSO)**

~~Florida HOSA: Future Health Professionals is the~~CTSOs are co-curricular career and technical student ~~organization~~organizations providing leadership training and reinforcing specific career and technical skills.- Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Medical Laboratory Assisting  
**Program Type:** Career Preparatory  
**Career Cluster:** Health Science

| Secondary – Career Preparatory |                                                                                                                                                                                             |

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The content includes but is not limited to planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues. Clinical learning experiences are an integral part of this program.

The program is designed to prepare students for employment as medical/clinical lab technicians, (or medical lab assistants 29-2099 - Health Technologists and Technicians, All Other)

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction totaling four credits. The two credit Health Science Core (Health Science Anatomy & Physiology 8417100 and Health Science Foundations 8417110) is required as a prerequisite for all programs. Secondary students completing the two required courses will not have to repeat the core in postsecondary.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary program structure:

| Course Number            | Course Title                                                                | Teacher Certification                                                        | Length   | SOC Code | Level | Graduation Requirement |
|--------------------------|-----------------------------------------------------------------------------|------------------------------------------------------------------------------|----------|----------|-------|------------------------|

(Graduation Requirement Codes: CT= Career & Technical Education, EQ= Equally Rigorous Science, EC= Economics, MA= Mathematics, PL= Personal Financial Literacy)

Common

### Florida's Career Technical Core—Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.

~~11. Use technology to enhance productivity.~~

~~12. Work productively in teams while using cultural/global competence.~~

### **Employability Skills**

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

02.01 Use critical thinking.

02.02 Use creativity.

02.03 Make sound decisions.

02.04 Solve problems.

02.05 Reason.

02.06 Plan and organize.

#### 03.0 Manage resources within an industry project

03.01 Manage time.

03.02 Manage money or resources.

03.03 Manage materials.

03.04 Manage personnel.

#### 04.0 Oversee the subcomponents, operations and output of a technical or organizational system.

04.01 Manage systems.

04.02 Monitor systems.

04.03 Improve systems.

#### 05.0 Use information for decision making.

05.01 Locate information.

05.02 Organize information.

|                                                                                                        |
|--------------------------------------------------------------------------------------------------------|
| <a href="#"><u>05.03 Use information.</u></a>                                                          |
| <a href="#"><u>05.04 Analyze information.</u></a>                                                      |
| <a href="#"><u>05.05 Communicate information.</u></a>                                                  |
| <a href="#"><u>06.0 Apply relevant technology to workplace scenarios to aid productivity.</u></a>      |
| <a href="#"><u>06.01 Use technology.</u></a>                                                           |
| <a href="#"><u>07.0 Interpret and express interpersonal communication.</u></a>                         |
| <a href="#"><u>07.01 Communicate verbally.</u></a>                                                     |
| <a href="#"><u>07.02 Listen actively.</u></a>                                                          |
| <a href="#"><u>07.03 Comprehend written material.</u></a>                                              |
| <a href="#"><u>07.04 Convey information in writing.</u></a>                                            |
| <a href="#"><u>07.05 Communicate nonverbally.</u></a>                                                  |
| <a href="#"><u>07.06 Interpret nonverbal communication.</u></a>                                        |
| <a href="#"><u>08.0 Interact with others to accomplish workplace goals.</u></a>                        |
| <a href="#"><u>08.01 Collaborate with others in a team.</u></a>                                        |
| <a href="#"><u>08.02 Respond to customer needs.</u></a>                                                |
| <a href="#"><u>08.03 Exercise leadership.</u></a>                                                      |
| <a href="#"><u>08.04 Negotiate to resolve conflict.</u></a>                                            |
| <a href="#"><u>08.05 Respect others.</u></a>                                                           |
| <a href="#"><u>09.0 Manage personal behavior to maximize productivity and professional growth.</u></a> |
| <a href="#"><u>09.01 Demonstrate responsibility and self-discipline.</u></a>                           |
| <a href="#"><u>09.02 Adapt and show flexibility.</u></a>                                               |
| <a href="#"><u>09.03 Work independently.</u></a>                                                       |
| <a href="#"><u>09.04 Demonstrate a willingness to learn.</u></a>                                       |
| <a href="#"><u>09.05 Demonstrate integrity.</u></a>                                                    |
| <a href="#"><u>09.06 Demonstrate professionalism.</u></a>                                              |
| <a href="#"><u>09.07 Take initiative.</u></a>                                                          |
| <a href="#"><u>09.08 Display positive attitude.</u></a>                                                |

09.09 Take responsibility for professional growth.

### **Career Exploration & Planning**

10.0 Explain career opportunities aligned with the regional economy and personal aspirations.

10.01 Describe regional occupations that are high-demand, high-growth, high-wage and/or high-skill.

10.02 Describe careers aligned with his or her interests, skills and values based on career assessment, experiential learning, career informational interviews, research and/or reflection.

11.0 Explain postsecondary pathways aligned with his or her career aspirations.

11.01 Compare and contrast postsecondary pathways, including education, employment, entrepreneurship and enlistment (the “Four Es”).

11.02 Compare and contrast regional postsecondary training provider options, including apprenticeships, technical colleges, state colleges, universities and industry-recognized certification providers.

11.03 Define postsecondary credentialing and stacking options, including industry-recognized certifications, apprenticeship certificates of completion, career certificates, licenses and associate or baccalaureate degrees.

11.04 Compare postsecondary training data for training programs of interest, such as total costs, average student loan debt, and median earnings and job placement rates after program completion.

12.0 Develop a personalized career and academic plan.

12.01 Prioritize an occupation, credential and postsecondary training provider for plan formation.

12.02 Self-assess progress toward meeting graduation requirements and skill-development goals.

12.03 Develop and complete a chronological checklist of steps and deadlines prior to postsecondary training or national service application that includes any required documentation to gather, writing prompts and examinations.

12.04 Identify a variety of financial aid opportunities, including scholarships, grants, savings, work, work-study programs, private loans and federal loans.

12.05 Develop a postsecondary training budget that is inclusive of living and school expenses.

### **Job Attainment**

13.0 Find, assess and apply to job opportunities.

13.01 Identify online job posts relevant to his or her career aspirations.

13.02 Compare and contrast the job posts’ required qualifications, job duties, compensation, benefits and employers.

13.03 Define what information, documentation and writing prompts are required for the positions.

14.0 Communicate personal competence, character and fit for a job opportunity.

14.01 Develop a resume.

14.02 Write a cover letter.

14.03 Curate a professional portfolio that includes work products.

|                                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#"><u>14.04 Prepare for and experience a mock job interview.</u></a>                                                                |
| <a href="#"><u>15.0 Cultivate and leverage relationships to professionally advance.</u></a>                                                  |
| <a href="#"><u>15.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.</u></a> |
| <a href="#"><u>15.02 Develop a plan to cultivate a professional digital footprint.</u></a>                                                   |
| <a href="#"><u>15.03 Develop a networking plan for a specific industry of interest.</u></a>                                                  |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

### **Health Science Core**

- 01.0 Analyze and interpret an overview of the human body, including organization and chemical process.
- 02.0 Apply correct medical terminology relating to body structure and function within a real-world application.
- 03.0 Evaluate cells and tissues microscopically and macroscopically and relate their specialized functions.
- 04.0 Analyze the integumentary system in relation to health and disease.
- 05.0 Analyze the skeletal system in relation to health and disease.
- 06.0 Analyze the muscular system in relation to health and disease.
- 07.0 Analyze the nervous system in relation to health and disease.
- 08.0 Analyze the endocrine system in relation to health and disease.
- 09.0 Analyze the cardiovascular/circulatory system in relation to health and disease.
- 10.0 Analyze the lymphatic and immune systems in relation to health and disease.
- 11.0 Analyze the respiratory system in relation to health and disease.
- 12.0 Analyze the digestive system in relation to health and disease.
- 13.0 Analyze the urinary system in relation to health and disease.
- 14.0 Analyze both the male and female reproductive systems in relation to health and disease.
- 15.0 Identify and explain factors relating to genetics and disease.
- 16.0 Evaluate and apply the principles of disease transmission and control to real-world scenarios.
- 17.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 18.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 19.0 Demonstrate legal and ethical responsibilities.
- 20.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 21.0 Recognize and practice safety and security procedures.
- 22.0 Recognize and respond to emergency situations.
- 23.0 Recognize and practice infection control procedures.
- 24.0 Demonstrate an understanding of information technology applications in healthcare.
- 25.0 Demonstrate employability skills.
- 26.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 27.0 Apply basic math and science skills.

### **Medical Laboratory Assisting 3**

- 28.0 Demonstrate accepted professional, communication, and interpersonal skills.
- 29.0 Discuss phlebotomy in relation to the health care setting.
- 30.0 Identify the anatomic structure and function of body systems in relation to services performed by phlebotomist.
- 31.0 Recognize and identify collection reagents supplies, equipment and interfering chemical substances.
- 32.0 Demonstrate skills and knowledge necessary to perform phlebotomy.
- 33.0 Practice infection control following standard precautions.

- 34.0 Practice accepted procedures of transporting, accessioning and processing specimens.
- 35.0 Practice quality assurance and safety.

**Medical Laboratory Assisting 4**

- 36.0 Identify the federal and state laws, which serve to regulate the provision of laboratory services, including CLIA, Florida Statutes, and Florida Administrative Code.
- 37.0 Demonstrate basic knowledge of microbiology.
- 38.0 Demonstrate basic knowledge of urinalysis.
- 39.0 Demonstrate basic knowledge of clinical chemistry.
- 40.0 Demonstrate basic knowledge of hematology.
- 41.0 Demonstrate basic knowledge of Immunohematology.
- 42.0 Demonstrate basic knowledge of and perform clinical laboratory Point of Care (POC) testing (Waived).
- 43.0 Successfully complete learning experiences in the clinical setting.

## Florida Department of Education Student Performance Standards

### **Health Science Core:**

The first two courses in this program are referred to as the Health Science Core and consist of the courses Health Science Anatomy & Physiology (8417100) and Health Science Foundations (8417110). **To ensure consistency whenever these courses are offered, the standards and benchmarks for the health science core have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-secondary-2425.rtf>

<https://www.fldoe.org/file/20894/health-sci-core-secondary-2627.rtf>

The two credit core is required as a prerequisite for all secondary programs except for Practical Nursing and Pharmacy Technician. Secondary students completing the two required courses will not have to repeat the core in postsecondary. When the recommended sequence is followed, the structure allows students to complete at specified courses for employment or remain for advanced training or cross-training.

**Course Title:** Health Science Anatomy & Physiology  
**Course Number:** 8417100  
**Course Credit:** 1

### **Course Description:**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental quality, and safety procedures will be an integral part of this course. Students will interact with materials and primary sources of data or with secondary sources of data to observe and understand the natural world. Students will develop an understanding of measurement error, and develop the skills to aggregate, interpret, and present the data and resulting conclusions. Equipment and supplies will be provided to enhance these hands-on experiences for students. A minimum of 20% of classroom time will be dedicated to laboratory experiences.

This course is part of the secondary Health Core consisting of an overview of the human body, both structurally and functionally with emphasis on the pathophysiology and transmission of disease. Medical terminology is an integral part of the course.

**The course Anatomy and Physiology (2000350) or Anatomy and Physiology Honors (2000360) may be substituted for the course Health Science Anatomy & Physiology (8417100) and their standards can be found at [www.cpalms.org](http://www.cpalms.org).**

The course Health Science Anatomy & Physiology (8417100) is designated as an equally rigorous (EQ) science credit.

**Course Title:** Health Science Foundations  
**Course Number:** 8417110  
**Course Credit:** 1

**Course Description:**

This course is part of the Secondary Health Core designed to provide the student with an in depth knowledge of the health care system and associated occupations. Emphasis is placed on communication and interpersonal skills, use of technology, ethics and the development of critical thinking and problem solving skills. Students may shadow professionals throughout the course.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Medical Laboratory Assisting 3  
**Course Number:** 8417201  
**Course Credit:** 1

**Course Description:**

This one credit course is the third course of a four course Medical Lab Assistant program. **Live work is not recommended for this course.** Students completing this course have also met the postsecondary requirements of phlebotomy **except for clinical experiences with live work.**

| CTE Standards and Benchmarks |                                                                                                                                                                                            |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.0                         | Demonstrate accepted professional, communication, and interpersonal skills. The student will be able to:                                                                                   |
| 28.01                        | Demonstrate the appropriate professional behavior of a phlebotomist.                                                                                                                       |
| 28.02                        | Explain to the patient the procedure to be used in specimen collection.                                                                                                                    |
| 28.03                        | Explain in detail the importance of identifying patients correctly when drawing blood.                                                                                                     |
| 28.04                        | Describe the scope of practice (job skills and duties) for a phlebotomist.                                                                                                                 |
| 28.05                        | List and describe professional organizations that provide accreditation, certification, and licensure to phlebotomists and phlebotomy programs.                                            |
| 28.06                        | Explain the importance of continuing education in relation to certification to maintain competency and skills.                                                                             |
| 29.0                         | Discuss phlebotomy in relation to the health care setting. The student will be able to:                                                                                                    |
| 29.01                        | List, classify and discuss various departments and services within the health care setting in which the phlebotomist must interact with to obtain laboratory specimens from patients.      |
| 29.02                        | Identify the major departments/sections with the clinical laboratory, the major types of procedures run in each department/section, and their specimen requirements.                       |
| 29.03                        | Describe roles of the major classifications of clinical laboratory personnel (i.e., pathologist, chief/administrative technologist, CLS, MLS, MLT, MT, phlebotomist, lab assistant, etc.). |
| 30.0                         | Identify the anatomic structure and function of body systems in relation to services performed by phlebotomist. The student will be able to:                                               |
| 30.01                        | Describe and define major body systems with emphasis on the circulatory system.                                                                                                            |
| 30.02                        | List and describe the main superficial veins used in performing venipuncture.                                                                                                              |

| CTE Standards and Benchmarks |                                                                                                                                                                                             |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30.03                        | Locate the most appropriate sites(s) for capillary and venipuncture.                                                                                                                        |
| 30.04                        | Describe the function of the following blood components: erythrocytes, thrombocytes, leukocytes and plasma.                                                                                 |
| 30.05                        | Compare and contrast between serum and plasma as it relates to blood collection.                                                                                                            |
| 30.06                        | Discuss hemostasis as it relates to blood collection.                                                                                                                                       |
| 31.0                         | Recognize and identify collection reagents supplies, equipment, and interfering chemical substances. The student will be able to:                                                           |
| 31.01                        | Identify and discuss proper use of appropriate types of equipment needed to collect various clinical laboratory blood specimens by venipuncture.                                            |
| 31.02                        | Explain the special precautions and types of equipment needed to collect blood from the pediatric patient.                                                                                  |
| 31.03                        | Identify and discuss proper use of supplies used in collecting short-draw specimens or difficult draws.                                                                                     |
| 31.04                        | Identify and discuss the proper use of the various types of anticoagulants, preservatives and gels used in blood collection and the vacuum tube color-codes for these additives.            |
| 31.05                        | Describe the types of specimens that are analyzed in the clinical laboratory and the phlebotomist's role in collecting and/or transporting these specimens to the laboratory.               |
| 31.06                        | Describe substances potentially encountered during phlebotomy which can interfere in analysis of blood constituents.                                                                        |
| 31.07                        | Define and utilize correct medical terminology and metric measurement needed for specimen collection.                                                                                       |
| 32.0                         | Demonstrate skills and knowledge necessary to perform phlebotomy. The student will be able to:                                                                                              |
| 32.01                        | Follow approved procedure for completing a laboratory requisition form.                                                                                                                     |
| 32.02                        | Recognize a properly completed requisition.                                                                                                                                                 |
| 32.03                        | Demonstrate knowledge of established protocol for patient and specimen identification.                                                                                                      |
| 32.04                        | Discuss appropriate methods for facilitating and preparing the patient for capillary and venipuncture collection.                                                                           |
| 32.05                        | List appropriate antiseptic agents useful in preparing sites for capillary and venipuncture.                                                                                                |
| 32.06                        | Perform venipuncture by evacuated tube, butterfly and syringe systems, demonstrating appropriate use of supplies, proper handling of equipment and specimens, and appropriate patient care. |
| 32.07                        | Describe the correct order of draw.                                                                                                                                                         |
| 32.08                        | Describe the use of barcoding systems used for specimen collection.                                                                                                                         |

| CTE Standards and Benchmarks |                                                                                                                                                                                                         |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 32.09                        | Convey an understanding of capillary puncture using appropriate supplies and techniques for both adults and pediatric patients.                                                                         |
| 32.10                        | Describe the most common complications associated with capillary and venipuncture, their causes, prevention, and treatment.                                                                             |
| 32.11                        | Recognize and respond to possible adverse patient reactions such as allergies, convulsions, syncope, light headedness, vomiting, and nerve involvement.                                                 |
| 32.12                        | Perform appropriate procedures for disposing of used or contaminated capillary and venipuncture supplies.                                                                                               |
| 32.13                        | Demonstrate the proper procedure for collecting blood cultures.                                                                                                                                         |
| 32.14                        | Discuss the effects of hemolysis and methods of prevention.                                                                                                                                             |
| 32.15                        | Demonstrate a working understanding of how age and weight of patients impacts the maximum amount of blood that can be safely drawn.                                                                     |
| 33.0                         | Practice infection control following standard precautions. The student will be able to:                                                                                                                 |
| 33.01                        | Define the term hospital acquired infection.                                                                                                                                                            |
| 33.02                        | Describe and practice procedures for infection prevention including hand washing skills.                                                                                                                |
| 33.03                        | Discuss transmission based precautions.                                                                                                                                                                 |
| 33.04                        | Identify potential routes of infection and their complications.                                                                                                                                         |
| 34.0                         | Practice accepted procedures of transporting, accessioning, and processing specimens. The student will be able to:                                                                                      |
| 34.01                        | Follow the approved procedure for preparation and processing (e.g., centrifugation, separation, aliquoting, labeling, and storage) of serum, plasma, urine, sputum, stool, and wound culture specimens. |
| 34.02                        | Demonstrate knowledge of accessioning procedures.                                                                                                                                                       |
| 34.03                        | Describe the significance of time constraints for specimen collection, transporting and delivery.                                                                                                       |
| 34.04                        | Describe routine procedures for transporting and processing specimens including DOT packaging requirements.                                                                                             |
| 35.0                         | Practice quality assurance and safety. The student will be able to:                                                                                                                                     |
| 35.01                        | Distinguish and perform procedures which ensure reliability of test results when collecting blood specimens.                                                                                            |
| 35.02                        | Practice appropriate patient safety.                                                                                                                                                                    |
| 35.03                        | Practice safety in accordance with OSHA (state & federal guidelines) for chemical, biological, and PPE established procedures including proper disposal of sharps and biohazardous materials.           |

| CTE Standards and Benchmarks                                                                                          |
|-----------------------------------------------------------------------------------------------------------------------|
| 35.04 Follow documentation procedures for work related accidents.                                                     |
| 35.05 Implement appropriate Joint Commission patient safety goals and other accrediting/regulatory agency guidelines. |

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Medical Laboratory Assisting 4  
**Course Number:** 8417202  
**Course Credit:** 1

**Course Description:**

This one credit course is the fourth course of a four course Medical Lab Assistant program. Students completing this course have also met the postsecondary requirements of Medical Lab Assisting **except for clinical experiences involving live work.**

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 36.0                         | Identify the federal and state laws, which serve to regulate the provision of laboratory services, including CLIA, Florida Statutes, and Florida Administrative Code. The student will be able to:                                                                                                                                                                                                                                                                                                             |
| 36.01                        | Explain the CLIA test complexity model and describe the characteristics required for FDA classification of a test as waived.                                                                                                                                                                                                                                                                                                                                                                                   |
| 36.02                        | Understand the CLIA 88 classification of laboratory testing into waived, moderate, and highly complex including the personnel qualified to perform each.                                                                                                                                                                                                                                                                                                                                                       |
| 36.03                        | Explain the categories of testing personnel established by both CLIA and Florida regulations and describe the basic educational and/or experiential qualifications for each category.                                                                                                                                                                                                                                                                                                                          |
| 36.04                        | Explain the differences in requirements for a physician practice laboratory, a hospital laboratory and an independent clinical laboratory.                                                                                                                                                                                                                                                                                                                                                                     |
| 36.05                        | Describe Alternate Site Testing requirements as they apply to hospitals in Florida, and compare and contrast these with the requirements for the Federal CLIA program and their four types of certificates: <ul style="list-style-type: none"> <li>• Certificates of Waiver</li> <li>• Certificate of Provider Performed Microscopy</li> <li>• Certificate of Compliance</li> <li>• Certificate of Accreditation</li> </ul> Apply the concepts of Point-of-Care or Near Patient testing to these requirements. |
| 36.06                        | Demonstrate an understanding of the concepts of “scope of practice”, “professional judgment”, and “duty/obligation to report”.                                                                                                                                                                                                                                                                                                                                                                                 |
| 37.0                         | Demonstrate basic knowledge of microbiology. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 37.01                        | Perform techniques of microbiology related to disinfection techniques.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 37.02                        | Discuss techniques of microbiology related to isolation techniques.                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 37.03                        | Perform techniques of microbiology related to sterilization techniques.                                                                                                                                                                                                                                                                                                                                                                                                                                        |

**CTE Standards and Benchmarks**

|       |                                                                                                                              |
|-------|------------------------------------------------------------------------------------------------------------------------------|
| 37.04 | Perform techniques of microbiology related to slide preparation.                                                             |
| 37.05 | Describe the basic operation and principles related to usage of microscopes.                                                 |
| 37.06 | Understand the staining and microscopic examination of gram stains.                                                          |
| 37.07 | Discuss techniques of microbiology related to primary inoculation media, specimen types, and transfer of cultures.           |
| 37.08 | Perform basic techniques of microbiology in respect to routine and emergency specimen collection including time constraints. |
| 37.09 | Discuss classification, composition and preparation of culture media.                                                        |
| 38.0  | Demonstrate basic knowledge of urinalysis. The student will be able to:                                                      |
| 38.01 | Understand urinalysis techniques related to normal and abnormal components of the urine.                                     |
| 38.02 | Perform urinalysis techniques related to collection and preservation of specimens and time constraints.                      |
| 38.03 | Perform urinalysis techniques related to physical properties of urine                                                        |
| 38.04 | Perform urinalysis techniques related to dipstick urine pH and describe clinical significance.                               |
| 38.05 | Discuss urinalysis techniques related to urine specific gravity techniques.                                                  |
| 38.06 | Perform dipstick or tablet (non-automated) urinalysis techniques related to performance of chemical tests.                   |
| 38.07 | Discuss urinalysis techniques related to microscopic identification of significant elements.                                 |
| 38.08 | Perform urinalysis techniques related to principles and use of centrifuge.                                                   |
| 39.0  | Demonstrate basic knowledge of clinical chemistry. The student will be able to:                                              |
| 39.01 | Perform techniques of clinical chemistry related to metric measurement.                                                      |
| 39.02 | Perform techniques of clinical chemistry related to labware and clinical equipment.                                          |
| 39.03 | Perform techniques of clinical chemistry related to reagent preparation, laboratory equipment and laboratory techniques.     |
| 39.04 | Discuss techniques of clinical chemistry related to standardization of procedure and use of standards, blanks and controls.  |
| 39.05 | Discuss the importance of quality assurance as it relates to patient results.                                                |
| 39.06 | Discuss techniques of clinical chemistry related to visual colorimetry, calibration and use of the spectrophotometer.        |

**CTE Standards and Benchmarks**

|       |                                                                                                                                                |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------|
| 39.07 | Demonstrate an understanding of the relationship between common clinical chemical tests and specific body systems and disorders.               |
| 40.0  | Demonstrate basic knowledge of hematology. The student will be able to:                                                                        |
| 40.01 | Discuss techniques of hematology related to counting formed elements of blood.                                                                 |
| 40.02 | Perform techniques of hematology related to preparation and staining.                                                                          |
| 40.03 | Discuss techniques of cell differential microscopic examination of blood films.                                                                |
| 40.04 | Perform appropriate techniques for making a peripheral blood smear for hematologic evaluation.                                                 |
| 40.05 | Perform techniques of hematology related to spun hematocrit tests.                                                                             |
| 40.06 | Discuss techniques of hematology related to the use of platelet function analyzing instruments in addition to performing bleeding times.       |
| 40.07 | Perform techniques of hematology related to hemoglobin tests.                                                                                  |
| 40.08 | Understand the use of and importance of red blood cell indices.                                                                                |
| 40.09 | Discuss basic techniques of hematology related to normal and abnormal physiology.                                                              |
| 41.0  | Demonstrate basic knowledge of Immunohematology. The student will be able to:                                                                  |
| 41.01 | Discuss the functions of the Immunohematology department.                                                                                      |
| 41.02 | Understand the four blood groups in ABO system, the inheritance of the blood group antigens, and their corresponding antibodies.               |
| 41.03 | Discuss techniques of forward and reverse grouping.                                                                                            |
| 41.04 | Perform ABO slide and tube grouping and interpret the results.                                                                                 |
| 41.05 | Discuss the importance of the Rh blood groups system, the inheritance of Rh antigen, and their corresponding antibodies.                       |
| 41.06 | Perform Rh D slide typing and interpret the results.                                                                                           |
| 41.07 | Explain the process of blood donation and the requirements necessary to donate blood.                                                          |
| 41.08 | Discuss tests performed on donated blood before it can be transfused.                                                                          |
| 41.09 | Explain the three blood components that can be obtained from a unit of donated blood and how these components would be beneficial to patients. |
| 41.10 | Describe safety precautions that should be observed while performing ABO and Rh D typing.                                                      |
| 41.11 | Discuss quality assessment policies and procedures that must be followed to ensure reliable ABO and Rh typing results.                         |

**CTE Standards and Benchmarks**

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 42.0  | Demonstrate basic knowledge of and perform clinical laboratory point of care (POC) testing (Waived). The student will be able to:                                                                                                                                                                                                                                                                                                                                                                             |
| 42.01 | Demonstrate the ability to interpret instructions of point of care testing specific to microbiology, hematology, urinalysis, and clinical chemistry including, but not limited to the following: <ul style="list-style-type: none"> <li>• Test principle</li> <li>• Storage &amp; stability</li> <li>• Internal vs. external quality control</li> <li>• Specimen collection &amp; preparation</li> <li>• Directions for use</li> <li>• Interpretation of results</li> <li>• Interfering substances</li> </ul> |
| 42.02 | Explain the purpose of performing lot-to-lot correlations.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 42.03 | Identify normal limits and associate abnormal results with disease and disorders.                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 42.04 | Perform instrument maintenance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 42.05 | Discuss the significance of reporting critical values as it applies to Point of Care testing.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 42.06 | Demonstrate knowledge of the frequency in which quality control procedures should be performed.                                                                                                                                                                                                                                                                                                                                                                                                               |
| 43.0  | Successfully complete learning experiences in the clinical setting. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                              |
| 43.01 | Observe and participate as appropriate the skills outlined in outcomes for medical lab assisting.                                                                                                                                                                                                                                                                                                                                                                                                             |
| 43.02 | Complete clinical rotations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Simulation and clinical laboratory experiences are integrated with the didactic portion of this program. Clinical experience is defined as laboratory activities performed in the clinical setting under the supervision of a medical laboratory technician or technologist.

**This program requires a clinical component of approximately 50% the length of the courses following the health science core. A portion of the clinical experience can be achieved through simulation when appropriate.**

Clinical courses require contact hours in the clinical setting in order to complete the health science program. Hospitals, nursing homes, and other clinical facilities with clinical affiliation agreements limit the number of students that can rotate and/or be on site at one time. Most facilities, including hospitals and nursing homes, limit the number of students to 15. Due to these industry limitations, it is recommended that the student ratio be 15:1 (student/teacher) based on the clinical facilities that students attend to for clinical training.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org).

### **Special Notes**

Following the completion of the Health Science Core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

This program meets the Department of Health HIV/AIDS Domestic Violence and Prevention of Medical Errors education requirements. Upon completion of this program, the instructor will provide a certificate to the student verifying that these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

Students completing the course Medical Laboratory Assisting 3 have also met the postsecondary requirements of phlebotomy except for clinical experiences involving venipuncture on actual patients.

Students completing the course Medical Laboratory Assisting 4 have also met the postsecondary requirements of Medical Lab Assisting except for some clinical experiences involving live work.

### **Career and Technical Student Organization (CTSO)**

~~Florida HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization(s)~~ organizations providing leadership training and reinforcing specific career and technical skills.- Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. -Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

Florida Department of Education  
Curriculum Framework

The standards and/or benchmarks for this program were updated for the 2026-27 academic year.

Program Title: Nursing Assistant (Acute and Long-Term Care)  
Program Type: Career Preparatory  
Career Cluster: Health Science

| Secondary – Career Preparatory |                                                                                                                                                                                             |

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This course is designed to prepare students for employment as nursing assistants SOC Code 31-1014 (Nursing Assistants) in nursing homes, hospitals, or other health care facilities.

The content includes, but is not limited to, interpersonal skills, medical terminology, legal and ethical responsibilities, safe and efficient work, gerontology, nutrition, pet-facilitated therapy, health and safety including Cardio-pulmonary Resuscitation (CPR) – heart saver level, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## Program Structure

This program is a planned sequence of instruction totaling three credits. The two credit Health Science Core (Health Science Anatomy & Physiology 8417100 and Health Science Foundations 8417110) is required as a prerequisite for all programs. Secondary students completing the two required courses will not have to repeat the core in postsecondary.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary program structure:

| Course Number            | Course Title                                                  | Teacher Certification                                                           | Length   | SOC Code | Level | Graduation Requirement |

(Graduation Requirement Codes: CT= Career & Technical Education, EQ= Equally Rigorous Science, EC= Economics, MA= Mathematics, PL= Personal Financial Literacy)

**\* The LPN 7 G district issued certification is a practical nurse. A practical nurse can only be utilized as an instructor of the CNA training program when they are supervised by the program coordinator, which must be a registered nurse. Please refer to 64B9-15.005, F.A.C. for requirements.**

## Regulated Programs

This program is regulated by the Florida Board of Nursing.

Successful completion of this program from an approved school prepares the student for certification for employment as a Nursing Assistant, in accordance with Chapter 464.203, Florida Statutes. To be approved, this program must be supervised by a registered nurse and follow the faculty qualifications set forth in 64B9-15.005 (3)(a) F.A.C.

**New programs must be approved by the Board of Nursing, Department of Health prior to enrolling students.**

Those students who satisfactorily complete an approved course are eligible to apply to take the national nursing assistant examination being utilized in Florida, in accordance with Chapter 464.203, F.S. This program includes both Acute and Long-Term Care.

In accordance with 64B9-15.005(4)(c), F.A.C., students will perform nursing skills in the clinical and simulated laboratory settings under the supervision of a qualified instructor. The clinical instruction ratio for program instructor to student is 1 to 15 for students caring directly for residents or clients.

In accordance with 64B9-15.006(2), F.A.C., The standardized curriculum shall require a minimum of 80 hours of classroom and 40 hours clinical instruction. The clinical instruction shall include at least 20 hours of long-term care clinical instruction in a licensed nursing home.

In accordance with 64B9-15.006(3), F.A.C., Prior to any direct contact with a resident, a training program shall require that a student receive a minimum of 16 hours of classroom instruction in communication and interpersonal skills; infection control; safety/emergency procedures, including the Heimlich maneuver; promoting residents' independence; and respecting residents' rights.

According to Section 400.211, F.S., persons who are enrolled in, or have completed, a state approved nursing assistant training program may be employed by a licensed nursing facility for a period of four months. However, the certification requirements must be met within four months of such initial employment.

**CommonFlorida’s Career Technical Core — Career Ready Practices**Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

- 1. Act as a responsible and contributing citizen and employee.
- 2. Apply appropriate academic and technical skills.
- 3. Attend to personal health and financial well-being.
- 4. Communicate clearly, effectively and with reason.
- 5. Consider the environmental, social and economic impacts of decisions.
- 6. Demonstrate creativity and innovation.
- 7. Employ valid and reliable research strategies.
- 8. Utilize critical thinking to make sense of problems and persevere in solving them.
- 9. Model integrity, ethical leadership and effective management.
- 10. Plan education and career path aligned to personal goals.
- 11. Use technology to enhance productivity.
- 12. Work productively in teams while using cultural/global competence.**

## **Standards**

After successfully completing this program, the student will be able to perform the following:

### **Health Science Core**

- 01.0 Analyze and interpret an overview of the human body, including organization and chemical process.
- 02.0 Apply correct medical terminology relating to body structure and function within a real-world application.
- 03.0 Evaluate cells and tissues microscopically and macroscopically and relate their specialized functions.
- 04.0 Analyze the integumentary system in relation to health and disease.
- 05.0 Analyze the skeletal system in relation to health and disease.
- 06.0 Analyze the muscular system in relation to health and disease.
- 07.0 Analyze the nervous system in relation to health and disease.
- 08.0 Analyze the endocrine system in relation to health and disease.
- 09.0 Analyze the cardiovascular/circulatory system in relation to health and disease.
- 10.0 Analyze the lymphatic and immune systems in relation to health and disease.
- 11.0 Analyze the respiratory system in relation to health and disease.
- 12.0 Analyze the digestive system in relation to health and disease.
- 13.0 Analyze the urinary system in relation to health and disease.
- 14.0 Analyze both the male and female reproductive systems in relation to health and disease.
- 15.0 Identify and explain factors relating to genetics and disease.
- 16.0 Evaluate and apply the principles of disease transmission and control to real-world scenarios.
- 17.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 18.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 19.0 Demonstrate legal and ethical responsibilities.
- 20.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 21.0 Recognize and practice safety and security procedures.
- 22.0 Recognize and respond to emergency situations.
- 23.0 Recognize and practice infection control procedures.
- 24.0 Demonstrate an understanding of information technology applications in healthcare.
- 25.0 Demonstrate employability skills.
- 26.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 27.0 Apply basic math and science skills.

### **Nursing Assistant 3**

- 28.0 Use verbal and written communications specific to nurse assisting.
- 29.0 Demonstrate legal and ethical responsibilities specific to nurse assisting.
- 30.0 Perform physical comfort and safety functions specific to nurse assisting.
- 31.0 Provide personal patient care.
- 32.0 Perform patient care procedures.
- 33.0 Apply principles of nutrition.

- 34.0 Provide care for geriatric patients.
- 35.0 Apply the principles of infection control specific to nursing assisting.
- 36.0 Provide biological, psychological, and social support.
- 37.0 Perform supervised organizational functions, following the patient care plan.
- 38.0 Assist with restorative (rehabilitative) activities.

## Florida Department of Education Student Performance Standards

### Health Science Core

The first two courses in this program are referred to as the Health Science Core and consist of the courses Health Science Anatomy & Physiology (8417100) and Health Science Foundations (8417110). **To ensure consistency whenever these courses are offered, the standards and benchmarks for the health science core have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-secondary-2425.rtf>

<https://www.fldoe.org/file/20894/health-sci-core-secondary-2627.rtf>

The two credit core is required as a prerequisite for all secondary programs except for Practical Nursing and Pharmacy Technician. Secondary students completing the two required courses will not have to repeat the core in postsecondary. When the recommended sequence is followed, the structure allows students to complete at specified courses for employment or remain for advanced training or cross-training.

**Course Title:** \_\_\_\_\_ **Health Science Anatomy & Physiology**

**Course Number:** \_\_\_\_\_ **8417100**

**Course Credit:** \_\_\_\_\_ **1**

#### **Course Description:**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental quality, and safety procedures will be an integral part of this course. Students will interact with materials and primary sources of data or with secondary sources of data to observe and understand the natural world. Students will develop an understanding of measurement error, and develop the skills to aggregate, interpret, and present the data and resulting conclusions. Equipment and supplies will be provided to enhance these hands-on experiences for students. A minimum of 20% of classroom time will be dedicated to laboratory experiences.

This course is part of the secondary Health Core consisting of an overview of the human body, both structurally and functionally with emphasis on the pathophysiology and transmission of disease. Medical terminology is an integral part of the course.

**The course *Anatomy and Physiology (2000350)* or *Anatomy and Physiology Honors (2000360)* may be substituted for the course Health Science Anatomy & Physiology (8417100) and their standards can be found at [www.cpalms.org](http://www.cpalms.org).**

The course Health Science Anatomy & Physiology (8417100) is designated as an equally rigorous (EQ) science credit.

**Course Title:** \_\_\_\_\_ **Health Science Foundations**

**Course Number:** \_\_\_\_\_ **8417110**

**Course Credit:** \_\_\_\_\_ **1**

**Course Description:**

This course is part of the Secondary Health Core designed to provide the student with an in depth knowledge of the health care system and associated occupations. Emphasis is placed on communication and interpersonal skills, use of technology, ethics and the development of critical thinking and problem solving skills. Students may shadow professionals throughout the course.

**Florida Department of Education  
Student Performance Standards**

**Course Title:**       Nursing Assistant 3

**Course Number:**       8417211

**Course Credit:**       1

**Course Description:**

This is a course designed to prepare the student to provide/assist with all aspects of activities of daily living for the adult patient in both hospital and nursing home settings. The course, which is taught by a registered nurse, includes didactic instruction, skills practice in the laboratory and clinical experience. Emphasis is also placed on the development of communication, interpersonal, problem solving and critical thinking skills.

Upon successful completion, the student is eligible to apply to sit for the Florida State Certified Nursing Assistant exam which qualifies as industry certification.

| CTE Standards and Benchmarks |                                                                                                                                          |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| 28.0                         | Use verbal and written communications specific to nurse assisting. The student will be able to:                                          |
| 28.01                        | Obtain specified data from patient and family.                                                                                           |
| 28.02                        | Utilize verbal and written information to assist with the patient's plan of care.                                                        |
| 28.03                        | Demonstrate use of the communication system.                                                                                             |
| 29.0                         | Demonstrate legal and ethical responsibilities specific to nurse assisting. The student will be able to:                                 |
| 29.01                        | Discuss and demonstrate legal and ethical behavior within the nursing assistant scope of practice including role limitations in Florida. |
| 29.02                        | Describe the purpose of the chain of communication to resolve conflict.                                                                  |
| 29.03                        | Follow policies and procedures affecting the health, safety, and well-being of patients.                                                 |
| 29.04                        | Demonstrate safe standards of patient care including prevention and quality of care                                                      |
| 29.05                        | Exhibit behavior supporting and promoting patients' and/or residents' rights.                                                            |
| 29.06                        | Recognize potential for and prevention of medical errors.                                                                                |
| 29.07                        | Practice the proper procedures to follow regarding medical errors.                                                                       |
| 29.08                        | Follow policies and procedures affecting the health, safety, and well-being of patients.                                                 |

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                                   |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 29.09                        | Recognize and report signs of substance abuse.                                                                                                                                                                                                    |
| 29.10                        | Demonstrate the understanding of vulnerable population abuse and reporting procedures per agency.                                                                                                                                                 |
| 29.11                        | Recognize that a C.N.A. must self-report any crimes they've been involved in within 30 days of the offense in accordance with (456.0727(1)(w), F.S.).                                                                                             |
| 29.12                        | Define Omnibus Budget Reconciliation Act (OBRA).                                                                                                                                                                                                  |
| 29.13                        | Define Minimum Data Set (MDS).                                                                                                                                                                                                                    |
| 30.0                         | Perform physical comfort and safety functions specific to nurse assisting. The student will be able to:                                                                                                                                           |
| 30.01                        | Implement appropriate regulatory and accrediting agency patient safety guidelines.                                                                                                                                                                |
| 30.02                        | Maintain safe patient units, equipment, and a comfortable environment.                                                                                                                                                                            |
| 30.03                        | Maintain service areas on the units including supplies and equipment.                                                                                                                                                                             |
| 30.04                        | Observe, report, and record changes in the patient's behavior as needed, including mental awareness.                                                                                                                                              |
| 30.05                        | Demonstrate adjustment of bed and side-rails according to facility policy.                                                                                                                                                                        |
| 30.06                        | Demonstrate and assist patient to dangle.                                                                                                                                                                                                         |
| 30.07                        | Demonstrate lifting, supporting and transferring patients from bed to chair, bed to bed, and bed to stretcher, including the use of the various assistive devices and equipment while utilizing proper body mechanics and patient safety measures |
| 30.08                        | Demonstrate the proper use of a gait/transfer belt in both transfer and ambulation.                                                                                                                                                               |
| 30.09                        | Assist patient in ambulation, including the use of crutch, cane, or walker.                                                                                                                                                                       |
| 30.10                        | Demonstrate the proper wheelchair safety techniques and assist patient as needed with use.                                                                                                                                                        |
| 30.11                        | Apply supportive devices as directed (e.g., footboard, over-bed cradle, alternating pressure mattress).                                                                                                                                           |
| 30.12                        | Assist patient with care and use of prosthetic/orthotic devices.                                                                                                                                                                                  |
| 30.13                        | Describe emergency procedures utilized in the clinical area(s) and the role of the nursing assistant in these procedures.                                                                                                                         |
| 31.0                         | Provide personal patient care. The student will be able to:                                                                                                                                                                                       |
| 31.01                        | Perform bed bath; observe and report changes in a patient including skin and level of consciousness.                                                                                                                                              |
| 31.02                        | Assist with shower or tub bath, including the use of specialty tubs or prepackaged disposable-bagged bath.                                                                                                                                        |

| CTE Standards and Benchmarks |                                                                                                      |
|------------------------------|------------------------------------------------------------------------------------------------------|
| 31.03                        | Administer back rub with bath and as needed.                                                         |
| 31.04                        | Assist patient with hair care utilizing sink, tub, shower, bed or shower cap.                        |
| 31.05                        | Demonstrate the use of a safety and/or electric razor to shave the patient.                          |
| 31.06                        | Demonstrate how to groom patient, including hair, skin, foot, hand and nail care.                    |
| 31.07                        | Assist with and/or administer oral hygiene including denture care.                                   |
| 31.08                        | Assist patient to dress.                                                                             |
| 31.09                        | Assist patient with toileting using various types of restorative and rehabilitative equipment.       |
| 31.10                        | Assist patient with use of bedpan (standard and fracture)                                            |
| 31.11                        | Assist with bowel and bladder training.                                                              |
| 31.12                        | Assist and/ or provide perineal care.                                                                |
| 31.13                        | Empty, measure and record urinary output and/or drainage.                                            |
| 31.14                        | Demonstrate application and use of a leg bag, leg strap and dignity bag.                             |
| 31.15                        | Monitor and assist with the drainage of urostomy bags and colostomy bags.                            |
| 31.16                        | Assist patient with both donning and doffing prosthesis and brace.                                   |
| 31.17                        | Assist patient with meals.                                                                           |
| 31.18                        | Describe the relationships of body systems when providing patient care.                              |
| 31.19                        | Recognize abnormal signs and symptoms of common diseases and conditions when providing patient care. |
| 32.0                         | Perform patient care procedures. The student will be able to:                                        |
| 32.01                        | Demonstrate ability to accurately measure, record and report vital signs.                            |
| 32.02                        | Assist with the admission of a patient and/or resident.                                              |
| 32.03                        | Assist with the admission, transfer, and discharge of a patient and/or resident.                     |
| 32.04                        | Maintain patient-belongings list.                                                                    |

| CTE Standards and Benchmarks |                                                                                                       |
|------------------------------|-------------------------------------------------------------------------------------------------------|
| 32.05                        | Make unoccupied/occupied bed.                                                                         |
| 32.06                        | Provide passive range-of-motion exercises.                                                            |
| 32.07                        | Apply anti-embolic hose and sequential compression devices.                                           |
| 32.08                        | Understand and demonstrate proper collection of routine, timed urine and clean catch urine specimens. |
| 32.09                        | Record fluid intake and output (I&O).                                                                 |
| 32.10                        | Observe, record, and report patient's emesis.                                                         |
| 32.11                        | Monitor and provide urinary catheter care and drainage systems.                                       |
| 32.12                        | Assist with ostomy care including emptying or changing ostomy bags that do not adhere to the skin.    |
| 32.13                        | Collect stool specimen.                                                                               |
| 32.14                        | Assist with the collection of a sputum specimen.                                                      |
| 32.15                        | Assist the nurse with care of the patient with complex medical needs.                                 |
| 32.16                        | Assist patient to apply binders.                                                                      |
| 32.17                        | Care for patient in skin and skeletal traction.                                                       |
| 32.18                        | Assist with pre-operative and post-operative patient care.                                            |
| 32.19                        | Reinforce dressings under the supervision of the RN/LPN.                                              |
| 32.20                        | Obtain and record an apical pulse.                                                                    |
| 32.21                        | Provide cast care and/or pin care.                                                                    |
| 32.22                        | Provide care for eyeglasses, artificial eyes, and contact lens.                                       |
| 33.0                         | Apply principles of nutrition. The student will be able to:                                           |
| 33.01                        | Identify nutrients and food groups.                                                                   |
| 33.02                        | Develop a basic food plan.                                                                            |
| 33.03                        | Describe special diets.                                                                               |

**CTE Standards and Benchmarks**

|       |                                                                                                                                                               |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 33.04 | Check patient's diet tray for accuracy.                                                                                                                       |
| 33.05 | Monitor and document Nutritional Intake.                                                                                                                      |
| 33.06 | Identify and implement regional, cultural and religious food guidelines/preferences.                                                                          |
| 33.07 | Demonstrate knowledge of the need for thickened liquids and fluid consistency.                                                                                |
| 33.08 | Identify methods of maintaining fluid balance including encouraging and restricting fluids.                                                                   |
| 34.0  | Provide care for geriatric patients. The student will be able to:                                                                                             |
| 34.01 | Identify and assist with methods and procedures to prevent pressure ulcers.                                                                                   |
| 34.02 | Identify and assist with methods to prevent falls in the elderly.                                                                                             |
| 34.03 | Identify and assist with safety principles as related to the elderly.                                                                                         |
| 34.04 | Describe general characteristics, particular needs, and age related changes of the elderly.                                                                   |
| 34.05 | Identify attitudes and living habits that promote positive mental and physical health for the elderly.                                                        |
| 34.06 | Distinguish between fact and fallacy about the aging process.                                                                                                 |
| 34.07 | Apply reality orientation techniques and validation therapy unless it is contraindicated by the patient diagnosis.                                            |
| 34.08 | Recognize and respond appropriately to symptoms of common diseases, including dementia, depression/suicide and Alzheimers.                                    |
| 34.09 | Provide and involve patients in diversional activities.                                                                                                       |
| 34.10 | Identify common alterations in elderly patient behavior.                                                                                                      |
| 34.11 | Provide care for patients with special needs (e.g., impaired hearing, impaired vision, immobility, impaired body functions, cognitively impaired (dementia)). |
| 34.12 | Demonstrate awareness of common behaviors in drug use and abuse in the elderly.                                                                               |
| 34.13 | Report concerns to the nurse and appropriate authorities related to drug use and abuse in the elderly patient.                                                |
| 34.14 | Identify the need for community resources and services available to the elderly and their caregiver.                                                          |
| 34.15 | Identify components of the grief process.                                                                                                                     |
| 34.16 | Demonstrate an understanding of end of life care, hospice and palliative care.                                                                                |

| CTE Standards and Benchmarks |                                                                                                                                                                         |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 35.0                         | Apply the principles of infection control specific to nursing assisting. The student will be able to:                                                                   |
| 35.01                        | Discuss transmission-based precautions.                                                                                                                                 |
| 35.02                        | Identify the chain of infection.                                                                                                                                        |
| 35.03                        | Provide care for patients with infectious diseases applying the principles of "Standard Precautions" utilized with all patients as well as special procedures required. |
| 35.04                        | Apply the proper use of personal protective equipment (PPE) for all types of isolation including donning and removing PPE appropriately.                                |
| 35.05                        | Follow isolation procedure with food tray, PPE, and other supplies/equipment.                                                                                           |
| 35.06                        | Collect specimen from patient in isolation.                                                                                                                             |
| 36.0                         | Provide biological, psychological, and social support. The student will be able to:                                                                                     |
| 36.01                        | Discuss family roles and their significance to health.                                                                                                                  |
| 36.02                        | Respond to patient and family emotional needs.                                                                                                                          |
| 37.0                         | Perform supervised organizational functions, following the patient care plan. The student will be able to:                                                              |
| 37.01                        | Organize and prioritize patient-care assignments.                                                                                                                       |
| 37.02                        | Complete assignments accurately and in a timely manner.                                                                                                                 |
| 38.0                         | Assist with restorative (rehabilitative) activities. The student will be able to:                                                                                       |
| 38.01                        | List the purposes of restorative (rehabilitation) program.                                                                                                              |
| 38.02                        | Assist patient with specified restorative (rehabilitation) needs.                                                                                                       |
| 38.03                        | Assist patients/residents to reach the optimum level of independence.                                                                                                   |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org)

### **Special Notes**

Students completing this program and the course Home Health Aide 3 have met the requirements for, and may be known as, Patient Care Assistants.

Following the completion of Health Science 1 and Health Science 2, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

## **Career and Technical Student Organization (CTSO)**

Florida HOSA: Future Health Professionals is the CTSOs are co-curricular career and technical student organization organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

## **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as vision care assistants (Industry Title) at the aide level to assist opticians: dispensing and measuring, lens grinders, and other trained workers in the field of optics SOC 29-2081 (Opticians, Dispensing).

The content includes but is not limited to planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues. Clinical learning experiences are an integral part of this program.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction totaling four credits. The two credit Health Science Core (Health Science Anatomy & Physiology 8417100 and Health Science Foundations 8417110) is required as a prerequisite for all programs and options. Secondary students completing the two required courses will not have to repeat the core in postsecondary.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary program structure:

| Course Number                                           | Course Title                                                                                                             | Teacher Certification                                                                           | Length   | SOC Code | Level | Graduation Requirement |

## ~~Common~~Florida's Career Technical Core—Career Ready PracticesReadiness Skills for CTE Programs

~~Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.~~

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- ~~12. Work productively in teams while using cultural/global competence.~~

| <a href="#"><u>09.08 Display positive attitude.</u></a>                                                |
| <a href="#"><u>09.09 Take responsibility for professional growth.</u></a>                              |

**Career Exploration & Planning****10.0 Explain career opportunities aligned with the regional economy and personal aspirations.**10.01 Describe regional occupations that are high-demand, high-growth, high-wage and/or high-skill.10.02 Describe careers aligned with his or her interests, skills and values based on career assessment, experiential learning, career informational interviews, research and/or reflection.**11.0 Explain postsecondary pathways aligned with his or her career aspirations.**11.01 Compare and contrast postsecondary pathways, including education, employment, entrepreneurship and enlistment (the “Four Es”).11.02 Compare and contrast regional postsecondary training provider options, including apprenticeships, technical colleges, state colleges, universities and industry-recognized certification providers.11.03 Define postsecondary credentialing and stacking options, including industry-recognized certifications, apprenticeship certificates of completion, career certificates, licenses and associate or baccalaureate degrees.11.04 Compare postsecondary training data for training programs of interest, such as total costs, average student loan debt, and median earnings and job placement rates after program completion.**12.0 Develop a personalized career and academic plan.**12.01 Prioritize an occupation, credential and postsecondary training provider for plan formation.12.02 Self-assess progress toward meeting graduation requirements and skill-development goals.12.03 Develop and complete a chronological checklist of steps and deadlines prior to postsecondary training or national service application that includes any required documentation to gather, writing prompts and examinations.12.04 Identify a variety of financial aid opportunities, including scholarships, grants, savings, work, work-study programs, private loans and federal loans.12.05 Develop a postsecondary training budget that is inclusive of living and school expenses.**Job Attainment****13.0 Find, assess and apply to job opportunities.**13.01 Identify online job posts relevant to his or her career aspirations.13.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.13.03 Define what information, documentation and writing prompts are required for the positions.**14.0 Communicate personal competence, character and fit for a job opportunity.**14.01 Develop a resume.14.02 Write a cover letter.14.03 Curate a professional portfolio that includes work products.14.04 Prepare for and experience a mock job interview.

|                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------|
| <u>15.0 Cultivate and leverage relationships to professionally advance.</u>                                                  |
| <u>15.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.</u> |
| <u>15.02 Develop a plan to cultivate a professional digital footprint.</u>                                                   |
| <u>15.03 Develop a networking plan for a specific industry of interest.</u>                                                  |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

### **Health Science Core**

- 01.0 Analyze and interpret an overview of the human body, including organization and chemical process.
- 02.0 Apply correct medical terminology relating to body structure and function within a real-world application.
- 03.0 Evaluate cells and tissues microscopically and macroscopically and relate their specialized functions.
- 04.0 Analyze the integumentary system in relation to health and disease.
- 05.0 Analyze the skeletal system in relation to health and disease.
- 06.0 Analyze the muscular system in relation to health and disease.
- 07.0 Analyze the nervous system in relation to health and disease.
- 08.0 Analyze the endocrine system in relation to health and disease.
- 09.0 Analyze the cardiovascular/circulatory system in relation to health and disease.
- 10.0 Analyze the lymphatic and immune systems in relation to health and disease.
- 11.0 Analyze the respiratory system in relation to health and disease.
- 12.0 Analyze the digestive system in relation to health and disease.
- 13.0 Analyze the urinary system in relation to health and disease.
- 14.0 Analyze both the male and female reproductive systems in relation to health and disease.
- 15.0 Identify and explain factors relating to genetics and disease.
- 16.0 Evaluate and apply the principles of disease transmission and control to real-world scenarios.
- 17.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 18.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 19.0 Demonstrate legal and ethical responsibilities.
- 20.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 21.0 Recognize and practice safety and security procedures.
- 22.0 Recognize and respond to emergency situations.
- 23.0 Recognize and practice infection control procedures.
- 24.0 Demonstrate an understanding of information technology applications in healthcare.
- 25.0 Demonstrate employability skills.
- 26.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 27.0 Apply basic math and science skills.

### **Vision Care Assisting 3**

- 28.0 Demonstrate knowledge of the visual system.
- 29.0 Gather patient history and all relevant data in preparation for a complete eye exam.
- 30.0 Prepare patients for and assist in testing for eye disorders.
- 31.0 Perform medical administrative office tasks.
- 32.0 Recognize patient needs in relation to lens characteristics.

33.0 Demonstrate knowledge of frame selection techniques used in a dispensing office setting.

**Vision Care Assisting 4**

34.0 Demonstrate knowledge of frame adjustment and alignment.

35.0 Demonstrate and perform basic skills relating to lenses.

36.0 Edge, tint and inspect a pair of glass or plastic lenses and insert into a frame.

37.0 Dispense optical supplies.

## Florida Department of Education Student Performance Standards

### **Health Science Core:**

The first two courses in this program are referred to as the Health Science Core and consist of the courses Health Science Anatomy & Physiology (8417100) and Health Science Foundations (8417110). **To ensure consistency whenever these courses are offered, the standards and benchmarks for the health science core have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-secondary-2425.rtf>

<https://www.fldoe.org/file/20894/health-sci-core-secondary-2627.rtf>

The two credit core is required as a prerequisite for all secondary programs except for Practical Nursing and Pharmacy Technician. Secondary students completing the two required courses will not have to repeat the core in postsecondary. When the recommended sequence is followed, the structure allows students to complete at specified courses for employment or remain for advanced training or cross-training.

**Course Title:** Health Science Anatomy & Physiology  
**Course Number:** 8417100  
**Course Credit:** 1

### **Course Description:**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental quality, and safety procedures will be an integral part of this course. Students will interact with materials and primary sources of data or with secondary sources of data to observe and understand the natural world. Students will develop an understanding of measurement error, and develop the skills to aggregate, interpret, and present the data and resulting conclusions. Equipment and supplies will be provided to enhance these hands-on experiences for students. A minimum of 20% of classroom time will be dedicated to laboratory experiences.

This course is part of the secondary Health Core consisting of an overview of the human body, both structurally and functionally with emphasis on the pathophysiology and transmission of disease. Medical terminology is an integral part of the course.

The course Anatomy and Physiology (2000350) or Anatomy and Physiology Honors (2000360) may be substituted for the course Health Science Anatomy & Physiology (8417100) ~~and their standards can be found at [www.cpalms.org](http://www.cpalms.org).~~

The course Health Science Anatomy & Physiology (8417100) is designated as an equally rigorous (EQ) science credit.

**Course Title:** Health Science Foundations  
**Course Number:** 8417110  
**Course Credit:** 1

**Course Description:**

This course is part of the Secondary Health Core designed to provide the student with an in depth knowledge of the health care system and associated occupations. Emphasis is placed on communication and interpersonal skills, use of technology, ethics and the development of critical thinking and problem solving skills. Students may shadow professionals throughout the course.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Vision Care Assisting 3  
**Course Number:** 8417231  
**Course Credit:** 1

**Course Description:**

This course is one of the two courses that prepare students to be Vision Care Assistants. Content includes, but is not limited to, care and maintenance of contact lenses and eyewear, basic skills pertaining to lens manufacturing, office support skills and patient safety.

| CTE Standards and Benchmarks |                                                                                                                    |
|------------------------------|--------------------------------------------------------------------------------------------------------------------|
| 28.0                         | Demonstrate knowledge of the visual system. The students will be able to:                                          |
| 28.01                        | Identify the anatomy of the eye.                                                                                   |
| 28.02                        | Describe the physiology of each part of the eye.                                                                   |
| 28.03                        | Describe the visual pathway.                                                                                       |
| 28.04                        | Define refractive errors.                                                                                          |
| 28.05                        | Explain the most common conditions of the eye.                                                                     |
| 29.0                         | Gather patient history and all relevant data in preparation for a complete eye exam. The students will be able to: |
| 29.01                        | Record personal information and the patient's chief complaint.                                                     |
| 29.02                        | Record the patient's medical and ocular history.                                                                   |
| 29.03                        | Record the family's medical and ocular history using proper medical abbreviations.                                 |
| 29.04                        | Identify preexisting conditions and medications affecting the eye.                                                 |
| 29.05                        | Elicit information with respect to current pertinence for examination.                                             |
| 30.0                         | Prepare patients for and assist in testing for eye disorders. The students will be able to:                        |
| 30.01                        | Accurately take and record patient blood pressure, pulse, height and weight.                                       |
| 30.02                        | Accurately screen and record patient visual acuity.                                                                |

**CTE Standards and Benchmarks**

|       |                                                                                                                                                                                                                                                                                            |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30.03 | Accurately evaluate and record. <ul style="list-style-type: none"> <li>• Dominant eye and hand.</li> <li>• Cover test for muscular imbalance.</li> <li>• Saccadic for erratic eye movements.</li> <li>• Near point of convergence.</li> <li>• Pursuits, rotations and versions.</li> </ul> |
| 30.04 | Demonstrate knowledge of selected instruments used in determining specific eye disorders.                                                                                                                                                                                                  |
| 31.0  | Perform medical administrative office tasks. The students will be able to:                                                                                                                                                                                                                 |
| 31.01 | Schedule and confirm appointments.                                                                                                                                                                                                                                                         |
| 31.02 | Process all types of incoming and outgoing correspondence.                                                                                                                                                                                                                                 |
| 31.03 | Organize office procedures from a management perspective. <ul style="list-style-type: none"> <li>• Verification of insurance benefits.</li> <li>• Medical records management.</li> <li>• Insurance claims procedures.</li> </ul>                                                           |
| 31.04 | Perform filing using a variety of methods.                                                                                                                                                                                                                                                 |
| 31.05 | Implement appropriate joint commission patient safety goals.                                                                                                                                                                                                                               |
| 31.06 | Manage frame boards.                                                                                                                                                                                                                                                                       |
| 32.0  | Recognize patient needs in relation to lens characteristics. The students will be able to:                                                                                                                                                                                                 |
| 32.01 | Interpret the various symbols and abbreviations in a written eyeglass and contact lens prescription.                                                                                                                                                                                       |
| 32.02 | Distinguish lens criteria for myopic, hyperopic, astigmatic and presbyopic correction.                                                                                                                                                                                                     |
| 32.03 | Identify the different designs of multifocal lenses to fit the patient's needs.                                                                                                                                                                                                            |
| 32.04 | Calculate focal lengths from dipotric values.                                                                                                                                                                                                                                              |
| 32.05 | Measure vertex distance and compensate for contact lens use.                                                                                                                                                                                                                               |
| 32.06 | Accurately measure a patient's needs with the use of a phoropter.                                                                                                                                                                                                                          |
| 32.07 | Define prism imbalance, vertical imbalance and full imbalance.                                                                                                                                                                                                                             |
| 32.08 | Identify the effects of optical prism on lenses.                                                                                                                                                                                                                                           |

**CTE Standards and Benchmarks**

32.09 Describe the effects of types of tint on the eye.

32.010 Estimate the best transmission value related to light.

33.0 Demonstrate knowledge of frame selection techniques used in a dispensing office setting. The students will be able to:

33.01 Distinguish between square, round, rectangular, oblong and oval features.

33.02 Compare features with large, long and small nasal attributes.

33.03 Contrast hair and skin tone.

33.04 Select a frame such that the horizontal and vertical fit the patient's needs.

33.05 Select a frame such that the material and color fit the patient's needs.

33.06 Select a frame considering lens thickness and material.

33.07 Select a frame considering temple length.

33.08 Identify and record frame measurements and markings.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Vision Care Assisting 4  
**Course Number:** 8417232  
**Course Credit:** 1

**Course Description:**

This course is the second of two courses that prepare students to be Vision Care Assistants. Content includes, but is not limited to, creation and completion of eyewear, frame selection techniques, frame adjustment and alignment, patient needs in relation to eyewear, compiling a patient case history as well as assisting in eye disorder testing.

| CTE Standards and Benchmarks |                                                                                          |
|------------------------------|------------------------------------------------------------------------------------------|
| 34.0                         | Demonstrate knowledge of frame adjustment and alignment. The students will be able to:   |
| 34.01                        | Identify frame parts and materials.                                                      |
| 34.02                        | Demonstrate knowledge of frame measurement.                                              |
| 34.03                        | Demonstrate pupillary distance measurement.                                              |
| 34.04                        | Demonstrate frame selection considering customer and frame characteristics.              |
| 34.05                        | Select correct frame and bridge size.                                                    |
| 34.06                        | Verify prescription information.                                                         |
| 34.07                        | Perform frame adjustment and alignment.                                                  |
| 34.08                        | Perform frame repairs.                                                                   |
| 34.09                        | Identify occupational eyewear and special purpose frames.                                |
| 35.0                         | Demonstrate and perform basic skills relating to lenses. The students will be able to:   |
| 35.01                        | Use a manual lensometer.                                                                 |
| 35.02                        | Find the optical center of a sphere and a spherocylindrical lens in a manual lensometer. |
| 35.03                        | Convert a lens according to the principals of toric transposition.                       |
| 35.04                        | Duplicate a pair of prescription eyeglasses.                                             |

| CTE Standards and Benchmarks |                                                                                                                 |
|------------------------------|-----------------------------------------------------------------------------------------------------------------|
| 35.05                        | Calculate lens size.                                                                                            |
| 35.06                        | Calculate decentration.                                                                                         |
| 35.07                        | Demonstrate knowledge of lens tinting.                                                                          |
| 35.08                        | Check finished product against ANSI standards.                                                                  |
| 36.0                         | Edge, tint and inspect a pair of glass or plastic lenses and insert into a frame. The students will be able to: |
| 36.01                        | Spot the optical center on any given axis in a pair of single vision, bifocal, or progressive lenses.           |
| 36.02                        | Decenter and block any given lens avoiding unwanted prism.                                                      |
| 36.03                        | Edge any single vision or multifocal lens to mount in a plastic, metal, semi-rimless and rimless frame.         |
| 36.04                        | Apply a safety bevel.                                                                                           |
| 36.05                        | Tint and coat various lenses.                                                                                   |
| 36.06                        | Insert lens into a frame.                                                                                       |
| 36.07                        | Inspect completed spectacles to meet ANSI Standards.                                                            |
| 37.0                         | Dispense optical supplies. The students will be able to:                                                        |
| 37.01                        | Select frames according to prescription suitability, color, style and size.                                     |
| 37.02                        | Fill out Rx card completely and correctly.                                                                      |
| 37.03                        | Take proper patient measurements.                                                                               |
| 37.04                        | Dispense eyewear.                                                                                               |
| 37.05                        | Adjust frames to patient's face using standard alignment.                                                       |
| 37.06                        | Manage frame-boards.                                                                                            |
| 37.07                        | Dispense contact lenses.                                                                                        |
| 37.08                        | Describe types and care systems for contact lenses.                                                             |
| 37.09                        | Demonstrate insertion and removal techniques of contact lenses.                                                 |

| CTE Standards and Benchmarks |                                                                                                            |
|------------------------------|------------------------------------------------------------------------------------------------------------|
| 37.10                        | Use keratometer.                                                                                           |
| 37.11                        | Demonstrate knowledge of frame repair.                                                                     |
| 38.0                         | Demonstrate knowledge of effective business management operation techniques. The students will be able to: |
| 38.01                        | Develop a small business plan of operation                                                                 |
| 38.02                        | Develop an office procedure manual                                                                         |
| 38.03                        | Demonstrate knowledge of finances, operating expenses, and inventory                                       |
| 38.04                        | Demonstrate knowledge of marketing and office set up.                                                      |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

**This program requires a clinical component of approximately 50% the length of the courses following the health science core. A portion of the clinical experience can be achieved through simulation when appropriate.**

Clinical courses require contact hours in the clinical setting in order to complete the health science program. Hospitals, nursing homes, and other clinical facilities with clinical affiliation agreements limit the number of students that can rotate and/or be on site at one time. Most facilities, including hospitals and nursing homes, limit the number of students to 15. Due to these industry limitations, it is recommended that the student ratio be 15:1 (student/teacher) based on the clinical facilities that students attend to for clinical training.

### Florida Standards for English Language Development (ELD)

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org).

### Special Notes

Following the completion of the Health Science Core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization(s)~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as health unit clerks or health unit coordinators SOC 43-6013 (Medical Secretaries). Transcription of physicians' orders is an integral part of this course.

The content includes but is not limited to planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues, simulated practice with standard equipment and supplies used in a health care facility by the health unit coordinator. Clinical learning experiences are an integral part of this program.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

# Program Structure

This program is a planned sequence of instruction totaling four credits. The two credit Health Science Core (Health Science Anatomy & Physiology 8417100 and Health Science Foundations 8417110) is required as a prerequisite for all programs and options. Secondary students completing the two required courses will not have to repeat the core in postsecondary.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary program structure:

| Course Number                                                             | Course Title                                                                                                                               | Teacher Certification                                                                           | Length   | SOC Code | Level | Graduation Requirement |

~~Common~~Florida's ~~Career~~ ~~Technical Core — Career Ready Practices~~Readiness Skills for CTE Programs

~~Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.~~

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- ~~12. Work productively in teams while using cultural/global competence.~~

## **Standards**

After successfully completing this program, the student will be able to perform the following:

### **Health Science Core**

- 01.0 Analyze and interpret an overview of the human body, including organization and chemical process.
- 02.0 Apply correct medical terminology relating to body structure and function within a real-world application.
- 03.0 Evaluate cells and tissues microscopically and macroscopically and relate their specialized functions.
- 04.0 Analyze the integumentary system in relation to health and disease.
- 05.0 Analyze the skeletal system in relation to health and disease.
- 06.0 Analyze the muscular system in relation to health and disease.
- 07.0 Analyze the nervous system in relation to health and disease.
- 08.0 Analyze the endocrine system in relation to health and disease.
- 09.0 Analyze the cardiovascular/circulatory system in relation to health and disease.
- 10.0 Analyze the lymphatic and immune systems in relation to health and disease.
- 11.0 Analyze the respiratory system in relation to health and disease.
- 12.0 Analyze the digestive system in relation to health and disease.
- 13.0 Analyze the urinary system in relation to health and disease.
- 14.0 Analyze both the male and female reproductive systems in relation to health and disease.
- 15.0 Identify and explain factors relating to genetics and disease.
- 16.0 Evaluate and apply the principles of disease transmission and control to real-world scenarios.
- 17.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 18.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 19.0 Demonstrate legal and ethical responsibilities.
- 20.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 21.0 Recognize and practice safety and security procedures.
- 22.0 Recognize and respond to emergency situations.
- 23.0 Recognize and practice infection control procedures.
- 24.0 Demonstrate an understanding of information technology applications in healthcare.
- 25.0 Demonstrate employability skills.
- 26.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 27.0 Apply basic math and science skills.

### **Health Unit Coordinator 1**

- 28.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas.
- 29.0 Describe the importance of professional ethics and legal responsibilities for the health unit coordinator.
- 30.0 Interpret and apply medical terminology specific to health unit clerks.
- 31.0 Organize and maintain efficient work practices.
- 32.0 Perform clerical duties.
- 33.0 Perform patient admission, transfer and discharge procedures.

34.0 Prepare discharge/transfer chart for medical records/new unit.

**Health Unit Coordinator 2**

- 35.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance.
- 36.0 Read, interpret, process, coordinate and transcribe physicians' orders.
- 37.0 Demonstrate an understanding of the Health Unit Coordinators role in the nutritional care department.
- 38.0 Demonstrate an understanding of the Health Unit Coordinators role in processing diagnostic orders.
- 39.0 Explain the importance of employability skills and entrepreneurship skills for the health unit coordinator.

## Florida Department of Education Student Performance Standards

### Health Science Core

The first two courses in this program are referred to as the Health Science Core and consist of the courses Health Science Anatomy & Physiology (8417100) and Health Science Foundations (8417110). **To ensure consistency whenever these courses are offered, the standards and benchmarks for the health science core have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-secondary-2425.rtf>

<https://www.fldoe.org/file/20894/health-sci-core-secondary-2627.rtf>

The two credit core is required as a prerequisite for all secondary programs except for Practical Nursing and Pharmacy Technician. Secondary students completing the two required courses will not have to repeat the core in postsecondary. When the recommended sequence is followed, the structure allows students to complete at specified courses for employment or remain for advanced training or cross-training.

**Course Title:** Health Science Anatomy & Physiology  
**Course Number:** 8417100  
**Course Credit:** 1

### **Course Description:**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental quality, and safety procedures will be an integral part of this course. Students will interact with materials and primary sources of data or with secondary sources of data to observe and understand the natural world. Students will develop an understanding of measurement error, and develop the skills to aggregate, interpret, and present the data and resulting conclusions. Equipment and supplies will be provided to enhance these hands-on experiences for students. A minimum of 20% of classroom time will be dedicated to laboratory experiences.

This course is part of the secondary Health Core consisting of an overview of the human body, both structurally and functionally with emphasis on the pathophysiology and transmission of disease. Medical terminology is an integral part of the course.

The course Anatomy and Physiology (2000350) or Anatomy and Physiology Honors (2000360) may be substituted for the course Health Science Anatomy & Physiology (8417100) ~~and their standards can be found at [www.cpalms.org](http://www.cpalms.org).~~

The course Health Science Anatomy & Physiology (8417100) is designated as an equally rigorous (EQ) science credit.

**Course Title:** Health Science Foundations  
**Course Number:** 8417110  
**Course Credit:** 1

**Course Description:**

This course is part of the Secondary Health Core designed to provide the student with an in depth knowledge of the health care system and associated occupations. Emphasis is placed on communication and interpersonal skills, use of technology, ethics and the development of critical thinking and problem solving skills. Students may shadow professionals throughout the course.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Health Unit Coordinator 1  
**Course Number:** 8417281  
**Course Credit:** 1

**Course Description:**

This course prepares students to be employed as Health Unit Coordinators/Health Unit Clerks. Content includes, but is not limited to, medical terminology, organization and efficiency in the workplace, computer operations, as well as aiding in physicians' orders.

| CTE Standards and Benchmarks |                                                                                                                                                                              |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.0                         | Use oral and written communication skills in creating, expressing, and interpreting information and ideas. The student will be able to:                                      |
| 28.01                        | Apply basic speaking and active listening skills including reflection, restatement, and clarification techniques when using the telephone and answering patient call lights. |
| 28.02                        | Recognize the importance of courtesy and respect for patients and other health care workers and maintain good interpersonal relationships.                                   |
| 28.03                        | Adapt communication skills to varied levels of understanding and cultural orientation including diverse age, cultural, economic, ethnic and religious groups.                |
| 28.04                        | Apply active listening skills to obtain and clarify information.                                                                                                             |
| 28.05                        | Exhibit public relations skills that aid in achieving customer satisfaction including face to face interactions.                                                             |
| 28.06                        | Explain why implementation of the electronic medical record is requiring advanced communication skills for the health unit coordinator (HUC).                                |
| 28.07                        | Give instances that exemplify human needs, classify each according to Maslow's hierarchy of human needs, and give appropriate responses to meet the listed needs.            |
| 28.08                        | Define and explain the importance of culturally sensitive care in the health care setting.                                                                                   |
| 28.09                        | List five guidelines to follow that could improve intercultural communication.                                                                                               |
| 29.0                         | Describe the importance of professional ethics and legal responsibilities for the health unit coordinator. The student will be able to:                                      |
| 29.01                        | List seven patient rights as outlined in HIPAA.                                                                                                                              |
| 29.02                        | Identify seven patient identifiers (individually identifiable health information [IIHI]).                                                                                    |
| 29.03                        | Explain two purposes of the Health Information Technology for Economic and Clinical Health (HITECH) Act.                                                                     |

| CTE Standards and Benchmarks |                                                                                                                                                 |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| 29.04                        | Explain the responsibilities the health unit coordinator (HUC) has for HIPAA compliance.                                                        |
| 29.05                        | Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. |
| 30.0                         | Interpret and apply medical terminology specific to health unit clerks. The student will be able to:                                            |
| 30.01                        | Identify components of medical terms.                                                                                                           |
| 30.02                        | Spell, pronounce and define medical terms, as related to health unit coordinator.                                                               |
| 30.03                        | Relate medical terminology to the body systems.                                                                                                 |
| 30.04                        | Identify and define standard abbreviations and medical symbols.                                                                                 |
| 30.05                        | Identify apothecary and metric systems.                                                                                                         |
| 31.0                         | Organize and maintain efficient work practices. The student will be able to:                                                                    |
| 31.01                        | Arrange daily activities by priority.                                                                                                           |
| 31.02                        | Prepare and post unit information lists.                                                                                                        |
| 31.03                        | Maintain a supply of assembled medical/surgical admission packets when using paper charts or standard forms.                                    |
| 31.04                        | Distribute forms and articles from in-basket.                                                                                                   |
| 31.05                        | Identify, store and maintain unit equipment/supplies in a neat and orderly manner.                                                              |
| 31.06                        | Sanitize nursing station equipment.                                                                                                             |
| 31.07                        | Maintain par levels of supplies as required by the nursing unit.                                                                                |
| 31.08                        | Greet all visitors to the nursing unit and offer assistance as necessary.                                                                       |
| 32.0                         | Perform clerical duties. The student will be able to:                                                                                           |
| 32.01                        | Demonstrate knowledge of common software applications relevant to the role of the health unit coordinator.                                      |
| 32.02                        | Prepare, label, and add forms to chart.                                                                                                         |
| 32.03                        | Record non-clinical admission data on unit records.                                                                                             |
| 32.04                        | Obtain previous admission records/X-rays.                                                                                                       |

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                                                                                      |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 32.05                        | Post all reports on charts.                                                                                                                                                                                                                                                                          |
| 32.06                        | File and retrieve assorted forms.                                                                                                                                                                                                                                                                    |
| 32.07                        | Maintain patient tracking for patients leaving the unit (electronic or paper log).                                                                                                                                                                                                                   |
| 32.08                        | Conduct “downtime” procedure when electronic medical record program is unavailable due to scheduled downtime or unexpected downtime.                                                                                                                                                                 |
| 33.0                         | Perform patient admission, transfer, and discharge procedures. The student will be able to:                                                                                                                                                                                                          |
| 33.01                        | List four types of admissions and three types of patients.                                                                                                                                                                                                                                           |
| 33.02                        | List the common components of a set of admission orders and common health unit coordinator (HUC) tasks regarding the patient’s admission when paper charts are used.                                                                                                                                 |
| 33.03                        | Describe how a surgical patient’s admission orders differ from a medical patient’s admission orders and discuss three options for the way in which patient surgeries are performed.                                                                                                                  |
| 33.04                        | List the components that may be included in a set of pre/postoperative orders.                                                                                                                                                                                                                       |
| 33.05                        | Explain why it is important for the HUC to monitor the patient’s electronic medical record (EMR) consistently.                                                                                                                                                                                       |
| 33.06                        | Explain the purpose and the benefits of the electronic patient status tracking board for the patient’s family and/or friends.                                                                                                                                                                        |
| 33.07                        | Explain what the HUC’s responsibility would be regarding all medical records, including patient signed consent forms, handwritten progress notes, and reports faxed or sent from other facilities or brought in by a patient when the EMR with computer physician order entry (CPOE) is implemented. |
| 34.0                         | Prepare discharge/transfer chart for medical records/new unit. The student will be able to:                                                                                                                                                                                                          |
| 34.01                        | List the different types of discharges and explain the importance of communicating pending discharge information and bed availability to the admitting department or bed placement in a timely manner.                                                                                               |
| 34.02                        | List the tasks that may be required to complete a routine discharge.                                                                                                                                                                                                                                 |
| 34.03                        | List the additional tasks that may be required when a patient is discharged to another facility, discharged home with assistance, or when a patient dies (postmortem).                                                                                                                               |
| 34.04                        | Describe the tasks necessary to prepare the discharged patient’s medical record for the health information management services (HIMS) department when paper charts are used.                                                                                                                         |
| 34.05                        | List the tasks that are performed when a patient is transferred from one unit to another.                                                                                                                                                                                                            |
| 34.06                        | List the tasks performed by the HUC when a patient is transferred from one room to another room on the same unit.                                                                                                                                                                                    |
| 34.07                        | Discuss the importance of reading the entire set of discharge or transfer orders prior to the patient being discharged or transferred.                                                                                                                                                               |

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Health Unit Coordinator 2  
**Course Number:** 8417282  
**Course Credit:** 1

**Course Description:**

This course prepares students to be employed as Health Unit Coordinators/Health Unit Clerks. Content includes, but is not limited to, medical terminology, organization and efficiency in the workplace, computer operations, as well as aiding in Physicians' orders.

| CTE Standards and Benchmarks |                                                                                                                                                                                                                |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 35.0                         | Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. The student will be able to: |
| 35.01                        | Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments.                                                                                                   |
| 35.02                        | Participate in emergency or disaster plan, CPR, and first aid.                                                                                                                                                 |
| 35.03                        | Identify the location of emergency equipment on the nursing unit.                                                                                                                                              |
| 35.04                        | Recognize and follow all appropriate emergent code protocols.                                                                                                                                                  |
| 35.05                        | Comply with regulatory agency guidelines.                                                                                                                                                                      |
| 36.0                         | Read, interpret, process, coordinate and transcribe physicians' orders. The student will be able to:                                                                                                           |
| 36.01                        | Identify all types of physician's orders.                                                                                                                                                                      |
| 36.02                        | Prioritize orders for transcription.                                                                                                                                                                           |
| 36.03                        | Prepare and route requisitions manually or via computer.                                                                                                                                                       |
| 36.04                        | Arrange for ordered consultations.                                                                                                                                                                             |
| 36.05                        | Schedule patients' treatments or therapy with other hospital departments.                                                                                                                                      |
| 37.0                         | Demonstrate an understanding of the health unit coordinators role in the nutritional care department. The student will be able to:                                                                             |
| 37.01                        | Explain the importance of communicating diet changes and patient food allergies to the nutritional care department.                                                                                            |
| 37.02                        | List the groups of diets including nutritional supplements that may be ordered for the hospitalized patient.                                                                                                   |

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                                                       |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 37.03                        | List consistency changes that can be made to a standard diet and explain what is included in each.                                                                                                                                                                    |
| 37.04                        | List diet options that may be selected for the patient who has started on clear liquids and has an order for diet as tolerated and explain how the selection would be made.                                                                                           |
| 37.05                        | Identify therapeutic diets that the patient's doctor may order.                                                                                                                                                                                                       |
| 37.06                        | Identify diets that may be requested by patients and assist them in ordering appropriate meals.                                                                                                                                                                       |
| 37.07                        | List the items an HUC may need to order when transcribing an order for tube feeding.                                                                                                                                                                                  |
| 37.08                        | Explain the purpose of the doctors' orders force fluids, limit fluids, and calorie count.                                                                                                                                                                             |
| 37.09                        | Discuss the importance of sending all doctors' orders regarding a patient's diet or modifications to a patient's diet to the nutritional care department.                                                                                                             |
| 37.10                        | Discuss the importance of sending total parenteral nutrition (TPN) orders to the pharmacy in a timely manner via fax, pneumatic, or dumb waiter system.                                                                                                               |
| 38.0                         | Demonstrate an understanding of the health unit coordinators role in processing diagnostic orders. The student will be able to:                                                                                                                                       |
| 38.01                        | List the major divisions of the clinical laboratory and their functions.                                                                                                                                                                                              |
| 38.02                        | List six invasive procedures that would require a consent form signed by the patient.                                                                                                                                                                                 |
| 38.03                        | Describe the health unit coordinator's responsibilities in ordering laboratory tests and sending specimens to the laboratory when EMR is used and when paper charts are used and describe how routine, stat, daily, and timed studies would be ordered and performed. |
| 38.04                        | Explain how the health unit coordinator's responsibilities regarding diagnostic imaging orders differ with the implementation of the electronic medical record and computer physician order entry versus use of the paper chart.                                      |
| 38.05                        | List the required patient information needed when ordering procedures to be performed by the diagnostic imaging department.                                                                                                                                           |
| 38.06                        | Explain when a patient would be required to sign an informed consent before a diagnostic imaging procedure.                                                                                                                                                           |
| 38.07                        | Discuss sequencing or scheduling of multiple diagnostic imaging procedures ordered for the same patient.                                                                                                                                                              |
| 38.08                        | Demonstrate an understanding of other diagnostic studies.                                                                                                                                                                                                             |
| 39.0                         | Explain the importance of employability skills and entrepreneurship skills for the health unit coordinator. The student will be able to:                                                                                                                              |
| 39.01                        | Discuss benefits and responsibilities of the HUC as a member of a professional organization such as the National Association of Health Unit Coordinators.                                                                                                             |
| 39.02                        | List five benefits of becoming a certified HUC.                                                                                                                                                                                                                       |

| CTE Standards and Benchmarks |                                                                                                                 |
|------------------------------|-----------------------------------------------------------------------------------------------------------------|
| 39.03                        | List three positions in which the HUC may be cross-trained.                                                     |
| 39.04                        | Compose written communication including emails using correct spelling, grammar, formatting and confidentiality. |
| 39.05                        | Observe professional e-mail practices and etiquette.                                                            |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

**This program requires a clinical component of approximately 50% the length of the courses following the health science core. A portion of the clinical experience can be achieved through simulation when appropriate.**

Clinical courses require contact hours in the clinical setting in order to complete the health science program. Hospitals, nursing homes, and other clinical facilities with clinical affiliation agreements limit the number of students that can rotate and/or be on site at one time. Most facilities, including hospitals and nursing homes, limit the number of students to 15. Due to these industry limitations, it is recommended that the student ratio be 15:1 (student/teacher) based on the clinical facilities that students attend to for clinical training.

### Florida Standards for English Language Development (ELD)

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org).

### Special Notes

Following the completion of Health Science Core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

It is recommended that completers of this program take the National Association of Health Unit Coordinators Certification examination which is offered annually.

### **Career and Technical Student Organization (CTSO)**

~~Florida HOSA: Future Health Professionals is the~~CTSOs are co-curricular career and technical student ~~organization(s)~~organizations providing leadership training and reinforcing specific career and technical skills. - Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. -Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

Program Title: Pharmacy Technician  
Program Type: Career Preparatory  
Career Cluster: Health Science

| Secondary – Career Preparatory |                                                                                                                                                                                                                                                                                                                                                                                     |

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as pharmacy technicians SOC Code 29-2052. [This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry: planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues, and health, safety, and environmental issues.](#)

The content includes but is not limited to metric system, medical terminology, medicinal drugs, pharmaceutical compounding, USP 795 standards, sterile techniques, USP 797 and UPS 800 standards, maintenance of inventory, IV preparation, receiving and handling of hazardous materials,

preparing purchase orders, receiving and checking supplies purchased, printing labels, typing prescription labels, delivering medications, pricing prescription drug orders and supplies, prepackaging unit dose packages, patient record systems, control records, data processing automation in pharmacy, computer application, employability skills, leadership and human relations skills, health and safety, including CPR.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction totaling seven credits.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary program structure:

| Course Number | Course Title          | Teacher Certification | Length   | SOC Code | Level | Graduation Requirement |
|---------------|-----------------------|-----------------------|----------|----------|-------|------------------------|
| 8418210       | Pharmacy Technician 1 | PHARMACY 7 G          | 1 credit | 31-9099  | 3     | CT                     |
| 8418220       | Pharmacy Technician 2 |                       | 1 credit | 29-2052  | 3     | CT                     |

(Graduation Requirement Codes: CT= Career & Technical Education, EQ= Equally Rigorous Science, EC= Economics, MA= Mathematics, PL= Personal Financial Literacy)

### **Regulated Programs**

**This program is regulated by the Department of Health, Florida Board of Pharmacy.**

This program must be approved by the Board of Pharmacy. Program completers who wish to work as Pharmacy Technicians in the State of Florida must register with the Board of Pharmacy (465.014, F.S.).

Common Florida's Career Technical Core—Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- ~~12. Work productively in teams while using cultural/global competence.~~

| Employability Skills |                                               |
|----------------------|-----------------------------------------------|
| 01.0                 | Apply academic skills to workplace scenarios. |
| 01.01                | Use reading skills.                           |
| 01.02                | Use writing skills.                           |
| 01.03                | Use mathematical strategies and procedures.   |
| 01.04                | Use scientific principles and procedures.     |
| 02.0                 | Design a solution to an industry problem.     |

|                                                                                                                       |

- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Practice ~~personal relation~~ professional pharmacy relational skills.
- ~~13.0 Identify pharmaceutical abbreviations and terminology as related to Community Pharmacy Practice.~~
- ~~14.0~~ 13.0 Identify medical and legal considerations in various pharmacy settings.
- ~~15.0~~ 14.0 Perform clerical duties as related to Pharmacy Practice.
- ~~16.0~~ 15.0 Demonstrate knowledge of ~~basic pharmaceutical chemistry and drug classification.~~ medication safety and prevention of medication errors.
- ~~17.0~~ 16.0 Demonstrate knowledge of inventory management.
- ~~18.0~~ 17.0 Initiate measurement and calculating techniques as ~~it relates~~ they relate to United States Pharmacopeia (USP) 795 (non-sterile) compounding in pharmacy practice.
- ~~19.0~~ 18.0 Demonstrate ~~a~~ basic knowledge and skills in areas of ~~science~~ anatomy/ physiology, pharmacology, and drug classification relevant to pharmacy technicians ~~including anatomy/physiology and pharmacology.~~
- ~~20.0~~ 19.0 Prepare and deliver medications.
- ~~21.0~~ 20.0 Repackage unit-dose medications.
- ~~22.0~~ 21.0 Prepare United States Pharmacopeia (USP) 797 and USP 800 sterile products.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Pharmacy Technician 1  
**Course Number:** 8418210  
**Course Credit:** 1

**Course Description:**

**Health Science Core:** -The Health Science Core is a core of basic knowledge necessary for any health occupations career.- This health core is encompassed inside of this course. Students who complete this course do not have to repeat the Health Science Core at any level. Students must have completed or be concurrently enrolled in the course to move on in this program.

Emphasis is placed on communication and interpersonal skills, use of technology, ethics, and the development of critical thinking and problem-solving skills. Students may shadow professionals throughout the course.

| CTE Standards and Benchmarks |                                                                                                                                              |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                         | Demonstrate knowledge of the health care delivery system and health occupations. The student will be able to:                                |
| 01.01                        | Identify the basic components of the health care delivery system, including public, private, government, and non-profit.                     |
| 01.02                        | Identify common methods of payment for healthcare services.                                                                                  |
| 01.03                        | Describe the various types of healthcare providers and the range of services available, including resources to victims of domestic violence. |
| 01.04                        | Describe the composition and functions of a healthcare team.                                                                                 |
| 01.05                        | Identify the general roles and responsibilities of the individual members of the healthcare team.                                            |
| 01.06                        | Identify the roles and responsibilities of the consumer within the healthcare delivery system.                                               |
| 01.07                        | Identify characteristics of effective teams.                                                                                                 |
| 01.08                        | Recognize methods for building positive team relationships.                                                                                  |
| 01.09                        | Discuss attributes and attitudes of an effective leader.                                                                                     |
| 01.10                        | Recognize factors and situations that may lead to conflict.                                                                                  |
| 01.11                        | Recognize effective techniques for managing team conflict.                                                                                   |
| 01.12                        | Describe factors that influence the current delivery system of healthcare.                                                                   |

**CTE Standards and Benchmarks**

|       |                                                                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.13 | Explain the impact of emerging issues, including technology, epidemiology, bioethics, and socioeconomics on healthcare delivery systems.                        |
| 02.0  | Demonstrate the ability to communicate and use interpersonal skills effectively. The student will be able to:                                                   |
| 02.01 | Develop basic speaking and active listening skills.                                                                                                             |
| 02.02 | Develop basic observational skills and related documentation strategies in written and oral form.                                                               |
| 02.03 | Identify characteristics of successful and unsuccessful communication, including communication styles and barriers.                                             |
| 02.04 | Identify characteristics of verbal and non-verbal cues.                                                                                                         |
| 02.05 | Use appropriate medical terminology and abbreviations.                                                                                                          |
| 02.06 | Discuss the importance of courtesy and respect for patients and other healthcare workers, and maintain good interpersonal relationships.                        |
| 02.07 | Explain the importance of patient/client education regarding healthcare.                                                                                        |
| 02.08 | Adapt communication skills to varied levels of understanding and cultural orientation, including diverse age, cultural, economic, ethnic, and religious groups. |
| 02.09 | Discuss elements of communication using a sender-receiver model.                                                                                                |
| 02.10 | Distinguish between and report subjective and objective information.                                                                                            |
| 02.11 | Report relevant information in order of occurrence.                                                                                                             |
| 03.0  | Demonstrate legal and ethical responsibilities. The student will be able to:                                                                                    |
| 03.01 | Explain the legal framework of the healthcare occupations, including scope of practice legislation.                                                             |
| 03.02 | Explain practices that could result in malpractice, liability, negligence, abandonment, false imprisonment, and fraud.                                          |
| 03.03 | Explain procedures for accurate documentation and record keeping.                                                                                               |
| 03.04 | Explain the importance of healthcare facility policy and procedures for employees.                                                                              |
| 03.05 | Explain the "Patient's Bill of Rights".                                                                                                                         |
| 03.06 | Identify and explain standards of the Health Insurance Portability and Accountability Act (HIPAA).                                                              |
| 03.07 | Describe advance directives.                                                                                                                                    |

**CTE Standards and Benchmarks**

03.08 Describe informed consent.

03.09 Explain the laws governing harassment, labor, and employment.

03.10 Differentiate between legal and ethical issues in healthcare.

03.11 Describe a code of ethics consistent with the healthcare occupation.

03.12 Identify and compare personal, professional, and organizational ethics.

03.13 Discuss the limits of authority and responsibility of health care workers, including legislated scope of practice

03.14 Recognize and report illegal and/or unethical practices of healthcare workers.

03.15 Recognize and report abuse, including domestic violence, neglect, and suspected human trafficking.

03.16 Distinguish between the five schedules of controlled substances.

04.0 Demonstrate an understanding of and apply wellness and disease concepts. The student will be able to:

04.01 Describe strategies for the prevention of diseases, including health screenings and examinations.

04.02 Identify personal health practices and environmental factors which affect optimal function of each of the major body systems.

04.03 Identify psychological reactions to illness, including defense mechanisms.

04.04 Identify complementary and alternative health practices.

04.05 Discuss the adverse effects of the use of alcohol, tobacco, and both legal and illegal drugs on the human body and apply safety practices related to these and other high-risk behaviors.

04.06 Explain the basic concepts of positive self-image, wellness, and stress.

04.07 Develop a wellness and stress control plan that can be used in personal and professional life.

04.08 Explore and utilize the U.S. Department of Agriculture's nutrition resources.

04.09 Discuss the steps in the grief process.

05.0 Recognize and practice safety and security procedures. The student will be able to:

05.01 Recognize safe and unsafe working conditions and report safety hazards.

05.02 Explain why understanding how to safely use medical equipment is important.

**CTE Standards and Benchmarks**

|       |                                                                                                                                                                                                             |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 05.03 | Explain and apply the theory of root-cause analysis                                                                                                                                                         |
| 05.04 | Identify and describe methods in medical error reduction and prevention in the various healthcare settings.                                                                                                 |
| 05.05 | Identify and practice security procedures for medical supplies and equipment.                                                                                                                               |
| 05.06 | Explain personal safety procedures based on <del>Occupations</del> Occupational Safety and Health Administration (OSHA) and Centers for Disease Control (CDC) regulations (including standard precautions). |
| 05.07 | Recognize Materials Data Safety Sheets (MSDS) and comply with safety signs, symbols, and labels.                                                                                                            |
| 05.08 | Explain proper body mechanics and ergonomics.                                                                                                                                                               |
| 05.09 | Explain the procedure for properly identifying patients.                                                                                                                                                    |
| 05.10 | Explain procedures for the safe transport and transfer of patients.                                                                                                                                         |
| 05.11 | Recognize fire, safety, disaster, and evacuations procedures.                                                                                                                                               |
| 05.12 | Discuss The Joint Commission patient safety goals ( <a href="http://www.jointcommission.org">www.jointcommission.org</a> ) and any other applicable accrediting/regulatory agency guidelines.               |
| 06.0  | Recognize and respond to emergency situations. The student will be able to:                                                                                                                                 |
| 06.01 | Monitor and record vital signs accurately.                                                                                                                                                                  |
| 06.02 | Describe legal parameters relating to the administration of emergency care.                                                                                                                                 |
| 06.03 | Obtain and maintain training for certification on cardiopulmonary resuscitation (CPR), automated external defibrillator (AED), foreign body airway obstruction (FBAO), and first aid.                       |
| 06.04 | Recognize adverse drug-related emergencies and take appropriate first aid action.                                                                                                                           |
| 07.0  | Recognize and practice infection control procedures. The student will be able to:                                                                                                                           |
| 07.01 | Define principles of infection control, including standard and transmission-based precautions.                                                                                                              |
| 07.02 | Explain medical asepsis and practice procedures such as hand-washing and isolation.                                                                                                                         |
| 07.03 | Explain surgical asepsis.                                                                                                                                                                                   |
| 07.04 | Describe how to dispose <del>correctly</del> of biohazardous materials according to appropriate government guidelines, such as OSHA.                                                                        |
| 08.0  | Demonstrate an understanding of information technology applications in healthcare. The student will be able to:                                                                                             |

**CTE Standards and Benchmarks**

|       |                                                                                                                                                                                                      |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 08.01 | Describe technology applications in healthcare.                                                                                                                                                      |
| 08.02 | Define terms and demonstrate basic computer skills.                                                                                                                                                  |
| 08.03 | Recognize technology applications in healthcare.                                                                                                                                                     |
| 08.04 | Interpret information from electronic medical documents.                                                                                                                                             |
| 08.05 | Identify methods of communication to access and distribute data, such as fax, e-mail, and internet.                                                                                                  |
| 09.0  | Demonstrate employability skills. The student will be able to:                                                                                                                                       |
| 09.01 | Identify personal traits or attitudes desirable in a member of the healthcare team.                                                                                                                  |
| 09.02 | Exemplify basic professional standards of healthcare workers as they apply to hygiene, dress, language, confidentiality, and behavior (i.e., telephone etiquette, courtesy, and self-introductions). |
| 09.03 | Identify documents that may be required when applying for a job.                                                                                                                                     |
| 09.04 | Write an appropriate resume.                                                                                                                                                                         |
| 09.05 | Conduct a job search.                                                                                                                                                                                |
| 09.06 | Complete a job application form correctly.                                                                                                                                                           |
| 09.07 | Examine levels of education, credentialing requirements, including licensure and certification, employment opportunities, workplace environments, and career growth potential.                       |
| 09.08 | Identify acceptable work habits.                                                                                                                                                                     |
| 09.09 | Recognize appropriate affective/professional behavior.                                                                                                                                               |
| 09.10 | Compare careers within the health science career pathways (diagnostic services, therapeutic services, health informatics, support services, or biotechnology research and development).              |
| 10.0  | Demonstrate knowledge of blood-borne diseases. The student will be able to:                                                                                                                          |
| 10.01 | Recognize emerging diseases and disorders.                                                                                                                                                           |
| 10.02 | Distinguish between fact and fallacy about the transmission and treatment of diseases caused by blood-borne pathogens.                                                                               |
| 10.03 | Identify community resources and services available to the individuals with diseases caused by blood-borne pathogens.                                                                                |
| 10.04 | Identify "at-risk" behaviors which promote the spread of diseases caused by blood-borne pathogens and the public education necessary to combat the spread of these diseases.                         |

**CTE Standards and Benchmarks**

10.05 Explain infection control techniques designed to prevent the spread of diseases caused by blood-borne pathogens to the care of all patients following the Centers for Disease Control (CDC) guidelines.

10.06 Explain the legal aspects of HIV/AIDS, including testing.

11.0 Apply basic math and science skills. The student will be able to:

11.01 Draw, read, and report on graphs, charts, and tables.

11.02 Measure time, temperature, distance, capacity, and mass/weight.

11.03 Make, use, and convert using both traditional and metric units.

11.04 Make estimations and approximations and judge the reasonableness of the result.

11.05 Convert from regular to 24-hour time.

11.06 Demonstrate ability to evaluate and draw conclusions.

11.07 Organize and communicate the results obtained by observation and experimentation.

11.08 Ask appropriate scientific questions and recognize what is involved in experimental approaches to the solution of such questions.

11.09 Calculate ratios.

~~12.0—Practice personal relation skills. The student will be able to:~~

Florida Department of Education  
Student Performance Standards

Course Title:        Pharmacy Technician 2

Course Number:    8418220

Course Credit:     1

Course Description:

This course builds on the knowledge and skill obtained in Pharmacy Technician 1. Students will learn integral administrative procedures, prevention of medication errors, and medical and legal considerations required of pharmacy technicians.

| <u>CTE Standards and Benchmarks</u> |                                                                                                                                                                                                                                                                  |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.0                                | <u>Practice professional pharmacy relational skills. The student will be able to:</u>                                                                                                                                                                            |
| 12.01                               | Explore the meaning, organizational flow, and duties of pharmacy personnel.                                                                                                                                                                                      |
| 12.02                               | Identify pharmacy organizations and their role in the profession to include student membership opportunities.                                                                                                                                                    |
| 12.03                               | Identify the current trends and perspectives in the pharmacy practice.                                                                                                                                                                                           |
| 12.04                               | Describe how team building can facilitate change within the pharmacy working environment.                                                                                                                                                                        |
| 12.05                               | Understand the importance of good interpersonal skills/soft skills in various pharmacy settings.                                                                                                                                                                 |
| 12.06                               | Explain ethical conduct in job-related activities.                                                                                                                                                                                                               |
| 12.07                               | Identify State of Florida requirements for obtaining and <del>maintaining</del> <u>maintaining</u> pharmacy technician registration, as well as continuing education requirements for renewal.                                                                   |
| 12.08                               | Explore the importance of national certification and the continuing education requirements for renewal.                                                                                                                                                          |
| 13.0                                | Identify <del>pharmaceutical abbreviations</del> <u>medical</u> and <del>terminology as related to community</del> <u>legal considerations in various</u> pharmacy <del>practice settings.</del> The student will be able to:                                    |
| 13.01                               | <del>Use pharmaceutical medical terminology.</del> <u>Articulate the significance of current national and Florida law, medical legal concepts, and administrative rules as they relate to the scope of practice for the pharmacy technician.</u>                 |
| 13.02                               | <del>Identify the major symbols and abbreviations used on prescriptions and state the meaning.</del> <u>Demonstrate an understanding of current vaccines and their guidelines.</u>                                                                               |
| 13.03                               | <del>Describe safety strategies used to prevent medication errors due to pharmaceutical abbreviations and terminology.</del> <u>Convey an understanding of patient counseling requirements pertaining to OBRA-90 versus Medication Therapy Management (MTM).</u> |

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Pharmacy Technician 2

**Course Number:** 8418220

**Course Credit:** 1

**Course Description:**

This course builds on the knowledge and skill obtained in Pharmacy Technician 1, while also exploring the medical and legal considerations in pharmaceutical careers. Students will learn integral administrative procedures required of pharmacy technicians while applying knowledge of basic pharmaceutical chemistry and drug classification.

| <b>CTE Standards and Benchmarks</b> |                                                                                                                                                                                                         |

| 14.03                               | Convey an understanding of medical legal concepts as they relate to the scope of practice for the pharmacy technician.                                                                                  |
| 14.0413.04                          | Explain the legal requirements for accurate pharmacy documentation and recordkeeping.                                                                                                                   |
| 14.0513.05                          | Demonstrate an understanding of HIPAA in pharmacy practice pertaining to the ethical and legal considerations.                                                                                          |
| 14.06                               | Convey an understanding of the patient's Bill of Rights as it relates to pharmacy practice.                                                                                                             |
| 14.0713.06                          | Convey an understanding of pertinent laws governing pharmacy practice, including but not limited to prescriptions, drug diversion, and use of E-FORCSE PDMP, <u>requirements.</u>                       |
| 14.0813.07                          | Differentiate between controlled substance schedules (CI-CV) and their applicable regulations.                                                                                                          |
| 14.0913.08                          | Convey an understanding of the Florida Right to Know Act with respect to P-listed drugs in addition to hazardous materials, the utilization of safety data sheets, and hazardous communication symbols. |
| 14.10                               | Identify and explain appropriate patient safety goals by applicable accrediting and regulatory organizations.                                                                                           |
| 14.1113.09                          | Understand and explain activities that may be performed by pharmacy technicians and those that must be performed by licensed pharmacists, <u>including final check.</u>                                 |
| 14.1213.10                          | Explain the importance of technology and its current use in various pharmacy settings.                                                                                                                  |

|                                                                                                                                                                                                                |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>13.11 Utilize emerging technologies such as AI to cross-reference reports with dispense/administration history to address unaccounted medications.</u>                                                      |
| <del>15.0</del> <u>14.0</u> Perform clerical duties as related to Pharmacy Practice. -The student will be able to:                                                                                             |
| <u>14.01 Utilize pharmaceutical medical terminology.</u>                                                                                                                                                       |
| <u>14.02 Identify the major symbols and abbreviations used on prescriptions and state the meaning.</u>                                                                                                         |
| <u>14.03 Utilize pharmacy reference manuals or websites.</u>                                                                                                                                                   |
| <del>15.01</del> <u>14.04</u> Demonstrate retail pharmacy dispensing processes.                                                                                                                                |
| <del>15.02 Identify potential errors that may result in Quality Related Events and explain specific ways they can be prevented.</del>                                                                          |
| <del>15.03</del> <u>14.05</u> Utilize pharmacy software in processing pharmacy prescription data.                                                                                                              |
| <del>15.04</del> <u>14.06</u> Identify and discuss applications of E-Prescribing and facsimile.                                                                                                                |
| <del>15.05</del> <u>14.07</u> Utilize and apply interactive communication skills while gathering accurate information from patients and <del>from</del> other healthcare professionals                         |
| <del>15.06 Identify communication modalities that can result in the transmission of inaccurate information, and explain specific ways to make improvements</del>                                               |
| <del>15.07</del> <u>14.08</u> Create, complete, and maintain patient profiles including third-party billing information.                                                                                       |
| <del>15.08</del> <u>14.09</u> Understand the processes of <u>PBMs and</u> third-party billing, resolving rejections, and obtaining prior authorizations.                                                       |
| <del>15.09</del> <u>14.10</u> Demonstrate professional communication skills within the scope of practice for the pharmacy technician.                                                                          |
| <del>15.10</del> <u>14.11</u> Demonstrate <del>the</del> knowledge of systems used in maintaining pharmacy records.                                                                                            |
| <u>15.0 Demonstrate knowledge of medication safety and prevention of medication errors. The student will be able to:</u>                                                                                       |
| <u>15.01 Identify communication modalities that can result in the transmission of inaccurate information and explain specific ways to make improvements.</u>                                                   |
| <u>15.02 Convey an understanding of the patient's Bill of Rights for medication administration as it relates to pharmacy practice.</u>                                                                         |
| <u>15.03 Identify and explain appropriate patient safety goals by applicable accrediting and regulatory organizations.</u>                                                                                     |
| <u>15.04 Identify potential errors that may result in quality-related events (QRE) and explain specific ways they can be prevented.</u>                                                                        |
| <u>15.05 Describe safety strategies used to prevent medication errors due to pharmaceutical abbreviations and terminology.</u>                                                                                 |
| <del>15.11</del> <u>15.06</u> Summarize, evaluate, and describe the <u>technician's</u> role <del>of the technician</del> in quality assurance activities <del>as</del> related to various pharmacy practices. |

~~16.0 Demonstrate knowledge of basic pharmaceutical chemistry and drug classification. The student will be able to:~~

~~16.01 Define the major classifications of pharmaceuticals.~~

~~16.02 Identify at least one official compendia of standards for quality and purity of drug monograph.~~

~~16.03 Utilize pharmacy reference manuals or web sites.~~

~~16.04 Demonstrate knowledge of trade and generic name equivalents.~~

## Florida Department of Education Student Performance Standards

**Course Title:** Pharmacy Technician 3  
**Course Number:** 8418230  
**Course Credit:** 1

### Course Description:

This course builds on the knowledge and skills obtained in Pharmacy Technician 1 and 2. This course focuses on the importance of quality control when handling controlled substances and essential compounding techniques.

| CTE Standards and Benchmarks         |                                                                                                                                                                                                                                                                            |

| <del>17.04</del> 16.06               | Maintain stock inventory, communicate shortages, and seek solutions to maintain continuity of patient care.                                                                                                                                                                |
| <del>17.05</del> 16.07               | Understand the process of how to create electronic purchase orders.                                                                                                                                                                                                        |
| <del>17.06</del> 16.08               | Accurately perform the process of purchasing, receiving, special <del>handling</del> handling, storing, distributing, and disposing of pharmaceutical supplies.                                                                                                            |
| <del>17.07</del> 16.09               | Convey an understanding of <del>Investigational Drugs, Risk Evaluation</del> recall management and <del>Mitigation Strategies (REMS), off label indications,</del> know the differences between types of recalls and <del>emerging drug therapy</del> how to address them. |
| <del>17.08</del> 16.10               | Convey an understanding of the inventory control process implemented by Title II of the Drug Quality and Security Act.                                                                                                                                                     |
| <del>18.0</del> 17.0                 | Initiate measurement and calculating techniques as <del>it relates</del> they relate to United States Pharmacopeia (USP) 795 (non-sterile) compounding in pharmacy practice. -The student will be able to:                                                                 |
| <del>18.04</del> 17.01               | Convey an understanding of United States Pharmacopeia (USP) 795 standards.                                                                                                                                                                                                 |
| <del>18.02</del> 17.02               | Convert measurements within the apothecary, avoirdupois, household, and metric systems.                                                                                                                                                                                    |
| <del>18.03</del> 17.03               | Perform common pharmaceutical calculations.                                                                                                                                                                                                                                |
| <del>18.04</del> 17.04               | Identify and utilize common pharmaceutical weighing equipment.                                                                                                                                                                                                             |

**CTE Standards and Benchmarks**

~~18.05~~17.05 Identify and utilize common pharmaceutical volume measurement equipment.

~~18.06~~17.06 Accurately demonstrate the technique of preparing common non-sterile pharmaceutical compounds.

~~18.07~~17.07 Summarize, evaluate, and describe the technician's role ~~of the technician~~ in quality assurance activities as related to the preparation of non-sterile products.

## Florida Department of Education Student Performance Standards

**Course Title:** Pharmacy Technician 4  
**Course Number:** 8418240  
**Course Credit:** 1

### Course Description:

This course builds on the knowledge and skills obtained in Pharmacy Technician 1, 2, and 3. This course focuses on ~~pharmaceutical chemistry~~anatomy and ~~its relationship with human~~ physiology. ~~Students will explore vital theories to better ensure patient safety and satisfaction~~the application of pharmacology for disease management.

### CTE Standards and Benchmarks

|                               |                                                                                                                                                                                                                                                                                                                                        |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>19.0</del> <u>18.0</u>   | Demonstrate <del>a</del> basic knowledge and skills in areas of <del>science</del> <u>anatomy/ physiology, pharmacology, and drug classification</u> relevant to pharmacy technicians <del>including anatomy/physiology and pharmacology.</del> The student will be able to:                                                           |
| <del>19.04</del> <u>18.01</u> | <del>Describe electrolyte balances and imbalances.</del> <u>Evaluate and apply anatomical terminology to describe the location of parts or areas of the body and related disease processes.</u>                                                                                                                                        |

|                               | <u>18.03 Demonstrate knowledge of trade and generic name equivalents.</u>                                                                                                                                                                                                                                                              |
| <del>19.02</del> <u>18.04</u> | <del>Relate</del> <u>Evaluate</u> the <del>general sources, classes, indications</del> pharmacy technician's understanding of pharmacology, including <u>drug classifications</u> , mechanisms of <del>actions, routes of administration,</del> <u>action, common</u> side effects, and <del>various types of drug</del> interactions. |
|                               | <u>18.05 Identify at least one official compendium of standards for quality and purity of drug monographs.</u>                                                                                                                                                                                                                         |
|                               | <u>18.06 Convey an understanding of Investigational Drugs, Risk Evaluation and Mitigation Strategies (REMS), off-label indications, and emerging drug therapy.</u>                                                                                                                                                                     |
| <del>19.03</del> <u>18.07</u> | Demonstrate an understanding of common adult doses of medications, <del>durations</del> <u>duration</u> of common <u>drug</u> therapies, and respective contraindications, including the <del>Beers</del> <u>BEERS</u> Criteria.                                                                                                       |
| <del>19.04</del> <u>18.08</u> | Identify potential interactions that require a pharmacist's <del>interventions</del> <u>intervention</u> pertaining to food/alcohol, herbal, OTC, and/or prescription medications.                                                                                                                                                     |
|                               | <u>18.09 Identify allergy histories during the medication reconciliation process and discern "allergy" vs "side effect" in optimizing care.</u>                                                                                                                                                                                        |

## Florida Department of Education Student Performance Standards

**Course Title:** Pharmacy Technician 5  
**Course Number:** 8418250  
**Course Credit:** 1

### Course Description:

This course builds on the knowledge and skills obtained in Pharmacy Technician 1, 2, 3, and 4.

Clinical (externship) ~~opportunity~~per programmatic needs in the hospital/retail setting will ~~enhance~~expand the student's ~~understanding~~knowledge of ~~community~~science and medicine as it relates to the professions associated with the practice in a pharmacy setting. Students will interact with pharmacists and technicians and patients to provide services in all types of patient care settings, including inpatient, outpatient, and ambulatory care. This externship is designed to develop both professional and clinical skills to ensure success in the pharmacy field.

Students are expected to participate in a clinical pharmacy experience that provides opportunities for each student to build on acquired knowledge and skills, to practice and develop skills in selected procedures. Such procedures include, but are not limited to, dispensing, compounding, inventory handling and control, drug distribution, processing of third-party claims, maintenance of patient profiles and interaction and communication with pharmacy staff.

### CTE Standards and Benchmarks

19.0 Prepare and deliver medications. The student will be able to:

19.01 Read and prepare medication orders correctly.

19.02 Demonstrate institutional pharmacy dispensing processes.

19.03 Compare all new orders with medications listed on profiles while noting any changes.

19.04 Utilize special precautions in the preparation of medications for pediatric patients.

19.05 Explain how to safely transport medications, being aware of hazards, theft, legal implications of accidental loss, and other consequences.

19.06 Understand how to correctly fill and deliver medication.

19.07 Collect data from the medication administration record.

19.08 Describe the use of automated medication dispensing equipment.

20.0 Repackage unit-dose medications. The student will be able to:

**CTE Standards and Benchmarks**

20.01 Locate the correct stock container.

20.02 Describe the use of unit-dose packaging equipment.

20.03 Measure, count, and place the individual dose in appropriate containers.

20.04 Understand precautions used when packaging unit-dose hazardous drugs.

20.05 Record repackaged medication data correctly.

20.06 Summarize, evaluate, and describe the technician's role in quality assurance activities related to repackaging unit-dose medication.

Florida Department of Education  
Student Performance Standards

Course Title:        Pharmacy Technician 6  
Course Number:    8418260  
Course Credit:      1

Course Description:

This course builds on the knowledge and skills obtained in Pharmacy Technician 1, 2, 3, 4, and 5. Students will learn how to properly prepare sterile products for patients and apply detailed knowledge of quality control techniques, drug incompatibilities, and the storage and disposal of pharmaceutical products.

| <u>CTE Standards and Benchmarks</u> |                                                                                                                                                                           |

| <u>21.03</u>                        | <u>Compare the medication order with the label on the vial and check the expiration date of the product.</u>                                                              |
| <u>21.04</u>                        | <u>Calculate drug dosage for parenteral use.</u>                                                                                                                          |
| <u>21.05</u>                        | <u>Reconstitute parenteral medications.</u>                                                                                                                               |
| <u>21.06</u>                        | <u>Demonstrate aseptic technique to withdraw medication from stock vial, measure correct quantity as instructed, select and insert it into IV solution without error.</u> |
| <u>21.07</u>                        | <u>Demonstrate aseptic technique to withdraw medication from an ampule using a filter needle/straw.</u>                                                                   |
| <u>21.08</u>                        | <u>Prepare parenteral solutions using proper aseptic technique.</u>                                                                                                       |
| <u>21.09</u>                        | <u>Understand the preparation of Total Parenteral Nutrition (TPN) solutions.</u>                                                                                          |
| <u>21.10</u>                        | <u>Understand the preparation of chemotherapeutic agents using proper safety techniques.</u>                                                                              |
| <u>21.11</u>                        | <u>Understand the appropriate technique while using specialized equipment such as laminar flow hoods, filters, pumps, automated compounders, and barrier isolators.</u>   |
| <u>21.12</u>                        | <u>Place label on IV solution container and record appropriately.</u>                                                                                                     |
| <u>21.13</u>                        | <u>Perform a quality control check of the completed product.</u>                                                                                                          |

**CTE Standards and Benchmarks**

21.14 Convey an understanding of the proper storage and disposal requirements of reconstituted and non-reconstituted IV solutions.

21.15 Convey an understanding of the proper storage and disposal of hazardous drugs.

21.16 Summarize, evaluate, and describe the technician's role in quality assurance activities related to the preparation of sterile products.

21.17 Understand the concept of Diversion Surveillance to assist in recognizing controlled substances.

Florida Department of Education  
Student Performance Standards

Course Title: Pharmacy Technician 7

Course Number: 8418270

Course Credit: 1

Course Description:

This course builds on the knowledge and skills obtained in Pharmacy Technician 1, 2, 3, 4, 5, and 6, provides certification preparation, and completion of a capstone project.

Clinical (externship) practice, association management, and the issues impacting the ~~per programmatic needs in the hospital/retail and chain drug industry.~~ setting will expand the student's knowledge of science and medicine as it relates to the professions associated with the practice in a pharmacy setting. Students will interact with pharmacists and technicians and patients to provide services in all types of patient care settings, including inpatient, outpatient, and ambulatory care. This externship is designed to develop both professional and clinical skills to ensure success in the pharmacy field.

Students are expected to participate in a clinical pharmacy experience that provides opportunities for each student to build on acquired knowledge and skills, to practice and develop skills in selected procedures. Such procedures include, but are not limited to, dispensing, compounding, inventory handling and control, drug distribution, processing of third-party claims, maintenance of patient profiles, and interaction and communication with pharmacy staff.

**~~CTE Standards and Benchmarks~~**~~20.0—Prepare and deliver medications. The student will be able to:~~~~20.01—Read and prepare medication orders correctly.~~~~20.02—Demonstrate institutional pharmacy dispensing processes.~~~~20.03—Compare all new orders with medications listed on profiles while noting any changes.~~~~20.04—Utilize special precautions in the preparation of medications for pediatric patients.~~~~20.05—Explain how to safely transport medications being aware of hazards, theft, legal implications of accidental loss, and other consequences.~~~~20.0601.01—Understand how to correctly fill and deliver medication.~~~~20.07—Collect data from medication administration record.~~~~20.0801.01—Describe the use of automated medication dispensing equipment.~~~~21.0—Repackage unit dose medications. The student will be able to:~~~~21.01—Locate correct stock container.~~~~21.02—Describe the use of unit dose packaging equipment.~~~~21.03—Measure, count, and place individual dose in appropriate containers.~~~~21.04—Understand precautions used when packaging unit dose hazardous drugs.~~~~21.0501.01—Record repackaged medication data correctly.~~~~21.06—Summarize, evaluate and describe the role of the technician in quality assurance activities as related to repackaging unit dose medication.~~

Florida Department of Education  
Student Performance Standards

Course Title: Pharmacy Technician 6  
Course Number: 8418260  
Course Credit: 1

Course Description:

This course builds on the knowledge and skills obtained in Pharmacy Technician 1, 2, 3, 4 and 5. Students will learn how to properly prepare sterile products for patients by considering common medical errors and applying detailed knowledge of quality control techniques, drug incompatibilities and the storage and disposal of controlled substances.

| CTE Standards and Benchmarks                                                                                                                                                  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22.0—Prepare United States Pharmacopeia (USP) 797 and USP 800 sterile products. The student will be able to:                                                                  |
| 22.01—Convey an understanding of United States Pharmacopeia (USP) 797 regulations.                                                                                            |
| 22.02—Convey an understanding of United States Pharmacopeia (USP) 800 regulations.                                                                                            |
| 22.03—Compare medication order with label on vial and check expiration date of product.                                                                                       |
| 22.0401.01—Calculate drug dosage for parenteral use.                                                                                                                          |
| 22.0501.01—Reconstitute parenteral medications.                                                                                                                               |
| 22.0601.01—Demonstrate aseptic technique to withdraw medication from stock vial, measure correct quantity as instructed, select and insert it into IV solution without error. |
| 22.07—Demonstrate aseptic technique to withdraw medication from an ampule using filter needle/straw.                                                                          |
| 22.0801.01—Prepare parenteral solutions using proper aseptic technique.                                                                                                       |
| 22.0901.01—Understand the preparation of Total Parenteral Nutrition (TPN) solutions.                                                                                          |
| 22.1001.01—Understand the preparation of chemotherapeutic agents using proper safety techniques.                                                                              |
| 22.11—Understand the appropriate technique while using specialized equipment such as: laminar flow hoods, filters, pumps, automated compounders, and barrier isolator.        |
| 22.1201.01—Place label on IV solution container and record appropriately.                                                                                                     |
| 22.13—Perform quality control check of completed product.                                                                                                                     |

**Florida Department of Education  
Student Performance Standards**

**Course Title:** ~~Pharmacy Technician 7~~

**Course Number:** ~~8418270~~

**Course Credit:** ~~1~~

**Course Description:**

~~This course builds on the knowledge and skills obtained in Pharmacy Technician 1, 2, 3, 4, 5 and 6.~~

~~Clinical (externship) in the hospital setting will expand the student's knowledge of science and medicine as it relates to the professions associated with the practice of pharmacy in hospitals and family health centers. Students will interact with pharmacists and technicians and patients to provide services in all types of patient care settings including inpatient, outpatient and ambulatory care.~~

~~Students are expected to participate in a clinical pharmacy experience that provides opportunities for each student to build on acquired knowledge and skills, to practice and develop skills in selected procedures. Such procedures include, but are not limited to, dispensing, compounding, inventory handling and control, drug distribution, processing of third party claims, maintenance of patient profiles and interaction and communication with pharmacy staff.~~

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Clinical practicum experiences are an integral part of this program.

In addition, due to the clinical experiences students are engaged in through the program and to ensure the safety of both the students and the patients the recommended student to instructor ratio in the classroom is 20:1 and in the lab is 4:1.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org) [sala@fldoe.org](mailto:sala@fldoe.org).

### **Special Notes**

~~This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.~~

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

It is recommended that program completers take ~~National Pharmacy Technician Certification Exam offered by the Pharmacy Technician Certification Board, 2215 Constitution Ave. NW, Washington, DC 20037-2985, (202) 429-7576. This certification is offered year round on a continual basis.~~ [a national certification examination upon successful program completion.](#)

Outcomes 01-~~46~~<sup>11</sup> are referred to as the Health Science Core and do not have to be completed if the student has previously completed the Core in another health occupations program at any level. ~~The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.~~

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals and SkillsUSA~~ [CTSOs](#) are ~~the~~ co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. - Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. - [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's ~~accommodations'~~ [accommodations](#) plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year~~;~~) to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student

earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, ~~and~~ occupation-specific skills, and knowledge of all aspects of [the](#) Health Science career cluster.

The content includes, but is not limited to, theoretical instruction and clinical experience in medical, surgical, obstetric, pediatric, and geriatric nursing; theoretical instruction and clinical experience in acute, care, long term care and community settings; theoretical instruction and clinical application of vocational role and function; personal, family and community health concepts; nutrition; human growth and development over the life span; body structure and function; interpersonal relationship skills, mental health concepts; pharmacology and administration of medications; legal aspects of practice; and current issues in nursing.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## Program Structure

This program is a planned sequence of instruction consisting of totaling nine credits.

To teach the ~~courses~~course(s) listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary program structure:

| Course Number | Course Title                                                                                                          | Teacher Certification                                                                | Length                            | SOC Code                             | Level | Graduation Requirement |

(Graduation Requirement Codes: CT= Career & Technical Education, EQ= Equally Rigorous Science, EC= Economics, MA= Mathematics, PL=  
Personal Financial Literacy)

~~PL= Personal Financial Literacy~~

~~\* The LPN 7 G district issued certification is a practical nurse. This certification can only be utilized in the 8418410 and 8418420 courses when the program is an approved nursing assistant program with the Florida Board of Nursing to teach concepts, skills and experiences solely at the Certified Nursing Assistant level and scope. A practical nurse can only be utilized as an instructor of the CNA training program when they are supervised by the program coordinator, which must be a registered nurse. Please refer to 64B9-15.005, Florida Administrative Code (F.A.C), for requirements.~~

### National Standards (NS)

#### Regulated Programs

~~This program is regulated by the Florida Board of Nursing.~~

~~This program is designed to prepare students for employment as licensed practical nurses (SOC 29-2061). The program must be approved by the Florida State Board of Nursing in order for graduates to apply to take the examination to practice as a Licensed Practical Nurse.~~

~~Please refer to 464.019(1)(b), Florida Statue (F.S.), for faculty credential requirements to teach this program.~~

Students are eligible to apply to take the national licensing examination after satisfactory completion of an approved program. [The National Council Licensure Examination for Practical Nurses](#), ~~CAT~~ NCLEX-PN is a computer-administered [adaptive](#) examination that the nursing graduate must take and pass in order to practice as a Licensed Practical Nurse.

[Programs identified as having Industry or National Standards have been cross-walked with the corresponding standards and/or benchmarks. Industry or National Standards for the Practical Nursing program can be found using the following link: <https://www.ncsbn.org/publications/2023-nclex-pn-test-plan> and <https://www.ncsbn.org/exams-research/report-of-findings-from-the-2021-lpvn-nursing-knowledge-survey>](#)

#### Regulated Programs

[The Practical Nursing Program must comply with the Florida Board of Nursing rules, including faculty qualifications. For questions regarding this process, please contact: Florida Board of Nursing, 4052 Bald Cypress Way, Tallahassee, FL 32399-3752.](#)

Clinical instruction of nursing students will meet the requirements of 464.019, F.S. Clinical experience must make up at least 50% of the total program. -Simulated practice and clinical experiences are included as an integral part of this program. **Clinical Simulation may be used for no more than 50% of the total clinical experience.**

~~Program must comply with the State Board of Nursing rules, including faculty qualifications. For questions regarding this process, please contact: Board of Nursing, 4052 Bald Cypress Way, Tallahassee, Florida 32399-3752.~~

~~An approved licensed practical nurse supervisory education course can only be taken following completion of this program, and after licensure. The Graduate must have 6 months' clinical experience before supervising as well as meeting all other criteria listed in 64B9-16.002, F.A.C.~~

~~A Licensed Practical Nurse working in a nursing home shall qualify to supervise by meeting all of the requirements in 64B9-16.002, F.A.C. The Supervisory course applicant must have no less than six months clinical nursing experience as an LPN. The supervisory course must be approved by the Board of Nursing and must be a minimum of 30 hours in length.~~

Common

## Florida's Career Technical Core — Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- 12. Work productively in teams while using cultural/global competence.**

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

## Standards

After successfully completing this program, the student will be able to perform the following:

### **Practical Nursing Foundations**

~~01.0—Demonstrate knowledge of the healthcare delivery system and health occupations.~~

01.0 Integrated Processes – Apply the following fundamental integrated processes to the practice of practical nursing and integrate them throughout the Client Needs categories and subcategories in every course of the program (See Client Needs categories from NCSTN, 2023). This standard is part of EVERY course in the Practical Nursing program.

02.0 Demonstrate the ability to participate in teamwork and collaboration, using appropriate written and verbal therapeutic communication, interpersonal skills, and standard nursing terminology (Coordinated Care, Health Promotion and Maintenance).

03.0 Demonstrate the ability to participate in teamwork and collaboration, using organizational functions, the plan of care, computer literacy, and electronic health record use (Coordinated Care, Health Promotion and Maintenance).

04.0 Demonstrate legal and ethical aspects of practice and responsibilities specific to the nursing profession. (Coordinated Care).

~~02.0—Recognize and practice safety, and security and emergency procedures.~~

~~03.0~~05.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS, environmental safety, client safety, and healthcare worker safety (Coordinated Care, Safety and Infection Control, Physiological Adaptation).

~~04.0—Demonstrate computer literacy as related to nursing functions.~~

~~05.0—Use appropriate verbal and written communications in the performance of nursing functions.~~

~~06.0—Demonstrate legal and ethical responsibilities specific to the nursing profession.~~

~~07.0~~06.0 Apply the principles of Recognize and practice infection control, utilizing nursing principles, principles and procedures and demonstrate maintenance of aseptic technique (Coordinated Care, Safety and Infection Control, Physiological Adaptation).

~~08.0—Perform aseptic and sterile techniques.~~

~~09.0~~07.0 Perform patient/client and personal care as it pertains to the practical nurse. (Safety and Infection Control, Basic Care and Comfort, Reduction of Risk Potential).

~~10.0—Provide patient-centered care for the geriatric population.~~

~~11.0—Assist with restorative (rehabilitative) activities.~~

~~12.0—Demonstrate organizational functions, following the patient plan of care.~~

~~08.0~~ Describe the Select clinical judgment functions in geriatric care (Psychosocial Integrity).

~~13.0—Explain foundational and evidence-based practice thinking that supports practical nursing care, describing the body structure and function of the healthy human body in relation to health and disease.~~

~~14.0~~09.0 Apply principles of nutrition as it relates, including but not limited to Practical Nursing scope of practice, the following body systems (Coordinated Care, Health Promotion and Maintenance).

~~15.0~~10.0 Describe Explain foundational thinking that supports human growth and development across the lifespan. (Coordinated Care, Health Promotion and Maintenance).

~~16.0—Demonstrate the performance of nursing procedures.~~

- 11.0 Develop teamwork and collaboration through clinical judgment, the nursing process, clinical reasoning, critical thinking, the use of SBAR (situation, background, assessment, recommendation), and the nursing care plan (Coordinated Care).
- 12.0 Demonstrate nursing knowledge, skills, attitudes (KSAs), procedures, and the following skills (Coordinated Care, Safety and Infection Control, Health Promotion and Maintenance, Pharmacological Therapies, Reduction of Risk Potential, Physiological Adaptation).
- 13.0 Demonstrate the use of clinical judgment to provide competent psychiatric or mental health care that includes the following diseases and disorders: schizophrenia, mood disorders, personality disorders, anxiety disorders, substance abuse, substance use disorders, impulse control disorders, eating disorders, and neurodevelopmental disorders (Psychosocial Integrity).
- 14.0 Demonstrate nursing knowledge, skills, attitudes (KSAs), and procedures related to safe administration of medication that include the following skills (Coordinated Care, Safety and Infection Control, Health Promotion and Maintenance, Pharmacological Therapies, Reduction of Risk Potential, Physiological Adaptation).
- 15.0 Interpret evidence-based practice to provide health awareness in community settings (Reduction of Risk Potential).
- ~~17.0~~16.0 Demonstrate ~~how to administer medication.~~ the use of clinical judgment to care for pre-operative and post-operative clients (Reduction of Risk Potential, Physiological Adaptation).
- ~~18.0—Demonstrate how to provide bio-psycho-social support.~~
- ~~19.0—Demonstrate healthy lifestyle responsibility specific to personal health maintenance.~~
- ~~20.0—Implement education and resources for family wellness.~~
- ~~21.0—Participate in Community Health Awareness Forums.~~

### Medical Surgical Nursing

- ~~22.0~~17.0 Demonstrate ~~how~~ the use of clinical judgment to care for ~~the a medical~~ surgical ~~patient with a~~ client (MS1: cardiovascular/circulatory, respiratory, lymphatic/immune, musculoskeletal, endocrine-or, integumentary ~~disease/disorder-/sensory systems.~~ (Reduction of Risk Potential, Physiological Adaptation).
- ~~23.0—Demonstrate ~~how~~ the use of clinical judgment to care for pre-operative and post-operative patients, utilizing nursing principles.~~
- ~~24.0~~18.0 Demonstrate ~~how to care for the a medical~~ surgical ~~patient with a~~ client (MS2: gastrointestinal, neurological, urinary, reproductive-or, oncologic ~~disease/disorder.~~ (Reduction of Risk Potential, Physiological Adaptation).

### Comprehensive Nursing and Transitional Skills

- ~~25.0~~19.0 Demonstrate ~~how~~ the use of clinical judgment to care for ~~an obstetric or~~ maternal/newborn ~~patients, utilizing nursing principles.~~ client ~~needing intrapartum care~~ (Health Promotion and Maintenance, Reduction of Risk Potential, Physiological Adaptation, Coordinated Care).
- ~~26.0—Demonstrate ~~knowledge~~ the use of SIDS/ SUIDS as it relates to the practical nursing role.~~
- ~~27.0~~20.0 Demonstrate ~~how~~ clinical judgment to care for ~~a pediatric~~ ~~patients, utilizing nursing principles.~~ client with the following diseases or disorders, including SIDS/SUIDS (Health Promotion and Maintenance, Reduction of Risk Potential, Physiological Adaptation, Coordinated Care).
- ~~28.0—Develop transitional skills.~~
- 21.0 Demonstrate ~~employability skills specific~~ the use of evidence-based practice and readiness for safe transition to nursing practice.

After completion of the Practical Nursing program, the graduate practical nursing nurse may take the 30-hour Intravenous Therapy Course, consisting of the following standard:

22.0 Demonstrate nursing knowledge, skills, attitudes (KSAs), and procedures related to safe intravenous access and intravenous medication administration that include the following skills.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** ~~Practical Nursing Foundations 1A~~  
**Course Number:** 8418410  
**Course Credit:** 1

**Course Description:**

The objectives in the course include knowledge of the health care system and professions, safety, security and emergency procedures, HIV/AIDS, computer literacy, basic communication skills, legal and ethical nursing concepts, principles of infection control and aseptic technique.

| <b>CTE Standards and Benchmarks</b> |                                                                                                                                                   |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>01.0</del>                     | <del>Demonstrate knowledge of the healthcare delivery system and health occupations. The student will be able to:</del>                           |

| <del>01.05</del>                    | <del>Identify the general roles and responsibilities of the individual members of the healthcare team.</del>                                      |
| <del>01.06</del>                    | <del>Identify the roles and responsibilities of the consumer within the healthcare delivery system.</del>                                         |
| <del>01.07</del>                    | <del>Identify characteristics of effective teams.</del>                                                                                           |
| <del>01.08</del>                    | <del>Recognize methods for building positive team relationships.</del>                                                                            |
| <del>01.09</del>                    | <del>Analyze attributes and attitudes of an effective leader.</del>                                                                               |
| <del>01.10</del>                    | <del>Recognize factors and situations that may lead to conflict.</del>                                                                            |
| <del>01.11</del>                    | <del>Demonstrate effective techniques for managing team conflict.</del>                                                                           |
| <del>01.12</del>                    | <del>Describe factors that influence the current delivery system of healthcare.</del>                                                             |
| <del>01.13</del>                    | <del>Explain the impact of emerging issues including technology, epidemiology, bioethics and socioeconomics on healthcare delivery systems.</del> |
| <del>02.0</del>                     | <del>Recognize and practice safety, security, and emergency procedures. The student will be able to:</del>                                        |

**CTE Standards and Benchmarks**~~02.01 Recognize safe and unsafe working conditions and report safety hazards.~~~~02.02 Demonstrate the safe use of medical equipment.~~~~02.03 Explain and apply the theory of root-cause analysis.~~~~02.04 Identify and describe methods in medical error reduction and prevention in the various healthcare settings.~~~~02.05 Identify and practice security procedures for medical supplies and equipment.~~~~02.06 Demonstrate personal safety procedures based on Occupations Safety and Health Administration (OSHA) and Centers for Disease Control (CDC) regulations including standard precautions.~~~~02.07 Recognize Safety Data Sheets (SDS) and comply with safety signs, symbols and labels.~~~~02.08 Demonstrate proper body mechanics and ergonomics.~~~~02.09 Demonstrate the procedure for properly identifying patients.~~~~02.10 Demonstrate procedures for the safe transport and transfer of patients.~~~~02.11 Describe fire, safety, disaster, active shooter, and evacuations procedures.~~~~02.12 Discuss the Joint Commission patient safety goals ([www.jointcommission.org](http://www.jointcommission.org)) and any other applicable accrediting/regulatory agency guidelines.~~~~02.13 Describe legal parameters relating to the administration of emergency care.~~~~02.14 Obtain and maintain training or certification on cardiopulmonary resuscitation (CPR), automated external defibrillator (AED), foreign body airway obstruction (FBAO) and first aid.~~~~03.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS. The student will be able to:~~~~03.01 Recognize emerging diseases and disorders.~~~~03.02 Distinguish between fact and fallacy about the transmission and treatment of diseases caused by blood borne pathogens.~~~~03.03 Identify community resources and services available to the individuals with diseases caused by blood borne pathogens.~~~~03.04 Identify "at risk" behaviors which promote the spread of diseases caused by blood borne pathogens and the public education necessary to combat the spread of these diseases.~~~~03.05 Apply infection control techniques designed to prevent the spread of diseases caused by blood borne pathogens to the care of all patients following Centers for Disease Control (CDC) guidelines.~~~~03.06 Demonstrate knowledge of the legal aspects of HIV/AIDS, including testing.~~

**CTE Standards and Benchmarks**

~~04.0 Demonstrate computer literacy as related to nursing functions. The student will be able to:~~

~~04.01 Demonstrate effective use of technology, including use of electronic medical records and email relevant to job requirements for a Licensed Practical Nurse.~~

~~04.02 Identify computer skills utilized for each clinical rotation and apply, as appropriate.~~

~~04.03 Identify methods of communication to access and distribute data such as fax, e-mail and internet as related to HIPAA.~~

~~05.0 Use appropriate verbal and written communications in the performance of nursing functions. The student will be able to:~~

~~05.01 Identify characteristics of successful and unsuccessful communication including communication styles and barriers.~~

~~05.02 Respond to verbal and non-verbal cues.~~

~~05.03 Use approved medical terminology and abbreviations.~~

~~05.04 Recognize the importance of courtesy and respect for patients and other healthcare workers and maintain good interpersonal relationships.~~

~~05.05 Receive and give oral report using safe handoff of patient's status.~~

~~05.06 Report and record objective and subjective pertinent observations.~~

~~05.07 Maintain current documentation.~~

~~05.08 Document changes in patient behavior and mental awareness in a timely manner.~~

~~05.09 Obtain specified data from patient and family.~~

~~05.10 Define and explain the steps in the nursing process and the role of the licensed practical nurse in that process.~~

~~05.11 Utilize nursing principles to assist with the patient's plan of care.~~

~~06.0 Demonstrate legal and ethical responsibilities specific to the nursing profession. The student will be able to:~~

~~06.01 Explain the "Patient's Bill of Rights".~~

~~06.02 Identify standards of the Health Insurance Portability and Accountability Act (HIPAA).~~

~~06.03 Describe advance directives.~~

~~06.04 Describe informed consent.~~

~~06.05 Recognize and report all forms of abuse to include domestic violence (physical & verbal), neglect and human trafficking.~~

**CTE Standards and Benchmarks**~~06.06 Identify the components of the Nurse Practice Act.~~~~06.07 Practice within the role and scope of the job description.~~~~06.08 Discuss medical errors related to the practical nurse.~~~~06.09 Define legal aspects and code of ethics related to nursing.~~~~06.10 Describe the practical nurses' role in delegation of duties.~~~~06.11 Follow policies and procedures affecting the health, safety, and well-being of patients.~~~~06.12 Follow legal guidelines in charting, including use of electronic medical records.~~~~07.0 Apply the principles of infection control, utilizing nursing principles. The student will be able to:~~~~07.01 Provide care for patients with infectious diseases applying the principles of "Standard Precautions" utilized with all patients as well as special procedures required.~~~~07.02 Perform and promote effective hand hygiene.~~~~07.03 Set up isolation unit using proper personal protective equipment (PPE) for all types of isolation including donning and removing PPE appropriately.~~~~07.04 Follow isolation procedure with food tray, garments, and other materials.~~~~07.05 Collect specimen from patient in isolation.~~~~07.06 Identify common hospital-acquired infections and their prevention and treatment.~~~~07.07 Identify emergent communicable diseases and their prevention and treatment.~~~~07.08 Apply interventions to break each chain of infection.~~~~07.09 Discuss immunity and the role of immunizations.~~~~07.10 Discuss nursing responsibilities related to biological exposures.~~~~08.0 Perform aseptic and sterile techniques. The student will be able to:~~~~08.01 Apply principles of medical and surgical asepsis.~~~~08.02 Apply and remove sterile gloves.~~~~08.03 Apply sterile dressing.~~

**CTE Standards and Benchmarks**~~08.04 Open sterile equipment and supplies.~~~~08.05 Maintain sterile field.~~~~08.06 Clean and disinfect equipment.~~~~08.07 Apply and remove personal protective equipment (PPE).~~**CTE Standards and Benchmarks**

01.0 Integrated Processes – Apply the following fundamental integrated processes to the practice of practical nursing and integrate them throughout the Client Needs categories and subcategories in every course of the program (See Client Needs categories from NCSCN, 2023). This standard is part of EVERY course in the Practical Nursing program. The student will be able to show:

01.01 Caring – Interaction of the practical nurse and client in an atmosphere of mutual respect and trust. In this collaborative environment, the practical nurse provides support and compassion to help achieve desired therapeutic outcomes.

01.02 Clinical judgment – The observed outcome of critical thinking and decision-making. It is an iterative process that uses nursing knowledge to observe and assess presenting situations, identify a prioritized client concern, and generate the best possible evidence-based solutions in order to deliver safe client care. The six clinical judgment functions include: recognizing cues, analyzing cues, prioritizing and hypothesizing, generating solutions, taking action, and evaluating outcomes.

01.03 Client problem-solving process (nursing process) – A scientific approach to client care that includes data collection, planning, implementation, and evaluation.

01.04 Communication and documentation – Verbal and nonverbal interactions between the practical nurse and the client, as well as other members of the healthcare team. Events and activities associated with client care are validated in written and/or electronic records that reflect standards of practice and accountability in the provision of care.

01.05 Culture and spirituality – Interaction of the nurse and the client (individual, family or group, including significant others, and population) that recognizes and considers the client-reported, self-identified, unique and individual preferences to client care, the applicable standard of care, and legal considerations.

01.06 Teaching and learning – Facilitation of the acquisition of knowledge, skills, and attitudes (KSAs) to assist in promoting a change in behavior.

01.07 Professionalism, respect, and civility toward clients and colleagues in all educational and practice settings

01.08 Application of a self-care plan, including the demonstration of healthy lifestyle choices and personal health maintenance

01.09 A demonstration of nursing care in clinical experiences, simulation, or skills lab of at least \_\_\_\_ hours.

02.0 Demonstrate the ability to participate in teamwork and collaboration, using appropriate written and verbal therapeutic communication, interpersonal skills, and standard nursing terminology (Coordinated Care, Health Promotion and Maintenance). The student will be able to:

02.01 Describe teamwork and collaboration through the healthcare system and healthcare occupations.

02.02 Participate as a member of an interdisciplinary team.

[06.03 Outline HIV/AIDS awareness and resources.](#)

**Florida Department of Education  
Student Performance Standards**

**Course Title:** \_\_\_\_\_ **Practical Nursing Foundations 1B**  
**Course Number:** 8418420  
**Course Credit:** 1

**Course Description:**

This course is a continuation of Practical Nursing Foundations 1A. -The objectives in the course include basic nursing care procedures, geriatric care, restorative activities, organizational functions, structure and function of the body system across the lifespan and nutrition. Laboratory and clinical experiences are an integral part of this course.

~~Laboratory and clinical experiences are an integral part of this course.~~

**~~CTE Standards and Benchmarks~~**

~~09.0 Perform patient and personal care as it pertains to the practical nurse. The student will be able to:~~

~~09.01 Demonstrate ability to accurately measure, document and report vital signs.~~

~~09.02 Lift, hold, and transfer patients including the use of the various assistive devices and equipment, utilizing proper body mechanics and patient safety measures.~~

~~09.03 Provide basic nursing care.~~

~~09.04 Perform patient hygiene care.~~

~~09.05 Assist patient with activities of Daily Living (ADL) including:~~

- ~~• Dressing~~
- ~~• Meals~~
- ~~• Bowel and bladder training~~
- ~~• Perineal/catheter care~~
- ~~• Make unoccupied/occupied bed~~
- ~~• Passive range of motion exercises~~

~~09.06 Assist patient with both donning and doffing prosthesis and brace.~~

~~09.07 Demonstrate care for eyeglasses, prosthetic eyes and contact lens.~~

~~10.0 Provide patient-centered care for the geriatric population. The student will be able to:~~

~~10.01 Incorporate professional attitudes, values, and expectations about physical and mental aging in the provision of patient-centered care for older adults and their families.~~

**CTE Standards and Benchmarks**

|                                                                                                                                                                                                                                                                                   |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>10.02 Identify barriers for older adults in receiving, understanding, and giving of information.</del>                                                                                                                                                                       |
| <del>10.03 Use valid and reliable assessment performed by registered nurse/LPN to guide nursing practice for older adults.</del>                                                                                                                                                  |
| <del>10.04 Recognize safe living environments as it relates to functional, physical, cognitive, psychological, and social needs of older adults.</del>                                                                                                                            |
| <del>10.05 Assist older adults and their support network to achieve personal goals, based on the analysis of the living environment and availability of community resources.</del>                                                                                                |
| <del>10.06 Identify actual or potential mistreatment (physical, mental or financial abuse, and/or self-neglect) in older adults and report appropriately.</del>                                                                                                                   |
| <del>10.07 Implement strategies and use online guidelines to prevent and/or identify and manage geriatric syndromes.</del>                                                                                                                                                        |
| <del>10.08 Recognize and respect the variations of care, the increased complexity, and the increased use of healthcare resources inherent in caring for older adults.</del>                                                                                                       |
| <del>10.09 Recognize the complex interaction of acute and chronic co-morbid physical and mental conditions and associated treatments common to older adults.</del>                                                                                                                |
| <del>10.10 Discuss models of care that promote safe, quality physical and mental health care for older adults such as PACE, NICHE, Guided Care, Culture Change, and Transitional Care Models.</del>                                                                               |
| <del>10.11 Facilitate ethical, non-coercive decision making by older adults and/or families/caregivers for maintaining everyday living, receiving treatment, initiating advance directives, and implementing end-of-life care.</del>                                              |
| <del>10.12 Assist registered nurse to promote adherence to the evidence-based practice of providing restraint-free care (both physical and chemical restraints).</del>                                                                                                            |
| <del>10.13 Demonstrate leadership and communication techniques that foster discussion and reflection on the extent to which diversity (among nurses, nurse assistive personnel, therapists, physicians, and patients) has the potential to impact the care of older adults.</del> |
| <del>10.14 Facilitate safe and effective transitions across levels of care, including acute, community-based, and long-term care (e.g., home, assisted living, hospice, skilled nursing facility) for older adults and their families.</del>                                      |
| <del>10.15 Provide patient-centered care with consideration for mental and physical health and well-being of informal and formal caregivers of older adults.</del>                                                                                                                |
| <del>10.16 Advocate for timely and appropriate palliative and hospice care for older adults with physical and cognitive impairments.</del>                                                                                                                                        |
| <del>10.17 Implement and monitor strategies to prevent risk and promote quality and safety (e.g., falls, medication mismanagement, pressure ulcers) in the nursing care of older adults with physical and cognitive needs.</del>                                                  |
| <del>10.18 Utilize resources/programs to promote functional, physical, and mental wellness in older adults.</del>                                                                                                                                                                 |
| <del>10.19 Identify relevant theories and concepts related to the delivery of patient-centered care for older adults.</del>                                                                                                                                                       |
| <del>10.20 Apply reality orientation techniques and validation therapy unless it is contraindicated by the patient diagnosis (Alzheimers or Dementia).</del>                                                                                                                      |

**CTE Standards and Benchmarks**

~~10.21 Recognize and respond appropriately to symptoms of common diseases, including dementia, depression/suicide and Alzheimers.~~

~~10.22 Provide care for patients with special needs (e.g., impaired hearing, impaired vision, immobility, impaired body functions, cognitively impaired (dementia)).~~

~~10.23 Demonstrate awareness of common behaviors in substance use and abuse in the elderly.~~

~~10.24 Report concerns to the nurse related to substance use and abuse in the elderly patient.~~

~~10.25 Identify components of the grief process as it relates the geriatric patient.~~

~~10.26 Identify factors predisposing aging adults for suicide.~~

~~11.0 Assist with restorative (rehabilitative) activities. The student will be able to:~~

~~11.01 List the purposes of restorative (rehabilitation) program.~~

~~11.02 Assist patient with specified restorative (rehabilitation) needs.~~

~~11.03 Assist patients/residents to reach the optimum level of independence.~~

~~12.0 Demonstrate organizational functions following the patient plan of care. The student will be able to:~~

~~12.01 Organize patient care assignments.~~

~~12.02 Complete assignments accurately and in a timely manner.~~

~~13.0 Describe the structure and function of the human body in relation to health and disease. The student will be able to:~~

~~13.01 Describe the relationships of body systems to health and disease as it relates to patient care.~~

~~13.02 Describe the structure and function of the respiratory system.~~

~~13.03 Describe the structure and function of the cardio-vascular system including lymph and immune response.~~

~~13.04 Describe the structure and function of the muscular-skeletal system.~~

~~13.05 Describe the structure and function of the nervous, skin, and sensory systems.~~

~~13.06 Describe the structure and function of the reproductive system.~~

~~13.07 Describe the structure and function of the urinary system.~~

~~13.08 Describe the structure and function of the digestive system.~~

**CTE Standards and Benchmarks**~~13.09 Describe the structure and function of the endocrine system.~~~~14.0 Apply principles of nutrition as it relates to practical nursing scope of practice. The student will be able to:~~~~14.01 Explore and utilize the U.S. Department of Agriculture's MyPlate Food Guide ([www.choosemyplate.gov](http://www.choosemyplate.gov)).~~~~14.02 Explain regional, cultural, and religious food references.~~~~14.03 Prepare a basic food plan.~~~~14.04 Demonstrate knowledge of the need for thickened liquids and fluid consistency.~~~~14.05 Identify methods of maintaining fluid balance including encouraging and restricting fluids.~~~~14.06 Monitor and document nutritional intake.~~~~14.07 Assist patient with and maintain therapeutic diets.~~~~14.08 Describe the nutrients, their sources and significance in promoting health.~~~~14.09 List factors which must be considered when purchasing food.~~~~14.10 List factors which must be considered when storing food safely.~~~~14.11 Identify methods of safe food preparation.~~**CTE Standards and Benchmarks**

01.0 Integrated Processes – Apply the following fundamental integrated processes to the practice of practical nursing and integrate them throughout the Client Needs categories and subcategories in every course of the program (See Client Needs categories from NCSBN, 2023). This standard is part of EVERY course in the Practical Nursing program. The student will be able to show:

01.01 Caring – Interaction of the practical nurse and client in an atmosphere of mutual respect and trust. In this collaborative environment, the practical nurse provides support and compassion to help achieve desired therapeutic outcomes.

01.02 Clinical judgment – The observed outcome of critical thinking and decision-making. It is an iterative process that uses nursing knowledge to observe and assess presenting situations, identify a prioritized client concern, and generate the best possible evidence-based solutions in order to deliver safe client care. The six clinical judgment functions include: recognizing cues, analyzing cues, prioritizing and hypothesizing, generating solutions, taking action, and evaluating outcomes.

01.03 Client problem-solving process (nursing process) – A scientific approach to client care that includes data collection, planning, implementation, and evaluation.

01.04 Communication and documentation – Verbal and nonverbal interactions between the practical nurse and the client, as well as other members of the healthcare team. Events and activities associated with client care are validated in written and/or electronic records that reflect standards of practice and accountability in the provision of care.

**CTE Standards and Benchmarks**

|       |                                                                                                                                                                                                                                                                                                                                        |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.05 | <u>Culture and spirituality – Interaction of the nurse and the client (individual, family or group, including significant others, and population) that recognizes and considers the client-reported, self-identified, unique and individual preferences to client care, the applicable standard of care, and legal considerations.</u> |
| 01.06 | <u>Teaching and learning – Facilitation of the acquisition of knowledge, skills, and attitudes (KSAs) to assist in promoting a change in behavior.</u>                                                                                                                                                                                 |
| 01.07 | <u>Professionalism, respect, and civility toward clients and colleagues in all educational and practice settings.</u>                                                                                                                                                                                                                  |
| 01.08 | <u>Application of a self-care plan, including the demonstration of healthy lifestyle choices and personal health maintenance.</u>                                                                                                                                                                                                      |
| 01.09 | <u>A demonstration of nursing care in clinical experiences, simulation, or skills lab of at least      hours.</u>                                                                                                                                                                                                                      |
| 07.0  | <u>Perform client and personal care (Safety and Infection Control, Basic Care and Comfort, Reduction of Risk Potential). The student will be able to:</u>                                                                                                                                                                              |
| 07.01 | <u>Use transfer assistive devices (gait belt, slide board, mechanical lift).</u>                                                                                                                                                                                                                                                       |
| 07.02 | <u>Provide care to a client with bowel or bladder management protocol.</u>                                                                                                                                                                                                                                                             |
| 07.03 | <u>Provide for mobility needs (ambulation, range of motion, transfer, repositioning, use of adaptive equipment).</u>                                                                                                                                                                                                                   |
| 07.04 | <u>Use measures to maintain or improve client skin integrity.</u>                                                                                                                                                                                                                                                                      |
| 07.05 | <u>Provide care to an immobilized client based on need.</u>                                                                                                                                                                                                                                                                            |
| 07.06 | <u>Assist in the care and comfort for a client with a visual and/or hearing impairment (body functions, immobility).</u>                                                                                                                                                                                                               |
| 07.07 | <u>Promote alternative/complementary therapy in providing client care (music therapy, pet therapy).</u>                                                                                                                                                                                                                                |
| 07.08 | <u>Provide non-pharmacological measures for pain relief (imagery, massage, repositioning).</u>                                                                                                                                                                                                                                         |
| 07.09 | <u>Evaluate pain using standardized rating scales.</u>                                                                                                                                                                                                                                                                                 |
| 07.10 | <u>Monitor client intake and output.</u>                                                                                                                                                                                                                                                                                               |
| 07.11 | <u>Assist with activities of daily living (including but not limited to bed mobility, transfer, ambulation, mobility, dressing, eating, elimination, personal hygiene, and grooming).</u>                                                                                                                                              |
| 07.12 | <u>Monitor and provide for nutritional needs of the client (including therapeutic diets, cultural and religious food preferences, nutrients, sources, and healthcare significance).</u>                                                                                                                                                |
| 07.13 | <u>Assist in providing postmortem care.</u>                                                                                                                                                                                                                                                                                            |
| 07.14 | <u>Provide measures to promote sleep and rest.</u>                                                                                                                                                                                                                                                                                     |
| 07.15 | <u>Apply and check proper use of compression stockings and/or sequential compression devices (SCDs).</u>                                                                                                                                                                                                                               |

**CTE Standards and Benchmarks**

07.16 Identify the client at risk and implement interventions.

07.17 Check and monitor vital signs (including oxygen saturation).

08.0 Select clinical judgment functions in geriatric care (Psychosocial Integrity). The student will be able to:

08.01 Assist in the care of the cognitively impaired client (including Alzheimer's, dementia, and other neurocognitive care).

08.02 Participate in reminiscence therapy, validation therapy, or reality orientation.

08.03 Report concerns to the nurse related to elder abuse, neglect, and maltreatment.

08.04 Initiate and participate in security alerts (flight risk).

08.05 Provide end-of-life, palliative, and hospice care and education to clients.

09.0 Explain foundational and evidence-based practice thinking that supports practical nursing care, describing the body structure and function of the healthy human body, including but not limited to the following body systems (Coordinated Care, Health Promotion and Maintenance). The student will be able to:

09.01 Describe and introduce body structure and function.

09.02 Describe the structure and function of tissues and cells.

09.03 Describe the structure and function of the integumentary system.

09.04 Describe the structure and function of the nervous system.

09.05 Describe the structure and function of the sensory system.

09.06 Describe the structure and function of the skeletal system.

09.07 Describe the structure and function of the muscular system.

09.08 Describe the structure and function of the endocrine system.

09.09 Describe the structure and function of the cardiovascular system.

09.10 Describe the structure and function of the hematologic system.

09.11 Describe the structure and function of the respiratory system.

09.12 Describe the structure and function of the digestive system.

**CTE Standards and Benchmarks**

09.13 Describe the structure and function of the urinary system.

09.14 Describe the structure and function of the reproductive system.

09.15 Describe the structure and function of the immune system.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** \_\_\_\_\_ **Practical Nursing Foundations 2A**  
**Course Number:** 8418430  
**Course Credit:** 1

**Course Description:**

The objectives in the course include growth and development across the lifespan, performance of nursing procedures, pharmacology, mental health, healthy lifestyle and education for family and community awareness.

**CTE Standards and Benchmarks**

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>15.00</del> 1.0   | <del>Describe human growth and development across the lifespan. The student will be able to:</del> <u>Integrated Processes – Apply the following fundamental integrated processes to the practice of practical nursing and integrate them throughout the Client Needs categories and subcategories in every course of the program (See Client Needs categories from NCSBN, 2023). This standard is part of EVERY course in the Practical Nursing program. The student will be able to show:</u>                                                                                                             |
| <del>15.01</del> 01.01 | <del>Describe characteristics of growth and development from conception to birth.</del> <u>Caring – Interaction of the practical nurse and client in an atmosphere of mutual respect and trust. In this collaborative environment, the practical nurse provides support and compassion to help achieve desired therapeutic outcomes.</u>                                                                                                                                                                                                                                                                    |
| <del>15.02</del> 01.02 | <del>Describe characteristics of growth and development from birth through preschool.</del> <u>Clinical judgment – The observed outcome of critical thinking and decision-making. It is an iterative process that uses nursing knowledge to observe and assess presenting situations, identify a prioritized client concern, and generate the best possible evidence-based solutions in order to deliver safe client care. The six clinical judgment functions include: recognizing cues, analyzing cues, prioritizing and hypothesizing, generating solutions, taking action, and evaluating outcomes.</u> |
| <del>15.03</del> 01.03 | <del>Describe characteristics of growth and development from school age through adolescence.</del> <u>Client problem-solving process (nursing process) – A scientific approach to client care that includes data collection, planning, implementation, and evaluation.</u>                                                                                                                                                                                                                                                                                                                                  |
| <del>15.04</del> 01.04 | <del>Describe characteristics of growth and development of the adult through the life span.</del> <u>Communication and documentation – Verbal and nonverbal interactions between the practical nurse and the client, as well as other members of the healthcare team. Events and activities associated with client care are validated in written and/or electronic records that reflect standards of practice and accountability in the provision of care.</u>                                                                                                                                              |
| <del>15.05</del> 01.05 | <del>Identify components of the grief process across the lifespan.</del> <u>Culture and spirituality – Interaction of the nurse and the client (individual, family or group, including significant others, and population) that recognizes and considers the client-reported, self-identified, unique and individual preferences to client care, the applicable standard of care, and legal considerations.</u>                                                                                                                                                                                             |

| <del>19.02</del>                | <del>Identify complementary and alternative health practices.</del>                                                                                                                                                                                                                                                                                         |
| <del>19.03</del>                | <del>Discuss the adverse effects of the use of alcohol, tobacco, and both legal and illegal drugs on the human body and apply safety practices related to these and other high risk behaviors.</del>                                                                                                                                                        |

|                                                                                                                                                                                   |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>19.04</del> Explain the basic concepts of positive self image, wellness and stress.                                                                                          |
| <del>19.05</del> Develop a wellness and stress control plan that can be used in personal and professional life.                                                                   |
| <del>19.06</del> Discuss annual medical screenings.                                                                                                                               |
| <del>19.07</del> Define dental health and self care practices.                                                                                                                    |
| <del>19.08</del> Provide education in warning signs and risk factors for mental health issues.                                                                                    |
| <del>19.09</del> Apply cultural diversity related to spirituality. Acknowledge cultural diversity and/or spirituality when providing patient care.                                |
| <del>19.10</del> Identify education level.                                                                                                                                        |
| <del>20.0</del> Implement education and resources for family wellness. The student will be able to:                                                                               |
| <del>20.01</del> Discuss risk factors in communicable diseases.                                                                                                                   |
| <del>20.02</del> Provide information on community resources for prenatal care.                                                                                                    |
| <del>20.03</del> Provide current immunization practices.                                                                                                                          |
| <del>20.04</del> Discuss healthy nutrition options and resources.                                                                                                                 |
| <del>20.05</del> Provide information on abuse and neglect in relationships.                                                                                                       |
| <del>21.0</del> <u>15.01</u> Participate in <del>community health awareness forums.</del> The student will be able to: <u>screenings or health promotion programs.</u>            |
| <del>21.01</del> Perform basic medical screenings such as vital signs, weight, glucose, cholesterol and body mass index.                                                          |
| <del>21.02</del> Discuss risk factors, screenings and resources for cancer.                                                                                                       |
| <del>21.03</del> <u>15.02</u> Identify and provide <u>community</u> resources for <del>mental health conditions including suicide and substance abuse</del> <u>clients.</u>       |
| <del>21.04</del> Discuss collaborative community strategies from healthcare providers, law enforcement agencies, religious affiliates, education systems and legislative offices. |

Florida Department of Education  
Student Performance Standards

**Course Title:**                      Practical Nursing Foundations 2B  
**Course Number:**        8418440  
**Course Credit:**        1

**Course Description:**

This course is a continuation of Practical Nursing Foundation 2A and may be concurrent with Practical Nursing Foundation 2A. -Clinical experiences will allow the student to practice the role of the practical nurse as a member of the health team and to participate in the health and wellness aspects of the patient and family.

The clinical experience provides the student with the opportunity to build on acquired knowledge and skills, to practice and develop skills in selected procedures, including administration of medications, to apply nursing principles in meeting the needs of medical surgical patients including the aged and/or chronically ill patient, and practice and understand the role of the practical nurse. -It reinforces and expands practice with common diseases included in Practical Nursing Foundations 1.

Florida Department of Education  
Student Performance Standards

Course Title: \_\_\_\_\_ Practical Nursing Medical Surgical ~~Nursing~~-1B

Course Number: 8418460

Course Credit: 1

**Course Description:**

This course is a continuation of Medical Surgical Nursing 1A and may be concurrent with Medical Surgical Nursing 1A. -Clinical experiences will allow the student to practice the role of the practical nurse as a member of the health team and to participate in the health and wellness aspects of the patient and family.

The clinical experience provides the student with the opportunity to build on acquired knowledge and skills, to practice and develop skills in selected procedures, including administration of medications, to apply nursing principles in meeting the needs of medical surgical patients, the aged and/or chronically ill patient, and practice and understand the role of the practical nurse.

Course ~~title:~~ Title: Practical Nursing Medical Surgical ~~Nursing~~ 2B  
Course ~~number:~~ Number: 8418480  
Course ~~credit:~~ Credit: 1

**Course Description:**

This course is a continuation of Medical Surgical Nursing 2A and may be concurrent with Medical Surgical Nursing 2A. -Clinical experiences will allow the student to practice the role of the practical nurse as a member of the health team and to participate in the health and wellness aspects of the patient and family.

The clinical experience provides the student with the opportunity to build on acquired knowledge and skills, to practice and develop skills in selected procedures, including administration of medications, to apply nursing principles in meeting the needs of medical surgical patients, the aged and/or chronically ill patient, and practice and understand the role of the practical nurse.

| <del>28.09 Determine how to apply for membership in a professional organization.</del>                                                                                                                                                                                       |
| <del>28.10 Discuss benefits and responsibilities of the LPN in membership in a professional organization.</del>                                                                                                                                                              |
| <del>29.0 Demonstrate employability skills specific to practical nursing. The student will be able to:</del>                                                                                                                                                                 |
| <del>29.01 Identify personal traits or attitudes desirable in a member of the healthcare team.</del>                                                                                                                                                                         |
| <del>29.02 Exemplify basic professional standards of healthcare workers as they apply to hygiene, dress, language, confidentiality and behavior (i.e., telephone etiquette, courtesy and self introductions).</del>                                                          |
| <del>29.03 Recognize the potential for stress in the practice of nursing and develop methods of managing stress.</del>                                                                                                                                                       |
| <del>29.04 Recognize the potential for violence in the workplace and describe methods of reducing that potential.</del>                                                                                                                                                      |
| <del>29.05 Identify employment opportunities for licensed practical nurses.</del>                                                                                                                                                                                            |
| <del>29.06 Participate in interview skill development activities.</del>                                                                                                                                                                                                      |
| <del>29.07 Complete letters of job application and resignation.</del>                                                                                                                                                                                                        |
| <del>29.08 Complete a professional portfolio, including a resume.</del>                                                                                                                                                                                                      |

Florida Department of Education  
Student Performance Standards

Course Title:        Intravenous (IV) Therapy

Course Number: \_\_\_\_\_

Course Credit: \_\_\_\_\_

Course Description:

The 30-hour Intravenous Therapy course may be taken after the student graduates from the program and includes the following standards and benchmarks:

| <b>CTE Standards and Benchmarks</b> |                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>22.0</u>                         | <u>Demonstrate nursing knowledge, skills, attitudes (KSAs), and procedures related to safe intravenous access and intravenous medication administration that include the following skills (Coordinated Care, Safety and Infection Control, Health Promotion and Maintenance, Pharmacological Therapies, Reduction of Risk Potential, Physiological Adaptation). The student will be able to:</u> |
| <u>22.01</u>                        | <u>Calculate and monitor intravenous (IV) flow rate.</u>                                                                                                                                                                                                                                                                                                                                         |
| <u>22.02</u>                        | <u>Administer intravenous hydrating fluids.</u>                                                                                                                                                                                                                                                                                                                                                  |
| <u>22.03</u>                        | <u>Perform a venipuncture for blood draws.</u>                                                                                                                                                                                                                                                                                                                                                   |
| <u>22.04</u>                        | <u>Insert, maintain, and remove a peripheral intravenous (IV) catheter.</u>                                                                                                                                                                                                                                                                                                                      |
| <u>22.05</u>                        | <u>Maintain a central venous catheter.</u>                                                                                                                                                                                                                                                                                                                                                       |
| <u>22.06</u>                        | <u>Administer intravenous piggyback (secondary) medications.</u>                                                                                                                                                                                                                                                                                                                                 |
| <u>22.07</u>                        | <u>Maintain pain control devices (epidural, patient-controlled analgesia, peripheral nerve catheter).</u>                                                                                                                                                                                                                                                                                        |
| <u>22.08</u>                        | <u>Monitor transfusion of blood product.</u>                                                                                                                                                                                                                                                                                                                                                     |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Clinical courses require contact hours in the clinical setting in order to complete the health science program. -Hospitals, nursing homes, and other clinical facilities with clinical affiliation agreements limit the number of students that can rotate and/or be on site at one time. -Most facilities, including hospitals and nursing homes, limit the number of students to 15. -Due to these industry limitations, it is recommended that the student ratio be 15:1 (student/teacher) based on the clinical facilities that students attend to for clinical training.

### Florida Standards for English Language Development (ELD)

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.~~ELL~~.SI.1.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. -For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org) -[sala@fldoe.org](mailto:sala@fldoe.org).

### Special Notes

This program meets the Department of Health's education requirements for ~~HIV/AIDS, Domestic Violence and Prevention~~ [Florida Board of Medical Errors-Nursing licensure renewal requirements](#). Although not a requirement for initial licensure, it is a requirement for renewal; therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry: planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. - Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. - Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. - Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. - Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. -If needed, a student may enroll in the same career and technical course more than once. -Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. -The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. -After achieving the competencies identified for the year, the student earns credit for the course. -It is important to ensure that credits earned by students are reported accurately. -The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

Program Title: Electrocardiograph Technician

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The content includes but is not limited to planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues. Clinical learning experiences are an integral part of this program.

The program is designed to prepare students for employment as EKG Technicians (SOC Code: 29-2031 Cardiovascular Technologists and Technicians).

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## Program Structure

This program is a planned sequence of instruction totaling three credits. The two credit Health Science Core (Health Science Anatomy & Physiology 8417100 [or Anatomy and Physiology 2000350](#) [or Anatomy and Physiology Honors 2000360](#) and Health Science Foundations 8417110) is required as a prerequisite for all programs. Secondary students completing the two required courses will not have to repeat the core in postsecondary.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary program structure:

| Course Number                   | Course Title                                                                       | Teacher Certification                                                                                                                                                                  | Length   | SOC Code | Level | Graduation Requirement |

### Common Career Technical Core—Career Ready Practices

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

| <a href="#"><u>09.08 Display positive attitude.</u></a>                                                |
| <a href="#"><u>09.09 Take responsibility for professional growth.</u></a>                              |

**Career Exploration & Planning****10.0 Explain career opportunities aligned with the regional economy and personal aspirations.**10.01 Describe regional occupations that are high-demand, high-growth, high-wage and/or high-skill.10.02 Describe careers aligned with his or her interests, skills and values based on career assessment, experiential learning, career informational interviews, research and/or reflection.**11.0 Explain postsecondary pathways aligned with his or her career aspirations.**11.01 Compare and contrast postsecondary pathways, including education, employment, entrepreneurship and enlistment (the “Four Es”).11.02 Compare and contrast regional postsecondary training provider options, including apprenticeships, technical colleges, state colleges, universities and industry-recognized certification providers.11.03 Define postsecondary credentialing and stacking options, including industry-recognized certifications, apprenticeship certificates of completion, career certificates, licenses and associate or baccalaureate degrees.11.04 Compare postsecondary training data for training programs of interest, such as total costs, average student loan debt, and median earnings and job placement rates after program completion.**12.0 Develop a personalized career and academic plan.**12.01 Prioritize an occupation, credential and postsecondary training provider for plan formation.12.02 Self-assess progress toward meeting graduation requirements and skill-development goals.12.03 Develop and complete a chronological checklist of steps and deadlines prior to postsecondary training or national service application that includes any required documentation to gather, writing prompts and examinations.12.04 Identify a variety of financial aid opportunities, including scholarships, grants, savings, work, work-study programs, private loans and federal loans.12.05 Develop a postsecondary training budget that is inclusive of living and school expenses.**Job Attainment****13.0 Find, assess and apply to job opportunities.**13.01 Identify online job posts relevant to his or her career aspirations.13.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.13.03 Define what information, documentation and writing prompts are required for the positions.**14.0 Communicate personal competence, character and fit for a job opportunity.**14.01 Develop a resume.14.02 Write a cover letter.14.03 Curate a professional portfolio that includes work products.14.04 Prepare for and experience a mock job interview.

|                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------|
| <u>15.0 Cultivate and leverage relationships to professionally advance.</u>                                                  |
| <u>15.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.</u> |
| <u>15.02 Develop a plan to cultivate a professional digital footprint.</u>                                                   |
| <u>15.03 Develop a networking plan for a specific industry of interest.</u>                                                  |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

### **Health Science Core**

- 01.0 Analyze and interpret an overview of the human body, including organization and chemical process.
- 02.0 Apply correct medical terminology relating to body structure and function within a real-world application.
- 03.0 Evaluate cells and tissues microscopically and macroscopically and relate their specialized functions.
- 04.0 Analyze the integumentary system in relation to health and disease.
- 05.0 Analyze the skeletal system in relation to health and disease.
- 06.0 Analyze the muscular system in relation to health and disease.
- 07.0 Analyze the nervous system in relation to health and disease.
- 08.0 Analyze the endocrine system in relation to health and disease.
- 09.0 Analyze the cardiovascular/circulatory system in relation to health and disease.
- 10.0 Analyze the lymphatic and immune systems in relation to health and disease.
- 11.0 Analyze the respiratory system in relation to health and disease.
- 12.0 Analyze the digestive system in relation to health and disease.
- 13.0 Analyze the urinary system in relation to health and disease.
- 14.0 Analyze both the male and female reproductive systems in relation to health and disease.
- 15.0 Identify and explain factors relating to genetics and disease.
- 16.0 Evaluate and apply the principles of disease transmission and control to real-world scenarios.
- 17.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 18.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 19.0 Demonstrate legal and ethical responsibilities.
- 20.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 21.0 Recognize and practice safety and security procedures.
- 22.0 Recognize and respond to emergency situations.
- 23.0 Recognize and practice infection control procedures.
- 24.0 Demonstrate an understanding of information technology applications in healthcare.
- 25.0 Demonstrate employability skills.
- 26.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 27.0 Apply basic math and science skills.

### **Electrocardiograph Technician (EKG) Technician 3**

- 28.0 Describe the cardiovascular system.
- 29.0 Identify legal and ethical responsibilities of an EKG technician.
- 30.0 Demonstrate knowledge of, apply and use medical instrumentation modalities.
- 31.0 Perform patient care techniques in the health care facility.
- 32.0 Recognize normal and abnormal monitoring and testing results.

- 33.0 Describe cardiovascular drugs, their actions, use and adverse effects.
- 34.0 Demonstrate knowledge of other cardiovascular diagnostic modalities.

## Florida Department of Education Student Performance Standards

### Health Science Core

The first two courses in this program are referred to as the Health Science Core and consist of the courses Health Science Anatomy & Physiology (8417100) and Health Science Foundations (8417110). **To ensure consistency whenever these courses are offered, the standards and benchmarks for the health science core have been placed in a separate document. To access this document, visiting this link:**

<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-secondary-2425.rtf>

<https://www.fldoe.org/file/20894/health-sci-core-secondary-2627.rtf>

The two credit core is required as a prerequisite for all secondary programs except for Practical Nursing and Pharmacy Technician. Secondary students completing the two required courses will not have to repeat the core in postsecondary. When the recommended sequence is followed, the structure allows students to complete at specified courses for employment or remain for advanced training or cross-training.

**Course Title:** Health Science Anatomy & Physiology  
**Course Number:** 8417100  
**Course Credit:** 1

### **Course Description:**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental quality, and safety procedures will be an integral part of this course. Students will interact with materials and primary sources of data or with secondary sources of data to observe and understand the natural world. Students will develop an understanding of measurement error, and develop the skills to aggregate, interpret, and present the data and resulting conclusions. Equipment and supplies will be provided to enhance these hands-on experiences for students. A minimum of 20% of classroom time will be dedicated to laboratory experiences.

[CTE Standards and Benchmarks](#)    [National Standards](#)

This course is part of the secondary Health Core consisting of an overview of the human body, both structurally and functionally with emphasis on the pathophysiology and transmission of disease. Medical terminology is an integral part of the course.

**The course Anatomy and Physiology (2000350) or Anatomy and Physiology Honors (2000360) may be substituted for the course Health Science Anatomy & Physiology (8417100) and their standards can be found at [www.cpalms.org](http://www.cpalms.org).**

The course Health Science Anatomy & Physiology (8417100) is designated as an equally rigorous (EQ) science credit.

**Course Title:** Health Science Foundations  
**Course Number:** 8417110  
**Course Credit:** 1

**Course Description:**

This course is part of the Secondary Health Core designed to provide the student with an in depth knowledge of the health care system and associated occupations. Emphasis is placed on communication and interpersonal skills, use of technology, ethics and the development of critical thinking and problem solving skills. Students may shadow professionals throughout the course.

**Florida Department of Education  
Student Performance Standards**

**Course Title:**       **Electrocardiograph Technician 3**  
**Course Number:**   **8427130**  
**Course Credit:**     **1**

**Course Description:**

This course prepares students to be employed as Electrocardiograph Technicians. Content includes, but is not limited to, a foundation in the cardiovascular system, safety measures for the individual, co-workers and patients as well as training in the appropriate theories and instruments used by an Electrocardiograph Technician.

| <b>CTE Standards and Benchmarks</b> |                                                                                                                                           |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| 28.0                                | Describe the cardiovascular system. The student will be able to:                                                                          |
| 28.01                               | Locate the heart and surrounding structures.                                                                                              |
| 28.02                               | Diagram and label the parts of the heart and list the functions of each labeled part.                                                     |
| 28.03                               | Trace the flow of blood through the cardiopulmonary system.                                                                               |
| 28.04                               | Identify and describe the electrical conduction system.                                                                                   |
| 28.05                               | Describe the function of the autonomic nervous system.                                                                                    |
| 28.06                               | Describe signs and symptoms of a patient demonstrating poor perfusion or low cardiac output and state the importance of rapid reporting.  |
| 29.0                                | Identify legal and ethical responsibilities of an EKG technician. The student will be able to:                                            |
| 29.01                               | Recognize and practice legal and ethical responsibilities as they relate to an EKG aide.                                                  |
| 29.02                               | Maintain a safe and efficient work environment.                                                                                           |
| 29.03                               | Maintain EKG equipment per manufacturers guidelines so it will be safe and accurate.                                                      |
| 29.04                               | Implement appropriate Joint Commission patient safety goals and adhere to HIPAA regulations regarding Protected Health Information (PHI). |
| 30.0                                | Demonstrate knowledge of, apply and use medical instrumentation modalities. The student will be able to:                                  |
| 30.01                               | Calibrate and maintain EKG equipment in the work environment.                                                                             |

**CTE Standards and Benchmarks**

|                        |                                                                                                                                                                                                   |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30.02                  | Identify three types of lead systems standard/limb, augmented, and precordial/chest).                                                                                                             |
| 30.03                  | Apply the concepts and history of Einthoven's triangle and Wilson's Central Terminal to EKG tracing.                                                                                              |
| 30.04                  | Demonstrate proper lead placement including lead placement with special considerations for various patients with special needs to include pediatric, amputee, and posterior and right sided EKGs. |
| 30.05                  | Identify artifacts and mechanical problems.                                                                                                                                                       |
| 30.06                  | Perform a 3, 5, and 12 lead EKG.                                                                                                                                                                  |
| <del>30.07</del>       | <del>Recognize normal sinus rhythm.</del>                                                                                                                                                         |
| <del>30.08</del>       | <del>Report dysrhythmias that are not normal sinus rhythm.</del>                                                                                                                                  |
| <del>30.09</del>       | <del>Recognize signs and symptoms of cardiopulmonary compromise on the EKG tracing and understand the importance of rapid reporting.</del>                                                        |
| <del>30.10</del> 30.07 | Verify accuracy of lead placement on the EKG.                                                                                                                                                     |
| <del>30.14</del> 30.08 | Verify setting on the EKG machine such as paper speed, sensitivity (gain), and Hertz (Hz) prior to use.                                                                                           |
| 31.0                   | Perform patient care techniques in the health care facility. The student will be able to:                                                                                                         |
| 31.01                  | Describe the physical and mental preparation of the patient for EKG testing.                                                                                                                      |
| 31.02                  | Identify patient and verify the requisition order.                                                                                                                                                |
| 31.03                  | Prepare patient for cardiovascular diagnostic testing.                                                                                                                                            |
| 31.04                  | Obtain patient's vitals (temperature, pulse, respirations, blood pressure, and pulse oximetry) in preparation for cardiovascular diagnostic testing and report abnormalities.                     |
| 31.05                  | State precautions required when performing cardiovascular diagnostic procedures.                                                                                                                  |
| 31.06                  | Convey the importance of maintaining a safe patient environment and evaluate potential hazards in the work environment.                                                                           |
| 32.0                   | Recognize normal and abnormal monitoring and testing results. The student will be able to:                                                                                                        |
| 32.01                  | Inspect and measure the various waveforms of a cardiac cycle including, segments, complexes, heart rates and intervals.                                                                           |
| 32.02                  | <u>Calculate heart rate and determine the regularity of heart rate.</u>                                                                                                                           |
| <del>32.02</del> 32.03 | Identify electrical axis.                                                                                                                                                                         |

## CTE Standards and Benchmarks

~~32.03 Recognize pacemaker spikes on the EKG and state the purpose of pacemakers.~~

32.04 Recognize normal and deviations from normal sinus rhythms and report dysrhythmias that are not normal sinus rhythms.

32.05 Recognize all atrial rhythms.

32.06 Recognize all junctional rhythms.

32.07 Recognize all ventricular rhythms.

32.08 Recognize all types of heart blocks.

~~32.09 Recognize normal and deviations from single-chamber and dual-chamber pacemakers as well as all implantable cardioverter defibrillators.~~

~~32.10~~32.09 Identify myocardial ischemia, injury, and infarction on EKG tracing.

~~32.11~~32.10 Recognize atrial and ventricular hypertrophies.

~~32.12~~32.11 Recognize ectopic beats and any rare phenomena.

~~32.13 Recognize normal and deviations from normal 12-lead EKG results.~~

~~32.14~~32.12 Describe potential patient responses to all dysrhythmias and other EKG abnormalities.

~~32.15~~32.13 Recognize and respond promptly to life threatening dysrhythmias during continuous monitoring such as telemetry—and diagnostic testing.

32.14 Recognize pacemaker spikes on the EKG and state the purpose of pacemakers.

32.15 Recognize normal and deviations from single-chamber and dual-chamber pacemakers as well as all implantable cardioverter defibrillators.

33.0 Describe cardiovascular drugs, their actions, use, and adverse effects. The student will be able to:

33.01 Describe the mechanisms by which common cardiovascular drugs work including actions and adverse effects.

33.02 Differentiate between normal and abnormal EKG changes potentially due to drugs.

34.0 Demonstrate knowledge of other cardiovascular diagnostic modalities. The student will be able to:

34.01 Demonstrate knowledge of the application of a Holter Monitor and ambulatory event monitor and provide patient education of its use.

34.02 ~~Demonstrate~~Describe the procedures for stress testing/scanning exercise treatment and provide patient education.

# CTE Standards and Benchmarks

34.03 Understand and demonstrate patient [activity log, patient records, symptoms, interpretation and activities](#) documentation for all types of monitoring.

[34.04](#) Describe activities and symptoms that should be documented for all types of monitoring.

~~34.04~~[34.05](#) Describe other modalities of cardiovascular diagnosis and interpretation- [\(i.e., angiogram, echocardiogram, etc.\)](#).

~~34.05~~[34.06](#) Understand patient cardiac alarm policy per acceptable facility guideline. .

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

**This program requires a clinical component of approximately 50% the length of the courses following the health science core. A portion of the clinical experience can be achieved through simulation when appropriate.**

Clinical courses require contact hours in the clinical setting in order to complete the health science program. Hospitals, nursing homes, and other clinical facilities with clinical affiliation agreements limit the number of students that can rotate and/or be on site at one time. Most facilities, including hospitals and nursing homes, limit the number of students to 15. Due to these industry limitations, it is recommended that the student ratio be 15:1 (student/teacher) based on the clinical facilities that students attend to for clinical training.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org).

### **Special Notes**

Following the completion of the Health Science Core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

A voluntary national certification is available through an exam offered by the National Health Career Association, 194 Rt. 46 East, Fairfield, NJ 07004 (973/244-0023).

### **Career and Technical Student Organization (CTSO)**

~~Florida HOSA: Future Health Professionals is the~~CTSOs are co-curricular career and technical student ~~organization(s)~~organizations providing leadership training and reinforcing specific career and technical skills. - Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. -Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Health Science career cluster.

The content includes, but is not limited to planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues. Clinical and/or work-based learning experiences are an integral part of this program.

The program is designed to prepare students for employment as Psychiatric Technicians/ Behavioral Health Technicians (SOC Code 29-5053), Health Technologists and Technicians (SOC Code 29-2099), Healthcare Support Workers (SOC Code 31-9099), and Community Health Workers (SOC Code 21-1094). Additional certification opportunities are noted at the end of the document under Special Notes.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## Program Structure

This program is a planned sequence of instruction consisting of 3 credits. The two credit Health Science Core courses (Health Science Anatomy & Physiology 8417100 and Health Science Foundations 8417110) are required as a prerequisite for this program. Secondary students completing the two required courses **will not** have to repeat the core in postsecondary.

To teach the course(s) listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the secondary ~~course~~/program structure:

| Course Number            | Course Title                                                                | Teacher Certification                                                                             | Length   | SOC Code                                 | Level | Graduation Requirement |

~~Common~~Florida's ~~Career~~ ~~Technical Core — Career Ready Practices~~Readiness Skills for CTE Programs

~~Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.~~

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- ~~12. Work productively in teams while using cultural/global competence.~~

## **Standards**

After successfully completing this program, the student will be able to perform the following:

### **Health Science Core**

- 01.0 Analyze and interpret an overview of the human body, including organization and chemical process.
- 02.0 Apply correct medical terminology relating to body structure and function within a real-world application.
- 03.0 Evaluate cells and tissues microscopically and macroscopically and relate their specialized functions.
- 04.0 Analyze the integumentary system in relation to health and disease.
- 05.0 Analyze the skeletal system in relation to health and disease.
- 06.0 Analyze the muscular system in relation to health and disease.
- 07.0 Analyze the nervous system in relation to health and disease.
- 08.0 Analyze the endocrine system in relation to health and disease.
- 09.0 Analyze the cardiovascular/circulatory system in relation to health and disease.
- 10.0 Analyze the lymphatic and immune systems in relation to health and disease.
- 11.0 Analyze the respiratory system in relation to health and disease.
- 12.0 Analyze the digestive system in relation to health and disease.
- 13.0 Analyze the urinary system in relation to health and disease.
- 14.0 Analyze both the male and female reproductive systems in relation to health and disease.
- 15.0 Identify and explain factors relating to genetics and disease.
- 16.0 Evaluate and apply the principles of disease transmission and control to real-world scenarios.
- 17.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 18.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 19.0 Demonstrate legal and ethical responsibilities.
- 20.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 21.0 Recognize and practice safety and security procedures.
- 22.0 Recognize and respond to emergency situations.
- 23.0 Recognize and practice infection control procedures.
- 24.0 Demonstrate an understanding of information technology applications in healthcare.
- 25.0 Demonstrate employability skills.
- 26.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 27.0 Apply basic math and science skills.

### **Behavioral Health Technician 3**

- 28.0 Demonstrate and implement knowledge of behavioral and mental health, mental illness, including substance use, abuse and addiction.
- 29.0 Implement crisis intervention techniques and emergency services in the behavioral and mental health setting.
- 30.0 Analyze, apply, and integrate national standards of practice in behavioral health care and human services, monitoring the implementation and effectiveness of policies and procedures for screening, assessment, and management of individuals.
- 31.0 Analyze and explain the foundations of behavioral health and the impact on community health and patient care.

- 32.0 Perform skills, examine, measure and interpret documentation related to direct care and recovery support system in various types of community and treatment settings as a member of a multidisciplinary team.
- 33.0 Provide biological, psychological and social support in conflict resolution and safety techniques.
- 34.0 Practice and perform duties, demonstrating professional responsibility and scope of practice.
- 35.0 Demonstrate an understanding of various behavioral and mental health diseases and disorders, observable signs and symptoms, and general interventions.
- 36.0 Perform skills and provide documentation related to caring for and supervising the mental health patient in various types of treatment settings.

## Florida Department of Education Student Performance Standards

### Health Science Core

The first two courses in this program are referred to as the Health Science Core and consist of the courses Health Science Anatomy & Physiology (8417100) and Health Science Foundations (8417110). **To ensure consistency whenever these courses are offered, the standards and benchmarks for the health science core have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-secondary-2425.rtf>

<https://www.fldoe.org/file/20894/health-sci-core-secondary-2627.rtf>

The two-credit core is required as a prerequisite for all secondary programs except for Practical Nursing and Pharmacy Technician. Secondary students completing the two required courses will not have to repeat the core in postsecondary. When the recommended sequence is followed, the structure allows students to complete at specified courses for employment or remain for advanced training or cross-training.

**Course Title:** Health Science Anatomy & Physiology  
**Course Number:** 8417100  
**Course Credit:** 1

#### **Course Description:**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental quality, and safety procedures will be an integral part of this course. Students will interact with materials and primary sources of data or with secondary sources of data to observe and understand the natural world. Students will develop an understanding of measurement error, and develop the skills to aggregate, interpret, and present the data and resulting conclusions. Equipment and supplies will be provided to enhance these hands-on experiences for students. A minimum of 20% of classroom time will be dedicated to laboratory experiences.

This course is part of the secondary Health Core consisting of an overview of the human body, both structurally and functionally with emphasis on the pathophysiology and transmission of disease. Medical terminology is an integral part of the course.

**The course Anatomy and Physiology (2000350), Anatomy and Physiology Honors (2000360) or Human Body Systems (8708120) may be substituted for the course Health Science Anatomy & Physiology (8417100) and their standards can be found at [www.cpalms.org](http://www.cpalms.org).**

The course Health Science Anatomy & Physiology (8417100) is designated as an equally rigorous (EQ) science credit.

**Course Title:** Health Science Foundations  
**Course Number:** 8417110  
**Course Credit:** 1

**Course Description:**

This course is part of the Secondary Health Core designed to provide the student with an in-depth knowledge of the health care system and associated occupations. Emphasis is placed on communication and interpersonal skills, use of technology, ethics and the development of critical thinking and problem-solving skills. Students may shadow professionals throughout the course.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Behavioral Health Technician 3  
**Course Number:** 8701010  
**Course Credit:** 1

**Course Description:**

Students investigate concepts and interventions in behavioral and mental health. This course is designed to provide an integrated cross-trained foundation and practical experience in behavioral and social sciences. The content includes, but is not limited to, basic psychopharmacology, medical terminology, electronic medical records and documentation, patient teaching and education, wellness and disease concepts, mental illness, growth and development, diseases and disorders including anxiety, bipolar disorder, depression, Alzheimer's disease, dementia, personality disorders, schizophrenia, and psychosis. Additional topics include emergency and crisis intervention, suicide prevention, intellectual developmental disabilities, substance abuse, group therapy, stress management, employability skills, safety and security issues, legal and ethical concepts, statistical measurements, neurological and psychological applications, therapeutic communication, and assessment tools in behavioral health.

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                                                              |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.0                         | Demonstrate and implement knowledge of behavioral and mental health, mental illness, including substance use, abuse and addiction. The student will be able to:                                                                                                              |
| 28.01                        | Define, discuss, and differentiate behavioral health, mental health, social and psychological behaviors.                                                                                                                                                                     |
| 28.02                        | Create a flyer classifying mental illnesses and their contributing factors.                                                                                                                                                                                                  |
| 28.03                        | Evaluate and explain substance use, misuse, abuse, dependency and addiction, co-occurring disorders, and comorbidity.                                                                                                                                                        |
| 28.04                        | Design a poster examining and categorizing information, data and fact sheets from The American Psychiatric Association, Diagnostic and Statistical Manual of Mental Disorders (DSM-5).                                                                                       |
| 28.05                        | Display awareness of emerging trends and current issues in behavioral and mental health - i.e., Healthy People 2030 Mental Health Objectives, Office of Disease Prevention and Health Promotion (ODPHP) - <a href="http://www.healthypeople.gov">www.healthypeople.gov</a> . |
| 28.06                        | Apply and implement knowledge of Maslow's hierarchy of needs, psychological and physical responses to stress, ego defense mechanisms, stages of grief, and stages of growth and development while caring for the mental health patient.                                      |
| 28.07                        | Facilitate and implement knowledge of cultural and spiritual considerations while caring for the mental health patient.                                                                                                                                                      |
| 28.08                        | Analyze, recognize and explain tools to managing personal bias, personal cultural identity, diversity, stereotypes, and skills to avoid and respond to micro-aggressions.                                                                                                    |
| 28.09                        | Demonstrate and apply knowledge of the 10 classes of drugs with Substance-Related and Addictive Disorders including prevalence, risks, consequences, intoxication, and withdrawal: <ul style="list-style-type: none"> <li>• Alcohol</li> <li>• Caffeine</li> </ul>           |

**CTE Standards and Benchmarks**

- Cannabis
- Hallucinogens
- Inhalants
- Opioids
- Sedatives, Hypnotics and Anxiolytics
- Stimulants
- Tobacco
- Other - synthetic drugs and bath salts

28.10 Analyze and defend several theories about what causes addiction or substance dependence and group them into the following four categories: Clinical, Social, Medical/Biological, and Biopsychosocial.

29.0 Implement crisis intervention techniques and emergency services in the behavioral and mental health setting. The student will be able to:

29.01 Discuss methods of suicide and suicide ideation, recognizing and comparing self-harm behaviors.

29.02 Demonstrate knowledge of restraint policies, suicide precautions, and no harm contract and limitations.

29.03 Demonstrate vigilance in identifying clues of a patient's suicidal intent; both direct and indirect and notify team member in charge.

29.04 Classify and demonstrate knowledge of risk factors for suicide and discuss suicide assessment.

29.05 Access plan of action and follow facility procedures for suicidal patient, potential homicide, and emergency medical services.

29.06 Discuss and summarize the Five-Phase Aggression Cycle: triggering phase, escalation phase, crisis phase, recovery phase, and post crisis phase.

29.07 Evaluate behavior and remain with individual who is experiencing panic anxiety.

29.08 Utilize reality-oriented approach, active listening, and attend to immediate needs.

29.09 Assess behavioral patterns and demonstrate vigilance in identifying behaviors that will initiate in increase in agitation, notifying team members, if observed.

29.10 Discuss emergency and crisis intervention measures for Inpatient setting including: show of force, locked seclusion, use of prn medications, and seclusion and restraints.

29.11 Demonstrate knowledge of facility's crisis intervention policy and crisis team to be notified if de-escalation techniques fail, and patient escalates to physical aggression.

29.12 Manage and assist with reintegration of patient to environment when stabilized and is able to participate.

29.13 Perform room searches, practice safety measures, and supervise to protect the patient; removing all potentially harmful objects and monitoring them closely during mealtime, medication administration, bathroom use, and activities.

29.14 Display and communicate that patient has value, encouraging patient to express honest feelings, including anger.

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                                                              |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 29.15                        | Demonstrate different levels of suicidal precautions as needed including 1:1 contact and constant visual observation, or every 15-minute checks and document.                                                                                                                |
| 29.16                        | Demonstrate knowledge of notifying the healthcare provider in charge or emergency services if patient communicates suicide plan or describes means to carry out suicide plan.                                                                                                |
| 29.17                        | Enforce policies and procedures related to aggressive and destructive behaviors including establishing an understanding of acceptable behaviors with the patient and enforcing rules for unacceptable behaviors.                                                             |
| 29.18                        | Demonstrate knowledge of de-escalation techniques: calm voice, reduce stimulation, verbal redirect, time out (quiet time-open seclusion) relaxation techniques, distract with positive activity, discuss alternative strategies etc.                                         |
| 30.0                         | Analyze, apply, and integrate national standards of practice in behavioral health care and human services, monitoring the implementation and effectiveness of policies and procedures for screening, assessment, and management of individuals. The student will be able to: |
| 30.01                        | Assess and improve the accuracy of the identification of individuals when providing care, treatment or services.                                                                                                                                                             |
| 30.02                        | Measure and validate patient safety goals to improve the safety of using medications and high-risk interventions.                                                                                                                                                            |
| 30.03                        | Evaluate and formulate a care plan following The Joint Commission national standards (National Patient Safety Goals).                                                                                                                                                        |
| 30.04                        | Compare, contrast, and critique a behavioral health scenario promoting equity and diversity, applying and implementing culturally and linguistically appropriate strategies and services.                                                                                    |
| 30.05                        | Examine and differentiate the process of psychopharmacology and pharmacological aspects of patient care.                                                                                                                                                                     |
| 30.06                        | Supervise and document patient medication administration, reporting side effects, adverse reactions, or allergies.                                                                                                                                                           |
| 30.07                        | Encourage patient to take prescribed medication; facilitating understanding of patient's rights to taking or refusing medication.                                                                                                                                            |
| 30.08                        | Demonstrate knowledge of 6 Rights of Medication Administration (right medication, right dose, right patient, right time, right route, and right documentation) and policies.                                                                                                 |
| 30.09                        | Collect and analyze data entry into electronic medical records platform, verifying accuracy of patient records and information.                                                                                                                                              |
| 30.10                        | Determine patient's medication history from records or family in relation to re-allergic reactions.                                                                                                                                                                          |
| 30.11                        | Assemble information about properties of medications being administered, their potential side effects and drug interactions.                                                                                                                                                 |
| 30.12                        | Assure adequate supply and safeguard storage of medications to prevent overdose, ensuring patient safety.                                                                                                                                                                    |
| 31.0                         | Analyze and explain the foundations of behavioral health and the impact on community health and patient care. The student will be able to:                                                                                                                                   |
| 31.01                        | Develop a working knowledge of the Substance Abuse and Mental Health Services Administration (SAMHSA) definition of recovery, to include the recovery process, stages of change and recovery capital.                                                                        |
| 31.02                        | Develop a working knowledge of the holistic approach to recovery and wellness, which includes physical, mental, spiritual and social wellness.                                                                                                                               |

| CTE Standards and Benchmarks |                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 31.03                        | Develop a basic understanding of the signs and symptoms of common mental health conditions, substance use disorders and co-occurring disorders.                                                                                                                                                                                                                                                                                                               |
| 31.04                        | Explain the core principles of trauma-informed care and how to provide services that reflect trauma-informed care principles and strategies.                                                                                                                                                                                                                                                                                                                  |
| 31.05                        | Recognize and respect the individual's personal values, cultural and spiritual beliefs, and how these play a role in achieving whole-health goals.                                                                                                                                                                                                                                                                                                            |
| 31.06                        | Write a clear and well-organized research paper on the psychological foundations of behavior and suicide prevention, incorporating information from sources such as: National Alliance on Mental Illness (NAMI), National Association for Behavioral Healthcare (NABH), National Institute of Mental Health (NIMH), National Suicide Prevention Lifeline, National Council for Mental Wellbeing, Autism Speaks.org, and WRAP (Wellness Recovery Action Plan). |
| 31.07                        | Demonstrate a working knowledge of relevant rights and laws to ensure the individual's rights are maintained.                                                                                                                                                                                                                                                                                                                                                 |
| 31.08                        | Develop and provide patient education and information on various resources and support groups available for the mentally ill, substance using or addictive patient, and family members.                                                                                                                                                                                                                                                                       |
| 31.09                        | Demonstrate and understand the principles of the 12-step program model for recovery, the 12 steps and traditions, anonymity, key slogans, and use of sponsor.                                                                                                                                                                                                                                                                                                 |
| 31.10                        | Demonstrate and discuss knowledge of local support groups, community mental health centers and developmental-disabled centers that provide support and assistance to patients and their families including AA (Alcoholics Anonymous), NA (Narcotics Anonymous), MARA (Medication Assisted Recovery Anonymous), and OA (Overeaters Anonymous).                                                                                                                 |
| 31.11                        | Conduct individual, group and family presentations and discussions to facilitate patient recovery and wellness, communicating clear goals, ground rules, expectations, and recognizing group dynamics and processes.                                                                                                                                                                                                                                          |
| 31.12                        | Display awareness of demographics of group participants (gender, culture, age, socioeconomic status); awareness of participant's cognitive and developmental stages, readiness for education on subject and comprehension ability.                                                                                                                                                                                                                            |
| 31.13                        | Identify different kinds of human trafficking, including child trafficking, and steps taken to avoid unsafe situations and to prevent exploitation.                                                                                                                                                                                                                                                                                                           |
| 31.14                        | Demonstrate and practice effective communication techniques (verbal and nonverbal) and use of possible role play, skits, handouts and creative supplements of content to be discussed or presented, assuring client safety and knowing possible "triggers".                                                                                                                                                                                                   |
| 32.0                         | Perform skills, examine, measure and interpret documentation related to direct care and recovery support system in various types of community and treatment settings as a member of a multidisciplinary team. The student will be able to:                                                                                                                                                                                                                    |
| 32.01                        | Orient individuals receiving services to the program.                                                                                                                                                                                                                                                                                                                                                                                                         |
| 32.02                        | Conduct initial screenings or other interviews to inform assessments.                                                                                                                                                                                                                                                                                                                                                                                         |
| 32.03                        | Participate as a member of the individual's treatment team and assist in implementation of treatment plans.                                                                                                                                                                                                                                                                                                                                                   |
| 32.04                        | Directly observe and support or redirect behaviors of individual's receiving services.                                                                                                                                                                                                                                                                                                                                                                        |
| 32.05                        | Document and communicate observations of individuals to the treatment team.                                                                                                                                                                                                                                                                                                                                                                                   |

| CTE Standards and Benchmarks |                                                                                                                                                                                                                           |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 32.06                        | Teach activities of daily living, including self-care, budgeting, chores, daily schedules, etc.                                                                                                                           |
| 32.07                        | Construct a spreadsheet outlining the chain of command, multidisciplinary roles, and scope of practice of the multidisciplinary team at various treatment centers.                                                        |
| 32.08                        | Assess stress management and incorporate effective techniques in the recovery and rehabilitation process.                                                                                                                 |
| 32.09                        | Organize, supervise and/or encourage participation in social, educational, or recreational activities that enhance the individual's interpersonal skills and social relationships.                                        |
| 32.10                        | Lead prescribed psychoeducational individual or group sessions as part of established procedures and in accord with the treatment plan.                                                                                   |
| 32.11                        | Demonstrate ability to function independently without constant supervision, showing respect for coworkers and following and interpreting the organizational chart.                                                        |
| 32.12                        | Engage and assist individuals to move through the recovery process and develop recovery capital.                                                                                                                          |
| 32.13                        | Assist and motivate individuals to access and successfully navigate the array of community resources and recovery support services available to achieve and maintain recovery.                                            |
| 32.14                        | Maintain own proper physical, emotional, and mental health through application of proper body mechanics, use of healthy coping mechanisms, ability to have self-awareness skills and seek healthy support when necessary. |
| 32.15                        | Collaborate with other team members in proper application of patient assessment, planning, implementation and evaluation; functioning in various roles and capacities and promoting healthy interpersonal relationships.  |
| 32.16                        | Relate unit problems and needs to the team leader; report violations of patients and assist in issuing consequences.                                                                                                      |
| 32.17                        | Support hospital and residential policies and procedures as well as the procedure manual for the unit.                                                                                                                    |
| 32.18                        | Participate in the planning, decision-making through staff meetings and professional development.                                                                                                                         |
| 33.0                         | Provide biological, psychological and social support in conflict resolution and safety techniques. The student will be able to:                                                                                           |
| 33.01                        | Discuss family roles, their significance to health, and the impact on their physical and mental status.                                                                                                                   |
| 33.02                        | Recognize and respond to conflicts using positive conflict resolution strategies.                                                                                                                                         |
| 33.03                        | Recognize and respond to signs of potential crisis by using de-escalation techniques and/or other crisis prevention and intervention strategies.                                                                          |
| 33.04                        | Monitor and maintain the environment of care to ensure safety of the individual, yourself and coworkers.                                                                                                                  |
| 33.05                        | Ensure quality patient care by developing good rapport while displaying empathy, respect, and nonjudgmental attitude towards the patient's needs.                                                                         |
| 33.06                        | Respond to patient and family emotional needs.                                                                                                                                                                            |
| 33.07                        | Articulate and portray knowledge of multicultural considerations while communicating with patients, families, and staff.                                                                                                  |

**CTE Standards and Benchmarks**

|       |                                                                                                                                                                                                                                                                                                           |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 33.08 | Provide positive feedback for acceptable behaviors while reinforcing that others care.                                                                                                                                                                                                                    |
| 33.09 | Cultivate simple, clear and direct communication techniques, which enable an effective exchange of information, ideas, feelings, and trust.                                                                                                                                                               |
| 33.10 | Investigate and analyze causes of mass shootings in schools and how they can be prevented.                                                                                                                                                                                                                |
| 33.11 | Design a video, film or presentation explaining and/or illustrating the risks of vaping, marijuana, opioid, prescription drug misuse, alcohol consumption, drug addiction and the physical effects on the human body.                                                                                     |
| 33.12 | Compare and contrast between direct and open-ended questioning, verbal and non-verbal cues, therapeutic communication techniques vs. nontherapeutic communication blocks, and effective vs. non-effective communication techniques.                                                                       |
| 34.0  | Practice and perform duties, demonstrating professional responsibility and scope of practice. The student will be able to:                                                                                                                                                                                |
| 34.01 | Maintain confidentiality in accordance with federal and state laws.                                                                                                                                                                                                                                       |
| 34.02 | Document services in accordance with agency policy and procedure.                                                                                                                                                                                                                                         |
| 34.03 | Perform all duties in accordance with federal, state, and local laws, rules and regulations.                                                                                                                                                                                                              |
| 34.04 | Perform all duties in accordance with published codes of ethics, professional conduct and scope of service.                                                                                                                                                                                               |
| 34.05 | Provide services without discrimination or preference based on age, ethnicity, culture, race, disability, gender identify, religion, sexual orientation or socio-economic status.                                                                                                                         |
| 34.06 | Understand, compare and contrast the scope of practice for psychiatric technicians including behavioral health technicians and mental health technicians.                                                                                                                                                 |
| 34.07 | Seek and follow supervisory guidance as necessary and appropriate to completely perform assigned duties.                                                                                                                                                                                                  |
| 34.08 | Demonstrate a working knowledge of and use personal safety and self-care strategies.                                                                                                                                                                                                                      |
| 34.09 | Identify and apply steps to minimize the harmful effects of stereotypes and the stigma associated with mental illness.                                                                                                                                                                                    |
| 34.10 | Compare and contrast the scope of practice for healthcare support workers, health technologists and technicians, community health workers, mental health counselors, healthcare social workers, substance abuse and behavioral disorder counselors, and mental health and substance abuse social workers. |
| 34.11 | Produce an informational flyer directed toward secondary students recommending resources to help mental health in schools.                                                                                                                                                                                |
| 34.12 | Explore and evaluate behavioral health careers including careers in administration, education, human services, counseling, casework, rehabilitation, coordination, and crisis intervention.                                                                                                               |
| 34.13 | Establish and maintain a professional atmosphere for a safe and therapeutic environment, including respect for appropriate boundaries, use of touch, distance zones, setting consistent limits especially with manipulative behavior, and reporting violations and exploitive behaviors.                  |

**CTE Standards and Benchmarks**

|       |                                                                                                                                                                                                                                                                                                                                                                                  |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 34.14 | Categorize intellectual developmental disabilities and their impact on the nervous system, sensory system, metabolism, development, and degenerative disorders.                                                                                                                                                                                                                  |
| 34.15 | Teach patients, incorporating relevant and up-to-date educational information to ensure comprehension of assessment tools, wellness and disease concepts, causes of diseases and disorders, and interventions in behavioral health.                                                                                                                                              |
| 34.16 | Participate in ongoing professional educational activities to enhance practice knowledge and work performance.                                                                                                                                                                                                                                                                   |
| 35.0  | Demonstrate an understanding of various behavioral and mental health diseases and disorders, observable signs and symptoms, and general interventions. The student will be able to:                                                                                                                                                                                              |
| 35.01 | Discuss observable signs and symptoms and demonstrate general interventions to be implemented for anxiety, bipolar, eating disorders, depression and suicide, neurodevelopmental disorders including autism spectrum disorder, and neurocognitive disorders including dementia.                                                                                                  |
| 35.02 | Discuss observable signs and symptoms and demonstrate general interventions to be implemented for Obsessive Compulsive Disorder (OCD), psychosis, schizophrenia, Alzheimer's disease, personality disorders, substance use and addictive disorders, and trauma and stressor related disorders.                                                                                   |
| 35.03 | Investigate anatomical and physiological concepts and action of the prefrontal cortex in mastering habits and managing pain.                                                                                                                                                                                                                                                     |
| 35.04 | Demonstrate knowledge of pharmacology treatment, side effects, and be able to identify the patient's adverse reactions.                                                                                                                                                                                                                                                          |
| 35.05 | Examine and critique prevention programs including drug education programs, health and wellness programs, stress management, community campaigns, and parenting programs.                                                                                                                                                                                                        |
| 35.06 | Examine and evaluate drugs that can alter functions enabling focus, control impulses, form flexible plans, use social intelligence and maintain motivation: stimulants, anxiety drugs, sleeping drugs, antidepressants, bipolar disorder drugs, anti-craving drugs, pain regulation, reinforcement, mental control, and habit-forming drugs.                                     |
| 35.07 | Validate and demonstrate knowledge of various types of therapies and its applications: complementary therapy, integrative therapy, and electroconvulsive therapy.                                                                                                                                                                                                                |
| 35.08 | Identify and classify the spectrum of interventions and treatment for mental health problems and the types of delivery of care in the stabilization and rehabilitation of the mental health patient.                                                                                                                                                                             |
| 35.09 | Display knowledge and explain the process of recovery and relapse prevention.                                                                                                                                                                                                                                                                                                    |
| 35.10 | Integrate knowledge of early intervention programs and their applications.                                                                                                                                                                                                                                                                                                       |
| 35.11 | Categorize and display knowledge of Individual therapy, group therapy, cognitive behavioral therapy, family therapy, education groups, support groups, and self-help groups.                                                                                                                                                                                                     |
| 35.12 | Design a case scenario modeling the differences between an involuntary and voluntary admission.                                                                                                                                                                                                                                                                                  |
| 35.13 | Apply and integrate knowledge of different types of treatment and support including: long term care facilities, residential facilities, clinics, mobile outreach units, partial hospitalization programs, community health centers and developmental disability centers, and inpatient hospitalization (crisis intervention, detoxification, stabilization and case management). |
| 36.0  | Perform skills and provide documentation related to caring for and supervising the mental health patient in various types of treatment settings. The student will be able to:                                                                                                                                                                                                    |

**CTE Standards and Benchmarks**

|       |                                                                                                                                                                                                                                                                                                   |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 36.01 | Apply legal and ethical concepts in decision making and examine safety and security issues to protect the patient.                                                                                                                                                                                |
| 36.02 | Demonstrate HIPAA, confidentiality, legal, and ethical considerations while caring for the mental health patient.                                                                                                                                                                                 |
| 36.03 | Analyze and synthesize information from multiple sources comparing and contrasting neurological and psychological applications.                                                                                                                                                                   |
| 36.04 | Demonstrate correct documentation procedures and guidelines in regard to format, proper grammar and spelling, appropriate use of medical abbreviations, medical terminology, and types of charting and electronic medical records utilized at different facilities.                               |
| 36.05 | Conduct a project that requires application of statistical measurements and illustration of data concerning patient safety protocols.                                                                                                                                                             |
| 36.06 | Perform a verbal report and accurately communicate to the healthcare team leader changes in patient conditions, vital signs, mood, behavior and/or recent or unreported events.                                                                                                                   |
| 36.07 | Categorize and evaluate various assessment tools in behavioral health.                                                                                                                                                                                                                            |
| 36.08 | Optimize group therapy sessions applying effective therapeutic communication and stress management skills.                                                                                                                                                                                        |
| 36.09 | Provide safety and security measures for inpatient hospitalization including: crisis intervention, contraband check, room search, elopement precautions, frequent monitoring, suicide and homicide precautions.                                                                                   |
| 36.10 | Compare and contrast subjective and objective observations.                                                                                                                                                                                                                                       |
| 36.11 | Demonstrate observation and documentation skills of patient's verbal and nonverbal communication, changes in thought processes, mood, and behavior.                                                                                                                                               |
| 36.12 | Practice and apply knowledge of infection control and blood borne pathogens on the mental health unit and while caring for the mental health patient.                                                                                                                                             |
| 36.13 | Provide safety and security measures for outpatient and residential facilities and display knowledge of outpatient emergency procedures.                                                                                                                                                          |
| 36.14 | Assess, assist, and document patient's vital signs, ADL's (activities of daily living: hygiene, bathing, dressing, nutrition and elimination); group attendance, and interactions with staff, patients, and visitors.                                                                             |
| 36.15 | Recognize and report signs of child abuse and neglect, domestic violence, and human trafficking; compare most recent state and federal laws and interpret findings.                                                                                                                               |
| 36.16 | Demonstrate practical skills in First Aid and CPR, HIV/AIDS and Bloodborne Pathogens, Safety, Ethics, Confidentiality and Patient's Rights.                                                                                                                                                       |
| 36.17 | Demonstrate the ability to observe and document physical signs and symptoms of patient responses to medications, drug use or change in condition and change in vital signs.                                                                                                                       |
| 36.18 | Verify and chart events accurately, writing appropriate time, sequence, and place.                                                                                                                                                                                                                |
| 36.19 | Participate and demonstrate competency in mandatory abuse reporting, verbal de-escalation techniques, identification and treatment of substance abuse and mental health disorders, basic psychopharmacology and side effects of medications, and clinical risk and client competency assessments. |
| 36.20 | Collaborate with members of a healthcare team in the clinical setting to coordinate and provide patient care.                                                                                                                                                                                     |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Florida Standards for English Language Development (ELD)**

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [SALA@fldoe.org](mailto:SALA@fldoe.org).

### **Special Notes**

Following the completion of the Health Science Core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

This program requires a clinical component of approximately 50% the length of the course following the health science core. A portion of the clinical experience can be achieved through simulation when appropriate.

Upon successful completion of the program, students may seek certification as a Certified Behavioral Health Technician (CBHT) through The Florida Certification Board (FCB). Please refer to the FCB for requirements, policies, and procedures at <https://flcertificationboard.org/>

In addition, program completers may seek certification as a Certified Community Health Worker and Certified Healthcare Support Specialist through certification boards and agencies offering the industry certifications.

### **Career and Technical Student Organization (CTSO)**

Florida HOSA: Future Health Professionals is the CTSOs are co-curricular career and technical student organization organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular course or a modified course. If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete a Career and Technical Education (CTE) course. The student should work on different competencies and new applications of competencies each year toward completion of the CTE course. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number for eligible students with disabilities.

**Purpose**

The purpose of this course is to assist students in making informed decisions regarding their future academic and occupational goals and to provide information regarding careers in the Health Science career cluster.

The content includes but is not limited to a broad overview of the Health Science career cluster, including terminology, careers, history, required skills, and technologies associated with each pathway in the Health Science career cluster.

Instruction and learning activities are provided in a laboratory setting using hands-on experiences with the equipment, materials and technology appropriate to the course content and in accordance with current practices.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Course Structure**

This program is a planned sequence of instruction consisting of 1 course.

The length of this course is one semester. It may be offered for two semesters when appropriate. When offered for one semester, it is recommended that it be at the exploratory level and more in-depth when offered for two semesters.

To teach the course listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the course/[program](#) structure:

| Course Number | Course Title                                   | Teacher Certification                                             | Length   |
|---------------|------------------------------------------------|-------------------------------------------------------------------|----------|
| 8709350       | Introduction to Health Science Career Pathways | ANY HEALTH OCCUP G *<br>( <a href="#">See DOE approved list</a> ) | Semester |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate an understanding of the Therapeutic Services career pathway.
- 02.0 Demonstrate an understanding of the Diagnostic Services career pathway.
- 03.0 Demonstrate an understanding of the Health Informatics career pathway.
- 04.0 Demonstrate an understanding of the Support Services career pathway.
- 05.0 Demonstrate an understanding of the Biotechnology Research and Development career pathway.
- 06.0 Apply leadership and communication skills.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Introduction to Health Science Career Pathways  
**Course Number:** 8709350  
**Course Length:** Semester

**Course Description:**

Beginning with a broad overview of the Health Science career cluster, students are introduced to the terminology, careers, history, required skills, and technologies associated with each pathway in the Health Science career cluster. Additionally, they will be provided with opportunities to acquire and demonstrate beginning leadership skills.

| CTE Standards and Benchmarks |                                                                                                                                                                                                  |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                         | Demonstrate an understanding of the Therapeutic Services career pathway. The student will be able to:                                                                                            |
| 01.01                        | Define and use proper terminology associated with the Therapeutic Services career pathway.                                                                                                       |
| 01.02                        | Explore a variety of careers in the Therapeutic Services career pathway, including educational requirements and salary expectations, such as EMS; Nursing; Dentistry; Pharmacy; Sports Medicine. |
| 01.03                        | Identify common characteristics of the careers in the Therapeutic Services pathway.                                                                                                              |
| 01.04                        | Identify skills and equipment used in Therapeutic Service careers.                                                                                                                               |
| 01.05                        | Perform lab activities that are relevant to each career that is being explored.                                                                                                                  |
| 02.0                         | Demonstrate an understanding of the Diagnostic Services career pathway. The student will be able to:                                                                                             |
| 02.01                        | Define and use proper terminology associated with the Diagnostic Services career pathway.                                                                                                        |
| 02.02                        | Explore a variety of careers in the Diagnostic Services career pathway.<br>Suggested careers to focus on: Medical Laboratory Services; Radiology; Ophthalmology.                                 |
| 02.03                        | Identify common characteristics of the careers in the Diagnostic Services career pathway.                                                                                                        |
| 02.04                        | Identify skills required to successfully enter any career in the Diagnostic Services career pathway.                                                                                             |
| 02.05                        | Perform lab activities related to careers being explored for example blood glucose testing, blood typing, and vision testing.                                                                    |
| 03.0                         | Demonstrate an understanding of the Health Informatics career pathway. The student will be able to:                                                                                              |
| 03.01                        | Define and use proper terminology associated with the Health Informatics career pathway.                                                                                                         |

**CTE Standards and Benchmarks**

|       |                                                                                                                                                                       |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.02 | Explore a variety of careers in the Health Informatics career pathway.                                                                                                |
| 03.03 | Explore the careers available in the Health Informatics; Medical Coding/Biller; Medical Office Administration.                                                        |
| 03.04 | Identify common characteristics of the careers in the Health Informatics career pathway.                                                                              |
| 03.05 | Identify skills required to successfully enter any career in the Health Informatics career pathway.                                                                   |
| 03.06 | Perform activities related to health informatics careers such as evaluating medical records or bills, office reception and support.                                   |
| 04.0  | Demonstrate an understanding of the Support Services career pathway. The student will be able to:                                                                     |
| 04.01 | Define and use proper terminology associated with the Support Services career pathway.                                                                                |
| 04.02 | Explore a variety of careers in the Support Services career pathway. Suggested careers: dietary services; central supply; social services; environmental services     |
| 04.03 | Identify common characteristics of the careers in the Support Services career pathway.                                                                                |
| 04.04 | Identify skills required to successfully enter any career in the Support Services career pathway.                                                                     |
| 04.05 | Perform lab skills related to covered careers such as diet plan design and housekeeping skills.                                                                       |
| 05.0  | Demonstrate an understanding of the Biotechnology Research and Development career pathway. The student will be able to:                                               |
| 05.01 | Define and use proper terminology associated with the Biotechnology Research and Development career pathway.                                                          |
| 05.02 | Explore a variety of careers in the Biotechnology Research and Development career pathway.<br>Suggested careers: Biomedical Engineering and Biomedical Research.      |
| 05.03 | Identify skills required to successfully enter any career in the Biotechnology Research and Development career pathway.                                               |
| 05.04 | Perform lab skills related to covered career, for example: microbiology labs; investigating antisepsis procedures; DNA extraction lab.                                |
| 05.05 | Explore the role of research in medical advancements and discoveries that promote wellness for example development of vaccines and discovery of the structure of DNA. |
| 06.0  | Apply leadership and communication skills. The student will be able to:                                                                                               |
| 06.01 | Increase awareness of leadership opportunities through professional organizations such as Career Technical Student Organizations (CTSOs).                             |
| 06.02 | Identify the characteristics of effective leadership.                                                                                                                 |
| 06.03 | Demonstrate effective communication skills.                                                                                                                           |

**CTE Standards and Benchmarks**

06.04 Demonstrate an understanding of how information technology is used in health care.

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Florida Standards for English Language Development (ELD)

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.[ELL](#).SI.1-4

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. –For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL’s need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org) [SALA@fldoe.org](mailto:SALA@fldoe.org).

### Special Notes

The intended progression for the Health Science Middle School courses is Introduction to Health Science Career Pathways (8709350 & 8709360), Orientation to Health Science Professions (8400110) and Exploration of Health Science Professions (8400310 & 8400210). By offering the middle school courses in the intended progression, each course increases in complexity, rigor and skill level as appropriate.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### Accommodations

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student’s Individual Educational Plan (IEP) or 504 plan or postsecondary student’s accommodations’ plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional

methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

**Purpose**

The purpose of this course is to assist students in making informed decisions regarding their future academic and occupational goals and to provide information regarding careers in the Health Science career cluster.

The content includes but is not limited to a broad overview of the Health Science career cluster, including terminology, careers, history, required skills, and technologies associated with each pathway in the Health Science career cluster.

Instruction and learning activities are provided in a laboratory setting using hands-on experiences with the equipment, materials and technology appropriate to the course content and in accordance with current practices.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Course Structure**

This program is a planned sequence of instruction consisting of 1 course.

The length of this course is one semester. It may be offered for two semesters when appropriate. When offered for one semester, it is recommended that it be at the exploratory level and more in-depth when offered for two semesters.

To teach the course listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the course/[program](#) structure:

| Course Number | Course Title                                                       | Teacher Certification                                             | Length   |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate an understanding of the Therapeutic Services career pathway.
- 02.0 Demonstrate an understanding of the Diagnostic Services career pathway.
- 03.0 Demonstrate an understanding of the Health Informatics career pathway.
- 04.0 Demonstrate an understanding of the Support Services career pathway.
- 05.0 Demonstrate an understanding of the Biotechnology Research and Development career pathway.
- 06.0 Apply leadership and communication skills.

~~Listed below are the standards that~~ Career and Education Planning [these must be met to satisfy the requirements of Section 1003.4156, Florida Statutes.]

07.0 Explain his or her career interests, skills and values.

~~07.0 Describe the influences that societal, economic, and technological changes have on employment trends and future training.~~

~~08.0 Develop skills to locate, evaluate, occupations and interpret career information.~~

~~09.0 Identify and demonstrate processes for making short and long term goals.~~

~~08.0 Demonstrate employability skills such as working industries in his or her region.~~

~~10.0 Describe a group, problem-solving and organizational skills, and the importance variety of entrepreneurship.~~

~~11.0 Understand the relationship between educational achievement and career choices/postsecondary options.~~

~~12.0 09.0 Identify a career cluster and related pathways through an interest assessment that match career and education goals.~~

~~13.0 Develop a career and education plan that includes short and long term goals, high school program of study, and postsecondary/career goals.~~

~~10.0 Demonstrate knowledge of technology and its application in career fields/clusters. Create a personalized career and academic plan.~~

~~14.0~~

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Introduction to Health Science Career Pathways and Career Planning  
**Course Number:** 8709360  
**Course Length:** Semester

**Course Description:**

Beginning with a broad overview of the Health Science career cluster, students are introduced to the terminology, careers, history, required skills, and technologies associated with each pathway in the Health Science career cluster. Additionally, they will be provided with opportunities to acquire and demonstrate beginning leadership skills.

| <b>CTE Standards and Benchmarks</b> |                                                                                                                                                                                                  |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                                | Demonstrate an understanding of the Therapeutic Services career pathway. The student will be able to:                                                                                            |
| 01.01                               | Define and use proper terminology associated with the Therapeutic Services career pathway.                                                                                                       |
| 01.02                               | Explore a variety of careers in the Therapeutic Services career pathway, including educational requirements and salary expectations, such as EMS; Nursing; Dentistry; Pharmacy; Sports Medicine. |
| 01.03                               | Identify common characteristics of the careers in the Therapeutic Services pathway.                                                                                                              |
| 01.04                               | Identify skills and equipment used in Therapeutic Service careers.                                                                                                                               |
| 01.05                               | Perform lab activities that are relevant to each career that is being explored.                                                                                                                  |
| 02.0                                | Demonstrate an understanding of the Diagnostic Services career pathway. The student will be able to:                                                                                             |
| 02.01                               | Define and use proper terminology associated with the Diagnostic Services career pathway.                                                                                                        |
| 02.02                               | Explore a variety of careers in the Diagnostic Services career pathway.<br>Suggested careers to focus on: Medical Laboratory Services; Radiology; Ophthalmology.                                 |
| 02.03                               | Identify common characteristics of the careers in the Diagnostic Services career pathway.                                                                                                        |
| 02.04                               | Identify skills required to successfully enter any career in the Diagnostic Services career pathway.                                                                                             |
| 02.05                               | Perform lab activities related to careers being explored for example blood glucose testing, blood typing, and vision testing.                                                                    |
| 03.0                                | Demonstrate an understanding of the Health Informatics career pathway. The student will be able to:                                                                                              |
| 03.01                               | Define and use proper terminology associated with the Health Informatics career pathway.                                                                                                         |

|       |                                                                                                                                                                       |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.02 | Explore a variety of careers in the Health Informatics career pathway.                                                                                                |
| 03.03 | Explore the careers available in the Health Informatics; Medical Coding/Biller; Medical Office Administration.                                                        |
| 03.04 | Identify common characteristics of the careers in the Health Informatics career pathway.                                                                              |
| 03.05 | Identify skills required to successfully enter any career in the Health Informatics career pathway.                                                                   |
| 03.06 | Perform activities related to health informatics careers such as evaluating medical records or bills, office reception and support.                                   |
| 04.0  | Demonstrate an understanding of the Support Services career pathway. The student will be able to:                                                                     |
| 04.01 | Define and use proper terminology associated with the Support Services career pathway.                                                                                |
| 04.02 | Explore a variety of careers in the Support Services career pathway. Suggested careers: dietary services; central supply; social services; environmental services.    |
| 04.03 | Identify common characteristics of the careers in the Support Services career pathway.                                                                                |
| 04.04 | Identify skills required to successfully enter any career in the Support Services career pathway.                                                                     |
| 04.05 | Perform lab skills related to covered careers such as diet plan design and housekeeping skills.                                                                       |
| 05.0  | Demonstrate an understanding of the Biotechnology Research and Development career pathway. The student will be able to:                                               |
| 05.01 | Define and use proper terminology associated with the Biotechnology Research and Development career pathway.                                                          |
| 05.02 | Explore a variety of careers in the Biotechnology Research and Development career pathway. Suggested careers: Biomedical Engineering and Biomedical Research.         |
| 05.03 | Identify skills required to successfully enter any career in the Biotechnology Research and Development career pathway.                                               |
| 05.04 | Perform lab skills related to covered career, for example: microbiology labs; investigating antisepsis procedures; DNA extraction lab.                                |
| 05.05 | Explore the role of research in medical advancements and discoveries that promote wellness for example development of vaccines and discovery of the structure of DNA. |
| 06.0  | Apply leadership and communication skills. The student will be able to:                                                                                               |
| 06.01 | Increase awareness of leadership opportunities through professional organizations such as Career Technical Student Organizations (CTSOs).                             |
| 06.02 | Identify the characteristics of effective leadership.                                                                                                                 |
| 06.03 | Demonstrate effective communication skills.                                                                                                                           |
| 06.04 | Demonstrate an understanding of how information technology is used in health care.                                                                                    |

~~Listed below are the standards that~~ Career and Education Planning [these must be met to satisfy the requirements of Section 1003.4156, Florida Statutes;

The student will be able to:

1

## Standards and Benchmarks

07.0 Explain his or her career interests, skills and values. The student will be able to:

07.01 Describe his or her career interests based on a career interest assessment, personal experience, career informational interviews, research and/or reflection.

~~07.02 Describe the influences that societal, economic, and technological changes have on employment trends and future training.~~ Describe what career-related skills are his or her current strengths or could become strengths in the future with practice and training based on a career skill assessment, personal experience and/or reflection.

~~08.02 Develop skills to locate, evaluate, and interpret career information.~~ Describe what lifestyle and workplace values are most important to them to consider during career decision making, such as salary and benefits, work environment, the nature of the work and work/life balance.

07.04 Describe what values that relate to positively impacting others and the world are most important to them to weigh during career decision making.

08.0 Describe occupations and industries in his or her region. The student will be able to:

08.01 Define Career Clusters, industries and occupations.

08.02 Define regional poverty, average and family-sustaining wage thresholds.

08.03 Review local labor market data to identify the top five regional occupations as relates to each of the following: employment, growth and salary.

08.04 List three occupations that align with his or her personal career interests, skills and values.

08.05 List the regional salary, employment and growth of three occupations they are most interested in learning more about.

08.06 Summarize occupational content learned through a career informational interview, career fair, job shadowing, service learning, guest speaker, project-based learning, work-based learning, worksite visit or other firsthand experience.

09.0 Describe a variety of postsecondary pathways. The student will be able to:

09.01 Evaluate the pros and cons of pursuing education, employment, entrepreneurship or enlistment immediately following high school.

~~09.02 Identify and demonstrate processes for making short and long term goals.~~ Define postsecondary training provider options and their admissions requirements, including apprenticeships, technical colleges, state or community colleges, universities and industry-recognized certification providers.

09.03 Define postsecondary credentialing and stacking options, including industry-recognized certifications, apprenticeship certificates of completion, career certificates, licenses and associate or baccalaureate degrees

09.04 Explain training options aligned with his or her career assessment results and occupational exploration.

|                       |                                                                                                                                                                                                                                                                                                                                                                                  |

## Additional Information

### Laboratory Activities

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Florida Standards for English Language Development (ELD)

English language learners communicate for social and instructional purposes within the school setting. ELD.K12.ELL.SI.1

English Language Development (ELD) Standards Special Notes:

Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners (ELL) to communicate for social and instructional purposes within the school setting. For the given level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which maximizes an ELL's need for communication and social skills. For additional information on the development and implementation of the ELD standards, please contact the Bureau of Student Achievement through Language Acquisition at [sala@fldoe.org](mailto:sala@fldoe.org).

### Special Notes

The intended progression for the Health Science Middle School courses is Introduction to Health Science Career Pathways (8709350 & 8709360), Orientation to Health Science Professions (8400110) and Exploration of Health Science Professions (8400310 & 8400210). By offering the middle school courses in the intended progression, each course increases in complexity, rigor and skill level as appropriate.

### Career Planning

**Effective July 1, 2019, per Section 1003.4156, Florida Statutes (F.S.), for students to meet middle grades promotion requirements, a Career and Education Planning course must be completed in either sixth, seventh, or eighth grade.** These courses should be taught integrating the eight career and education planning course standards.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### Accommodations

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's Individual Educational Plan (IEP) or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an IEP served in Exceptional Student Education (ESE)) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Florida Department of Education

### Purpose

This certificate program is part of the Biotechnology Laboratory Technology AS degree program (1341010100).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program offers a sequence of Biotechnology, Chemistry, Statistics, and Health courses providing sound workforce content along with both academic preparation and industry-standard technical skills needed to advance education and careers in the biotechnology career cluster. This certificate provides for the development of technical ability, including competency-based applied learning to develop and enhance academic knowledge, higher-order ~~reasoning~~ reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the biotechnology career cluster.

The content includes but is not limited to broad biology and chemistry concepts, statistical analysis, documentation procedures, basic and advanced laboratory techniques and concepts, working in a regulated environment, and biohazard and safety procedures.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## Program Structure

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

| <a href="#"><u>09.09 Take responsibility for professional growth.</u></a>                              |

## Job Attainment

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 ~~Demonstrate~~Apply communication skills.
- 02.0 ~~Demonstrate~~Follow laboratory safety ~~skills~~requirements.
- 03.0 ~~Demonstrate~~Apply basic laboratory skills.
- 04.0 ~~Demonstrate~~Follow regulatory compliance.
- 05.0 Demonstrate appropriate decision-making and problem-solving techniques.
- 06.0 ~~Demonstrate specific~~Apply advanced laboratory skills.
- 07.0 ~~Demonstrate~~Implement quality assurance/control measurements.
- 08.0 ~~Maintain~~Recognize facility and equipment maintenance.

Florida Department of Education  
Student Performance Standards

Program Title: **Biotechnology Laboratory Specialist**  
 CIP Number: **0341010101**  
 Program Length: **30 credit hours**

**This certificate program is part of the Biotechnology Laboratory Technology AS degree program (1341010100). At the completion of this program, the student will be able to:**

01.0 ~~Demonstrate~~Apply communication skills. -The student will be able to:

01.01 ~~Make~~Prepare professional oral and written presentations.

01.02 Comprehend and use correct scientific, technical, and medical vocabulary.

01.03 Follow~~/analyze~~ experimental ~~and~~protocols, laboratory protocols, and scientific literature.

01.04 ~~Prepare identify and apply changes to control procedures.~~Identify experimental controls.

01.05 ~~Write or update manuals, SOP's~~Follow laboratory protocols, ~~reports~~standard operating procedures (SOPs), and ~~technical summaries~~scientific techniques.

01.06 ~~Keep~~Maintain accurate laboratory records in notebooks, batch records, or other approved ~~mediums~~media.

01.07 ~~Perform~~Explore computerized ~~research and web searches, including, but not limited to Pub-Med~~databases, such as the National Center for Biotechnology Information (NCBI), and identify ~~basic reference~~ resources in necessary for biotechnology, ~~including, but not limited to original journal articles~~.

01.08 Recognize differences between ~~primary~~peer-reviewed scientific references and ~~secondary information~~non-scientific sources.

01.09 ~~Perform basic applications in word processing, spread sheets, databases, presentations and project management.~~Recognize the scientific process, including formulating a hypothesis.

01.10 ~~Ask appropriate scientific questions and recognize what is involved in experimental approaches to the solution of such questions.~~Illustrate an ethical application of artificial intelligence tools.

02.0 ~~Demonstrate~~Follow laboratory safety ~~skills, requirements~~. The student will be able to:

02.01 ~~Identify and maintain~~Locate first aid supplies, eye wash station, emergency shower, co-worker contact, medical information, emergency and chemical protection, ~~chemical hygiene plan~~ and evacuation plan.

02.02 Follow correct safety procedures, guidelines, and chemical hygiene plans.

02.03 ~~Maintain~~Follow the required environmental health, safety, and laboratory training.

02.04 Handle, store, and dispose of hazardous materials per appropriate MSDS, other safety guidelines, Worker Protection Standards (WPS), and/or appropriate regulatory guidelines (i.e., state, federal, local, accreditation, etc.).

|       |                                                                                                                                                                                                                                                                                               |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.05 | Follow standard precautions for biological <del>pathogen, both</del> <u>pathogens using</u> proper handling and disposal, <u>methods</u> and <del>define principles</del> <u>follow guidelines</u> of contamination control <del>including standard and transmission based precautions.</del> |
| 02.06 | <del>Demonstrate</del> <u>Identify</u> procedures for declaring a laboratory emergency and <del>or responding with the</del> appropriate institutional <u>response</u> procedures.                                                                                                            |
| 03.0  | <del>Demonstrate</del> <u>Apply</u> basic laboratory skills. -The student will be able to:                                                                                                                                                                                                    |
| 03.01 | Obtain and read <del>protocol, protocols, follow</del> test <del>procedure, procedures, use</del> standard operating <del>procedure (SOP), procedures</del> <u>(SOPs), and follow</u> equipment manuals, <del>and proper forms.</del>                                                         |
| 03.02 | Prioritize and perform multiple tasks in a timely manner, based upon priorities communicated by supervisor.                                                                                                                                                                                   |
| 03.03 | Clean, organize, and sterilize materials and laboratory instruments, when required.                                                                                                                                                                                                           |
| 03.04 | <del>Organization of</del> <u>Organize</u> supply inventory; date <del>and</del> label reagents, and store promptly upon arrival.                                                                                                                                                             |
| 03.05 | Demonstrate knowledge of <del>asepsis</del> <u>aseptic techniques</u> and practice procedures such as hand-washing and <u>specimen</u> isolation.                                                                                                                                             |
| 03.06 | <del>Use</del> <u>Master</u> titration/pipetting techniques; <del>measure</del> <u>and measurement of</u> volume/weights.                                                                                                                                                                     |
| 03.07 | Perform basic calculations, unit conversions, graphing of data, and statistical analysis.                                                                                                                                                                                                     |
| 03.08 | Calculate and prepare <u>a</u> dilutions series.                                                                                                                                                                                                                                              |
| 03.09 | Prepare solutions and reagents for laboratory use.                                                                                                                                                                                                                                            |
| 03.10 | Monitor physical properties of reagents, buffers, media, and solutions, and determine optimum conditions for use.                                                                                                                                                                             |
| 03.11 | Obtain and review appropriate procedures and test forms, prepare for laboratory inspections, and respond to the reports.                                                                                                                                                                      |
| 03.12 | Collect and set up samples for analysis.                                                                                                                                                                                                                                                      |
| 03.13 | Perform general laboratory tests, including, setup equipment, and perform/document tests and results.                                                                                                                                                                                         |
| 03.14 | Demonstrate knowledge of chemical cross-contamination control between reagents from weighing implements, storage containers, and media.                                                                                                                                                       |
| 03.15 | Make estimations and approximations and judge the reasonableness of the result.                                                                                                                                                                                                               |
| 04.0  | <del>Demonstrate</del> <u>Follow</u> regulatory compliance. -The student will be able to:                                                                                                                                                                                                     |
| 04.01 | Follow guidelines from the appropriate regulatory, accreditation, and/or certification agencies, such as FDA, OSHA, USDA, NIH, NR, DOT, EPA, CDC, ISO/IEC, and NRC.                                                                                                                           |
| 04.02 | Comply with principles using current Good Experimental Practices and quality improvement systems (e.g., GXP; GLP, GMP, GCP)                                                                                                                                                                   |
| 05.0  | Demonstrate appropriate decision-making and problem-solving techniques. -The student will be able to:                                                                                                                                                                                         |

|       |                                                                                                                                                                                                                                                                                                                                                                                 |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 05.01 | Identify <del>decision to be made</del> <u>decisions</u> and compare alternatives.                                                                                                                                                                                                                                                                                              |
| 05.02 | Make decisions based on <del>accurate</del> facts, data, and <del>agreed-upon goals</del> <u>analyses</u> .                                                                                                                                                                                                                                                                     |
| 05.03 | <del>Evaluate the decision made.</del>                                                                                                                                                                                                                                                                                                                                          |
| 05.04 | <del>05.03</del> <u>Demonstrate ability to evaluate data</u> <u>Evaluate the experimental outcomes</u> and draw conclusions.                                                                                                                                                                                                                                                    |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

This program is designed to prepare students for employment as Biotechnology Research Technicians, Biological Technicians ~~or~~, cell culture technicians, or biotechnology manufacturing ~~technician~~ technicians, and/or to supply supplemental training for persons previously or currently employed in these ~~occupation~~ occupations.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals and SkillsUSA are the~~ CTSOs are co-curricular career and technical student organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### Accommodations

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Dental Assisting Technology and Management  
**Program Type:** ATD (Applied Technology Diploma)  
**Career Cluster:** Health Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as dental assistants 66002, educational managers for dental companies, and dental assisting educators. The program will prepare students for the Dental Assisting National Board Examination as well as state requirements. The program should meet the requirements of the Commission on Dental Accreditation of the American Dental Association and standards recommended by the Florida Board of Dentistry.

The content includes but is not limited to, dental office and patient management, basic dental laboratory procedures, dental and general anatomy, dental terminology, nutrition, dental instrument and equipment utilization, microbiology, dental pharmacology and anesthesia, chairside assisting

and expanded functions, dental office emergencies/CPR, dental radiography, maintenance and asepsis of dental operatory and instrumentation, dental specialty procedures, employability skills, leadership and human relations skills, ethics and jurisprudence, dental materials and preventive dentistry.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is an Applied Technology Diploma (ATD) program that is part of a technical degree program, is less than 60 credit hours, and leads to employment in a specific occupation. -An ATD program may consist of either technical credit or college credit.- A public school district may offer an ATD program only as clock hour credit, with college credit awarded to a student upon articulation to a state college.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

### **Clock Hour Program**

When offered at the district level, this program is a planned sequence of instruction consisting of 3 occupational completion points and the courses as shown below.

| OCP | Course Number | Course Title                       | Length    |
|-----|---------------|------------------------------------|-----------|
| A   | DEA0725       | Introduction to Dental Assisting   | 90 hours  |
| B   | DEA0726       | Dental Infection Control Assistant | 210 hours |
| C   | DEA0727       | Dental Assisting 1                 | 465 hours |
|     | DEA0728       | Dental Assisting 2                 | 465 hours |

### **College Credit Program**

When offered at the college credit level, this ATD program is part of the Dental Assisting Technology and Management AS (1351060104) and has a program length of 50 credits.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the dental health care delivery system and dental health occupations.
- 02.0 Use oral, written, and electronic communication skills with professional etiquette in creating, expressing, and interpreting information and ideas.
- 03.0 Describe the legal and ethical responsibilities of the dental health care worker.
- 04.0 Demonstrate an understanding of general anatomy and physiology and apply wellness and disease concepts.
- 05.0 Demonstrate the importance of health, safety, and environmental management systems in dental organizations and their importance to organizational performance and regulatory compliance.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Use information technology tools. ~~(Optional)~~
- 08.0 Explain the importance of employability skills.
- 09.0 Demonstrate knowledge of airborne and blood-borne diseases.
- 10.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 11.0 Use dental terminology.
- 12.0 Identify structures and explain functions and pathologies of dental and general head and neck anatomy.
- 13.0 Identify principles of microbiology, disease transmission, and disease prevention, and perform infection control procedures.
- 14.0 Identify, describe, maintain, and utilize dental instruments and equipment.
- 15.0 Record patient assessment and treatment data.
- 16.0 Identify the functions of pharmacology and anesthesia as they relate to dentistry.
- 17.0 Identify and perform dental radiographic procedures using current technology.
- 18.0 Identify properties and uses, and manipulate dental materials.
- 19.0 Perform chairside assisting for general dentistry and specialty procedures.
- 20.0 Describe principles and perform techniques of preventive dentistry.
- 21.0 Perform general dental business office procedures.
- 22.0 Demonstrate professionalism as a dental team member in the clinical setting.

Student Performance Standards**

**Program Title:** Dental Assisting Technology and Management – ATD

**Clock Hour Program Number:** ~~—~~ H170113

When this program is offered at the district level, the following organization of courses, standards, and benchmarks apply.

| <b>Course Number: DEA0725</b><br><b>Occupational Completion Point: A</b><br><b>Introduction to Dental Assisting – 90 Hours</b> |                                                                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                                                                                                                           | Demonstrate knowledge of the dental health care delivery system and dental health occupations. -The student will be able to:                                                      |
| 01.01                                                                                                                          | Identify the basic components of the dental health care delivery system, including public, private, government, and non-profit.                                                   |
| 01.02                                                                                                                          | Describe the various types of dental health care providers and the range of services available.                                                                                   |
| 01.03                                                                                                                          | Describe the composition and functions of a dental health care team.                                                                                                              |
| 01.04                                                                                                                          | Identify the general roles and responsibilities of the individual members of the dental health care team.                                                                         |
| 01.05                                                                                                                          | Identify the roles and responsibilities of the consumer within the dental healthcare system.                                                                                      |
| 01.06                                                                                                                          | Explain the <del>cause</del> causes and effects of factors that influence the current delivery system of dental healthcare.                                                       |
| 01.07                                                                                                                          | Discuss the impact of emerging issues, including technology, epidemiology, bioethics, and socioeconomics, on the dental healthcare delivery system.                               |
| 01.08                                                                                                                          | Discuss the history of dentistry <u>and the dental health care team</u> .                                                                                                         |
| 01.09                                                                                                                          | <u>Demonstrate knowledge in communicating and collaborating with other members of the health care team to support comprehensive patient care.</u>                                 |
| 02.0                                                                                                                           | Use oral, written, and electronic communication skills with professional etiquette in creating, expressing, and interpreting information and ideas. -The student will be able to: |
| 02.01                                                                                                                          | Apply basic speaking and active listening skills, including reflection, restatement, and clarification techniques.                                                                |
| 02.02                                                                                                                          | Develop basic observational skills and related documentation strategies in written and oral form.                                                                                 |
| 02.03                                                                                                                          | Identify characteristics of <del>successful and unsuccessful</del> communication, including communication styles and barriers.                                                    |
| 02.04                                                                                                                          | Compose written communication using correct spelling, grammar, <u>etiquette</u> , formatting <del>and</del> , confidentiality, and specific formats of letter writing.            |
| 02.05                                                                                                                          | Recognize components of medical and dental terminology <del>and</del> , abbreviations, <u>and their uses</u> .                                                                    |

|                        |                                                                                                                                                                                                                                                                                                                                       |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.06                  | Recognize the importance of courtesy and respect for patients and other health care workers and maintain good interpersonal relationships.                                                                                                                                                                                            |
| 02.07                  | Recognize the importance of patient education regarding dental and health care.                                                                                                                                                                                                                                                       |
| 02.08                  | Adapt communication skills to varied levels of understanding and <del>cultural</del> -orientation <del>including diverse</del> <u>of diversity, but not limited to sexual orientation, gender orientation, disability</u> , age, <del>cultural, economic, ethnic and religious groups.</del> <u>culture, economics, or ethnicity.</u> |
| 02.09                  | Identify psychological considerations influencing communication and behaviors.                                                                                                                                                                                                                                                        |
| 03.0                   | Describe the legal and ethical responsibilities of the dental health care worker. -The student will be able to:                                                                                                                                                                                                                       |
| 03.01                  | Identify areas of <del>Florida Statute 466, F.S.</del> <u>F.S.</u> and Rule 64B5-16, <del>FACF.A.C.</del> <u>F.A.C.</u> and Rule 64B5-25, <del>FACF.A.C.</del> <u>F.A.C.</u> applicable to practice by the dental health workers <u>and providers.</u>                                                                                |
| 03.02                  | Explain practices that could result in malpractice, liability, negligence, abandonment, false imprisonment, <u>and</u> fraud.                                                                                                                                                                                                         |
| 03.03                  | Demonstrate procedures for accurate documentation and record keeping.                                                                                                                                                                                                                                                                 |
| 03.04                  | Interpret healthcare facility policy and procedures.                                                                                                                                                                                                                                                                                  |
| 03.05                  | Explain the patients' "Bill of Rights".                                                                                                                                                                                                                                                                                               |
| 03.06                  | Identify and implement standards of the Health Insurance Portability and Accountability Act (HIPAA) and apply these standards to social media <del>and the use of personal electronic devices in the workplace.</del>                                                                                                                 |
| 03.07                  | Distinguish between expressed, implied, and informed consent.                                                                                                                                                                                                                                                                         |
| 03.08                  | Explain the laws governing harassment, labor, <u>and</u> employment.                                                                                                                                                                                                                                                                  |
| 03.09                  | Differentiate between legal and ethical issues in dentistry.                                                                                                                                                                                                                                                                          |
| 03.10                  | Describe <del>a</del> <u>the dental profession's</u> Code of Ethics <del>consistent</del> with <u>emphasis on</u> the dental assisting profession.                                                                                                                                                                                    |
| 03.11                  | Identify and compare personal, professional, <u>and</u> organizational ethics.                                                                                                                                                                                                                                                        |
| 03.12                  | Recognize the limits of authority and responsibility of dental health care workers, <u>including</u> legislated scope of practice.                                                                                                                                                                                                    |
| 03.13                  | Recognize and report illegal and/or unethical practices of dental health care workers.                                                                                                                                                                                                                                                |
| 03.14                  | Recognize <del>and report</del> <u>various forms of</u> abuse <del>including (i.e., trafficking,</del> domestic violence, <u>and</u> neglect. <u>)</u> .                                                                                                                                                                              |
| 03.15                  | <u>Demonstrate an understanding of reporting requirements for all types of abuse.</u>                                                                                                                                                                                                                                                 |
| <del>03.15</del> 03.16 | Identify resources <del>to</del> <u>for</u> victims of <del>domestic violence</del> <u>abuse.</u>                                                                                                                                                                                                                                     |
| <del>03.16</del> 03.17 | Explain risk management <u>and root cause analysis.</u>                                                                                                                                                                                                                                                                               |

|       |                                                                                                                                                                                                                                                         |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <a href="#">03.18 Define commonly used legal vocabulary relating to dentistry.</a>                                                                                                                                                                      |
|       | <a href="#">03.19 Describe ethical considerations/obligations in the dental team-patient relationship.</a>                                                                                                                                              |
|       | <a href="#">03.20 Apply self-assessment skills to prepare for lifelong learning.</a>                                                                                                                                                                    |
|       | <a href="#">03.21 Apply ethical principles, legal, and regulatory concepts to resolve ethical dilemmas.</a>                                                                                                                                             |
| 04.0  | Demonstrate an understanding of general anatomy and physiology and apply wellness and disease concepts. -The student will be able to:                                                                                                                   |
| 04.01 | Develop a basic understanding of the structure and function of the body systems.                                                                                                                                                                        |
| 04.02 | Identify common disorders related to each of the body systems.                                                                                                                                                                                          |
| 04.03 | <del>Explain basic concepts</del> <a href="#">Identify and develop a control plan to address the issues</a> of positive self-image, wellness, and stress.                                                                                               |
|       | <del>04.04—Develop a wellness and stress control plan that can be used in personal and professional life.</del>                                                                                                                                         |
| 05.0  | Demonstrate the importance of health, safety, and environmental management systems in dental organizations and their importance to organizational performance and regulatory compliance. -The student will be able to:                                  |
| 05.01 | Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments.                                                                                                                                            |
| 05.02 | Identify and describe methods in medical error reduction and prevention in the dental healthcare setting.                                                                                                                                               |
| 05.03 | Demonstrate an understanding of personal safety procedures based on <del>Occupations</del> <a href="#">the Occupational</a> Safety and Health Administration (OSHA) and Centers for Disease Control (CDC) regulations (including standard precautions). |
| 05.04 | Recognize Safety Data Sheets (SDS) and <a href="#">Globally Harmonized System (GHS) labels and</a> comply with safety signs, symbols, and labels.                                                                                                       |
| 05.05 | Demonstrate procedures for the safe transport and transfer of patients.                                                                                                                                                                                 |
| 05.06 | Describe <a href="#">workplace preparedness and procedures for</a> fire safety, disaster, and evacuation <del>procedures.</del>                                                                                                                         |
| 05.07 | Explain emergency procedures to follow <del>in response</del> <a href="#">for responding</a> to, <a href="#">reporting, and recording</a> workplace accidents <a href="#">and acts of violence</a>                                                      |
| 05.08 | Demonstrate handwashing and the use of personal protective equipment used in dentistry.                                                                                                                                                                 |
| 06.0  | Recognize and respond to emergency situations. -The student will be able to:                                                                                                                                                                            |
| 06.01 | Take and record vital signs.                                                                                                                                                                                                                            |
| 06.02 | Describe legal parameters relating to the administration of emergency care.                                                                                                                                                                             |
| 06.03 | Obtain and maintain certification in basic life support (BLS), cardiopulmonary resuscitation (CPR), automated external defibrillator (AED), foreign body airway obstruction (FBAO), and first aid.                                                      |

|                  |                                                                                                                                                                                                                                   |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.0             | Use information technology tools. <del>(Optional)</del> The student will be able to:                                                                                                                                              |
| 07.01            | Define terms and demonstrate basic computer skills.                                                                                                                                                                               |
| 07.02            | Interpret information from electronic medical documents.                                                                                                                                                                          |
| 08.0             | Explain the importance of employability skills. -The student will be able to:                                                                                                                                                     |
| 08.01            | Identify personal traits or attitudes desirable in a member of the healthcare team.                                                                                                                                               |
| 08.02            | Exemplify basic professional standards of dental healthcare workers/providers as they apply to hygiene, dress, language, confidentiality, and behavior (i.e., telephone etiquette, courtesy, and self-introductions).             |
| <del>08.03</del> | <del>Prepare and maintain a professional portfolio to document knowledge, continued education, skills, and experience. (Optional)</del>                                                                                           |
| <del>08.04</del> | <del>Write an appropriate resume.</del>                                                                                                                                                                                           |
| <del>08.05</del> | <del>Conduct a job search and complete a job application form correctly.</del>                                                                                                                                                    |
| <del>08.06</del> | <del>Demonstrate competence in job interview techniques.</del>                                                                                                                                                                    |
| <del>08.03</del> | Examine levels of education, and industry credentialing requirements, including licensure and certification, employment opportunities, workplace environments, and career growth potential.                                       |
| <del>08.07</del> |                                                                                                                                                                                                                                   |
| <del>08.08</del> | <del>Examine licensing, certification, and industry credentialing requirements.</del>                                                                                                                                             |
| 09.0             | Demonstrate knowledge of airborne and blood-borne diseases. -The student will be able to:                                                                                                                                         |
| 09.01            | Recognize emerging diseases and disorders.                                                                                                                                                                                        |
| 09.02            | <del>Distinguish between fact and fallacy about</del> Demonstrate knowledge of the transmission and treatment of diseases caused by airborne and blood-borne pathogens, infectious agents, and organisms.                         |
| 09.03            | Identify "at risk" behaviors that promote the spread of infectious diseases caused by airborne and blood-borne pathogens and the public education necessary to combat the spread of these diseases.                               |
| 09.04            | Identify community resources and services available to the individuals with diseases caused by airborne and blood borne pathogens.                                                                                                |
| 09.05            | Apply infection control techniques designed to prevent the spread of diseases caused by airborne and blood-borne pathogens to the care of all patients following the Centers for Disease Control and Prevention (CDC) guidelines. |
| <del>09.06</del> | Demonstrate knowledge of the legal aspects of patient privacy, standard precautions, and incident reporting protocols.                                                                                                            |
| <del>09.06</del> | 09.07 Demonstrate knowledge of the legal aspects of AIDS treating patients with infectious diseases, including testing, and proper documentation.                                                                                 |
| 10.0             | Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. -The students will be able to:                                                                                                         |
| 10.01            | Analyze attributes and attitudes of an effective leader to include emotional intelligence.                                                                                                                                        |

- |       |                                                                                              |
|-------|----------------------------------------------------------------------------------------------|
| 10.02 | Recognize factors and situations that may lead to conflict.                                  |
| 10.03 | Demonstrate effective <a href="#">problem-solving</a> techniques for managing team conflict. |

**Course Number: DEA0726**  
**Occupational Completion Point: B**  
**Dental Infection Control Assistant – 210 Hours**

- |                                        |                                                                                                                                                                                                                    |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11.0                                   | Use dental terminology. -The student will be able to:                                                                                                                                                              |
| 11.01                                  | Identify and define common dental terms.                                                                                                                                                                           |
| 11.02                                  | Demonstrate the use of proper dental terminology in the dental environment.                                                                                                                                        |
| 12.0                                   | Identify structures and explain functions and pathologies of dental and general head and neck anatomy. -The student will be able to:                                                                               |
| 12.01                                  | Identify structures and functions of <a href="#">the</a> head and neck anatomy, including bones, muscles, sinuses, salivary glands, lymph nodes, nerves, and blood vessels.                                        |
| 12.02                                  | Identify embryonic development of <a href="#">the</a> head, oral cavity, and teeth.                                                                                                                                |
| 12.03                                  | Identify teeth and their landmarks, and the morphological characteristics of each individual tooth.                                                                                                                |
| 12.04                                  | Describe the histological components of the head, oral cavity, and elements of the teeth and supporting structures.                                                                                                |
| 12.05                                  | Recognize and describe oral pathological conditions, related to the teeth and their supporting structures.                                                                                                         |
| 12.06                                  | Recognize and describe developmental anomalies related to the teeth, face, and oral structures.                                                                                                                    |
| 12.07                                  | Describe and differentiate between <del>normal</del> <a href="#">occlusion</a> and malocclusion.                                                                                                                   |
| 12.08                                  | Discuss the adverse effects of the use of alcohol, tobacco, and both legal and illegal drugs on the oral cavity.                                                                                                   |
| 13.0                                   | Identify principles of microbiology, <a href="#">disease transmission</a> , and disease prevention, and perform infection control procedures. -The student will be able to:                                        |
| 13.01                                  | Differentiate between pathogenic and non-pathogenic microorganisms.                                                                                                                                                |
| 13.02                                  | Describe pathogens and modes of disease transmission.                                                                                                                                                              |
| 13.03                                  | Differentiate between aseptic and non-aseptic environments.                                                                                                                                                        |
| <a href="#">13.04</a>                  | <a href="#">Perform aseptic handwashing technique.</a>                                                                                                                                                             |
| <del>13.04</del> <a href="#">13.05</a> | Describe, <a href="#">apply</a> , and <del>apply</del> <a href="#">differentiate between</a> methods of <a href="#">pre</a> -cleaning, disinfection, and sterilization <a href="#">of the dental environment</a> . |

|                        |                                                                                                                                                                                                              |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>13.05</del> 13.06 | Identify chemicals and their uses for controlling the spread of disease in the dental environment.                                                                                                           |
| <del>13.06</del> 13.07 | Identify and practice the current CDC guidelines for infection control in dental healthcare settings.                                                                                                        |
| <del>13.07</del> 13.08 | Describe the duties of the dental office safety coordinator.                                                                                                                                                 |
| <del>13.08</del> 13.09 | Demonstrate compliance with the OSHA Blood Borne Pathogens Standard (29CFR-1910.1030) applicable to the dental office environment.                                                                           |
| <del>13.09</del> 13.10 | Identify and manage hazardous chemicals and biomedical wastes in accordance with the OSHA Hazard Communications Standard (29CFR-1910.1200), 64E-16, F.A.C., and Environmental Protection Agency regulations. |
| <del>13.10</del> 13.11 | Define principles of infection control, including standard and transmission-based precautions.                                                                                                               |
| <del>13.14</del> 13.12 | Demonstrate knowledge of dental asepsis <u>within the dental environment</u> .                                                                                                                               |
| <del>13.12</del> 13.13 | Implement appropriate hand hygiene procedures and use of <u>personal</u> protective <del>barriers</del> <u>equipment</u> .                                                                                   |
| <del>13.13</del> 13.14 | Demonstrate knowledge of surgical asepsis and isolation.                                                                                                                                                     |
| 14.0                   | Identify, describe, maintain, and utilize dental instruments and equipment. -The student will be able to:                                                                                                    |
| 14.01                  | Identify various types, functions, and operations of dental operatory and laboratory equipment.                                                                                                              |
| 14.02                  | Identify types and functions of operative, restorative, surgical, prosthodontic, <u>periodontic</u> , orthodontic, and endodontic dental instruments.                                                        |
| 14.03                  | Maintain dental operatory equipment and instruments.                                                                                                                                                         |
| 14.04                  | Identify types and functions of specific dental hygiene instruments with emphasis on category rather than individual instruments.                                                                            |
| 14.05                  | Seat and dismiss patients.                                                                                                                                                                                   |
| 14.06                  | Operate oral evacuation devices and air/water syringe.                                                                                                                                                       |
| 14.07                  | Maintain a clear field of vision, including isolation techniques.                                                                                                                                            |
| 14.08                  | Perform a variety of instrument transfers to include four-handed dentistry.                                                                                                                                  |
| 14.09                  | Utilize appropriate chairside assistant ergonomics.                                                                                                                                                          |
| 14.10                  | Assist with and place dental dams as permitted by Florida Statute and Florida Board of Dentistry Rule.                                                                                                       |

**Course Number: DEA0727**  
**Occupational Completion Point: C**  
**Dental Assisting 1 – 465 Hours**

15.0 Record patient assessment and treatment data. -The student will be able to:

15.01 Take and record medical-, health, and dental histories.

15.02 Record assessment of existing oral conditions.

15.03 Perform intraoral and extraoral photography.

15.04 Record conditions diagnosed by the dentist.

15.05 Record treatment-related data on the patient's clinical record.

15.06 Record treatment plan and treatment in the patient's chart.

15.07 Perform a visual assessment of existing oral conditions.

15.08 Distinguish between and report subjective ~~and~~, objective, indications, and contraindication information.

15.09 Report relevant information in order of occurrence.

16.0 Identify the functions of pharmacology and anesthesia as they relate to dentistry. -The student will be able to:

16.01 Identify drug requirements, agencies, and regulations, including prescribing regulations related to medications subject to addiction.

16.02 Distinguish among the five schedules of controlled substances.

16.03 Record a drug/medication prescription in a patient's chart.

16.04 ~~Utilize~~Understand ratios and proportional problems to calculate prescribed drug dosages as instructed by the dentist.

16.05 Identify drug/medicaments actions, metabolism, side effects, indications, and contraindications; verify with Physician's Desk Reference (PDR) or its equivalent.

16.06 Identify ~~common drugs~~pharmaceuticals and medicaments used in dentistry.

16.07 ~~Prepare~~Identify the tissues innervated by each of the nerves associated with dental local and topical anesthetics to prepare and apply a topical anesthetic agent.

16.08 Identify properties of anesthetics.

16.09 Prepare syringes for the administration of local anesthetics.

16.10 Monitor and identify precautions in the use of nitrous oxide-oxygen conscious sedation.

|                        |                                                                                                                                                                                     |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.11                  | <del>Calculate</del> <u>Understand</u> the <del>percentage</del> <u>calculations</u> of nitrous oxide-oxygen delivered <u>by the dentist</u> during a conscious sedation procedure. |
| 16.12                  | Identify drugs and agents used for treating dental-related infection.                                                                                                               |
| 16.13                  | Identify and respond to dental office emergencies.                                                                                                                                  |
| 16.14                  | Describe the signs and symptoms of drug addiction.                                                                                                                                  |
| 16.15                  | <u>Recognize specific conditions in the oral cavity that may be caused by pharmaceutical agents.</u>                                                                                |
| <del>16.15</del> 16.16 | Discuss the dental team's responsibility to recognize patients with drug addictions.                                                                                                |
| 17.0                   | Identify and perform dental <del>and carpal</del> -radiographic procedures- <u>using current technology</u> . The student will be able to:                                          |
| 17.01                  | Describe <u>the</u> history, physics, and biological effects of ionizing radiation.                                                                                                 |
| 17.02                  | Identify parts of the <del>X-ray</del> <u>radiography</u> machine, including accessories.                                                                                           |
| 17.03                  | Demonstrate radiologic health protection techniques.                                                                                                                                |
| 17.04                  | <del>Describe dark room/processing procedures, mix solutions.</del>                                                                                                                 |
| 17.05                  | <del>Describe the proper disposal of hazardous radiographic waste.</del>                                                                                                            |
| <del>17.06</del> 17.04 | Place and expose dental radiographic <del>films or phosphors and</del> <u>images on</u> digital <del>sensors</del> <u>image receptors</u> .                                         |
| <del>17.07</del> 17.05 | Perform extraoral radiography as required for dental diagnostic procedures.                                                                                                         |
| <del>17.08</del> 17.06 | <del>Identify</del> <u>Describe and identify</u> radiographic anatomical landmarks and pathologies.                                                                                 |
| <del>17.09</del> 17.07 | Mount radiographic <del>surveys</del> <u>images</u> .                                                                                                                               |
| <del>17.10</del> 17.08 | Describe how to maintain <del>unexposed film inventory</del> <u>digital image receptors</u> and <del>storage/or</del> <u>image devices</u> .                                        |
| <del>17.14</del> 17.09 | Maintain digitally acquired radiographic images.                                                                                                                                    |
| <del>17.12</del> 17.10 | Practice infection control procedures for all radiographic procedures.                                                                                                              |
| 18.0                   | Identify properties and uses, and manipulate dental materials. -The student will be able to:                                                                                        |
| 18.01                  | Identify properties and uses and manipulate gypsum.                                                                                                                                 |
| 18.02                  | Identify properties and uses and manipulate restorative materials.                                                                                                                  |
| 18.03                  | Identify properties and uses and manipulate dental cements.                                                                                                                         |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18.04 | Place and remove matrices as permitted by Florida Statute and Florida Board of Dentistry Rule.                                                                                                                                                                                                                                                                                                                            |
| 18.05 | Place and remove temporary restorations as permitted by Florida Statute and Florida Board of Dentistry Rule.                                                                                                                                                                                                                                                                                                              |
| 18.06 | Identify properties and uses and manipulate impression materials.                                                                                                                                                                                                                                                                                                                                                         |
| 18.07 | Make intraoral impressions as permitted by Florida Statute and Florida Board of Dentistry Rule.                                                                                                                                                                                                                                                                                                                           |
| 18.08 | Identify properties and uses and manipulate acrylics and <del>thermoplastics</del> <a href="#">thermoplastic materials</a> .                                                                                                                                                                                                                                                                                              |
| 18.09 | Identify properties and uses and manipulate waxes.                                                                                                                                                                                                                                                                                                                                                                        |
| 18.10 | Perform dental laboratory procedures to include the fabrication of casts, custom trays, whitening trays, temporary crowns, and bridges.                                                                                                                                                                                                                                                                                   |
| 18.11 | Identify and manage hazardous dental materials and wastes in accordance with the OSHA Hazard Communications Standard (29CFR-1910.1200) and Environmental Protection Agency regulations.                                                                                                                                                                                                                                   |
| 18.12 | Employ measurements of time, temperature, distance, capacity, and mass/weight during the manipulation of dental materials.                                                                                                                                                                                                                                                                                                |
| 19.0  | Perform chairside assisting for general dentistry and specialty procedures. -The student will be able to:                                                                                                                                                                                                                                                                                                                 |
| 19.01 | Describe procedures, equipment, materials, and instrumentation used in the dental specialties to include but not limited to periodontics, endodontics, pedodontics, oral <del>surgery</del> <a href="#">and maxillofacial specialties</a> , orthodontics, <del>and</del> -prosthodontics, <a href="#">dental radiology, pathology, oral implantology, dental anesthesia, dentofacial orthopedics, and oral medicine</a> . |
| 19.02 | Assemble tray set-ups for general and specialty dental procedures.                                                                                                                                                                                                                                                                                                                                                        |
| 19.03 | Assist in general and specialty dental procedures.                                                                                                                                                                                                                                                                                                                                                                        |
| 19.04 | Describe the special needs of patients during dental procedures.                                                                                                                                                                                                                                                                                                                                                          |
| 19.05 | Perform patient education to include pre- and post-operative instructions as prescribed by a dentist.                                                                                                                                                                                                                                                                                                                     |
| 19.06 | Describe procedures, equipment, and materials utilized in digital dentistry to include CAD/CAM <del>Technology</del> <a href="#">and intraoral scanning technology</a> .                                                                                                                                                                                                                                                  |
| 19.07 | <a href="#">Identify, describe, and demonstrate the uses and principles of phlebotomy as they pertain to dentistry.</a>                                                                                                                                                                                                                                                                                                   |
| 19.08 | <a href="#">Identify, describe, and demonstrate the properties, uses, and principles of autologous blood concentrates as they pertain to dentistry.</a>                                                                                                                                                                                                                                                                   |

**Course Number: DEA0728**  
**Occupational Completion Point: C**  
**Dental Assisting 2 – 465 Hours**

20.0 Describe principles and perform techniques of preventive dentistry. -The student will be able to:

|                        |                                                                                                                                                                                                                                                                                                                                                      |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20.01                  | Describe the process of oral biofilm formation and its management through preventative dentistry.                                                                                                                                                                                                                                                    |
| 20.02                  | Provide patient preventive education and oral hygiene instruction.                                                                                                                                                                                                                                                                                   |
| 20.03                  | <u>Identify, communicate, and instruct patients on applicable methods of preventative dentistry that utilize:</u> <ul style="list-style-type: none"> <li>• <u>Risk assessment</u></li> <li>• <u>Evidence-based learning</u></li> <li>• <u>Individualized preventive care plans</u></li> <li>• <u>Motivational interviewing/counseling</u></li> </ul> |
| 20.04                  | <u>Training regarding health status and rationale for a preventive care plan.</u>                                                                                                                                                                                                                                                                    |

| 22.05                  | <u>Write an appropriate resume.</u>                                                                                                                                                      |
| 22.06                  | <u>Conduct a job search and complete a job application correctly.</u>                                                                                                                    |
| 22.07                  | <u>Demonstrate effective job interview techniques.</u>                                                                                                                                   |
| 22.08                  | <u>Examine levels of education and credentialing requirements, including licensure and certification, employment opportunities, workplace environments, and career growth potential.</u> |

**Florida Department of Education  
Student Performance Standards**

**Program Title:**     Dental Assisting Technology and Management – ATD      
**ATD CIP Number:** ~~—~~ 0351060108

When this program is offered at the college level, the following standards and benchmarks apply:

|       |                                                                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Demonstrate knowledge of the dental health care delivery system and dental health occupations. -The student will be able to:                                                      |
| 01.01 | Identify the basic components of the dental health care delivery system, including public, private, government, and non-profit.                                                   |
| 01.02 | Describe the various types of dental health care providers and the range of services available.                                                                                   |
| 01.03 | Describe the composition and functions of a dental health care team.                                                                                                              |
| 01.04 | Identify the general roles and responsibilities of the individual members of the dental health care team.                                                                         |
| 01.05 | Identify the roles and responsibilities of the consumer within the dental healthcare system.                                                                                      |
| 01.06 | Explain the <del>cause</del> causes and effects of factors that influence the current delivery system of dental healthcare.                                                       |
| 01.07 | Discuss the impact of emerging issues, including technology, epidemiology, bioethics, and socioeconomics on the dental healthcare delivery system.                                |
| 01.08 | Discuss the history of dentistry <u>and the dental health care team</u> .                                                                                                         |
| 01.09 | <u>Demonstrate knowledge in communicating and collaborating with other members of the health care team to support comprehensive patient care.</u>                                 |
| 02.0  | Use oral, written, and electronic communication skills with professional etiquette in creating, expressing, and interpreting information and ideas. -The student will be able to: |
| 02.01 | Apply basic speaking and active listening skills, including reflection, restatement, and clarification techniques.                                                                |
| 02.02 | Develop basic observational skills and related documentation strategies in written and oral form.                                                                                 |
| 02.03 | Identify characteristics of <del>successful and unsuccessful</del> communication, including communication styles and barriers.                                                    |
| 02.04 | Compose written communication using correct spelling, grammar, <u>etiquette</u> , <del>formatting and</del> confidentiality, and specific formats of letter writing.              |
| 02.05 | Recognize components of medical and dental terminology and abbreviations <u>and their uses</u> .                                                                                  |
| 02.06 | Recognize the importance of courtesy and respect for patients and other health care workers and maintain good interpersonal relationships.                                        |

|            |                                                                                                                                                                                                                                                                                                                                      |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.07      | Recognize the importance of patient education regarding dental and health care.                                                                                                                                                                                                                                                      |
| 02.08      | Adapt communication skills to varied levels of understanding and <del>cultural</del> -orientation <del>including diverse</del> of diversity, but not limited to <u>sexual orientation, gender orientation, disability</u> , age, <del>cultural, economic, ethnic and religious groups</del> . <u>culture, economics, ethnicity</u> . |
| 02.09      | Identify psychological considerations influencing communication and behaviors.                                                                                                                                                                                                                                                       |
| 03.0       | Describe the legal and ethical responsibilities of the dental health care worker. -The student will be able to:                                                                                                                                                                                                                      |
| 03.01      | Identify areas of <del>Florida Statute</del> 466, <u>F.S.</u> and Rule 64B5-16, F.A.C. and Rule 64B5-25, F.A.C. applicable to practice by the dental health workers <u>and providers</u> .                                                                                                                                           |
| 03.02      | Explain practices that could result in malpractice, liability, negligence, abandonment, false imprisonment, and fraud.                                                                                                                                                                                                               |
| 03.03      | Demonstrate procedures for accurate documentation and record keeping.                                                                                                                                                                                                                                                                |
| 03.04      | Interpret healthcare facility policy and procedures.                                                                                                                                                                                                                                                                                 |
| 03.05      | Explain the patients' "Bill of Rights".                                                                                                                                                                                                                                                                                              |
| 03.06      | Identify and implement standards of the Health Insurance Portability and Accountability Act (HIPAA) and apply these standards to social media, <u>and the use of personal electronic devices in the workplace</u> .                                                                                                                  |
| 03.07      | Distinguish between expressed, implied, and informed consent.                                                                                                                                                                                                                                                                        |
| 03.08      | Explain the laws governing harassment, labor, and employment.                                                                                                                                                                                                                                                                        |
| 03.09      | Differentiate between legal and ethical issues in dentistry.                                                                                                                                                                                                                                                                         |
| 03.10      | Describe <u>at the dental profession's</u> Code of Ethics <del>consistent</del> with <u>emphasis on</u> the dental assisting profession.                                                                                                                                                                                             |
| 03.11      | Identify and compare personal, professional, and organizational ethics.                                                                                                                                                                                                                                                              |
| 03.12      | Recognize the limits of authority and responsibility of dental health care workers, including legislated scope of practice.                                                                                                                                                                                                          |
| 03.13      | Recognize and report illegal and/or unethical practices of dental health care workers.                                                                                                                                                                                                                                               |
| 03.14      | Recognize <del>and report</del> <u>various forms of</u> abuse <del>including (i.e., trafficking,</del> domestic violence, and neglect).                                                                                                                                                                                              |
| 03.15      | <u>Demonstrate an understanding of reporting requirements for all types of abuse.</u>                                                                                                                                                                                                                                                |
| 03.1503.16 | Identify resources <del>to</del> <u>for</u> victims of <del>domestic violence</del> <u>abuse</u> .                                                                                                                                                                                                                                   |
| 03.1603.17 | Explain risk management <u>and root cause analysis</u> .                                                                                                                                                                                                                                                                             |
| 03.18      | <u>Define commonly used legal vocabulary relating to dentistry.</u>                                                                                                                                                                                                                                                                  |

|       |                                                                                                                                                                                                                                                         |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <a href="#">03.19 Describe ethical considerations/obligations in the dental team-patient relationship.</a>                                                                                                                                              |

| 04.0  | Demonstrate an understanding of general anatomy and physiology and apply wellness and disease concepts. -The student will be able to:                                                                                                                   |
| 04.01 | Develop a basic understanding of the structure and function of the body systems.                                                                                                                                                                        |
| 04.02 | Identify common disorders related to each of the body systems.                                                                                                                                                                                          |
| 04.03 | <del>Explain basic concepts</del> <a href="#">Identify and develop a control plan to address the issues</a> of positive self-image, wellness, and stress.                                                                                               |
|       | <del>04.04 Develop a wellness and stress control plan that can be used in personal and professional life.</del>                                                                                                                                         |
| 05.0  | Demonstrate the importance of health, safety, and environmental management systems in dental organizations and their importance to organizational performance and regulatory compliance. -The student will be able to:                                  |
| 05.01 | Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments.                                                                                                                                            |
| 05.02 | Identify and describe methods in medical error reduction and prevention in the dental healthcare setting.                                                                                                                                               |
| 05.03 | Demonstrate an understanding of personal safety procedures based on <del>Occupations</del> <a href="#">the Occupational</a> Safety and Health Administration (OSHA) and Centers for Disease Control (CDC) regulations (including standard precautions). |
| 05.04 | Recognize Safety Data Sheets (SDS) and <a href="#">Globally Harmonized System (GHS) labels and</a> comply with safety signs, symbols, and labels.                                                                                                       |
| 05.05 | Demonstrate procedures for the safe transport and transfer of patients.                                                                                                                                                                                 |
| 05.06 | Describe <a href="#">workplace preparedness and procedures for</a> fire safety, disaster, and evacuation <del>procedures</del> .                                                                                                                        |
| 05.07 | Explain emergency procedures to follow <del>in response</del> <a href="#">for responding</a> to, <a href="#">reporting, and recording</a> workplace accidents <a href="#">and acts of violence</a>                                                      |
| 05.08 | Demonstrate handwashing and the use of personal protective equipment used in dentistry.                                                                                                                                                                 |
| 06.0  | Recognize and respond to emergency situations. -The student will be able to:                                                                                                                                                                            |
| 06.01 | Take and record vital signs.                                                                                                                                                                                                                            |
| 06.02 | Describe legal parameters relating to the administration of emergency care.                                                                                                                                                                             |
| 06.03 | Obtain and maintain certification in basic life support (BLS), cardiopulmonary resuscitation (CPR), automated external defibrillator (AED), foreign body airway obstruction (FBAO), and first aid.                                                      |
| 07.0  | Use information technology tools. <del>(Optional)</del> -The student will be able to:                                                                                                                                                                   |

|                        |                                                                                                                                                                                                                                   |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.01                  | Define terms and demonstrate basic computer skills.                                                                                                                                                                               |
| 07.02                  | Interpret information from electronic medical documents.                                                                                                                                                                          |
| 08.0                   | Explain the importance of employability skills. -The student will be able to:                                                                                                                                                     |
| 08.01                  | Identify personal traits or attitudes desirable in a member of the healthcare team.                                                                                                                                               |
| 08.02                  | Exemplify basic professional standards of dental healthcare workers/providers as they apply to hygiene, dress, language, confidentiality, and behavior (i.e., telephone etiquette, courtesy, and self-introductions).             |
| <del>08.03</del>       | <del>Prepare and maintain a professional portfolio to document knowledge, continued education, skills, and experience. (Optional)</del>                                                                                           |
| <del>08.04</del>       | <del>Write an appropriate resume.</del>                                                                                                                                                                                           |
| <del>08.05</del>       | <del>Conduct a job search and complete a job application form correctly.</del>                                                                                                                                                    |
| <del>08.06</del>       | <del>Demonstrate competence in job interview techniques.</del>                                                                                                                                                                    |
| <del>08.07</del> 08.03 | Examine levels of education, credentialing requirements, including licensure and –certification, employment opportunities, work environments, and career growth potential.                                                        |
| <del>08.08</del>       | <del>Examine licensing, certification, and industry credentialing requirements.</del>                                                                                                                                             |
| 09.0                   | Demonstrate knowledge of airborne and blood–borne diseases. -The student will be able to:                                                                                                                                         |
| 09.01                  | Recognize emerging diseases and disorders.                                                                                                                                                                                        |
| 09.02                  | <del>Distinguish between fact and fallacy about</del> Demonstrate knowledge of the transmission and treatment of diseases caused by airborne and blood–borne pathogens, infectious agents, and organisms.                         |
| 09.03                  | Identify "at risk" behaviors that promote the spread of infectious diseases caused by airborne and blood–borne pathogens and the public education necessary to combat the spread of these diseases.                               |
| 09.04                  | Identify community resources and services available to the individuals with diseases caused by airborne and blood borne pathogens.                                                                                                |
| 09.05                  | Apply infection control techniques designed to prevent the spread of diseases caused by airborne and blood borne pathogens to the care of all patients following the Centers for Disease Control and Prevention (CDC) guidelines. |
| 09.06                  | Demonstrate knowledge of the legal aspects of patient privacy, standard precautions, and incident reporting protocols.                                                                                                            |
| <del>09.06</del> 09.07 | Demonstrate knowledge of the legal aspects of <del>AIDS</del> treating patients with infectious diseases, including testing– and proper documentation.                                                                            |
| 10.0                   | Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. -The students will be able to:                                                                                                         |
| 10.01                  | Analyze attributes and attitudes of an effective leader to include emotional intelligence.                                                                                                                                        |
| 10.02                  | Recognize factors and situations that may lead to conflict.                                                                                                                                                                       |

|                  |                                                                                                                                                                                        |
|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10.03            | Demonstrate effective <a href="#">problem-solving</a> techniques for managing team conflict.                                                                                           |
| 11.0             | Use dental terminology. -The student will be able to:                                                                                                                                  |
| 11.01            | Identify and define common dental terms.                                                                                                                                               |
| 11.02            | Demonstrate the use of proper dental terminology in the dental environment.                                                                                                            |
| 12.0             | Identify structures and explain functions and pathologies of dental and general head and neck anatomy. -The student will be able to:                                                   |
| 12.01            | Identify structures and functions of <a href="#">the</a> head and neck anatomy, including bones, muscles, sinuses, salivary glands, lymph nodes, nerves, and blood vessels.            |
| 12.02            | Identify embryonic development of <a href="#">the</a> head, oral cavity, and teeth.                                                                                                    |
| 12.03            | Identify teeth and their landmarks, and the morphological characteristics of each individual tooth.                                                                                    |
| 12.04            | Describe the histological components of the head, oral cavity, and elements of the teeth and supporting structures.                                                                    |
| 12.05            | Recognize and describe oral pathological conditions, related to the teeth and their supporting structures.                                                                             |
| 12.06            | Recognize and describe developmental anomalies related to the teeth, face, and oral structures.                                                                                        |
| 12.07            | Describe and differentiate between <del>normal</del> <a href="#">occlusion</a> and malocclusion.                                                                                       |
| 12.08            | Discuss the adverse effects of the use of alcohol, tobacco, and both legal and illegal drugs on the oral cavity.                                                                       |
| 13.0             | Identify principles of microbiology <del>and</del> , <a href="#">disease transmission</a> , disease prevention and perform infection control procedures. -The student will be able to: |
| 13.01            | Differentiate between pathogenic and non-pathogenic microorganisms.                                                                                                                    |
| 13.02            | Describe pathogens and modes of disease transmission.                                                                                                                                  |
| 13.03            | Differentiate between aseptic and non-aseptic environments.                                                                                                                            |
| <del>13.04</del> | <a href="#">Perform aseptic handwashing technique.</a>                                                                                                                                 |
| <del>13.05</del> | <a href="#">Describe, apply, and differentiate between</a> methods of <a href="#">pre-cleaning</a> , disinfection, and sterilization <a href="#">of the dental environment</a> .       |
| <del>13.06</del> | <a href="#">Identify chemicals and their uses for controlling the spread of disease in the dental environment.</a>                                                                     |
| <del>13.07</del> | <a href="#">Identify and practice the current CDC guidelines for infection control in dental healthcare settings.</a>                                                                  |
| <del>13.08</del> | <a href="#">Describe the duties of the dental office safety coordinator.</a>                                                                                                           |

|                        |                                                                                                                                                                                                              |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>13.08</del> 13.09 | Demonstrate compliance with the OSHA Blood Borne Pathogens Standard (29CFR-1910.1030) applicable to the dental office environment.                                                                           |
| <del>13.09</del> 13.10 | Identify and manage hazardous chemicals and biomedical wastes in accordance with the OSHA Hazard Communications Standard (29CFR-1910.1200), 64E-16, F.A.C., and Environmental Protection Agency regulations. |
| <del>13.10</del> 13.11 | Define principles of infection control including standard and transmission-based precautions.                                                                                                                |
| <del>13.14</del> 13.12 | Demonstrate knowledge of dental asepsis <u>within the dental environment</u> .                                                                                                                               |
| <del>13.12</del> 13.13 | Implement appropriate hand hygiene procedures and use of <u>personal</u> protective <del>barriers</del> <u>equipment</u> .                                                                                   |
| <del>13.13</del> 13.14 | Demonstrate knowledge of surgical asepsis and isolation.                                                                                                                                                     |
| 14.0                   | Identify, describe, maintain and utilize dental instruments and equipment. -The student will be able to:                                                                                                     |
| 14.01                  | Identify various types, functions, and operations of dental operatory and laboratory equipment.                                                                                                              |
| 14.02                  | Identify types and functions of operative, restorative, surgical, prosthodontic, <u>periodontic</u> , orthodontic and endodontic dental instruments.                                                         |
| 14.03                  | Maintain dental operatory equipment and instruments.                                                                                                                                                         |
| 14.04                  | Identify types and functions of specific dental hygiene instruments with emphasis on category rather than individual instruments.                                                                            |
| 14.05                  | Seat and dismiss patients.                                                                                                                                                                                   |
| 14.06                  | Operate oral evacuation devices and air/water syringe.                                                                                                                                                       |
| 14.07                  | Maintain a clear field of vision including isolation techniques.                                                                                                                                             |
| 14.08                  | Perform a variety of instrument transfers to include four-handed dentistry.                                                                                                                                  |
| 14.09                  | Utilize appropriate chairside assistant ergonomics.                                                                                                                                                          |
| 14.10                  | Assist with and place dental dams as permitted by Florida Statute and Florida Board of Dentistry Rule.                                                                                                       |
| 15.0                   | Record patient assessment and treatment data. –The student will be able to:                                                                                                                                  |
| 15.01                  | Take and record medical- <del>,</del> <u>health, and</u> dental histories.                                                                                                                                   |
| 15.02                  | Record assessment of existing oral conditions.                                                                                                                                                               |
| 15.03                  | Perform intraoral and extraoral photography.                                                                                                                                                                 |
| 15.04                  | Record conditions diagnosed by the dentist.                                                                                                                                                                  |

|       |                                                                                                                                                                                     |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15.05 | Record treatment-related data on the patient's clinical record.                                                                                                                     |
| 15.06 | Record treatment plan and treatment in patient's chart.                                                                                                                             |
| 15.07 | Perform a visual assessment of existing oral conditions.                                                                                                                            |
| 15.08 | Distinguish between and report subjective <del>and</del> , objective, <u>indications, and contraindication</u> information.                                                         |
| 15.09 | Report relevant information in order of occurrence.                                                                                                                                 |
| 16.0  | Identify the functions of pharmacology and anesthesia as they relate to dentistry. -The student will be able to:                                                                    |
| 16.01 | Identify drug requirements, agencies, and regulations including prescribing regulations related to medications subject to addiction.                                                |
| 16.02 | Distinguish among the five schedules of controlled substances.                                                                                                                      |
| 16.03 | Record a drug/ <u>medication</u> prescription in a patient's chart.                                                                                                                 |
| 16.04 | <del>Utilize</del> <u>Understand</u> ratios and proportional problems to calculate prescribed drug dosages <u>as instructed by the dentist</u> .                                    |
| 16.05 | Identify drug/ <u>medicaments</u> actions, <u>metabolism</u> , side effects, indications, and contraindications; verify with Physician's Desk Reference (PDR) or its equivalent.    |
| 16.06 | Identify <del>common drugs</del> <u>pharmaceuticals and medicaments</u> used in dentistry.                                                                                          |
| 16.07 | <del>Prepare</del> <u>Identify the tissues innervated by each of the nerves associated with dental local and topical anesthetic to prepare</u> and apply topical anesthetic agent.  |
| 16.08 | Identify properties of anesthetics.                                                                                                                                                 |
| 16.09 | Prepare syringes for the administration of local anesthetics.                                                                                                                       |
| 16.10 | Monitor and identify precautions in the use of nitrous oxide-oxygen conscious sedation.                                                                                             |
| 16.11 | <del>Calculate</del> <u>Understand</u> the <del>percentage</del> <u>calculations</u> of nitrous oxide-oxygen delivered <u>by the dentist</u> during a conscious sedation procedure. |
| 16.12 | Identify drugs and agents used for treating dental-related infection.                                                                                                               |
| 16.13 | Identify and respond to dental office emergencies.                                                                                                                                  |
| 16.14 | Describe the signs and symptoms of drug addiction. <u>Recognize specific conditions in the oral cavity that may be caused by pharmaceutical agents.</u>                             |
| 16.15 | Discuss the dental team's responsibility to recognize patients with drug addictions.                                                                                                |
| 17.0  | Identify and perform dental radiographic procedures- <del>using</del> <u>current technology</u> . The student will be able to:                                                      |

|                               |                                                                                                                                              |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| 17.01                         | Describe <u>the</u> history, physics, and biological effects of ionizing radiation.                                                          |
| 17.02                         | Identify parts of the <del>X-ray</del> <u>radiography</u> machine, including accessories.                                                    |
| 17.03                         | Demonstrate radiologic health protection techniques.                                                                                         |
| <del>17.04</del>              | <del>Describe dark room/processing procedures, mix solutions.</del>                                                                          |
| <del>17.05</del>              | <del>Describe the proper disposal of hazardous radiographic waste.</del>                                                                     |
| <del>17.06</del> <u>17.04</u> | Place and expose dental radiographic <del>films or phosphors and</del> <u>images on</u> digital <del>sensors</del> <u>image receptors</u> .  |
| <del>17.07</del> <u>17.05</u> | Perform extraoral radiography as required for dental diagnostic procedures.                                                                  |
| <del>17.08</del> <u>17.06</u> | <del>Identify</del> <u>Describe and identify</u> radiographic anatomical landmarks and pathologies.                                          |
| <del>17.09</del> <u>17.07</u> | Mount radiographic <del>surveys</del> <u>images</u> .                                                                                        |
| <del>17.10</del> <u>17.08</u> | Describe how to maintain <del>unexposed film inventory</del> <u>digital image receptors</u> and <del>storage/or</del> <u>image devices</u> . |
| <del>17.11</del> <u>17.09</u> | Maintain digitally acquired radiographic images.                                                                                             |
| <del>17.12</del> <u>17.10</u> | Practice infection control procedures for all radiographic procedures.                                                                       |
| 18.0                          | Identify properties and uses, and manipulate dental materials. -The student will be able to:                                                 |
| 18.01                         | Identify properties and uses and manipulate gypsum.                                                                                          |
| 18.02                         | Identify properties and uses and manipulate restorative materials.                                                                           |
| 18.03                         | Identify properties and uses and manipulate dental cements.                                                                                  |
| 18.04                         | Place and remove matrices as permitted by Florida Statute and Florida Board of Dentistry Rule.                                               |
| 18.05                         | Place and remove temporary restorations as permitted by Florida Statute and Florida Board of Dentistry Rule.                                 |
| 18.06                         | Identify properties and uses and manipulate impression materials.                                                                            |
| 18.07                         | Make intraoral impressions as permitted by Florida Statute and Florida Board of Dentistry Rule.                                              |
| 18.08                         | Identify properties and uses and manipulate acrylics and <del>thermoplastics</del> <u>thermoplastic materials</u> .                          |
| 18.09                         | Identify properties and uses and manipulate waxes.                                                                                           |
| 18.10                         | Perform dental laboratory procedures to include the fabrication of casts, custom trays, whitening trays, temporary crowns, and bridges.      |

|                        |                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18.11                  | Identify and manage hazardous dental materials and wastes in accordance with the OSHA Hazard Communications Standard (29CFR-1910.1200) and Environmental Protection Agency regulations.                                                                                                                                                                                                                |
| 18.12                  | Employ measurements of time, temperature, distance, capacity, and mass/weight during the manipulation of dental materials.                                                                                                                                                                                                                                                                             |
| 19.0                   | Perform chairside assisting for general dentistry and specialty procedures. -The student will be able to:                                                                                                                                                                                                                                                                                              |
| 19.01                  | Describe procedures, equipment, materials, and instrumentation used in the dental specialties to include but not limited to periodontics, endodontics, pedodontics, oral <del>surgery</del> and <u>maxillofacial specialties</u> , orthodontics, <del>and</del> prosthodontics, <u>dental radiology, pathology, oral implantology, dental anesthesia, dentofacial orthopedics, and oral medicine</u> . |
| 19.02                  | Assemble tray set-ups for general and specialty dental procedures.                                                                                                                                                                                                                                                                                                                                     |
| 19.03                  | Assist in general and specialty dental procedures.                                                                                                                                                                                                                                                                                                                                                     |
| 19.04                  | Describe the special needs of patients during dental procedures.                                                                                                                                                                                                                                                                                                                                       |
| 19.05                  | Perform patient education to include pre- and post-operative instructions as prescribed by a dentist.                                                                                                                                                                                                                                                                                                  |
| 19.06                  | Describe procedures, equipment, and materials utilized in digital dentistry to include CAD/CAM <del>Technology</del> and <u>intraoral scanning technology</u> .                                                                                                                                                                                                                                        |
| 19.07                  | <u>Identify, describe, and demonstrate the uses and principles of phlebotomy as they pertain to dentistry.</u>                                                                                                                                                                                                                                                                                         |
| 19.08                  | <u>Identify, describe, and demonstrate the properties, uses, and principles of autologous blood concentrates as they pertain to dentistry.</u>                                                                                                                                                                                                                                                         |
| 20.0                   | Describe principles and perform techniques of preventive dentistry. -The student will be able to:                                                                                                                                                                                                                                                                                                      |
| 20.01                  | Describe the process of oral biofilm formation and its management through preventative dentistry.                                                                                                                                                                                                                                                                                                      |
| 20.02                  | Provide patient preventive education and oral hygiene instruction.                                                                                                                                                                                                                                                                                                                                     |
| 20.03                  | <u>Identify, communicate, and instruct patients on applicable methods of preventative dentistry that utilize:</u> <ul style="list-style-type: none"> <li>• <u>Risk assessment</u></li> <li>• <u>Evidence-based learning</u></li> <li>• <u>Individualized preventive care plans</u></li> <li>• <u>Motivational interviewing/counseling</u></li> </ul>                                                   |
| 20.04                  | <u>Training regarding health status and rationale for a preventive care plan.</u>                                                                                                                                                                                                                                                                                                                      |
| <del>20.03</del> 20.05 | Prepare and set up for various <del>preventive</del> <u>preventative</u> procedures.                                                                                                                                                                                                                                                                                                                   |
| <del>20.04</del> 20.06 | Identify properties and uses of abrasive agents used to polish coronal surfaces and appliances.                                                                                                                                                                                                                                                                                                        |
| <del>20.05</del> 20.07 | Perform coronal polish and apply anticariogenic and desensitizing treatments as permitted by Florida Statute and Florida Board of Dentistry Rule.                                                                                                                                                                                                                                                      |
| <del>20.06</del> 20.08 | Clean and polish removable dental appliances.                                                                                                                                                                                                                                                                                                                                                          |

|                        |                                                                                                                                                          |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>20.07</del> 20.09 | Apply dental sealants as permitted by Florida Statute and Florida Board of Dentistry Rule.                                                               |
| <del>20.08</del> 20.10 | Identify the elements of nutrition, basic food groups, and acceptable diets as recommended by the U.S. Department of Agriculture.                        |
| <del>20.09</del> 20.11 | Identify dietary deficiencies and dietary practices that contribute to the manifestation of symptoms in the oral cavity.                                 |
| 20.12                  | <u>Describe the metabolism of nutrient foods, vitamins, and minerals by the human body and pathological conditions related to nutrient deficiencies.</u> |
| <del>20.10</del> 20.13 | Identify community dental resources and services available.                                                                                              |
| 21.0                   | Perform general dental business office procedures. -The student will be able to:                                                                         |
| 21.01                  | Maintain appointment control.                                                                                                                            |
| 21.02                  | <del>Maintain</del> <u>Assess, create, modify, and maintain</u> an active <del>recall</del> <u>re-care</u> system.                                       |
| 21.03                  | Prepare and maintain accurate patient records.                                                                                                           |
| 21.04                  | Prepare and maintain patient financial records, <u>and</u> collect fees.                                                                                 |
| 21.05                  | Demonstrate the use of dental procedure codes and current terminology when preparing and managing insurance claims.                                      |
| 21.06                  | Differentiate the different categories of dental procedure codes.                                                                                        |
| 21.07                  | <del>Prepare and maintain office financial records.</del>                                                                                                |
| <del>21.08</del> 21.07 | Prepare and maintain dental office inventory control and purchasing.                                                                                     |
| <del>21.09</del> 21.08 | Demonstrate public relations responsibilities of the secretary/receptionist.                                                                             |
| <del>21.10</del> 21.09 | Demonstrate skills on office equipment <u>to include computers and dental office management practice software.</u>                                       |
| <del>21.14</del> 21.10 | Maintain the dental business office environment.                                                                                                         |
| <del>21.12</del> 21.11 | Receive and dismiss patients and visitors.                                                                                                               |
| <del>21.13</del> 21.12 | Demonstrate appropriate patient management/customer service skills.                                                                                      |
| 21.13                  | <u>Demonstrate and maintain office financial records and budgets</u>                                                                                     |
| 21.14                  | Describe the effect of money management on practice goals.                                                                                               |
| 22.0                   | Demonstrate professionalism as a dental team member in the clinical setting. -The student will be able to:                                               |

|                       |                                                                                                                                                                                                |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22.01                 | Perform dental assisting duties, dental assisting expanded functions, and dental radiographic procedures in a clinical setting under the direct supervision of a licensed dentist.             |
| 22.02                 | Interact with a professional dental team in the delivery of patient services.                                                                                                                  |
| 22.03                 | Utilize employability skills.                                                                                                                                                                  |
| <a href="#">22.04</a> | <a href="#">Develop and maintain a professional portfolio to document knowledge, continued education, skills, and experience.</a>                                                              |
| <a href="#">22.05</a> | <a href="#">Write an appropriate resume.</a>                                                                                                                                                   |
| <a href="#">22.06</a> | <a href="#">Conduct a job search and complete a job application correctly.</a>                                                                                                                 |

| <a href="#">22.08</a> | <a href="#">Examine levels of education, credentialing requirements, including licensure and certification, employment opportunities, workplace environments, and career growth potential.</a> |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

**Field Internship Activities:** Clinical experiences are integrated with the didactic portion of this program. Clinical experience assisting a dentist must be an integral part of the educational program designed to perfect students' competence in performing dental assisting functions, rather than to provide basic instruction. The major portion of the students' time in clinical assignments must be spent assisting with or participating in patient care. Prior to clinical assignments, students demonstrate minimum competence in performing the procedures which they will be expected to perform in their clinical experience.

### **Special Notes**

Dental assisting programs accredited by the American Dental Association Commission on Dental Accreditation are required to implement enrollment and admissions criteria that include the selection of adult students with a high school diploma, its equivalent, or an advanced degree.

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.

This program meets the goals of TECH PREP and is based on the model developed by the Allied Health Articulation Task Force.

This program should meet the most current edition of the American Dental Association Accreditation Standards for Dental Assisting Education Programs. For further information, contact: Commission on Dental Accreditation, 211 East Chicago Avenue, Chicago, Illinois 60611.

For Florida information contact the Florida Agency for Health Care Administration (AHCA), Division of Health Quality Assurance, Board of Dentistry, 4052 Bald Cypress Way, Tallahassee, FL 32399, 850/245-4161.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

Pursuant to 466.024, F.S., 64B5-16.002, F.A.C. and 64B5-9.011, F.A.C., completers of the dental assisting program may be awarded a certificate verifying formal training which is required for the performance of certain remediable tasks (also known as expanded functions.)

Students should be encouraged to become members and participate in the activities of the professional organization: The American Dental Assistants Association.

Completers of the dental assisting program should be encouraged to take the Dental Assisting National Board (DANB) Certified Dental Assistant (CDA) exam. DANB is recognized by the American Dental Association as the national certification board for dental assistants.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

### **Program Length**

In accordance with Rule 6A-10.024, F.A.C. an ATD program consists of a course of study that is part of an AS or AAS degree program, is less than 60 credit hours, is approximately 50% of the technical component (non-general education) and leads to employment in a specific occupation. An ATD program may consist of either technical credit or college credit.

Students must have a high school diploma, a GED, or a certificate of completion to be admitted to an ATD program. Within six weeks of entry, students in ATD programs of 450 or more hours must be tested pursuant to Rule 6A-10.040, F.A.C. and if below minimum standards for completion from the program, must receive remedial instruction. The minimum standards must be at least the equivalent of a score of ten (10) on all sections of basic skills test approved in Rule 6A-10.040, F.A.C. Students must successfully complete all remedial instruction before completing the ATD.

Community Colleges may offer either college or career credit toward the ATD. A Career Center in a public school district may offer an ATD program only as technical credit, with college credit awarded to a student upon articulation to a community college (Section 1004.02, F.S.)

When offered at a community college the standard length of this program is 50 credits. When offered at a technical center the standard length of this program is 1230 clock hours.

In accordance with Rule 6A-10.024, F.A.C. all faculty providing instruction must have at least a baccalaureate degree or an associate degree with demonstrated competencies in the specific instructional program as defined by the Southern Association of Colleges and Schools.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** ~~Health-Care~~ Healthcare Services Specialist  
**Career Cluster:** Health Science

### Purpose

This certificate program is part of the Health Services Management AS degree program (1351070101).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as ~~Health-Care~~ Healthcare Services supervisor assistants in medicine and health service management (Medical and Health Services Managers). This program is for individuals who are currently employed in the health field or seeking employment in entry-level management positions in the health field.

The content includes but is not limited to: laws and regulations pertaining to health care facilities and agencies, organizational structure of health care facilities, making employee assignments and scheduling, legal aspects of ~~health-care~~ healthcare, health and safety, including CPR, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

| <del>09.03</del>              | <del>Identify mandatory requirements regarding environmental health and safety standards.</del>                                                                                |
| <del>09.04</del>              | <del>Discuss the impact of legislative changes on health care facilities.</del>                                                                                                |
| <del>10.0</del> <u>09.0</u>   | Demonstrate knowledge of the economics involved in healthcare. -The student will be able to:                                                                                   |
| <del>10.04</del> <u>09.01</u> | Identify common methods, benefits, and challenges of payment for healthcare services.                                                                                          |
| <del>10.02</del> <u>09.02</u> | Demonstrate knowledge of reimbursement <del>systems within</del> <u>methodologies for</u> healthcare <u>services</u> .                                                         |
| <del>10.03</del> <u>09.03</u> | Identify billing and insurance terminology.                                                                                                                                    |
| <del>10.04</del> <u>09.04</u> | -Demonstrate understanding of the process of utilization review.                                                                                                               |
| <del>10.05</del> <u>09.05</u> | -Demonstrate <del>knowledge of</del> <u>effective practices in</u> accounts receivable <del>system that monitors</del> and <del>optimizes</del> reimbursement <u>systems</u> . |
| <del>10.06</del> <u>09.06</u> | Demonstrate knowledge of third-party reimbursements, including Center for Medicare/Medicaid Services (CMS) rulings and precedence to other payers.                             |
| <del>10.07</del> <u>09.07</u> | Demonstrate basic knowledge of the procedures and purposes of medical documentation, medical billing, and coding.                                                              |
| <del>10.08</del> <u>09.08</u> | Demonstrate knowledge of the revenue cycle.                                                                                                                                    |
| <del>10.09</del> <u>09.09</u> | Explain government impacts to reimbursement (i.e., value-based payment models, government incentive programs, self-pay models, and HCAPS scores).                              |
| <del>10.10</del> <u>09.10</u> | Identify volume and growth strategies for healthcare agencies.                                                                                                                 |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

It is strongly recommended that hands-on practical experience be an integral part of the program.

### **Special Notes**

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S., for more information on disqualification for a license, certificate, or registration through the Department of Health.

The Health Care Services Program, with emphasis on middle management skills, is a complex program requiring current knowledge in both health care and legislation affecting the health care delivery system. Instruction disciplines can come from a variety of fields.

To augment the program areas, community leaders possessing expertise in specific health care areas may be utilized.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Healthcare Informatics Specialist  
**Career Cluster:** Health Science

### Purpose

This certificate program is part of the Health Information Technology AS degree program (1351070700).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as entry-level Healthcare Informatics Specialists or to provide supplemental training for persons previously or currently employed in related health record or information technology occupations.

The content includes but is not limited to biomedical sciences, medical terminology, healthcare delivery systems, basic principles of healthcare informatics, electronic health/medical record systems, data and workflow management concepts, and project management skills specific to healthcare informatics, ethical and legal concepts, health data content, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## Program Structure

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate an understanding of healthcare organizations and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Explore health informatics as ~~an allied~~ health ~~profession~~ professional.
- 04.0 ~~Demonstrate an understanding~~ Apply knowledge of health data concepts.
- 05.0 Manage the ~~functions~~ adoption of ~~a~~ multiple formats of health ~~record~~ records and the function of digital applications.
- 06.0 ~~Demonstrate an understanding of~~ Apply Health Information Technology principles.
- 07.0 ~~Discuss~~ Apply classification systems, clinical vocabularies, and terminologies.
- 08.0 Evaluate ethical issues in Health Information ~~Professions~~ professions.
- 09.0 Demonstrate compliance with laws, regulations, and standards that impact healthcare.
- 10.0 Apply policies, regulations, and standards to the management of information associated with treatment, payment, and operations (TPO).
- 11.0 Demonstrate computer knowledge and skills.
- 12.0 Demonstrate employability skills.
- 13.0 Examine the various informatics and data analytics-related disciplines.
- 14.0 Demonstrate ethical and legal principles with regard to the role of the informatics and data analytics specialist.
- 15.0 Apply appropriate resources in healthcare informatics and data analytics to retrieve and analyze relevant information.
- 16.0 Manage health data processes and systems.
- 17.0 Analyze healthcare data ~~including~~ to support research and performance improvement initiatives.
- 18.0 Perform appropriate information technology ~~and systems~~ system functions.
- 19.0 Perform project management principles and best practices.
- 20.0 Collaborate in the planning, design, selection, implementation, integration, testing, and support ~~for~~ of health information systems.
- 21.0 ~~Perform proficiently in the application and integration of~~ Integrate healthcare informatics and data analytics ~~concepts and~~ skills through practical lab experiences.

| 08.02                  | Analyze ethical issues related to health information.                                                                                                                                                                                        |
| 08.03                  | Manage ethical issues related to <u>treatment, payment</u> - <del>options, and operations</del> .                                                                                                                                            |

|       |                                                                                                                                                                                                                                                                                                     |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 09.0  | Demonstrate compliance with laws, regulations, and standards that impact healthcare. -The student will be able to:                                                                                                                                                                                  |
| 09.01 | <del>Promote</del> Advocate the importance of maintaining ethical and legal standards in gathering, securing, managing, and analyzing <del>the use of</del> health information.                                                                                                                     |
| 09.02 | Identify all regulations, <u>laws</u> , and standards that impact health information, including <del>but not limited to</del> the Health Insurance Portability and Accountability Act (HIPAA).                                                                                                      |
| 09.03 | Explain the composition of the legal health record <del>in various settings</del> .                                                                                                                                                                                                                 |
| 09.04 | Apply health information policies and procedures for privacy, confidentiality, and security.                                                                                                                                                                                                        |
| 09.05 | Articulate legal terms and processes that impact healthcare.                                                                                                                                                                                                                                        |
| 10.0  | Apply policies, regulations, and standards to the management of information associated with treatment, payment, and operations (TPO). The student will be able to:                                                                                                                                  |
| 10.01 | Describe how <del>to adapt workflow necessitated by</del> regulatory change <u>impacts workflow</u> .                                                                                                                                                                                               |
| 10.02 | Demonstrate knowledge of policies and procedures for access and disclosure of protected health information to authorized users.                                                                                                                                                                     |
| 10.03 | Adhere to appropriate and applicable healthcare regulatory and accrediting agency guidelines.                                                                                                                                                                                                       |
| 11.0  | Demonstrate computer knowledge and skills. -The student will be able to:                                                                                                                                                                                                                            |
| 11.01 | Demonstrate the ability to create, manage, organize, attach, and retrieve files.                                                                                                                                                                                                                    |
| 11.02 | Demonstrate <u>the</u> ability to connect to and perform research <del>on the internet</del> <u>using search engines and</u> by identifying <del>reliable</del> -reputable websites.                                                                                                                |
| 11.03 | Demonstrate proficiency in word processing, spreadsheets, <del>database</del> , and presentation software.                                                                                                                                                                                          |
| 11.04 | Demonstrate the ability to <del>install</del> <u>manage</u> software programs.                                                                                                                                                                                                                      |
| 11.05 | Demonstrate knowledge of safe computer practices and security procedures <del>including but not limited to</del> <u>such as</u> encryption, passwords, and biometrics.                                                                                                                              |
| 12.0  | Demonstrate employability skills. -The student will be able to:                                                                                                                                                                                                                                     |
| 12.01 | Identify and exemplify <del>personal</del> <u>professional</u> traits <del>or attitudes</del> desirable in a member of the healthcare team.                                                                                                                                                         |
| 12.02 | <del>Model</del> <u>Demonstrate</u> professional standards of healthcare workers as they apply to hygiene, dress, language, <del>confidentiality, cultural diversity, competence,</del> and behavior. <u>(e.g., telephone and email etiquette, social media, courtesy, and self-introductions).</u> |
| 12.03 | <del>Utilize documents</del> <u>Identify necessary documentation</u> that may be required when applying for a <u>healthcare</u> position.                                                                                                                                                           |
| 12.04 | Model the process to obtain employment, including but not limited to job search, cover letter, resume, application, <u>interview</u> , and thank you letter.                                                                                                                                        |
| 13.0  | Examine the various informatics and data analytics-related disciplines. -The student will be able to:                                                                                                                                                                                               |

|       |                                                                                                                                                                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.01 | <del>Identify</del> <u>Analyze</u> the <del>development</del> <u>evolution, current state, and future trends</u> of <del>the</del> informatics <del>discipline</del> and data analytics <del>including the present industry environment and future trends-related disciplines</del> . |
| 13.02 | <del>Demonstrate</del> <u>Apply</u> comprehensive knowledge of health data standards for <u>the</u> implementation of health information systems.                                                                                                                                     |
| 14.0  | Demonstrate ethical and legal principles with regard to the role of the informatics and data analytics specialist. -The student will be able to:                                                                                                                                      |
| 14.01 | Apply the Code of Ethics to informatics and data analytics as it relates to professional organizations.                                                                                                                                                                               |
| 14.02 | <del>Explain</del> <u>Identify</u> the scope of work of the healthcare informatics and data analytics specialist, <u>including ethical and legal responsibilities</u> .                                                                                                               |
| 15.0  | Apply appropriate resources in healthcare informatics and data analytics to retrieve and analyze relevant information. -The student will be able to:                                                                                                                                  |
| 15.01 | <del>Demonstrate the ability to identify</del> <u>Identify</u> credible informatics and data analytics resources <u>for retrieving and analyzing</u> relevant <del>to the content, applications, and assignments</del> <u>information</u> .                                           |
| 15.02 | Utilize case studies and best practices <u>into analyze</u> informatics and data analytics <del>projects and course work</del> <u>concepts</u> .                                                                                                                                      |
| 16.0  | Manage health data processes and systems. -The student will be able to:                                                                                                                                                                                                               |
| 16.01 | Oversee the collection and maintenance of health data, data sets, quality indicators, and databases.                                                                                                                                                                                  |
| 16.02 | Apply policies and procedures to health informatics and data analytics processes.                                                                                                                                                                                                     |
| 16.03 | <del>Maintain and verify</del> <u>Verify</u> data quality, standards, and data sources for all health information systems across the continuum of care.                                                                                                                               |
| 16.04 | <del>Take part</del> <u>Participate</u> in <del>data base</del> <u>database</u> management such as data entry, data display design, and <del>data base</del> <u>database</u> language.                                                                                                |
| 16.05 | Identify standards for <u>the</u> exchange of health information.                                                                                                                                                                                                                     |
| 17.0  | Analyze healthcare data, <del>including to support</del> research and performance improvement <del>– initiatives</del> . The student will be able to:                                                                                                                                 |
| 17.01 | Analyze data for clinical indices/databases/registries.                                                                                                                                                                                                                               |
| 17.02 | Model data as representative visual information to achieve desired outcomes.                                                                                                                                                                                                          |
| 17.03 | Calculate basic descriptive, institutional, and healthcare statistics.                                                                                                                                                                                                                |
| 17.04 | <del>Identify</del> <u>Examine</u> common research methods in accordance with Institutional Review Board (IRB) processes and policies.                                                                                                                                                |
| 17.05 | Utilize technologies for trend analysis, end- <u>–</u> user support, decision making, and strategic planning.                                                                                                                                                                         |
| 17.06 | Report data for facility- <u>–</u> wide quality management and performance improvement programs.                                                                                                                                                                                      |
| 18.0  | Perform appropriate information technology <del>and systems</del> <u>system</u> functions. -The student will be able to:                                                                                                                                                              |

|       |                                                                                                                                                                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18.01 | <del>Report healthcare data through</del> Perform graphical representations <del>from healthcare data reports that have been accurately calculated, interpreted, and summarized using statistical software.</del>                                                                 |
| 18.02 | Utilize specialized <del>software in processes</del> technologies and AI applications affiliated with treatment, payment, and operations (TPO).                                                                                                                                   |
| 18.03 | Apply policies and procedures to <del>facilitate streamline</del> the use of electronic health <del>record</del> records (EHR), personal health <del>record</del> (PHR)records (PHRs), public health <del>systems</del> , and <del>other</del> related applications and networks. |
| 18.04 | <del>Apply</del> Utilize knowledge of <del>data base</del> database modeling to <del>meet</del> address departmental needs.                                                                                                                                                       |
| 18.05 | <del>Utilize and maintain appropriate electronic or imaging technology for data/record storage.</del> Facilitate the implementation, maintenance, and decommissioning of an information system or application.                                                                    |
| 18.06 | Perform <del>database queries, analyses, and presentations of</del> data <del>base inquiries</del> to facilitate decision-making.                                                                                                                                                 |
| 18.07 | Utilize tools and techniques for <del>information</del> retention, archiving, and destruction of information <del>in accordance with</del> per state and federal regulations.                                                                                                     |
| 18.08 | Protect data integrity <del>and validity</del> by preventing unauthorized access using software and hardware <del>technology</del> technologies.                                                                                                                                  |
| 19.0  | Perform project management principles and best practices. -The student will be able to:                                                                                                                                                                                           |
| 19.01 | Demonstrate an understanding of the general principles and tools of informatics and data analytics project management.                                                                                                                                                            |
| 19.02 | Demonstrate <del>abilities related to</del> teamwork, <del>project</del> resource allocation, and problem- <del>resolution associated in a</del> solving skills in healthcare informatics and data analytics <del>project</del> projects.                                         |
| 20.0  | Collaborate in the planning, design, selection, implementation, integration, testing, and support <del>for</del> of health information systems. -The student will be able to:                                                                                                     |
| 20.01 | <del>Apply standard selection processes for health information systems using best practices.</del> <del>Apply appropriate data collection methods considering end user perspectives and needs.</del>                                                                              |
| 20.02 | <del>Model information technologies across the healthcare continuum of care.</del> Demonstrate interoperability standards to ensure data sharing across systems.                                                                                                                  |
| 20.03 | Identify technological and changing management issues and problem resolution associated with health information systems.                                                                                                                                                          |
| 20.04 | <del>Benchmark</del> Apply S.M.A.R.T. goals for projects <del>using evidence-based information and research to inform decisions and justify actions.</del>                                                                                                                        |
| 20.05 | <del>Map</del> Analyze workflow <del>and process assessment as it pertains to information technology</del> within an electronic health record.                                                                                                                                    |
| 20.06 | Summarize <del>the various types of</del> information systems <del>theory</del> and their applications.                                                                                                                                                                           |
| 20.07 | <del>Describe strategic planning for implementation of</del> Analyze problems, promote solutions, and encourage decision-making in <del>implementing</del> health information systems, <del>including SWOT.</del>                                                                 |
| 20.08 | Identify <del>security</del> cybersecurity risks <del>including across</del> physical, virtual, and network areas.                                                                                                                                                                |
| 20.09 | <del>Take part in end-user</del> Develop training <del>sessions, including planning training sessions</del> materials for various individuals, groups, and <del>development of training material</del> populations.                                                               |

|       |                                                                                                                                                                                                                           |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20.10 | Identify health information system practices <del>on a national and international scale</del> globally.                                                                                                                   |
| 20.11 | <del>Verify user access logs and audit trails.</del> Examine data generated from advanced digital applications to review the security, authenticity, or reliability of the data generated.                                |
| 21.0  | <del>Perform proficiently in the application and integration of</del> Integrate healthcare informatics and data analytics <del>concepts and</del> skills through practical lab experiences. -The student will be able to: |
| 21.01 | <del>Model the role and responsibilities of the</del> Demonstrate a health informatics and data analytics specialist <u>role</u> as <u>a</u> team leader <del>and/or</del> project manager.                               |
| 21.02 | Apply knowledge and skills related to project management <del>health information systems</del> .                                                                                                                          |
| 21.03 | <del>Perform real-world applications of</del> Apply healthcare informatics <del>and</del> data analytics principles, and best practices <u>in real-world scenarios</u> .                                                  |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

The cooperative method of instruction or clinical rotation is appropriate for this program. Whenever these methods are offered, the following is required for each student: a training plan, signed by the student, teacher, and employer, which includes instructional objectives and a list of on-the-job and in-school learning experiences; and a work station which reflects equipment, skills, and tasks which are relevant to the occupation which the student has chosen as a career goal. The student may receive compensation for work performed.

Faculty teaching this program must have a minimum of an AS degree in Healthcare Informatics, Nursing, Health Information Management.

Students should be encouraged to become members and participate in the activities of the professional organizations: American Health Information Management Association (AHIMA), Healthcare Information and Management Systems Society (HIMSS), American Medical Informatics Association (AMIA), and other discipline-specific professional informatics organizations.

Outcomes 01-12 are referred to as the Health Information Technology core and do not have to be completed if the students has previously completed the core in another program at any level. The Core should be taken first in the program.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as

instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Medical Coder/Biller  
**Program Type:** ATD (Applied Technology Diploma)  
**Career Cluster:** Health Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment in a variety of health care settings as entry-level ~~coder~~[coders](#), medical record ~~coder~~[coders](#), coding ~~technician, or~~[technicians](#), coding clerks, or medical coder/billers, or Medical Records and Health Information Technicians.

The content includes but is not limited to medical terminology, anatomy and physiology, coding systems, fundamentals of disease process, including pharmacology, health care delivery systems, basics of medical records services, ethical and legal responsibilities, safety/security procedures, basic data processing, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is an Applied Technology Diploma (ATD) program that is part of a technical degree program, ~~is~~has less than 60 credit hours, and leads to employment in a specific occupation. An ATD program may consist of either technical credit or college credit. ~~A~~ public school district may offer an ATD program only as clock hour credit, with college credit awarded to a student upon articulation to a state college.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

### **Clock Hour Program**

When offered at the district level, this program is a planned sequence of instruction consisting of 2 occupational completion points and the courses as shown below.

| OCP | Course Number | Course Title                                  | Length    |
|-----|---------------|-----------------------------------------------|-----------|
| A   | HIM0009       | Introduction to Health Information Technology | 90 hours  |
| B   | HIM0091       | Medical Coder/Biller I                        | 350 hours |
|     | HIM0092       | Medical Coder/Biller II                       | 350 hours |
|     | HIM0093       | Medical Coder/Biller III                      | 320 hours |

### **College Credit Program**

When offered at the college credit level, this ATD program is part of the Health Information Technology AS (1351070700) and has a program length of 37 credits.

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |

**Job Attainment****10.0 Find, assess and apply to job opportunities.**10.01 Identify online job posts relevant to his or her career aspirations.10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.10.03 Define what information, documentation and writing prompts are required for the positions.**11.0 Communicate personal competence, character and fit for a job opportunity.**11.01 Develop a resume.11.02 Write a cover letter.11.03 Curate a professional portfolio that includes work products.11.04 Prepare for and experience a mock job interview.**12.0 Cultivate and leverage relationships to professionally advance.**12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.12.02 Develop a plan to cultivate a professional digital footprint.12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate an understanding of healthcare organizations and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Explore health informatics as ~~an allied~~ health ~~profession~~ professional.
- 04.0 ~~Demonstrate an understanding~~ Apply knowledge of health data concepts.
- 05.0 Manage the ~~functions~~ adoption of ~~a multiple formats of~~ health ~~record~~ records and the function of digital applications.
- 06.0 ~~Demonstrate an understanding of~~ Apply Health Information Technology principles.
- 07.0 ~~Discuss~~ Apply classification systems, clinical vocabularies, and terminologies.
- 08.0 Evaluate ethical issues in Health Information ~~Professions~~ professions.
- 09.0 Demonstrate compliance with laws, regulations, and standards that impact healthcare.
- 10.0 Apply policies, regulations, and standards to the management of information associated with treatment, payment, and operations (TPO).
- 11.0 Demonstrate computer knowledge and skills.
- 12.0 Demonstrate employability skills.
- 13.0 Describe the anatomy and physiology of the human body.
- 14.0 Demonstrate proficiency in the application of medical terminology.
- 15.0 Demonstrate an understanding of the fundamentals of disease ~~process~~ processes in ~~relationship~~ relation to the human body, including pharmacology.
- 16.0 ~~Perform proficiently~~ Demonstrate proficiency in ~~the use of ICD~~ current medical code set systems and ~~HCPGS/CPT~~ technology-assisted coding ~~systems, both manual and automated~~ solutions.
- ~~17.0 — Perform coding complexities proficiently.~~
- 17.0 Demonstrate proficiency in complex coding scenarios and value-based care requirements.
- 18.0 Articulate ~~the significance of~~ health information services ~~as it relates~~ within modern healthcare delivery systems related to the medical coder/biller.
- 19.0 Ensure professional and ethical behavior of a medical coder/biller in an evolving digital healthcare environment.
- 20.0 ~~Take part~~ Participate in healthcare revenue cycle management processes.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Medical Coder/Biller - ATD  
**Clock Hour Program Number:** H170530

When this program is offered at the district level, the following organization of courses, standards and benchmarks apply.

| <b>Course Number: HIM0009</b><br><b>Occupational Completion Point: A</b><br><b>Introduction to Health Information Technology – 90 Hours</b> |                                                                                                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                                                                                                                                        | Demonstrate an understanding of <del>the</del> healthcare organizations and health occupations. -The student will be able to:                                         |
| 01.01                                                                                                                                       | Discuss the evolution of healthcare.                                                                                                                                  |
| 01.02                                                                                                                                       | Demonstrate an understanding of the infrastructure of healthcare in the United States.                                                                                |
| 01.03                                                                                                                                       | Discuss healthcare regulatory agencies and organizations.                                                                                                             |
| 01.04                                                                                                                                       | Recognize levels of education, credentialing requirements, employment opportunities, workplace environments, and career growth potential.                             |
| 01.05                                                                                                                                       | Summarize the roles of various providers and disciplines throughout the continuum of healthcare.                                                                      |
| 02.0                                                                                                                                        | Demonstrate the ability to communicate and use interpersonal skills effectively. -The student will be able to:                                                        |
| 02.01                                                                                                                                       | Apply basic speaking and active listening skills with meaningful feedback.                                                                                            |
| <del>02.02</del>                                                                                                                            | <del>Apply basic observational skills, related documentation strategies in written and oral form.</del>                                                               |
| <del>02.03</del> 02.02                                                                                                                      | Identify characteristics of successful and unsuccessful communication including barriers.                                                                             |
| <del>02.04</del> 02.03                                                                                                                      | <del>Recognize</del> Demonstrate emotional intelligence (e.g., recognize verbal and non-verbal cues-).                                                                |
| <del>02.05</del> 02.04                                                                                                                      | Demonstrate <del>written</del> effective professional communication <del>including emails</del> using correct spelling, grammar, formatting, and confidentiality.     |
| <del>02.06</del>                                                                                                                            | <del>Demonstrate ability to create professional correspondence using appropriate email practices and etiquette.</del>                                                 |
| <del>02.07</del> 02.05                                                                                                                      | <del>Utilize</del> Use appropriate medical terminology and abbreviations.                                                                                             |
| <del>02.08</del>                                                                                                                            | <del>Demonstrate the importance of cultural diversity and competence for patients and other healthcare workers by maintaining good interpersonal relationships.</del> |
| <del>02.09</del> 02.06                                                                                                                      | Promote health information training and awareness to internal/external stakeholders.                                                                                  |

|                        |                                                                                                                                                                                                                                              |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>02.10</del> 02.07 | Model communication skills to varied levels of understanding and cultural orientation, including <del>diverse age</del> <u>generational differences</u> , cultural, <del>economic</del> <u>socioeconomic</u> , ethnic, and religious groups. |
| <del>02.14</del> 02.08 | Distinguish between <del>and identify</del> subjective and objective information.                                                                                                                                                            |
| 03.0                   | Explore health <del>information</del> <u>informatics</u> as <del>an allied</del> <u>a</u> health <del>profession-</del> <u>professional</u> . The student will be able to:                                                                   |
| 03.01                  | Discuss the <del>history</del> <u>past, present, and future</u> of health information- <del>management</del> .                                                                                                                               |
| 03.02                  | <del>Discuss the</del> <u>Examine</u> professional opportunities <del>within the</del> <u>related to</u> health information- <del>professions</del> .                                                                                        |
| 03.03                  | Demonstrate knowledge of <u>industry-recognized credentials and</u> professional associations applicable to the field of health information.                                                                                                 |
| 04.0                   | <del>Demonstrate an understanding</del> <u>Apply knowledge</u> of health data concepts. -The student will be able to:                                                                                                                        |
| 04.01                  | <del>Describe the</del> <u>Examine</u> various <del>uses of primary and secondary</del> health data <u>uses</u> and data sets.                                                                                                               |
| 04.02                  | Identify various characteristics of health data quality and <u>emerging</u> standards.                                                                                                                                                       |
| 05.0                   | Manage the <del>functions</del> <u>adoption</u> of <del>a</del> <u>multiple formats of</u> health <del>record-</del> <u>records and the function of digital applications</u> . The student will be able to:                                  |
| 05.01                  | <del>Demonstrate an understanding</del> <u>Apply regulations and requirements</u> of <u>health information to</u> the <del>various formats</del> <u>continuum</u> of the <u>health record in various settings</u> <u>care</u> .              |
| 05.02                  | <del>Take part in the various uses of a</del> <u>Analyze</u> health information as it relates to treatment, payment, and operations (TPO).                                                                                                   |
| 06.0                   | <del>Demonstrate an understanding of</del> <u>Apply</u> Health Information Technology- <del>principles</del> . The student will be able to:                                                                                                  |
| 06.01                  | <del>Articulate</del> <u>Explain</u> how changing regulations and technology impact the health information field.                                                                                                                            |
| 06.02                  | Validate <u>the accuracy, integrity, and reliability of</u> information from health information systems and applications in healthcare.                                                                                                      |
| 06.03                  | Demonstrate <del>an</del> <u>proficiency and</u> understanding of creation, use, storage, retrieval, and exchange of health data.                                                                                                            |
| 07.0                   | <del>Discuss</del> <u>Apply</u> classification systems, clinical vocabularies, and terminologies. -The student will be able to:                                                                                                              |
| 07.01                  | <del>Explain</del> <u>Demonstrate</u> the use of classification systems, clinical vocabularies, <del>and</del> terminologies, and nomenclatures.                                                                                             |
| 08.0                   | Evaluate ethical issues in Health Information <del>Professions-</del> <u>professions</u> . The student will be able to:                                                                                                                      |
| 08.01                  | Interpret <del>AHIMA</del> <u>the industry-recognized</u> code of ethics <u>for healthcare information practices</u> .                                                                                                                       |
| 08.02                  | Analyze ethical issues related to health information.                                                                                                                                                                                        |
| 08.03                  | Manage ethical issues related to <u>treatment</u> , payment, and operations.                                                                                                                                                                 |

|       |                                                                                                                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 09.0  | Demonstrate compliance with laws, regulations, and standards that impact healthcare. -The student will be able to:                                                                                                                                                                               |
| 09.01 | <del>Promote</del> Advocate the importance of maintaining ethical and legal standards in gathering, managing, and analyzing <del>the use of</del> health information.                                                                                                                            |
| 09.02 | Identify all regulations, <u>laws</u> , and standards that impact health information, including but not limited to the Health Insurance Portability and Accountability Act (HIPAA).                                                                                                              |
| 09.03 | Explain the composition of the legal health record <del>in various settings</del> .                                                                                                                                                                                                              |
| 09.04 | Apply health information policies and procedures for privacy, confidentiality, and security.                                                                                                                                                                                                     |
| 09.05 | Articulate legal terms and processes that impact healthcare.                                                                                                                                                                                                                                     |
| 10.0  | Apply policies, regulations, and standards to the management of information associated with treatment, payment, and operations (TPO). The student will be able to:                                                                                                                               |
| 10.01 | Describe how <del>to adapt workflow necessitated by</del> regulatory change <u>impacts workflow</u> .                                                                                                                                                                                            |
| 10.02 | Demonstrate knowledge of policies and procedures for access and disclosure of protected health information to authorized users.                                                                                                                                                                  |
| 10.03 | Adhere to appropriate and applicable healthcare regulatory and accrediting agency guidelines.                                                                                                                                                                                                    |
| 11.0  | Demonstrate computer knowledge and skills. -The student will be able to:                                                                                                                                                                                                                         |
| 11.01 | Demonstrate the ability to create, manage, organize, attach, and retrieve files.                                                                                                                                                                                                                 |
| 11.02 | Demonstrate <u>the</u> ability to connect to and perform research <del>on the internet</del> <u>using search engines and</u> by identifying <del>reliable</del> -reputable websites.                                                                                                             |
| 11.03 | Demonstrate proficiency in word processing, spreadsheets, <del>database</del> , and presentation software.                                                                                                                                                                                       |
| 11.04 | Demonstrate the ability to <del>install</del> <u>manage</u> software programs.                                                                                                                                                                                                                   |
| 11.05 | Demonstrate knowledge of safe computer practices and security procedures <del>including but not limited to</del> <u>such as</u> encryption, passwords, and biometrics.                                                                                                                           |
| 12.0  | Demonstrate employability skills. -The student will be able to:                                                                                                                                                                                                                                  |
| 12.01 | Identify and exemplify <del>personal</del> <u>professional</u> traits <del>or attitudes</del> -desirable in a member of the healthcare team.                                                                                                                                                     |
| 12.02 | <del>Model</del> Demonstrate professional standards of healthcare workers as they apply to hygiene, dress, language, <del>confidentiality, cultural diversity, competence,</del> and behavior. <del>(e.g., telephone and email etiquette, social media, courtesy, and self-introductions).</del> |
| 12.03 | <del>Utilize documents</del> <u>Identify necessary documentation</u> that may be required when applying for a <u>healthcare</u> position.                                                                                                                                                        |
| 12.04 | Model the process to obtain employment, including, but not limited to, job search, cover letter, resume, application, <u>interview</u> , and thank you letter.                                                                                                                                   |

**Course Number: HIM HIM0091**  
**Occupational Completion Point: B**  
**Medical Coder/Biller I – 350 Hours**

13.0 Describe the anatomy and physiology of the human body. -The student will be able to:

13.01 Describe the structure and function of the respiratory system.

13.02 Describe the structure and function of the circulatory system.

13.03 Describe the structure and function of the musculoskeletal and connective tissue ~~system~~ systems.

13.04 Describe the structure and function of nervous and sensory systems.

13.05 Describe the structure and function of the reproductive system.

13.06 Describe the structure and function of the urinary system.

13.07 Describe the structure and function of the digestive system.

13.08 Describe the structure and function of the endocrine system.

13.09 Describe the structure and function of the integumentary system.

13.10 Describe major mental health disorders.

14.0 Demonstrate proficiency in the application of medical terminology. -The student will be able to:

14.01 Identify word parts of medical terminology in daily use.

14.02 Build, spell, and pronounce correctly; appropriate terms from word parts ~~learned~~ and be able to ~~give the meaning of~~ define the word.

14.03 Identify word parts and be able to build, spell, and understand new words with those parts.

14.04 Spell and use medical abbreviations ~~correctly~~.

14.05 Identify terminology specific to healthcare settings, including surgical, medical, and therapeutic.

14.06 Apply medical reference sources.

15.0 Demonstrate an understanding of the fundamentals of disease ~~process~~ processes in ~~relationship~~ relation to the human body, including pharmacology. -The student will be able to:

15.01 Demonstrate an understanding of the predisposing factors and direct causes of disease as they relate to the human body.

|       |                                                                                                                                                                                                |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15.02 | Demonstrate an understanding of the general pathogenesis and morphology of disease and its role in the disease process.                                                                        |
| 15.03 | Demonstrate an understanding of pharmacological agents, <del>mechanisms of actions, modalities</del> <u>uses, treatments</u> , and <del>utilizing</del> <u>utilize</u> drug reference sources. |
| 15.04 | Identify and use therapeutic and diagnostic test terminology.                                                                                                                                  |

**Course Number: HIM HIM0092**  
**Occupational Completion Point: B**  
**Medical Coder/Biller II – 350 Hours**

|       |                                                                                                                                                                                                                                                                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.0  | <del>Perform proficiently</del> <u>Demonstrate proficiency</u> in <del>the use of ICD</del> <u>current medical code set systems</u> and <del>HCPGS/CPT</del> <u>technology-assisted coding systems, both manual and automated, solutions</u> . The student will be able to:                                                                                                 |
| 16.01 | <del>Analyze</del> <u>Apply coding</u> conventions and guidelines <del>used in coding</del> <u>when utilizing Computer-Assisted Coding (CAC) and Natural Language Processing (NLP) technologies</u> .                                                                                                                                                                       |
| 16.02 | <del>Map the process to update</del> <u>Implement processes for maintaining and updating</u> coding resources, <u>including automated updates and coding software maintenance</u> .                                                                                                                                                                                         |
| 16.03 | <del>Assign</del> <u>Validate codes using both manual and verify automated systems, including</u> diagnosis, procedure, HCPCS level II codes, <u>APCs</u> , and applicable modifiers and groupings <del>in accordance with</del> <u>according to current</u> official guidelines.                                                                                           |
| 16.04 | Perform <u>coding using current versions of ICD-10-CM, ICD-10-PCS, CPT, and HCPCS</u> <del>HCPCS</del> Level II <del>coding sets to assign diagnosis in both traditional and procedure codes to case studies and authentic health records/abstracts in various</del> <u>virtual healthcare settings, including telehealth services</u> .                                    |
| 16.05 | <del>Examine components</del> <u>Analyze the impact of Social Determinants of Health (SDoH) coding on</u> revenue cycle management and <u>clinical documentation improvement including quality indicators as it relates to coding</u> <del>participate in various settings</del> <u>Clinical Documentation Integrity (CDI) programs using modern technology solutions</u> . |
| 16.06 | <del>Analyze</del> <u>Evaluate</u> documentation compliance <u>using automated auditing tools</u> and <del>standards to improve</del> <u>Artificial Intelligence (AI)-assisted documentation practices improvement systems</u> .                                                                                                                                            |
| 17.0  | <del>Perform</del> <u>Demonstrate proficiency in complex</u> coding <del>complexities proficiently, scenarios and value-based care requirements</del> . The student will be able to:                                                                                                                                                                                        |
| 17.01 | <del>Verify</del> <u>Apply</u> coding concepts to complex <u>authentic cases, including post-acute care and virtual health records/abstracts and case studies across the continuum of care in various settings</u> <del>encounters</del> .                                                                                                                                  |
| 17.02 | <del>Analyze</del> <u>Utilize advanced analytics tools to assess</u> case-mix index, <del>severity of illness systems, hierarchical condition categories (HCCs), risk adjustment systems factors, and coding quality monitors and reporting metrics for value-based reimbursement</del> .                                                                                   |
| 17.03 | <del>Examine a variety of simulated health records from</del> <u>Analyze cases</u> across the <u>contemporary healthcare continuum of care to interpret data, assign, including remote patient monitoring and verify codes in various settings</u> <u>digital health services</u> .                                                                                         |
| 17.04 | <del>Identify the</del> <u>Apply</u> various classification systems, including <del>but not limited to</del> <u>ICD-O, DSM, ICF, and ICF emerging code sets for precision medicine and genomics</u> .                                                                                                                                                                       |
| 18.0  | Articulate <del>the significance of</del> health information services <del>as it relates</del> <u>within modern healthcare delivery systems related</u> to the medical <del>/coder/ biller. -</del> The student will be able to:                                                                                                                                            |

|       |                                                                                                                                                                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18.01 | <del>Identify the functions of</del> Collaborate with interdisciplinary teams in various departments <del>through digital communication platforms</del> and how this department interacts with the medical coder/biller shared health information systems.       |
| 18.02 | Utilize <del>the</del> electronic health <del>record</del> records (EHRs) and other digital health information systems content in various settings.                                                                                                              |
| 18.03 | Educate stakeholders on <del>the importance of the health record in relation to state and federal agencies</del> regulatory compliance, including <del>compliance area</del> information blocking rules, interoperability requirements, and privacy regulations. |

**Course Number: HIM HIM0093**  
**Occupational Completion Point: B**  
**Medical Coder/Biller III – 320 Hours**

|       |                                                                                                                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.0  | Ensure professional and ethical behavior of a medical coder/biller. <del>in an evolving digital healthcare environment.</del> The student will be able to:                                                                        |
| 19.01 | Advocate <del>for</del> the <del>scope of work</del> expanding role of the medical coder/biller <del>in data analytics and population health management.</del>                                                                    |
| 19.02 | <del>Comply with</del> Adhere to ethical coding practices <del>as outlined by professional associations</del> in AI and automated coding systems.                                                                                 |
| 20.0  | <del>Take part</del> Participate in healthcare revenue cycle management processes. -The student will be able to:                                                                                                                  |
| 20.01 | <del>Format applicable third-party payer claims.</del> Prepare claims using electronic claims submission systems and automated verification tools.                                                                                |
| 20.02 | Analyze various <del>third-party payer types.</del> payment methodologies (e.g., value-based and alternative payment models).                                                                                                     |
| 20.03 | <del>Perform patient</del> Utilize modern accounting <del>functions</del> software and patient financial engagement platforms.                                                                                                    |
| 20.04 | <del>Examine</del> Apply reimbursement <del>methodology systems across the continuum of care</del> methodologies for emerging healthcare delivery models, including telehealth and remote patient monitoring in various settings. |
| 20.05 | Analyze Maintain digital charge <del>master</del> capture systems and <del>encounter form maintenance</del> management tools in various settings.                                                                                 |
| 20.06 | <del>Facilitate</del> Implement compliance strategies <del>and reporting as well as for</del> regulatory <del>guidelines.</del> requirements (e.g., price transparency and surprise billing regulations).                         |

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Medical Coder/Biller-ATD  
**ATD CIP Number:** 0351071400

When this program is offered at the college level, the following standards and benchmarks apply:

|                               |                                                                                                                                                                                                                                             |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                          | Demonstrate an understanding of <del>the</del> healthcare organizations and health occupations. <del>-The student will be able to:</del>                                                                                                    |
| 01.01                         | Discuss the evolution of healthcare.                                                                                                                                                                                                        |
| 01.02                         | Demonstrate an understanding of the infrastructure of healthcare in the United States.                                                                                                                                                      |
| 01.03                         | Discuss healthcare regulatory agencies and organizations.                                                                                                                                                                                   |
| 01.04                         | Recognize levels of education, credentialing requirements, employment opportunities, workplace environments, and career growth potential.                                                                                                   |
| 01.05                         | <del>Differentiate</del> <u>Summarize</u> the roles of various providers and disciplines throughout the continuum of healthcare <del>and respond to their information needs.</del>                                                          |
| 02.0                          | Demonstrate the ability to communicate and use interpersonal skills effectively. <del>-The student will be able to:</del>                                                                                                                   |
| 02.01                         | Apply basic speaking and active listening skills with meaningful feedback.                                                                                                                                                                  |
| <del>02.02</del>              | <del>Apply basic observational skills, related documentation strategies in written and oral form.</del>                                                                                                                                     |
| <del>02.03</del> <u>02.02</u> | Identify characteristics of successful and unsuccessful communication including barriers.                                                                                                                                                   |
| <del>02.04</del> <u>02.03</u> | <del>Recognize</del> <u>Demonstrate</u> emotional intelligence (e.g., verbal and non-verbal cues.).                                                                                                                                         |
| <del>02.05</del> <u>02.04</u> | Demonstrate <del>written</del> <u>effective professional</u> communication <del>including emails</del> using correct spelling, grammar, formatting, and confidentiality.                                                                    |
| <del>02.06</del>              | <del>Demonstrate ability to create professional correspondence using appropriate email practices and etiquette.</del>                                                                                                                       |
| <del>02.07</del> <u>02.05</u> | <del>Utilize</del> <u>Use</u> appropriate medical terminology and abbreviations.                                                                                                                                                            |
| <del>02.08</del>              | <del>Demonstrate the importance of cultural diversity and competence for patients and other healthcare workers by maintaining good interpersonal relationships.</del>                                                                       |
| <del>02.09</del> <u>02.06</u> | Promote health information training and awareness to internal/external stakeholders.                                                                                                                                                        |
| <del>02.10</del> <u>02.07</u> | Model communication skills to varied levels of understanding and cultural orientation, including <del>diverse age</del> <u>generational</u> differences, cultural, <del>economic</del> <u>socioeconomic</u> , ethnic, and religious groups. |

|                        |                                                                                                                                                                                                                                     |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>02.11</del> 02.08 | Distinguish between <del>and identify</del> subjective and objective information.                                                                                                                                                   |
| 03.0                   | Explore health <del>information</del> <u>informatics</u> as <del>an allied</del> <u>a</u> health <del>profession.</del> <u>professional</u> . The student will be able to:                                                          |
| 03.01                  | Discuss the <del>history</del> <u>past, present, and future</u> of health information <del>-management</del> .                                                                                                                      |
| 03.02                  | <del>Discuss</del> <u>Examine</u> the professional opportunities <del>within the</del> <u>related to</u> health information <del>-professions</del> .                                                                               |
| 03.03                  | Demonstrate knowledge of <u>industry-recognized credentials and</u> professional associations applicable to the field of health information.                                                                                        |
| 04.0                   | <del>Demonstrate an understanding</del> <u>Apply knowledge</u> of health data concepts. -The student will be able to:                                                                                                               |
| 04.01                  | <del>Describe the</del> <u>Examine</u> various <del>uses of primary and secondary</del> health data <u>uses</u> and data sets.                                                                                                      |
| 04.02                  | Identify various characteristics of health data quality and <u>emerging</u> standards.                                                                                                                                              |
| 05.0                   | Manage the <del>functions</del> <u>adoption</u> of <del>a</del> <u>multiple formats of</u> health <del>record.</del> <u>records and the function of digital applications</u> . The student will be able to:                         |
| 05.01                  | <del>Demonstrate an understanding</del> <u>Apply regulations and requirements</u> of <u>health information to</u> the <del>various formats</del> <u>continuum</u> of the <del>health record in various settings</del> <u>care</u> . |
| 05.02                  | <del>Take part in the various uses of a</del> <u>Analyze</u> health information as it relates to treatment, payment, and operations (TPO).                                                                                          |
| 06.0                   | <del>Demonstrate an understanding of</del> <u>Apply</u> Health Information Technology <del>—</del> <u>principles</u> . The student will be able to:                                                                                 |
| 06.01                  | <del>Articulate</del> <u>Explain</u> how changing regulations and technology impact the health information field.                                                                                                                   |
| 06.02                  | Validate <u>the accuracy, integrity, and reliability of</u> information from health information systems and applications in healthcare.                                                                                             |
| 06.03                  | Demonstrate <del>an</del> <u>proficiency and</u> understanding of creation, use, storage, retrieval, and exchange of health data.                                                                                                   |
| 07.0                   | <del>Discuss</del> <u>Apply</u> classification systems, clinical vocabularies, and terminologies. -The student will be able to:                                                                                                     |
| 07.01                  | <del>Explain</del> <u>Demonstrate</u> the use of classification systems, clinical vocabularies, terminologies, and nomenclatures.                                                                                                   |
| 08.0                   | Evaluate ethical issues in Health Information <del>Professions.—</del> <u>professions</u> . The student will be able to:                                                                                                            |
| 08.01                  | Interpret <del>AHIMA</del> <u>the industry-recognized</u> code of ethics <u>for healthcare information practices</u> .                                                                                                              |
| 08.02                  | Analyze ethical issues related to health information.                                                                                                                                                                               |
| 08.03                  | Manage ethical issues related to <u>treatment,</u> payment, and operations.                                                                                                                                                         |
| 09.0                   | Demonstrate compliance with laws, regulations, and standards that impact healthcare. -The student will be able to:                                                                                                                  |

|       |                                                                                                                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 09.01 | <del>Promote</del> <u>Advocate</u> the importance of maintaining ethical and legal standards in gathering, managing, and analyzing <del>of</del> health information.                                                                                                                                         |
| 09.02 | Identify all regulations, <u>laws</u> , and standards that impact health information, including <del>but not limited to</del> the Health Insurance Portability and Accountability Act (HIPAA). <del>;</del>                                                                                                  |
| 09.03 | Explain the composition of the legal health record <del>in various settings</del> .                                                                                                                                                                                                                          |
| 09.04 | Apply health information policies and procedures for privacy, confidentiality, and security.                                                                                                                                                                                                                 |
| 09.05 | Articulate legal terms and processes that impact healthcare.                                                                                                                                                                                                                                                 |
| 10.0  | Apply policies, regulations, and standards to the management of information associated with treatment, payment, and operations (TPO). The student will be able to:                                                                                                                                           |
| 10.01 | Describe how <del>to adapt workflow necessitated by</del> regulatory change <u>impacts workflow</u> .                                                                                                                                                                                                        |
| 10.02 | Demonstrate knowledge of policies and procedures for access and disclosure of protected health information to authorized users.                                                                                                                                                                              |
| 10.03 | Adhere to appropriate and applicable healthcare regulatory and accrediting agency guidelines.                                                                                                                                                                                                                |
| 11.0  | Demonstrate computer knowledge and skills. -The student will be able to:                                                                                                                                                                                                                                     |
| 11.01 | Demonstrate the ability to create, manage, organize, attach, and retrieve files.                                                                                                                                                                                                                             |
| 11.02 | Demonstrate <u>the</u> ability to connect to and perform research <del>on the internet</del> <u>using search engines and</u> by identifying <del>reliable</del> reputable websites.                                                                                                                          |
| 11.03 | Demonstrate proficiency in word processing, spreadsheets, <del>database</del> , and presentation software.                                                                                                                                                                                                   |
| 11.04 | Demonstrate the ability to <del>install</del> <u>manage</u> software programs.                                                                                                                                                                                                                               |
| 11.05 | Demonstrate knowledge of safe computer practices and security procedures <del>including but not limited to</del> <u>such as</u> encryption, passwords, and biometrics.                                                                                                                                       |
| 12.0  | Demonstrate employability skills. -The student will be able to:                                                                                                                                                                                                                                              |
| 12.01 | Identify and exemplify <del>personal</del> <u>professional</u> traits <del>or attitudes</del> desirable in a member of the healthcare team.                                                                                                                                                                  |
| 12.02 | <del>Model</del> <u>Demonstrate basic</u> professional standards of healthcare workers as they apply to hygiene, dress, language, <del>confidentiality, cultural diversity, competence</del> and behavior. <del>(e.g., telephone and email etiquette, social media, courtesy, and self-introductions).</del> |
| 12.03 | <del>Utilize documents</del> <u>Identify necessary documentation</u> that may be required when applying for a <u>healthcare</u> position.                                                                                                                                                                    |
| 12.04 | Model the process to obtain employment, including but not limited to, job search, cover letter, resume, application, <u>interview</u> , and thank you letter.                                                                                                                                                |
| 13.0  | Describe the anatomy and physiology of the human body. -The student will be able to:                                                                                                                                                                                                                         |
| 13.01 | Describe the structure and function of the respiratory system.                                                                                                                                                                                                                                               |

|       |                                                                                                                                                                                                                                                                                     |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.02 | Describe the structure and function of the circulatory system.                                                                                                                                                                                                                      |
| 13.03 | Describe the structure and function of the musculoskeletal and connective tissue <del>system</del> <u>systems</u> .                                                                                                                                                                 |
| 13.04 | Describe the structure and function of nervous and sensory systems.                                                                                                                                                                                                                 |
| 13.05 | Describe the structure and function of the reproductive system.                                                                                                                                                                                                                     |
| 13.06 | Describe the structure and function of the urinary system.                                                                                                                                                                                                                          |
| 13.07 | Describe the structure and function of the digestive system.                                                                                                                                                                                                                        |
| 13.08 | Describe the structure and function of the endocrine system.                                                                                                                                                                                                                        |
| 13.09 | Describe the structure and function of the integumentary system.                                                                                                                                                                                                                    |
| 13.10 | Describe major mental health disorders.                                                                                                                                                                                                                                             |
| 14.0  | Demonstrate proficiency in the application of medical terminology. -The student will be able to:                                                                                                                                                                                    |
| 14.01 | Identify word parts of medical terminology in daily use.                                                                                                                                                                                                                            |
| 14.02 | Build, spell, and pronounce correctly, appropriate terms from word parts <del>learned</del> , and be able to <del>give the meaning of</del> <u>define</u> the word.                                                                                                                 |
| 14.03 | Identify word parts and be able to build, spell, and understand new words with those parts.                                                                                                                                                                                         |
| 14.04 | Spell and use medical abbreviations <del>correctly</del> .                                                                                                                                                                                                                          |
| 14.05 | Identify terminology specific to healthcare settings, including surgical, medical, and therapeutic.                                                                                                                                                                                 |
| 14.06 | Apply medical reference sources.                                                                                                                                                                                                                                                    |
| 15.0  | Demonstrate an understanding of the fundamentals of disease <del>process</del> <u>processes</u> in <del>relationship</del> <u>relation</u> to the human body, including pharmacology. -The student will be able to:                                                                 |
| 15.01 | Demonstrate an understanding of the predisposing factors and direct causes of disease as they relate to the human body.                                                                                                                                                             |
| 15.02 | Demonstrate an understanding of the general pathogenesis and morphology of disease and its role in the disease process.                                                                                                                                                             |
| 15.03 | -Demonstrate an understanding of pharmacological agents, <del>mechanisms of action, modalities</del> <u>uses, treatments</u> , and <del>utilizing</del> <u>utilize</u> drug reference sources.                                                                                      |
| 15.04 | Identify and use therapeutic and diagnostic test terminology.                                                                                                                                                                                                                       |
| 16.0  | <del>Perform proficiently</del> <u>Demonstrate proficiency</u> in <del>the use of ICD</del> <u>current medical code set systems</u> and <del>HCPGS/CPT</del> <u>technology-assisted coding systems, both manual and automated</u> . <u>solutions</u> . The student will be able to: |

|                  |                                                                                                                                                                                                                                                                                                                                                           |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.01            | <del>Analyze</del> <u>Adopt coding</u> conventions and guidelines <del>used in coding</del> <u>when utilizing Computer-Assisted Coding (CAC) and Natural Language Processing (NLP) technologies.</u>                                                                                                                                                      |
| 16.02            | <del>Map the process to update</del> <u>Implement processes for maintaining and updating</u> coding resources, <u>including automated updates and coding software maintenance.</u>                                                                                                                                                                        |
| 16.03            | <del>Assign</del> <u>Validate codes using both manual and</u> <del>verify</del> <u>automated systems, including</u> diagnosis, procedure, HCPCS level II codes, APCs, and applicable modifiers and groupings <del>in accordance with</del> <u>according to current</u> official guidelines.                                                               |
| 16.04            | Perform <u>coding using current versions of ICD-10-CM, ICD-10-PCS, CPT, and HCPCS</u> <del>HCPCS</del> Level II <del>coding to assign diagnosis in both traditional and procedure codes to case studies and authentic health records/abstracts in various virtual healthcare settings, including telehealth services.</del>                               |
| 16.05            | <del>Examine components</del> <u>Analyze the Social Determinants of Health (SDoH) coding on</u> revenue cycle management and <del>clinical documentation improvement including quality indicators as it relates to coding participate in various settings</del> <u>Clinical Documentation Integrity (CDI) programs using modern technology solutions.</u> |
| 16.06            | <del>Analyze</del> <u>Evaluate</u> documentation compliance <u>using automated auditing tools</u> and <del>standards to improve</del> <u>Artificial Intelligence (AI)-assisted documentation practices</u> <u>improvement systems.</u>                                                                                                                    |
| 17.0             | <del>Perform</del> <u>Demonstrate proficiency in complex</u> coding <del>complexities proficiently. scenarios and value-based care requirements.</del> The student will be able to:                                                                                                                                                                       |
| 17.01            | <del>Verify</del> <u>Apply</u> coding concepts to complex <del>authentic cases, including post-acute care and virtual health records/abstracts and case studies across the continuum of care in various settings</del> <u>encounters.</u>                                                                                                                 |
| 17.02            | <del>Analyze</del> <u>Utilize advanced analytics tools to assess</u> case-mix index, <del>severity of illness systems, hierarchical condition categories (HCCs), risk adjustment systems factors, and coding quality monitors and reporting metrics for value-based disbursements.</del>                                                                  |
| 17.03            | <del>Examine a variety of simulated health records from</del> <u>Analyze cases</u> across the <u>contemporary healthcare continuum of care, interpret data, including remote patient monitoring and assign and verify codes in various settings</u> <u>digital health services.</u>                                                                       |
| 17.04            | <del>Identify the</del> <u>Apply</u> various classification systems, including <del>but not limited to</del> ICD-O, DSM, <u>ICF</u> , and <del>ICF</del> <u>emerging code sets for precision medicine and genomics.</u>                                                                                                                                   |
| 18.0             | Articulate <del>the significance of</del> health information services <del>as it relates</del> <u>within modern healthcare delivery systems related</u> to the medical coder/biller. -The student will be able to:                                                                                                                                        |
| <del>18.01</del> | <del>Identify the functions of</del> <u>Collaborate with interdisciplinary teams in</u> various departments <u>through digital communication platforms</u> and <del>how this department interacts with the Medical</del>                                                                                                                                  |
| <u>18.01</u>     | <u>Coder/Biller, shared health information systems</u>                                                                                                                                                                                                                                                                                                    |
| 18.02            | Utilize the <u>electronic</u> health <del>record</del> <u>records (EHRs) and other digital health information systems</u> content in various settings.                                                                                                                                                                                                    |
| 18.03            | Educate stakeholders on <del>the importance of the health record in relation to state and federal agencies</del> <u>regulatory compliance,</u> including <del>compliance area</del> <u>information blocking rules, interoperability requirements, and privacy regulations.</u>                                                                            |
| 19.0             | Ensure professional and ethical behavior of a medical coder/biller. <del>in an evolving digital healthcare environment.</del> The student will be able to:                                                                                                                                                                                                |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

Students should be encouraged to become members and participate in the activities of the professional organizations: American Health Information Management Association and/or American Academy of Procedural Coders.

About AHIMA Credentials: Completers of the Medical Biller Coder program may take the Certified Coding Associate (CCA) credential exam as the first step in their coding career. The CCA is an entry-level credential that distinguishes new coders in the job market. Individuals with a CCA credential:

- Exhibit a level of commitment, competency, and professional capability usually absent in a newcomer to the field.
- Demonstrate a commitment to the coding profession.
- Distinguish themselves from non-credentialed coders and those holding credentials from other organizations less demanding of the higher level of expertise required to earn AHIMA certification.

The CCA should be viewed as the starting point for an individual entering a career as a coder. The AHIMA Certified Coding Specialist (CCS) and Certified Coding Specialist-Physician-based (CCS-P) exams demonstrate mastery level skills in coding. Most individuals challenge the CCS or CCS-P exams after two or more years of work experience in coding.

American Health Information Management Association (AHIMA)  
919 North Michigan Ave., Suite 2150, Chicago, IL. 60611-5519, (312) 233-1100

The American Academy of Professional Coders (AAPC) sponsors a certification exam for coders with expertise in physician-based settings which leads to the title of Certified Professional Coder (CPC) or Certified Professional Coder Hospital (CPC-H).

American Academy of Professional Coders (AAPC)  
309 West 700 South, Salt Lake City, UT 84101, #800-626-2633

The National Healthcare Association also offers a national certification examination for a Certified Billing and Coding Specialist (CBCS).

National Healthcareer Association [www.nhanow.com](http://www.nhanow.com)  
7500 West 160<sup>th</sup> Street, Stilwell, KS 66085, #800-499-9092

Outcomes 01-12 are referred to as the Health Information Technology core and do not have to be completed if the student has previously completed the core in another program at any level. The Core should be taken first or concurrently with the first course in the program.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOSs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

### **Program Length**

In accordance with Rule 6A-10.024, F.A.C., an ATD program consists of a course of study that is part of an AS or AAS degree program, is less than 60 credit hours, is approximately 50% of the technical component (non-general education), and leads to employment in a specific occupation. An ATD program may consist of either technical credit or college credit.

Students must have a high school diploma, a GED, or a certificate of completion to be admitted to an ATD program. Within six weeks of entry, students in ATD programs of 450 or more hours must be tested pursuant to Rule 6A-10.040, F.A.C. and if below minimum standards for completion from the program, must receive remedial instruction. The minimum standards must be at least the equivalent of a score of ten (10) on all sections of basic skills test approved in Rule 6A-10.040, F.A.C. Students must successfully complete all remedial instruction before completing the ATD.

Community Colleges may offer either college or career credit toward the ATD. A Career Center in a public school district may offer an ATD program only as technical credit, with college credit awarded to a student upon articulation to a community college (Section 1004.02, F.S.)

When offered at a community college the standard length of this program is 37 credits. When offered at a technical center the standard length of this program is 1110 clock hours.

In accordance with Rule 6A-10.024, F.A.C., all faculty providing instruction must have at least a baccalaureate degree or an associate degree with demonstrated competencies in the specific instructional program as defined by the Southern Association of Colleges and Schools.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

### Purpose

This certificate program is part of the Health Information Technology AS degree program (1351070700).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment in a variety of health care settings as entry-level ~~coder~~ [coders](#), medical record ~~coder~~ [coders](#), coding ~~technician, or~~ [technicians](#), coding clerks, or medical ~~coder~~ [coders](#)/billers (Medical Records and Health Information Technicians). Some colleges may choose to divide the Coder/Biller Certificate into two tracks, one for coding and one for billing.

The content includes but is not limited to medical terminology, anatomy and physiology, coding systems, fundamentals of disease process, including pharmacology, healthcare delivery systems, basics of medical records services, ethical and legal responsibilities, safety/security procedures, basic data processing, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

| <b><u>12.03</u></b>          | <b><u>Develop a networking plan for a specific industry of interest.</u></b>                                                  |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate an understanding of healthcare organizations and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Explore health informatics as ~~an allied~~ health ~~profession~~ professional.
- 04.0 ~~Demonstrate an understanding~~ Apply knowledge of health data concepts.
- 05.0 Manage the ~~functions~~ adoption of ~~a~~ multiple formats of health ~~record~~ records and the function of digital applications.
- 06.0 ~~Demonstrate an understanding of~~ Apply Health Information Technology principles.
- 07.0 ~~Discuss~~ Apply classification systems, clinical vocabularies, and terminologies.
- 08.0 Evaluate ethical issues in Health Information ~~Professions~~ professions.
- 09.0 Demonstrate compliance with laws, regulations, and standards that impact healthcare.
- 10.0 Apply policies, regulations, and standards to the management of information associated with treatment, payment, and operations (TPO).
- 11.0 Demonstrate computer knowledge and skills.
- 12.0 Demonstrate employability skills.
- 13.0 Describe the anatomy and physiology of the human body.
- 14.0 Demonstrate proficiency in the application of medical terminology.
- 15.0 Demonstrate an understanding of the fundamentals of disease ~~process~~ processes in ~~relationship~~ relation to the human body, including pharmacology.
- 16.0 ~~Perform~~ Demonstrate proficiency in ~~the use of ICD~~ current medical code set systems and ~~HCPGS/CPT~~ technology-assisted coding ~~systems,~~ solutions.
- ~~17.0 Perform coding complexities proficiently.~~
- 17.0 Demonstrate proficiency in complex coding scenarios and value-based care requirements.
- 18.0 Articulate ~~the significance of~~ health information services ~~as it relates~~ within modern healthcare delivery systems related to the medical coder/biller.
- 19.0 Ensure professional and ethical behavior of a medical coder/biller in an evolving digital healthcare environment.
- 20.0 ~~Take part~~ Participate in healthcare revenue cycle management processes.

Florida Department of Education  
Student Performance Standards

Program Title: Medical Information Coder/Biller  
 CIP Number: 0351071404  
 Program Length: 37 credit hours  
 SOC Code(s):

**This certificate program is part of the Health Information Technology AS degree program (1351070700). At the completion of this program, the student will be able to:**

|       |                                                                                                                                                                                               |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Demonstrate an understanding of <del>the</del> healthcare organizations and health occupations. -The student will be able to:                                                                 |
| 01.01 | Discuss the evolution of healthcare.                                                                                                                                                          |
| 01.02 | Demonstrate an understanding of the infrastructure of healthcare in the United States.                                                                                                        |
| 01.03 | Discuss healthcare regulatory agencies and organizations.                                                                                                                                     |
| 01.04 | Recognize levels of education, credentialing requirements, employment opportunities, workplace environments, and career growth potential.                                                     |
| 01.05 | <del>Differentiate</del> <u>Summarize</u> the roles of various providers and disciplines throughout the continuum of healthcare and respond to their information needs.                       |
| 02.0  | Demonstrate the ability to communicate and use interpersonal skills effectively. -The student will be able to:                                                                                |
| 02.01 | <del>Develop</del> <u>Apply</u> basic speaking and active listening skills with meaningful feedback.                                                                                          |
| 02.02 | <del>Develop basic observational skills and related documentation strategies in written and oral form.</del>                                                                                  |
| 02.03 | <del>02.02</del> Identify characteristics of successful and unsuccessful communication, including barriers.                                                                                   |
| 02.04 | <del>02.03</del> <u>Respond to</u> <u>Demonstrate emotional intelligence (e.g., recognize</u> verbal and non-verbal cues <u>).</u>                                                            |
| 02.05 | <del>02.04</del> <u>Compose written</u> <u>Demonstrate effective professional</u> communication <del>including emails</del> using correct spelling, grammar, formatting, and confidentiality. |
| 02.06 | <del>Demonstrate ability to create professional correspondence using appropriate email practices and etiquette.</del>                                                                         |
| 02.07 | <del>02.05</del> Use appropriate medical terminology and abbreviations.                                                                                                                       |
| 02.08 | <del>Model the importance of courtesy and respect for patients and other healthcare workers and maintain good interpersonal relationships.</del>                                              |
| 02.09 | <del>02.06</del> <u>Provide</u> <u>Promote</u> health information <del>education</del> <u>training and awareness</u> to internal/external stakeholders.                                       |

|       |       |                                                                                                                                                                                                                                                                             |
|-------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.10 | 02.07 | <del>Adapt</del> <u>Model</u> communication skills to varied levels of understanding and cultural orientation, including <del>diverse</del> <u>age</u> <u>generational differences</u> , cultural, <del>economic</del> <u>socioeconomic</u> , ethnic, and religious groups. |
| 02.11 | 02.08 | Distinguish between <del>and identify</del> subjective and objective information.                                                                                                                                                                                           |
| 03.0  |       | Explore health <del>information</del> <u>informatics</u> as <del>an allied</del> <u>a</u> health <del>profession</del> <u>professional</u> . The student will be able to:                                                                                                   |
| 03.01 |       | Discuss the <del>history</del> <u>past, present, and future</u> of health information <del>management</del> .                                                                                                                                                               |
| 03.02 |       | <del>Discuss the</del> <u>Examine</u> professional opportunities <del>within the</del> <u>related to</u> health information <del>professions</del> .                                                                                                                        |
| 03.03 |       | Demonstrate knowledge of <u>industry-recognized credentials and</u> professional associations applicable to the field of health information.                                                                                                                                |
| 04.0  |       | <del>Demonstrate an understanding</del> <u>Apply knowledge</u> of health data concepts. -The student will be able to:                                                                                                                                                       |
| 04.01 |       | <del>Describe the</del> <u>Examine</u> various <del>uses of primary and secondary</del> health data <u>uses</u> and data sets.                                                                                                                                              |
| 04.02 |       | Identify various characteristics of health data quality and <u>emerging</u> standards.                                                                                                                                                                                      |
| 05.0  |       | Manage the <del>functions</del> <u>adoption</u> of <del>a</del> <u>multiple formats of</u> health <del>record</del> <u>records and the function of digital applications</u> . The student will be able to:                                                                  |
| 05.01 |       | <del>Demonstrate an understanding</del> <u>Apply regulations and requirements</u> of <u>health information to</u> the <del>various formats</del> <u>continuum</u> of the <u>health record</u> <u>care</u> .                                                                 |
| 05.02 |       | <del>Explain the various uses of a</del> <u>Analyze</u> health information as it relates to treatment, payment, and operations (TPO).                                                                                                                                       |
| 06.0  |       | <del>Demonstrate an understanding of</del> <u>Apply</u> Health Information Technology <del>principles</del> . The student will be able to:                                                                                                                                  |
| 06.01 |       | <del>Discuss</del> <u>Explain</u> how changing regulations and technology impact the health information field.                                                                                                                                                              |
| 06.02 |       | <del>Interpret</del> <u>Validate the accuracy, integrity, and reliability of</u> information from health information systems and applications in healthcare.                                                                                                                |
| 06.03 |       | Demonstrate <del>an</del> <u>proficiency and</u> understanding of creation, use, storage, retrieval, and exchange of health data.                                                                                                                                           |
| 07.0  |       | <del>Discuss</del> <u>Apply</u> classification systems, clinical vocabularies, and terminologies. -The student will be able to:                                                                                                                                             |
| 07.01 |       | <del>Explain</del> <u>Demonstrate</u> the use of classification systems, clinical vocabularies, <del>and terminologies as they relate to Health Information Management and</del> , <u>and</u> nomenclatures.                                                                |
| 08.0  |       | Evaluate ethical issues in Health Information <del>Professions</del> <u>professions</u> . The student will be able to:                                                                                                                                                      |
| 08.01 |       | <del>Describe</del> <u>Interpret</u> the <u>industry-recognized</u> code of ethics <del>consistent with</del> <u>for</u> healthcare <del>occupations</del> <u>information practices</u> .                                                                                   |
| 08.02 |       | Analyze ethical issues related to health information.                                                                                                                                                                                                                       |
| 08.03 |       | Manage ethical issues related to <del>coding</del> <u>treatment, payment, and billing/ healthcare documentation</u> <u>operations</u> .                                                                                                                                     |

|       |                                                                                                                                                                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 09.0  | Demonstrate compliance with laws, regulations, and standards that impact healthcare. -The student will be able to:                                                                                                                                                                |
| 09.01 | <del>Promote</del> <u>Advocate</u> the importance of maintaining ethical and legal standards in <del>compilation</del> <u>gathering, managing,</u> and <del>usage</del> <u>of analyzing</u> health information.                                                                   |
| 09.02 | Identify all <u>regulations,</u> laws, and standards that impact health information, including the Health Insurance Portability and Accountability Act (HIPAA).                                                                                                                   |
| 09.03 | Explain the composition of the legal health record.                                                                                                                                                                                                                               |
| 09.04 | Apply health information policies and procedures for privacy, confidentiality, and security.                                                                                                                                                                                      |
| 09.05 | Articulate legal terms and processes that impact healthcare.                                                                                                                                                                                                                      |
| 10.0  | Apply policies, regulations, and standards to the management of information associated with treatment, payment, and operations (TPO). The student will be able to:                                                                                                                |
| 10.01 | Describe how <del>to adapt workflow necessitated by</del> regulatory change <u>impacts workflow.</u>                                                                                                                                                                              |
| 10.02 | Demonstrate knowledge of policies and procedures for access and disclosure of protected health information to authorized users.                                                                                                                                                   |
| 10.03 | Adhere to appropriate and applicable <u>healthcare regulatory and</u> accrediting agency guidelines.                                                                                                                                                                              |
| 11.0  | Demonstrate computer knowledge and skills. -The student will be able to:                                                                                                                                                                                                          |
| 11.01 | Demonstrate the ability to create, manage, organize, attach, and retrieve files.                                                                                                                                                                                                  |
| 11.02 | Demonstrate <u>the</u> ability to connect to and perform research <del>on the internet</del> <u>using search engines and</u> by identifying <del>reliable</del> reputable websites.                                                                                               |
| 11.03 | Demonstrate proficiency in word processing, spreadsheets, and presentation software.                                                                                                                                                                                              |
| 11.04 | Demonstrate the ability to <del>install</del> <u>manage</u> software programs.                                                                                                                                                                                                    |
| 11.05 | Demonstrate knowledge of safe computer practices and security procedures <del>including but not limited to</del> <u>such as</u> encryption, passwords, and biometrics.                                                                                                            |
| 12.0  | Demonstrate employability skills. -The student will be able to:                                                                                                                                                                                                                   |
| 12.01 | Identify and exemplify <del>personal</del> <u>professional</u> traits <del>or attitudes</del> desirable in a member of the healthcare team.                                                                                                                                       |
| 12.02 | <del>Model</del> <u>Demonstrate</u> professional standards of healthcare workers as they apply to hygiene, dress, language, <del>confidentiality</del> and behavior ( <del>i.e., g.,</del> <u>telephone and email etiquette, social media,</u> courtesy, and self-introductions). |
| 12.03 | Identify <del>documents</del> <u>necessary documentation</u> that may be required when applying for a <del>job</del> <u>healthcare position.</u>                                                                                                                                  |
| 12.04 | <del>Perform</del> <u>Model</u> the process to obtain employment: <u>including but not limited to,</u> job search, cover letter, resume, application, <u>interview,</u> and thank you letter.                                                                                     |
| 13.0  | Describe the anatomy and physiology of the human body. -The student will be able to:                                                                                                                                                                                              |

|       |                                                                                                                                                                                                                     |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.01 | Describe the structure and function of the respiratory system.                                                                                                                                                      |
| 13.02 | Describe the structure and function of the circulatory system.                                                                                                                                                      |
| 13.03 | Describe the structure and function of the musculoskeletal and connective tissue <del>system</del> <u>systems</u> .                                                                                                 |
| 13.04 | Describe the structure and function of nervous and sensory systems.                                                                                                                                                 |
| 13.05 | Describe the structure and function of the reproductive system.                                                                                                                                                     |
| 13.06 | Describe the structure and function of the urinary system.                                                                                                                                                          |
| 13.07 | Describe the structure and function of the digestive system.                                                                                                                                                        |
| 13.08 | Describe the structure and function of the endocrine system.                                                                                                                                                        |
| 13.09 | Describe the structure and function of the integumentary system.                                                                                                                                                    |
| 13.10 | Describe major <del>psychiatric</del> <u>mental health</u> disorders.                                                                                                                                               |
| 14.0  | Demonstrate proficiency in the application of medical terminology. -The student will be able to:                                                                                                                    |
| 14.01 | Identify word parts of medical terminology in daily use.                                                                                                                                                            |
| 14.02 | Build, spell, and pronounce correctly; appropriate terms from word parts <del>learned</del> and be able to <del>give the meaning of</del> <u>define</u> the word.                                                   |
| 14.03 | Identify word parts and be able to build, spell, and understand new words with those parts.                                                                                                                         |
| 14.04 | Spell and use medical abbreviations.                                                                                                                                                                                |
| 14.05 | Identify terminology specific to healthcare settings, including surgical, medical, and therapeutic.                                                                                                                 |
| 14.06 | Apply medical reference sources.                                                                                                                                                                                    |
| 15.0  | Demonstrate an understanding of the fundamentals of disease <del>process</del> <u>processes</u> in <del>relationship</del> <u>relation</u> to the human body, including pharmacology. -The student will be able to: |
| 15.01 | Demonstrate an understanding of the predisposing factors and direct causes of disease as they relate to the human body.                                                                                             |
| 15.02 | Demonstrate an understanding of the general pathogenesis and morphology of disease and its role in the disease process.                                                                                             |
| 15.03 | -Demonstrate an understanding of pharmacological agents, uses, treatments, and <del>utilizing</del> <u>utilize</u> drug reference sources.                                                                          |
| 15.04 | Identify and use diagnostic test terminology.                                                                                                                                                                       |

|                  |                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.0             | <del>Perform</del> <u>Demonstrate</u> proficiency in <del>use of ICD current medical code set systems</del> and <del>HCPGS/CPT technology-assisted coding systems, both manual and automated solutions.</del> The student will be able to:                                                                                                                                                  |
| 16.01            | Apply <u>coding</u> conventions and guidelines <del>used in coding</del> <u>when utilizing Computer-Assisted Coding (CAC) and Natural Language Processing (NLP) technologies.</u>                                                                                                                                                                                                           |
| 16.02            | <del>Describe the process to update</del> <u>Implement processes for maintaining and updating coding resources, including automated updates and coding software maintenance.</u>                                                                                                                                                                                                            |
| 16.03            | <del>Assign</del> <u>Validate codes using both manual and/or verify automated systems, including</u> diagnosis, procedure, HCPCS level II codes, APCs, and applicable modifiers and groupings <del>in accordance with</del> <u>according to current</u> official guidelines.                                                                                                                |
| 16.04            | <del>Utilize</del> <u>Perform coding using current versions of ICD-10-CM, ICD-10-PCS, CPT (all sections), and HCPSGHCPSC</u> Level II <del>code sets to assign diagnosis in both traditional and procedure codes to intermediate and advanced case studies and authentic health records/abstracts</del> <u>virtual healthcare settings, including telehealth services.</u>                  |
| 16.05            | <del>Describe components</del> <u>Analyze the impact of Social Determinants of Health (SDoH) coding on</u> revenue cycle management and clinical documentation improvement including quality indicators <del>as it relates to coding</del> <u>participate in Clinical Documentation Integrity (CDI) programs using modern technology solutions.</u>                                         |
| 16.06            | <del>Identify any discrepancies, incomplete information, and/or poor documentation practices in relation to coding while following appropriate departmental policies for correcting errors or improving documentation practices.</del> <u>Evaluate documentation compliance using automated auditing tools and Artificial Intelligence (AI)-assisted documentation improvement systems.</u> |
| 17.0             | <del>Perform</del> <u>Demonstrate</u> proficiency in <del>complex coding complexities proficiently. scenarios and value-based care requirements.</del> The student will be able to:                                                                                                                                                                                                         |
| 17.01            | Apply <del>advanced</del> coding concepts to complex <del>authentic cases, including post-acute care and virtual health records/abstracts and/or case studies across the continuum of care encounters.</del>                                                                                                                                                                                |
| 17.02            | <del>Analyze case mix, severity of illness systems, and coding quality monitors and reporting.</del> <u>Utilize advanced analytics tools to assess case-mix index, hierarchical condition categories (HCCs), risk adjustment factors, and quality metrics for value-based reimbursement.</u>                                                                                                |
| 17.03            | <del>Utilize a variety of simulated patient records from</del> <u>Analyze cases</u> across the <u>contemporary healthcare</u> continuum <del>of care, interpret data, including remote patient monitoring and assign and/or verify codes</del> <u>digital health services.</u>                                                                                                              |
| 17.04            | <del>Analyze the</del> <u>Apply</u> various classification systems, <u>including ICD-O, DSM, ICF, and emerging code sets for precision medicine and genomics.</u>                                                                                                                                                                                                                           |
| 18.0             | Articulate <del>the significance of</del> health information services <del>as it relates</del> <u>within modern healthcare delivery systems related</u> to the medical coder/biller. The student will be able to:                                                                                                                                                                           |
| <del>18.01</del> | <del>Describe the functions of a</del> <u>Collaborate with interdisciplinary teams in various departments through digital communication platforms and shared</u> health information management department and how this department interacts with the medical <del>18.01 coder/billers</del> <u>systems.</u>                                                                                 |
| 18.02            | <del>Describe the development of the health record to include all types used in the current industry.</del> <u>Utilize electronic health records (EHRs) and other digital health information systems content in various settings.</u>                                                                                                                                                       |
| 18.03            | <del>Explain the importance of the health record in relation to state and federal agencies, including compliance area.</del> <u>Educate stakeholders on regulatory compliance, including information blocking rules, interoperability requirements, and privacy regulations.</u>                                                                                                            |

|       |                                                                                                                                                                                                                                                                   |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.0  | Ensure professional and ethical behavior of a medical coder/biller. <del>in an evolving digital healthcare environment.</del> The student will be able to:                                                                                                        |
| 19.01 | <del>Explain the scope of work of the Medical Coder/Biller.</del> <u>Advocate for the expanding role of the medical coder/biller in data analytics and population health management.</u>                                                                          |
| 19.02 | <del>Demonstrate</del> <u>Adhere to</u> ethical coding practices <del>as outlined by professional associations</del> <u>in AI and automated coding systems.</u>                                                                                                   |
| 20.0  | <del>Take part</del> <u>Participate</u> in healthcare revenue cycle management processes. -The student will be able to:                                                                                                                                           |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

This program is part of Health Information Technology or Office Administration - Medical Office Specialization. The College Credit Certificate guarantees transfer of credit of 37 hours toward the AS degree in Health Information Technology or Office Administration. Minimum entrance requirements for this program include a high school diploma or GED.

The cooperative method of instruction or clinical rotation is appropriate for this program. Whenever these methods are offered, the following is required for each student: a training plan, signed by the student, teacher, and employer, which includes instructional objectives and a list of on-the-job and in-school learning experiences; and a work station which reflects equipment, skills, and tasks which are relevant to the occupation which the student has chosen as a career goal. The student may receive compensation for work performed.

Faculty teaching this program must have a minimum of an AS degree in Health Information Management.

Students should be encouraged to become members and participate in the activities of the professional organizations: American Health Information Management Association and/or American Academy of Procedural Coders.

About AHIMA Credentials: Students who complete the Medical Biller Coder program may take the Certified Coding Associate (CCA) credential exam as the first step in their coding career. The CCA is an entry-level credential that distinguishes new coders in the job market. Individuals with a CCA credential:

- Exhibit a level of commitment, competency, and professional capability usually absent in a newcomer to the field.
- Demonstrate a commitment to the coding profession.
- Distinguish themselves from non-credentialed coders and those holding credentials from other organizations less demanding of the higher level of expertise required to earn AHIMA certification.

The CCA should be viewed as the starting point for an individual entering a career as a coder. The AHIMA CCS and CCS-P exams demonstrate mastery level skills in coding. Most individuals challenge the CCS or CCS-P exams after two or more years of work experience in coding.

American Health Information Management Association (AHIMA)  
919 North Michigan Ave., Suite 2150, Chicago, IL. 60611-5519 (312) 233-1100

The American Academy of Professional Coders (AAPC) sponsors a certification exam for coders with expertise in physician-based settings which leads to the title of Certified Professional Coder (CPC) or Certified Professional Coder Hospital (CPC-H).

American Academy of Professional Coders  
309 West 700 South, Salt Lake City, UT 84101 #800-626-2633

The National Healthcare Association also offers a national certification examination for a Certified Billing and Coding Specialist (CBCS).

National Healthcareer Association [www.nhanow.com](http://www.nhanow.com)  
7500 West 160<sup>th</sup> Street, Stilwell, Kansas 66085 #800-499-9092

Outcomes 01-12 are referred to as the Health Information Technology core and do not have to be completed if the students has previously completed the core in another program at any level. The Core should be taken in the program.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student organization(s) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Clinical Research Coordinator  
**Career Cluster:** Health Science

### Purpose

This certificate program is part of the Clinical Research Professional AS degree program (1351071902).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as clinical research coordinators (Natural Science Manager), (Medical and Health Services Manager), (Manager), or (Healthcare Support Workers) or to provide supplemental training for persons previously or currently employed in these occupations.

The content includes but is not limited to communication skills, leadership skills, human relations and employability skills, principles of management, introduction to computer literacy, health care organization, medical ethics, legal aspects, and advanced technical skills in a chosen health-related profession, health and safety, and CPR.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 30 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

|------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b><u>10.0</u></b>           | <b><u>Find, assess and apply to job opportunities.</u></b>                                                                    |
| <b><u>10.01</u></b>          | <b><u>Identify online job posts relevant to his or her career aspirations.</u></b>                                            |
| <b><u>10.02</u></b>          | <b><u>Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.</u></b>  |
| <b><u>10.03</u></b>          | <b><u>Define what information, documentation and writing prompts are required for the positions.</u></b>                      |
| <b><u>11.0</u></b>           | <b><u>Communicate personal competence, character and fit for a job opportunity.</u></b>                                       |
| <b><u>11.01</u></b>          | <b><u>Develop a resume.</u></b>                                                                                               |
| <b><u>11.02</u></b>          | <b><u>Write a cover letter.</u></b>                                                                                           |
| <b><u>11.03</u></b>          | <b><u>Curate a professional portfolio that includes work products.</u></b>                                                    |
| <b><u>11.04</u></b>          | <b><u>Prepare for and experience a mock job interview.</u></b>                                                                |
| <b><u>12.0</u></b>           | <b><u>Cultivate and leverage relationships to professionally advance.</u></b>                                                 |
| <b><u>12.01</u></b>          | <b><u>Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.</u></b> |
| <b><u>12.02</u></b>          | <b><u>Develop a plan to cultivate a professional digital footprint.</u></b>                                                   |
| <b><u>12.03</u></b>          | <b><u>Develop a networking plan for a specific industry of interest.</u></b>                                                  |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate basic knowledge of medical ~~language~~[terminology](#), anatomy and physiology.
- 02.0 Identify and apply basic knowledge of different aspects of wellness.
- 03.0 Demonstrate knowledge of funding and site sponsorship related to clinical research including: public/private grants and contracts and lifecycles of clinical trials.
- 04.0 Demonstrate knowledge of the guidelines and regulations governing clinical trials.
- 05.0 Demonstrate ability to work as a clinical research professional.
- 06.0 Demonstrate knowledge of the compliance and monitoring ~~issues~~[practices](#) in clinical research.
- 07.0 Demonstrate knowledge of the research process including: consent, screening, phases of clinical trials, product development and adverse events and safety.
- 08.0 Demonstrate knowledge of current events in the field of public health, [biomedical science and clinical research](#).
- 09.0 Demonstrate the ability to identify U.S. health care delivery funding sources.
- 10.0 Demonstrate knowledge of the principles and language of pharmacology, including drugs and drug classes, diagnostic tests, indications, techniques.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Clinical Research Coordinator  
**CIP Number:** 0351071901  
**Program Length:** 30 credit hours

**This certificate program is part of the Clinical Research Professional AS degree program (1351071902). At the completion of this program, the student will be able to:**

|                        |                                                                                                                                                                                                                                                                                                                                    |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                   | Demonstrate basic knowledge of medical <del>language</del> terminology, anatomy and physiology. The student will be able to:                                                                                                                                                                                                       |
| 01.01                  | Define, describe and discuss anatomic <u>names and</u> descriptive terms of the body.                                                                                                                                                                                                                                              |
| 01.02                  | Demonstrate an understanding of basic patient discharge and transfer procedures.                                                                                                                                                                                                                                                   |
| 01.03                  | Describe common abbreviations and commonly used medical terms and their proper usage.                                                                                                                                                                                                                                              |
| <del>01.04</del>       | <del>Define and describe anatomic names of bones and organs of the body.</del>                                                                                                                                                                                                                                                     |
| 02.0                   | Identify and apply basic knowledge of different aspects of wellness. The student will be able to:                                                                                                                                                                                                                                  |
| 02.01                  | Discuss integrating health living into one's lifestyle.                                                                                                                                                                                                                                                                            |
| 02.02                  | Define: <u>how</u> physical fitness, mental health, nutrition, <del>tobacco usage, alcohol consumption, illicit drug</del> substance use, <u>and abuse, and</u> family <del>living and how these factors</del> influences connect with the <del>concepts</del> concept of <u>patient</u> wellness <del>on a personal level</del> . |
| <del>02.03</del>       | <u>Describe the impact of social media and time in the digital environment on physical and mental health and wellness.</u>                                                                                                                                                                                                         |
| <del>02.03</del> 02.04 | Identify the risk factors for cardiovascular disease.                                                                                                                                                                                                                                                                              |
| <del>02.04</del> 02.05 | Describe the effects of tobacco <del>and</del> smoking <del>on the human body</del> <u>and vaping</u> .                                                                                                                                                                                                                            |
| <del>02.05</del> 02.06 | Describe the various fitness methods to improve health.                                                                                                                                                                                                                                                                            |
| <del>02.06</del> 02.07 | Discuss the effects of nutrition on health and wellness.                                                                                                                                                                                                                                                                           |
| <del>02.07</del> 02.08 | Explain body composition and achieving a healthy weight.                                                                                                                                                                                                                                                                           |
| <del>02.08</del> 02.09 | Describe stress management strategies.                                                                                                                                                                                                                                                                                             |
| <del>02.09</del> 02.10 | Discuss the use and abuse of illicit drugs in society.                                                                                                                                                                                                                                                                             |
| <del>02.10</del> 02.11 | Describe the effects of chronic disease on the human body.                                                                                                                                                                                                                                                                         |

|       |                                                                                                                                                                                                      |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.0  | Demonstrate knowledge of funding and site sponsorship related to clinical research including: public/private grants and contracts and lifecycles of clinical trials. The student will be able to:    |
| 03.01 | Describe key concepts and skills used in the site-sponsor relationship.                                                                                                                              |
| 03.02 | Classify clinical research funding sources and the protocols used to secure funding.                                                                                                                 |
| 03.03 | Discuss <del>basic</del> constructs related to grants and contracts management in clinical research.                                                                                                 |
| 03.04 | <del>Provide examples of the types</del> <u>Demonstrate knowledge</u> of lifecycles <del>of</del> <u>in</u> clinical trials.                                                                         |
| 03.05 | Define the terms and language used in startup and closing Items on clinical research.                                                                                                                |
| 03.06 | Determine communication methods to be used in the startup and closing of items in clinical research.                                                                                                 |
| 04.0  | Demonstrate knowledge of the guidelines and regulations governing clinical trials. The student will be able to:                                                                                      |
| 04.01 | Understand <del>the array of</del> guidelines and regulations <del>governing</del> clinical trials.                                                                                                  |
| 04.02 | Describe <del>the various</del> HIPPA <del>Privacy</del> and clinical research privacy issues.                                                                                                       |
| 04.03 | Identify <del>the major GCP/ICH</del> <u>Good Clinical Practices/ International Conference on Harmonization</u> guidelines related to <del>working with</del> human subjects <del>in</del> research. |
| 04.04 | Discuss <del>the various</del> sources and uses of essential documents generated from clinical studies.                                                                                              |
| 04.05 | Explain the role of compliance in maintaining fidelity to a study protocol.                                                                                                                          |
| 04.06 | Provide examples of a standard response to a request for documentation of meeting award conditions.                                                                                                  |
| 04.07 | Understand <del>the array of</del> <u>quantitative and qualitative</u> analysis techniques used in interpreting research findings.                                                                   |
| 05.0  | Demonstrate ability to work as a clinical research professional. The student will be able to:                                                                                                        |
| 05.01 | Identify clinical and behavioral research settings where Clinical Research Professionals are employed.                                                                                               |
| 05.02 | Demonstrate an understanding of the essential duties of a Clinical Research Professional.                                                                                                            |
| 05.03 | Describe procedures and processes used to protect research participants <del>at placement site</del> .                                                                                               |
| 05.04 | Discuss <del>the core</del> research activities of placement site.                                                                                                                                   |
| 05.05 | Demonstrate an understanding of how placement site works with: local, county, state and federal agencies to carry out their research activities.                                                     |
| 05.06 | Evaluate the role of Clinical Research Professionals in research settings.                                                                                                                           |

|       |                                                                                                                                                                                                                                |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 05.07 | Demonstrate the skills necessary to be a productive member of a research team including; working on a multidisciplinary research team and demonstrating an ability to work with confidential research participant information. |
| 06.0  | Demonstrate knowledge of the compliance and monitoring issues in clinical research. The student will be able to:                                                                                                               |
| 06.01 | Describe the role of compliance in clinical research.                                                                                                                                                                          |
| 06.02 | Identify issues related to compliance in human <del>subject's</del> <u>subject</u> research.                                                                                                                                   |
| 06.03 | Explain activities associated with monitoring <del>within the scope of</del> clinical research <u>trials</u> .                                                                                                                 |
| 06.04 | Discuss processes used to resolve issues that may arise from monitoring as part of a clinical trial.                                                                                                                           |
| 06.05 | Provide examples of quality assurance audits used in clinical research and discuss their value in relation to performing research with human subjects.                                                                         |
| 06.06 | Define the types of inspections clinical research facilities are subject to.                                                                                                                                                   |
| 07.0  | Demonstrate knowledge of the research process including: consent, screening, phases of clinical trials, product development and adverse events and safety. The student will be able to:                                        |
| 07.01 | <del>Accurately describe the</del> <u>Describe</u> processes involved in clinical research.                                                                                                                                    |
| 07.02 | Define and describe issues associated with participant consent <u>and assent</u> .                                                                                                                                             |
| 07.03 | Explain the goals, limitations and basic rules for screening participants.                                                                                                                                                     |
| 07.04 | Discuss <del>market and social</del> aspects of product development (drugs & devices).                                                                                                                                         |
| 07.05 | Discuss impacts of clinical trial stakeholders.                                                                                                                                                                                |
| 07.06 | Accurately describe how epidemiology is used in clinical research.                                                                                                                                                             |
| 07.07 | Explain <del>the relationship between essential</del> processes related to adverse events and safety.                                                                                                                          |
| 08.0  | Demonstrate knowledge of current events in the field of public health. The student will be able to:                                                                                                                            |
| 08.01 | Identify <del>outlets</del> <u>(sources and platforms (e.g., news, media, and governmental))</u> used to communicate public health events to the general public.                                                               |
| 08.02 | Describe the implications of current events on public health.                                                                                                                                                                  |
| 08.03 | Discuss concerns related to how public health information is relayed to the public.                                                                                                                                            |
| 08.04 | Recognize how reporting of global events (e.g., epidemics, regime change, and weather events) has the potential to impact other areas.                                                                                         |
| 08.05 | Locate emerging public health trends.                                                                                                                                                                                          |

|       |                                                                                                                                                                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 08.06 | Explain etiology of emerging public health trends discussed throughout semester.                                                                                                                                                                                                      |
| 08.07 | Discuss legislation designed to protect the public's right to information during major health events (epidemics, terrorism, natural disasters).                                                                                                                                       |
| 09.0  | <del>Demonstrate the ability to identify</del> <u>Identify and apply knowledge of United States (U.S.) health care delivery</u> <del>funding sources, and fiscal resources.</del> The student will be able to:                                                                        |
| 09.01 | <del>Demonstrate an understanding of</del> <u>Describe</u> the <del>evolutionary perspective</del> <u>changes landscape</u> of health services and its relevance <del>with</del> <u>on</u> the existing healthcare system, facilities, and services.                                  |
| 09.02 | Explain the <del>social, political, and impacts of</del> public <del>policy implications of health-related issues</del> <u>policies on healthcare</u> , such as availability <u>of healthcare services</u> , cost, delivery, and <del>financing</del> <u>financial implications</u> . |
| 09.03 | Describe the various health care organizations and service delivery options.                                                                                                                                                                                                          |
| 09.04 | Identify <del>the major</del> health professions and explain the role of each and their licensing/educational requirements.                                                                                                                                                           |
| 09.05 | Compare and contrast the health care delivery systems of the U.S. with other <del>major industrialized nations</del> <u>countries</u> .                                                                                                                                               |
| 09.06 | Understand the array of career choices in the health care sector of the economy.                                                                                                                                                                                                      |
| 09.07 | <u>Discuss the various sources and uses of funds for healthcare</u>                                                                                                                                                                                                                   |
| 10.0  | Demonstrate knowledge of the principles and language of pharmacology, including drugs and drug classes, diagnostic tests, indications, techniques. The student will be able to:                                                                                                       |
| 10.01 | Describe pharmacological principles.                                                                                                                                                                                                                                                  |
| 10.02 | Classify routes of administration.                                                                                                                                                                                                                                                    |
| 10.03 | Describe the relationships <del>of</del> <u>between</u> drug classes <del>with</del> <u>and</u> disease processes <del>and</del> <u>within</u> medical specialties.                                                                                                                   |
| 10.04 | Recognize commonly prescribed medications.                                                                                                                                                                                                                                            |
| 10.05 | Use appropriate pharmacological and laboratory references.                                                                                                                                                                                                                            |
| 10.06 | Describe indications, actions, dosages, and routes of administration.                                                                                                                                                                                                                 |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization(s)~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOSs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Purpose**

This certificate program is part of the Medical Assisting Advanced AS degree program (1351080103).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Health Science career cluster.

The content includes but is not limited to communication, transcultural communication in healthcare, interpersonal skills, legal and ethical responsibilities, health-illness concepts, administrative and clinical duties, emergency procedures including CPR and first aid, emergency preparedness, safety and security procedures, medical terminology, anatomy and physiology, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

**Job Attainment****10.0 Find, assess and apply to job opportunities.**10.01 Identify online job posts relevant to his or her career aspirations.10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.10.03 Define what information, documentation and writing prompts are required for the positions.**11.0 Communicate personal competence, character and fit for a job opportunity.**11.01 Develop a resume.11.02 Write a cover letter.11.03 Curate a professional portfolio that includes work products.11.04 Prepare for and experience a mock job interview.**12.0 Cultivate and leverage relationships to professionally advance.**12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.12.02 Develop a plan to cultivate a professional digital footprint.12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of ~~blood borne~~bloodborne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate proper use of medical terminology.
- 13.0 Demonstrate knowledge of legal and ethical responsibilities for medical assistants.
- 14.0 Demonstrate an understanding of anatomy and physiology concepts ~~in both illness and wellness states.~~
- 15.0 Demonstrate ~~basic clerical/medical~~effective front office duties.
- 16.0 Demonstrate accepted professional, communication, and interpersonal skills as related to phlebotomy.
- 17.0 Discuss phlebotomy in relation to the ~~health care~~healthcare setting.
- 18.0 Identify the anatomic structure and function of body systems in relation to services performed by ~~a~~the phlebotomist.
- 19.0 Recognize and identify collection reagents supplies, equipment, and interfering chemical substances.
- 20.0 Demonstrate skills and knowledge necessary to perform phlebotomy.
- 21.0 Practice infection control following standard precautions.
- 22.0 Practice accepted procedures of transporting, accessioning, and processing specimens.
- 23.0 Practice quality assurance and safety.
- 24.0 Describe the role of a medical assistant with intravenous therapy ~~in oncology and dialysis.~~
- 25.0 Describe the cardiovascular system.
- 26.0 Identify legal and ethical responsibilities of an electrocardiogram (EKG/ECG) aide.
- 27.0 Perform correct patient care techniques ~~in the health care facility for EKG/ECG testing.~~
- 28.0 Demonstrate knowledge of, apply, and use medical instrumentation modalities ~~when performing EKG/ECG.~~
- 29.0 Demonstrate ~~basic office examination procedures~~clinical care assistance.
- 30.0 Demonstrate knowledge of ~~the~~infection control fundamentals ~~of microbial control and use aseptic techniques.~~
- ~~31.0 Demonstrate minor treatments.~~
- 31.0 Demonstrate knowledge of basic minor medical treatments.
- 32.0 Demonstrate knowledge of diagnostic medical ~~assisting~~ procedures.
- 33.0 Demonstrate basic radiologic procedures.
- 34.0 Demonstrate knowledge of ~~pharmaceutical~~pharmacological principles and ~~administer medications~~medication administration.
- 35.0 ~~Perform~~Demonstrate knowledge of CLIA-waived diagnostic clinical laboratory procedures.

36.0 Demonstrate knowledge of emergency preparedness and protective practices.

37.0 Perform administrative ~~office~~ and managerial duties.

~~38.0 Perform administrative and general skills.~~

~~39.0~~ 38.0 Perform clinical and general skills.

~~40.0~~ 39.0 Display professional work habits ~~integral~~ essential to medical assisting.

40.0 Demonstrate knowledge regarding the use of Artificial Intelligence (AI) in healthcare.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Medical Assisting  
**CIP Number:** 0351080104  
**Program Length:** 44 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

**This certificate program is part of the Medical Assisting Advanced AS degree program (1351080103). At the completion of this program, the student will be able to:**

|                        |                                                                                                                                                      |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.0                   | Demonstrate proper use of medical terminology. -The student will be able to:                                                                         |
| 12.01                  | Use medical terminology as appropriate for a medical assistant.                                                                                      |
| 12.02                  | Identify medical terms, labeling the word parts.                                                                                                     |
| 12.03                  | Define medical terms and abbreviations related to all body systems.                                                                                  |
| 13.0                   | Demonstrate knowledge of legal and ethical responsibilities for medical assistants. -The student will be able to:                                    |
| 13.01                  | Describe the role of the medical assistant.                                                                                                          |
| <del>13.02</del>       | <del>Understand the importance of order entry as it relates to certification of the medical assistant.</del>                                         |
| <del>13.03</del> 13.02 | Provide health care as set forth in <del>Florida Statute</del> section 458.3485, <a href="#">Florida Statutes</a> , for the medical assistant.       |
| <del>13.04</del> 13.03 | Distinguish between the liability of <del>the</del> physicians and <del>staff members</del> <a href="#">medical personnel</a> in the medical office. |
| <del>13.05</del> 13.04 | Explain the principles for preventing medical liability.                                                                                             |
| <del>13.06</del> 13.05 | List the principles in the Codes of Ethics for Medical Assistants as stated by the American Association of Medical Assistants.                       |
| 14.0                   | Demonstrate an understanding of anatomy and physiology concepts <del>in both illness and wellness states.</del> The student will be able to:         |

|       |                                                                                                                                                                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.01 | Define the terms <del>Anatomy</del> <u>anatomy</u> and <del>Physiology</del> <u>physiology</u> .                                                                                                                                                                            |
| 14.02 | Define both medical terms and abbreviations related to all body systems.                                                                                                                                                                                                    |
| 14.03 | Define the <del>principle</del> <u>principal</u> directional terms, planes, quadrants, and cavities used in describing the body and the association of body parts to one another.                                                                                           |
| 14.04 | Define the levels of organization of the body <del>inclusive of, but not limited to, from</del> cells, <del>organs and body</del> <u>to</u> systems.                                                                                                                        |
| 14.05 | Describe the function of the 11 major organ systems of the body (1) integumentary, (2) skeletal, (3) muscular, (4) nervous, (5) endocrine, (6) <del>circulatory</del> (cardiovascular), (7) lymphatic, (8) respiratory, (9) digestive, (10) urinary, and (11) reproductive. |
| 14.06 | Describe symptoms and common disease pathology related to each body system and the relationship of the disease process to other body systems.                                                                                                                               |
| 14.07 | Discuss diagnostic options to identify common disease pathology and <del>corresponding basic</del> treatment <u>options</u> .                                                                                                                                               |
| 14.08 | Compare <u>the</u> structure and function of the body across the life span.                                                                                                                                                                                                 |
| 15.0  | Demonstrate <del>basic-clerical/medical</del> <u>effective front</u> office duties. -The student will be able to:                                                                                                                                                           |
| 15.01 | <del>Perform</del> <u>Utilize</u> effective communication skills essential <del>to</del> <u>in</u> the medical office <u>and recognize both verbal and non-verbal cues</u> .                                                                                                |
| 15.02 | <del>Maintain filing systems.</del> <u>Operate office equipment.</u>                                                                                                                                                                                                        |
| 15.03 | <del>Operate office equipment and perform</del> <u>Perform</u> clerical office procedures.                                                                                                                                                                                  |
| 15.04 | Discuss principles of using electronic <del>health</del> <u>medical</u> record ( <del>EHR</del> <u>EMR</u> ).                                                                                                                                                               |
| 15.05 | Prepare and maintain medical records both manually and within the <del>electronic health record (EHR).</del> <u>EMR.</u>                                                                                                                                                    |
| 15.06 | Screen and process mail.                                                                                                                                                                                                                                                    |
| 15.07 | Schedule routine appointments and patient admissions, and/or procedures, both manually and within the <del>electronic health record (EHR).</del> <u>EMR.</u>                                                                                                                |
| 15.08 | Adhere to current government regulations, risk management, and compliance within the scope of practice of a medical assistant practicing in the <del>State</del> <u>state</u> of Florida.                                                                                   |
| 15.09 | Maintain office inventory.                                                                                                                                                                                                                                                  |
| 15.10 | Inform patients of office policies <del>both verbally and written</del> .                                                                                                                                                                                                   |
| 15.11 | Perform general <del>housekeeping duties</del> <u>medical office maintenance</u> .                                                                                                                                                                                          |
| 15.12 | Perform daily office activities both manually and within the <del>electronic health record (EHR).</del> <u>EMR.</u>                                                                                                                                                         |
| 15.13 | <del>Receive</del> <u>Greet</u> patients and visitors.                                                                                                                                                                                                                      |

|       |                                                                                                                                                                                                                       |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <a href="#">15.14 Maintain confidentiality and adhere to Health Insurance Portability and Accountability Act (HIPAA) regulations.</a>                                                                                 |
|       | <a href="#">15.15 Demonstrate safety and quality assurance in the workplace.</a>                                                                                                                                      |
|       | <del>15.14</del> <a href="#">15.16</a> Identify and maintain office security policies <del>and</del> procedures.                                                                                                      |
| 16.0  | Demonstrate accepted professional, communication, and interpersonal skills as related to phlebotomy. -The student will be able to:                                                                                    |
| 16.01 | Demonstrate the appropriate professional behavior of a phlebotomist: <a href="#">and describe the scope of practice (job skills and duties).</a>                                                                      |
| 16.02 | Explain to the patient the procedure to be used in specimen collection.                                                                                                                                               |
| 16.03 | Explain in detail the importance of identifying patients correctly when drawing blood.                                                                                                                                |
|       | <del>16.04 Describe the scope of practice for a phlebotomist.</del>                                                                                                                                                   |
|       | <del>16.05 List and describe professional organizations that provide accreditation, certification, and licensure to phlebotomists and phlebotomy programs.</del>                                                      |
|       | <del>16.06</del> <a href="#">16.04</a> Explain the importance of continuing education in relation to certification to maintain competency and skills.                                                                 |
| 17.0  | Discuss phlebotomy in relation to the <del>health care</del> <a href="#">healthcare</a> setting. -The student will be able to:                                                                                        |
| 17.01 | List, classify, and discuss various departments and services within the health care setting <del>within</del> which the phlebotomist must interact <a href="#">with</a> to obtain laboratory specimens from patients. |
| 17.02 | Identify the major departments/sections within the clinical laboratory, the major types of procedures run in each department/section, and their specimen requirements.                                                |
| 17.03 | Describe roles of the major classifications of clinical laboratory personnel (i.e., pathologist, chief/administrative technologist, CLS, MLS, MLT, MT, phlebotomist, lab assistant, etc.).                            |
| 18.0  | Identify the anatomic structure and function of body systems in relation to services performed by <del>a</del> <a href="#">the</a> phlebotomist. -The student will be able to:                                        |
| 18.01 | Describe and define major body systems with emphasis on the circulatory system.                                                                                                                                       |
| 18.02 | List and describe the main superficial veins used in performing venipuncture.                                                                                                                                         |
| 18.03 | Locate the most appropriate site(s) for <del>both</del> capillary and venipuncture.                                                                                                                                   |
| 18.04 | Describe the function of the following blood components: -erythrocytes, thrombocytes, leukocytes, and plasma.                                                                                                         |
| 18.05 | Compare and contrast <del>between</del> serum and plasma as <del>it relates</del> <a href="#">they relate</a> to blood collection.                                                                                    |
| 18.06 | Discuss hemostasis, <a href="#">hemolysis, and methods of prevention</a> as <del>it relates</del> <a href="#">they relate</a> to blood collection.                                                                    |
| 19.0  | Recognize and identify collection reagents supplies, equipment, and interfering chemical substances. -The student will be able to:                                                                                    |

|                               |                                                                                                                                                                                              |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.01                         | Identify and discuss <u>the</u> proper use of appropriate types of equipment needed to collect various clinical laboratory blood specimens by venipuncture.                                  |
| 19.02                         | Explain the special precautions and types of equipment needed to collect blood from <del>a</del> <u>the</u> pediatric patient.                                                               |
| 19.03                         | Identify and discuss <u>the</u> proper use of supplies used in collecting short-draw specimens or difficult draws.                                                                           |
| 19.04                         | Identify and discuss the proper use of the various types of anticoagulants, preservatives, and gels used in blood collection and the vacuum tube color-codes for these additives.            |
| 19.05                         | Describe the types of specimens that are analyzed in the clinical laboratory and the phlebotomist's role in collecting and/or transporting these specimens to the laboratory.                |
| 19.06                         | Describe substances potentially encountered during phlebotomy <del>which</del> <u>that</u> can interfere <del>in</del> <u>with the</u> analysis of blood constituents.                       |
| 19.07                         | Define and utilize correct medical terminology and metric measurement needed for specimen collection.                                                                                        |
| 20.0                          | Demonstrate skills and knowledge necessary to perform phlebotomy. -The student will be able to:                                                                                              |
| 20.01                         | Follow approved procedure for completing a laboratory requisition form- <u>and recognize a properly completed form.</u>                                                                      |
| <del>20.02</del>              | <del>Recognize a properly completed requisition.</del>                                                                                                                                       |
| <del>20.03</del> <u>20.02</u> | Demonstrate knowledge of established protocol for patient and specimen identification.                                                                                                       |
| <del>20.04</del> <u>20.03</u> | Discuss appropriate methods for facilitating and preparing the patient for capillary and venipuncture collection.                                                                            |
| <del>20.05</del> <u>20.04</u> | List appropriate antiseptic agents useful in preparing sites for capillary and venipuncture- <u>for adult and pediatric patients..</u>                                                       |
| <del>20.06</del> <u>20.05</u> | Perform venipuncture by evacuated tube, butterfly, and syringe systems, demonstrating appropriate use of supplies, proper handling of equipment and specimens, and appropriate patient care. |
| <del>20.07</del> <u>20.06</u> | Describe the correct order of draw.                                                                                                                                                          |
| <del>20.08</del> <u>20.07</u> | Describe the use of barcoding systems used for specimen collection.                                                                                                                          |
| <del>20.09</del> <u>20.08</u> | <del>Perform a</del> <u>Convey an understanding of</u> capillary puncture using appropriate supplies and techniques for <del>both adults</del> <u>adult</u> and pediatric patients.          |
| <del>20.10</del> <u>20.09</u> | Describe the most common complications associated with capillary and venipuncture, their causes, prevention, and treatment.                                                                  |
| <del>20.11</del> <u>20.10</u> | Recognize and respond to possible adverse patient reactions such as allergies, convulsions, syncope, <del>light headedness</del> <u>lightheadedness</u> , vomiting, and nerve involvement.   |
| <del>20.12</del> <u>20.11</u> | Perform appropriate procedures for disposing of used or contaminated capillary and venipuncture supplies.                                                                                    |
| <del>20.13</del> <u>20.12</u> | Perform appropriate techniques for making a peripheral blood smear for hematologic evaluation.                                                                                               |
| <del>20.14</del> <u>20.13</u> | Demonstrate the proper procedure for collecting blood cultures.                                                                                                                              |

|                                                                                                                                                                   |                                                                                                                                                                                                                                                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>20.15 Discuss the effects of hemolysis and methods of prevention.</del>                                                                                      |                                                                                                                                                                                                                                                                |
| <del>20.16</del> 20.14                                                                                                                                            | Demonstrate a working understanding of how <u>the</u> age and weight of patients <del>impacts</del> <u>impact</u> the maximum amount of blood that can be safely drawn.                                                                                        |
| 21.0                                                                                                                                                              | Practice infection control following standard precautions. -The student will be able to:                                                                                                                                                                       |
| 21.01                                                                                                                                                             | Define the term “ <u>hospital-acquired infection.</u> ”                                                                                                                                                                                                        |

| 27.0  | Perform <u>correct</u> patient care techniques <del>in the health care facility.</del> <u>for EKG/ECG testing.</u> The student will be able to:                      |
| 27.01 | Describe the physical preparation of the patient for EKG/ <u>ECG</u> testing.                                                                                        |
| 27.02 | Identify <u>the</u> patient and verify the requisition order.                                                                                                        |
| 27.03 | Prepare patient for EKG/ <u>ECG</u> testing.                                                                                                                         |
| 27.04 | State precautions required when performing an EKG/ <u>ECG</u> .                                                                                                      |
| 28.0  | Demonstrate knowledge of, apply, and use medical instrumentation modalities <del>.</del> <u>when performing EKG/ECG.</u> The student will be able to:                |
| 28.01 | Calibrate and maintain EKG/ <u>ECG</u> equipment in the work environment.                                                                                            |
| 28.02 | Identify three types of lead systems ( <del>standard</del> /limb, augmented, and precordial/chest).                                                                  |
| 28.03 | State Einthoven's triangle.                                                                                                                                          |
| 28.04 | Demonstrate proper lead placement <del>including lead placement for</del> <u>to include</u> patients with special needs <del>.</del>                                 |
| 28.05 | Demonstrate knowledge of the <del>application of a</del> -Holter Monitor and provide patient education <del>of its use</del> .                                       |

|                        |                                                                                                                                                                                                                                                         |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.06                  | Identify, <u>troubleshoot, and resolve</u> artifacts and mechanical problems.                                                                                                                                                                           |
| 28.07                  | Perform <del>a</del> -12 lead EKG/ <u>ECG</u> .                                                                                                                                                                                                         |
| <del>28.08</del>       | <del>Perform a rhythm strip.</del>                                                                                                                                                                                                                      |
| <del>28.09</del> 28.08 | Recognize normal sinus rhythm.                                                                                                                                                                                                                          |
| <del>28.10</del> 28.09 | <del>Report</del> Recognize and report dysrhythmias <del>that are not normal sinus rhythm.</del>                                                                                                                                                        |
| <del>28.11</del> 28.10 | Recognize <del>a</del> -cardiac <u>emergency/emergencies</u> as seen on <del>the</del> -EKG/ <u>ECG</u> .                                                                                                                                               |
| <del>28.12</del> 28.11 | Use <u>proper</u> documentation skills to <del>identify</del> <u>analyze</u> electrocardiographs.                                                                                                                                                       |
| 29.0                   | Demonstrate <del>basic office examination procedures.</del> <u>clinical care assistance</u> . The student will be able to:                                                                                                                              |
| 29.01                  | Prepare patients for and assist the <u>physician/provider</u> with physical examinations <del>including, but not limited to, pre and post-natal, male and female reproductive, rectal, and pediatric</del> <u>in all specialty areas</u> .              |
| 29.02                  | Measure and record vital signs, recognizing abnormalities and danger signs.                                                                                                                                                                             |
| <del>29.03</del>       | <del>Measure and record a pulse pressure</del>                                                                                                                                                                                                          |
| <del>29.04</del> 29.03 | Measure and record <del>an</del> -apical <del>pulse</del> <u>and radial pulses</u> .                                                                                                                                                                    |
| <del>29.05</del> 29.04 | Measure and record <del>a</del> -orthostatic blood pressure.                                                                                                                                                                                            |
| <del>29.06</del> 29.05 | Record patient data.                                                                                                                                                                                                                                    |
| <del>29.07</del> 29.06 | <del>Instruct</del> Educate patient on breast and testicular self-examinations.                                                                                                                                                                         |
| <del>29.08</del> 29.07 | Assist with pediatric procedures, <del>including, but not limited to, weighing, measuring, and collecting specimens.</del>                                                                                                                              |
| <del>29.09</del> 29.08 | <del>Instruct</del> Educate patients regarding <del>health care</del> <u>healthcare</u> and wellness practices <del>including but not limited to dietary guidelines necessary for common diseases</del> <u>in accordance with their health status</u> . |
| <del>29.10</del>       | <del>Create a patient teaching plan which addresses dietary guidelines and special needs.</del>                                                                                                                                                         |
| <del>29.11</del> 29.09 | <del>Explore and utilize</del> Educate patients utilizing the U.S. Department of <del>Agricultures</del> <u>Agriculture's</u> "My Plate" Food Guide ( <a href="https://www.myplate.gov/">https://www.myplate.gov/</a> ).                                |
| <del>29.12</del> 29.10 | Prepare patients for diagnostic procedures.                                                                                                                                                                                                             |
| 30.0                   | Demonstrate knowledge of <del>the</del> <u>infection control</u> fundamentals <del>of microbial control and use aseptic techniques.</del> . The student will be able to:                                                                                |
| 30.01                  | <del>Demonstrate competence in</del> <u>Practice standard precautions when performing</u> sanitation, disinfection, and sterilization.                                                                                                                  |

|       |                                                                                                                                                                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30.02 | Identify common instruments.                                                                                                                                                                                                                                       |

| • <del>Prepare injections from ampules and vials.</del>                                                                                                                                                                              |
| • <del>Apply the Seven Rights of Drug Administration</del>                                                                                                                                                                           |
| 35.0 <del>Perform</del> <u>Demonstrate knowledge of</u> CLIA-waived diagnostic clinical laboratory procedures. –The students will be able to:                                                                                        |
| 35.01 Comply with safety signs, symbols, and labels.                                                                                                                                                                                 |
| 35.02 Recognize signs and symptoms that may indicate to the physician a need for laboratory testing.                                                                                                                                 |
| 35.03 Describe the criteria used by <u>the</u> Food and Drug Administration (FDA) to classify a test as “CLIA- <u>waived</u> ” and the regulatory constraints on test performance.                                                   |
| 35.04 Explain the methods of quality control for CLIA-waived testing, identify acceptable and unacceptable control results, and describe specific corrective action required when results are unacceptable.                          |
| 35.05 Demonstrate proper technique for the collection of urine, capillary whole blood (finger/heel stick), culture material (throat/nasal swab) <u>and wound cultures</u> , and other specimen types required for CLIA-waived tests. |
| 35.06 Instruct patients in the proper collection of urine (clean catch, mid-stream), sputum, and stool specimens.                                                                                                                    |
| 35.07 Perform CLIA-waived occult blood tests.                                                                                                                                                                                        |
| 35.08 Perform CLIA-waived urinalysis testing, including color and turbidity assessment and reagent test strips.                                                                                                                      |
| 35.09 Perform CLIA-waived hematology tests (e.g., hemoglobin, hematocrit).                                                                                                                                                           |
| 35.10 Perform CLIA-waived chemistry tests (e.g., glucose, cholesterol).                                                                                                                                                              |
| 35.11 Perform CLIA-waived pregnancy tests.                                                                                                                                                                                           |
| 35.12 Perform CLIA-waived infectious disease testing (e.g., strep screen, mono test, influenza A/B, <u>and COVID</u> ).                                                                                                              |
| 36.0 Demonstrate knowledge of emergency preparedness and protective practices. –The student will be able to:                                                                                                                         |
| 36.01 Maintain and operate emergency equipment and supplies.                                                                                                                                                                         |
| 36.02 Participate in a mock environmental exposure event and document steps taken.                                                                                                                                                   |
| 36.03 Explain an <del>evacuation</del> <u>evacuation</u> plan for a <del>physician's</del> <u>medical</u> office.                                                                                                                    |

|                               |                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 36.04                         | Maintain a current list of community resources for emergency preparedness.                                                                                                                                                                                                                                                                                                                                                  |
| 37.0                          | Perform administrative <del>office</del> <u>and managerial</u> duties. -The student will be able to:                                                                                                                                                                                                                                                                                                                        |
| 37.01                         | Execute data management using <del>electronic health record (EHR)</del> <u>Electronic Medical Record (EMR)</u> , including, but not limited to, patient registration, appointment scheduling, charting, billing and insurance processing, procedure and diagnostic coding, ordering and monitoring patient testing, medication and prescription orders, keyboarding and correspondence, and performing an office inventory. |
| 37.02                         | Execute non- <del>EHR</del> <u>EMR</u> data management, including, but not limited to, selecting appropriate procedure and diagnostic codes, <del>process</del> <u>processing</u> insurance data and claims, <del>develop</del> and <del>maintain</del> <u>developing and maintaining</u> billing and collection systems.                                                                                                   |
| 37.03                         | Perform various financial procedures, including, but not limited to, billing and collection procedures, payroll procedures, and checkbook procedures.                                                                                                                                                                                                                                                                       |
| 37.04                         | Demonstrate knowledge of management in a medical office, including but not limited to personnel records, interviewing, various management styles, risk management, and conflict resolution.                                                                                                                                                                                                                                 |
| <del>38.0</del>               | <del>Perform administrative and general skills. The student will be able to:</del>                                                                                                                                                                                                                                                                                                                                          |
| <del>38.01</del>              | <del>Understand proper and professional telephone technique.</del>                                                                                                                                                                                                                                                                                                                                                          |
| <del>38.02</del>              | <del>Recognize and respond to verbal communication.</del>                                                                                                                                                                                                                                                                                                                                                                   |
| <del>38.03</del>              | <del>Recognize and respond to non-verbal communication.</del>                                                                                                                                                                                                                                                                                                                                                               |
| <del>38.04</del>              | <del>Maintain confidentiality and adhere to HIPAA regulations.</del>                                                                                                                                                                                                                                                                                                                                                        |
| <del>38.05</del>              | <del>Understand how to document manually and electronically appropriately.</del>                                                                                                                                                                                                                                                                                                                                            |
| <del>38.06</del>              | <del>Understand how to schedule appointments manually and electronically accurately.</del>                                                                                                                                                                                                                                                                                                                                  |

| <del>40.0</del>               | <u>Demonstrate knowledge regarding the use of Artificial Intelligence (AI) in healthcare. The student will be able to:</u>                                                             |
| <del>40.01</del>              | <u>Explain the fundamentals of AI and its use in medical assisting.</u>                                                                                                                |

[40.02 Identify healthcare sectors benefiting from AI.](#)

[40.03 Demonstrate the use of AI tools used in medical assisting.](#)

[40.04 Identify AI's role in patient privacy, data protection, and ethical concerns.](#)

[40.05 Demonstrate knowledge of interpreting AI outputs in patient management systems.](#)

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

Although it is not required, it is strongly recommended that the programs meet the Standards and Guidelines of an Accredited Educational Program for the Medical Assistant adopted by the American Association of Medical Assistants and the Commission on Accreditation of Allied Health Education Programs (CAAHEP) or the American Medical Technologist and the Accrediting Bureau of Health Education Schools (ABHES). For further information contact:

Commission on Accreditation of Allied Health Education Programs (CAAHEP) [www.caahep.org](http://www.caahep.org)/[www.caahep.org/](http://www.caahep.org/)  
1361 Park Street, Clearwater, FL 33756  
Phone: 727-210-2350 Fax: 727-210-2354

Accrediting Bureau of Health Education Schools (ABHES) [www.abhes.org](http://www.abhes.org)/[www.abhes.org/](http://www.abhes.org/)  
777 Leesburg Pike, Suite 312, North Falls, VA 22043  
(703) 917-9503

This program will also be in accordance with Florida Statute, Medical Assistants, 458.3485, F.S.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

Program completers of a CAAHEP or ABHES-accredited program are eligible to take the American Association of Medical Assistants' Certification Examination (CMA) or the American Medical Technologists' Certification Examination (RMA). For further information contact:

American Association of Medical Assistants (AAMA) [www.aama-ntl.org](http://www.aama-ntl.org)/[www.aama-ntl.org/](http://www.aama-ntl.org/)  
20 North Wacker Drive, Suite 1575, Chicago, Illinois 60606 (312-899-1500)

Or

American Medical Technologist (AMT) <https://americanmedtech.org/>  
10700 West Higgins Road, Suite 150, Rosemont, Illinois 60018 (800-275-1268)

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~CTSOs are co-curricular career and technical student ~~organization(s)~~organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Pharmacy Technician  
**Program Type:** ATD (Applied Technology Diploma)  
**Career Cluster:** Health Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as pharmacy technicians.

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry: planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues, health, safety, and environmental issues.

The content includes but is not limited to metric system, medical terminology, medicinal drugs, pharmaceutical compounding, USP 795 standards, sterile techniques, USP 797 and USP 800 standards, maintenance of inventory, IV preparation, receiving and handling of hazardous materials, preparing purchase orders, receiving and checking supplies purchased, printing labels, typing prescription labels, delivering medications, pricing prescription drug orders and supplies, prepackaging unit dose packages, patient record systems, control records, data processing automation in pharmacy, computer application, employability skills, leadership and human relations skills, health and safety, including CPR.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is an Applied Technology Diploma (ATD) program that is part of a technical degree program, is less than 60 credit hours, and leads to employment in a specific occupation. -An ATD program may consist of either technical credit or college credit.- A public school district may offer an ATD program only as clock hour credit, with college credit awarded to a student upon articulation to a state college.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related AS and AAS degrees.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

### **Regulated Programs**

**This program is regulated by the Florida Board of Pharmacy.** This program must be approved by the Board of Pharmacy. Program completers who wish to work as Pharmacy Technicians in the State of Florida must register with the Board of Pharmacy (465.014, F.S.).

### **Clock Hour Program**

When offered at the district level, this program is a planned sequence of instruction consisting of 2 occupational completion points and the courses as shown below.

| OCP | Course Number | Course Title            | Length   |
|-----|---------------|-------------------------|----------|
| A   | HSC0003       | Basic Healthcare Worker | 90 hours |

| OCP | Course Number | Course Title          | Length    |
|-----|---------------|-----------------------|-----------|
| B   | PTN0084       | Pharmacy Technician 1 | 360 hours |
|     | PTN0085       | Pharmacy Technician 2 | 300 hours |
|     | PTN0086       | Pharmacy Technician 3 | 300 hours |

### **College Credit Program**

When offered at the college credit level, this ATD program is part of the Pharmacy Management AS program (1351080502) and has a program length of 40 credits.

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Practice ~~personal relation~~ professional pharmacy relational skills.
- ~~13.0 Identify pharmaceutical abbreviations and terminology as related to Community Pharmacy Practice.~~
- ~~14.0~~ 13.0 Identify medical and legal considerations in various pharmacy settings.
- ~~15.0~~ 14.0 Perform clerical duties as related to ~~pharmacy practice~~ Pharmacy Practice.
- ~~16.0~~ 15.0 Demonstrate knowledge of ~~basic pharmaceutical chemistry~~ medication safety and ~~drug classification~~ prevention of medication errors.
- ~~17.0~~ 16.0 Demonstrate knowledge of inventory management.
- ~~18.0~~ 17.0 Initiate measurement and calculating techniques as ~~it relates~~ they relate to United States Pharmacopeia (USP) 795 (non-sterile) compounding in pharmacy practice.
- ~~19.0~~ 18.0 Demonstrate ~~a~~ basic knowledge and skills in areas of ~~science~~ anatomy/ physiology, pharmacology, and drug classification relevant to pharmacy technicians ~~including anatomy/physiology and pharmacology~~.
- ~~20.0~~ 19.0 Prepare and deliver medications.
- ~~21.0~~ 20.0 Repackage unit-dose medications.
- ~~22.0~~ 21.0 Prepare United States Pharmacopeia (USP) 797 and USP 800 sterile products.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Pharmacy Technician - ATD  
**Clock Hour Program Number:** H170700

When this program is offered at the district level, the following organization of courses, standards, and benchmarks apply.

The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Clock Hour health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**Course Number: HSC0003**  
**Occupational Completion Point: A**  
**Basic Healthcare Worker – 90 Hours**

To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

**Course Number: PTN0084**  
**Occupational Completion Point: B**  
**Pharmacy Technician 1 – 360 Hours**

12.0 Practice ~~personal relation~~ professional pharmacy relational skills. –The student will be able to:

12.01 Explore the meaning, organizational flow, and duties of pharmacy personnel.

12.02 Identify pharmacy organizations and their role in the profession, to include student membership opportunities.

12.03 Identify the current trends and perspectives in the pharmacy practice.

12.04 Describe how team building can facilitate change within the pharmacy working environment.

12.05 Understand the importance of good interpersonal skills/soft skills in various pharmacy settings.

12.06 Explain ethical conduct in job-related activities.

12.07 Identify State of Florida requirements for obtaining and maintaining pharmacy technician registration as well as continuing education requirements for renewal.

12.08 Explore the importance of national certification and the continuing education requirements for renewal.

|                                   |                                                                                                                                                                                                                                                                                                                                                                                            |

| <del>15.04</del> 14.05 | Identify and discuss applications of E-Prescribing and facsimile.                                                                                                                                                                                                                |
| <del>15.05</del> 14.06 | Utilize and apply interactive communication skills while gathering accurate information from patients and from other healthcare professionals.                                                                                                                                   |
| 14.07                  | <u>Create, complete, and maintain patient profiles including third-party billing information.</u>                                                                                                                                                                                |
| 14.08                  | <u>Understand the processes of PBMs and third-party billing, resolving rejections, and obtaining prior authorizations.</u>                                                                                                                                                       |
| 14.09                  | <u>Demonstrate professional communication skills within the scope of practice for the pharmacy technician.</u>                                                                                                                                                                   |
| 14.10                  | <u>Demonstrate knowledge of systems used in maintaining pharmacy records.</u>                                                                                                                                                                                                    |
| 15.0                   | <u>Demonstrate knowledge of medication safety and prevention of medication errors. The student will be able to:</u>                                                                                                                                                              |
| <del>15.06</del> 15.01 | Identify communication modalities that can result in the transmission of inaccurate information, and explain specific ways to make improvements.                                                                                                                                 |
| <del>15.07</del>       | <del>Create, complete and maintain patient profiles including third party billing information.</del>                                                                                                                                                                             |
| <del>15.08</del>       | <del>Understand the processes of third-party billing, resolving rejections, and obtaining authorizations.</del>                                                                                                                                                                  |
| <del>15.09</del> 15.02 | <del>Demonstrate professional communication skills within</del> <u>Convey an understanding of the scope</u> <del>patient's Bill of</del><br><del>practice</del> <u>Rights for the</u> <del>medication administration as it relates to pharmacy technician</del> <u>practice.</u> |
| 15.03                  | <u>Identify and explain appropriate patient safety goals by applicable accrediting and regulatory organizations.</u>                                                                                                                                                             |
| 15.04                  | <u>Identify potential errors that may result in quality-related events (QRE) and explain specific ways they can be prevented.</u>                                                                                                                                                |
| <del>15.10</del> 15.05 | <del>Demonstrate the knowledge of systems used in maintaining pharmacy records.</del> <u>Describe safety strategies used to prevent medication errors due to pharmaceutical abbreviations and terminology</u>                                                                    |
| <del>15.14</del> 15.06 | Summarize, evaluate, and describe the <u>technician's</u> <del>role of the technician</del> in quality assurance activities as related to various pharmacy practices.                                                                                                            |
| 16.0                   | <del>Demonstrate knowledge of basic pharmaceutical chemistry and drug classification. The student will be able to:</del>                                                                                                                                                         |
| 16.01                  | <del>Define the major classifications of pharmaceuticals.</del>                                                                                                                                                                                                                  |
| 16.02                  | <del>Identify at least one official compendia of standards for quality and purity of drug monograph.</del>                                                                                                                                                                       |
| 16.03                  | <del>Utilize pharmacy reference manuals or web sites.</del>                                                                                                                                                                                                                      |
| 16.04                  | <del>Demonstrate knowledge of trade and generic name equivalents.</del>                                                                                                                                                                                                          |

|                        |                                                                                                                                                                                                                                                                            |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>17.0</del> 16.0   | Demonstrate knowledge of inventory management. The student will be able to:                                                                                                                                                                                                |
| <del>17.01</del> 16.01 | Convey an understanding of industry standards in purchasing pharmaceutical supplies, <del>including the Florida Pedigree Law.</del>                                                                                                                                        |
| <del>17.02</del> 16.02 | <del>Explain</del> Demonstrate how to maintain a controlled substance inventory.                                                                                                                                                                                           |
| <del>17.03</del> 16.03 | <del>Apply</del> Understand knowledge of pharmacy business math <del>to</del> in prescription pricing systems.                                                                                                                                                             |
| <del>17.04</del> 16.04 | Maintain stock inventory, communicate shortages, and seek solutions to maintain continuity of patient care.                                                                                                                                                                |
| <del>17.05</del> 16.05 | Understand the process of how to create electronic purchase orders.                                                                                                                                                                                                        |
| <del>17.06</del> 16.06 | Accurately perform the process of purchasing, receiving, special handling, storing, distributing, and disposing of pharmaceutical supplies.                                                                                                                                |
| <del>17.07</del> 16.07 | Convey an understanding of <del>Investigational Drugs, Risk Evaluation</del> recall management and <del>Mitigation Strategies (REMS), off label indications,</del> know the differences between types of recalls and <del>emerging drug therapy</del> how to address them. |
| <del>17.08</del> 16.08 | Convey an understanding of the inventory control process implemented by Title II of the Drug Quality and Security Act.                                                                                                                                                     |
| <del>18.0</del> 17.0   | Initiate measurement and calculating techniques as <del>it relates</del> they relate to United States Pharmacopeia (USP) 795 (non-sterile) compounding in pharmacy practice. The student will be able to:                                                                  |
| <del>18.01</del> 17.01 | Convey an understanding of United States Pharmacopeia (USP) 795 standards.                                                                                                                                                                                                 |
| <del>18.02</del> 17.02 | Convert measurements within the apothecary, avoirdupois, household, and metric systems.                                                                                                                                                                                    |
| <del>18.03</del> 17.03 | Perform common pharmaceutical calculations.                                                                                                                                                                                                                                |
| <del>18.04</del> 17.04 | Identify and utilize common pharmaceutical weighing equipment.                                                                                                                                                                                                             |
| <del>18.05</del> 17.05 | Identify and utilize common pharmaceutical volume measurement equipment.                                                                                                                                                                                                   |
| <del>18.06</del> 17.06 | Accurately demonstrate the technique of preparing common non-sterile pharmaceutical compounds.                                                                                                                                                                             |
| <del>18.07</del> 17.07 | Summarize, evaluate, and describe the <del>technician's</del> role-of the technician in quality assurance activities as related to the preparation of non-sterile products.                                                                                                |

Course Number: PTN0085  
Occupational Completion Point: B  
Pharmacy Technician 2 – 300 Hours

~~19.0~~18.0 Demonstrate ~~a~~ basic knowledge and skills in areas of ~~science~~anatomy/ physiology, pharmacology, and drug classification relevant to pharmacy technicians ~~including anatomy/ physiology and pharmacology.~~. The student will be able to:

|                        |                                                                                                                                                                                                                                                                                                                                 |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>19.04</del> 18.01 | <del>Describe electrolyte balances and imbalances.</del> Evaluate and apply anatomical terminology to describe the location of parts or areas of the body and related disease processes.                                                                                                                                        |
| 18.02                  | Define the major classifications of pharmaceuticals and conditions treated.                                                                                                                                                                                                                                                     |
| 18.03                  | Demonstrate knowledge of trade and generic name equivalents.                                                                                                                                                                                                                                                                    |
| <del>19.02</del> 18.04 | <del>Relate</del> Evaluate the <del>general sources, classes, indications</del> pharmacy technician's understanding of pharmacology, including <u>drug classifications</u> , mechanisms of <del>actions, routes of administration,</del> <u>action, common</u> side effects, and <del>various types of drug</del> interactions. |
| 18.05                  | Identify at least one official compendium of standards for quality and purity of drug monographs.                                                                                                                                                                                                                               |
| 18.06                  | Convey an understanding of Investigational Drugs, Risk Evaluation and Mitigation Strategies (REMS), off-label indications, and emerging drug therapy.                                                                                                                                                                           |
| <del>19.03</del> 18.07 | Demonstrate an understanding of common adult doses of medications, duration of common drug therapies, and respective contraindications, including the BEERS Criteria.                                                                                                                                                           |
| <del>19.04</del> 18.08 | Identify potential interactions that require a pharmacist's intervention pertaining to food/alcohol, herbal, OTC, and/or prescription medications.                                                                                                                                                                              |
| 18.09                  | Identify allergy histories during the medication reconciliation process and discern "allergy" vs. "side effect" in optimizing care.                                                                                                                                                                                             |
| <del>20.0</del> 19.0   | Prepare and deliver medications. The student will be able to:                                                                                                                                                                                                                                                                   |
| <del>20.04</del> 19.01 | Read and prepare medication orders correctly.                                                                                                                                                                                                                                                                                   |
| <del>20.02</del> 19.02 | Demonstrate institutional pharmacy dispensing processes.                                                                                                                                                                                                                                                                        |
| <del>20.03</del> 19.03 | Compare all new orders with medications listed on profiles while noting any changes.                                                                                                                                                                                                                                            |
| <del>20.04</del> 19.04 | Utilize special precautions in the preparation of medications for pediatric patients.                                                                                                                                                                                                                                           |
| <del>20.05</del> 19.05 | Explain how to safely transport medications, being aware of hazards, theft, legal implications of accidental loss, and other consequences.                                                                                                                                                                                      |
| <del>20.06</del> 19.06 | Understand how to correctly fill and deliver medication.                                                                                                                                                                                                                                                                        |
| <del>20.07</del> 19.07 | Collect data from <u>the</u> medication administration record.                                                                                                                                                                                                                                                                  |
| <del>20.08</del> 19.08 | Describe the use of automated medication dispensing equipment.                                                                                                                                                                                                                                                                  |

Course Number: PTN0086  
Occupational Completion Point: B  
Pharmacy Technician 3 – 300-Hours

~~21.0~~20.0 Repackage unit dose medications. The student will be able to:

|                        |                                                                                                                                                                                               |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>21.01</del> 20.01 | Locate <u>the</u> correct stock container.                                                                                                                                                    |
| <del>21.02</del> 20.02 | <del>Operate</del> <u>Describe the use of</u> unit-dose packaging equipment.                                                                                                                  |
| <del>21.03</del> 20.03 | Measure, count, and place <u>the</u> individual dose in appropriate containers.                                                                                                               |
| <del>21.04</del> 20.04 | Understand precautions used when packaging unit-dose hazardous drugs.                                                                                                                         |
| <del>21.05</del> 20.05 | Record repackaged medication data correctly.                                                                                                                                                  |
| <del>21.06</del> 20.06 | Summarize, evaluate, and describe the <u>technician's</u> <del>role-of-the-technician</del> in quality assurance activities as related to repackaging unit-dose medication.                   |
| <del>22.0</del> 21.0   | Prepare United States Pharmacopeia (USP) 797 and USP 800 sterile products. The student will be able to:                                                                                       |
| <del>22.01</del> 21.01 | Convey an understanding of United States Pharmacopeia (USP) 797 regulations.                                                                                                                  |
| <del>22.02</del> 21.02 | Convey an understanding of United States Pharmacopeia (USP) 800 regulations.                                                                                                                  |
| <del>22.03</del> 21.03 | Compare <u>the</u> medication order with <u>the</u> label on <u>the</u> vial and check <u>the</u> expiration date of <u>the</u> product.                                                      |
| <del>22.04</del> 21.04 | Calculate drug dosage for parenteral use.                                                                                                                                                     |
| <del>22.05</del> 21.05 | Reconstitute parenteral medications.                                                                                                                                                          |
| <del>22.06</del> 21.06 | Demonstrate aseptic technique to withdraw medication from stock vial, measure correct quantity as instructed, select and insert it into IV solution without error.                            |
| <del>22.07</del> 21.07 | Demonstrate aseptic technique to withdraw medication from an ampule using filter needle/straw.                                                                                                |
| <del>22.08</del> 21.08 | Prepare parenteral solutions using proper aseptic technique.                                                                                                                                  |
| <del>22.09</del> 21.09 | Understand the preparation of Total Parenteral Nutrition (TPN) solutions.                                                                                                                     |
| <del>22.10</del> 21.10 | Understand the preparation of chemotherapeutic agents using proper safety techniques.                                                                                                         |
| <del>22.11</del> 21.11 | Understand the appropriate technique while using specialized equipment such as: laminar flow hoods, filters, pumps, automated compounders, and barrier <del>isolator</del> <u>isolators</u> . |
| <del>22.12</del> 21.12 | Place label on IV solution container and record appropriately.                                                                                                                                |
| <del>22.13</del> 21.13 | Perform <u>a</u> quality control check of <u>the</u> completed product.                                                                                                                       |
| <del>22.14</del> 21.14 | Convey an understanding of the proper storage and disposal requirements of reconstituted and non-reconstituted IV solutions.                                                                  |
| <del>22.15</del> 21.15 | Convey an understanding of the proper storage and disposal of hazardous drugs.                                                                                                                |

~~22.16~~21.16 Summarize, evaluate, and describe the technician's role ~~of the technician~~ in quality assurance activities ~~as~~ related to the preparation of sterile products.

21.17 Understand the concept of Diversion Surveillance to assist in recognizing controlled substances.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Pharmacy Technician - ATD  
**ATD CIP Number:** 0351080503  
**SOC Code(s):** \_\_\_\_\_

When this program is offered at the college level, the following standards and benchmarks apply:

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

| <del>18.04</del> 17.04 | Identify and utilize common pharmaceutical weighing equipment.                                                                                                                                                                                                                                                                         |
| <del>18.05</del> 17.05 | Identify and utilize common pharmaceutical volume measurement equipment.                                                                                                                                                                                                                                                               |
| <del>18.06</del> 17.06 | Accurately demonstrate the technique of preparing common non-sterile pharmaceutical compounds.                                                                                                                                                                                                                                         |
| <del>18.07</del> 17.07 | Summarize, evaluate and describe the <u>technician's</u> role <del>of the technician</del> in quality assurance activities as related to the preparation of non-sterile products.                                                                                                                                                      |
| <del>19.0</del> 18.0   | Demonstrate basic knowledge and skills in areas of <del>science</del> <u>anatomy/ physiology, pharmacology, and drug classification</u> relevant to pharmacy technicians <del>including anatomy/physiology and pharmacology.</del> The student will be able to:                                                                        |
| <del>19.01</del> 18.01 | <del>Describe electrolyte balances and imbalances.</del> <u>Evaluate and apply anatomical terminology to describe the location of parts or areas of the body and related disease processes.</u>                                                                                                                                        |
| 18.02                  | <u>Define the major classifications of pharmaceuticals and conditions treated.</u>                                                                                                                                                                                                                                                     |
| 18.03                  | <u>Demonstrate knowledge of trade and generic name equivalents.</u>                                                                                                                                                                                                                                                                    |
| <del>19.02</del> 18.04 | <del>Relate</del> <u>Evaluate</u> the <del>general sources, classes, indications</del> <u>pharmacy technician's understanding of pharmacology, including drug classifications</u> , mechanisms of <del>actions, routes of administration,</del> <u>action, common</u> side effects, and <del>various types of drug</del> interactions. |
| 18.05                  | <u>Identify at least one official compendium of standards for quality and purity of drug monographs.</u>                                                                                                                                                                                                                               |
| 18.06                  | <u>Convey an understanding of Investigational Drugs, Risk Evaluation and Mitigation Strategies (REMS), off-label indications, and emerging drug therapy.</u>                                                                                                                                                                           |
| <del>19.03</del> 18.07 | Demonstrate an understanding of common adult doses of medications, duration of common drug therapies, and respective contraindications, including the BEERS Criteria.                                                                                                                                                                  |
| <del>19.04</del> 18.08 | Identify potential interactions that require a pharmacist's intervention pertaining to food/alcohol, herbal, OTC, and/or prescription medications.                                                                                                                                                                                     |
| 18.09                  | <u>Identify allergy histories during the medication reconciliation process and discern "allergy" vs "side effect" in optimizing care.</u>                                                                                                                                                                                              |
| <del>20.0</del> 19.0   | Prepare and deliver medications. The student will be able to:                                                                                                                                                                                                                                                                          |
| <del>20.01</del> 19.01 | Read and prepare medication orders correctly.                                                                                                                                                                                                                                                                                          |
| <del>20.02</del> 19.02 | Demonstrate institutional pharmacy dispensing processes.                                                                                                                                                                                                                                                                               |
| <del>20.03</del> 19.03 | Compare all new orders with medications listed on profiles while noting any changes.                                                                                                                                                                                                                                                   |

|                        |                                                                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>20.04</del> 19.04 | Utilize special precautions in the preparation of medications for pediatric patients.                                                                                       |
| <del>20.05</del> 19.05 | Explain how to safely transport medications, being aware of hazards, theft, legal implications of accidental loss, and other consequences.                                  |
| <del>20.06</del> 19.06 | Understand how to correctly fill and deliver medication.                                                                                                                    |
| <del>20.07</del> 19.07 | Collect data from <u>the</u> medication administration record.                                                                                                              |
| <del>20.08</del> 19.08 | Describe the use of automated medication dispensing equipment.                                                                                                              |
| <del>21.0</del> 20.0   | Repackage unit-dose medications. The student will be able to:                                                                                                               |
| <del>21.01</del> 20.01 | Locate <u>the</u> correct stock container.                                                                                                                                  |
| <del>21.02</del> 20.02 | Operate unit dose packaging equipment.                                                                                                                                      |
| <del>21.03</del> 20.03 | Measure, count, and place <u>the</u> individual dose in appropriate containers.                                                                                             |
| <del>21.04</del> 20.04 | Understand precautions used when packaging unit-dose hazardous drugs.                                                                                                       |
| <del>21.05</del> 20.05 | Record repackaged medication data correctly.                                                                                                                                |
| <del>21.06</del> 20.06 | Summarize, evaluate, and describe the <u>technician's</u> role <del>of the technician</del> in quality assurance activities as related to repackaging unit-dose medication. |
| <del>22.0</del> 21.0   | Prepare United States Pharmacopeia (USP) 797 and USP 800 sterile products. The student will be able to:                                                                     |
| <del>22.01</del> 21.01 | Convey an understanding of United States Pharmacopeia (USP) 797 regulations.                                                                                                |
| <del>22.02</del> 21.02 | Convey an understanding of United States Pharmacopeia (USP) 800 regulations.                                                                                                |
| <del>22.03</del> 21.03 | Compare <u>the</u> medication order with <u>the</u> label on <u>the</u> vial and check <u>the</u> expiration date of <u>the</u> product.                                    |
| <del>22.04</del> 21.04 | Calculate drug dosage for parenteral use.                                                                                                                                   |
| <del>22.05</del> 21.05 | Reconstitute parenteral medications.                                                                                                                                        |
| <del>22.06</del> 21.06 | Demonstrate aseptic technique to withdraw medication from stock vial, measure correct quantity as instructed, select and insert it into IV solution without error.          |
| <del>22.07</del> 21.07 | Demonstrate aseptic technique to withdraw medication from an ampule using <u>a</u> filter needle/straw.                                                                     |
| <del>22.08</del> 21.08 | Prepare parenteral solutions using proper aseptic technique.                                                                                                                |
| <del>22.09</del> 21.09 | Understand the preparation of Total Parenteral Nutrition (TPN) solutions.                                                                                                   |

|                        |                                                                                                                                                                                       |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>22.10</del> 21.10 | Understand the preparation of chemotherapeutic agents using proper safety techniques.                                                                                                 |
| <del>22.11</del> 21.11 | Understand the appropriate technique while using specialized equipment such as: laminar flow hoods, filters, pumps, automated compounders, and barrier <del>isolator</del> isolators. |
| <del>22.12</del> 21.12 | Place label on IV solution container and record appropriately.                                                                                                                        |
| <del>22.13</del> 21.13 | Perform <u>a</u> quality control check of <u>the</u> completed product.                                                                                                               |
| <del>22.14</del> 21.14 | Convey an understanding of the proper storage and disposal requirements of reconstituted and non-reconstituted IV solutions.                                                          |
| <del>22.15</del> 21.15 | Convey an understanding of the proper storage and disposal of hazardous drugs.                                                                                                        |

| 21.17                  | <u>Understand the concept of Diversion Surveillance to assist in the evaluation of mishandling narcotics suggestive of diversion.</u>                                                 |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Clinical practicum experiences are an integral part of this program.

### Special Notes

Due to the clinical experiences students are engaged in through the program and to ensure the safety of both the students and the patients the recommended student to instructor ratio in the classroom is 20:1 and in the lab is 4:1.

It is recommended that program completers take ~~National Pharmacy Technician Certification Exam offered by the Pharmacy Technician Certification Board, 2215 Constitution Ave, Washington, DC 20037-2985, (202) 429-7576. This certification is offered three times annually.~~ [a national certification upon successful program completion.](#)

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### Basic Skills

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

### **Program Length**

In accordance with Rule 6A-10.024, F.A.C. an ATD program consists of a course of study that is part of an AS or AAS degree program, is less than 60 credit hours, is approximately 50% of the technical component (non-general education), and leads to employment in a specific occupation. An ATD program may consist of either technical credit or college credit.

Students must have a high school diploma, a GED, or a certificate of completion to be admitted to an ATD program. Within six weeks of entry, students in ATD programs of 450 or more hours must be tested pursuant to Rule 6A-10.040, F.A.C. and if below minimum standards for completion from the program, must receive remedial instruction. The minimum standards must be at least the equivalent of a score of ten (10) on all sections of basic skills test approved in Rule 6A-10.040, F.A.C. Students must successfully complete all remedial instruction before completing the ATD.

Community Colleges may offer either college or career credit toward the ATD. A Career Center in a public school district may offer an ATD program only as technical credit, with college credit awarded to a student upon articulation to a community college (Section 1004.02, F.S.)

When offered at a community college the standard length of this program is 40 credits. When offered at a technical center the standard length of this program is 1050 clock hours.

In accordance with Rule 6A-10.024, F.A.C. all faculty providing instruction must have at least a baccalaureate degree or an associate degree with demonstrated competencies in the specific instructional program as defined by the Southern Association of Colleges and Schools.

### **Purpose**

This certificate program is part of the Medical Assisting Advanced AS degree program (1351080103).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Health Science career cluster.

This program is designed to prepare students for employment as healthcare support workers.

The content includes but is not limited to assisting management by expediting and facilitating the maintenance and production of routine administrative and clinical tasks; performing medical administrative activities such as preparing and updating of patients' medical histories and discharge summaries; learn the special terminology and procedures associated with medicine and assist in the administration of policy. Emphasis is placed upon students' theoretical and clinical proficiency so they will be well prepared for employment as medical office support staff and healthcare support workers in medical offices, hospitals, and other healthcare settings.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.
