| 14.07 | Identify methods of determining and assuring quality control both sonographically and photographically.                                                                                                                    |
| 14.08 | Discuss <u>and demonstrate</u> common processing techniques, including but not limited to harmonics, persistence, spatial compounding, panoramic imaging, <del>RES</del> , and <del>current techniques</del> <u>zoom</u> . |
| 14.09 | Discuss causes, detection, and control of factors that may create biologic effects in human tissue <del>with</del> <u>during</u> insonation at the diagnostic medical sonography exposure level.                           |
| 15.0  | Demonstrate knowledge of the principles of Doppler. -The student will be able to:                                                                                                                                          |
| 15.01 | Explain the general principles of Doppler techniques and the Doppler formula.                                                                                                                                              |
| 15.02 | Describe how pulse wave Doppler is processed and displayed.                                                                                                                                                                |
| 15.03 | Describe how color-flow Doppler is processed and displayed.                                                                                                                                                                |
| 15.04 | Describe how power Doppler is processed and displayed.                                                                                                                                                                     |
| 15.05 | Identify normal and abnormal Doppler waveforms.                                                                                                                                                                            |
| 15.06 | Discuss the advantages and disadvantages of the various Doppler methods.                                                                                                                                                   |
| 15.07 | Describe the purpose and use of typical controls used to optimize Doppler acquisition and display, including Doppler measurements.                                                                                         |
| 15.08 | Demonstrate skills required <del>on a daily basis</del> in the typical Sonography setting for obtaining and displaying Doppler.                                                                                            |
| 16.0  | Apply knowledge <del>gained in instrumentation lecture</del> as it <del>applied</del> <u>pertains</u> to various ultrasound systems in the clinical setting. -The student will be able to:                                 |
| 16.01 | <del>Utilize</del> <u>Recall</u> patient <u>exam</u> information <del>systems</del> <u>for sonographic use on various ultrasound units</u> .                                                                               |
| 16.02 | Demonstrate appropriate transducer selection for specific sonographic application.                                                                                                                                         |
| 16.03 | Utilize amplification in all its forms to produce a diagnostic quality sonogram.                                                                                                                                           |
| 16.04 | Utilize power to produce a diagnostic quality sonogram while maintaining the ALARA principle.                                                                                                                              |
| 16.05 | Utilize the various forms of processing to produce a diagnostic quality sonogram.                                                                                                                                          |
| 16.06 | Utilize the various types of scanning <u>modes, imaging</u> techniques, and patient positioning required to produce diagnostic quality sonograms.                                                                          |

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.07                  | <del>To Recognize and</del> explain <del>and recognize</del> typical artifacts as found in sonographic imaging.                                                                                                                                                                                                                                                                                                                                                                             |
| 16.08                  | <u>Explain the usage of various image storage devices.</u>                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <del>16.08</del> 16.09 | <del>Demonstrate QA</del> <u>Explain quality assurance</u> parameters utilizing test objects and phantoms.                                                                                                                                                                                                                                                                                                                                                                                  |
| 17.0                   | Apply knowledge of the anatomy, <u>pathology</u> , and scanning techniques related to retroperitoneal structures <del>and upper</del> abdominal organs, <u>cavities</u> , and <del>systems</del> <u>urinary tract</u> . The student will be able to:                                                                                                                                                                                                                                        |
| 17.01                  | Identify <u>the</u> gross <del>abdominal structures as demonstrated by ultrasound such as the liver, gall bladder,</del> <u>anatomy, relational anatomy, and anatomic variants sonographically of the</u> aorta, inferior vena cava, <del>stomach,</del> pancreas, <del>bowel, liver,</del> <u>gallbladder</u> , spleen, <u>adrenal glands, urinary tract, peritoneal and retroperitoneal cavities, stomach, bowel, and</u> lymph nodes, <del>retroperitoneum, and peritoneal cavity.</del> |
| 17.02                  | <del>Identify</del> <u>Label</u> the gross upper abdominal organs <u>and cavities</u> in two planes.                                                                                                                                                                                                                                                                                                                                                                                        |
| 17.03                  | <del>Identify</del> <u>Label</u> the gross retroperitoneal <del>organs, bowel</del> <u>structures</u> and <del>peritoneum</del> <u>urinary tract</u> in two planes.                                                                                                                                                                                                                                                                                                                         |
| 17.04                  | <u>Explain screen orientation and its relationship to the upper abdomen and retroperitoneal structures.</u>                                                                                                                                                                                                                                                                                                                                                                                 |
| <del>17.04</del> 17.05 | <u>Explain the physiology of the upper abdominal organs and the related-laboratory results.</u>                                                                                                                                                                                                                                                                                                                                                                                             |
| <del>17.05</del> 17.06 | <u>Explain the physiology and related-laboratory results</u> of the retroperitoneal organs, <u>urinary tract</u> , bowel, and peritoneum.                                                                                                                                                                                                                                                                                                                                                   |
| <del>17.06</del> 17.07 | <del>Explain</del> <u>Demonstrate</u> and <del>demonstrate</del> <u>explain</u> the <del>protocol</del> <u>protocols</u> for sonographic examination of the upper abdominal organs.                                                                                                                                                                                                                                                                                                         |

| <del>19.03</del>                       | <del>Identify the gross adrenals in two planes.</del>                                                                                                                                                                                                                                                                                                                                |
| <del>19.04</del>                       | <del>Explain the physiology of the urinary system organs and the related laboratory results.</del>                                                                                                                                                                                                                                                                                   |

|       |                                                                                                                                                                                                   |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.05 | <del>Explain the physiology of the adrenals and the related laboratory results.</del>                                                                                                             |
| 19.06 | <del>Explain and demonstrate the protocol for sonographic examination of the urinary system organs.</del>                                                                                         |
| 19.07 | <del>Explain and demonstrate the protocol for sonographic examination of the adrenals.</del>                                                                                                      |
| 19.08 | <del>Explain the common pathologies related to the urinary system organs including the sonographic appearance of these pathologies corresponding lab values, patient history and symptoms.</del>  |
| 19.09 | <del>Explain the common pathologies related to the adrenals including the sonographic appearance of these pathologies corresponding lab values, patient history and symptoms.</del>               |
| 19.10 | <del>20.03 Explain screen orientation and its relationship to the urinary system female pelvic structures and the adrenals.</del>                                                                 |
| 19.11 | <del>Describe and perform procedures of a complete ultrasound examination of the urinary system from preparation to reporting.</del>                                                              |
| 20.0  | <del>Apply knowledge of anatomy, pathology, and scanning techniques used in Sonography of the female pelvis. The student will be able to:</del>                                                   |
| 20.01 | <del>Identify the gross female pelvic structures as demonstrated by ultrasound including but not limited to the female reproductive organs and urinary bladder.</del>                             |
| 20.02 | <del>Identify the gross female pelvic organs in two planes.</del>                                                                                                                                 |
| 20.03 | <del>20.04 Explain the physiology of the female pelvic organs and the related laboratory results.</del>                                                                                           |
| 20.04 | <del>20.05 ExplainDemonstrate and demonstrateexplain the protocol for sonographic examination of the female pelvic organs.</del>                                                                  |
| 20.05 | <del>20.06 Explain the common pathologies related to the female pelvis, including the sonographic appearance of these pathologies, corresponding lab values, patient history, and symptoms.</del> |
| 20.06 | <del>Explain screen orientation and its relationship to the female pelvic structures.</del>                                                                                                       |
| 20.07 | Describe and perform procedures of a complete ultrasound examination of the female pelvis from preparation to reporting.                                                                          |
| 20.08 | ExplainDiscuss when the protocol for both transabdominal, translabial, and transvaginal, or translabial pelvic ultrasound approach should be utilized.                                            |
| 20.09 | Identify the need for protocol modification based on the sonographic findings and the differential diagnoses.                                                                                     |
| 21.0  | Apply knowledge of anatomy, pathology, and scanning techniques related to obstetrics. -The student will be able to:                                                                               |
| 21.01 | Identify gross obstetrical structures as demonstrated by ultrasound, including but not limited to the uterus and adnexa in both the pregnant and postpartum state.                                |
| 21.02 | Discuss anatomy and physiology of the various stages of fetal development as related to ultrasound.                                                                                               |
| 21.03 | Discuss the anatomy and physiology of the placenta at all stages of development.                                                                                                                  |
| 21.04 | Describe the basic stages of embryology and sonographic relationships.                                                                                                                            |

|                        |                                                                                                                                                                                           |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21.05                  | Describe events occurring in the first trimester and their relationship to ultrasound.                                                                                                    |
| 21.06                  | Explain the physiology of organs related to obstetrics.                                                                                                                                   |
| 21.07                  | <del>Explain</del> <u>Demonstrate</u> and <del>demonstrate</del> <u>explain</u> the protocol for sonographic examinations used in obstetrics.                                             |
| 21.08                  | <u>Discuss protocol modification in the setting of multiple gestations through the various stages of fetal development.</u>                                                               |
| <del>21.08</del> 21.09 | Explain the common pathologies related to obstetrics, including the sonographic appearance of these pathologies, corresponding lab values, patient history, and symptoms.                 |
| <del>21.09</del> 21.10 | Explain screen orientation and its relationship to the organs related to obstetrics.                                                                                                      |
| <del>21.10</del> 21.11 | Describe and perform methods for determining gestational age and fetal growth by ultrasound using appropriate biometrics.                                                                 |
| <del>21.11</del> 21.12 | Explain the effects of specific diseases common to the gestational period.                                                                                                                |
| <del>21.12</del> 21.13 | Compare <u>the</u> normal and abnormal states of embryology in <del>the human</del> <u>humans</u> as demonstrated by ultrasound.                                                          |
| <del>21.13</del> 21.14 | Perform a biophysical profile to determine fetal well-being.                                                                                                                              |
| <del>21.14</del> 21.15 | Compare the normal and pathologic appearance of the fetus and the fetal environment.                                                                                                      |
| <del>21.15</del> 21.16 | Demonstrate special techniques of ultrasound scanning and collateral processes during pregnancy.                                                                                          |
| <del>21.16</del> 21.17 | Explain <u>and perform</u> the <del>protocol and</del> <u>current</u> AIUM <del>guidelines for</del> <u>protocols under the</u> obstetrical ultrasound <u>guidelines</u> .                |
| <del>21.17</del> 21.18 | <del>Explain</del> <u>Demonstrate</u> and <del>demonstrate</del> <u>explain</u> the special safety precautions required during an obstetrical ultrasound with a focus on AIUM guidelines. |
| <del>21.18</del> 21.19 | Describe and perform procedures of a complete obstetrical ultrasound examination from preparation to reporting.                                                                           |
| <del>21.19</del> 21.20 | Describe Doppler applications for evaluation of a pregnancy (i.e., umbilical artery, etc.).                                                                                               |
| 22.0                   | Develop a continuous awareness of the disease processes. -The student will be able to:                                                                                                    |
| 22.01                  | Discuss basic concepts of the causes of disease.                                                                                                                                          |
| 22.02                  | Discuss common urogenital pathology.                                                                                                                                                      |
| 22.03                  | Discuss gastrointestinal diseases.                                                                                                                                                        |
| 22.04                  | Discuss common pathology found in obstetrics and gynecology.                                                                                                                              |
| 22.05                  | Discuss common pathology found in the cardiovascular system.                                                                                                                              |

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22.06                  | Discuss common pathology found in <u>the</u> hepatobiliary system to include <u>the</u> liver, gallbladder, pancreas, spleen, and <del>retroperitneum</del> <u>retroperitoneum</u> .                                                                                                                                                                                                                                                                                          |
| 22.07                  | Discuss common pathology found in thyroid, scrotum (testicular), neck, <del>breast, MSK</del> <u>penis</u> , and prostate.                                                                                                                                                                                                                                                                                                                                                    |
| 22.08                  | Discuss post-surgical changes and <del>its</del> <u>their</u> effects on images.                                                                                                                                                                                                                                                                                                                                                                                              |
| 22.09                  | <del>Demonstrate knowledge and understanding of the role of the sonographer in performing interventional/invasive procedures.</del><br><u>Discuss the usage of contrast-enhanced imaging and how it aids in diagnosing disease processes.</u>                                                                                                                                                                                                                                 |
| 22.10                  | <u>Discuss the usage of elastography and how it aids in diagnosing disease processes.</u>                                                                                                                                                                                                                                                                                                                                                                                     |
| 23.0                   | Apply accumulated knowledge to the process of creating <u>and documenting</u> diagnostic sonograms. -The student will be able to:                                                                                                                                                                                                                                                                                                                                             |
| 23.01                  | Complete in all aspects a diagnostic sonogram with emphasis on: <ul style="list-style-type: none"> <li>• <u>ergonomic techniques</u></li> <li>• <u>standard precautions/isolation procedures</u></li> <li>• patient identification</li> <li>• patient interaction</li> <li>• professionalism</li> <li>• creation of an optimized sonogram</li> <li>• appropriate image annotation</li> <li>• safety</li> <li>• recognition of anatomy, both normal and pathologic.</li> </ul> |
| 23.02                  | Complete routine documentation associated with a typical ultrasound department.                                                                                                                                                                                                                                                                                                                                                                                               |
| 23.03                  | Accurately complete technical report/worksheet.                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 24.0                   | Apply skills needed to <del>complete diagnostic images</del> <u>effectively perform in the role</u> of <del>high-quality from a variety of scanning units.</del> <u>an entry-level sonographer</u> . The student will be able to:                                                                                                                                                                                                                                             |
| 24.01                  | <del>Perform</del> <u>Demonstrate clinical competency through</u> complete and diagnostic <u>sonographic</u> examinations of the abdomen, superficial structures, retroperitoneal cavity, pelvis, and obstetrical patient using real-time and Doppler techniques using a variety of ultrasound machines.                                                                                                                                                                      |
| 24.02                  | <u>Demonstrate knowledge and understanding of the role of an entry-level sonographer while performing interventional/invasive procedures.</u>                                                                                                                                                                                                                                                                                                                                 |
| <del>24.02</del> 24.03 | <u>Present completed examinations in detail with justification of all techniques, methods, and procedures used to obtain data.</u>                                                                                                                                                                                                                                                                                                                                            |
| 24.04                  | <u>Identify and present examination findings that require immediate clinical responses and notify the interpreting physician.</u>                                                                                                                                                                                                                                                                                                                                             |
| <del>24.03</del> 24.05 | <u>Identify gross pathology of the abdomen, superficial structures, retroperitoneal cavity, pelvis, and obstetrical patient, both on sonograms and related imaging modalities.</u>                                                                                                                                                                                                                                                                                            |
| <del>24.04</del> 24.06 | <u>Perform all preliminary procedures leading to actual examination by <del>Sonography</del><u>sonography</u> and all procedures necessary post examination, to include but not limited to prior exams.</u>                                                                                                                                                                                                                                                                   |

|                                                                                                                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>24.07 Explain the reporting and documentation process of clinical incidents and/or adverse reactions that occur.</u>                                                                    |
| <del>24.05</del> <u>24.08</u> Demonstrate skills needed to relate with tact and diplomacy with patients, physicians, nurses, other imaging personnel, and the general hospital population. |
| <del>24.06</del> <u>24.09</u> Demonstrate those characteristics that reflect the high degree of professionalism associated with the field of ultrasound.                                   |
| <u>24.10 Discuss awareness of professional development resources.</u>                                                                                                                      |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to [s. 456.0635, F.S.](#) for more information on disqualification for a license, certificate, or registration through the Department of Health. The program should meet the requirements of:

Commission on Accreditation of Allied Health Education Programs (CAAHEP) [www.caahep.org](http://www.caahep.org)  
361 Park St., Clearwater, FL 33756, (727) 210-2350

Written clinical affiliation agreements must be maintained with each health care facility. Health care facilities must be accredited by The Joint Commission.

Students completing this program may apply to take one or both of the national registry examinations to obtain certification, for further information contact:

American Registry of Diagnostic, Medical Sonographers (ARDMS) [www.ardms.org](http://www.ardms.org)  
51 Monroe St., Plaza East 1, Rockville, Maryland 20850-2400, (301) 738-8401

Or

American Registry of Radiologic Technologists (ARRT) [www.arrt.org](http://www.arrt.org)  
1255 Northland Drive, St. Paul, MN 55120-1155, (612) 687-0048

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

## **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded). The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

## **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the intercurricular~~ [CTSOs are co-curricular](#) career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

Program Title: Radiography  
Career Cluster: Health Science

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as Radiographers, and Radiologic Technologists/Technicians or to provide supplemental training for persons previously or presently employed in these occupations.

The content includes but is not limited to an introduction to radiography, medical ethics, and law, medical terminology, methods of patient care, human structure and function, radiographic procedures, principles of radiographic exposure, imaging equipment, image processing, radiation physics, principles of radiation protection, principles of radiation biology, radiographic pathology, introduction to quality assurance, introduction to computer literacy, and clinical education. The curriculum includes a plan for well-structured competency-based clinical education.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Program Structure**

This program is a planned sequence of instruction consisting of 77 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

### **Regulated Programs**

**The program must be approved by the Department of Health, Bureau of Radiation Control so that the graduate is eligible for licensure in Florida as a Certified Radiologic Technologist. As specified in Chapter 468 Part IV, F.S. and Chapter 64E-3, F.A.C.**

The program must be accredited. by the Joint Review Committee on Education in Radiologic Technology (JRCERT), 20 North Wacker Drive, Suite 900, Chicago, Illinois 60606-2901, (312) 704-5300, or by ~~the Southern Association of Colleges and Schools~~one of the following ARRT recognized regional accrediting agency.

Commission Higher Education of the Middle States Association of Colleges and Schools

Commission on Elementary and Secondary Schools of the Middle States Association of College and Schools

New England Association of Schools and Colleges

New England Commission of Higher Education

Higher Learning Commission

Northwest Commission on Colleges and Universities

Southern Association of Colleges and Schools Commission on Colleges

Accrediting Commission for Community and Junior Colleges and Western Association of Senior College and University Commission

Program completers will be eligible to make an application to take the National Registry examination. For further information contact:

American Registry of Radiologic Technologists (ARRT)  
1255 Northland Drive, St. Paul, MN 55120-1155, (612) 687-0048

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |
|-----------------------------|--------------------------------------------------------------------------------------------------|
| <u>01.0</u>                 | <u>Apply academic skills to workplace scenarios.</u>                                             |
| <u>01.01</u>                | <u>Use reading skills.</u>                                                                       |
| <u>01.02</u>                | <u>Use writing skills.</u>                                                                       |
| <u>01.03</u>                | <u>Use mathematical strategies and procedures.</u>                                               |
| <u>01.04</u>                | <u>Use scientific principles and procedures.</u>                                                 |
| <u>02.0</u>                 | <u>Design a solution to an industry problem.</u>                                                 |
| <u>02.01</u>                | <u>Use critical thinking.</u>                                                                    |
| <u>02.02</u>                | <u>Use creativity.</u>                                                                           |
| <u>02.03</u>                | <u>Make sound decisions.</u>                                                                     |
| <u>02.04</u>                | <u>Solve problems.</u>                                                                           |
| <u>02.05</u>                | <u>Reason.</u>                                                                                   |
| <u>02.06</u>                | <u>Plan and organize.</u>                                                                        |
| <u>03.0</u>                 | <u>Manage resources within an industry project</u>                                               |
| <u>03.01</u>                | <u>Manage time.</u>                                                                              |
| <u>03.02</u>                | <u>Manage money or resources.</u>                                                                |
| <u>03.03</u>                | <u>Manage materials.</u>                                                                         |
| <u>03.04</u>                | <u>Manage personnel.</u>                                                                         |
| <u>04.0</u>                 | <u>Oversee the subcomponents, operations and output of a technical or organizational system.</u> |
| <u>04.01</u>                | <u>Manage systems.</u>                                                                           |
| <u>04.02</u>                | <u>Monitor systems.</u>                                                                          |
| <u>04.03</u>                | <u>Improve systems.</u>                                                                          |
| <u>05.0</u>                 | <u>Use information for decision making.</u>                                                      |

**Job Attainment****10.0 Find, assess and apply to job opportunities.**10.01 Identify online job posts relevant to his or her career aspirations.10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.10.03 Define what information, documentation and writing prompts are required for the positions.**11.0 Communicate personal competence, character and fit for a job opportunity.**11.01 Develop a resume.11.02 Write a cover letter.11.03 Curate a professional portfolio that includes work products.11.04 Prepare for and experience a mock job interview.**12.0 Cultivate and leverage relationships to professionally advance.**12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.12.02 Develop a plan to cultivate a professional digital footprint.12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate a functional knowledge of medical terminology required in radiologic science.
- 02.0 Convey an understanding of the ethics and laws that impact ~~Radiologic Sciences~~ radiologic sciences at both the state and federal levels.
- 03.0 Demonstrate introductory knowledge of radiologic science and the health care system.
- 04.0 Demonstrate knowledge of and perform patient care procedures required in radiologic sciences.
- 05.0 Demonstrate an understanding of pharmacology and venipuncture ~~procedures~~ procedure as ~~it relates~~ they relate to radiologic science.
- 06.0 Demonstrate proficiency in the skills, techniques, and knowledge required for image analysis.
- 07.0 Demonstrate proficiency in the skills, techniques, and knowledge required to operate imaging equipment.
- 08.0 Convey an understanding of the principles of imaging and the various factors that contribute to accuracy, including ~~X~~ X-ray production, image formation, and factors related to radiographic quality.
- 09.0 Demonstrate an understanding of the structure and function of the human body with a focus on the muscular, endocrine, respiratory, urinary, axial, and appendicular skeletal systems.
- 10.0 Demonstrate proficiency in the skills, techniques, and knowledge required to perform accurate radiographic procedures.
- 11.0 Demonstrate ~~the~~ proficiency in the skills and knowledge required ~~effor~~ effor clinical practice.
- 12.0 Convey an understanding of the principles of imaging and the various factors that contribute to accuracy, including image acquisition and processing, scatter radiation control, and image evaluation.
- 13.0 Demonstrate an understanding of the concepts and equipment required ~~effor~~ effor digital image acquisition and display.
- ~~14.0 Demonstrate an understanding of the structure and function of the human body with a focus on the axial skeletal system.~~
- ~~15.0~~ 14.0 Demonstrate an understanding of the structure and function of the human body with a focus on the circulatory/cardiovascular, digestive, and reproductive systems.
- ~~16.0~~ 15.0 Demonstrate proficiency in the skills, techniques, and knowledge required to perform accurate fluoroscopic procedures.
- ~~17.0~~ 16.0 Demonstrate an understanding of the structure and function of the human body with a focus on the nervous system.
- ~~18.0~~ 17.0 Demonstrate introductory knowledge of computed tomography.
- ~~19.0~~ 18.0 Demonstrate appropriate venipuncture technique.
- ~~20.0~~ 19.0 Demonstrate an understanding of radiographic pathology.
- ~~21.0~~ 20.0 Demonstrate an understanding of how radiation is produced and the characteristics of different classifications of radiation.
- ~~22.0~~ 21.0 Demonstrate an understanding of the structure and function of the human body, including the immune system and chemical composition of the body.
- ~~23.0~~ 22.0 Demonstrate an understanding of the integral aspects of radiation biology required of a radiographer.
- ~~24.0~~ 23.0 Convey the importance ~~for~~ of proper radiation protection and the precautions radiographers should take to prevent unnecessary exposure to themselves and patients.

| 01.0                                                            | Demonstrate a functional knowledge of medical terminology required in radiologic science. -The student will be able to:                                                          |
| 01.01                                                           | Apply the word-building process for medical terminology.                                                                                                                         |
| 01.02                                                           | Interpret medical abbreviations and symbols.                                                                                                                                     |
| 01.03                                                           | Critique orders and requests.                                                                                                                                                    |
| 01.04                                                           | Define medical imaging and radiation.                                                                                                                                            |
| 01.05                                                           | Translate medical terms, abbreviations, and symbols into layman's terms.                                                                                                         |
| 02.0                                                            | Convey an understanding of the ethics and laws that impact <del>Radiologic Sciences</del> radiologic sciences at both the state and federal levels. The student will be able to: |
| 02.01                                                           | Discuss the origins of medical ethics.                                                                                                                                           |
| 02.02                                                           | Apply medical/professional ethics in the context of a broader societal ethic.                                                                                                    |
| 02.03                                                           | Explain the role of ethical behavior in health care delivery.                                                                                                                    |
| 02.04                                                           | Explain concepts of personal honesty, integrity, accountability, competence, and compassion as ethical imperatives in health care.                                               |
| 02.05                                                           | Identify legal and professional standards and relate each to practice in health professions.                                                                                     |
| 02.06                                                           | Identify specific situations and conditions that give rise to ethical dilemmas in health care.                                                                                   |
| 02.07                                                           | Explain select concepts embodied in the principles of patients' rights, the doctrine of informed (patient) consent, and other issues related to patients' rights.                |
| 02.08                                                           | Explain the legal implications of professional liability, malpractice, professional negligence, and other legal doctrines applicable to professional practice.                   |
| 02.09                                                           | Describe the importance of timely, accurate, and comprehensive methods of documentation as a legal and ethical imperative.                                                       |

|                        |                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| 02.10                  | Explore theoretical situations and questions relating to the ethics of health care delivery.                                  |
| 02.11                  | Explain legal terms, principles, doctrines, and laws specific to the radiologic sciences.                                     |
| 02.12                  | Outline the conditions necessary for a valid malpractice claim in medical imaging.                                            |
| 02.13                  | Describe institutional and professional liability protection typically available to the radiographer.                         |
| 02.14                  | Describe the components and implications of informed consent.                                                                 |
| 02.15                  | Identify standards for informed consent and disclosure of protected health information (PHI).                                 |
| 02.16                  | Describe how consent forms are used relative to specific radiographic procedures.                                             |
| 02.17                  | Differentiate between civil and criminal liability.                                                                           |
| 02.18                  | Define tort and explain the differences between intentional and unintentional torts.                                          |
| 03.0                   | Demonstrate introductory knowledge of radiologic science and the health care system. -The student will be able to:            |
| 03.01                  | Identify health science professions that <del>participate in</del> <u>contribute to</u> the total health care of the patient. |
| 03.02                  | <u>Identify and collaborate with relationships and interdependencies within a health care institution.</u>                    |
| <del>03.02</del> 03.03 | Identify various settings involved in the delivery of health care.                                                            |
| <del>03.03</del> 03.04 | Discuss the reimbursement/payment options for health care services.                                                           |
| <del>03.04</del> 03.05 | Discuss the role and value of a mission statement to the operation of a healthcare institution.                               |
| 03.05                  | <del>Describe relationships and interdependencies of departments within a health care institution.</del>                      |
| 03.06                  | Discuss the responsibilities and relationships of all personnel in the radiology department.                                  |
| 03.07                  | Differentiate between quality assurance (QA) and continuous quality improvement (CQI).                                        |
| 03.08                  | Differentiate between accreditation types.                                                                                    |
| 03.09                  | Define credentialing, national certification, registration, and state licensure.                                              |
| 03.10                  | Discuss career opportunities and advancement for the radiographer.                                                            |
| 03.11                  | Identify the benefits of continuing education as related to improved patient care and professional development.               |
| 03.12                  | Describe the types, <del>purpose</del> <u>purposes</u> , and functions of professional organizations (ASRT).                  |

|       |                                                                                                                                                                                                                              |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.13 | Identify educational and <del>certifications</del> <u>certification</u> requirements.                                                                                                                                        |
| 03.14 | Identify state and federal regulatory agencies.                                                                                                                                                                              |
| 04.0  | Demonstrate knowledge of and perform patient care procedures required in radiologic sciences. -The student will be able to:                                                                                                  |
| 04.01 | Identify the responsibilities of the health care facility and members of the health care team.                                                                                                                               |
| 04.02 | List the general responsibilities of the radiographer.                                                                                                                                                                       |
| 04.03 | Describe the practice standards for the radiographer as defined by the ASRT and state licensure.                                                                                                                             |
| 04.04 | Differentiate between culture and ethnicity.                                                                                                                                                                                 |
| 04.05 | <del>Explain perceptions of dying and death from the viewpoint of both patient and radiographer.</del> <u>Describe end-of-life options, including living wills, advance directives, and Do Not Resuscitate (DNR) orders.</u> |
| 04.06 | Identify methods for determining the correct patient for a given procedure.                                                                                                                                                  |
| 04.07 | Explain the use of various communication models.                                                                                                                                                                             |
| 04.08 | Explain specific aspects of a radiographic procedure to the patient.                                                                                                                                                         |
| 04.09 | Demonstrate correct principles of body mechanics applicable to patient care.                                                                                                                                                 |
| 04.10 | Demonstrate techniques for specific types of patient transfer.                                                                                                                                                               |
| 04.11 | Demonstrate select procedures to turn patients who have various health conditions.                                                                                                                                           |
| 04.12 | Describe immobilization techniques for various types of procedures and patient conditions.                                                                                                                                   |
| 04.13 | Describe specific patient safety measures and concerns.                                                                                                                                                                      |
| 04.14 | Explain the purpose, legal considerations, and procedures for incident reporting.                                                                                                                                            |
| 04.15 | Describe methods to evaluate <del>patient</del> <u>the patient's</u> physical status.                                                                                                                                        |
| 04.16 | List the information to be collected prior to a patient examination.                                                                                                                                                         |
| 04.17 | Describe vital signs and lab values used to assess the condition of the patient, including sites for assessment and normal values.                                                                                           |
| 04.18 | Define terms related to infection control.                                                                                                                                                                                   |
| 04.19 | Describe the importance of standard precautions and isolation procedures, including sources and modes of transmission of infection and disease and institutional control procedures.                                         |

|                                        |                                                                                                                                                                                                                         |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 04.20                                  | Identify symptoms related to specific emergency situations.                                                                                                                                                             |
| 04.21                                  | Describe the institution's emergency medical code system and the role of the student during a medical emergency.                                                                                                        |
| 04.22                                  | Explain the age-specific considerations necessary when performing radiographic procedures.                                                                                                                              |
| 04.23                                  | Describe appropriate procedures for <a href="#">the</a> management of various types of trauma situations.                                                                                                               |
| 04.24                                  | Describe the symptoms and medical interventions for a patient with a contrast agent reaction.                                                                                                                           |
| 04.25                                  | Explain the role of the radiographer in patient education.                                                                                                                                                              |
| <del>04.26</del>                       | <del>Describe the patient preparation for contrast studies.</del>                                                                                                                                                       |
| <del>04.27</del> <a href="#">04.26</a> | Identify specific types of tubes, lines, catheters, and collection devices.                                                                                                                                             |
| <del>04.28</del> <a href="#">04.27</a> | Outline the steps in the operation and maintenance of suction equipment.                                                                                                                                                |
| <del>04.29</del> <a href="#">04.28</a> | Outline the steps in the operation and maintenance of oxygen equipment and demonstrate proper use.                                                                                                                      |
| <del>04.30</del> <a href="#">04.29</a> | Demonstrate competency in basic life support (BLS).                                                                                                                                                                     |
| <del>04.31</del> <a href="#">04.30</a> | Describe the steps in performing various mobile procedures.                                                                                                                                                             |
| <del>04.32</del> <a href="#">04.31</a> | Describe the special problems faced in performing procedures on a patient with a tracheotomy and specific tubes, drains, and catheters.                                                                                 |
| <del>04.33</del> <a href="#">04.32</a> | Describe the procedure for producing diagnostic images in the surgical suite.                                                                                                                                           |
| <del>04.34</del> <a href="#">04.33</a> | Explain the appropriate radiation protection required when performing mobile/surgical radiography.                                                                                                                      |
| <a href="#">04.34</a>                  | <a href="#">Describe the patient preparation for contrast studies.</a>                                                                                                                                                  |
| 05.0                                   | Demonstrate an understanding of pharmacology and venipuncture <del>procedures</del> <a href="#">procedure</a> as <del>it relates</del> <a href="#">they relate</a> to radiologic science. -The student will be able to: |
| 05.01                                  | Distinguish between the chemical, generic, and trade names of various drugs.                                                                                                                                            |
| 05.02                                  | Describe the pharmacokinetic, pharmacodynamics, and pharmacogenetic principles of drugs.                                                                                                                                |
| 05.03                                  | Explain the uses and impact on the patient of different categories of drugs.                                                                                                                                            |
| 05.04                                  | Define the categories of contrast agents and give specific examples for each category.                                                                                                                                  |
| 05.05                                  | Explain the pharmacology of contrast agents.                                                                                                                                                                            |

|                       |                                                                                                                                                                                                           |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 05.06                 | Describe methods and techniques for administering various types of contrast agents.                                                                                                                       |
| 05.07                 | Identify and describe the routes of drug administration.                                                                                                                                                  |
| <a href="#">05.08</a> | <a href="#">Identify the appropriateness of contrast media to examinations.</a>                                                                                                                           |
| <a href="#">05.09</a> | <a href="#">Differentiate between the two major sites of intravenous drug administration.</a>                                                                                                             |
| <a href="#">05.10</a> | <a href="#">Identify, describe, and document complications associated with venipuncture and appropriate actions to resolve these complications.</a>                                                       |
| <a href="#">05.11</a> | <a href="#">Discuss the various elements of initiating and discontinuing intravenous access.</a>                                                                                                          |
| <a href="#">05.12</a> | <a href="#">Differentiate and document dose calculations for adult and pediatric patients.</a>                                                                                                            |
| <a href="#">05.13</a> | <a href="#">Prepare for injection of contrast agents/intravenous medications using aseptic technique.</a>                                                                                                 |
| <a href="#">05.14</a> | <a href="#">Explain the current legal status and professional liability issues of the radiographer's role in contrast and/or drug administration.</a>                                                     |
| <a href="#">05.15</a> | <a href="#">Simulate appropriate venipuncture technique.</a>                                                                                                                                              |
| 06.0                  | Demonstrate proficiency in the skills, techniques, and knowledge required for image analysis. -The student will be able to:                                                                               |
| 06.01                 | Discuss the elements of a radiographic image.                                                                                                                                                             |
| 06.02                 | Identify anatomy on radiographic images.                                                                                                                                                                  |
| 06.03                 | Apply a problem-solving process used for image analysis.                                                                                                                                                  |
| 06.04                 | Describe an effective image analysis method.                                                                                                                                                              |
| 06.05                 | Describe the role of the radiographer in image analysis.                                                                                                                                                  |
| 06.06                 | Apply the process for evaluating images for adequate image receptor exposure, exposure indicator, contrast/greyscale/spatial resolution, identification markers, and appropriate use of beam restriction. |
| 06.07                 | Summarize the importance of proper positioning.                                                                                                                                                           |
| 06.08                 | Discuss the impact of patient preparation on the resulting radiographic image.                                                                                                                            |
| 06.09                 | Identify common equipment malfunctions that affect image quality, and corrective action.                                                                                                                  |
| 06.10                 | Differentiate between technical factor problems, procedural factor problems, and equipment malfunctions.                                                                                                  |
| 06.11                 | Critique images for appropriate technical, procedural, and pathologic factors, and employ corrective actions if necessary.                                                                                |

|       |                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------|
| 06.12 | Differentiate images produced by various modalities.                                                                                  |
| 06.13 | Apply a process for evaluating images for acceptable limits of distortion, image artifacts, radiation fog, noise, and gross exposure. |
| 07.0  | Demonstrate proficiency in the skills, techniques, and knowledge required to operate imaging equipment. -The student will be able to: |
| 07.01 | Describe potential difference, current, and resistance.                                                                               |
| 07.02 | Describe the general components and functions of the tube and filament circuits.                                                      |
| 07.03 | Compare generators in terms of radiation produced and efficiency.                                                                     |
| 07.04 | Discuss mobile and fixed radiographic equipment in terms of purpose, components, types, and applications.                             |
| 07.05 | Demonstrate operation of various types of permanently fixed and mobile radiographic equipment.                                        |
| 07.06 | Discuss fixed, fluoroscopy, and mobile equipment in terms of purpose, components, types, and applications.                            |
| 07.07 | Describe the components and function of automatic exposure control (AEC) devices.                                                     |
| 07.08 | Demonstrate proper use of AEC devices.                                                                                                |
| 07.09 | Describe the components of diagnostic <del>x</del> X-ray tubes.                                                                       |
| 07.10 | Explain methods used to extend x-ray tube life.                                                                                       |
| 07.11 | Explain image-intensified, flat panel, and pulsed fluoroscopy.                                                                        |
| 07.12 | Indicate the purpose, construction, and application of <u>the</u> fluoroscopic monitor.                                               |
| 07.13 | Differentiate between quality assurance (QA) and quality control (QC).                                                                |
| 07.14 | List the benefits of <del>a</del> -quality control management to the patient and <del>to</del> the department.                        |
| 07.15 | Evaluate the results of standard QC tests.                                                                                            |
| 07.16 | Discuss the image appearance and basic principles of operation for equipment used in various imaging modalities.                      |
| 07.17 | Describe continuous quality improvement (CQI).                                                                                        |
| 07.18 | Describe the components of the various types of display monitors.                                                                     |
| 07.19 | Compare monitor types (e.g., acquisition, display).                                                                                   |
| 07.20 | Discuss quality control (QC) for imaging equipment and accessories.                                                                   |

|                        |                                                                                                                                                                                                                                                |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.21                  | Discuss the appropriate use of electronic masking.                                                                                                                                                                                             |
| 07.22                  | Recognize and compare basic equipment used in various imaging modalities.                                                                                                                                                                      |
| 08.0                   | Convey an understanding of the principles of imaging and the various factors that contribute to accuracy, including <del>x</del> X-ray production, image formation, and factors related to radiographic quality. -The student will be able to: |
| 08.01                  | Discuss practical considerations in setting standards for acceptable image quality.                                                                                                                                                            |
| 08.02                  | Assess radiographic exposure on radiographic images.                                                                                                                                                                                           |
| 08.03                  | Analyze the relationships of factors that control and affect image exposure.                                                                                                                                                                   |
| <del>08.04</del>       | <del>Critique the radiographic contrast within various radiographic images.</del>                                                                                                                                                              |
| <del>08.05</del> 08.04 | Analyze the relationship of factors that control and affect radiographic contrast.                                                                                                                                                             |
| <del>08.06</del> 08.05 | Critique spatial resolution on various radiographic images.                                                                                                                                                                                    |
| <del>08.07</del> 08.06 | Analyze the relationships of factors that control and affect spatial resolution.                                                                                                                                                               |
| <del>08.08</del> 08.07 | Differentiate between size and shape distortion.                                                                                                                                                                                               |
| <del>08.09</del> 08.08 | Perform calculations to determine image magnification and percent magnification.                                                                                                                                                               |
| <del>08.10</del> 08.09 | Summarize the relationship of factors that control and affect distortion.                                                                                                                                                                      |
| <del>08.11</del> 08.10 | Explain the rationale for using beam restriction.                                                                                                                                                                                              |
| <del>08.12</del> 08.11 | Describe the operation and applications for different types of beam restriction devices.                                                                                                                                                       |
| <del>08.13</del> 08.12 | Explain how beam filtration affects x-ray beam intensity, beam quality, and patient exposure.                                                                                                                                                  |
| <del>08.14</del> 08.13 | Describe the change in the half-value layer (HVL) when filtration is added or removed.                                                                                                                                                         |
| <del>08.15</del> 08.14 | Describe the impact of sampling frequency on spatial resolution.                                                                                                                                                                               |
| <del>08.16</del> 08.15 | Define sampling frequency.                                                                                                                                                                                                                     |
| <del>08.17</del> 08.16 | Describe the impact of detector element size on spatial resolution.                                                                                                                                                                            |
| <del>08.18</del> 08.17 | Describe the Nyquist-Shannon theorem as it relates to sampling frequency.                                                                                                                                                                      |
| <del>08.19</del> 08.18 | Describe the process of image stitching.                                                                                                                                                                                                       |

|       |                                                                                                                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 09.0  | Demonstrate an understanding of the structure and function of the human body with a focus on the muscular, endocrine, respiratory, urinary, <u>axial</u> , and appendicular skeletal systems. -The student will be able to: |
| 09.01 | Discuss the basics of anatomical nomenclature.                                                                                                                                                                              |
| 09.02 | Classify tissue types, describe the functional characteristics of each, and give examples of their location within the human body.                                                                                          |
| 09.03 | Describe the composition and characteristics of bone.                                                                                                                                                                       |
| 09.04 | Identify and locate the bones of the human skeleton.                                                                                                                                                                        |
| 09.05 | Identify bony processes and depressions found on the human skeleton.                                                                                                                                                        |
| 09.06 | Summarize the functions of the skeletal system.                                                                                                                                                                             |
| 09.07 | <del>Label different</del> Describe and label the types of articulations <u>specific to the axial and appendicular skeletal system</u> .                                                                                    |
| 09.08 | Compare the types, locations, and movements permitted by the different types of articulations.                                                                                                                              |
| 09.09 | <del>Examine how muscle is organized at the gross and microscopic levels.</del>                                                                                                                                             |
| 09.10 | 09.09 Differentiate between the structures of each type of muscle tissue.                                                                                                                                                   |
| 09.11 | 09.10 State the function of each type of muscle tissue.                                                                                                                                                                     |
| 09.12 | 09.11 Name and locate the major muscles of the skeleton.                                                                                                                                                                    |
| 09.13 | <del>Define endocrine.</del>                                                                                                                                                                                                |
| 09.14 | 09.12 Describe the characteristics and functions of the components that comprise the endocrine system.                                                                                                                      |
| 09.15 | 09.13 Differentiate between <u>the</u> peritoneum, omentum, and mesentery.                                                                                                                                                  |
| 09.16 | 09.14 Label the components of the respiratory system.                                                                                                                                                                       |
| 09.17 | 09.15 Describe the physiology and regulation of respiration.                                                                                                                                                                |
| 09.18 | 09.16 Label the parts of the kidneys, ureters, bladder, and urethra.                                                                                                                                                        |
| 09.19 | 09.17 Describe the function of each organ of the urinary system.                                                                                                                                                            |
| 09.20 | 09.18 Describe the composition and formation of urine.                                                                                                                                                                      |
| 09.21 | 09.19 Explain micturition.                                                                                                                                                                                                  |
| 09.22 | 09.20 Identify major sectional anatomical structures found within the head and neck, thorax, and abdomen.                                                                                                                   |

|                                                                                    |                                                                                                                                                                |
|------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">09.21 Differentiate the primary and secondary curves of the spine.</a> |                                                                                                                                                                |
| 10.0                                                                               | Demonstrate proficiency in the skills, techniques, and knowledge required to perform accurate radiographic procedures. -The student will be able to:           |
| 10.01                                                                              | Describe standard positioning terms.                                                                                                                           |
| 10.02                                                                              | Demonstrate proper use of positioning aids.                                                                                                                    |
| 10.03                                                                              | Discuss general procedural considerations for radiographic exams.                                                                                              |
| 10.04                                                                              | Identify methods and barriers of communication and describe how each may be used or overcome effectively during patient education.                             |
| <del>10.05</del>                                                                   | <del>Explain radiographic procedures to patients/family members.</del>                                                                                         |
| <del>10.06</del>                                                                   | <del>Modify directions to patients with various communication problems.</del>                                                                                  |
| <del>10.07</del> <a href="#">10.05</a>                                             | Develop an awareness of cultural factors that necessitate adapting standard exam protocols.                                                                    |
| <del>10.08</del> <a href="#">10.06</a>                                             | Adapt general procedural considerations to specific clinical settings.                                                                                         |
| <del>10.09</del> <a href="#">10.07</a>                                             | Identify the structures demonstrated on routine radiographic images.                                                                                           |
| <del>10.10</del> <a href="#">10.08</a>                                             | Adapt radiographic procedures for special considerations.                                                                                                      |
| <del>10.11</del> <a href="#">10.09</a>                                             | Simulate radiographic procedures on a person or phantom in a laboratory or clinical setting.                                                                   |
| <del>10.12</del> <a href="#">10.10</a>                                             | Evaluate images for positioning, centering, appropriate anatomy, and overall image quality.                                                                    |
| <del>10.13</del> <a href="#">10.11</a>                                             | Discuss equipment and supplies necessary to complete basic radiographic procedures.                                                                            |
| <del>10.14</del> <a href="#">10.12</a>                                             | Explain the routine and special positions and projections for all radiographic procedures.                                                                     |
| <del>10.15</del> <a href="#">10.13</a>                                             | Describe the general purpose of radiographic studies.                                                                                                          |
| <del>10.16</del> <a href="#">10.14</a>                                             | Apply general radiation safety and protection practices associated with radiographic examinations.                                                             |
| <del>10.17</del> <a href="#">10.15</a>                                             | Define region of interest (ROI).                                                                                                                               |
| <del>10.18</del> <a href="#">10.16</a>                                             | Define basic terms related to indications and contraindications related to imaging studies.                                                                    |
| 11.0                                                                               | Demonstrate <del>the</del> proficiency in the skills and knowledge required <del>of</del> <a href="#">for</a> clinical practice. -The student will be able to: |
| 11.01                                                                              | Exercise the priorities required in daily clinical practice.                                                                                                   |

|       |                                                                                                                                                                                              |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11.02 | Execute medical imaging procedures under the appropriate level of supervision.                                                                                                               |
| 11.03 | Adhere to team practice concepts that focus on organizational theories, roles of team members, and conflict resolution.                                                                      |
| 11.04 | Adapt to changes and varying clinical situations.                                                                                                                                            |
| 11.05 | Describe the role of health care team members in responding/reacting to a local or national emergency.                                                                                       |
| 11.06 | Provide patient-centered, clinically effective care for all patients regardless of age, gender, disability, special needs, ethnicity, or culture.                                            |
| 11.07 | Integrate <del>the use of</del> appropriate and effective written, oral, and nonverbal communication with patients, the public, and members of the health care team in the clinical setting. |
| 11.08 | Integrate appropriate personal and professional values into clinical practice.                                                                                                               |
| 11.09 | Recognize the influence of professional values on patient care.                                                                                                                              |
| 11.10 | Explain how a person's cultural beliefs toward illness and health affect his or her health status.                                                                                           |
| 11.11 | Use patient and family education strategies appropriate to the comprehension level of the patient/family.                                                                                    |
| 11.12 | Provide desired psychosocial support to the patient and family.                                                                                                                              |
| 11.13 | Demonstrate competent assessment skills through effective management of the patient's physical and mental status.                                                                            |
| 11.14 | Respond appropriately to medical emergencies.                                                                                                                                                |
| 11.15 | Examine demographic factors that influence patient compliance with medical care.                                                                                                             |
| 11.16 | Adapt procedures to meet age-specific, disease-specific, and cultural needs of patients.                                                                                                     |
| 11.17 | Assess the patient and record clinical history.                                                                                                                                              |
| 11.18 | Demonstrate basic life support procedures.                                                                                                                                                   |
| 11.19 | Use appropriate charting/electronic documentation methods.                                                                                                                                   |
| 11.20 | Recognize life-threatening electrocardiogram (ECG) tracing.                                                                                                                                  |
| 11.21 | Apply standard and transmission-based precautions.                                                                                                                                           |
| 11.22 | Apply the appropriate medical asepsis and sterile technique.                                                                                                                                 |
| 11.23 | Demonstrate competency in the principles of radiation protection standards.                                                                                                                  |

|       |                                                                                                                                                                                                                                      |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11.24 | Apply the principles of total quality management.                                                                                                                                                                                    |
| 11.25 | Report equipment malfunctions.                                                                                                                                                                                                       |
| 11.26 | Examine procedure orders for accuracy and make corrective actions when applicable.                                                                                                                                                   |
| 11.27 | Demonstrate safe, ethical, and legal practices.                                                                                                                                                                                      |
| 11.28 | Integrate the radiographer's practice standards into the clinical practice setting.                                                                                                                                                  |
| 11.29 | Maintain patient confidentiality standards and meet HIPAA requirements.                                                                                                                                                              |
| 11.30 | Demonstrate the principles of transferring, positioning, and immobilizing patients.                                                                                                                                                  |
| 11.31 | Comply with departmental and institutional response to emergencies, disasters, and accidents.                                                                                                                                        |
| 11.32 | Differentiate between emergency and non-emergency procedures.                                                                                                                                                                        |
| 11.33 | Adhere to national, institutional, and departmental standards, policies, and procedures regarding care of patients, providing radiologic procedures, and reducing medical errors.                                                    |
| 11.34 | Select technical factors to produce quality diagnostic images with the lowest radiation exposure possible.                                                                                                                           |
| 11.35 | Critique images for appropriate anatomy, image quality, and patient identification.                                                                                                                                                  |
| 11.36 | Determine corrective measures to improve inadequate images.                                                                                                                                                                          |
| 12.0  | Convey an understanding of the principles of imaging and the various factors that contribute to accuracy, including image acquisition and processing, scatter radiation control, and image evaluation. -The student will be able to: |
| 12.01 | Summarize the relationship of factors affecting scattered radiation.                                                                                                                                                                 |
| 12.02 | Evaluate the effects of scattered radiation on the image.                                                                                                                                                                            |
| 12.03 | Compare grid types.                                                                                                                                                                                                                  |
| 12.04 | Select the most appropriate grid for a given clinical situation.                                                                                                                                                                     |
| 12.05 | Interpret grid efficiency in terms of grid ratio and frequency.                                                                                                                                                                      |
| 12.06 | Summarize the factors that influence grid cutoff.                                                                                                                                                                                    |
| 12.07 | Evaluate grid artifacts.                                                                                                                                                                                                             |
| 12.08 | Explain the use of radiographic technique charts.                                                                                                                                                                                    |

|       |                                                                                                                                                               |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.09 | Explain exposure factor considerations involved in selecting techniques.                                                                                      |
| 12.10 | Compare fixed kilovoltage peak (kVp) and variable kVp systems.                                                                                                |
| 12.11 | Apply the reciprocity law to clinical situations.                                                                                                             |
| 12.12 | Apply conversion factors for changes in the following areas: distance, grid, image receptors, reciprocity law, and 15 percent rule.                           |
| 13.0  | Demonstrate an understanding of the concepts and equipment required <del>effor</del> for digital image acquisition and display. -The student will be able to: |
| 13.01 | Define terminology associated with digital imaging systems.                                                                                                   |
| 13.02 | Describe the various types of digital receptors.                                                                                                              |
| 13.03 | Describe the response of digital detectors to exposure variations.                                                                                            |
| 13.04 | Compare the advantages and limits of each receptor type.                                                                                                      |
| 13.05 | Evaluate the spatial resolution of a digital imaging system.                                                                                                  |
| 13.06 | Describe the histogram and the process or histogram analysis as it relates to automatic rescaling and determining an exposure indicator.                      |
| 13.07 | Relate the receptor exposure indicator values to technical factors, system calibration, part/beam/plate alignment, and patient exposure.                      |
| 13.08 | Describe the response of PSP systems to background and scatter radiation.                                                                                     |
| 13.09 | Use appropriate means of scatter control.                                                                                                                     |
| 13.10 | Avoid grid use errors associated with grid cutoff and Moiré effect.                                                                                           |
| 13.11 | Identify common limitations and technical problems encountered when using PSP systems.                                                                        |
| 13.12 | Employ appropriate beam/part/receptor alignment to avoid histogram analysis errors.                                                                           |
| 13.13 | Associate <u>the</u> impact of image processing parameters <del>te</del> with the image appearance.                                                           |
| 13.14 | Apply the fundamental principles of radiographic exposure to digital detectors.                                                                               |
| 13.15 | Evaluate the effect of a given exposure change on histogram shape, data width, and image appearance.                                                          |
| 13.16 | Describe the conditions that cause quantum mottle in a digital image.                                                                                         |
| 13.17 | Formulate a procedure or process to minimize histogram analysis and rescaling errors.                                                                         |

|                  |                                                                                                                                                                                                                                                  |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.18            | Examine the potential impact of digital radiographic systems on patient exposure and methods of practicing the as low as reasonably achievable (ALARA) concept with digital systems.                                                             |
| 13.19            | Describe <del>picture-archival</del> <a href="#">the medical image management</a> and <del>communications</del> <a href="#">processing</a> system ( <del>PACS</del> <a href="#">MIMPS</a> ) and its function.                                    |
| 13.20            | Identify components of a <del>PACS</del> <a href="#">(MIMPS) medical image management processing system</a> .                                                                                                                                    |
| 13.21            | Define digital imaging and communications in medicine (DICOM).                                                                                                                                                                                   |
| 13.22            | Describe HIPAA concerns with electronic information.                                                                                                                                                                                             |
| 13.23            | Identify common problems associated with retrieving/viewing images within a <del>PACS</del> <a href="#">MIMPS</a> .                                                                                                                              |
| 13.24            | Describe the calculation of the exposure indicator (AAPM Task Group 116).                                                                                                                                                                        |
| 13.25            | Relate how the values of interest (VOI) impact image appearance.                                                                                                                                                                                 |
| 13.26            | Describe signal- <del>to</del> -noise (SNR) as it relates to digital radiography detectors.                                                                                                                                                      |
| 13.27            | Describe modulation transfer function (MTF) as it relates to digital radiography detectors.                                                                                                                                                      |
| 13.28            | Describe contrast to noise (CNR) as it relates to digital radiography detectors.                                                                                                                                                                 |
| 13.29            | Describe detective quantum efficiency (DQE) for digital radiography detectors.                                                                                                                                                                   |
| 13.30            | Describe display monitor aspect ratio and its impact on image display.                                                                                                                                                                           |
| 13.31            | Identify critical components of the DICOM header.                                                                                                                                                                                                |
| 13.32            | Relate the location and size of the ROI to the appearance of the image and exposure indicator.                                                                                                                                                   |
| 13.33            | Discuss the impact of viewing angle, luminance, ambient lighting, and pixel size on image display.                                                                                                                                               |
| 14.0             | Demonstrate an understanding of the structure and function of the human body with a focus on the <del>axial-skeletal-system</del> <a href="#">circulatory/cardiovascular, digestive, and reproductive systems</a> . The student will be able to: |
| <del>14.01</del> | <del>Describe articulations of the axial skeleton.</del>                                                                                                                                                                                         |
| <del>14.02</del> | <del>Differentiate the primary and secondary curves of the spine.</del>                                                                                                                                                                          |
| <del>14.03</del> | <del>Identify and locate the bones of the human axial skeleton.</del>                                                                                                                                                                            |
| <del>14.04</del> | <del>Identify bony processes and depressions found on the human axial skeleton.</del>                                                                                                                                                            |
| <del>14.05</del> | <del>Summarize the functions of the axial skeletal system.</del>                                                                                                                                                                                 |

|                               |                                                                                                                                                                                                           |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>14.06</del>              | <del>Label different types of articulations specific to the axial skeletal system.</del>                                                                                                                  |
| <del>15.0</del>               | <del>Demonstrate an understanding of the structure and function of the human body with a focus on the circulatory/cardiovascular, digestive, and reproductive systems. The student will be able to:</del> |
| <del>15.01</del> <u>14.01</u> | Describe the composition and characteristics of blood.                                                                                                                                                    |
| <del>15.02</del> <u>14.02</u> | List the types of blood cells and state their functions.                                                                                                                                                  |
| <del>15.03</del> <u>14.03</u> | Differentiate between blood plasma and serum.                                                                                                                                                             |
| <del>15.04</del> <u>14.04</u> | Outline the clotting mechanism.                                                                                                                                                                           |
| <del>15.05</del> <u>14.05</u> | List the blood types.                                                                                                                                                                                     |
| <del>15.06</del>              | <del>Explain the term Rh factor.</del>                                                                                                                                                                    |
| <del>15.07</del>              | <del>Explain the antigen/antibody relationship and its use in blood typing.</del>                                                                                                                         |
| <del>15.08</del> <u>14.06</u> | Label the parts of the human heart.                                                                                                                                                                       |
| <del>15.09</del> <u>14.07</u> | Describe the flow of blood through the body and identify the main vessels.                                                                                                                                |
| <del>15.10</del> <u>14.08</u> | Describe the structure and function of arteries, veins, and capillaries.                                                                                                                                  |
| <del>15.11</del> <u>14.09</u> | Differentiate between arterial blood in systemic circulation and arterial blood in pulmonary circulation.                                                                                                 |
| <del>15.12</del> <u>14.10</u> | Outline the major pathways of lymphatic circulation.                                                                                                                                                      |
| <del>15.13</del> <u>14.11</u> | Correlate cardiac electrophysiology to a normal ECG tracing.                                                                                                                                              |
| <del>15.14</del> <u>14.12</u> | Label the anatomy of the male and female reproductive organs.                                                                                                                                             |
| <del>15.15</del> <u>14.13</u> | Analyze the function of each of the male and female reproductive organs.                                                                                                                                  |
| <del>15.16</del> <u>14.14</u> | Describe the structures and functions of the components that comprise the human eye and ear.                                                                                                              |
| <del>15.17</del>              | <del>List the component body parts involved in the senses of smell and taste.</del>                                                                                                                       |
| <del>15.18</del> <u>14.15</u> | List the somatic senses.                                                                                                                                                                                  |
| <del>15.19</del> <u>14.16</u> | Describe the hard and soft palates.                                                                                                                                                                       |
| <del>15.20</del> <u>14.17</u> | Describe the structure and function of the tongue.                                                                                                                                                        |
| <del>15.21</del> <u>14.18</u> | Identify the structure, function, and locations of the salivary glands.                                                                                                                                   |

|                        |                                                                                                                                                      |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>15.22</del> 14.19 | List and label the accessory organs of the digestive system, and describe their function <u>and identify their secretions</u> .                      |
| <del>15.23</del> 14.20 | Describe the composition and characteristics of the primary organs of the digestive system.                                                          |
| <del>15.24</del> 14.21 | Describe the function(s) of each primary organ of the digestive system.                                                                              |
| <del>15.25</del> 14.22 | Differentiate between the layers of tissue that comprise the esophagus, stomach, small intestine, large intestine, and rectum.                       |
| <del>15.26</del>       | <del>Identify the secretions and function of each accessory organ of the digestive system.</del>                                                     |
| <del>15.27</del> 14.23 | Explain the purpose of digestion.                                                                                                                    |
| <del>15.28</del> 14.24 | List the digestive processes that occur in the body.                                                                                                 |
| <del>16.0</del> 15.0   | Demonstrate proficiency in the skills, techniques, and knowledge required to perform accurate fluoroscopic procedures. -The student will be able to: |
| <del>16.04</del> 15.01 | Identify the structures demonstrated on routine fluoroscopic images.                                                                                 |
| <del>16.02</del> 15.02 | Adapt fluoroscopic procedures for special considerations.                                                                                            |
| <del>16.03</del> 15.03 | Simulate fluoroscopic procedures on a person or phantom in a laboratory setting.                                                                     |
| <del>16.04</del> 15.04 | Evaluate images for positioning, centering, appropriate anatomy, and overall image quality.                                                          |
| <del>16.05</del> 15.05 | Discuss equipment and supplies necessary to complete basic fluoroscopic procedures.                                                                  |
| <del>16.06</del> 15.06 | Explain the patient preparation necessary for various contrast and special studies.                                                                  |
| <del>16.07</del> 15.07 | Explain the routine and special positions/projections for all fluoroscopic procedures.                                                               |
| <del>16.08</del> 15.08 | Explain the purpose for using contrast media.                                                                                                        |
| <del>16.09</del> 15.09 | Name the type, dosage, and route of administration of contrast media commonly used to perform radiographic contrast and special studies.             |
| <del>16.10</del> 15.10 | Describe the general purpose of fluoroscopic studies.                                                                                                |
| <del>16.11</del> 15.11 | Apply general radiation safety and protection practices associated with fluoroscopic examinations.                                                   |
| <del>17.0</del> 16.0   | Demonstrate an understanding of the structure and function of the human body with a focus on the nervous system. -The student will be able to:       |
| <del>17.01</del>       | <del>Differentiate between the structure and function of different types of nerve cells.</del>                                                       |
| <del>17.02</del> 16.01 | State the structure of the brain and the relationship of its component parts.                                                                        |

|                        |                                                                                                                  |
|------------------------|------------------------------------------------------------------------------------------------------------------|
| <del>17.03</del> 16.02 | Describe brain functions.                                                                                        |
| <del>17.04</del> 16.03 | List the meninges and describe the function of each.                                                             |
| <del>17.05</del> 16.04 | Outline how cerebrospinal fluid forms, circulates, and functions.                                                |
| <del>17.06</del> 16.05 | Describe the structure and function of the spinal cord.                                                          |
| <del>17.07</del> 16.06 | Determine the distribution and function of cranial and spinal nerves.                                            |
| <del>17.08</del> 16.07 | Summarize the structure and function of components that comprise the autonomic nervous system.                   |
| <del>18.0</del> 17.0   | Demonstrate introductory knowledge of computed tomography. -The student will be able to:                         |
| <del>18.01</del> 17.01 | Explain the difference between reconstructing and reformatting an image.                                         |
| <del>18.02</del> 17.02 | Cite the structures demonstrated on commonly performed CT images.                                                |
| <del>18.03</del> 17.03 | Describe commonly performed CT procedures.                                                                       |
| <del>18.04</del> 17.04 | Evaluate images for positioning, centering, appropriate anatomy, and overall image quality.                      |
| <del>18.05</del> 17.05 | Discuss equipment and supplies necessary to complete commonly performed CT procedures.                           |
| <del>18.06</del>       | <del>Explain the CT acquisition protocol for commonly performed head/neck, thorax, and abdomen procedures.</del> |
| <del>18.07</del> 17.06 | Explain the patient preparation necessary for commonly performed CT contrast studies.                            |
| <del>18.08</del> 17.07 | Name the type, dosage purpose, and route of contrast administration for common CT procedures.                    |
| <del>18.09</del> 17.08 | Describe the components of the CT imaging system.                                                                |
| <del>18.10</del> 17.09 | Explain the functions of collimators in CT.                                                                      |
| <del>18.11</del> 17.10 | List the CT computer data processing steps.                                                                      |
| <del>18.12</del> 17.11 | Define algorithm and explain its impact on image scan factors and reconstruction.                                |
| <del>18.13</del> 17.12 | Define raw data and image data.                                                                                  |

~~18.14~~17.13 Describe the following terms in relation to the CT data acquisition process:

- Pixel-
- Matrix-
- Voxel-
- Linear attenuation coefficient-
- CT/Hounsfield number-
- Partial volume averaging-
- Window width (ww) and window level (wl)-)
- Spatial resolution-
- Contrast resolution-
- Noise-
- Annotation-
- Region of interest (ROI)-)

~~18.15~~ Name the common controls found on CT operator consoles and describe how and why each is used.

~~18.16~~ Identify the types and appearance of artifacts most commonly affecting CT images.

~~18.17~~ Name the radiation protection devices that can be used to reduce patient dose in CT and describe the correct application of each.

~~18.18~~ Describe the general purpose of commonly performed CT studies.

~~18.19~~ Discuss general radiation safety and protection practices associated with examinations in CT.

~~19.0~~18.0 Demonstrate appropriate venipuncture technique. -The student will be able to:

~~19.01~~18.01 Differentiate between the two major sites of intravenous drug administration.

~~19.02~~18.02 Identify, describe, and document complications associated with venipuncture and appropriate actions to resolve these complications.

~~19.03~~18.03 Discuss the various elements of initiating and discontinuing intravenous access.

~~19.04~~18.04 Differentiate and document dose calculations for adult and pediatric patients.

~~19.05~~18.05 Prepare for injection of contrast agents/intravenous medications using aseptic technique.

~~19.06~~18.06 Explain the current legal status and professional liability issues of the radiographer's role in contrast and/or drug administration.

~~19.07~~18.07 Simulate appropriate venipuncture technique.

~~20.0~~19.0 Demonstrate an understanding of radiographic pathology. -The student will be able to:

~~20.01~~19.01 Define basic terms related to pathology.

|                        |                                                                                                                                                            |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>20.02</del> 19.02 | Describe the basic manifestations of pathological conditions and their relevance to radiologic procedures.                                                 |
| <del>20.03</del> 19.03 | Discuss the classifications of trauma.                                                                                                                     |
| <del>20.04</del> 19.04 | Describe imaging procedures used in diagnosing disease.                                                                                                    |
| <del>20.05</del> 19.05 | List the causes of tissue disruption.                                                                                                                      |
| <del>20.06</del> 19.06 | Describe the healing process.                                                                                                                              |
| <del>20.07</del> 19.07 | Identify complications connected with the repair and replacement of tissue.                                                                                |
| <del>20.08</del> 19.08 | Describe the various systemic classifications of disease in terms of etiology, types, common sites, complications, and prognosis.                          |
| <del>20.09</del> 19.09 | Describe the radiographic appearance of diseases.                                                                                                          |
| <del>20.10</del> 19.10 | Identify imaging procedures and interventional techniques appropriate for diseases common to each body system.                                             |
| <del>20.11</del> 19.11 | Identify diseases caused by or connected to genetic factors.                                                                                               |
| <del>21.0</del> 20.0   | Demonstrate an understanding of how radiation is produced and the characteristics of different classifications of radiation. -The student will be able to: |
| <del>21.01</del> 20.01 | Describe <u>the</u> fundamental atomic structure.                                                                                                          |
| <del>21.02</del> 20.02 | Describe the electromagnetic spectrum.                                                                                                                     |
| <del>21.03</del> 20.03 | Describe wavelength and frequency, and how they are related to velocity.                                                                                   |
| <del>21.04</del> 20.04 | Explain the relationship of energy, wavelength, and frequency.                                                                                             |
| <del>21.05</del> 20.05 | Explain the wave-particle duality <del>phenomena</del> phenomenon.                                                                                         |
| <del>21.06</del> 20.06 | Identify the properties of <del>x</del> X-rays.                                                                                                            |
| <del>21.07</del> 20.07 | Describe the processes of ionization and excitation.                                                                                                       |
| <del>21.08</del> 20.08 | Describe particulate radiation.                                                                                                                            |
| <del>21.09</del> 20.09 | Differentiate between ionizing and nonionizing radiation.                                                                                                  |
| <del>21.10</del> 20.10 | Describe radioactivity and radioactive decay in terms of alpha, beta, and gamma emission.                                                                  |
| <del>21.11</del> 20.11 | Compare the production of bremsstrahlung and characteristic radiations.                                                                                    |

|                        |                                                                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>21.12</del> 20.12 | Describe the conditions necessary to produce <del>*X</del> -radiation.                                                                                                        |
| <del>21.13</del> 20.13 | Describe the <del>*X</del> -ray emission spectrum.                                                                                                                            |
| <del>21.14</del> 20.14 | Explain the factors that affect the <del>*X</del> -ray emission spectrum.                                                                                                     |
| <del>21.15</del> 20.15 | Discuss various photon interactions with matter.                                                                                                                              |
| <del>21.16</del> 20.16 | Discuss relationships of wavelength and frequency to beam characteristics.                                                                                                    |
| <del>21.17</del> 20.17 | Discuss the clinical significance of the photoelectric and modified scattering (Compton) interactions in diagnostic imaging.                                                  |
| <del>21.18</del> 20.18 | Compare and contrast different types of radiation.                                                                                                                            |
| <del>22.0</del> 21.0   | Demonstrate an understanding of the structure and function of the human body, including the immune system and chemical composition of the body. -The student will be able to: |
| <del>22.01</del> 21.01 | Describe the chemical composition of the human body.                                                                                                                          |
| <del>22.02</del> 21.02 | Identify cell structure and elements of genetic control.                                                                                                                      |
| <del>22.03</del> 21.03 | Explain the essentials of human metabolism.                                                                                                                                   |
| <del>22.04</del> 21.04 | Differentiate between nonspecific defenses and specific immunity.                                                                                                             |
| <del>22.05</del> 21.05 | Explain antibody production and function.                                                                                                                                     |
| <del>22.06</del>       | <del>List the different types and functions of T- and B-cells and explain their functions.</del>                                                                              |
| <del>23.0</del> 22.0   | Demonstrate an understanding of the integral aspects of radiation biology required of a radiographer. -The student will be able to:                                           |
| <del>23.01</del> 22.01 | Differentiate between ionic and covalent molecular bonds.                                                                                                                     |
| <del>23.02</del> 22.02 | Describe principles of cellular biology.                                                                                                                                      |
| <del>23.03</del> 22.03 | Identify sources of electromagnetic and particulate ionizing radiations.                                                                                                      |
| <del>23.04</del> 22.04 | Discriminate between the direct and indirect effects of radiation.                                                                                                            |
| <del>23.05</del> 22.05 | Identify sources of radiation exposure.                                                                                                                                       |
| <del>23.06</del> 22.06 | Describe radiation-induced chemical reactions and potential biologic damage.                                                                                                  |
| <del>23.07</del> 22.07 | Evaluate factors influencing radiobiologic/biophysical events at the cellular and subcellular level.                                                                          |
| <del>23.08</del> 22.08 | Identify methods to measure radiation response.                                                                                                                               |

|                        |                                                                                                                                                                                                                    |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>23.09</del> 22.09 | Describe physical, chemical, and biologic factors influencing <u>the</u> radiation response of cells and tissues.                                                                                                  |
| <del>23.10</del> 22.10 | Explain factors influencing radiosensitivity.                                                                                                                                                                      |
| <del>23.11</del> 22.11 | Recognize the clinical significance of lethal dose (LD).                                                                                                                                                           |
| <del>23.12</del> 22.12 | Identify the radiosensitivity and radioresistency of specific cells.                                                                                                                                               |
| <del>23.13</del> 22.13 | Employ dose response curves to study the relationship between radiation dose levels and the degree of biologic response.                                                                                           |
| <del>23.14</del> 22.14 | Examine <u>the</u> effects of limited vs. total body exposure.                                                                                                                                                     |
| <del>23.15</del> 22.15 | Relate short-term and long-term effects as a consequence of high and low radiation doses.                                                                                                                          |
| <del>23.16</del> 22.16 | Differentiate between somatic and genetic radiation effects and discuss specific diseases or syndromes associated with them.                                                                                       |
| <del>23.17</del> 22.17 | Discuss stochastic and deterministic effects.                                                                                                                                                                      |
| <del>23.18</del> 22.18 | Discuss embryonic and fetal effects of radiation exposure.                                                                                                                                                         |
| <del>23.19</del> 22.19 | Discuss risk estimates for radiation-induced malignancies.                                                                                                                                                         |
| <del>23.20</del> 22.20 | Discuss acute radiation syndromes.                                                                                                                                                                                 |
| <del>23.21</del> 22.21 | Define basic terms related to dose differences.                                                                                                                                                                    |
| <del>24.0</del> 23.0   | Convey the importance <del>for</del> <u>of</u> proper radiation protection and the precautions radiographers should take to prevent unnecessary exposure to themselves and patients. -The student will be able to: |
| <del>24.01</del> 23.01 | Identify and justify the need to minimize unnecessary radiation exposure of humans.                                                                                                                                |
| <del>24.02</del> 23.02 | Explain the objectives of a radiation protection program.                                                                                                                                                          |
| <del>24.03</del> 23.03 | Define radiation and radioactivity units of measurement.                                                                                                                                                           |
| <del>24.04</del> 23.04 | Identify effective dose limits (EDL) for occupational and non-occupational radiation exposure.                                                                                                                     |
| <del>24.05</del> 23.05 | Describe the ALARA concept.                                                                                                                                                                                        |
| <del>24.06</del> 23.06 | Identify the basis for occupational exposure limits.                                                                                                                                                               |
| <del>24.07</del> 23.07 | Distinguish between perceived risk and comparable risk.                                                                                                                                                            |
| <del>24.08</del> 23.08 | Describe the concept of the negligible individual dose (NID).                                                                                                                                                      |

|                                        |                                                                                                                                                                  |
|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>24.09</del> <a href="#">23.09</a> | Identify ionizing radiation sources from natural and man-made sources.                                                                                           |
| <del>24.10</del> <a href="#">23.10</a> | Comply with legal and ethical radiation protection responsibilities of radiation workers.                                                                        |
| <del>24.11</del> <a href="#">23.11</a> | Describe the relationship between irradiated area and effective dose.                                                                                            |
| <del>24.12</del> <a href="#">23.12</a> | Describe the theory and operation of radiation detection devices.                                                                                                |
| <del>24.13</del> <a href="#">23.13</a> | Identify appropriate applications and limitations for each radiation detection device.                                                                           |
| <del>24.14</del> <a href="#">23.14</a> | Describe how isoexposure curves are used for radiation protection.                                                                                               |
| <del>24.15</del> <a href="#">23.15</a> | Identify performance standards for beam-limiting devices.                                                                                                        |
| <del>24.16</del> <a href="#">23.16</a> | Describe procedures used to verify performance standards for equipment.                                                                                          |
| <del>24.17</del> <a href="#">23.17</a> | Describe the operation of various interlocking systems for equipment.                                                                                            |
| <del>24.18</del> <a href="#">23.18</a> | Identify conditions and locations evaluated in an area survey for radiation protection.                                                                          |
| <del>24.19</del> <a href="#">23.19</a> | Distinguish between controlled and non-controlled areas and list acceptable exposure levels.                                                                     |
| <del>24.20</del> <a href="#">23.20</a> | Describe “Radiation Area” signs and identify appropriate placement sites.                                                                                        |
| <del>24.21</del> <a href="#">23.21</a> | Describe the function of federal, state, and local regulations governing radiation protection practices.                                                         |
| <del>24.22</del> <a href="#">23.22</a> | Describe the qualifications and responsibilities of a radiation safety officer.                                                                                  |
| <del>24.23</del> <a href="#">23.23</a> | Express the need and importance of personnel monitoring for radiation workers.                                                                                   |
| <del>24.24</del> <a href="#">23.24</a> | Describe personnel monitoring devices, including applications, advantages, and limitations for each device.                                                      |
| <del>24.25</del> <a href="#">23.25</a> | Interpret personnel monitoring reports.                                                                                                                          |
| <del>24.26</del> <a href="#">23.26</a> | Compare values for individual effective dose limits for occupational radiation exposures (annual and lifetime).                                                  |
| <del>24.27</del> <a href="#">23.27</a> | Identify effective dose limits for the embryo and fetus in occupationally exposed women.                                                                         |
| <del>24.28</del> <a href="#">23.28</a> | Distinguish between primary and secondary radiation barriers.                                                                                                    |
| <del>24.29</del> <a href="#">23.29</a> | Demonstrate how the operation of various x-ray and ancillary equipment influences radiation safety and describe the potential consequences of equipment failure. |
| <del>24.30</del> <a href="#">23.30</a> | Perform calculations of exposure with varying time, distance, and shielding.                                                                                     |

|                               |                                                                                                                                                                   |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>24.34</del> <u>23.31</u> | Discuss the relationship between workload, energy, half-value layer (HVL), tenth-value layer (TVL), use factor, and shielding design.                             |
| <del>24.32</del> <u>23.32</u> | Identify emergency procedures to be followed during failures of x-ray equipment.                                                                                  |
| <del>24.33</del> <u>23.33</u> | Demonstrate how time, distance, and shielding can be manipulated to <del>keep</del> <u>minimize</u> radiation <del>exposures to a</del> <u>minimum exposure</u> . |
| <del>24.34</del> <u>23.34</u> | Explain the relationship of beam-limiting devices to patient radiation protection.                                                                                |
| <del>24.35</del> <u>23.35</u> | Discuss added and inherent filtration in terms of the effect on patient dosage.                                                                                   |
| <del>24.36</del> <u>23.36</u> | Explain the purpose and importance of patient shielding.                                                                                                          |
| <del>24.37</del> <u>23.37</u> | Identify various types of patient shielding and state the advantages and disadvantages of each type.                                                              |
| <del>24.38</del> <u>23.38</u> | Use the appropriate method of shielding for a given radiographic or fluoroscopic procedure.                                                                       |
| <del>24.39</del> <u>23.39</u> | Explain the relationship of exposure factors to patient dosage.                                                                                                   |
| <del>24.40</del> <u>23.40</u> | Explain how patient position affects dose to radiosensitive organs.                                                                                               |
| <del>24.41</del> <u>23.41</u> | Identify the appropriate image receptor that will result in an optimum diagnostic image with the minimum radiation exposure to the patient.                       |
| <del>24.42</del> <u>23.42</u> | Select the immobilization techniques used to eliminate voluntary motion.                                                                                          |
| <del>24.43</del> <u>23.43</u> | Describe the minimum source-to-tabletop distances for fixed and mobile fluoroscopic devices.                                                                      |
| <del>24.44</del> <u>23.44</u> | Apply safety factors for the patient, health care personnel, and family members in the room during radiographic/fluoroscopic procedures.                          |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

Radiographers provide patient services using imaging modalities, as directed by physicians qualified to order and/or perform radiologic procedures. Radiographers usually provide patient care essential to radiologic procedures, including exercising judgment when performing medical imaging procedures. When providing patient services, the radiographer adheres to the principles of radiation protection for the patient, self, and others.

Radiographers accurately demonstrate anatomical structures on various imaging receptors by knowledge of anatomy, positioning, radiographic technique, and radiation protection. Radiographers must also be able to recognize emergency patient conditions and initiate lifesaving first aid. Additional duties may include performing quality assurance, processing film, and keeping patient records. Radiographers may be required to perform some of these duties at the patient's bedside or in the operating room.

The policies and process by which students receive clinical education shall be published and made known to all concerned in order to avoid practices in which students are substituted for paid staff. Students shall not take the responsibility or the place of qualified staff. After demonstrating competency, students may be permitted to perform procedures with indirect supervision. Unsatisfactory radiographs shall be repeated only in the presence of a qualified radiographer.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded). The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Medical Laboratory Technology  
**Career Cluster:** Health Science

**AS** Associate in Science

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as medical/clinical laboratory ~~technologist~~ technologists (medical clinical laboratory technologist) or medical laboratory technologists (associate degree) or to provide supplemental training for persons previously or currently employed in these occupations.

The content includes, but is not limited to, specific techniques and instruments, identification of factors directly affecting procedures and results, confirmation of results ~~and~~, monitoring quality control programs within pre-determined parameters, and correction of errors using pre-set standards. A clinical component is a necessary element of this program.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## **Program Structure**

This program is a planned sequence of instruction consisting of 76 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## **Regulated Programs**

This program is regulated by the Florida Board of Clinical Laboratory Personnel: ~~<http://floridasclinicallabs.gov/>~~<http://floridasclinicallabs.gov/>

## Florida's Career Readiness Skills for CTE Programs

## **Job Attainment**

### 10.0 Find, assess and apply to job opportunities.

10.01 Identify online job posts relevant to his or her career aspirations.

10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.

10.03 Define what information, documentation and writing prompts are required for the positions.

### 11.0 Communicate personal competence, character and fit for a job opportunity.

11.01 Develop a resume.

11.02 Write a cover letter.

11.03 Curate a professional portfolio that includes work products.

11.04 Prepare for and experience a mock job interview.

### 12.0 Cultivate and leverage relationships to professionally advance.

12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.

12.02 Develop a plan to cultivate a professional digital footprint.

12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of ~~blood-borne~~ bloodborne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate accepted professional, communication, and interpersonal skills.
- 13.0 Discuss phlebotomy in relation to the ~~health-care~~ healthcare setting.
- 14.0 Identify the anatomic structure and function of body systems in relation to services performed by the phlebotomist.
- 15.0 Recognize and identify collection reagents supplies, equipment, and interfering chemical substances.
- 16.0 Demonstrate skills and knowledge necessary to perform phlebotomy.
- 17.0 Practice infection control following standard precautions.
- 18.0 Practice accepted procedures of transporting, accessioning, and processing specimens.
- 19.0 Practice quality assurance and safety.
- 20.0 Demonstrate knowledge and use of basic laboratory equipment and techniques.
- 21.0 Demonstrate basic knowledge of and perform clinical laboratory Point-of-Care (POC) testing (Waived).
- 22.0 Demonstrate basic knowledge of and perform Point-of-Care (POC) Testing using CLIA-approved ~~Waived~~ waived instrumentation.
- 23.0 Discuss the general responsibilities and functions encountered by a medical laboratory technician.
- 24.0 Apply quality assurance principles and ~~safety~~ protocols for laboratory equipment.
- 25.0 Demonstrate knowledge of the operation of computer systems.
- 26.0 Demonstrate an understanding of the basic principles of molecular diagnostics.
- 27.0 Demonstrate knowledge of urinalysis and body fluids principles and procedures.
- 28.0 Demonstrate knowledge of hematological principles and procedures.
- 29.0 Demonstrate knowledge of hemostasis and related diagnostic principles and procedures.
- 30.0 Demonstrate knowledge of immunology principles and procedures.
- 31.0 Demonstrate knowledge of clinical chemistry principles and procedures.
- 32.0 Demonstrate knowledge of immunohematology principles and procedures.
- 33.0 Demonstrate knowledge of microbiological principles and procedures.
- 34.0 Demonstrate knowledge of advanced hematological principles and procedures.
- 35.0 Demonstrate knowledge of advanced hemostasis testing.
- 36.0 Demonstrate knowledge of advanced microbiological principles and procedures.

- 37.0 Demonstrate knowledge of advanced clinical chemistry principles and procedures.
- 38.0 Demonstrate knowledge of advanced immunological procedures.
- 39.0 Demonstrate knowledge of advanced immunohematology principles and procedures.
- 40.0 Demonstrate ~~and~~an understanding of advanced principles of molecular diagnostics.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Medical Laboratory Technology  
**CIP Number:** 1351100405  
**Program Length:** 76 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

| At the completion of this program, the student will be able to: |                                                                                                                                                                                            |
|-----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.0                                                            | Demonstrate accepted professional, communication, and interpersonal skills. -The student will be able to:                                                                                  |
| 12.01                                                           | Demonstrate the appropriate professional behavior of a phlebotomist <u>and describe the scope of practice</u> .                                                                            |
| 12.02                                                           | Explain to the patient the procedure to be used in specimen collection.                                                                                                                    |
| 12.03                                                           | Explain in detail the importance of identifying patients correctly when drawing blood.                                                                                                     |
| <del>12.04</del>                                                | <del>Describe the scope of practice (job skills and duties) for a phlebotomist.</del>                                                                                                      |
| <del>12.05</del>                                                | <del>List and describe professional organizations that provide accreditation for phlebotomy programs and provide certification for phlebotomists.</del>                                    |
| <del>12.06</del> <u>12.04</u>                                   | Explain the importance of continuing education in relation to certification to maintain competency and skills.                                                                             |
| 13.0                                                            | Discuss phlebotomy in relation to the <del>health care</del> <u>healthcare</u> setting. -The student will be able to:                                                                      |
| 13.01                                                           | List, classify, and discuss various departments and services within the health care setting in which the phlebotomist must interact with to obtain laboratory specimens from patients.     |
| 13.02                                                           | Identify the major departments/sections with the clinical laboratory, the major types of procedures run in each department/section, and their specimen requirements.                       |
| 13.03                                                           | Describe roles of the major classifications of clinical laboratory personnel (i.e., pathologist, chief/administrative technologist, CLS, MLS, MLT, MT, phlebotomist, lab assistant, etc.). |
| 14.0                                                            | Identify the anatomic structure and function of body systems in relation to services performed by <u>the</u> phlebotomist. -The student will be able to:                                   |

|       |                                                                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.01 | Describe and define major body systems with emphasis on the circulatory system.                                                                                                                    |
| 14.02 | List and describe the main superficial veins used in performing venipuncture.                                                                                                                      |
| 14.03 | <del>Locate</del> the most appropriate sites(s) for capillary and venipuncture.                                                                                                                    |
| 14.04 | Describe the function of the following blood components: erythrocytes, thrombocytes, leukocytes, and plasma.                                                                                       |
| 14.05 | Compare and contrast <del>between</del> serum and plasma as <del>it relates</del> <u>they relate</u> to blood collection.                                                                          |
| 14.06 | Discuss hemostasis, <u>hemolysis, and methods of prevention</u> as <del>it relates</del> <u>they relate</u> to blood collection.                                                                   |
| 15.0  | Recognize and identify collection reagents supplies, equipment, and interfering chemical substances. <del>The student will be able to:</del>                                                       |
| 15.01 | Identify and discuss <u>the</u> proper use of appropriate types of equipment needed to collect various clinical laboratory blood specimens by venipuncture.                                        |
| 15.02 | Explain the special precautions and types of equipment needed to collect blood from the pediatric patient.                                                                                         |
| 15.03 | Identify and discuss <u>the</u> proper use of supplies used in collecting micro-specimens.                                                                                                         |
| 15.04 | Identify and discuss the proper use of the various types of anticoagulants, preservatives, and gels used in blood collection and the vacuum tube color-codes for these additives.                  |
| 15.05 | Describe the types of <del>patient's</del> specimens that are analyzed in the clinical laboratory and the phlebotomist's role in collecting and/or transporting these specimens to the laboratory. |
| 15.06 | Describe substances potentially encountered during phlebotomy <del>which</del> <u>that</u> can interfere <del>in</del> <u>with the</u> analysis of blood constituents.                             |
| 15.07 | Define and utilize correct medical terminology and metric measurement needed for specimen collection.                                                                                              |
| 16.0  | Demonstrate skills and knowledge necessary to perform phlebotomy. <del>The student will be able to:</del>                                                                                          |
| 16.01 | Follow approved procedure for completing a laboratory requisition form <del>and</del> <u>recognize a properly completed form.</u>                                                                  |
| 16.02 | <del>Recognize a properly completed requisition and apply</del> <u>Apply</u> established protocol for patient and specimen identification for transport to a reference lab.                        |
| 16.03 | Demonstrate knowledge of established protocol for patient and specimen identification.                                                                                                             |
| 16.04 | Discuss appropriate methods for facilitating and preparing the patient for capillary and venipuncture collection.                                                                                  |
| 16.05 | List appropriate antiseptic agents useful in preparing sites for capillary and venipuncture <u>for adult and pediatric patients.</u>                                                               |
| 16.06 | Know how to perform venipuncture by evacuated tube, butterfly, and syringe systems.                                                                                                                |
| 16.07 | Describe the correct order of draw <del>according to CLSI guidelines.</del>                                                                                                                        |

|                               |                                                                                                                                                                                                         |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.08                         | Describe the use of barcoding systems used for positive patient identification and specimen identification.                                                                                             |
| 16.09                         | <del>-Convey an understanding of capillary puncture using appropriate supplies and techniques for both <del>adults</del></del> <u>adult</u> and pediatric patients.                                     |
| 16.10                         | Describe the most common complications associated with capillary and venipuncture, their causes, prevention, and treatment.                                                                             |
| 16.11                         | Recognize and respond to possible adverse patient reactions such as allergies, convulsions, syncope, and <del>light headedness.</del> <u>lightheadedness.</u>                                           |
| 16.12                         | Perform appropriate procedures for disposing of used or contaminated capillary and venipuncture supplies.                                                                                               |
| 16.13                         | Perform appropriate techniques for making a peripheral blood smear for hematologic evaluation.                                                                                                          |
| 16.14                         | Demonstrate the proper procedure for collecting blood cultures.                                                                                                                                         |
| <del>16.15</del>              | <del>Discuss the effects of hemolysis and methods of prevention.</del>                                                                                                                                  |
| <del>16.16</del> <u>16.15</u> | Demonstrate a working understanding of how <u>the</u> age and weight of patients <del>impacts</del> <u>impact</u> the maximum amount of blood that can be safely drawn.                                 |
| 17.0                          | Practice infection control following standard precautions. -The student will be able to:                                                                                                                |
| <del>17.01</del>              | <del>Define the term "hospital acquired infection".</del>                                                                                                                                               |
| <del>17.02</del> <u>17.01</u> | Demonstrate proper hand hygiene.                                                                                                                                                                        |
| <del>17.03</del> <u>17.02</u> | Comply with <del>universal</del> /standard <u>infection control</u> precautions.                                                                                                                        |
| <del>17.04</del> <u>17.03</u> | Identify potential routes of infection and their complications.                                                                                                                                         |
| 18.0                          | Practice accepted procedures of transporting, accessioning, and processing specimens. -The student will be able to:                                                                                     |
| 18.01                         | Follow the approved procedure for preparation and processing (e.g., centrifugation, separation, aliquoting, labeling, and storage) of serum, plasma, urine, sputum, stool, and wound culture specimens. |
| 18.02                         | Demonstrate knowledge of accessioning procedures.                                                                                                                                                       |
| 18.03                         | Describe the <del>significance</del> <u>importance</u> of time <del>constraints</del> <u>considerations</u> for specimen collection, transporting, and delivery.                                        |
| 18.04                         | Describe routine procedures for transporting and processing specimens, including <del>DOT</del> <u>U.S. Department of Transportation</u> packaging requirements.                                        |
| 19.0                          | Practice quality assurance and safety. -The student will be able to:                                                                                                                                    |
| 19.01                         | Distinguish and perform procedures <del>which</del> <u>that</u> ensure <u>the</u> reliability of test results when collecting <del>blood</del> <u>laboratory</u> specimens.                             |
| 19.02                         | Demonstrate knowledge of and practice appropriate patient safety.                                                                                                                                       |

|                               |                                                                                                                                                                                                            |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.03                         | Practice safety in accordance with OSHA (State & Federal guidelines) for chemical, biological, and PPE established procedures, including proper disposal of sharps, <u>and biohazardous materials.</u>     |
| 19.04                         | Follow <del>documentation</del> <u>policies and</u> procedures for work-related accidents.                                                                                                                 |
| 19.05                         | <del>Understand</del> <u>Implement appropriate</u> Joint Commission patient safety goals and other accrediting/regulatory agency guidelines.                                                               |
| 20.0                          | Demonstrate knowledge and use of basic laboratory equipment and techniques. -The student will be able to:                                                                                                  |
| 20.01                         | Identify the parts of the microscope and explain the function of each.                                                                                                                                     |
| 20.02                         | Demonstrate the proper technique for <del>operation</del> <u>use</u> of the microscope.                                                                                                                    |
| 20.03                         | Demonstrate use of standard laboratory equipment, including <del>glassware, pipettes,</del> <u>pipetting skills</u> and <del>centrifuge</del> <u>preventative maintenance.</u>                             |
| 20.04                         | Perform basic laboratory math calculations, <u>including serial dilutions and making solutions.</u>                                                                                                        |
| 20.05                         | Understand the principles of quality assurance to correct problems encountered in monitoring daily quality control.                                                                                        |
| 20.06                         | Evaluate laboratory findings to confirm results according to standard operating procedure <u>and best laboratory practices.</u>                                                                            |
| 20.07                         | Demonstrate knowledge of principles and operation of <u>basic</u> laboratory instruments.                                                                                                                  |
| 21.0                          | Demonstrate <del>the</del> basic knowledge of and perform clinical laboratory Point-of-Care (POC) testing (Waived). -The student will be able to:                                                          |
| <del>21.01</del> <u>21.01</u> | Demonstrate the ability to interpret instructions of point-of-care testing, including, but not limited to the following:                                                                                   |
| <del>21.01.01</del>           | Test principle                                                                                                                                                                                             |
| <del>21.01.02</del>           | • Storage and Stability                                                                                                                                                                                    |
| <del>21.01.03</del>           | • Internal vs. External Quality Control                                                                                                                                                                    |
| <del>21.01.04</del>           | • Specimen collection and preparation                                                                                                                                                                      |
| <del>21.01.05</del>           | • Directions for use                                                                                                                                                                                       |
| <del>21.01.06</del>           | • Interpretation of results                                                                                                                                                                                |
| <del>21.01.07</del>           | • Interfering substances                                                                                                                                                                                   |
| 21.02                         | Demonstrate and discuss knowledge of lot numbers use and importance <del>in regard to</del> <u>regarding</u> both kits and reagents.                                                                       |
| 21.03                         | Demonstrate knowledge of the frequency <del>in which</del> <u>of performing</u> quality control procedures <del>should be performed.</del>                                                                 |
| <del>21.04</del> <u>21.04</u> | Explain the <u>Clinical Laboratory Improvement Amendments (CLIA)</u> 88 classification of laboratory testing into waived, moderate, and highly complex, including the personnel qualified to perform each. |
| 22.0                          | Demonstrate basic knowledge of and perform <del>point</del> <u>Point-of-care</u> (POC) testing using CLIA-approved waived instrumentation. The student will be able to:                                    |
| 22.01                         | Demonstrate and perform POC testing specific to microbiology, hematology, urinalysis, and clinical chemistry.                                                                                              |

|       |                                                                                                                                                         |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22.02 | Perform instrument maintenance.                                                                                                                         |
| 22.03 | Demonstrate knowledge of quality control and calibrations involved <del>within</del> <u>with</u> the POC instruments.                                   |
| 22.04 | Identify normal limits and associate abnormal results with disease or disorders.                                                                        |
| 22.05 | Discuss the significance of reporting critical values as it applies to <del>point-of-care</del> <u>(POC)</u> testing <u>as soon as possible</u> .       |
| 23.0  | Discuss the general responsibilities and functions encountered by a medical <u>laboratory</u> technician. -The students will be able to:                |
| 23.01 | Ask appropriate scientific questions and recognize what is involved in experimental approaches to the solutions of such questions.                      |
| 23.02 | Communicate laboratory results to healthcare professionals.                                                                                             |
| 23.03 | Demonstrate ability to evaluate laboratory results <u>under the supervision of a medical laboratory scientist</u> .                                     |
| 23.04 | Demonstrate ability to report laboratory results in written or oral form <u>under the supervision of a medical laboratory scientist</u> .               |
| 23.05 | <del>Discuss the</del> <u>List</u> licensure and certification requirements of the major classifications of clinical laboratory personnel.              |
| 24.0  | Apply quality assurance principles and <del>safety</del> protocols- <u>for laboratory equipment</u> . The student will be able to:                      |
| 24.01 | Assess specimen acceptability using standard operating procedure, including rejection/recollection criteria.                                            |
| 24.02 | Describe procedures for transporting and processing specimens.                                                                                          |
| 24.03 | Describe <u>the</u> clinical laboratory role in providing quality assurance in laboratory testing, reporting, and the use and maintenance of equipment. |
| 24.04 | Understand the need for calibration of laboratory equipment.                                                                                            |
| 24.05 | Demonstrate and record quality control procedures required for the tests performed and recognize unacceptable results.                                  |
| 24.06 | Report identified problems encountered in daily quality control according to standard operating procedures.                                             |
|       | <del>24.07—Comply with current OSHA regulations regarding laboratory hazards.</del>                                                                     |
| 25.0  | Demonstrate knowledge of the operation of computer systems. -The student will be able to:                                                               |
| 25.01 | Discuss the role of computer systems in laboratory data management.                                                                                     |
| 25.02 | Demonstrate knowledge of common computer terminology.                                                                                                   |
| 25.03 | Demonstrate entry- <u>level</u> computer operations for specimen accessioning, data reporting, and quality control recording.                           |
| 25.04 | Demonstrate entry- <u>level</u> operational skills in the use of computer-interfaced analytical instrumentation.                                        |

|                        |                                                                                                                                   |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| 26.0                   | Demonstrate an understanding of the basic principles of molecular diagnostics. –The student will be able to:                      |
| 26.01                  | Discuss the principles and major steps of the polymerase chain reaction (PCR).                                                    |
| <del>26.02</del>       | <del>Label the organelles and important parts of a eukaryotic animal cell.</del>                                                  |
| <del>26.03</del>       | <del>Describe the function of the organelles and important parts of a eukaryotic animal cell.</del>                               |
| <del>26.04</del> 26.02 | Discuss the structure, function, and components of DNA and RNA.                                                                   |
| <del>26.05</del> 26.03 | Define the key terms of molecular diagnostics.                                                                                    |
| <del>26.06</del> 26.04 | <del>Understand</del> List and describe the principles of <u>DNA, RNA, and</u> molecular diagnostic testing.                      |
| <del>26.07</del> 26.05 | Compare the advantages and disadvantages of molecular techniques over traditional diagnostic tests for infectious diseases.       |
| <del>26.08</del>       | <del>List molecular tests associated with the identification of microorganisms.</del>                                             |
| <del>26.09</del> 26.06 | Identify the types of samples appropriate for molecular diagnostics.                                                              |
| <del>26.10</del> 26.07 | Discuss the ethical impact of genetic technologies.                                                                               |
| <del>26.11</del> 26.08 | Outline requirements for reducing contamination in a molecular lab.                                                               |
| <del>26.12</del> 26.09 | Discuss nucleic acid probes and their role in clinical laboratory diagnostics.                                                    |
| 27.0                   | Demonstrate knowledge of urinalysis and body fluids principles and procedures. –The student will be able to:                      |
| 27.01                  | Identify the components of the urinary system and explain their functions.                                                        |
| 27.02                  | Discuss diseases affecting the urinary system.                                                                                    |
| 27.03                  | Describe collection, transport, and storage procedures for random and timed urine specimens.                                      |
| 27.04                  | Discuss specific gravity techniques; <del>calibration and use of the refractometer.</del>                                         |
| 27.05                  | Perform <del>dipstick or tablet</del> (non-automated) urinalysis techniques for chemical exam of the urine and interpret results. |
| 27.06                  | Demonstrate the proper use of automated urinalysis analyzers.                                                                     |
| 27.07                  | Describe renal function tests.                                                                                                    |
| 27.08                  | Describe principles of and perform routine physical and chemical analyses on urine.                                               |
| 27.09                  | Prepare urine sediments and perform identification and quantitation of microscopic formed elements.                               |

|                        |                                                                                                                                                          |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27.10                  | Correlate abnormal physical, chemical, and microscopic urine results with associated pathological conditions.                                            |
| 27.11                  | Differentiate between transudates and exudates.                                                                                                          |
| <del>27.12</del>       | <del>Discuss miscellaneous body fluids to include cerebral spinal, serous, seminal, and joint fluids.</del>                                              |
| <del>27.13</del> 27.12 | Perform physical, chemical, and microscopic evaluations of common body fluids.                                                                           |
| 28.0                   | Demonstrate knowledge of hematological principles and procedures. -The student will be able to:                                                          |
| 28.01                  | Discuss the organs, cells, and cellular <del>interaction</del> <u>interactions</u> of the lymphoid, myeloid, and reticuloendothelial systems.            |
| 28.02                  | Demonstrate an understanding of basic concepts of hematopoiesis.                                                                                         |
| 28.03                  | Identify the components of blood.                                                                                                                        |
| 28.04                  | Discuss the function of formed elements of blood.                                                                                                        |
| 28.05                  | Demonstrate an understanding of the synthesis of normal and abnormal molecular structure of hemoglobin, common hemoglobinopathies, and associated tests. |
| 28.06                  | Describe normal hemoglobin-oxygen function using the oxygen dissociation curve (ODC).                                                                    |
| 28.07                  | Discuss assessment and impact of preanalytical, analytical, and post-analytical factors on hematology testing.                                           |
| 28.08                  | Calculate red blood cell indices.                                                                                                                        |
| 28.09                  | Discuss selected cytochemical staining and flow cytometry procedures.                                                                                    |
| 28.10                  | Evaluate red blood cell morphology.                                                                                                                      |
| 28.11                  | State the review process of histogram/scatterplot/ <del>scatter gram</del> <u>scattergram</u> analysis.                                                  |
| 28.12                  | Describe the categories used in a morphological classification of anemias.                                                                               |
| 28.13                  | Correlate complete blood cell results with <u>a</u> peripheral exam of blood smear.                                                                      |
| 28.14                  | List the white blood cell maturation sequence and identify distinguishing morphology for <u>the</u> stages of developing white blood cells.              |
| 28.15                  | Discuss normal and abnormal hematology findings, reference ranges, and associated diseases.                                                              |
| 28.16                  | Demonstrate an understanding of normal and abnormal white cell morphology, related disease states, <u>and</u> associated tests.                          |
| 28.17                  | Discuss the principles of and perform routine hematology procedures, <u>applying</u> quality control procedures, <u>as</u> necessary.                    |
| 28.18                  | Perform commonly used methods to evaluate leukocytes, correlate, <u>and</u> verify automated cell counts with established criteria.                      |

|                        |                                                                                                                                                                                                                 |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28.19                  | Identify characteristic findings of nonmalignant leukocytic disorders, (e.g., shift to the left, toxic granulation, Döhle bodies, etc.).                                                                        |
| 28.20                  | Perform techniques of manual blood smear evaluation, including white blood cell differential, red cell, and platelet morphology.                                                                                |
| 28.21                  | Correlate peripheral blood evaluation with automated cell analysis.                                                                                                                                             |
| 28.22                  | Perform platelet <u>and white blood cell</u> counts on <del>patient and control</del> specimens using manual <del>and automated</del> techniques, <u>diluents</u> , and correlate counts with peripheral smear. |
| 29.0                   | Demonstrate knowledge of hemostasis and related diagnostic principles and procedures. -The student will be able to:                                                                                             |
| 29.01                  | Discuss and define the mechanisms of hemostasis, including bleeding and clotting.                                                                                                                               |
| 29.02                  | Discuss common coagulopathies and associated treatments.                                                                                                                                                        |
| 29.03                  | Discuss <u>the</u> assessment and impact of pre-analytical factors on hemostasis testing                                                                                                                        |
| 29.04                  | Describe the principles of and perform routine testing used in the evaluation of primary and secondary hemostasis.                                                                                              |
|                        | <u>29.05 Demonstrate use of hemostasis laboratory equipment.</u>                                                                                                                                                |
| <del>29.05</del> 29.06 | Discuss additional hemostasis tests performed to differentiate the cause of abnormal routine tests.                                                                                                             |
| 30.0                   | Demonstrate knowledge of immunology principles and procedures. -The student will be able to:                                                                                                                    |
| 30.01                  | Discuss the functions of the cells of the immune system, cytokines, and regulatory molecules.                                                                                                                   |
| 30.02                  | Discuss physical and chemical properties of immunogens (antigens), immunoglobulins (antibodies), and complement.                                                                                                |
| 30.03                  | Compare and contrast the principles of basic agglutination, flocculation, and precipitation procedures in immunology/serology.                                                                                  |
| 30.04                  | Perform basic procedures in immunology/serology.                                                                                                                                                                |
| 30.05                  | Discuss principles of serum protein electrophoresis and immunofixation.                                                                                                                                         |
| 30.06                  | Discuss the clinical significance of the commonly performed immunological tests.                                                                                                                                |
| 30.07                  | Discuss selected serological tests <del>such as immuneassays.</del>                                                                                                                                             |
| 31.0                   | Demonstrate knowledge of clinical chemistry principles and procedures. -The student will be able to:                                                                                                            |
| 31.01                  | Identify the chemistry analytes used to evaluate various organ <del>function</del> <u>functions</u> .                                                                                                           |
|                        | <del>31.02—Discuss the renal system and related analytes.</del>                                                                                                                                                 |
| <del>31.03</del> 31.02 | Discuss principles of, and perform common renal function tests.                                                                                                                                                 |

|                                        |                                                                                                                                                                                                         |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>31.04</del> <a href="#">31.03</a> | Discuss carbohydrate, protein, and lipid metabolism.                                                                                                                                                    |
| <del>31.05</del> <a href="#">31.04</a> | Discuss principles of <del>;</del> and perform commonly ordered tests related to carbohydrate, protein, and lipid metabolism.                                                                           |
| <del>31.06</del> <a href="#">31.05</a> | Discuss the liver and its functions and related analytes.                                                                                                                                               |
| <del>31.07</del> <a href="#">31.06</a> | Discuss principles of and perform commonly ordered liver function tests.                                                                                                                                |
| <del>31.08</del> <a href="#">31.07</a> | Discuss enzyme classification, origin, activity, and function.                                                                                                                                          |
| <del>31.09</del> <a href="#">31.08</a> | Discuss principles of and perform commonly ordered enzyme procedures.                                                                                                                                   |
| <del>31.10</del> <a href="#">31.09</a> | Discuss electrolyte balance as related to health and disease.                                                                                                                                           |
| <del>31.11</del> <a href="#">31.10</a> | Discuss principles of and perform electrolyte analyses.                                                                                                                                                 |
| <del>31.12</del> <a href="#">31.11</a> | Discuss principles of and perform commonly ordered tests to evaluate cardiac function.                                                                                                                  |
| <del>31.13</del> <a href="#">31.12</a> | Discuss the physiology of the endocrine system and the principal tests used to evaluate endocrine function.                                                                                             |
| <del>31.14</del> <a href="#">31.13</a> | Discuss the role of the laboratory in therapeutic drug monitoring and toxicology.                                                                                                                       |
| <del>31.15</del> <a href="#">31.14</a> | Discuss and perform general electrophoresis techniques.                                                                                                                                                 |
| <del>31.16</del> <a href="#">31.15</a> | Discuss the clinical significance of commonly ordered clinical chemistry tests.                                                                                                                         |
| <del>31.17</del> <a href="#">31.16</a> | Demonstrate knowledge of principles of instrumentation as related to the clinical chemistry laboratory.                                                                                                 |
| <del>31.18</del> <a href="#">31.17</a> | Discuss techniques of clinical chemistry related to <a href="#">the</a> standardization of <del>procedure</del> <a href="#">procedures</a> and use of standards, <a href="#">blanks</a> , and controls. |
| <del>31.19</del> <a href="#">31.18</a> | Discuss other techniques of clinical chemistry.                                                                                                                                                         |
| <del>31.20</del> <a href="#">31.19</a> | Discuss basic techniques of clinical chemistry related to normal and abnormal physiology.                                                                                                               |
| 32.0                                   | Demonstrate knowledge of immunohematology principles and procedures. -The student will be able to:                                                                                                      |
| 32.01                                  | Discuss donor <del>interview</del> <a href="#">interviews</a> , criteria for selection, phlebotomy preparation, and donor blood processing.                                                             |
| 32.02                                  | Discuss blood component collection, preparation, storage, and use.                                                                                                                                      |
| 32.03                                  | Describe the roles of <a href="#">the Federal Drug Administration (FDA, -)</a> , <a href="#">American Association of Blood Banks (AABB, )</a> , and state agencies, and how to contact each.            |
| 32.04                                  | Compare <a href="#">the</a> advantages and disadvantages <del>for</del> <a href="#">of</a> autologous, versus homologous (allogenic) blood collection and transfusion.                                  |

|       |                                                                                                                                                             |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 32.05 | Discuss <a href="#">the</a> basic genetics of the blood group antigens-.                                                                                    |
| 32.06 | Discuss the ABO blood group system testing procedures and recognize ABO discrepancies.                                                                      |
| 32.07 | Describe required tests on recipient blood samples.                                                                                                         |
| 32.08 | Discuss and differentiate other blood group systems such as Duffy, Kell, Kidd, S,s, Lu, and the common cold-reacting antibodies such as Le, P, I, M, and N. |
| 32.09 | Perform Rh testing to determine Rh phenotypes.                                                                                                              |
| 32.10 | Perform and interpret antibody screening.                                                                                                                   |
| 32.11 | Perform antibody identification tests to detect clinically significant antibodies.                                                                          |
| 32.12 | Discuss the safety and determine <a href="#">the</a> compatibility of blood components for transfusion.                                                     |
| 32.13 | Discuss and perform routine compatibility testing, including the immediate spin crossmatch and the electronic crossmatch.                                   |
| 32.14 | Discuss and perform phenotyping on recipient and donor specimens.                                                                                           |
| 32.15 | Identify symptoms of the suspected transfusion reaction and the required laboratory work-up.                                                                |
| 32.16 | Discuss immune hemolytic disorders and perform the direct antiglobulin test.                                                                                |
| 32.17 | Discuss specialized techniques <a href="#">in immunohematology</a> .                                                                                        |
| 32.18 | Perform quality control (QC) on reagents.                                                                                                                   |
| 32.19 | Describe the pathophysiology of hemolytic disease of the fetus and newborn.                                                                                 |
| 33.0  | Demonstrate knowledge of microbiological principles and procedures. -The student will be able to:                                                           |
| 33.01 | Discuss microbial taxonomy and nomenclature.                                                                                                                |
| 33.02 | Discuss bacterial metabolism, reproduction, cell structures, and their functions.                                                                           |
| 33.03 | Discuss classification, composition, and preparation of culture media.                                                                                      |
| 33.04 | Discuss the human pathogenesis of bacteria.                                                                                                                 |
| 33.05 | Discuss and perform sterilization techniques.                                                                                                               |
| 33.06 | Perform culturing techniques for urine, stool, wound, respiratory, body fluids, and blood specimens.                                                        |
| 33.07 | Perform techniques of microbiology related to inoculation and transfer of cultures.                                                                         |

|                        |                                                                                                                                                                                                                                                                                                                                     |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 33.08                  | Discuss the principles of Gram and <a href="#">Acid-Fast Bacilli (AFB)</a> stains.                                                                                                                                                                                                                                                  |
| 33.09                  | Accurately perform, read, and report <del>gram</del> <a href="#">Gram</a> stains.                                                                                                                                                                                                                                                   |
| 33.10                  | Perform techniques necessary for isolation and identification of aerobic <del>-and</del> , anaerobic, <a href="#">and facultative</a> bacterial organisms.                                                                                                                                                                          |
| 33.11                  | Identify commonly encountered aerobic bacteria through morphological, physical, and biochemical properties.                                                                                                                                                                                                                         |
| 33.12                  | Perform and interpret antimicrobial susceptibility tests.                                                                                                                                                                                                                                                                           |
| 33.13                  | Discuss <a href="#">the</a> collection and handling of specimens for fungal, mycobacterial, and viral culture.                                                                                                                                                                                                                      |
| 33.14                  | Prepare and examine specimens, and identify ova and parasites when present.                                                                                                                                                                                                                                                         |
| 34.0                   | Demonstrate knowledge of advanced hematological principles and procedures. -The student will be able to:                                                                                                                                                                                                                            |
| 34.01                  | Correlate histogram/scatterplot/ <del>scatter gram</del> <a href="#">scattergram</a> with differential results.                                                                                                                                                                                                                     |

| 36.05                  | Discuss and perform automated microbiological procedures.                                                                                                                  |
| 36.06                  | Identify life cycles, modes of transmission, prevention, and pathophysiology, of clinically significant parasites.                                                         |
| 36.07                  | Discuss microbial and immunological techniques to identify clinically significant viruses.                                                                                 |
| 36.08                  | Discuss classification and related disease states of clinically significant viruses.                                                                                       |
| 36.09                  | Identify commonly used antibiotics, their usage, and mechanisms of activity.                                                                                               |
| 36.10                  | <u>Discuss and perform molecular testing to identify bacteria, parasites, fungi, and significant viruses.</u>                                                              |
| 37.0                   | Demonstrate knowledge of advanced clinical chemistry principles and procedures. -The student will be able to:                                                              |
| 37.01                  | Perform, calculate, analyze, and recognize normal/abnormal electrophoresis procedures.                                                                                     |
| 37.02                  | Perform <u>and interpret</u> immunoassay procedures <u>and results</u> .                                                                                                   |
| 37.03                  | Perform and recognize associated disease states for selected isoenzyme assays.                                                                                             |
| 37.04                  | Perform, calculate, and recognize associated disease states for blood lipid profiles.                                                                                      |
| 37.05                  | Perform selected procedures related to <u>analyzing hormones and evaluating</u> endocrine function.                                                                        |
| 37.06                  | Perform selected assays for therapeutic <u>drug monitoring</u> and toxic substances,.                                                                                      |
| 37.07                  | <u>Analyze toxicology results.</u>                                                                                                                                         |
| <del>37.07</del> 37.08 | <u>Discuss the principles and procedures of blood gas analysis, including arterial specimen collection and clinical significance.</u>                                      |
| 38.0                   | Demonstrate knowledge of advanced immunological procedures. -The student will be able to:                                                                                  |
| 38.01                  | Perform serological tests such as immunofluorescence assays.                                                                                                               |
| 38.02                  | Discuss and interpret antinuclear antibody patterns and their relationship to disease states.                                                                              |

|                        |                                                                                                                                                                           |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 38.03                  | Discuss MHC and HLA proteins and <del>the</del> <u>their</u> application to transplant technology and rejection.                                                          |
| 39.0                   | Demonstrate knowledge of advanced immunohematology principles and procedures. -The student will be able to:                                                               |
| 39.01                  | <del>Understand questions regarding</del> <u>Describe</u> donor suitability <u>criteria</u> .                                                                             |
| 39.02                  | Discuss the various parameters of <u>the</u> required testing of donor blood according to AABB Standards.                                                                 |
| 39.03                  | Describe the preparation and use of washed red cells, leukocyte-reduced red cells, and platelet concentrations from donor units.                                          |
| 39.04                  | Describe the preparation and use of cryoprecipitate and fresh frozen plasma.                                                                                              |
| 39.05                  | Describe the principle and use of the antiglobulin test, both direct and indirect methods, including the purpose <del>for</del> <u>of</u> using IgG- sensitized cells.    |
| 39.06                  | Perform methods of adsorption and elution techniques.                                                                                                                     |
| 39.07                  | Perform procedures for identification of multiple antibodies in <u>the</u> recipient specimen, including enzyme enhancement, dosage, temperature, and complement binding. |
| 39.08                  | Determine <u>the</u> appropriate dosage of Rh Immune Globulin based on test results.                                                                                      |
| 39.09                  | Interpret the preliminary investigation results to determine whether a transfusion reaction has occurred.                                                                 |
| 40.0                   | Demonstrate <del>and</del> <u>an</u> understanding of advanced principles of molecular diagnostics. -The student will be able to:                                         |
| 40.01                  | Describe the steps used to prepare genomic DNA <u>and RNA</u> from blood and buccal cells.                                                                                |
| 40.02                  | <u>Discuss the extraction, purification, and storage of nucleic acids.</u>                                                                                                |
| <del>40.02</del> 40.03 | <u>Describe the process of Fluorescent In-Situ Hybridization (FISH).</u>                                                                                                  |
| <del>40.03</del> 40.04 | <u>Compare and contrast real-time PCR and conventional PCR.</u>                                                                                                           |
| 40.05                  | <u>Explain baseline threshold and CT-values of PCR curves.</u>                                                                                                            |
| 40.06                  | <u>Explain Sanger sequencing.</u>                                                                                                                                         |
| 40.07                  | <u>Explain Next-generation sequencing.</u>                                                                                                                                |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

**Clinical learning experiences in a clinical laboratory and related areas are an integral part of this program. Clinical learning experiences should reflect the full breadth of responsibilities expected of a Medical Laboratory Technician and should include appropriate experience in each of the areas of the laboratory described herein. The specified length for each of the courses listed is inclusive of clinical experience for each of the respective laboratory sections.**

### Special Notes

This program meets the Department of Health HIV/AIDS, Domestic Violence, and Prevention of Medical Errors education requirements. Upon completion of this program, the instructor will provide a certificate to the student verifying that these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### General Education Course Requirements for AS and AAS Degrees

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded. The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

**Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

**Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as tissue technologists (Medical and Clinical Laboratory Technologists) or histotechnicians or to provide supplemental training for persons previously or currently employed in these occupations.

The content includes but is not limited to preparation of tissue specimens of human and animal origin for research, teaching purposes, or diagnosis of body dysfunction and malignancy. A clinical component is a necessary element of this program.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 76 credit hours.

[When developing the course sequence for the local implementation of this program, select courses that:](#)

- [Meet the skill development requirements of the standards and benchmarks of this program.](#)

- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

| <b><u>Job Attainment</u></b> |                                                                                                                               |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b><u>10.0</u></b>           | <b><u>Find, assess and apply to job opportunities.</u></b>                                                                    |
| <b><u>10.01</u></b>          | <b><u>Identify online job posts relevant to his or her career aspirations.</u></b>                                            |
| <b><u>10.02</u></b>          | <b><u>Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.</u></b>  |
| <b><u>10.03</u></b>          | <b><u>Define what information, documentation and writing prompts are required for the positions.</u></b>                      |
| <b><u>11.0</u></b>           | <b><u>Communicate personal competence, character and fit for a job opportunity.</u></b>                                       |
| <b><u>11.01</u></b>          | <b><u>Develop a resume.</u></b>                                                                                               |
| <b><u>11.02</u></b>          | <b><u>Write a cover letter.</u></b>                                                                                           |
| <b><u>11.03</u></b>          | <b><u>Curate a professional portfolio that includes work products.</u></b>                                                    |
| <b><u>11.04</u></b>          | <b><u>Prepare for and experience a mock job interview.</u></b>                                                                |
| <b><u>12.0</u></b>           | <b><u>Cultivate and leverage relationships to professionally advance.</u></b>                                                 |
| <b><u>12.01</u></b>          | <b><u>Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.</u></b> |
| <b><u>12.02</u></b>          | <b><u>Develop a plan to cultivate a professional digital footprint.</u></b>                                                   |
| <b><u>12.03</u></b>          | <b><u>Develop a networking plan for a specific industry of interest.</u></b>                                                  |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the health care delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Identify the anatomic structure and function of body systems in relation to disease states and services performed by the histotechnician.
- 13.0 Practice quality assurance, safety, and acceptable communication skills.
- 14.0 Adhere to legal and ethical principles related to the practice of histotechnology.
- 15.0 Demonstrate knowledge of histology laboratory operations related to accessioning.
- 16.0 Demonstrate knowledge of histology laboratory operations related to grossing.
- 17.0 Demonstrate knowledge of histology laboratory operations related to tissue processing.
- 18.0 Demonstrate knowledge of histology laboratory operations related to embedding.
- 19.0 Demonstrate knowledge of histology laboratory operations related to microtomy.
- 20.0 Perform tissue preparation techniques.
- 21.0 Maintain histology laboratory equipment.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Histologic Technology  
**CIP Number:** 1351100800  
**Program Length:** 76 credit hours  
**SOC Code(s):** \_\_\_\_\_

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>

| At the completion of this program, the student will be able to: |                                                                                                                                                                                                                                      |
|-----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.0                                                            | Identify the anatomic structure and function of body systems in relation to disease states and services performed by the histotechnician. The student will be able to:                                                               |
| 12.01                                                           | Demonstrate knowledge of human anatomy and physiology as related to histotechnology.                                                                                                                                                 |
| 12.02                                                           | Demonstrate knowledge of normal histology of human organs.                                                                                                                                                                           |
| 12.03                                                           | Demonstrate knowledge of various methods of obtaining histological specimens from patients.                                                                                                                                          |
| 12.04                                                           | Identify tissue structures and cellular components; relate both to physiological functions.                                                                                                                                          |
| 12.05                                                           | Demonstrate knowledge of types of histological specimens usually submitted for gross and microscopic examination or submitted for gross description only.                                                                            |
| 12.06                                                           | Demonstrate knowledge of the processing of histologic specimens especially as related to disease processes.                                                                                                                          |
| 12.07                                                           | Demonstrate knowledge of tissue processing methods and schedules, depending on tissue type and size including variety of fixatives used and how each relates to different tissue components and the disease process to be diagnosed. |
| 13.0                                                            | Practice quality assurance, safety and acceptable communication skills. The student will be able to:                                                                                                                                 |
| 13.01                                                           | Practice quality control in the histology laboratory as required by the accrediting agency.                                                                                                                                          |
| 13.02                                                           | Follow institutional policies and procedures related to safety.                                                                                                                                                                      |
| 13.03                                                           | Demonstrate knowledge of medical terminology.                                                                                                                                                                                        |

|       |                                                                                                                                                                                 |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.04 | Recognize errors and their sources, and take corrective action.                                                                                                                 |
| 13.05 | Demonstrate knowledge of chemical hazards and acceptable exposure limits within the histopathology laboratory.                                                                  |
| 13.06 | Demonstrate knowledge of proper disposal methods for all chemical and biological waste within the histopathology laboratory with emphasis on both state and local requirements. |
| 13.07 | Implement procedures to meet regulatory and accreditation agency patient safety guidelines.                                                                                     |
| 14.0  | Adhere to legal and ethical principles related to the practice of histotechnology. The student will be able to:                                                                 |
| 14.01 | Practice discretion and confidentiality with protected health information in regard to laboratory reports, requisitions and computer monitors.                                  |
| 14.02 | Demonstrate knowledge of the histotechnician's role and responsibilities in relation to the health care team.                                                                   |
| 14.03 | Demonstrate knowledge of the legal ramifications of pathology practice of laboratory medicine.                                                                                  |
| 15.0  | Demonstrate knowledge of histology laboratory operations related to accessioning. The student will be able to:                                                                  |
| 15.01 | Demonstrate the understanding of evaluation of acceptable specimen protocol including proper patient identification.                                                            |
| 15.02 | Recognize specimens submitted for special studies (i.e., Immunofluorescence, Quantitative Iron).                                                                                |
| 15.03 | Verify positive patient ID.                                                                                                                                                     |
| 16.0  | Demonstrate knowledge of histology laboratory operations related to grossing. The student will be able to:                                                                      |
| 16.01 | Demonstrate knowledge of fixation types and volume to size.                                                                                                                     |
| 16.02 | Demonstrate the need for accurate labeling of cassettes with accession number and sub-parts in relation to gross description.                                                   |
| 16.03 | Explain the purpose of macroscopic descriptions according to standard grossing protocol.                                                                                        |
| 16.04 | Recognize the measures of loss prevention of small specimens (i.e., sponges, lens paper, biopsy bags).                                                                          |
| 16.05 | Identify the processes of the integrity of minute fragments including but not limited to cell blocks.                                                                           |
| 16.06 | Demonstrate knowledge of decalcification procedures by specimen type.                                                                                                           |
| 16.07 | Triage specimens for size for appropriate tissue processing schedules.                                                                                                          |
| 17.0  | Demonstrate knowledge of histology laboratory operations related to tissue processing. The student will be able to:                                                             |
| 17.01 | Demonstrate knowledge of the types of tissue processors including routine, microwave and rapid.                                                                                 |

|       |                                                                                                                                |
|-------|--------------------------------------------------------------------------------------------------------------------------------|
| 17.02 | Perform the operation and maintenance of equipment.                                                                            |
| 17.03 | Perform the preparation of a reagent.                                                                                          |
| 17.04 | Create tissue processing schedules by size and tissue type.                                                                    |
| 17.05 | Perform tissue processor maintenance including changing and rotation of reagents.                                              |
| 17.06 | Recognize the difference in paraffin types for histological processes including their composition, utility, and melting point. |
| 18.0  | Demonstrate knowledge of histology laboratory operations related to embedding. The student will be able to:                    |
| 18.01 | Recognize adequacy of tissue processing and rectify if possible.                                                               |
| 18.02 | Recognize special instructions given from the gross team.                                                                      |
| 18.03 | Verify the number of pieces and cassettes submitted.                                                                           |
| 18.04 | Select the appropriate size of mold for the size of tissue being embedded.                                                     |
| 18.05 | Perform the proper orientation of tissue pieces (i.e., Punch biopsies, tubes, veins).                                          |
| 18.06 | Apply knowledge of the prevent air bubbles and multi-layering of paraffin.                                                     |
| 18.07 | Apply quality control measures for the temperatures of paraffin including daily recording.                                     |
| 19.0  | Demonstrate knowledge of histology laboratory operations related to microtomy. The student will be able to:                    |
| 19.01 | Demonstrate the use of microtomy tools and microtomes including alignment and angles, and proper disposal of blades.           |
| 19.02 | Select the appropriate thickness of sections for routine specimens and special procedures.                                     |
| 19.03 | Identify the number of slides and levels per block as indicated.                                                               |
| 19.04 | Demonstrate techniques for facing/trimming into blocks for full section.                                                       |
| 19.05 | Perform slide selection for all specimen types including slides with adhesives for bones and nails.                            |
| 20.0  | Perform tissue preparation techniques. The student will be able to:                                                            |
| 20.01 | Demonstrate an understanding of the need for proper histologic specimen identification.                                        |
| 20.02 | Perform the clinically appropriate preparation and histochemical staining techniques when ordered by the pathologist.          |
| 20.03 | Identify and troubleshoot problems encountered in histological staining and reagent preparation procedures.                    |

|       |                                                                                                                                                                                                                                      |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20.04 | Demonstrate the knowledge of the current methods of immunohistochemistry procedures for the detection of antigen.                                                                                                                    |
| 20.05 | Evaluate, validate and understand new preparation and staining procedures.                                                                                                                                                           |
| 20.06 | Distinguish between well-prepared and stained and poorly prepared and stained histologic specimens.                                                                                                                                  |
| 20.07 | Identify tissue structures and their staining characteristics.                                                                                                                                                                       |
| 20.08 | Demonstrate knowledge of frozen section use and techniques.                                                                                                                                                                          |
| 21.0  | Maintain histology laboratory equipment. The student will be able to:                                                                                                                                                                |
| 21.01 | Perform routine maintenance of equipment and instruments within specified limits to include: <ul style="list-style-type: none"><li>• embedding centers</li><li>• tissue processors</li><li>• microtomes</li><li>• cryostat</li></ul> |
| 21.02 | Refer to appropriate person(s) for complex repairs.                                                                                                                                                                                  |
| 21.03 | Follow procedures for accessibility and maintenance of service records.                                                                                                                                                              |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### General Education Course Requirements for AS and AAS Degrees

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral

part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Opticianry  
**Career Cluster:** Health Science

**AS** Associate in Science

|                            |                                                                                                                                                                                             |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as dispensing opticians, optician apprentices, dispensing), opticians: dispensing and measuring (Opticians, Dispensing) or to provide supplemental training for persons previously or currently employed in these occupations.

The content includes but is not limited to lens surfacing, finishing and mounting; dispensing of completed prescriptions; fitting contact lenses; frame repair, business management techniques and human relations.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of 72 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

### **Regulated Programs**

**The program must be approved by the: Commission on Opticianry Accreditation**, P.O. Box 592, Canton, NY 13617, (703) 468-0566. Graduates of a recognized program with an A.S. Degree are eligible to take the Florida optician licensure examination administered by the Department of Business and Professional Regulation for the Board of Opticianry (Chapter 484, F.S.; Rule Chapter 21, F.A.C.).

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |
|-----------------------------|--------------------------------------------------------------------------------------------------|
| <u>01.0</u>                 | <u>Apply academic skills to workplace scenarios.</u>                                             |
| <u>01.01</u>                | <u>Use reading skills.</u>                                                                       |
| <u>01.02</u>                | <u>Use writing skills.</u>                                                                       |
| <u>01.03</u>                | <u>Use mathematical strategies and procedures.</u>                                               |
| <u>01.04</u>                | <u>Use scientific principles and procedures.</u>                                                 |
| <u>02.0</u>                 | <u>Design a solution to an industry problem.</u>                                                 |
| <u>02.01</u>                | <u>Use critical thinking.</u>                                                                    |
| <u>02.02</u>                | <u>Use creativity.</u>                                                                           |
| <u>02.03</u>                | <u>Make sound decisions.</u>                                                                     |
| <u>02.04</u>                | <u>Solve problems.</u>                                                                           |
| <u>02.05</u>                | <u>Reason.</u>                                                                                   |
| <u>02.06</u>                | <u>Plan and organize.</u>                                                                        |
| <u>03.0</u>                 | <u>Manage resources within an industry project</u>                                               |
| <u>03.01</u>                | <u>Manage time.</u>                                                                              |
| <u>03.02</u>                | <u>Manage money or resources.</u>                                                                |
| <u>03.03</u>                | <u>Manage materials.</u>                                                                         |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the health care delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Surface ophthalmic lenses.
- 13.0 Edge and finish lenses.
- 14.0 Insert and mount lenses.
- 15.0 Select and order frames and lenses.
- 16.0 Fit and dispense prescriptions.
- 17.0 Fit contact lenses.
- 18.0 Repair frames.
- 19.0 Demonstrate knowledge of office management.
- 20.0 Practice effective business management operation techniques.
- 21.0 Demonstrate knowledge of anatomy and physiology of the eye.
- 22.0 Demonstrate knowledge of the effects ophthalmic devices have in correcting the errors of human vision.
- 23.0 Practice technical and business computer functions.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Optician  
**CIP Number:** 1351180100  
**Program Length:** 72 credit hours

Standards 1-11 are referred to as the **Health Science Core** and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

| <del>13.06</del> 13.04                                          | Tint hard resin lenses.                                                                 |
| <del>13.07</del> 13.05                                          | Select appropriate lenses.                                                              |

|       |                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------|
| 14.0  | Insert and mount lenses. The student will be able to:                                                            |
| 14.01 | Insert lenses into plastic frames.                                                                               |
| 14.02 | Insert lenses into metal frames.                                                                                 |
| 14.03 | Mount lenses into rimless and semi-rimless mountings or other appropriate designs.                               |
| 14.04 | Perform final inspection of eye glasses.                                                                         |
| 14.05 | Demonstrate knowledge of lens enhancements/treatments.                                                           |
| 15.0  | Select and order frames and lenses. The student will be able to:                                                 |
| 15.01 | Analyze written prescriptions.                                                                                   |
| 15.02 | Duplicate prescriptions from existing lenses.                                                                    |
| 15.03 | Evaluate patient's life-style needs.                                                                             |
| 15.04 | Use selected instruments to assist in the calculation of fitting measurements, including position of wear (POW). |
| 15.05 | Calculate lens size and availability.                                                                            |
| 15.06 | Discuss charges with patients.                                                                                   |
| 15.07 | Demonstrate knowledge of managed vision care procedures.                                                         |
| 15.08 | Order lenses and frames, including lens enhancements/treatments.                                                 |
| 16.0  | Fit and dispense prescriptions. The students will be able to:                                                    |
| 16.01 | Verify finished prescriptions to specifications.                                                                 |
| 16.02 | Align frames.                                                                                                    |
| 16.03 | Adjust and fit optical devices to patients.                                                                      |
| 17.0  | Fit contact lenses. The student will be able to:                                                                 |
| 17.01 | Analyze prescriptions.                                                                                           |
| 17.02 | Evaluate patient suitability.                                                                                    |
| 17.03 | Use selected instruments to conduct and assess fittings.                                                         |

|       |                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------|
| 17.04 | Identify types of contact lenses.                                                                               |
| 17.05 | Perform patient training.                                                                                       |
| 17.06 | Outline potential complications.                                                                                |
| 17.07 | Perform follow-up evaluations.                                                                                  |
| 17.08 | <a href="#">Demonstrate knowledge of insertions and removal of various contact lens.</a>                        |
| 18.0  | Repair frames. The student will be able to:                                                                     |
| 18.01 | Demonstrate the knowledge of restoring finish and replacement/repair trim on frames.                            |
| 18.02 | Replace/repair nose pieces on plastic or metal frames.                                                          |
| 18.03 | Demonstrate knowledge of soldering metal frames.                                                                |
| 18.04 | Replace/repair frame-front, temples, monofilament, and rimless.                                                 |
| 18.05 | Reshape damaged frames to lenses.                                                                               |
| 18.06 | Modify frames for special needs.                                                                                |
| 19.0  | Demonstrate knowledge of office management. The student will be able to:                                        |
| 19.01 | Demonstrate knowledge of legal and ethical standards of vision care professionals.                              |
| 19.02 | Maintain and file patient records.                                                                              |
| 19.03 | Demonstrate basic knowledge of managed vision care.                                                             |
| 19.04 | Demonstrate knowledge of the collections and overdue accounts.                                                  |
| 19.05 | Practice office supply control.                                                                                 |
| 20.0  | Practice effective business management operation techniques. The student will be able to:                       |
| 20.01 | Develop a small business plan of operation.                                                                     |
| 20.02 | Develop an office policy/procedure manual.                                                                      |
| 20.03 | Demonstrate knowledge of business finance and operating expenses.                                               |
| 20.04 | Demonstrate the knowledge of setting up a pay scale and benefit program for employees and a bookkeeping system. |

|       |                                                                                                                                                 |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| 20.05 | Demonstrate knowledge of tax forms, payroll records, insurance needs and inventory needs.                                                       |
| 20.06 | Demonstrate knowledge of employee hiring and orientation.                                                                                       |
| 20.07 | Demonstrate knowledge of processes to resolve customer complaints.                                                                              |
| 20.08 | Demonstrate a working knowledge of basic compliance laws related to Opticianry.                                                                 |
| 21.0  | Demonstrate knowledge of anatomy and physiology of the eye. The student will be able to:                                                        |
| 21.01 | Demonstrate understanding of the interrelationships between body systems.                                                                       |
| 21.02 | Diagram and explain the anatomy of the visual system.                                                                                           |
| 21.03 | Recognize and discuss physiological conditions of the eye.                                                                                      |
| 22.0  | Demonstrate knowledge of the effects ophthalmic devices have in correcting the errors of human vision. The student will be able to:             |
| 22.01 | Demonstrate knowledge of basic mathematical principles that are involved in ophthalmic and geometrical optics.                                  |
| 22.02 | Describe the influence of prisms on the behavior of light.                                                                                      |
| 22.03 | Apply the principles of light acting on curved single refracting surface to the optics of ophthalmic lenses for parallel and nonparallel light. |
| 22.04 | Describe the relationship and optical properties of cylindrical lenses.                                                                         |
| 22.05 | Demonstrate knowledge of the theory of lens surface power measuring devices.                                                                    |
| 22.06 | Create and eliminate prismatic effect by decentration.                                                                                          |
| 22.07 | Demonstrate the influence of lens thickness and surface curvature.                                                                              |
| 23.0  | Practice technical and business computer functions. The student will be able to:                                                                |
| 23.01 | Demonstrate knowledge of technical computer functions.                                                                                          |
| 23.02 | Demonstrate knowledge of practice management software and business applications of computers.                                                   |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

The cooperative method of instruction is appropriate for this program. When the cooperative method is offered, the following is required for each student: a training plan signed by the student, instructor and employer which includes instructional objectives and a list of on-the-job and in-school learning experiences; a work station which reflects equipment, skills, and tasks which are relevant to the occupations which the student has chosen as a career goal. Students must receive compensation for work performed.

The CORE should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS degree program includes the following College Credit Certificates:

Ophthalmic Laboratory Technician (0351100600) – 24 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Ophthalmic Technician  
**Career Cluster:** Health Science

**AS**Associate in Science

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as ophthalmic technicians, optical goods workers (Health Technologists and Technicians) or provide supplemental training for persons previously or presently employed in this occupation.

The content includes but is not limited to (1) to perform specified ophthalmologic tests and procedures with skill, (2) understand and practice the art of ophthalmologic assisting, thereby providing the patient with medical care of the highest quality and accuracy, (3) to become members of the health care team who contribute to the physical and psychological comfort of the patient, (4) to provide a system of quality assurance for both equipment and treatment delivery, (5) and to understand the importance of maintaining membership in the professional organizations and keeping abreast of the changes in the field of ophthalmology.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 72 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |
|-----------------------------|--------------------------------------------------------------------------------------------------|
| <u>01.0</u>                 | <u>Apply academic skills to workplace scenarios.</u>                                             |
| <u>01.01</u>                | <u>Use reading skills.</u>                                                                       |
| <u>01.02</u>                | <u>Use writing skills.</u>                                                                       |
| <u>01.03</u>                | <u>Use mathematical strategies and procedures.</u>                                               |
| <u>01.04</u>                | <u>Use scientific principles and procedures.</u>                                                 |
| <u>02.0</u>                 | <u>Design a solution to an industry problem.</u>                                                 |
| <u>02.01</u>                | <u>Use critical thinking.</u>                                                                    |
| <u>02.02</u>                | <u>Use creativity.</u>                                                                           |
| <u>02.03</u>                | <u>Make sound decisions.</u>                                                                     |
| <u>02.04</u>                | <u>Solve problems.</u>                                                                           |
| <u>02.05</u>                | <u>Reason.</u>                                                                                   |
| <u>02.06</u>                | <u>Plan and organize.</u>                                                                        |
| <u>03.0</u>                 | <u>Manage resources within an industry project</u>                                               |
| <u>03.01</u>                | <u>Manage time.</u>                                                                              |
| <u>03.02</u>                | <u>Manage money or resources.</u>                                                                |
| <u>03.03</u>                | <u>Manage materials.</u>                                                                         |
| <u>03.04</u>                | <u>Manage personnel.</u>                                                                         |
| <u>04.0</u>                 | <u>Oversee the subcomponents, operations and output of a technical or organizational system.</u> |
| <u>04.01</u>                | <u>Manage systems.</u>                                                                           |
| <u>04.02</u>                | <u>Monitor systems.</u>                                                                          |
| <u>04.03</u>                | <u>Improve systems.</u>                                                                          |
| <u>05.0</u>                 | <u>Use information for decision making.</u>                                                      |
| <u>05.01</u>                | <u>Locate information.</u>                                                                       |
| <u>05.02</u>                | <u>Organize information.</u>                                                                     |
| <u>05.03</u>                | <u>Use information.</u>                                                                          |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Discuss the ophthalmic practice and personnel.
- 02.0 Discuss legal and ethical issues in the ophthalmic practice.
- 03.0 Describe the basic functions of the human body systems.
- 04.0 Discuss the anatomy and physiology of the human eye.
- 05.0 Describe the clinical findings of common ocular pathology.
- 06.0 Demonstrate knowledge of geometric and physiologic optics.
- 07.0 Demonstrate clinical knowledge of ocular and systemic medications.
- 08.0 Demonstrate the taking of an ocular and medical history.
- 09.0 Demonstrate basic ophthalmic clinical skills.
- 10.0 Demonstrate intermediate ophthalmic clinical skills.
- 11.0 Demonstrate knowledge of ophthalmic surgical procedures.
- 12.0 Discuss patient services provided or by the ophthalmic technician.
- 13.0 Demonstrate office safety and maintenance.
- 14.0 Demonstrate knowledge of patient vital signs and reactions.
- 15.0 Demonstrate advanced clinical skills.

Florida Department of Education  
Student Performance Standards

Program Title: Ophthalmic Technician  
CIP Number: 1351180301  
Program Length: 72 credit hours

**At the completion of this program, the student will be able to:**

01.0 Discuss the ophthalmic practice and personnel. The student will be able to:

01.01 List the professionals who work in the eye care industry.

01.02 Differentiate between licensure and certification of personnel.

01.03 Identify the general responsibilities of ophthalmic technical personnel, the ophthalmic scribe and the administrative staff.

01.04 Define the levels of training and certification of the ophthalmic medical professional.

01.05 Define the scope of practice of the ophthalmic technician.

02.0 Discuss legal and ethical issues in the ophthalmic practice. The student will be able to:

02.01 Identify methods of protection of personal health information for the patient.

02.02 Summarize the Health Information Portability Accountability Act as it pertains to care of the patient in the ophthalmic clinic.

02.03 Discuss ethical and legal standards of medical care.

02.04 Identify the components of a malpractice case, and methods employed to prevent negligence in the clinical setting.

02.05 Discuss physician and technician malpractice insurance.

02.06 Describe the process of informed consent.

03.0 Describe the basic functions of the human body systems. The student will be able to:

03.01 Discuss the components and functions of the respiratory and cardiovascular system.

03.02 Describe the anatomy and physiology of the endocrine and reproductive systems.

03.03 Identify the components of the integumentary and digestive systems.

03.04 Describe the structure and function of the musculoskeletal system.

|       |                                                                                              |
|-------|----------------------------------------------------------------------------------------------|
| 03.05 | Discuss the components and functions of the nervous system.                                  |
| 04.0  | Discuss the anatomy and physiology of the human eye. The student will be able to:            |
| 04.01 | Identify the bones and soft tissues of the orbit.                                            |
| 04.02 | List the components of the anterior and posterior segments of the eye.                       |
| 04.03 | Discuss the anatomy of the eyelids and lacrimal system.                                      |
| 04.04 | Describe the anatomy and physiology of the cornea and lens.                                  |
| 04.05 | List the primary functions of the fibrous, vascular and sensory tunics of the eye.           |
| 04.06 | Discuss the origins and functions of the extraocular muscles.                                |
| 04.07 | Describe ocular development during embryologic and fetal stages of gestation.                |
| 04.08 | Identify the cranial nerves associated with movement and sensation of the ocular structures. |
| 04.09 | Describe the visual and pupillary pathways.                                                  |
| 04.10 | Discuss the pupillary light reflex.                                                          |
| 04.11 | Describe the process of accommodation.                                                       |
| 05.0  | Describe the clinical findings of common ocular pathology. The student will be able to:      |
| 05.01 | Discuss the principles of pathology.                                                         |
| 05.02 | Discuss basic microbiology as it applies to the ocular structures.                           |
| 05.03 | Differentiate between signs and symptoms of the ophthalmic patient.                          |
| 05.04 | Differentiate between inflammation and infection.                                            |
| 05.05 | Identify disorders of the orbit.                                                             |
| 05.06 | Identify benign and malignant lesions of the eyelids.                                        |
| 05.07 | List eyelid disorders due to malposition.                                                    |
| 05.08 | Discuss disorders of the lacrimal system.                                                    |
| 05.09 | Identify disorders of the conjunctiva and sclera.                                            |

|       |                                                                                                         |
|-------|---------------------------------------------------------------------------------------------------------|
| 05.10 | Describe abnormal findings of the cornea.                                                               |
| 05.11 | Discuss intraocular inflammation of the iris and ciliary body.                                          |
| 05.12 | Describe cataractous changes in the crystalline lens.                                                   |
| 05.13 | Discuss the ocular and visual changes associated with glaucoma.                                         |
| 05.14 | List the signs and symptoms related to macular disease.                                                 |
| 05.15 | Discuss the retinal vascular changes associated with diabetes and cardiovascular disease.               |
| 06.0  | Demonstrate knowledge of geometric and physiologic optics. The student will be able to:                 |
| 06.01 | Discuss the visible spectrum and theories of visible light.                                             |
| 06.02 | Describe the processes of reflection, refraction and absorption of visible light.                       |
| 06.03 | Discuss the index of refraction of different media.                                                     |
| 06.04 | Describe the process of refraction through a prism and a lens.                                          |
| 06.05 | Identify the principle focal point and refraction of light rays through a plus or minus spherical lens. |
| 06.06 | Calculate the focal length and dioptric power of a lens.                                                |
| 06.07 | Identify the principle focal lines and Conoid of Sturm of a spherocylinder lens.                        |
| 06.08 | Discuss human refractive errors.                                                                        |
| 06.09 | Differentiate between simple, compound and mixed forms of astigmatism.                                  |
| 06.10 | Identify lenses used in the correction of refractive errors.                                            |
| 06.11 | Transpose prescriptions between plus and minus cylinder format.                                         |
| 06.12 | Calculate a spherical equivalent power of a spherocylinder lens.                                        |
| 07.0  | Demonstrate clinical knowledge of ocular and systemic medications. The student will be able to:         |
| 07.01 | Describe methods of delivery of ophthalmic and systemic medications.                                    |
| 07.02 | Use accepted terminology and abbreviations related to pharmacology.                                     |
| 07.03 | List ophthalmic medications used in the general ophthalmic examination.                                 |

|       |                                                                                                                                    |
|-------|------------------------------------------------------------------------------------------------------------------------------------|
| 07.04 | Classify ophthalmic topical medications by the bottle top colors.                                                                  |
| 07.05 | List topical medications used in the treatment of glaucoma.                                                                        |
| 07.06 | Instill ophthalmic drops and ointments using proper technique.                                                                     |
| 07.07 | Identify potential allergic reactions and side effects of topical ophthalmic medications.                                          |
| 07.08 | Describe the mechanism of action of anti-VEGF medications used in the treatment of macular degeneration and diabetic retinopathy.  |
| 07.09 | Match common systemic disease processes with the medications used in the treatment of these diseases.                              |
| 07.10 | List potential allergic reactions and ocular side effects of systemic medications.                                                 |
| 08.0  | Demonstrate the taking of an ocular and medical history. The student will be able to:                                              |
| 08.01 | Communicate effectively in written and oral communication.                                                                         |
| 08.02 | Document information in the written or electronic medical record using appropriate medical terminology and accepted abbreviations. |
| 08.03 | Preserve patient confidentiality using HIPAA guidelines.                                                                           |
| 08.04 | Maintain applicable ethical and legal standards.                                                                                   |
| 08.05 | Elicit the patient's chief complaint and history of present illness.                                                               |
| 08.06 | Identify pertinent ocular and systemic history that could affect the patient's ocular health.                                      |
| 08.07 | Record ocular and systemic medicines.                                                                                              |
| 08.08 | Obtain pertinent family history of ocular and systemic disease.                                                                    |
| 08.09 | Elicit the social history as it pertains to the ocular examination.                                                                |
| 08.10 | Record patient allergies and allergic reactions to ocular and systemic medicines, environmental substances and seasonal allergens. |
| 09.0  | Demonstrate basic ophthalmic clinical skills. The student will be able to:                                                         |
| 09.01 | Test and record the patient's level of visual acuity at distance and at near.                                                      |
| 09.02 | Test and record the visual acuity level using a pinhole.                                                                           |
| 09.03 | Select non-traditional methods of visual acuity assessment for non-verbal, illiterate or non-English speaking patients.            |
| 09.04 | Identify methods of testing visual acuity on physically disabled patients or patients with nystagmus.                              |

|       |                                                                                                                         |
|-------|-------------------------------------------------------------------------------------------------------------------------|
| 09.05 | Neutralize the patient's current spectacle correction by manual or automated lensometry.                                |
| 09.06 | Measure and record the corneal surface refractive power by manual or automated keratometry.                             |
| 09.07 | Assess the patient's color vision using Ishihara plates, Farnsworth D-15, or other color tests.                         |
| 09.08 | Test and record the central visual field using an Amsler grid.                                                          |
| 09.09 | Test and record the patient's visual field using confrontation testing.                                                 |
| 09.10 | Perform formal visual field assessment using automated perimetry.                                                       |
| 09.11 | Identify patient reliability errors and technician errors on the automated perimetry printout.                          |
| 09.12 | Determine the binocular status of the patient using fusion and stereopsis testing.                                      |
| 09.13 | Assess the extraocular motility by version and duction testing.                                                         |
| 09.14 | Qualify strabismic deviations by position.                                                                              |
| 09.15 | Differentiate between phoric and tropic deviations.                                                                     |
| 09.16 | Identify and measure extraocular muscle imbalances using prism and alternate cover or Maddox rod and prism testing.     |
| 09.17 | Estimate the ocular muscle deviation by corneal reflex positions using the Hirschberg or Krimsky methods.               |
| 09.18 | Assess and record the direct and consensual pupillary reactions to light and accommodation.                             |
| 09.19 | Perform swinging flashlight test and identify afferent pupillary defects.                                               |
| 09.20 | Examine the ocular adnexa and record the findings.                                                                      |
| 09.21 | Instill topical anesthetic and dilating drops.                                                                          |
| 09.22 | Perform and record intraocular pressure measurements using Goldman applanation, Tonopen, or other methods of tonometry. |
| 10.0  | Demonstrate intermediate ophthalmic clinical skills. The student will be able to:                                       |
| 10.01 | Perform retinoscopy to estimate the patient's refractive error.                                                         |
| 10.02 | Demonstrate refractometry techniques to obtain the best corrected visual acuity.                                        |
| 10.03 | Perform manifest and cycloplegic refractometry.                                                                         |
| 10.04 | Identify ground-in or induced prism using manual or automated lensometry.                                               |

|       |                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------|
| 10.05 | Determine add power required for near or intermediate tasks.                                                         |
| 10.06 | Assess the anterior segment using the slit lamp biomicroscope.                                                       |
| 10.07 | Perform axial length measurements using ultrasound and optical instruments.                                          |
| 10.08 | Calculate the intraocular lens power range in the pre-operative cataract evaluation.                                 |
| 10.09 | Perform optical imaging of the retina and optic nerve.                                                               |
| 10.10 | Use digital or film cameras to obtain external, anterior segment or fundus images.                                   |
| 10.11 | Assist in fluorescein and ICG angiography.                                                                           |
| 10.12 | Identify phases of fluorescein angiography.                                                                          |
| 10.13 | Measure the corneal thickness by pachymetry.                                                                         |
| 10.14 | Map the corneal surfaces by corneal topography.                                                                      |
| 10.15 | Match diagnostic procedures used in evaluation and diagnosis with specific ocular disorders.                         |
| 10.16 | Identify normal and abnormal findings in ophthalmic diagnostic testing printouts.                                    |
| 10.17 | Perform basic soft and rigid contact lens fitting.                                                                   |
| 10.18 | Identify pathology related to contact lens wear.                                                                     |
| 10.19 | Describe methods of patient education related to the care, wearing schedule and insertion/removal of contact lenses. |
| 11.0  | Demonstrate knowledge of ophthalmic surgical procedures. The student will be able to:                                |
| 11.01 | Identify minor surgery procedures performed in the ophthalmic clinical setting.                                      |
| 11.02 | Describe surgical procedures commonly performed on the orbits, lacrimal system and eyelids.                          |
| 11.03 | List procedures performed for correction of strabismus.                                                              |
| 11.04 | Identify and describe refractive surgical procedures.                                                                |
| 11.05 | Differentiate between full thickness and lamellar corneal transplantation.                                           |
| 11.06 | Discuss the methods of cataract extraction.                                                                          |
| 11.07 | Classify intraocular lens implants used after cataract extraction.                                                   |

|       |                                                                                                                               |
|-------|-------------------------------------------------------------------------------------------------------------------------------|
| 11.08 | Identify laser and surgical procedures performed as treatment for glaucoma.                                                   |
| 11.09 | Discuss methods of removing the vitreous.                                                                                     |
| 11.10 | Describe retinal and macular surgical procedures.                                                                             |
| 11.11 | Apply proper sterile technique in the minor procedure or surgical suite.                                                      |
| 11.12 | Describe proper assisting techniques in minor procedure or surgical cases.                                                    |
| 12.0  | Discuss patient services provided or by the ophthalmic technician. The student will be able to:                               |
| 12.01 | Demonstrate proper technique of placing a pressure or non-pressure eye patch.                                                 |
| 12.02 | Demonstrate patient education of ocular and systemic disease processes.                                                       |
| 12.03 | Inform the patient of required testing, the interpreted test results, and treatment options for ophthalmic disease processes. |
| 12.04 | Counsel the patients on proper use of medications.                                                                            |
| 12.05 | Instill ocular medications using proper technique.                                                                            |
| 12.06 | Discuss triage procedures for ocular emergencies.                                                                             |
| 12.07 | Identify resources available for the patient with subnormal vision.                                                           |
| 12.08 | Instruct patient is the use of optical and non-optical low vision devices.                                                    |
| 12.09 | Instruct the patient on the insertion, removal and care of contact lenses.                                                    |
| 13.0  | Demonstrate office safety and maintenance. The student will be able to:                                                       |
| 13.01 | Identify environmental and electrical safety procedures in the clinical practice.                                             |
| 13.02 | Replace instrument bulbs and fuses employing proper technique and safety standards.                                           |
| 13.03 | Discuss methods of instrument cleaning and maintenance.                                                                       |
| 13.04 | Maintain clinical supply inventory.                                                                                           |
| 13.05 | Discuss proper disposal of hazardous and bio-medical waste.                                                                   |
| 13.06 | Describe the principles of infection control and standard universal precautions.                                              |
| 13.07 | Maintain aseptic technique in the clinical and surgical setting.                                                              |

|       |                                                                                          |
|-------|------------------------------------------------------------------------------------------|
| 13.08 | Identify potential safety hazards in the physical space.                                 |
| 14.0  | Demonstrate knowledge of patient vital signs and reactions. The student will be able to: |
| 14.01 | Perform cardiopulmonary resuscitation in a clinical setting.                             |
| 14.02 | Measure and record blood pressure.                                                       |
| 14.03 | Measure and record patient temperature.                                                  |
| 14.04 | Assess patient respiration.                                                              |
| 14.05 | Recognize patient allergic response in the clinical setting.                             |
| 15.0  | Demonstrate advanced clinical skills. The student will be able to:                       |
| 15.01 | Assess visual ability in low vision patients.                                            |
| 15.02 | Calculate magnification needed for optical aids used in low vision.                      |
| 15.03 | Identify optical low vision aids.                                                        |
| 15.04 | Identify paralytic extraocular muscle using the three-step test.                         |
| 15.05 | Assess and record head and posture abnormalities.                                        |
| 15.06 | Perform fusional amplitudes.                                                             |
| 15.07 | Demonstrate use of direct ophthalmoscopy.                                                |
| 15.08 | Perform advanced ocular imaging procedures.                                              |
| 15.09 | Determine prism addition in spectacle correction.                                        |
| 15.10 | Calculate induced prism using Prentice's formula.                                        |
| 15.11 | Perform specialty contact lens fitting.                                                  |
| 15.12 | Perform ophthalmic electrophysiology testing.                                            |
| 15.13 | Demonstrate clinical supervision skills.                                                 |
| 15.14 | Demonstrate clinical training techniques.                                                |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Clinical education has been established for students in this program to permit accurate assessment of the knowledge, skills, and abilities of students in the clinical component of the program. After completion of the prerequisite practice of ophthalmic assisting procedures, students indicate to the faculty their readiness for evaluation of competence in a specific competency category/procedure.

Multiple affiliates are utilized for the clinical activities which provide equitable opportunities for the student to achieve the program clinical objectives. The resulting clinical rotations provide students with the technical skills for the ophthalmic medical technician.

### **Special Notes**

The program is designed to provide the medical community of ophthalmology with workers who, under the supervision of an ophthalmologist, aid in the treatment of eye conditions and diseases. The curriculum provides students an opportunity to develop technical and social skills through experiences in the clinic, classroom, and laboratory.

The Health Careers Core must be taken by all students first (secondary, postsecondary adult and postsecondary vocational) planning to complete any Health Occupations program. Once successfully completed, the core does not need to be repeated at any instructional level.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Health Science career cluster.

The purpose of this program is to prepare students for employment as health navigators, (Medical and Health Services Manager) or (Navigators, Benefits Navigators, Community Health Worker)Service Specialists, or to provide supplemental training for persons previously or currently employed in these occupations.

The content includes but is not limited to communication skills, leadership skills, human relations and employability skills, principles of health insurance, introduction to computer literacy, health care organization, medical ethics, legal aspects, and advanced technical skills in a chosen health-related profession, health and safety.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Program Structure**

This program is a planned sequence of instruction consisting of 60 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |
|-----------------------------|--------------------------------------------------------------------------------------------------|
| <u>01.0</u>                 | <u>Apply academic skills to workplace scenarios.</u>                                             |
| <u>01.01</u>                | <u>Use reading skills.</u>                                                                       |
| <u>01.02</u>                | <u>Use writing skills.</u>                                                                       |
| <u>01.03</u>                | <u>Use mathematical strategies and procedures.</u>                                               |
| <u>01.04</u>                | <u>Use scientific principles and procedures.</u>                                                 |
| <u>02.0</u>                 | <u>Design a solution to an industry problem.</u>                                                 |
| <u>02.01</u>                | <u>Use critical thinking.</u>                                                                    |
| <u>02.02</u>                | <u>Use creativity.</u>                                                                           |
| <u>02.03</u>                | <u>Make sound decisions.</u>                                                                     |
| <u>02.04</u>                | <u>Solve problems.</u>                                                                           |
| <u>02.05</u>                | <u>Reason.</u>                                                                                   |
| <u>02.06</u>                | <u>Plan and organize.</u>                                                                        |
| <u>03.0</u>                 | <u>Manage resources within an industry project</u>                                               |
| <u>03.01</u>                | <u>Manage time.</u>                                                                              |
| <u>03.02</u>                | <u>Manage money or resources.</u>                                                                |
| <u>03.03</u>                | <u>Manage materials.</u>                                                                         |
| <u>03.04</u>                | <u>Manage personnel.</u>                                                                         |
| <u>04.0</u>                 | <u>Oversee the subcomponents, operations and output of a technical or organizational system.</u> |
| <u>04.01</u>                | <u>Manage systems.</u>                                                                           |
| <u>04.02</u>                | <u>Monitor systems.</u>                                                                          |
| <u>04.03</u>                | <u>Improve systems.</u>                                                                          |
| <u>05.0</u>                 | <u>Use information for decision making.</u>                                                      |
| <u>05.01</u>                | <u>Locate information.</u>                                                                       |
| <u>05.02</u>                | <u>Organize information.</u>                                                                     |
| <u>05.03</u>                | <u>Use information.</u>                                                                          |

**Job Attainment****10.0 Find, assess and apply to job opportunities.**10.01 Identify online job posts relevant to his or her career aspirations.10.02 Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.10.03 Define what information, documentation and writing prompts are required for the positions.**11.0 Communicate personal competence, character and fit for a job opportunity.**11.01 Develop a resume.11.02 Write a cover letter.11.03 Curate a professional portfolio that includes work products.11.04 Prepare for and experience a mock job interview.**12.0 Cultivate and leverage relationships to professionally advance.**12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.12.02 Develop a plan to cultivate a professional digital footprint.12.03 Develop a networking plan for a specific industry of interest.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate computer literacy with emphasis on current and emerging technology and the implications for and the effects on our health, wellness, and society.
- 02.0 Demonstrate knowledge of practical methods of speech composition, organizational patterns, and presentation.
- 03.0 Demonstrate basic knowledge of medical ~~language~~ terminology, anatomy, and physiology.
- 04.0 Demonstrate knowledge of the major ethical theories in philosophy and how they relate to clinical care.
- 05.0 Demonstrate knowledge of the use of scientific methods in measuring and examining ~~society~~ societal factors.
- 06.0 Meet requirements for cardiopulmonary resuscitation (CPR-Certification) certification.
- 07.0 Demonstrate knowledge of modern scientific psychology and its application to human behavior.
- 08.0 Demonstrate knowledge of the basic concepts of statistical design and data analysis.
- 09.0 Identify and apply basic knowledge of ~~different~~ aspects of health and wellness.
- 10.0 Demonstrate knowledge of various topics pertinent to the five core disciplines of public health.
- 11.0 ~~Demonstrate~~ Identify and apply knowledge of the ~~ability to identify~~ U.S. ~~health care~~ healthcare delivery ~~funding sources~~ and fiscal resources.
- 12.0 Demonstrate ability to work as a health navigator or community health worker.
- 13.0 Demonstrate knowledge of current events in the field of public health.
- 14.0 Demonstrate knowledge of health communication and its impact on health outcomes.
- 15.0 Define and describe aging, long-term care, and types of residences.
- 16.0 Demonstrate the use of evidence to draw conclusions about disease etiology.
- 17.0 Demonstrate knowledge of the three primary levels of prevention.
- 18.0 Demonstrate knowledge of how the insured and uninsured interact with the ~~United States~~ U.S. healthcare system.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Health Navigator  
**CIP Number:** 1351220800  
**Program Length:** 60 credit hours

**At the completion of this program, the student will be able to:**

|       |                                                                                                                                                                                                                                                                                                               |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Demonstrate computer literacy with emphasis on current <u>and emerging</u> technology and the implications for and the effects on our <u>health, wellness, and</u> society. -The student will be able to:                                                                                                     |
| 01.01 | Define <del>cyber-space and</del> online communications, including the impact of the Internet <del>and World Wide Web; ethical</del> <u>as it pertains to ethics, legal</u> , privacy, environmental, and health-related issues.                                                                              |
| 01.02 | <del>Demonstrate an understanding</del> <u>Describe the use of</u> <del>how</del> <u>online communications, including the impact of</u> the Internet <del>and World Wide Web impact; as it pertains to</del> <u>ethics, legal</u> , privacy <del>as well as</del> , environmental, and health-related issues. |
| 02.0  | Demonstrate knowledge of practical methods of speech composition, organizational patterns, and presentation. -The student will be able to:                                                                                                                                                                    |
| 02.01 | <del>Demonstrate ability to present information in a group setting.</del> <u>Design and deliver a professional presentation that effectively communicates key messages, engages the audience, and utilizes appropriate visual aids and technology to enhance understanding.</u>                               |
| 02.02 | <del>Demonstrate an understanding of</del> <u>Describe</u> how to <u>effectively</u> organize, aggregate, and present information.                                                                                                                                                                            |
| 03.0  | Demonstrate basic knowledge of medical <del>language</del> <u>terminology</u> , anatomy, and physiology. -The student will be able to:                                                                                                                                                                        |
| 03.01 | Define, describe, and discuss anatomic <u>names and</u> descriptive terms of the body.                                                                                                                                                                                                                        |
| 03.02 | Demonstrate an understanding of basic patient discharge and transfer procedures.                                                                                                                                                                                                                              |
| 03.03 | Describe common abbreviations and commonly used medical terms and their proper usage.                                                                                                                                                                                                                         |
| 03.04 | <del>Define and describe anatomic names of bones and organs of the body.</del>                                                                                                                                                                                                                                |
| 04.0  | Demonstrate knowledge of the major ethical theories in philosophy and how they relate to clinical care. -The student will be able to:                                                                                                                                                                         |
| 04.01 | Define ethical theories in philosophy and how they are used in evaluating contemporary issues in health care.                                                                                                                                                                                                 |
| 04.02 | Describe applications of ethical codes.                                                                                                                                                                                                                                                                       |
| 04.03 | Explain variations in ethical standards across <del>health care</del> <u>healthcare</u> .                                                                                                                                                                                                                     |
| 04.04 | <u>Explain the ethical considerations of artificial intelligence (AI) technologies in research, data collection and analysis, health care delivery and documentation, and individual healthcare decisions.</u>                                                                                                |

|       |                                                                                                                                                                                                                                                                                                                                  |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <a href="#">04.05 Recognize and report various forms of abuse (e.g., trafficking, domestic violence, and neglect).</a>                                                                                                                                                                                                           |
|       | <a href="#">04.06 Identify evidence-based prevention strategies and interventions for victims of abuse.</a>                                                                                                                                                                                                                      |
| 05.0  | Demonstrate knowledge of the use of scientific methods in <a href="#">measuring and</a> examining <del>society</del> <a href="#">societal factors</a> . The student will be able to:                                                                                                                                             |
| 05.01 | Define and discuss <a href="#">societal</a> group <del>structure</del> <a href="#">structures</a> .                                                                                                                                                                                                                              |
| 05.02 | Define and discuss socialization, social stratification, and social roles.                                                                                                                                                                                                                                                       |
| 05.03 | <del>Explain deviance, collective behavior, ethnic diversity and globalism.</del> <a href="#">Explain societal influences and behaviors, factors that influence population density, and the impact of international health policies.</a>                                                                                         |
|       | <a href="#">05.04 Identify and describe safety principles in the online environment for privacy and security of patient medical information and organizational processes.</a>                                                                                                                                                    |

|       | <del>06.02 Demonstrate knowledge and skills necessary in an emergency to reduce pain until professional medical help arrives.</del>                                                                                                                                                                                              |
|       | <del>06.03</del> <a href="#">06.01</a> Demonstrate knowledge and skills necessary <a href="#">to perform CPR</a> in an emergency to <a href="#">help sustain life</a> , minimize <del>the</del> <a href="#">injury</a> , and <a href="#">mitigate</a> consequences <del>of injury</del> until professional medical help arrives. |
| 07.0  | Demonstrate knowledge of modern scientific psychology and its application to human behavior. -The student will be able to:                                                                                                                                                                                                       |
| 07.01 | Discuss personality development.                                                                                                                                                                                                                                                                                                 |
| 07.02 | Define: perception, motivation, learning, thinking, and remembering.                                                                                                                                                                                                                                                             |
| 07.03 | Describe how <del>the scientific method is</del> <a href="#">observation, experimentation, and analysis are</a> used in <a href="#">modern</a> psychology.                                                                                                                                                                       |
| 07.04 | Explain emotion and how it impacts perception.                                                                                                                                                                                                                                                                                   |
| 07.05 | Define <a href="#">the types of</a> intelligence and describe how <del>it is</del> <a href="#">they are</a> measured.                                                                                                                                                                                                            |
| 07.06 | Define cognition and how information is input, stored, and retrieved.                                                                                                                                                                                                                                                            |
| 08.0  | Demonstrate knowledge of the basic concepts of statistical design and data analysis-: The student will be able to:                                                                                                                                                                                                               |
| 08.01 | Discuss descriptive and inferential statistics.                                                                                                                                                                                                                                                                                  |
| 08.02 | <del>Define:</del> <a href="#">Describe</a> data organization and analysis, probability, discrete and continuous probability distributions, confidence intervals, hypothesis testing, correlation, and simple linear regression.                                                                                                 |
| 08.03 | Describe when to use inferential, descriptive, or probability statistics.                                                                                                                                                                                                                                                        |

|                        |                                                                                                                                                                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 08.04                  | Define basic statistics: <u>including</u> mean, median, mode, and variance.                                                                                                                                                                                                  |
| 09.0                   | Identify and apply basic knowledge of <del>different</del> aspects of <u>health and</u> wellness. -The student will be able to:                                                                                                                                              |
| 09.01                  | Discuss integrating <del>health</del> <u>healthy</u> living <u>choices</u> into one's lifestyle.                                                                                                                                                                             |
| 09.02                  | Define: <u>how</u> physical fitness, mental health, nutrition, substance use and abuse, and family <del>living and how these factors</del> <u>influences</u> connect with the <del>concepts</del> <u>concept</u> of <u>patient</u> wellness <del>on a personal level</del> . |
| 09.03                  | <u>Describe the impact of social media and time in the digital environment on physical and mental health and wellness.</u>                                                                                                                                                   |
| <del>09.03</del> 09.04 | Identify the risk factors for cardiovascular disease.                                                                                                                                                                                                                        |
| <del>09.04</del> 09.05 | Describe the effects of tobacco <del>and</del> smoking <del>on the human body</del> <u>and vaping</u> .                                                                                                                                                                      |
| <del>09.05</del> 09.06 | Describe <del>the</del> various fitness methods to improve health.                                                                                                                                                                                                           |
| <del>09.06</del> 09.07 | Discuss the effects of <del>nutrition</del> <u>nutritional impacts</u> on health and wellness.                                                                                                                                                                               |
| <del>09.07</del> 09.08 | Explain body composition and achieving a healthy weight.                                                                                                                                                                                                                     |
| <del>09.08</del> 09.09 | Describe <u>the types of stress, its impacts on health and wellness, and</u> stress management strategies.                                                                                                                                                                   |
| <del>09.09</del> 09.10 | Discuss <del>the</del> <u>substance</u> use and abuse <del>of illicit drugs</del> in society.                                                                                                                                                                                |
| <del>09.10</del> 09.11 | Describe the effects of chronic disease on the human body.                                                                                                                                                                                                                   |
| 10.0                   | Demonstrate knowledge of various topics pertinent to the five core disciplines of public health. -The student will be able to:                                                                                                                                               |
| 10.01                  | Define public health.                                                                                                                                                                                                                                                        |
| 10.02                  | Describe <del>why</del> <u>how</u> public health <del>is important</del> <u>strategies and practices contribute to achieving local, state, and national health objectives</u> .                                                                                              |
| 10.03                  | Summarize the historical milestones in public health.                                                                                                                                                                                                                        |
| 10.04                  | Identify and describe the <u>following</u> five core disciplines of public health: <u>epidemiology/biostatistics, community/family health, environmental/occupational health, health policy/management, and global health</u> .                                              |
| 10.05                  | Identify elements of public health <del>in our everyday world</del> .                                                                                                                                                                                                        |
| 10.06                  | Explain the concepts of: prevention, detection, control of infectious and chronic conditions, <u>and the factors that contribute to differences in population-level</u> health <del>disparities, and global health</del> <u>indicators</u> .                                 |
| 10.07                  | Compare and contrast examples of major domestic and international public health issues.                                                                                                                                                                                      |
| 11.0                   | <del>Demonstrate</del> <u>Identify and apply knowledge of</u> the <del>ability to identify</del> U.S. health care delivery <del>funding sources, and</del> <u>fiscal resources</u> . The student will be able to:                                                            |

|       |                                                                                                                                                                                                                                                                                           |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11.01 | <del>Demonstrate an understanding of</del> <u>Describe</u> the <del>evolutionary perspective</del> <u>changing landscape</u> of health services and <del>its</del> <u>their</u> relevance <del>with</del> <u>on</u> the existing healthcare system, facilities, and services.             |
| 11.02 | Explain the <del>social, political, and impacts of</del> public <del>policy implications of health-related issues</del> <u>policies on healthcare</u> , such as availability <del>of healthcare services</del> , cost, delivery, and <del>financing</del> <u>financial implications</u> . |
| 11.03 | Describe the various health care organizations and service delivery options.                                                                                                                                                                                                              |
| 11.04 | Identify the <del>major</del> health professions and explain the role of each and their licensing/educational requirements.                                                                                                                                                               |
| 11.05 | Compare and contrast the health care delivery systems of the U.S. with other <del>major industrialized nations</del> <u>countries</u> .                                                                                                                                                   |
| 11.06 | <del>Understand</del> <u>Describe</u> the array of <u>healthcare</u> career <del>choices in the health care sector of the economy</del> <u>options</u> .                                                                                                                                  |
| 11.07 | Discuss the various sources and uses of funds for healthcare <del>as well as market trends and future implications</del> .                                                                                                                                                                |
| 12.0  | Demonstrate ability to work as a health navigator or community health worker. -The student will be able to:                                                                                                                                                                               |
| 12.01 | Identify community agencies where health navigators are employed.                                                                                                                                                                                                                         |
| 12.02 | Complete a field experience that provides <del>student with</del> descriptions of primary duties, annual salary, and <del>interaction with professional organization</del> <u>interpersonal collaboration</u> .                                                                           |
| 12.03 | Demonstrate an understanding <u>and expectation</u> of the essential duties of health navigators.                                                                                                                                                                                         |
| 12.04 | Describe barriers to care faced by <u>healthcare providers</u> , patients, and consumers of <u>the</u> placement site.                                                                                                                                                                    |
| 12.05 | Discuss the core health activities of <u>the</u> placement site.                                                                                                                                                                                                                          |
| 12.06 | Demonstrate an understanding of how placement <del>site works</del> <u>sites work</u> with: local, county, state, and federal agencies.                                                                                                                                                   |
| 12.07 | Evaluate the role of <u>a</u> health <del>navigation</del> <u>navigator</u> in patient health care.                                                                                                                                                                                       |
| 12.08 | Demonstrate communication techniques to assess patient health and needs.                                                                                                                                                                                                                  |
| 12.09 | <u>Apply health literacy principles and adapt instruction and training, as appropriate, to patients, groups, and populations.</u>                                                                                                                                                         |
| 13.0  | Demonstrate knowledge of current events in the field of public health. -The student will be able to:                                                                                                                                                                                      |
| 13.01 | Identify <del>outlets</del> <del>(sources and platforms (e.g.,</del> news, media, <u>and</u> governmental) used to communicate public health events to the general public.                                                                                                                |
| 13.02 | Describe the implications of current events on public health.                                                                                                                                                                                                                             |
| 13.03 | Discuss concerns related to how public health information is <del>relayed</del> <u>presented</u> to the public.                                                                                                                                                                           |
| 13.04 | Recognize how reporting of global events (e.g., epidemics, regime change, and weather events) has the potential to impact other areas.                                                                                                                                                    |

|       |                                                                                                                                                                                                                                                                                                                                                         |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.05 | Locate emerging public health trends.                                                                                                                                                                                                                                                                                                                   |
| 13.06 | Explain <u>the</u> etiology of emerging public health trends discussed throughout <del>semester</del> <u>the course</u> .                                                                                                                                                                                                                               |
| 13.07 | Discuss legislation designed to protect the public's right to information during major health events (epidemics, terrorism, natural disasters).                                                                                                                                                                                                         |
| 14.0  | Demonstrate knowledge of health communication and its impact on health outcomes. -The student will be able to:                                                                                                                                                                                                                                          |
| 14.01 | Describe key concepts and skills used to identify <u>and measure</u> individuals with reduced health literacy.                                                                                                                                                                                                                                          |
| 14.02 | Explain how understanding health literacy is <del>as</del> a determinant of health.                                                                                                                                                                                                                                                                     |
| 14.03 | <del>Discuss how to best provide culturally appropriate communication and care starting with an awareness of one's own culture and the skills needed to provide sensitive and meaningful care and services to others.</del> <u>Advocate for patients, ensuring that their voices are heard and respected in the healthcare decision-making process.</u> |
| 14.04 | Discuss basic constructs of theories used in behavior change and persuasion.                                                                                                                                                                                                                                                                            |
| 14.05 | Classify health communication programs based on disease type (e.g., chronic vs. infectious).                                                                                                                                                                                                                                                            |
| 14.06 | Determine communication methods to be used in specific settings ( <del>healthcare</del> <u>e.g., health care</u> , school, and workplace).                                                                                                                                                                                                              |
| 14.07 | Discuss risks and rewards associated with <u>the</u> use of <del>digital communication</del> <u>technology-based applications</u> in <del>health care</del> <u>healthcare</u> .                                                                                                                                                                         |
| 15.0  | Define and describe <u>aging</u> , long-term care, and types of residences. -The student will be able to:                                                                                                                                                                                                                                               |
| 15.01 | <del>Explain psychological factors associated with the graying of populations in developed areas.</del>                                                                                                                                                                                                                                                 |
| 15.02 | <u>15.01</u> Describe demographic characteristics of <u>an</u> aging population.                                                                                                                                                                                                                                                                        |
| 15.02 | <u>Explain psychological factors associated with aging.</u>                                                                                                                                                                                                                                                                                             |
| 15.03 | Describe the phenomenon of increasing life expectancy <u>and the impact on the U.S. healthcare system, economy, and society</u> .                                                                                                                                                                                                                       |
| 15.04 | Discuss health promotion <del>and</del> , prevention, <u>and end-of-life planning</u> for aging populations.                                                                                                                                                                                                                                            |
| 15.05 | Compare and contrast aging populations <del>across the 20 and 21<sup>st</sup> centuries</del> <u>from a historical perspective</u> .                                                                                                                                                                                                                    |
| 15.06 | <del>Summarize the geriatric medicine movement.</del> <u>Describe the levels of care and types of residences for different health needs.</u>                                                                                                                                                                                                            |
| 16.0  | Demonstrate the use of evidence to draw conclusions about disease etiology. -The student will be able to:                                                                                                                                                                                                                                               |
| 16.01 | Define <del>evidenced</del> <u>evidence</u> -based <del>thinking</del> <u>practices</u> in public health.                                                                                                                                                                                                                                               |
| 16.02 | Identify evidence-based <del>recommendations to determine</del> <u>practices in</u> disease etiology, <u>the</u> benefits, and <del>basic</del> recommendations for prevention.                                                                                                                                                                         |

|                        |                                                                                                                                                                                                                                                       |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.03                  | Discuss health information concepts related to economic, legal, and social issues.                                                                                                                                                                    |
| 16.04                  | Investigate a problem by using <del>evidenced</del> -evidence-based <del>thinking</del> practice skills to define a health problem and determine <del>what</del> the information <del>that</del> is —needed to make <del>aan</del> educated decision. |
| 16.05                  | Locate and evaluate online health information to determine <del>that</del> appropriate audiences are reached using <del>content that is patient-specific</del> <del>content to the demographic group</del> .                                          |
| 17.0                   | Demonstrate knowledge of the three primary levels of prevention. -The student will be able to:                                                                                                                                                        |
| 17.01                  | Discuss implementation methods of prevention used in public health: <del>including</del> education, motivation, and obligation.                                                                                                                       |
| 17.02                  | Describe the three levels of prevention in public health: <del>including</del> primary, secondary, and tertiary.                                                                                                                                      |
| 17.03                  | Explain how preventative methods can be used throughout the <del>life-cycle</del> lifespan.                                                                                                                                                           |
| 17.04                  | Identify individual and community <del>prevention</del> -needs <del>in-order</del> to connect available resources to distressed areas <del>and prevent adverse effects</del> .                                                                        |
| 17.05                  | Summarize specific primary prevention methods, including: vaccinations, exercise, nutrition counseling, and birth control.                                                                                                                            |
| 17.06                  | Summarize secondary prevention methods, including: screening for risk factors of <del>cardiovascular</del> disease and injury prevention.                                                                                                             |
| 17.07                  | Summarize specific tertiary prevention methods, including: treatment to control symptoms and prevent complications.                                                                                                                                   |
| 18.0                   | Demonstrate knowledge of how the insured and uninsured interact with the <del>United States healthcare</del> U.S. health care system. -The student will be able to:                                                                                   |
| 18.01                  | Identify types of health insurance, <del>–</del> (e.g., Medicaid, Medicare <del>and</del> , Medigap, exchanges, <del>and</del> employment-based <del>–</del> ).                                                                                       |
| 18.02                  | Accurately describe the history, <del>advantages, and disadvantages</del> of the development of the U.S. <del>Healthcare</del> health care system.                                                                                                    |
| 18.03                  | Explain the relationship between essential services <del>such as: (e.g., preventive care, emergency care, choice of providers, institutional options, prescription drug options, and coverage decisions–)</del> .                                     |
| 18.04                  | Describe issues associated with having access to <del>care</del> healthcare in the absence of health insurance and consequences of the decision not to obtain health insurance.                                                                       |
| 18.05                  | Explain goals, limitations, and basic <del>rules</del> guidelines for eligibility for <del>worker's</del> workers' compensation.                                                                                                                      |
| <del>18.06</del>       | <del>Discuss market and social justice philosophies in relation to health care coverage internationally.</del>                                                                                                                                        |
| <del>18.07</del> 18.06 | <del>Describe</del> Discuss the <del>advantages</del> economic implications related to access and <del>disadvantages</del> affordability of the U.S. <del>health care</del> healthcare coverage-system.                                               |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### General Education Course Requirements for AS and AAS Degrees

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded. The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization(s)~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### Accommodations

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS degree program includes the following College Credit Certificates:

Health Navigator Specialist (0351220800) - 31 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Orthotics & Prosthetics Technology  
**Career Cluster:** Health Science

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as Orthotic and Prosthetic Technicians (Medical Appliance Technicians).

The content includes, but is not limited to, human anatomy and physiology, biomechanics and kinesiology, material science, orthotic and prosthetic fabrication, safety procedures, CAD/CAM, and clinical pathologies.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 60 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.

- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |
|-----------------------------|--------------------------------------------------------------------------------------------------|
| <u>01.0</u>                 | <u>Apply academic skills to workplace scenarios.</u>                                             |
| <u>01.01</u>                | <u>Use reading skills.</u>                                                                       |
| <u>01.02</u>                | <u>Use writing skills.</u>                                                                       |
| <u>01.03</u>                | <u>Use mathematical strategies and procedures.</u>                                               |
| <u>01.04</u>                | <u>Use scientific principles and procedures.</u>                                                 |
| <u>02.0</u>                 | <u>Design a solution to an industry problem.</u>                                                 |
| <u>02.01</u>                | <u>Use critical thinking.</u>                                                                    |
| <u>02.02</u>                | <u>Use creativity.</u>                                                                           |
| <u>02.03</u>                | <u>Make sound decisions.</u>                                                                     |
| <u>02.04</u>                | <u>Solve problems.</u>                                                                           |
| <u>02.05</u>                | <u>Reason.</u>                                                                                   |
| <u>02.06</u>                | <u>Plan and organize.</u>                                                                        |
| <u>03.0</u>                 | <u>Manage resources within an industry project</u>                                               |
| <u>03.01</u>                | <u>Manage time.</u>                                                                              |
| <u>03.02</u>                | <u>Manage money or resources.</u>                                                                |
| <u>03.03</u>                | <u>Manage materials.</u>                                                                         |
| <u>03.04</u>                | <u>Manage personnel.</u>                                                                         |
| <u>04.0</u>                 | <u>Oversee the subcomponents, operations and output of a technical or organizational system.</u> |
| <u>04.01</u>                | <u>Manage systems.</u>                                                                           |
| <u>04.02</u>                | <u>Monitor systems.</u>                                                                          |
| <u>04.03</u>                | <u>Improve systems.</u>                                                                          |
| <u>05.0</u>                 | <u>Use information for decision making.</u>                                                      |
| <u>05.01</u>                | <u>Locate information.</u>                                                                       |
| <u>05.02</u>                | <u>Organize information.</u>                                                                     |
| <u>05.03</u>                | <u>Use information.</u>                                                                          |

|                                                                                                 |

| <b><u>Job Attainment</u></b> |                                                                                                                               |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b><u>10.0</u></b>           | <b><u>Find, assess and apply to job opportunities.</u></b>                                                                    |
| <b><u>10.01</u></b>          | <b><u>Identify online job posts relevant to his or her career aspirations.</u></b>                                            |
| <b><u>10.02</u></b>          | <b><u>Compare and contrast the job posts' required qualifications, job duties, compensation, benefits and employers.</u></b>  |
| <b><u>10.03</u></b>          | <b><u>Define what information, documentation and writing prompts are required for the positions.</u></b>                      |
| <b><u>11.0</u></b>           | <b><u>Communicate personal competence, character and fit for a job opportunity.</u></b>                                       |
| <b><u>11.01</u></b>          | <b><u>Develop a resume.</u></b>                                                                                               |
| <b><u>11.02</u></b>          | <b><u>Write a cover letter.</u></b>                                                                                           |
| <b><u>11.03</u></b>          | <b><u>Curate a professional portfolio that includes work products.</u></b>                                                    |
| <b><u>11.04</u></b>          | <b><u>Prepare for and experience a mock job interview.</u></b>                                                                |
| <b><u>12.0</u></b>           | <b><u>Cultivate and leverage relationships to professionally advance.</u></b>                                                 |
| <b><u>12.01</u></b>          | <b><u>Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.</u></b> |
| <b><u>12.02</u></b>          | <b><u>Develop a plan to cultivate a professional digital footprint.</u></b>                                                   |
| <b><u>12.03</u></b>          | <b><u>Develop a networking plan for a specific industry of interest.</u></b>                                                  |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Discuss and understand the role and responsibilities of an orthotic and prosthetic technician.
- 02.0 Discuss and describe an overview of the human body, including organization and chemical process.
- 03.0 Demonstrate knowledge and use medical terminology integral to Orthotics and Prosthetic technology.
- 04.0 Demonstrate knowledge of foot orthoses.
- 05.0 Demonstrate knowledge of UCBL foot orthoses.
- 06.0 Demonstrate knowledge of Ankle Foot Orthoses (AFO).
- 07.0 Demonstrate knowledge of Knee-Ankle-Foot Orthoses (KAFO).
- 08.0 Demonstrate knowledge of Hip-Knee-Ankle-Foot Orthoses (HKAFO), Standing Frames/Parapodiums.
- 09.0 Demonstrate knowledge of Knee Orthoses (KO) and Hip Orthoses.
- 10.0 Demonstrate the knowledge of Hand Orthoses and Wrist-Hand Orthoses
- 11.0 Demonstrate knowledge of Elbow Orthoses Shoulder-Elbow-Wrist-Hand (SEWH) and Fracture Orthoses.
- 12.0 Demonstrate knowledge of Lumbo-Sacral Orthoses (LSO), Thoraco-Lumbo-Sacral Orthoses (TLSO) and Cervico-Thoraco-Lumbo-Sacral Orthoses (CTLSO).
- 13.0 Demonstrate knowledge of Partial Foot Prostheses.
- 14.0 Demonstrate knowledge of Syme Prostheses.
- 15.0 Demonstrate knowledge of Transtibial Prostheses.
- 16.0 Demonstrate knowledge of Transfemoral Prostheses.
- 17.0 Demonstrate knowledge of Knee Disarticulation and Hip Disarticulation/Hemipelvectomy Prostheses.
- 18.0 Demonstrate knowledge of Transradial Prostheses.
- 19.0 Demonstrate knowledge of Transhumeral Prostheses.

**Program Title:** Orthotics & Prosthetics Technology  
**CIP Number:** 1351230703  
**Program Length:** 60 credit hours ———

**At the completion of this program, the student will be able to:**

|       |                                                                                                                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Discuss and understand the role and responsibilities of an Orthotic and Prosthetic Technician. The student will be able to:                                                                                                 |
| 01.01 | Explain the role of the orthotic and prosthetic technician in providing ethical patient-centered care in technical support of patients.                                                                                     |
| 01.02 | Demonstrate knowledge of professional responsibilities of the orthotic and prosthetic technician to the orthotic and prosthetic workflow as well as to promotion of the field.                                              |
| 01.03 | Demonstrate understanding of the governing statutes and ethical considerations of the role of the technician, support personnel, and those holding certificates and/or licensure in any orthotic and prosthetic profession. |
| 01.04 | Demonstrate understanding of safety procedures throughout fabrication, delivers, and maintenance of all orthotic and/or prosthetic services.                                                                                |
| 01.05 | Demonstrate knowledge of safety organizations and governing bodies including, but not limited to, OSHA, The Joint Commission, and HIPPA.                                                                                    |
| 01.06 | Discuss the importance of professional development including continuing education, promotion of public awareness of the orthotic and prosthetic profession and involvement in professional organizations.                   |
| 02.0  | Discuss and describe an overview of the human body, including organization and chemical process. The student will be able to:                                                                                               |
| 02.01 | Demonstrate an understanding of the interrelationships of the structure of the human body and the specific functions of its cells, tissues, organs and organ systems.                                                       |
| 02.02 | Demonstrate knowledge of the basic principles of chemistry that govern the normal maintenance of homeostasis.                                                                                                               |
| 02.03 | Demonstrate understanding of the malfunction of homeostatic mechanisms in response to stress and/or disorders in the human body.                                                                                            |
| 03.0  | Demonstrate knowledge and use medical terminology integral to Orthotics and Prosthetic Technology. The student will be able to:                                                                                             |
| 03.01 | Define the meaning of prefixes, suffixes, word roots and combining forms used in analyzing and defining medical terms.                                                                                                      |
| 03.02 | Correctly spell and/or pronounce medical terms and abbreviations essential to the practice of Orthotics and Prosthetics.                                                                                                    |
| 04.0  | Demonstrate knowledge of foot orthoses. The student will be able to:                                                                                                                                                        |
| 04.01 | Demonstrate knowledge of current materials used in the fabrication of hard and soft foot orthoses.                                                                                                                          |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 04.02 | Understand the difference between corrective and accommodative foot orthoses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 04.03 | Demonstrate knowledge and skill to prepare positive models for foot orthoses (category I and II modifications only*).                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 04.04 | Demonstrate skill to form materials to fabricate hard and soft orthoses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 04.05 | Demonstrate knowledge and skill of modifications of foot orthoses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 04.06 | Demonstrate knowledge and skill to correctly fit foot orthoses into shoes including corrections for heel height.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 04.07 | Demonstrate knowledge of shoe modification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 04.08 | Demonstrate knowledge of anatomy and biomechanics of the normal and pathological foot.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 05.0  | Demonstrate knowledge of UCBL foot orthoses. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 05.01 | Demonstrate knowledge of the bony landmarks and pressure tolerant areas of the foot.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 05.02 | Demonstrate knowledge to locate the medial, lateral, and transverse arches of the foot.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 05.03 | Demonstrate knowledge and skill to prepare a positive UCBL model for fabrication (category I and II modifications only*).                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 05.04 | Demonstrate knowledge of materials used to fabricate UCBL orthoses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 05.05 | Demonstrate knowledge and skill in the processes used to fabricate UCBL orthoses including medial posting and trim lines.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 06.0  | Demonstrate knowledge of Ankle Foot Orthoses (AFO). -- The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 06.01 | Demonstrate knowledge of the following AFO designs: <ul style="list-style-type: none"> <li>• Posterior leaf spring/flexible ankle</li> <li>• Thermoplastic solid ankle</li> <li>• Axial resisting</li> <li>• CROW/neuropathic walker</li> <li>• Metal</li> <li>• Dorsiflexion assist articulated</li> <li>• Dorsiflexion stop articulated</li> <li>• Plantarflexion resist articulated</li> <li>• Plantarflexion stop articulated</li> <li>• Limited motion articulated</li> <li>• Hybrid</li> <li>• Padded anterior shell</li> <li>• Molded inner boot</li> </ul> |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 06.02 | Demonstrate the skills to fabricate: <ul style="list-style-type: none"> <li>• A thermoplastic AFO</li> <li>• A metal AFO with attached shoe</li> <li>• An articulated plastic AFO with self-aligning joints (Tamarack)</li> <li>• An articulated plastic AFO without self-aligning joints (Oklahoma)</li> <li>• Heel posts</li> <li>• Various strapping configurations</li> <li>• A plastic AFO with modification for varus and/or valgus ankle control</li> </ul> |
| 06.03 | Demonstrate knowledge of components for various AFOs.                                                                                                                                                                                                                                                                                                                                                                                                              |
| 06.04 | Demonstrate the knowledge and skills to correct a paper tracing to accommodate fixed or flexible deformities of the ankle.                                                                                                                                                                                                                                                                                                                                         |
| 06.05 | Demonstrate knowledge and skill in making angular changes to a negative model in the sagittal plane, only under a practitioner's instruction (i.e., set ankle at 3 degrees of dorsiflexion).                                                                                                                                                                                                                                                                       |
| 06.06 | Demonstrate knowledge and skill to prepare positive models for fabrication of AFOs (category I and II modifications only*).                                                                                                                                                                                                                                                                                                                                        |
| 06.07 | Demonstrate knowledge of anatomy and biomechanics of the normal and pathological foot and ankle.                                                                                                                                                                                                                                                                                                                                                                   |
| 07.0  | Demonstrate knowledge of Knee-Ankle-Foot Orthoses (KAFO). The student will be able to:                                                                                                                                                                                                                                                                                                                                                                             |
| 07.01 | Demonstrate knowledge of the following KAFO designs: <ul style="list-style-type: none"> <li>• Metal</li> <li>• Plastic</li> <li>• Hybrid</li> <li>• Stance Control</li> <li>• Axial resisting</li> <li>• Fracture</li> </ul>                                                                                                                                                                                                                                       |
| 07.02 | Demonstrate the skills to fabricate: <ul style="list-style-type: none"> <li>• A metal KAFO</li> <li>• A plastic/metal (hybrid) KAFO</li> </ul>                                                                                                                                                                                                                                                                                                                     |
| 07.03 | Demonstrate knowledge of components for coronal, sagittal and transverse plane control.                                                                                                                                                                                                                                                                                                                                                                            |
| 07.04 | Demonstrate the knowledge and skills to correct a lower limb tracing for a KAFO.                                                                                                                                                                                                                                                                                                                                                                                   |
| 07.05 | Demonstrate knowledge and skill in making angular changes to a negative model in the sagittal plane, only under a practitioner's instruction (i.e. set knee in 3 degrees of flexion).                                                                                                                                                                                                                                                                              |
| 07.06 | Demonstrate skill to prepare a lower limb positive model for fabrication of a KAFO (category I and II modifications only*).                                                                                                                                                                                                                                                                                                                                        |
| 07.07 | Demonstrate skill to incorporate tibial torsion into a metal KAFO.                                                                                                                                                                                                                                                                                                                                                                                                 |
| 07.08 | Demonstrate knowledge of anatomy and biomechanics of the normal and pathological knee.                                                                                                                                                                                                                                                                                                                                                                             |

|       |                                                                                                                                                                                                                                                                     |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 08.0  | Demonstrate knowledge of Hip-Knee-Ankle-Foot Orthoses (HKAFO), Standing Frames/Parapodiums. The student will be able to:                                                                                                                                            |
| 08.01 | Demonstrate knowledge of the following HKAFO and standing frame designs: <ul style="list-style-type: none"> <li>• Standing frames and parapodiums</li> <li>• Reciprocating gait orthoses</li> <li>• Metal HKAFO designs</li> <li>• Plastic HKAFO designs</li> </ul> |
| 08.02 | Demonstrate knowledge of components for various HKAFO designs.                                                                                                                                                                                                      |
| 08.03 | Demonstrate knowledge of hip joint placement.                                                                                                                                                                                                                       |
| 08.04 | Demonstrate knowledge of tracing correction principles for fabrication of HKAFOs.                                                                                                                                                                                   |
| 08.05 | Demonstrate knowledge of spinal control devices that may be incorporated in HKAFO designs.                                                                                                                                                                          |
| 08.06 | Demonstrate knowledge of anatomy and biomechanics of the normal and pathological hip.                                                                                                                                                                               |
| 09.0  | Demonstrate knowledge of Knee Orthoses (KO) and Hip Orthoses. The student will be able to:                                                                                                                                                                          |
| 09.01 | Demonstrate knowledge of custom and prefabricated KO designs and principles.                                                                                                                                                                                        |
| 09.02 | Demonstrate knowledge pediatric hip control orthoses.                                                                                                                                                                                                               |
| 09.03 | Demonstrate knowledge of post-surgical/trauma hip control orthoses.                                                                                                                                                                                                 |
| 10.0  | Demonstrate the knowledge of Hand Orthoses and Wrist-Hand Orthoses. The student will be able to:                                                                                                                                                                    |
| 10.01 | Demonstrate knowledge and skill to fabricate plastic and/or metal hand orthosis and wrist- hand orthoses.                                                                                                                                                           |
| 10.02 | Demonstrate knowledge and skill to prepare positive models (category I and II modifications only*).                                                                                                                                                                 |
| 10.03 | Demonstrate knowledge of anatomy and biomechanics of the normal and pathological hand and wrist.                                                                                                                                                                    |
| 11.0  | Demonstrate knowledge of Elbow Orthoses Shoulder-Elbow-Wrist-Hand (SEWH) and Fracture Orthoses. The student will be able to:                                                                                                                                        |
| 11.01 | Demonstrate knowledge of Elbow orthoses.                                                                                                                                                                                                                            |
| 11.02 | Demonstrate knowledge of SEWH orthoses.                                                                                                                                                                                                                             |
| 11.03 | Demonstrate knowledge of various upper extremity orthoses for fracture management.                                                                                                                                                                                  |
| 11.04 | Demonstrate knowledge of anatomy and biomechanics of the normal and pathological elbow.                                                                                                                                                                             |
| 12.0  | Demonstrate knowledge of Lumbo-Sacral Orthoses (LSO), Thoraco-Lumbo-Sacral Orthoses (TLSO) and Cervico-Thoraco-Lumbo-Sacral Orthoses (CTLSO). The student will be able to:                                                                                          |

|       |                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------|
| 12.01 | Demonstrate knowledge of metal and plastic LSO and TLSO designs.                                                         |
| 12.02 | Demonstrate skills to fabricate metal LSO or TLSO spinal orthoses designs.                                               |
| 12.03 | Demonstrate skills to fabricate plastic bi-valve TLSO or LSO spinal orthoses designs.                                    |
| 12.04 | Demonstrate skills to fabricate scoliosis TLSO designs.                                                                  |
| 12.05 | Demonstrate knowledge and skill to prepare positive models for spinal orthoses (category I and II modifications only*).  |
| 12.06 | Demonstrate knowledge of metal and plastic CTLSO designs and principles.                                                 |
| 12.07 | Demonstrate knowledge of anatomy and biomechanics of the normal and pathological spine.                                  |
| 13.0  | Demonstrate knowledge of Partial Foot Prostheses. The student will be able to:                                           |
| 13.01 | Demonstrate knowledge of designs and principles for partial foot prostheses.                                             |
| 13.02 | Demonstrate knowledge of current materials used in the fabrication of partial foot prostheses.                           |
| 13.03 | Demonstrate skill to form materials to fabricate partial foot prostheses.                                                |
| 13.04 | Demonstrate knowledge and skill to prepare positive models for partial foot prostheses (category I modifications only*). |
| 14.0  | Demonstrate knowledge of Syme Prostheses. The student will be able to:                                                   |
| 14.01 | Demonstrate knowledge of designs for Syme prostheses.                                                                    |
| 14.02 | Demonstrate the skills to fabricate expandable wall and/or medial opening prostheses.                                    |
| 14.03 | Demonstrate knowledge and skill to prepare positive models for Syme prostheses (category I modifications only*).         |
| 14.04 | Demonstrate knowledge of alignment for Syme prostheses.                                                                  |
| 15.0  | Demonstrate knowledge of Transtibial Prostheses. The student will be able to:                                            |
| 15.01 | Demonstrate knowledge of patellar tendon-bearing transtibial socket designs with cuff suspensions systems.               |
| 15.02 | Demonstrate knowledge of total surface bearing transtibial socket designs.                                               |
| 15.03 | Demonstrate knowledge of hydrostatic transtibial socket designs using a locking mechanism.                               |
| 15.04 | Demonstrate knowledge of roll-on suction suspension systems.                                                             |
| 15.05 | Demonstrate knowledge of waist belt suspension systems.                                                                  |

|       |                                                                                                                         |
|-------|-------------------------------------------------------------------------------------------------------------------------|
| 15.06 | Demonstrate knowledge of supracondylar suspension systems.                                                              |
| 15.07 | Demonstrate knowledge of knee joint and thigh lacer suspension systems.                                                 |
| 15.08 | Demonstrate knowledge of transtibial suspension sleeves.                                                                |
| 15.09 | Demonstrate knowledge of elevated vacuum transtibial socket designs and suspension systems.                             |
| 15.10 | Demonstrate the skills to fabricate an Exoskeletal transtibial prosthesis.                                              |
| 15.11 | Demonstrate the skills to fabricate an Endoskeletal transtibial prosthesis.                                             |
| 15.12 | Demonstrate the skills to fabricate a Soft interface for a transtibial prosthesis.                                      |
| 15.13 | Demonstrate the skills to fabricate a transtibial diagnostic socket.                                                    |
| 15.14 | Demonstrate knowledge of components for various transtibial prostheses.                                                 |
| 15.15 | Demonstrate knowledge and skill to prepare positive models for transtibial prostheses (category I modifications only*). |
| 15.16 | Demonstrate the skills of transtibial alignment and transfer.                                                           |
| 15.17 | Demonstrate techniques for cosmetic finishing of a transtibial prostheses.                                              |
| 16.0  | Demonstrate knowledge of Transfemoral Prostheses. The student will be able to:                                          |
| 16.01 | Demonstrate knowledge of Ischial containment transfemoral socket designs and suspensions systems:                       |
| 16.02 | Demonstrate knowledge of quadrilateral transfemoral socket designs.                                                     |
| 16.03 | Demonstrate knowledge of roll-on suction transfemoral suspension systems with or without locking mechanisms.            |
| 16.04 | Demonstrate knowledge of hip joint, pelvic band, and waist belt transfemoral suspension systems.                        |
| 16.05 | Demonstrate knowledge of suction socket transfemoral socket designs and suspension systems.                             |
| 16.06 | Demonstrate knowledge of auxiliary suspension systems (TES belt, Silesian bandage).                                     |
| 16.07 | Demonstrate knowledge of transfemoral suspension sleeves.                                                               |
| 16.08 | Demonstrate knowledge of elevate vacuum transfemoral socket designs and suspension systems.                             |
| 16.09 | Demonstrate the skills to fabricate transfemoral diagnostic sockets.                                                    |
| 16.10 | Demonstrate the skills to fabricate endoskeleton transfemoral prosthesis.                                               |

|       |                                                                                                                                 |
|-------|---------------------------------------------------------------------------------------------------------------------------------|
| 16.11 | Demonstrate knowledge of components for various transfemoral prostheses.                                                        |
| 16.12 | Demonstrate knowledge and skills to prepare positive models for transfemoral prostheses (category I modifications only*).       |
| 16.13 | Demonstrate the skills of transfemoral alignment and transfer.                                                                  |
| 16.14 | Demonstrate techniques for cosmetic finishing of transfemoral prostheses.                                                       |
| 17.0  | Demonstrate knowledge of Knee Disarticulation and Hip Disarticulation / Hemipelvectomy Prostheses. The student will be able to: |
| 17.01 | Demonstrate knowledge of knee disarticulation prosthetic designs and principles.                                                |
| 17.02 | Demonstrate knowledge of hip disarticulation and hemipelvectomy prosthetic designs and principles.                              |
| 18.0  | Demonstrate knowledge of Transradial Prostheses. The student will be able to:                                                   |
| 18.01 | Demonstrate knowledge of partial hand prosthesis designs and principles.                                                        |
| 18.02 | Demonstrate knowledge of passive/cosmetic prosthesis designs and principles.                                                    |
| 18.03 | Demonstrate knowledge of flexible and rigid hinges for transradial prostheses.                                                  |
| 18.04 | Demonstrate knowledge of transradial suspension techniques.                                                                     |
| 18.05 | Demonstrate knowledge of body powered transradial prosthesis designs and principles.                                            |
| 18.06 | Demonstrate knowledge of external powered transradial prosthesis designs and principles.                                        |
| 18.07 | Demonstrate the skills to fabricate short transradial prosthesis.                                                               |
| 18.08 | Demonstrate the skills to fabricate long transradial prosthesis.                                                                |
| 18.09 | Demonstrate the skills to fabricate transradial prostheses with rigid and flexible hinges.                                      |
| 18.10 | Demonstrate the skills to fabricate transradial prosthesis control harness and cable systems.                                   |
| 18.11 | Demonstrate knowledge of components for various transradial prostheses.                                                         |
| 18.12 | Demonstrate knowledge and skill to prepare positive models for transradial prostheses (category I modifications only*).         |
| 18.13 | Demonstrate the skill of transradial alignment.                                                                                 |
| 18.14 | Demonstrate techniques for cosmetic finishing of transradial prostheses.                                                        |
| 19.0  | Demonstrate knowledge of Transhumeral Prostheses. The student will be able to:                                                  |

|       |                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------|
| 19.01 | Demonstrate knowledge of the elbow disarticulation prosthesis designs and principles.                                    |
| 19.02 | Demonstrate knowledge of shoulder disarticulation prosthesis designs and principles.                                     |
| 19.03 | Demonstrate knowledge of interscapular-thoracic prosthesis designs and principles.                                       |
| 19.04 | Demonstrate knowledge of transhumeral prosthesis designs and principles.                                                 |
| 19.05 | Demonstrate knowledge of passive/cosmetic transhumeral designs and principles.                                           |
| 19.06 | Demonstrate knowledge of body powered transhumeral designs and principles.                                               |
| 19.07 | Demonstrate knowledge of external powered transhumeral designs and principles.                                           |
| 19.08 | Demonstrate knowledge of transhumeral suspension techniques.                                                             |
| 19.09 | Demonstrate the skills to fabricate transhumeral prostheses.                                                             |
| 19.10 | Demonstrate the skills to fabricate a transhumeral control harness and cable system.                                     |
| 19.11 | Demonstrate knowledge of components for various transhumeral prostheses.                                                 |
| 19.12 | Demonstrate knowledge and skill to prepare positive models for transhumeral prostheses (category I modifications only*). |
| 19.13 | Demonstrate the skill of transhumeral alignment.                                                                         |
| 19.14 | Demonstrate techniques for cosmetic finishing of transhumeral prostheses.                                                |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

Students who complete an Orthotic and Prosthetic Technician Programs accredited by the Commission on Accreditation of Allied Health Education Programs (CAAHEP) are eligible to sit for the Certified O & P Technician examination through the American Board for Certification in Orthotics, Prosthetics & Pedorthics (ABCOP). Please visit [www.caahep.org](http://www.caahep.org) and [www.abcop.org](http://www.abcop.org) for more information.

### **General Education Course Requirements for AS and AAS Degrees**

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded) The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan

with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Nursing R.N.  
**Career Cluster:** Health Science

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as registered nurses. The Health Careers Core must be taken by all students first (secondary and postsecondary adult) planning to complete any Health Occupations program. Once successfully completed, the core does not need to be repeated at any instructional level.

The content includes but is not limited to-, theoretical instruction and clinical experience in medical, surgical, obstetric, pediatric, and geriatric nursing; theoretical instruction and clinical experience in acute, care, long term care and community settings; theoretical instruction and clinical application of vocational role and function; personal, family and community health concepts; nutrition; human growth and development over the life span; body structure and function; interpersonal relationship skills, mental health concepts; pharmacology and administration of medications; legal aspects of practice; and current issues in nursing.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## **Program Structure**

This program is a planned sequence of instruction consisting of 72 credit hours.

When developing the course sequence for the local implementation of this program, select courses that:

- Meet the skill development requirements of the standards and benchmarks of this program.
- Meet the general education core course requirements of Rule 6A-14.0303, Florida Administrative Code.
- Where reasonable and practicable, align with programs offered by your institution or other postsecondary institutions in Florida, including:
  - Related CCC and ATD credentials.
  - Baccalaureate degrees within the same career pathway and/or Federal CIP code.

Visit FloridaShines' Discover Programs website to identify other institutions that offer similar programs to review their course sequencing. Where appropriate, course alignment between institutions offering related programs can facilitate interagency student articulation.

Visit FloridaShines' Common Prerequisites Manual to identify courses that are prerequisites for admission into an upper division program. When sub-baccalaureate courses are aligned to the course admissions requirements of baccalaureate programs with the same career pathway, students can enter upper division coursework seamlessly.

## **Regulated Programs**

**This program is regulated by the Florida Board of Nursing:** ~~<http://floridasnursing.gov/>~~<http://floridasnursing.gov/>

Clinical instruction of nursing students will meet the requirements of [s. 464.019](#), F.S. Clinical experience must make up at least 50% of the total program. Clinical Simulation may be used for no more than 50% of the total clinical experience [unless the Florida Board of Nursing approves additional Clinical Simulation experiences](#).

Please refer to [s. 464.019 \(1\)\(ba\)\(1\)](#), F.S., for faculty credential requirements to teach this program.

The program must be approved by the Florida Board of Nursing. It is important that each associate degree nursing program effectively utilize the services of an active program advisory committee composed of ~~individuals'~~[individuals](#) representative of the community. Only when the educators and employers work together can the associate degree nursing graduate be provided the competencies that are most needed for successful employment as a new registered nurse.

~~The Human Patient Simulator (HPS) may be used for a limited number of clinical hours with prior approval from the Florida Board of Nursing.~~

Associate degree nurses (ADN) are prepared to provide nursing care to clients in a variety of settings. ADN graduates are eligible to take the National Council Licensing Examination (NCLEX-RN)[\)](#), which tests minimum competence to practice safe nursing care.

## Florida's Career Readiness Skills for CTE Programs

| <u>Employability Skills</u> |                                                                                                  |
|-----------------------------|--------------------------------------------------------------------------------------------------|
| <u>01.0</u>                 | <u>Apply academic skills to workplace scenarios.</u>                                             |
| <u>01.01</u>                | <u>Use reading skills.</u>                                                                       |
| <u>01.02</u>                | <u>Use writing skills.</u>                                                                       |
| <u>01.03</u>                | <u>Use mathematical strategies and procedures.</u>                                               |
| <u>01.04</u>                | <u>Use scientific principles and procedures.</u>                                                 |
| <u>02.0</u>                 | <u>Design a solution to an industry problem.</u>                                                 |
| <u>02.01</u>                | <u>Use critical thinking.</u>                                                                    |
| <u>02.02</u>                | <u>Use creativity.</u>                                                                           |
| <u>02.03</u>                | <u>Make sound decisions.</u>                                                                     |
| <u>02.04</u>                | <u>Solve problems.</u>                                                                           |
| <u>02.05</u>                | <u>Reason.</u>                                                                                   |
| <u>02.06</u>                | <u>Plan and organize.</u>                                                                        |
| <u>03.0</u>                 | <u>Manage resources within an industry project</u>                                               |

- ~~17.0~~ 12.0 Demonstrate core teaching and learning competencies ~~in the core components of a~~ professional ~~nursing teaching and learning~~ nurse.
- ~~18.0~~ 13.0 Demonstrate core collaboration competencies ~~in the core components of a~~ professional ~~nursing collaboration~~ nurse.
- ~~19.0~~ 14.0 Demonstrate core managing care competencies ~~in the core components of a~~ professional ~~nursing managing care~~ nurse.
- ~~20.0~~ 15.0 Demonstrate ~~competencies in the core components of the professional nurse~~ leadership and delegation competencies of a professional nurse.

Florida Department of Education  
Student Performance Standards

Program Title: ~~Registered Nurse~~ Nursing R.N.  
CIP Number: 1351380100  
Program Length: 72 credit hours

~~Standards 1–11 are referred to as the Health Science Core and are required standards in this program. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.~~

~~To ensure consistency whenever these courses are offered, the health science core standards (1–11) and benchmarks have been placed in a separate document. To access this document, visit this link:  
<https://www.fldoe.org/core/fileparse.php/20569/urlt/health-sci-core-psav-cc-2324.rtf>~~

**At the completion of this program, the student will be able to:**

**Associate Degree Nursing: ~~Intended outcomes 12–20 complete the occupational exit of Associate Degree Nurse.~~ Inherent within ~~these~~the intended outcomes of the Associate Degree Nursing is the utilization and application of the nursing process (assessment, diagnosis, planning, implementation, and evaluation) across the ~~life span~~lifespan and in diverse settings within the health continuum.**

01.0 Demonstrate knowledge of the health care delivery system and health occupations. The student will be able to:

01.01 Identify the basic components of the healthcare delivery system, including public, private, government, and non-profit.

01.02 Identify common methods of payment for healthcare services.

01.03 Describe the various types of healthcare providers and the range of services available, including resources to victims of domestic violence.

01.04 Describe the composition and functions of a healthcare team.

01.05 Identify the general roles and responsibilities of the individual members of the healthcare team.

01.06 Identify the roles and responsibilities of the consumer within the healthcare delivery system.

01.07 Identify characteristics of effective teams.

01.08 Recognize methods for building positive team relationships.

01.09 Discuss attributes and attitudes of an effective leader.

|                        |                                                                                                                                                                                                             |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 06.02                  | Exemplify basic professional standards of healthcare workers as they apply to hygiene, dress, language, confidentiality, and behavior (i.e., telephone etiquette, courtesy, and self-introductions).        |
| 06.03                  | Identify documents that may be required when applying for a job.                                                                                                                                            |
| 06.04                  | Write an appropriate resume.                                                                                                                                                                                |
| 06.05                  | Conduct a job search.                                                                                                                                                                                       |
| 06.06                  | Complete a job application form correctly.                                                                                                                                                                  |
| 06.07                  | Examine levels of education, credentialing requirements, including licensure and certification, employment opportunities, workplace environments, and career growth potential.                              |
| 06.08                  | Identify acceptable work habits.                                                                                                                                                                            |
| 06.09                  | Recognize appropriate affective/professional behavior.                                                                                                                                                      |
| 06.10                  | Compare careers within the health science career pathways (diagnostic services, therapeutic services, health informatics, support services, and biotechnology research and development).                    |
| <del>12.0</del> 07.0   | Demonstrate <del>competencies in the core components of</del> professional <del>nursing regarding</del> behavior competencies of a professional <del>behaviors-nurse</del> . The student will be able to:   |
| <del>12.04</del> 07.01 | Practice within the ethical, legal, and regulatory frameworks of nursing and standards of professional nursing practice.                                                                                    |
| <del>12.02</del> 07.02 | Report unsafe practices of healthcare providers using appropriate channels of communication.                                                                                                                |
| <del>12.03</del> 07.03 | Demonstrate accountability for nursing care given by self and or delegated to others.                                                                                                                       |
| <del>12.04</del> 07.04 | <del>Advocate for client rights</del> . Act as an advocate for clients, ensuring that their voices are heard and respected in the healthcare decision-making process.                                       |
| <del>12.05</del> 07.05 | Maintain organizational and client confidentiality.                                                                                                                                                         |
| <del>12.06</del> 07.06 | Demonstrate behaviors of the professional nursing role in accordance with the American Nurses Association (ANA <del>code</del> ) Code of <del>ethics</del> Ethics.                                          |
| <del>12.07</del> 07.07 | -Understand the role of professional organizations.                                                                                                                                                         |
| <del>12.08</del> 07.08 | Serve as a professional role model within healthcare settings and the community at large.                                                                                                                   |
| <del>12.09</del> 07.09 | Recognize the impact of political, social, and demographic forces on the delivery of health care.                                                                                                           |
| <del>12.10</del> 07.10 | Participate in lifelong learning.                                                                                                                                                                           |
| <del>12.11</del> 07.11 | Implement a plan to meet self-learning needs <u>by engaging in reflective practice, evaluating clinical performance, and identifying areas for improvement to enhance personal and professional growth.</u> |
| <del>12.12</del> 07.12 | Delineate and maintain appropriate professional boundaries in the nurse-client relationship.                                                                                                                |

|                        |                                                                                                                                                                                                                                                                                                        |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>13.0</del> 08.0   | Demonstrate <u>core communication</u> competencies <del>in the core components of a</del> professional <del>nursing communication</del> <u>nurse</u> . The student will be able to:                                                                                                                    |
| <del>13.04</del> 08.01 | Utilize therapeutic communication skills when interacting with clients, <u>caregivers</u> , and <del>support person(s)</del> <u>the healthcare team</u> .                                                                                                                                              |
| <del>13.02</del> 08.02 | Communicate relevant, accurate, and complete information in a concise, clear, and timely manner to the client and <del>support person</del> <u>caregiver(s)</u> as well as interprofessional team members.                                                                                             |
| <del>13.03</del> 08.03 | Document relevant, accurate, and complete information regarding assessments, interventions, and progress toward client outcomes.                                                                                                                                                                       |
| <del>13.04</del> 08.04 | Utilize <del>information technology</del> <u>healthcare technologies</u> , including the use of electronic health records <u>and telehealth</u> , to <del>support effectively</del> and <u>ethically</u> communicate <del>the planning and provision of client care</del> <u>patient information</u> . |
| <del>13.05</del> 08.05 | Utilize appropriate channels of communication to achieve positive client outcomes.                                                                                                                                                                                                                     |
| <del>13.06</del> 08.06 | <del>Determine</del> <u>Effectively communicate</u> the <del>communication needs/preferences</del> of <del>individual</del> <u>all</u> clients and <del>support persons(s)</del> <u>/or caregivers based on the individual's health literacy level</u> .                                               |
| <del>14.0</del> 09.0   | Demonstrate <u>core assessment</u> competencies <del>in the core components of the</del> a professional nurse <del>regarding assessment</del> . The student will be able to:                                                                                                                           |
| <del>14.04</del> 09.01 | Assess the interaction patterns of the individual client or significant <del>support person</del> <u>caregiver(s)</u> .                                                                                                                                                                                |
| <del>14.02</del> 09.02 | Assess the developmental, emotional, cultural, religious, and spiritual influences on the client's health status.                                                                                                                                                                                      |
| <del>14.03</del> 09.03 | Assess the client's health status by completing a health history and performing a physical, cognitive, psychosocial, and functional assessment.                                                                                                                                                        |
| <del>14.04</del> 09.04 | Assess client and significant <del>support person</del> <u>caregiver(s)</u> for learning strengths, capabilities, barriers, and educational needs.                                                                                                                                                     |
| <del>14.05</del> 09.05 | Assess the client's adaptation to health and behavior issues.                                                                                                                                                                                                                                          |
| <del>14.06</del> 09.06 | <del>Assess the client's response</del> <u>Evaluate client responses</u> to <u>nursing</u> interventions.                                                                                                                                                                                              |
| <del>14.07</del> 09.07 | Assess the client's knowledge and ability to access available resources to meet health needs.                                                                                                                                                                                                          |
| <del>14.08</del> 09.08 | Assess the <u>client's</u> environment for <u>risk</u> factors that may impact the <del>client's health</del> <u>healthcare</u> status.                                                                                                                                                                |
| <del>15.0</del> 10.0   | Demonstrate <u>core clinical decision-making</u> competencies <del>in the core components of the</del> a professional nurse <del>regarding clinical decision-making</del> . The student will be able to:                                                                                               |
| <del>15.01</del> 10.01 | Make clinical judgments and management decisions to ensure accurate and safe care.                                                                                                                                                                                                                     |
| <del>15.02</del> 10.02 | <del>Utilize</del> <u>Analyze</u> client data to <u>develop a</u> plan <u>of</u> care.                                                                                                                                                                                                                 |
| <del>15.03</del> 10.03 | Evaluate the effectiveness of care provided in meeting client outcomes.                                                                                                                                                                                                                                |
| <del>15.04</del> 10.04 | Modify client care as indicated by the evaluation of outcomes.                                                                                                                                                                                                                                         |

|                        |                                                                                                                                                                                                                                                                                                      |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>15.05</del> 10.05 | Participate in problem identification and data collection for research, quality control, or improvement processes to meet client outcomes.                                                                                                                                                           |
| <del>15.06</del> 10.06 | Use research and evidence-based data to plan client care and support clinical decision-making.                                                                                                                                                                                                       |
| <del>16.0</del> 11.0   | Demonstrate <u>core caring intervention</u> competencies <del>in the core components of the</del> professional nurse <del>regarding caring interventions</del> . The student will be able to:                                                                                                        |
| <del>16.04</del> 11.01 | Promote the client's dignity.                                                                                                                                                                                                                                                                        |
| <del>16.02</del> 11.02 | Provide client-centered nursing care based on emotional, cultural, religious, and spiritual influences on the client in diverse settings.                                                                                                                                                            |
| <del>16.03</del> 11.03 | Demonstrate caring behavior towards the client, <del>support person</del> caregiver(s), <del>peers and other</del> interprofessional team members <del>of the healthcare team</del> .                                                                                                                |
| <del>16.04</del> 11.04 | Implement the <del>prescribed plan of</del> care <del>regimen</del> for <u>client</u> management <del>of clients with obstetric, pediatric, medical, surgical, geriatric, or psychiatric problems across the lifespan</del> within the legal, ethical, and regulatory framework of nursing practice. |
| <del>16.05</del> 11.05 | Perform nursing interventions competently according to the current standards of professional nursing practice.                                                                                                                                                                                       |
| <del>16.06</del> 11.06 | Provide a safe physical and psychosocial environment <u>for client and caregiver(s) across the lifespan</u> .                                                                                                                                                                                        |
| <del>16.07</del> 11.07 | Assist the client and <del>support person</del> caregiver(s) to cope with and adapt to stressful events and changes in health status, including healthcare and end-of-life decision-making.                                                                                                          |
| <del>16.08</del> 11.08 | Assist the client and <del>support person</del> caregiver(s) to achieve optimum well-being.                                                                                                                                                                                                          |
| <del>16.09</del> 11.09 | Prepare the client and <del>support person</del> caregiver(s) for independent care management.                                                                                                                                                                                                       |
| <del>16.10</del> 11.10 | Implement appropriate procedures to meet regulatory and accreditation agency <del>patient</del> client safety guidelines.                                                                                                                                                                            |
| <del>17.0</del> 12.0   | Demonstrate <u>core teaching and learning</u> competencies <del>in the core components of the</del> professional nurse <del>regarding teaching and learning</del> . ## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error, and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore, the instructor **may** provide a certificate for renewal purposes to the student, verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S., for more information on disqualification for a license, certificate, or registration through the Department of Health.

Outcomes 01-11 are referred to as the Health Careers Core and do not have to be completed if the student has previously completed the Core in another health science program. The COR should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

Reinforcement of basic skills in English, mathematics, and sciences appropriate for the job preparatory programs occurs through didactic instruction and applied laboratory procedures or practice.

The location of the ADN program within the community college setting provides an appropriate academic environment for instruction in the biological, physical, social, and behavioral sciences. The community college setting further provides instruction in the communication skills basic to the successful performance of the ADN graduate in the work setting. This body of knowledge supports concepts specific to the practice of nursing.

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry: planning, management, and community issues, and health, safety, and environmental issues.

### General Education Course Requirements for AS and AAS Degrees

State Board of Education Rule 6A-14.030(4), F.A.C., identifies 15 credit hours as the minimum amount of general education coursework required in the Associate of Science (AS) degree and the Associate of Applied Science (AAS) degree. In addition, Rule 6A-14.0303, F.A.C., implements s. 1007.25, F.S., and requires students entering a technical education degree program in the 2022-2023 academic year, and thereafter, to complete at least one identified core course in each subject area as part of the general education course requirements (15 credit hours total) before a degree is awarded. The core subject areas include:

- Communication.
- Humanities.
- Mathematics.
- Natural Sciences.
- Social Sciences.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as Florida licensed massage therapists, all other service workers.

The content includes but is not limited to the theory and practice of massage, theory and practice of hydrotherapy, hygiene, practice demonstration, human anatomy and physiology, legal aspects of massage practice, allied modalities, leadership and human relations skills, health and safety, CPR, and employability skills. Colonic irrigation is optional post initial licensure.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## **Program Structure**

This program is a planned sequence of instruction consisting of two occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title      | Teacher Certification | Length    |
|-----|---------------|-------------------|-----------------------|-----------|
| A   | MSS0204       | Massage Therapy 1 | MASSAGE TH 7 G        | 375 hours |
| B   | MSS0209       | Massage Therapy 2 |                       | 375 hours |

## **Regulated Programs**

The program must be approved by the Florida Department of Health, Board of Massage Therapy so that the graduates may take the board approved examination to practice as massage therapists.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

After completion of this program students will be eligible to make an application to take the licensure examination approved by the Board of Massage Therapy, at the Department of Health, 4052 Bald Cypress Way, Bin # CO6, Tallahassee, FL 32399 850-488-0595

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

Colonic irrigation instruction is optional post initial licensure. If such instruction is provided, it must meet minimum standards as provided per the Board of Massage Therapy rule 64B7-32.005, F.A.C.

### **Course of Study Classroom Hours as stated in 64B7-32.003, F.A.C.**

| Topic                            | Required Hours |
|----------------------------------|----------------|
| Anatomy & Physiology             | 150            |
| Basic Massage Theory and History | 100            |
| Clinical Practicum               | 125            |

|                                                                     |    |
|---------------------------------------------------------------------|----|
| Allied Modalities                                                   | 76 |
| Business                                                            | 15 |
| Theory and Practice of Hydrotherapy                                 | 15 |
| Florida Laws and Rules (Chapters 456 and 480, F.S. and 64B7, F.A.C) | 10 |
| Professional Ethics                                                 | 4  |
| HIV/AIDS Education                                                  | 3  |
| Medical Errors                                                      | 2  |

## CommonFlorida's Career Technical Core—Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

|                                                                                                       |
|-------------------------------------------------------------------------------------------------------|
| <u>02.0 Design a solution to an industry problem.</u>                                                 |
| <u>02.01 Use critical thinking.</u>                                                                   |
| <u>02.02 Use creativity.</u>                                                                          |
| <u>02.03 Make sound decisions.</u>                                                                    |
| <u>02.04 Solve problems.</u>                                                                          |
| <u>02.05 Reason.</u>                                                                                  |
| <u>02.06 Plan and organize.</u>                                                                       |
| <u>03.0 Manage resources within an industry project</u>                                               |
| <u>03.01 Manage time.</u>                                                                             |
| <u>03.02 Manage money or resources.</u>                                                               |
| <u>03.03 Manage materials.</u>                                                                        |
| <u>03.04 Manage personnel.</u>                                                                        |
| <u>04.0 Oversee the subcomponents, operations and output of a technical or organizational system.</u> |
| <u>04.01 Manage systems.</u>                                                                          |
| <u>04.02 Monitor systems.</u>                                                                         |
| <u>04.03 Improve systems.</u>                                                                         |
| <u>05.0 Use information for decision making.</u>                                                      |
| <u>05.01 Locate information.</u>                                                                      |
| <u>05.02 Organize information.</u>                                                                    |
| <u>05.03 Use information.</u>                                                                         |
| <u>05.04 Analyze information.</u>                                                                     |
| <u>05.05 Communicate information.</u>                                                                 |

Student Performance Standards**

**Program Title:**           **Massage Therapy**  
**Career Certificate Program Number:**   **H120406**

**Course Number: MSS0204**

**Occupational Completion Point: A**

**Massage Therapy 1 – 375 Hours**

|       |                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Demonstrate the ability to communicate effectively as a medical therapy professional. The student will be able to:                                                                               |
| 01.01 | Demonstrate knowledge of professional communication, active listening skills, and ability to interview the client/patient to ascertain his/her indications and/or contraindications for therapy. |
| 01.02 | Demonstrate knowledge and use of appropriate medical terminology and ability to perform proper S.O.A.P (Subjective, objective, assessment and plan) notation in the field of massage therapy.    |
| 01.03 | Demonstrate knowledge of the Patients' Bill of Rights and informed consent.                                                                                                                      |
| 01.04 | Identify and demonstrate Health Insurance Portability and Accountability Act (HIPAA) standards within the massage therapy treatment and business setting.                                        |
| 02.0  | Demonstrate an understanding of human anatomy and physiology, kinesiology and pathology as related to the practice of massage therapy. The student will be able to:                              |
| 02.01 | Explain the structure and function of all the body systems, organs, tissues and cells with emphasis on origins, insertions and actions of muscles.                                               |
| 02.02 | Explain the concept of homeostasis and how it relates to massage therapy and its modalities.                                                                                                     |
| 02.03 | Explain the effects of massage on the human body.                                                                                                                                                |
| 02.04 | Demonstrate a basic knowledge of kinesiology.                                                                                                                                                    |
| 02.05 | Demonstrate a basic knowledge of various body systems' pathology.                                                                                                                                |
| 03.0  | Exhibit an understanding of the principles of the theories of therapeutic massage and demonstrate the proper techniques of massage manipulations. The student will be able to:                   |
| 03.01 | Explain the mechanical, reflexive and physiologic chemical effects of therapeutic massage.                                                                                                       |
| 03.02 | Demonstrate knowledge of the effects, usage, indications and contraindications of various lubricants in massage therapy and apply appropriately.                                                 |
| 03.03 | Demonstrate awareness of professional boundaries using acknowledgement of body language, verbal communication, and cultural cues.                                                                |
| 03.04 | Practice proper body mechanics.                                                                                                                                                                  |

|       |                                                                                                                                                                |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 03.05 | Accurately perform all therapeutic massage strokes and manipulations.                                                                                          |
| 03.06 | Demonstrate Proper client/patient positioning, support and draping techniques.                                                                                 |
| 03.07 | Demonstrate an understanding of initial treatment plan assessment, & re-assessment and treatment indications and contraindications of massage therapy.         |
| 03.08 | Apply various massage therapy techniques properly when presented with various pathological conditions and contraindications.                                   |
| 03.09 | Effectively operate common massage therapy equipment which may include electrical devices such as vibrating tools and electronic simulation, where applicable. |
| 04.0  | Demonstrate the recommended safety, hygiene and health practices for the massage therapist. The student will be able to:                                       |
| 04.01 | Explain the ways a massage establishment should be planned and maintained to promote health and safety including fire, disaster and evacuation procedures.     |
| 04.02 | Outline practices conducive to personal health, hygiene and appearance.                                                                                        |
| 04.03 | Demonstrate knowledge of measures conducive to eliminating medical errors                                                                                      |
| 04.04 | Demonstrate an understanding of diseases caused by airborne and blood borne pathogens and their legal aspects.                                                 |

**Course Number: MSS0209**  
**Occupational Completion Point: B**  
**Massage Therapy 2 – 375 Hours**

|       |                                                                                                                                        |
|-------|----------------------------------------------------------------------------------------------------------------------------------------|
| 05.0  | Exhibit an understanding of the principles of the theory of hydrotherapy and use hydrotherapy modalities. The student will be able to: |
| 05.01 | Explain the effects of hydrotherapy on the human body.                                                                                 |
| 05.02 | Interview the clients/patients to ascertain their indications and/or contraindications for hydrotherapy.                               |
| 05.03 | Appropriately perform hydrotherapy services such as thermal therapy and cryotherapy.                                                   |
| 05.04 | Demonstrate knowledge of accepted temperature and time standards for hydrotherapy techniques.                                          |
| 05.05 | Educate clients/ patients in the use of various hydrotherapy self-care techniques.                                                     |
| 06.0  | Explain and appropriately apply allied modalities related to massage therapy. The student will be able to:                             |
| 06.01 | Identify various modalities utilized within the scope of practice of massage therapy.                                                  |
| 06.02 | Identify allied modalities outside the scope of massage therapy for the purposes of referral.                                          |
| 06.03 | Explain the effects on the human body while utilizing various massage allied modalities.                                               |

|       |                                                                                                                                                                                                                                                                            |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 06.04 | Educate clients/patients in the use of various self-care techniques and applications including stretching and joint movement.                                                                                                                                              |
| 07.0  | Demonstrate knowledge of ethical practice standards and the statutes and rules of Florida Massage Practice Act and the rules of the Florida Board of Massage Therapy (Chapter 480, F.S.; Chapter 64b7, F.A.C.; Chapter 456, F.S.). The student will be able to:            |
| 07.01 | State the purpose of the Massage Practice Act. (Chapter 456 and 480, F.S.; Rule 64B7, F.A.C.)                                                                                                                                                                              |
| 07.02 | State the qualifications necessary for licensure and renewal of license.                                                                                                                                                                                                   |
| 07.03 | State the function of the Board of Massage Therapy and the Department of Health.                                                                                                                                                                                           |
| 07.04 | State the conditions necessary for acceptance for examination for licensure.                                                                                                                                                                                               |
| 07.05 | State the requirements for massage therapy establishments and their inspection.                                                                                                                                                                                            |
| 07.06 | Understand the grounds for which disciplinary actions may be taken by the Board of Massage Therapy.                                                                                                                                                                        |
| 07.07 | Define the terms: Board, Department, Massage Therapist, Apprentice, Inactive Licensure, Massage Establishment, Certification and Licensure.                                                                                                                                |
| 07.08 | Describe the various types of healthcare providers and the range of services available including resources to victims of domestic violence.                                                                                                                                |
| 07.09 | Demonstrate knowledge of ethical conduct in the massage therapy practice and the responsibility to report ethical violations.                                                                                                                                              |
| 07.10 | Discuss the massage therapists' responsibility to report abuse including domestic violence and neglect per the vulnerable persons act, including strategies for identifying, assessing, and responding to clients who may be current or past victims of human trafficking. |
| 07.11 | Understand the importance of and practice proper medical documentation, including storage and disposal.                                                                                                                                                                    |
| 08.0  | Demonstrate knowledge of basic business practices and standards. The student will be able to:                                                                                                                                                                              |
| 08.01 | Define basic business practices and standards, including basic components of public private government and nonprofit healthcare delivery systems.                                                                                                                          |
| 08.02 | Identify the function, roles and responsibilities of the massage therapist as part of the health care team.                                                                                                                                                                |
| 08.03 | List the advantages and disadvantages of business ownership versus independent contractor versus employee.                                                                                                                                                                 |
| 08.04 | Identify the necessary personal characteristics of a successful entrepreneur and a successful employee.                                                                                                                                                                    |
| 08.05 | Demonstrate the ability to create a resume and find employment opportunities with the use of current technology.                                                                                                                                                           |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

Reinforcement of basic skills in English, mathematics, and science appropriate for the job preparatory programs occurs through vocational classroom instruction and applied laboratory procedures or practice.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTOSs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated programs cannot be modified.

Florida Department of Education  
Curriculum Framework

**The standards and benchmarks for this program were updated for the 2026-27 academic year.**

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as dental assistants and to take the Dental Assisting National Board Examination. The program should meet the requirements of the Commission on Dental Accreditation of the American Dental Association and standards recommended by the Florida Board of Dentistry.

The content includes, but is not limited to, dental office and patient management, basic dental laboratory procedures, dental and general anatomy, dental terminology, nutrition, dental instrument and equipment utilization, microbiology, dental pharmacology and anesthesia, chairside assisting and expanded functions, dental office emergencies/CPR, dental radiography, maintenance and asepsis of dental operatory and instrumentation,

dental specialty procedures, employability skills, leadership and human relations skills, ethics and jurisprudence, dental materials and preventive dentistry.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 3 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title                       | Teacher Certification | Length    |
|-----|---------------|------------------------------------|-----------------------|-----------|
| A   | DEA0725       | Introduction to Dental Assisting   | DENTL ASST @7 7G      | 90 hours  |
| B   | DEA0726       | Dental Infection Control Assistant |                       | 210 hours |
| C   | DEA0727       | Dental Assisting 1                 |                       | 465 hours |
|     | DEA0728       | Dental Assisting 2                 |                       | 465 hours |

## Common Florida's Career Technical Core—Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                |

**Introduction to Dental Assisting – 90 Hours**

|       |                                                                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Demonstrate knowledge of the dental health care delivery system and dental health occupations. -The student will be able to:                                                      |
| 01.01 | Identify the basic components of the dental health care delivery system, including public, private, government, and non-profit.                                                   |
| 01.02 | Describe the various types of dental health care providers and the range of services available.                                                                                   |
| 01.03 | Describe the composition and functions of a dental health care team.                                                                                                              |
| 01.04 | Identify the general roles and responsibilities of the individual members of the dental health care team.                                                                         |
| 01.05 | Identify the roles and responsibilities of the consumer within the dental healthcare system.                                                                                      |
| 01.06 | Explain the <del>cause</del> causes and effects of factors that influence the current delivery system of dental healthcare.                                                       |
| 01.07 | Discuss the impact of emerging issues, including technology, epidemiology, bioethics, and socioeconomics, on the dental healthcare delivery system.                               |
| 01.08 | Discuss the history of dentistry <u>and the dental health care team</u> .                                                                                                         |
| 01.09 | <u>Demonstrate knowledge in communicating and collaborating with other members of the health care team to support comprehensive patient care.</u>                                 |
| 02.0  | Use oral, written, and electronic communication skills with professional etiquette in creating, expressing, and interpreting information and ideas. -The student will be able to: |
| 02.01 | Apply basic speaking and active listening skills, including reflection, restatement, and clarification techniques.                                                                |
| 02.02 | Develop basic observational skills and related documentation strategies in written and oral form.                                                                                 |
| 02.03 | Identify characteristics of <del>successful and unsuccessful</del> communication, including communication styles and barriers.                                                    |
| 02.04 | Compose written communication using correct spelling, grammar, <u>etiquette</u> , formatting <del>and</del> , confidentiality, and specific formats of letter writing.            |
| 02.05 | Recognize components of medical and dental terminology <del>and</del> , abbreviations, <u>and their uses</u> .                                                                    |
| 02.06 | Recognize the importance of courtesy and respect for patients and other health care workers and maintain good interpersonal relationships.                                        |

|            |                                                                                                                                                                                                                                                                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.07      | Recognize the importance of patient education regarding dental and health care.                                                                                                                                                                                                                                                         |
| 02.08      | Adapt communication skills to varied levels of understanding and <del>cultural</del> -orientation <del>including diverse</del> of diversity, but not limited to <u>sexual orientation, gender orientation, disability</u> , age, <del>cultural, economic, ethnic and religious groups</del> , <u>culture, economics, or ethnicity</u> . |
| 02.09      | Identify psychological considerations influencing communication and behaviors.                                                                                                                                                                                                                                                          |
| 03.0       | Describe the legal and ethical responsibilities of the dental health care worker. -The student will be able to:                                                                                                                                                                                                                         |
| 03.01      | Identify areas of 466, F.S., <u>and</u> Rule 64B5-16, F.A.C. and Rule 64B5-25, F.A.C. applicable to practice by the dental health workers <u>and providers</u> .                                                                                                                                                                        |
| 03.02      | Explain practices that could result in malpractice, liability, negligence, abandonment, false imprisonment, <u>and</u> fraud.                                                                                                                                                                                                           |
| 03.03      | Demonstrate procedures for accurate documentation and record keeping.                                                                                                                                                                                                                                                                   |
| 03.04      | Interpret healthcare facility policy and procedures.                                                                                                                                                                                                                                                                                    |
| 03.05      | Explain the patients' "Bill of Rights".                                                                                                                                                                                                                                                                                                 |
| 03.06      | Identify and implement standards of the Health Insurance Portability and Accountability Act (HIPAA) and apply these standards to social media, <u>and the use of personal electronic devices in the workplace</u> .                                                                                                                     |
| 03.07      | Distinguish between expressed, implied, and informed consent.                                                                                                                                                                                                                                                                           |
| 03.08      | Explain the laws governing harassment, labor, <u>and</u> employment.                                                                                                                                                                                                                                                                    |
| 03.09      | Differentiate between legal and ethical issues in dentistry.                                                                                                                                                                                                                                                                            |
| 03.10      | Describe <u>at the dental profession's</u> Code of Ethics <del>consistent</del> with <u>emphasis on</u> the dental assisting profession.                                                                                                                                                                                                |
| 03.11      | Identify and compare personal, professional, <u>and</u> organizational ethics.                                                                                                                                                                                                                                                          |
| 03.12      | Recognize the limits of authority and responsibility of dental health care workers, <u>including</u> legislated scope of practice.                                                                                                                                                                                                      |
| 03.13      | Recognize and report illegal and/or unethical practices of dental health care workers.                                                                                                                                                                                                                                                  |
| 03.14      | Recognize <del>and report</del> <u>various forms of</u> abuse <del>including (i.e., trafficking,</del> domestic violence, <u>and</u> neglect, <u>).</u>                                                                                                                                                                                 |
| 03.15      | <u>Demonstrate an understanding of reporting requirements for all types of abuse.</u>                                                                                                                                                                                                                                                   |
| 03.1503.16 | <u>Identify resources to</u> <u>for</u> victims of <del>domestic violence</del> <u>abuse</u> .                                                                                                                                                                                                                                          |
| 03.1603.17 | <u>Explain risk management</u> <u>and root cause analysis</u> .                                                                                                                                                                                                                                                                         |
| 03.18      | <u>Define commonly used legal vocabulary relating to dentistry.</u>                                                                                                                                                                                                                                                                     |

|       |                                                                                                                                                                                                                                                         |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <a href="#">03.19 Describe ethical considerations/obligations in the dental team-patient relationship.</a>                                                                                                                                              |
|       | <a href="#">03.20 Apply self-assessment skills to prepare for lifelong learning.</a>                                                                                                                                                                    |
|       | <a href="#">03.21 Apply ethical principles, legal, and regulatory concepts to resolve ethical dilemmas.</a>                                                                                                                                             |
| 04.0  | Demonstrate an understanding of general anatomy and physiology and apply wellness and disease concepts. -The student will be able to:                                                                                                                   |
| 04.01 | Develop a basic understanding of the structure and function of the body systems.                                                                                                                                                                        |
| 04.02 | Identify common disorders related to each of the body systems.                                                                                                                                                                                          |
| 04.03 | <del>Explain basic concepts</del> <a href="#">Identify and develop a control plan to address the issues</a> of positive self-image, wellness, and stress.                                                                                               |
|       | <del>04.04 Develop a wellness and stress control plan that can be used in personal and professional life.</del>                                                                                                                                         |
| 05.0  | Demonstrate the importance of health, safety, and environmental management systems in dental organizations and their importance to organizational performance and regulatory compliance. -The student will be able to:                                  |
| 05.01 | Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments.                                                                                                                                            |
| 05.02 | Identify and describe methods in medical error reduction and prevention in the dental healthcare setting.                                                                                                                                               |
| 05.03 | Demonstrate an understanding of personal safety procedures based on <del>Occupations</del> <a href="#">the Occupational</a> Safety and Health Administration (OSHA) and Centers for Disease Control (CDC) regulations (including standard precautions). |
| 05.04 | Recognize Safety Data Sheets (SDS) and <a href="#">Globally Harmonized System (GHS) labels and</a> comply with safety signs, symbols, and labels.                                                                                                       |
| 05.05 | Demonstrate procedures for the safe transport and transfer of patients.                                                                                                                                                                                 |
| 05.06 | Describe <a href="#">workplace preparedness and procedures for</a> fire safety, disaster, and evacuation <del>procedures</del> .                                                                                                                        |
| 05.07 | Explain emergency procedures to follow <del>in response</del> <a href="#">for responding</a> to, <a href="#">reporting, and recording</a> workplace <del>accidents</del> <a href="#">incidents and acts of violence</a> .                               |
| 05.08 | Demonstrate handwashing and the use of personal protective equipment used in dentistry.                                                                                                                                                                 |
| 06.0  | Recognize and respond to emergency situations. -The student will be able to:                                                                                                                                                                            |
| 06.01 | Take and record vital signs.                                                                                                                                                                                                                            |
| 06.02 | Describe legal parameters relating to the administration of emergency care.                                                                                                                                                                             |
| 06.03 | Obtain and maintain certification in basic life support (BLS), cardiopulmonary resuscitation (CPR), automated external defibrillator (AED), foreign body airway obstruction (FBAO), and first aid.                                                      |
| 07.0  | Use information technology tools. ( <del>Optional</del> ) -The student will be able to:                                                                                                                                                                 |

|                        |                                                                                                                                                                                                                                   |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.01                  | Define terms and demonstrate basic computer skills.                                                                                                                                                                               |
| 07.02                  | Interpret information from electronic medical documents.                                                                                                                                                                          |
| 08.0                   | Explain the importance of employability skills. -The student will be able to:                                                                                                                                                     |
| 08.01                  | Identify personal traits or attitudes desirable in a member of the healthcare team.                                                                                                                                               |
| 08.02                  | Exemplify basic professional standards of dental healthcare workers/providers as they apply to hygiene, dress, language, confidentiality, and behavior (i.e., telephone etiquette, courtesy, and self-introductions).             |
| <del>08.03</del>       | <del>Prepare and maintain a professional portfolio to document knowledge, continued education, skills, and experience. (Optional)</del>                                                                                           |
| <del>08.04</del>       | <del>Write an appropriate resume.</del>                                                                                                                                                                                           |
| <del>08.05</del>       | <del>Conduct a job search and complete a job application form correctly.</del>                                                                                                                                                    |
| <del>08.06</del>       | <del>Demonstrate competence in job interview techniques.</del>                                                                                                                                                                    |
| <del>08.07</del> 08.03 | Examine levels of education, and industry credentialing requirements, including licensure and certification, employment opportunities, workplace environments, and career growth potential.                                       |
| <del>08.08</del>       | <del>Examine licensing, certification, and industry credentialing requirements.</del>                                                                                                                                             |
| 09.0                   | Demonstrate knowledge of airborne and blood-borne diseases. -The student will be able to:                                                                                                                                         |
| 09.01                  | Recognize emerging diseases and disorders.                                                                                                                                                                                        |
| 09.02                  | <del>Distinguish between fact and fallacy about</del> Demonstrate knowledge of the transmission and treatment of diseases caused by airborne and blood-borne pathogens, infectious agents, and organisms.                         |
| 09.03                  | Identify "at risk" behaviors that promote the spread of infectious diseases caused by airborne and blood-borne pathogens and the public education necessary to combat the spread of these diseases.                               |
| 09.04                  | Identify community resources and services available to the individuals with diseases caused by airborne and blood-borne pathogens.                                                                                                |
| 09.05                  | Apply infection control techniques designed to prevent the spread of diseases caused by airborne and blood borne pathogens to the care of all patients following the Centers for Disease Control and Prevention (CDC) guidelines. |
| 09.06                  | Demonstrate knowledge of the legal aspects of patient privacy, standard precautions, and incident reporting protocols.                                                                                                            |
| <del>09.06</del> 09.07 | Demonstrate knowledge of the legal aspects of AIDS/treating patients with infectious diseases, including testing- and proper documentation.                                                                                       |
| 10.0                   | Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. -The students will be able to:                                                                                                         |
| 10.01                  | Analyze attributes and attitudes of an effective leader to include emotional intelligence.                                                                                                                                        |
| 10.02                  | Recognize factors and situations that may lead to conflict.                                                                                                                                                                       |

10.03 Demonstrate effective [problem-solving](#) techniques for managing team conflict.

**Course Number: DEA0726**

**Occupational Completion Point: B**

**Dental Infection Control Assistant – 210 Hours**

11.0 Use dental terminology. -The student will be able to:

11.01 Identify and define common dental terms.

11.02 Demonstrate the use of proper dental terminology in the dental environment.

12.0 Identify structures and explain functions and pathologies of dental and general head and neck anatomy. -The student will be able to:

12.01 Identify structures and functions of [the](#) head and neck anatomy, including bones, muscles, sinuses, salivary glands, lymph nodes, nerves, and blood vessels.

12.02 Identify embryonic development of [the](#) head, oral cavity, and teeth.

12.03 Identify teeth and their landmarks, and the morphological characteristics of each individual tooth.

12.04 Describe the histological components of the head, oral cavity, and elements of the teeth and supporting structures.

12.05 Recognize and describe oral pathological conditions, related to the teeth and their supporting structures.

12.06 Recognize and describe developmental anomalies related to the teeth, face, and oral structures.

12.07 Describe and differentiate between ~~normal~~[occlusion](#) and malocclusion.

12.08 Discuss the adverse effects of the use of alcohol, tobacco, and both legal and illegal drugs on the oral cavity.

13.0 Identify principles of microbiology, [disease transmission](#), and disease prevention, and perform infection control procedures. -The student will be able to:

13.01 Differentiate between pathogenic and non-pathogenic microorganisms.

13.02 Describe pathogens and modes of disease transmission.

13.03 Differentiate between aseptic and non-aseptic environments.

[13.04 Perform aseptic handwashing technique.](#)

~~13.04~~[13.05](#) Describe, [apply](#), and ~~apply~~[differentiate between](#) methods of [pre](#)-cleaning, disinfection, and sterilization [of the dental environment](#).

~~13.05~~[13.06](#) Identify chemicals and their uses for controlling the spread of disease in the dental environment.

|                        |                                                                                                                                                                                                              |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>13.06</del> 13.07 | Identify and practice the current CDC guidelines for infection control in dental healthcare settings.                                                                                                        |
| <del>13.07</del> 13.08 | Describe the duties of the dental office safety coordinator.                                                                                                                                                 |
| <del>13.08</del> 13.09 | Demonstrate compliance with the OSHA Blood-Borne Pathogens Standard (29CFR-1910.1030) applicable to the dental office environment.                                                                           |
| <del>13.09</del> 13.10 | Identify and manage hazardous chemicals and biomedical wastes in accordance with the OSHA Hazard Communications Standard (29CFR-1910.1200), 64E-16, F.A.C., and Environmental Protection Agency regulations. |
| <del>13.10</del> 13.11 | Define principles of infection control, including standard and transmission-based precautions.                                                                                                               |
| <del>13.11</del> 13.12 | Demonstrate knowledge of dental asepsis <u>within the dental environment</u> .                                                                                                                               |
| <del>13.12</del> 13.13 | Implement appropriate hand hygiene procedures and use of <u>personal</u> protective <del>barriers</del> <u>equipment</u> .                                                                                   |
| <del>13.13</del> 13.14 | Demonstrate knowledge of surgical asepsis and isolation.                                                                                                                                                     |
| 14.0                   | Identify, describe, maintain, and utilize dental instruments and equipment. -The student will be able to:                                                                                                    |
| 14.01                  | Identify various types, functions, and operations of dental operatory and laboratory equipment.                                                                                                              |
| 14.02                  | Identify types and functions of operative, restorative, surgical, prosthodontic, <u>periodontic</u> , orthodontic, and endodontic dental instruments.                                                        |
| 14.03                  | Maintain dental operatory equipment and instruments.                                                                                                                                                         |
| 14.04                  | Identify types and functions of specific dental hygiene instruments with emphasis on category rather than individual instruments.                                                                            |
| 14.05                  | Seat and dismiss patients.                                                                                                                                                                                   |
| 14.06                  | Operate oral evacuation devices and air/water syringe.                                                                                                                                                       |
| 14.07                  | Maintain a clear field of vision, including isolation techniques.                                                                                                                                            |
| 14.08                  | Perform a variety of instrument transfers to include four-handed dentistry.                                                                                                                                  |
| 14.09                  | Utilize appropriate chairside assistant ergonomics.                                                                                                                                                          |
| 14.10                  | Assist with and place dental dams as permitted by Florida Statute and Florida Board of Dentistry Rule.                                                                                                       |

**Course Number: DEA0727**  
**Occupational Completion Point: C**  
**Dental Assisting 1 – 465 Hours**

15.0 Record patient assessment and treatment data. --The student will be able to:

|       |                                                                                                                                                                                     |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15.01 | Take and record medical-, <u>health, and</u> dental histories.                                                                                                                      |
| 15.02 | Record assessment of existing oral conditions.                                                                                                                                      |
| 15.03 | Perform intraoral and extraoral photography.                                                                                                                                        |
| 15.04 | Record conditions diagnosed by the dentist.                                                                                                                                         |
| 15.05 | Record treatment-related data on the patient's clinical record.                                                                                                                     |
| 15.06 | Record treatment plan and treatment in <u>the</u> patient's chart.                                                                                                                  |
| 15.07 | Perform a visual assessment of existing oral conditions.                                                                                                                            |
| 15.08 | Distinguish between and report subjective <del>and</del> , objective, <u>indications, and contraindication</u> information.                                                         |
| 15.09 | Report relevant information in order of occurrence.                                                                                                                                 |
| 16.0  | Identify the functions of pharmacology and anesthesia as they relate to dentistry. -The student will be able to:                                                                    |
| 16.01 | Identify drug requirements, agencies, and regulations, including prescribing regulations related to medications subject to addiction.                                               |
| 16.02 | Distinguish among the five schedules of controlled substances.                                                                                                                      |
| 16.03 | Record a drug/ <u>medication</u> prescription in a patient's chart.                                                                                                                 |
| 16.04 | <del>Utilize</del> <u>Understand</u> ratios and proportional problems to calculate prescribed drug dosages <u>as instructed by the dentist</u> .                                    |
| 16.05 | Identify drug/ <u>medicaments</u> actions, <u>metabolism</u> , side effects, indications, and contraindications; verify with Physician's Desk Reference (PDR) or its equivalent.    |
| 16.06 | Identify <del>common drugs</del> <u>pharmaceuticals and medicaments</u> used in dentistry.                                                                                          |
| 16.07 | <del>Prepare</del> <u>Identify the tissues innervated by each of the nerves associated with dental local and topical anesthetics to prepare</u> and apply topical anesthetic agent. |
| 16.08 | Identify properties of anesthetics.                                                                                                                                                 |
| 16.09 | Prepare syringes for the administration of local anesthetics.                                                                                                                       |
| 16.10 | Monitor and identify precautions in the use of nitrous oxide-oxygen conscious sedation.                                                                                             |
| 16.11 | <del>Calculate</del> <u>Understand</u> the <del>percentage</del> <u>calculations</u> of nitrous oxide-oxygen delivered <u>by the dentist</u> during a conscious sedation procedure. |
| 16.12 | Identify drugs and agents used for treating dental-related infection.                                                                                                               |

|                        |                                                                                                                                              |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| 16.13                  | Identify and respond to dental office emergencies.                                                                                           |
| 16.14                  | Describe the signs and symptoms of drug addiction.                                                                                           |
| 16.15                  | <u>Recognize specific conditions in the oral cavity that may be caused by pharmaceutical agents.</u>                                         |
| <del>16.15</del> 16.16 | Discuss the dental team's responsibility to recognize patients with drug addictions.                                                         |
| 17.0                   | Identify and perform dental <del>and carpal</del> radiographic procedures— <u>using current technology</u> . The student will be able to:    |
| 17.01                  | Describe <u>the</u> history, physics, and biological effects of ionizing radiation.                                                          |
| 17.02                  | Identify parts of the <del>X-ray</del> <u>radiography</u> machine, including accessories.                                                    |
| 17.03                  | Demonstrate radiologic health protection techniques.                                                                                         |
| 17.04                  | <del>Describe dark room/processing procedures, mix solutions.</del>                                                                          |
| 17.05                  | <del>Describe the proper disposal of hazardous radiographic waste.</del>                                                                     |
| <del>17.06</del> 17.04 | Place and expose dental radiographic <del>films or phosphors and</del> <u>images on</u> digital <del>sensors</del> <u>image receptors</u> .  |
| <del>17.07</del> 17.05 | Perform extraoral radiography as required for dental diagnostic procedures.                                                                  |
| <del>17.08</del> 17.06 | <del>Identify</del> <u>Describe and identify</u> radiographic anatomical landmarks and pathologies.                                          |
| <del>17.09</del> 17.07 | Mount radiographic <del>surveys</del> <u>images</u> .                                                                                        |
| <del>17.10</del> 17.08 | Describe how to maintain <del>unexposed film inventory</del> <u>digital image receptors</u> and <del>storage/or</del> <u>image devices</u> . |
| <del>17.14</del> 17.09 | Maintain digitally acquired radiographic images.                                                                                             |
| <del>17.12</del> 17.10 | Practice infection control procedures for all radiographic procedures.                                                                       |
| 18.0                   | Identify properties and uses, and manipulate dental materials. —The student will be able to:                                                 |
| 18.01                  | Identify properties and uses and manipulate gypsum.                                                                                          |
| 18.02                  | Identify properties and uses and manipulate restorative materials.                                                                           |
| 18.03                  | Identify properties and uses and manipulate dental cements.                                                                                  |
| 18.04                  | Place and remove matrices as permitted by Florida Statute and Florida Board of Dentistry Rule.                                               |
| 18.05                  | Place and remove temporary restorations as permitted by Florida <del>Statute</del> <u>Statutes</u> and Florida Board of Dentistry Rule.      |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18.06 | Identify properties and uses and manipulate impression materials.                                                                                                                                                                                                                                                                                                                                                         |
| 18.07 | Make intraoral impressions as permitted by Florida Statute and Florida Board of Dentistry Rule.                                                                                                                                                                                                                                                                                                                           |
| 18.08 | Identify properties and uses and manipulate acrylics and <del>thermoplastics</del> <a href="#">thermoplastic materials</a> .                                                                                                                                                                                                                                                                                              |
| 18.09 | Identify properties and uses and manipulate waxes.                                                                                                                                                                                                                                                                                                                                                                        |
| 18.10 | Perform dental laboratory procedures to include the fabrication of casts, custom trays, whitening trays, temporary crowns, and bridges.                                                                                                                                                                                                                                                                                   |
| 18.11 | Identify and manage hazardous dental materials and wastes in accordance with the OSHA Hazard Communications Standard (29CFR-1910.1200) and Environmental Protection Agency regulations.                                                                                                                                                                                                                                   |
| 18.12 | Employ measurements of time, temperature, distance, capacity, and mass/weight during the manipulation of dental materials.                                                                                                                                                                                                                                                                                                |
| 19.0  | Perform chairside assisting for general dentistry and specialty procedures. -The student will be able to:                                                                                                                                                                                                                                                                                                                 |
| 19.01 | Describe procedures, equipment, materials, and instrumentation used in the dental specialties to include but not limited to periodontics, endodontics, pedodontics, oral <del>surgery</del> <a href="#">and maxillofacial specialties</a> , orthodontics, <del>and</del> -prosthodontics, <a href="#">dental radiology, pathology, oral implantology, dental anesthesia, dentofacial orthopedics, and oral medicine</a> . |
| 19.02 | Assemble tray set-ups for general and specialty dental procedures.                                                                                                                                                                                                                                                                                                                                                        |
| 19.03 | Assist in general and specialty dental procedures.                                                                                                                                                                                                                                                                                                                                                                        |
| 19.04 | Describe the special needs of patients during dental procedures.                                                                                                                                                                                                                                                                                                                                                          |
| 19.05 | Perform patient education to include pre- and post-operative instructions as prescribed by a dentist.                                                                                                                                                                                                                                                                                                                     |
| 19.06 | Describe procedures, equipment, and materials utilized in digital dentistry to include CAD/CAM <del>Technology</del> <a href="#">and intraoral scanning technology</a> .                                                                                                                                                                                                                                                  |
| 19.07 | <a href="#">Identify, describe, and demonstrate the uses and principles of phlebotomy as they pertain to dentistry.</a>                                                                                                                                                                                                                                                                                                   |
| 19.08 | <a href="#">Identify, describe, and demonstrate the properties, uses, and principles of autologous blood concentrates as they pertain to dentistry.</a>                                                                                                                                                                                                                                                                   |

**Course Number: DEA0728**  
**Occupational Completion Point: C**  
**Dental Assisting 2 – 465 Hours**

|       |                                                                                                   |
|-------|---------------------------------------------------------------------------------------------------|
| 20.0  | Describe principles and perform techniques of preventive dentistry. -The student will be able to: |
| 20.01 | Describe the process of oral biofilm formation and its management through preventative dentistry. |
| 20.02 | Provide patient preventive education and oral hygiene instruction.                                |

|                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <p><u>20.14 Understand the dynamics of preventive dentistry in the dental public health setting.</u></p>                                                                                                                                                                                                                                                          |
| <p>21.0 Perform general dental business office procedures. -The student will be able to:</p>                                                                                                                                                                                                                                                                      |
| <p>21.01 Maintain appointment control.</p>                                                                                                                                                                                                                                                                                                                        |
| <p>21.02 <del>Maintain</del><u>Assess, create, modify, and maintain</u> an active <del>recall</del><u>re-care</u> system.</p>                                                                                                                                                                                                                                     |
| <p>21.03 Prepare and maintain accurate patient records.</p>                                                                                                                                                                                                                                                                                                       |
| <p>21.04 Prepare and maintain patient financial records, <u>and</u> collect fees.</p>                                                                                                                                                                                                                                                                             |
| <p>21.05 Demonstrate the use of dental procedure codes and current terminology when preparing and managing insurance claims.</p>                                                                                                                                                                                                                                  |
| <p>21.06 Differentiate the different categories of dental procedure codes.</p>                                                                                                                                                                                                                                                                                    |
| <p><del>21.07 Prepare and maintain office financial records.</del></p>                                                                                                                                                                                                                                                                                            |

|                        |                                                                                                                                                                                          |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>21.08</del> 21.07 | Prepare and maintain dental office inventory control and purchasing.                                                                                                                     |
| <del>21.09</del> 21.08 | Demonstrate public relations responsibilities of the secretary/receptionist.                                                                                                             |
| <del>21.10</del> 21.09 | Demonstrate skills on office equipment <u>to include computers and dental office management practice software.</u>                                                                       |
| <del>21.11</del> 21.10 | Maintain the dental business office environment.                                                                                                                                         |
| <del>21.12</del> 21.11 | Receive and dismiss patients and visitors.                                                                                                                                               |
| <del>21.13</del> 21.12 | Demonstrate appropriate patient management/customer service skills.                                                                                                                      |
| 21.13                  | <u>Demonstrate and maintain office financial records and budgets.</u>                                                                                                                    |
| 21.14                  | Describe the effect of money management on practice goals.                                                                                                                               |
| 22.0                   | Demonstrate professionalism as a dental team member in the clinical setting. -The student will be able to:                                                                               |
| 22.01                  | Perform dental assisting duties, dental assisting expanded functions, and dental radiographic procedures in a clinical setting under the direct supervision of a licensed dentist.       |
| 22.02                  | Interact with a professional dental team in the delivery of patient services.                                                                                                            |
| 22.03                  | Utilize employability skills.                                                                                                                                                            |
| 22.04                  | <u>Develop and maintain a professional portfolio to document knowledge, continued education, skills, and experience.</u>                                                                 |
| 22.05                  | <u>Write an appropriate resume.</u>                                                                                                                                                      |
| 22.06                  | <u>Conduct a job search and complete a job application correctly.</u>                                                                                                                    |
| 22.07                  | <u>Demonstrate effective job interview techniques.</u>                                                                                                                                   |
| 22.08                  | <u>Examine levels of education and credentialing requirements, including licensure and certification, employment opportunities, workplace environments, and career growth potential.</u> |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

**Field Internship Activities:** Clinical experiences are integrated with the didactic portion of this program. Clinical experience assisting a dentist must be an integral part of the educational program designed to perfect students' competence in performing dental assisting functions, rather than to provide basic instruction. The major portion of the students' time in clinical assignments must be spent assisting with or participating in patient care. Prior to clinical assignments, students demonstrate minimum competence in performing the procedures which they will be expected to perform in their clinical experience.

### **Special Notes**

Dental assisting programs accredited by the American Dental Association Commission on Dental Accreditation are required to implement enrollment and admissions criteria that include the selection of adult students with a high school diploma, its equivalent, or an advanced degree.

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.

For Florida information contact the Florida Agency for Health Care Administration (AHCA), Division of Health Quality Assurance, Board of Dentistry, 4052 Bald Cypress Way, Tallahassee, FL 32399, (850) 245-4161.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

Pursuant to 466.024, F.S.; 64B5-16.002, F.A.C. and 64B5-9.011, F.A.C., completers of the dental assisting program may be awarded a certificate verifying formal training which is required for the performance of certain remediable tasks (also known as expanded functions).

Students should be encouraged to become members and participate in the activities of the professional organization: The American Dental Assistants Association.

Completers of the dental assisting program should be encouraged to take the Dental Assisting National Board (DANB) Certified Dental Assistant (CDA) exam. DANB is recognized by the American Dental Association as the national certification board for dental assistants.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs](#) are co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTOSs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, F.S., may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040, F.A.C.). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The content includes but is not limited to interpersonal skills, medical terminology, legal and ethical responsibilities, safe and efficient work practices, clerical skills, safety and security use of computers, interpretation and transcription of doctors' orders, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Program Structure**

This program is a planned sequence of instruction consisting of 3 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title            | Teacher Certification          | Length    |
|-----|---------------|-------------------------|--------------------------------|-----------|
| A   | HSC0003       | Basic Healthcare Worker | REG NURSE 7 G<br>MED RECTEC 7G | 90 hours  |
| B   | HIM0076       | Health Unit Clerk       |                                | 410 hours |
| C   | HIM0090       | Monitor Technician      |                                | 130 hours |

## Common Florida's Career Technical Core—Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                |
|----------------------------------------------------------------------------------------------------------------|
| <a href="#">02.01 Use critical thinking.</a>                                                                   |
| <a href="#">02.02 Use creativity.</a>                                                                          |
| <a href="#">02.03 Make sound decisions.</a>                                                                    |
| <a href="#">02.04 Solve problems.</a>                                                                          |
| <a href="#">02.05 Reason.</a>                                                                                  |
| <a href="#">02.06 Plan and organize.</a>                                                                       |
| <a href="#">03.0 Manage resources within an industry project</a>                                               |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas.
- 13.0 Describe the importance of professional ethics and legal responsibilities for the Health Unit Coordinator.
- 14.0 Interpret and apply medical terminology specific to health unit clerks.
- 15.0 Organize and maintain efficient work practices.
- 16.0 Perform clerical duties.
- 17.0 Perform patient admission, transfer and discharge procedures.
- 18.0 Prepare discharge/transfer chart for medical records/new unit.
- 19.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance.
- 20.0 Read, interpret, process, coordinate and transcribe physicians' orders.
- 21.0 Demonstrate an understanding of the Health Unit Coordinators role in the Nutritional Care Department.
- 22.0 Demonstrate an understanding of the Health Unit Coordinators role in processing diagnostic orders.
- 23.0 Explain the importance of employability skills and entrepreneurship skills for the Health Unit Coordinator.
- 24.0 Describe the cardiovascular system.
- 25.0 Identify legal and ethical responsibilities of an EKG Monitor Technician.
- 26.0 Demonstrate knowledge of, apply and use medical instrumentation modalities.
- 27.0 Perform patient care techniques in the health care facility.
- 28.0 Recognize normal and abnormal cardiac telemetry monitoring results.
- 29.0 Describe common cardiovascular drugs, their actions, use and adverse effects.
- 30.0 Set up telemetry monitoring, interpret and report abnormal rhythms to the nurse.
- 31.0 Monitoring, interpreting and reporting abnormal rhythms (dysrhythmias) to the nurse.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Health Unit Coordinator  
**Career Certificate Program Number:** H170107

The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Career Certificate Program health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**Course Number: HSC0003**  
**Occupational Completion Point: A**  
**Basic Healthcare Worker – 90 Hours**

To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

|------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.0                                                                                                             | Use oral and written communication skills in creating, expressing and interpreting information and ideas. The student will be able to:                                       |
| 12.01                                                                                                            | Apply basic speaking and active listening skills including reflection, restatement, and clarification techniques when using the telephone and answering patient call lights. |
| 12.02                                                                                                            | Recognize the importance of courtesy and respect for patients and other health care workers and maintain good interpersonal relationships.                                   |
| 12.03                                                                                                            | Adapt communication skills to varied levels of understanding and cultural orientation including diverse age, cultural, economic, ethnic, and religious groups.               |
| 12.04                                                                                                            | Apply active listening skills to obtain and clarify information.                                                                                                             |
| 12.05                                                                                                            | Exhibit public relations skills that aid in achieving customer satisfaction including face to face interactions.                                                             |
| 12.06                                                                                                            | Explain why implementation of the electronic medical record is requiring advanced communication skills for the health unit coordinator (HUC).                                |
| 12.07                                                                                                            | Give instances that exemplify human needs, classify each according to Maslow's hierarchy of human needs, and give appropriate responses to meet the listed needs.            |
| 12.08                                                                                                            | Define and explain the importance of culturally sensitive care in the health care setting.                                                                                   |

|       |                                                                                                                                                 |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.09 | List five guidelines to follow that could improve intercultural communication.                                                                  |
| 13.0  | Describe the importance of professional ethics and legal responsibilities for the Health Unit Coordinator. The student will be able to:         |
| 13.01 | List seven patient rights as outlined in HIPAA.                                                                                                 |
| 13.02 | Identify seven patient identifiers (individually identifiable health information [IIHI]).                                                       |
| 13.03 | Explain two purposes of the Health Information Technology for Economic and Clinical Health (HITECH) Act.                                        |
| 13.04 | Explain the responsibilities the health unit coordinator (HUC) has for HIPAA compliance.                                                        |
| 13.05 | Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. |
| 14.0  | Interpret and apply medical terminology specific to health unit clerks. The student will be able to:                                            |
| 14.01 | Identify components of medical terms.                                                                                                           |
| 14.02 | Spell, pronounce, and define medical terms as related to Health Unit Coordinator.                                                               |
| 14.03 | Relate medical terminology to the body systems.                                                                                                 |
| 14.04 | Identify and define standard abbreviations and medical symbols.                                                                                 |
| 14.05 | Identify apothecary and metric systems.                                                                                                         |
| 15.0  | Organize and maintain efficient work practices. The student will be able to:                                                                    |
| 15.01 | Arrange daily activities by priority.                                                                                                           |
| 15.02 | Prepare and post unit information lists.                                                                                                        |
| 15.03 | Maintain a supply of assembled medical/surgical admission packets when using paper charts or standard forms.                                    |
| 15.04 | Distribute forms and articles from in-basket.                                                                                                   |
| 15.05 | Identify, store and maintain unit equipment/supplies in a neat and orderly manner.                                                              |
| 15.06 | Sanitize nursing station equipment.                                                                                                             |
| 15.07 | Maintain par levels of supplies as required by the nursing unit                                                                                 |
| 15.08 | Greet all visitors to the nursing unit and offer assistance as necessary.                                                                       |
| 16.0  | Perform clerical duties. The student will be able to:                                                                                           |

|       |                                                                                                                                                                                                                                                                                                      |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.01 | Demonstrate knowledge of common software applications relevant to the role of the health unit coordinator.                                                                                                                                                                                           |
| 16.02 | Prepare, label and add forms to chart.                                                                                                                                                                                                                                                               |
| 16.03 | Record non-clinical admission data on unit records.                                                                                                                                                                                                                                                  |
| 16.04 | Obtain previous admission records/X-rays.                                                                                                                                                                                                                                                            |
| 16.05 | Post all reports on charts.                                                                                                                                                                                                                                                                          |
| 16.06 | File and retrieve assorted forms.                                                                                                                                                                                                                                                                    |
| 16.07 | Maintain patient tracking for patients leaving the unit (electronic or paper log).                                                                                                                                                                                                                   |
| 16.08 | Conduct “down time” procedure when electronic record program is unavailable due to scheduled downtime or unexpected downtime.                                                                                                                                                                        |
| 17.0  | Perform patient admission, transfer and discharge procedures. The student will be able to:                                                                                                                                                                                                           |
| 17.01 | List four types of admissions and three types of patients.                                                                                                                                                                                                                                           |
| 17.02 | List the common components of a set of admission orders and common health unit coordinator (HUC) tasks regarding the patient’s admission when paper charts are used.                                                                                                                                 |
| 17.03 | Describe how a surgical patient’s admission orders differ from a medical patient’s admission orders and discuss three options for the way in which patient surgeries are performed.                                                                                                                  |
| 17.04 | List the components that may be included in a set of pre/postoperative orders.                                                                                                                                                                                                                       |
| 17.05 | Explain why it is important for the HUC to monitor the patient’s electronic medical record (EMR) consistently.                                                                                                                                                                                       |
| 17.06 | Explain the purpose and the benefits of the electronic patient status tracking board for the patient’s family and/or friends.                                                                                                                                                                        |
| 17.07 | Explain what the HUC’s responsibility would be regarding all medical records, including patient signed consent forms, handwritten progress notes, and reports faxed or sent from other facilities or brought in by a patient when the EMR with computer physician order entry (CPOE) is implemented. |
| 18.0  | Prepare discharge/transfer chart for medical records/new unit. The student will be able to:                                                                                                                                                                                                          |
| 18.01 | List the different types of discharges and explain the importance of communicating pending discharge information and bed availability to the admitting department or bed placement in a timely manner.                                                                                               |
| 18.02 | List the tasks that may be required to complete a routine discharge.                                                                                                                                                                                                                                 |
| 18.03 | List the additional tasks that may be required when a patient is discharged to another facility, discharged home with assistance, or when a patient dies (postmortem).                                                                                                                               |
| 18.04 | Describe the tasks necessary to prepare the discharged patient’s medical record for the health information management services (HIMS) department when paper charts are used.                                                                                                                         |

|       |                                                                                                                                                                                                                |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18.05 | List the tasks that are performed when a patient is transferred from one unit to another.                                                                                                                      |
| 18.06 | List the tasks performed by the HUC when a patient is transferred from one room to another room on the same unit.                                                                                              |
| 18.07 | Discuss the importance of reading the entire set of discharge or transfer orders prior to the patient being discharged or transferred.                                                                         |
| 19.0  | Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. The student will be able to: |
| 19.01 | Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments.                                                                                                   |
| 19.02 | Participate in emergency or disaster plan, CPR and first aid.                                                                                                                                                  |
| 19.03 | Identify the location of emergency equipment on the nursing unit.                                                                                                                                              |
| 19.04 | Recognize and follow all appropriate emergent code protocols.                                                                                                                                                  |
| 19.05 | Comply with regulatory agency guidelines.                                                                                                                                                                      |
| 20.0  | Read, interpret, process, coordinate and transcribe physicians' orders. The student will be able to:                                                                                                           |
| 20.01 | Identify all types of physician's orders.                                                                                                                                                                      |
| 20.02 | Prioritize orders for transcription.                                                                                                                                                                           |
| 20.03 | Prepare and route requisitions manually or via computer.                                                                                                                                                       |
| 20.04 | Arrange for ordered consultations.                                                                                                                                                                             |
| 20.05 | Schedule patients' treatments or therapy with other hospital departments.                                                                                                                                      |
| 21.0  | Demonstrate an understanding of the Health Unit Coordinators role in the Nutritional Care Department. The student will be able to:                                                                             |
| 21.01 | Explain the importance of communicating diet changes and patient food allergies to the nutritional care department.                                                                                            |
| 21.02 | List the groups of diets including nutritional supplements that may be ordered for the hospitalized patient.                                                                                                   |
| 21.03 | List consistency changes that can be made to a standard diet and explain what is included in each.                                                                                                             |
| 21.04 | List diet options that may be selected for the patient who has started on clear liquids and has an order for diet as tolerated and explain how the selection would be made.                                    |
| 21.05 | Identify therapeutic diets that the patient's doctor may order.                                                                                                                                                |
| 21.06 | Identify diets that may be requested by patients and assist them in ordering appropriate meals.                                                                                                                |

|       |                                                                                                                                                                                                                                                                       |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21.07 | List the items an HUC may need to order when transcribing an order for tube feeding.                                                                                                                                                                                  |
| 21.08 | Explain the purpose of the doctors' orders for fluids, limit fluids, and calorie count.                                                                                                                                                                               |
| 21.09 | Discuss the importance of sending all doctors' orders regarding a patient's diet or modifications to a patient's diet to the nutritional care department.                                                                                                             |
| 21.10 | Discuss the importance of sending total parenteral nutrition (TPN) orders to the pharmacy in a timely manner via fax, pneumatic, or dumb waiter system.                                                                                                               |
| 22.0  | Demonstrate an understanding of the Health Unit Coordinators role in processing diagnostic orders. The student will be able to:                                                                                                                                       |
| 22.01 | List the major divisions of the clinical laboratory and their functions.                                                                                                                                                                                              |
| 22.02 | List six invasive procedures that would require a consent form signed by the patient.                                                                                                                                                                                 |
| 22.03 | Describe the health unit coordinator's responsibilities in ordering laboratory tests and sending specimens to the laboratory when EMR is used and when paper charts are used and describe how routine, stat, daily, and timed studies would be ordered and performed. |
| 22.04 | Explain how the health unit coordinator's responsibilities regarding diagnostic imaging orders differ with the implementation of the electronic medical record and computer physician order entry versus use of the paper chart.                                      |
| 22.05 | List the required patient information needed when ordering procedures to be performed by the diagnostic imaging department.                                                                                                                                           |
| 22.06 | Explain when a patient would be required to sign an informed consent before a diagnostic imaging procedure.                                                                                                                                                           |
| 22.07 | Discuss sequencing or scheduling of multiple diagnostic imaging procedures ordered for the same patient.                                                                                                                                                              |
| 22.08 | Demonstrate an understanding of other diagnostic studies.                                                                                                                                                                                                             |
| 23.0  | Explain the importance of employability skills and entrepreneurship skills for the Health Unit Coordinator. The student will be able to:                                                                                                                              |
| 23.01 | Discuss benefits and responsibilities of the HUC as a member of a professional organization.                                                                                                                                                                          |
| 23.02 | List five benefits of becoming a certified HUC.                                                                                                                                                                                                                       |
| 23.03 | List three positions in which the HUC may be cross-trained.                                                                                                                                                                                                           |
| 23.04 | Compose written communication including emails using correct spelling, grammar, formatting and confidentiality.                                                                                                                                                       |
| 23.05 | Observe professional e-mail practices and etiquette.                                                                                                                                                                                                                  |

**Course Number: HIM0090**  
**Occupational Completion Point: C**  
**Monitor Technician – 130 Hours**

|       |                                                                                                                                                                                          |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 24.0  | Describe the cardiovascular system. The student will be able to:                                                                                                                         |
| 24.01 | Locate the heart and surrounding structures.                                                                                                                                             |
| 24.02 | Using a diagram label the parts of the heart and list the functions of each labeled part.                                                                                                |
| 24.03 | Trace the flow of blood through the cardiopulmonary system.                                                                                                                              |
| 24.04 | Identify and describe the electrical conduction system.                                                                                                                                  |
| 25.0  | Identify legal and ethical responsibilities of an EKG Monitor Technician. The student will be able to:                                                                                   |
| 25.01 | Recognize and practice legal and ethical responsibilities as they relate to an EKG Monitor Tech.                                                                                         |
| 25.02 | Maintain a safe and efficient work environment.                                                                                                                                          |
| 25.03 | Maintain EKG monitoring equipment so it will be safe and accurate.                                                                                                                       |
| 25.04 | Implement appropriate monitoring of hospital patient safety goals.                                                                                                                       |
| 26.0  | Demonstrate knowledge of, apply, and use medical instrumentation modalities. The student will be able to:                                                                                |
| 26.01 | Operate cardiac telemetry monitoring equipment related to admitting and discharging patients, trending, changing alarm parameters, changing leads and changing cardiac monitoring paper. |
| 26.02 | Troubleshooting monitor equipment, cleaning and maintaining monitoring equipment.                                                                                                        |
| 26.03 | Identify three types of lead systems.                                                                                                                                                    |
| 26.04 | Describe correct anatomic placement of standard limb, augmented, and chest (precordial) leads.                                                                                           |
| 26.05 | List three common causes of artifact and the techniques to correct them.                                                                                                                 |
| 26.06 | Recognize normal sinus rhythm.                                                                                                                                                           |
| 26.07 | Report any rhythm that is not normal sinus rhythm.                                                                                                                                       |
| 26.08 | List the three leads that form Einthoven's triangle.                                                                                                                                     |
| 26.09 | Recognize a cardiac emergency as seen on the EKG monitor and explain the importance of rapid reporting.                                                                                  |
| 27.0  | Perform patient care techniques in the health care facility. The student will be able to:                                                                                                |

|       |                                                                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27.01 | Verify requisition order with patient identification band.                                                                                                         |
| 27.02 | Identify patient utilizing name, date of birth, and medical and/or financial number.                                                                               |
| 27.03 | Prepare the patient for lead placement.                                                                                                                            |
| 28.0  | Recognize normal and abnormal cardiac telemetry monitoring results. The student will be able to:                                                                   |
| 28.01 | Consistently apply a systematic approach to analyze and interpret heart rhythm strips.                                                                             |
| 28.02 | Identify and examine wave forms, segments, and complexes.                                                                                                          |
| 28.03 | Measure PRI, QRS, QTI, and calculate heart rate.                                                                                                                   |
| 28.04 | Explain the process of evaluating ECG tracings to determine the presence of dysrhythmias.                                                                          |
| 28.05 | List indications for pacemaker insertion, pacemaker modalities.                                                                                                    |
| 28.06 | Recognize normal pacemaker rhythms and malfunctions such as pacemaker failure to fire, failure to capture, over-sensing, and under-sensing.                        |
| 28.07 | Recognize sinus rhythms including sinus bradycardia, sinus tachycardia, sinus arrhythmia, and sinus pause.                                                         |
| 28.08 | Recognize atrial dysrhythmias including atrial tachycardia, atrial fibrillation, atrial flutter, and atrial ectopic beats.                                         |
| 28.09 | Recognize junctional dysrhythmias including junctional rhythm, accelerated junctional, junctional tachycardia, and junctional ectopic beats.                       |
| 28.10 | Recognize supra ventricular tachycardia.                                                                                                                           |
| 28.11 | Identify all Heart Blocks including 1 <sup>st</sup> Degree, 2 <sup>nd</sup> Degree Type I, 2 <sup>nd</sup> Degree Type II, Third Degree, and Bundle Branch Blocks. |
| 28.12 | Recognize all lethal cardiac dysrhythmias including Ventricular Tachycardia, Ventricular Fibrillation, and Asystole.                                               |
| 28.13 | Recognize ECG changes that indicate the presence of myocardial ischemia or infarction.                                                                             |
| 28.14 | Explain the importance of notifying the nurse immediately when ischemic or infarct ECG changes are identified.                                                     |
| 28.15 | Identify ECG wave morphology that indicate atrial or ventricular hypertrophies.                                                                                    |
| 28.16 | Recognize ECG changes that indicate premature atrial, junctional, and ventricular complexes and other rare phenomena.                                              |
| 29.0  | Describe common cardiovascular drugs, their actions, use and adverse effects. The student will be able to:                                                         |
| 29.01 | List common cardiovascular drugs and their common adverse effects including ECG changes if applicable.                                                             |

|       |                                                                                                                                                                           |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 29.02 | Identify and observe a cardiac emergency.                                                                                                                                 |
| 30.0  | Set up telemetry monitoring, interpret and report abnormal rhythms to the nurse. The student will be able to:                                                             |
| 30.01 | Apply and turn on telemetry unit and set alarm parameters according to facility policy.                                                                                   |
| 30.02 | Identify lethal arrhythmias and actions required.                                                                                                                         |
| 30.03 | Enter and maintain patient identity and location while in telemetry according to patient reconciliation procedures.                                                       |
| 30.04 | Identify the PRI, QRS, QTI, T waves, and heart rate.                                                                                                                      |
| 31.0  | Monitoring, interpreting and reporting abnormal rhythms (dysrhythmias) to the nurse. The student will be able to:                                                         |
| 31.01 | Oversee cardiac rhythms for dysrhythmias and report to the nurse.                                                                                                         |
| 31.02 | Examine rhythm strips for clarity and artifact. Record and documents heart rhythm strips per unit policy.                                                                 |
| 31.03 | Identify three types of artifacts and initiates actions to correct them.                                                                                                  |
| 31.04 | Replace electrodes and apply lead wires using the correct landmarks.                                                                                                      |
| 31.05 | Records rhythm and documents time of events during cardiac arrest situations, cardioversion procedures, and emergency medication administration as directed by the nurse. |
| 31.06 | Maintain constant communication with the nurse during patient emergency situations.                                                                                       |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

Transcription of physicians' orders is an integral part of this course. This competency is achieved through simulated practice with standard equipment and supplies used in a health care facility by the health unit coordinator. An overview of anatomy and physiology serves as a foundation for medical terminology and CPR/first aid. A working knowledge of the computer is a competency achieved through actual practice. Role playing is one of the methods which can be used for developing interpersonal skills.

### **Supervised clinical experience is an integral part of this program.**

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

It is recommended that completers of this program take the National Association of Health Unit Coordinators Certification examination which is offered annually.

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the appropriate~~ CTSOs are co-curricular career and technical student ~~organization for~~ organizations providing leadership training and reinforcing specific career and technical skills. - Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. -Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for entry level employment as dental laboratory technicians, denture technicians, crown & bridge technicians, ceramic & technicians, or to provide supplemental training for persons previously or currently employed in this occupation.

The content of the program includes, but is not limited to, general studies, physical sciences, dental sciences, and dental laboratory techniques.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

## Program Structure

This program is a planned sequence of instruction consisting of ~~6~~7 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the ~~post-secondary~~postsecondary program structure:

| OCP | Course Number              | Course Title                                                        | Teacher Certification | Length                   |

## CommonFlorida's Career Technical Core – Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                |
|----------------------------------------------------------------------------------------------------------------|
| <a href="#">02.01 Use critical thinking.</a>                                                                   |
| <a href="#">02.02 Use creativity.</a>                                                                          |
| <a href="#">02.03 Make sound decisions.</a>                                                                    |
| <a href="#">02.04 Solve problems.</a>                                                                          |
| <a href="#">02.05 Reason.</a>                                                                                  |
| <a href="#">02.06 Plan and organize.</a>                                                                       |
| <a href="#">03.0 Manage resources within an industry project</a>                                               |
| <a href="#">03.01 Manage time.</a>                                                                             |
| <a href="#">03.02 Manage money or resources.</a>                                                               |
| <a href="#">03.03 Manage materials.</a>                                                                        |
| <a href="#">03.04 Manage personnel.</a>                                                                        |
| <a href="#">04.0 Oversee the subcomponents, operations and output of a technical or organizational system.</a> |
| <a href="#">04.01 Manage systems.</a>                                                                          |
| <a href="#">04.02 Monitor systems.</a>                                                                         |
| <a href="#">04.03 Improve systems.</a>                                                                         |
| <a href="#">05.0 Use information for decision making.</a>                                                      |
| <a href="#">05.01 Locate information.</a>                                                                      |
| <a href="#">05.02 Organize information.</a>                                                                    |
| <a href="#">05.03 Use information.</a>                                                                         |
| <a href="#">05.04 Analyze information.</a>                                                                     |
| <a href="#">05.05 Communicate information.</a>                                                                 |
| <a href="#">06.0 Apply relevant technology to workplace scenarios to aid productivity.</a>                     |
| <a href="#">06.01 Use technology.</a>                                                                          |
| <a href="#">07.0 Interpret and express interpersonal communication.</a>                                        |
| <a href="#">07.01 Communicate verbally.</a>                                                                    |
| <a href="#">07.02 Listen actively.</a>                                                                         |
| <a href="#">07.03 Comprehend written material.</a>                                                             |

|                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">07.04 Convey information in writing.</a>                                                                                 |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Identify the anatomic structure and function of body systems in relation to prosthetic services performed by the dental laboratory technician.
- 02.0 Practice quality assurance, safety, and infection control.
- 03.0 Adhere to legal and ethical principles related to the practice of dental laboratory technology.
- ~~04.001.0 Demonstrate knowledge of effective business management techniques.~~
- ~~05.0~~04.0 Demonstrate knowledge of dental sciences.
- ~~06.0~~05.0 Demonstrate knowledge of physical and mechanical properties of metals and alloys.
- ~~07.0~~06.0 Manufacture various methods of complete denture construction.
- ~~08.0~~07.0 Manufacture complete denture construction on practical work received from [a](#) dental clinic.
- ~~09.0~~08.0 Manufacture and identify components of a removable partial denture.
- ~~10.0~~09.0 Manufacture orthodontic and pedodontic appliances.
- ~~11.0~~10.0 Demonstrate knowledge and skills required to manufacture single and multi-unit restorations.
- ~~12.0~~11.0 Perform basic occlusion, determinants of occlusal morphology, and physiology of mandibular movements.
- ~~13.0~~12.0 Manufacture restorations in the student's specialty for patients who receive treatment at the dental research clinic.
- 13.0 Demonstrate knowledge of effective business management techniques.
- 14.0 Demonstrate knowledge of basic concepts of porcelain-fused-to-metal (PFM) techniques.
- 15.0 Demonstrate proper design and fabrication for individual and three-unit anterior ~~bridge~~[bridges](#) for pressable system restorations.
- 16.0 Demonstrate proper design and fabrication for all Ceramics Restorations using [the](#) Refractory System.
- 17.0 Demonstrate knowledge of the Standard Components for Implant Systems.
- 18.0 Demonstrate proper design and fabrication for [the](#) Implants System.
- 19.0 Describe the Standard Components and fabrication of semi-precision attachments.
- 20.0 Demonstrate proper design and fabrication of Hybrid Restoration.
- 21.0 Specialization Removable Appliances: Demonstrate ~~their~~ skills in removable dentures on specific projects.
- 22.0 Perform select proficiency in fixed restorative techniques in chosen areas of specialization.

Florida Department of Education  
Student Performance Standards

Program Title: Dental Laboratory Technology  
Career Certificate Program Number: ~~H170108~~H700100

Course Number: ~~DTE0400~~DTE0401

Occupational Completion Point: A

Orientation to Dental Laboratory Technology – ~~48~~109 Hours

01.0 Identify the anatomic structure and function of body systems in relation to prosthetic services performed by the dental laboratory technician. The student will be able to:

01.01 Identify structures and functions of head and neck anatomy.

01.02 Identify embryonic development of the head, oral cavity, and individual teeth.

01.03 Identify each tooth and its landmarks.

02.0 Practice quality assurance, safety, and infection control. -The student will be able to:

02.01 Practice safety in accordance with institutional policy.

02.02 Identify documentation procedures necessary to comply with state laws.

02.03 Demonstrate knowledge of the dental laboratory technician's role in providing quality assurance in laboratory procedures, reporting, and use and maintenance of equipment.

02.04 Use appropriate dental terminology and abbreviations.

02.05 Demonstrate knowledge, principles, and methods of disease transmission and prevention as related to dental prostheses.

02.06 Demonstrate knowledge of infection control in dental laboratories in accordance with ~~Center~~the Centers for Disease Control (CDC)/OSHA guidelines.

02.07 Establish an infection control procedures policy for the dental laboratory.

03.0 Adhere to legal and ethical principles related to the practice of dental laboratory technology. -The student will be able to:

03.01 Demonstrate knowledge of the importance of observing the doctor/technician relationship.

03.02 Demonstrate knowledge of state law governing the practice of Dental Laboratory Technology.

~~04.0 Demonstrate knowledge of effective business management techniques. The student will be able to:~~

~~04.01 Demonstrate knowledge and use of an office/laboratory procedure manual.~~

~~04.02 Demonstrate knowledge and use of business finance and operating expenses.~~

~~04.03 Demonstrate knowledge of pay scale and benefit program for employees and a bookkeeping system.~~

~~04.04 Demonstrate knowledge of tax forms, payroll records, insurance needs and inventory needs.~~

~~04.05 Demonstrate knowledge of employee hiring orientation.~~

~~04.06 Demonstrate knowledge of computer applications in the dental laboratory.~~

**Course Number: DTE0433**  
**Occupational Completion Point: B**  
**Denture Technician 1 – ~~319 Hours~~315 hours**

~~05.0~~04.0 Demonstrate knowledge of dental sciences. -The student will be able to:

~~05.01~~04.01 Demonstrate knowledge of physical properties, use, and manipulation of dental materials.

~~05.02~~04.02 Demonstrate knowledge of the dynamics of occlusion.

~~05.03~~04.03 Demonstrate problem-solving skills as related to dental materials.

~~06.0~~05.0 Demonstrate knowledge of physical and mechanical properties of metals and alloys. -The student will be able to:

~~06.01~~05.01 Identify how dental materials are affected by changes in the physical and mechanical properties of the materials.

~~06.02~~05.02 List characteristics of a metal.

~~06.03~~05.03 Identify the mechanical properties of cast alloys and cold-worked metal, strain hardening, recrystallization, and grain growth.

~~06.04~~05.04 Identify the metals and percentages in all types of dental casting gold alloys, and how different alloys of dental gold casting affect the dental restorations.

~~06.05~~05.05 Identify heat treatment techniques for dental casting gold alloys.

~~06.06~~05.06 List the types, composition, and uses of dental solders.

~~06.07~~05.07 Identify the composition and uses of dental fluxes and pickling agents.

~~06.08~~05.08 Identify composition, physical and mechanical properties, and heat treatment techniques for base metal alloys, chrome cobalt, and nickel chrome.

~~06.09~~05.09 Identify types of burs used in dentistry and the mechanics of cutting.

~~06.10~~05.10 Identify abrasion and polishing dentifrices used in the dental lab and how each affects the dental restoration.

**Course Number: DTE0434**  
**Occupational Completion Point: B**  
**Denture Technician 2 – ~~319 Hours~~ 315 hours**

~~07.0~~06.0 Manufacture various methods of complete denture construction. -The student will be able to:

~~07.01~~06.01 Make casts by pouring all types of impression material to include dentulous and edentulous impressions.

~~07.02~~06.02 Construct base plates by either the light cure ~~and~~ or thermoforming vacuum press.

~~07.03~~06.03 Construct wax occlusion rims to exact specifications.

~~07.04~~06.04 Articulate cast upon which complete dentures are to be made on 1 plain line and semi-adjustable articulators.

~~07.05~~06.05 Set-up and wax-up complete upper and lower dentures.

~~07.06~~06.06 Manufacture temporary all-acrylic removable partial dentures.

~~07.07~~06.07 Repair ~~any and~~ all types of dentures.

~~07.08~~06.08 Manufacture immediate complete dentures complete with surgical tray.

~~07.09~~06.09 Relining complete dentures (upper and lower).

~~07.10~~06.10 Perform selective milling ~~and~~ grinding in the finishing of complete dentures.

~~08.0~~07.0 Manufacture complete denture construction on practical work received from a dental clinic. -The student will be able to:

~~08.01~~07.01 Make stone or plaster casts by pouring all types of impressions, both dentulous and semi-edentulous impressions, be it alginate, rubber base, or silicone.

~~08.02~~07.02 Construct a light-cure or thermoformed vacuum base plate and stabilized tray if so ordered on the prescription by the doctor.

~~08.03~~07.03 Construct wax occlusal rim to exact measurements.

~~08.04~~07.04 Be able to articulate casts on a plain line or semi-adjustable articulator.

~~08.05~~07.05 Set-up and wax-up cases.

~~08.06~~07.06 Invest, pack, cure, deflask, finish, and polish.

~~08.07~~07.07 Repair dentures, flange, adding teeth, or clasp if needed to the denture.

~~08.08~~07.08 Reline any upper or lower denture.

**Course Number:** ~~DTE0435~~DTE0436  
**Occupational Completion Point:** C  
**Advanced Denture Technician – ~~349-Hours~~255 hours**

~~09.0~~08.0 Manufacture and identify components of a removable partial denture. -The student will be able to:

~~09.01~~08.01 Survey and design the maxillary and mandibular removable partial denture framework.

~~09.02~~08.02 Block out and duplicate the master cast.

~~09.03~~08.03 Identify, explain, and use a variety of clasps.

~~09.04~~08.04 Wax-up, sprue, invest, burnout, and cast non-precious alloy frames.

~~09.05~~08.05 Finish and polish metal frames and arrange artificial teeth.

~~09.06~~08.06 Demonstrate the bending of wrought wire and perform various repairs.

~~10.0~~09.0 Manufacture orthodontic and pedodontic appliances. -The student will be able to:

~~10.01~~09.01 Identify and describe various types of malocclusion as presented in the course.

~~10.02~~09.02 Identify and know the treatment objectives of the orthodontic appliances presented in the course.

~~10.03~~09.03 Interpret work authorization for orthodontic appliances.

~~10.04~~09.04 Complete the assigned laboratory exercises in the course to the standard of clinically acceptable quality.

**Course Number:** ~~DTE0441~~DTE0442  
**Occupational Completion Point:** D  
**Crown ~~And~~ Bridge Technician – ~~285-Hours~~296 hours**

~~11.0~~10.0 Demonstrate knowledge and skills required to manufacture single and multi-unit restorations. -The student will be able to:

~~11.01~~10.01 Pour impression to make casts with removable dies.

~~11.02~~10.02 Articulate casts on a semi-adjustable articulator and use various types of articulation systems.

~~11.03~~10.03 Prepare dies for waxing.

~~11.04~~10.04 Manufacture wax patterns for inlays, onlays, full crowns, and multi-unit restorations.

|                        |                                                                                                                                                     |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>11.05</del> 10.05 | Demonstrate proper techniques in spruing, investing, and casting.                                                                                   |
| <del>11.06</del> 10.06 | Finish all metal cast restorations.                                                                                                                 |
| <del>11.07</del> 10.07 | Demonstrate a proper diagnostic wax-up for single and multi-unit restorations.                                                                      |
| <del>11.08</del> 10.08 | Demonstrate the fabrication of <u>a</u> provisional restoration using thermoforming, vacuum, or putty matrix methods.                               |
| <del>11.09</del> 10.09 | Construct a single and multi-unit restoration.                                                                                                      |
| <del>11.10</del> 10.10 | Finish <u>the</u> provisional restoration in an acceptable manner.                                                                                  |
| <del>11.11</del> 10.11 | Construct a post and core with a final restoration.                                                                                                 |
| <del>12.0</del> 11.0   | Perform basic occlusion, determinants of occlusal morphology, and physiology of mandibular movements. -The student will be able to:                 |
| <del>12.01</del> 11.01 | Identify fundamental occlusion patterning associated with the basic mandibular positions.                                                           |
| <del>12.02</del> 11.02 | Identify Dr. Angle's occlusal classifications.                                                                                                      |
| <del>12.03</del> 11.03 | Identify cusp types from the functional point of view.                                                                                              |
| <del>12.04</del> 11.04 | Identify the incisal edges and cusps tips of maxillary teeth to mandibular teeth in centric occlusion.                                              |
| <del>12.05</del> 11.05 | Demonstrate the correlation between maxillary and mandibular cusps.                                                                                 |
| <del>12.06</del> 11.06 | Demonstrate an understanding of mandibular movements.                                                                                               |
| <del>12.07</del> 11.07 | Demonstrate an understanding of functional occlusion.                                                                                               |
| <del>13.0</del> 12.0   | Manufacture restorations in the student's specialty for patients who receive treatment at the dental research clinic. -The student will be able to: |
| <del>13.01</del> 12.01 | Complete denture set-up, wax-up, and finish.                                                                                                        |
| <del>13.02</del> 12.02 | Perform basic complete denture relines.                                                                                                             |
| <del>13.03</del> 12.03 | Demonstrate knowledge of denture repairs.                                                                                                           |
| <del>13.04</del> 12.04 | Removable partial denture wax-up, casting, and finish.                                                                                              |
| <del>13.05</del> 12.05 | Manufacture a Hawley appliance.                                                                                                                     |
| <del>13.06</del> 12.06 | Manufacture <u>a</u> space maintainer.                                                                                                              |

|                                                                                                                   |                                                                                                                                                                                     |
|-------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>13.07</del> 12.07                                                                                            | Fabricate restorations to include: inlay, onlays, full crowns, bridges, Porcelain Fused to Metal (PFM), and all ceramic restorations.                                               |
| <del>13.08</del> 12.08                                                                                            | Manufacture prostheses for patients currently under treatment or from actual casts or impressions and occlusal records from previously fabricated <del>prosthesis</del> prostheses. |
| <b>Course Number: DTE0461</b><br><b>Occupational Completion Point: E</b><br><b>Ceramic Technician – 285 Hours</b> |                                                                                                                                                                                     |
| <del>14.0</del> 13.0                                                                                              | Demonstrate knowledge of basic concepts of porcelain-fused-to-metal (PFM) techniques. -The student will be able to:                                                                 |
| <del>14.04</del> 13.01                                                                                            | Describe the components of dental porcelain.                                                                                                                                        |
| <del>14.02</del> 13.02                                                                                            | Describe the early porcelain-fused-to-metal systems.                                                                                                                                |
| <del>14.03</del> 13.03                                                                                            | Identify various alloys used in the fabrication of PFM restorations.                                                                                                                |
| <del>14.04</del> 13.04                                                                                            | Identify and explain the uses of opaque, body, incisal, modifier, glaze, and stain porcelains.                                                                                      |
| <del>14.05</del> 13.05                                                                                            | Demonstrate proper metal design for individual and multiple-unit PFM restorations.                                                                                                  |
| <del>14.06</del> 13.06                                                                                            | Demonstrate proper spruing, investing, burnout, casting, and metal finishing techniques.                                                                                            |
| <del>14.07</del> 13.07                                                                                            | Demonstrate proper and accurate pre-soldering skills.                                                                                                                               |
| <del>14.08</del> 13.08                                                                                            | Demonstrate proper and accurate post-soldering skills.                                                                                                                              |
| <del>14.09</del> 13.09                                                                                            | Describe the concept of degassing and metal porcelain bonding.                                                                                                                      |
| <del>14.10</del> 13.10                                                                                            | Demonstrate approved techniques for opaque, body, and incisal porcelain application.                                                                                                |
| <del>14.14</del> 13.11                                                                                            | Identify various porcelain firing cycles.                                                                                                                                           |
| <del>14.12</del> 13.12                                                                                            | Demonstrate approved techniques for contouring and glazing porcelain.                                                                                                               |
| <del>14.13</del> 13.13                                                                                            | Describe the basic concepts of staining, the color wheel and hue, chroma, and value.                                                                                                |
| <del>14.14</del> 13.14                                                                                            | Demonstrate <del>and an</del> understanding of porcelain furnace calibration and maintenance.                                                                                       |

| <del>21.03</del> 20.03                                                                                                                       | Duplicate master casts.                                                                                                                            |
| <del>21.04</del> 20.04                                                                                                                       | Sprue and invest waxed partial denture castings.                                                                                                   |

|                               |                                                                                                                             |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <del>21.05</del> <u>20.05</u> | Finish and polish a removable partial denture casting.                                                                      |
| <del>22.0</del> <u>21.0</u>   | Perform select proficiency in fixed restorative techniques in chosen areas of specialization. -The student will be able to: |
| <del>22.01</del> <u>21.01</u> | Manufacture fixed restorations more quickly and with increased skill.                                                       |
| <del>22.02</del> <u>21.02</u> | Demonstrate a thorough understanding of the procedures involved in the fabrication of fixed restorations.                   |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error, and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Laboratory activities are integrated with the didactic portion of this program. Students perform representative tasks in the manufacture of custom-made dental devices and become involved in the dental health team through first-hand observation in clinical procedures as they relate to laboratory techniques.

### Special Notes

Reinforcement of basic skills in English, mathematics, and science appropriate for the job preparatory programs occurs through vocational classroom instruction and applied laboratory procedures or practice.

The program should meet the requirements of the Commission on Dental Accreditation of the American Dental Association. Students should be prepared to take the recognized graduate examination offered by the National Board for Certification in Dental Laboratory ~~technology~~ Technology, Inc.

Dental Laboratory Technicians will complete the certificate program and be prepared to take the recognized graduate examination offered by the National Board of ~~Certificate~~ Certification for Dental Laboratory Technicians.

The standard length of the program is 2040 clock hours.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### Cooperative Training – OJT

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Language and Reading and Language Arts). These grade level numbers correspond to a grade-equivalent score obtained on a state-designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Florida Department of Education  
Curriculum Framework

No new students may be enrolled in this program starting 2026-27. The last year to report any enrollment is 2028-29. This program was replaced by Dental Laboratory Technology H700100 (0351060307).

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for entry level employment as dental laboratory technicians, denture technicians crown & bridge technicians, ceramic & technicians or to provide supplemental training for persons previously or currently employed in this occupation.

The content of the program includes, but is not limited to, general studies, physical sciences, dental sciences, and dental laboratory techniques.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 6 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the post-secondary program structure:

| OCP | Course Number | Course Title                                        | Teacher Certification | Length    |
|-----|---------------|-----------------------------------------------------|-----------------------|-----------|
| A   | DTE0400       | Orientation to Dental Laboratory Technology         | DEN LABTEC 7G         | 18 hours  |
| B   | DTE0433       | Denture Technician 1                                |                       | 319 hours |
|     | DTE0434       | Denture Technician 2                                |                       | 319 hours |
| C   | DTE0435       | Advanced Denture Technician                         |                       | 349 hours |
| D   | DTE0441       | Crown and Bridge Technician                         |                       | 285 hours |
| E   | DTE0461       | Ceramic Technician                                  |                       | 285 hours |
| F   | DTE0451       | Implant, Attachment & Hybrid Restoration Technician |                       | 285 hours |
| G   | DTE0481       | Master Dental Laboratory Technician                 |                       | 180 hours |

## CommonFlorida's Career Technical Core — Career Ready PracticesReadiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------|

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Identify the anatomic structure and function of body systems in relation to prosthetic services performed by the dental laboratory technician.
- 02.0 Practice quality assurance, safety and infection control.
- 03.0 Adhere to legal and ethical principles related to the practice of dental laboratory technology.
- 04.0 Demonstrate knowledge of effective business management techniques.
- 05.0 Demonstrate knowledge of dental sciences.
- 06.0 Demonstrate knowledge of physical and mechanical properties of metals and alloys.
- 07.0 Manufacture various methods of complete denture construction.
- 08.0 Manufacture complete denture construction on practical work received from dental clinic.
- 09.0 Manufacture and identify components of a removable partial denture.
- 10.0 Manufacture orthodontic and pedodontic appliances.
- 11.0 Demonstrate knowledge and skills required to manufacture single and multi-unit restorations.
- 12.0 Perform basic occlusion, determinants of occlusal morphology and physiology of mandibular movements.
- 13.0 Manufacture restorations in the student's specialty for patients who receive treatment at the dental research clinic.
- 14.0 Demonstrate knowledge of basic concepts of porcelain-fused-to-metal (PFM) techniques.
- 15.0 Demonstrate proper design and fabrication for individual and three-unit anterior bridge for pressable system restorations.
- 16.0 Demonstrate proper design and fabrication for all Ceramics Restorations using Refractory System.
- 17.0 Demonstrated knowledge of the Standard Components for Implant Systems.
- 18.0 Demonstrate proper design and fabrication for Implants System.
- 19.0 Describe the Standard Components and fabrication of semi precision attachments.
- 20.0 Demonstrate proper design and fabrication of Hybrid Restoration.
- 21.0 Specialization Removable Appliances: Demonstrate their skills in removable dentures on specific projects.
- 22.0 Perform select proficiency in fixed restorative techniques in chosen areas of specialization.

| 09.0                                                                                                                       | Manufacture and identify components of a removable partial denture. The student will be able to:                          |
| 09.01                                                                                                                      | Survey and design maxillary and mandibular removable partial denture framework.                                           |
| 09.02                                                                                                                      | Block out and duplicate master cast.                                                                                      |
| 09.03                                                                                                                      | Identify, explain, and use a variety of clasps.                                                                           |
| 09.04                                                                                                                      | Wax-up, sprue, invest, burnout and cast non-precious alloy frames.                                                        |
| 09.05                                                                                                                      | Finish and polish metal frames and arrange artificial teeth.                                                              |
| 09.06                                                                                                                      | Demonstrate the bending of wrought wire and perform various repairs.                                                      |
| 10.0                                                                                                                       | Manufacture orthodontic and pedodontic appliances. The student will be able to:                                           |
| 10.01                                                                                                                      | Identify and describe various types of malocclusion as presented in the course.                                           |
| 10.02                                                                                                                      | Identify and know the treatment objectives of the orthodontic appliances presented in the course.                         |
| 10.03                                                                                                                      | Interpret work authorization for orthodontic appliances.                                                                  |
| 10.04                                                                                                                      | Complete the assigned laboratory exercises in the course to the standard of clinically acceptable quality.                |
| <b>Course Number: DTE0441</b><br><b>Occupational Completion Point: D</b><br><b>Crown And Bridge Technician – 285 Hours</b> |                                                                                                                           |
| 11.0                                                                                                                       | Demonstrate knowledge and skills required to manufacture single and multi-unit restorations. The student will be able to: |
| 11.01                                                                                                                      | Pour impression to make casts with removable dies.                                                                        |
| 11.02                                                                                                                      | Articulate casts on a semi-adjustable articulator and use various types of articulation systems.                          |
| 11.03                                                                                                                      | Prepare dies for waxing.                                                                                                  |
| 11.04                                                                                                                      | Manufacture wax patterns for inlays, onlays, full crowns, and multi-unit restorations.                                    |

|       |                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| 11.05 | Demonstrate proper techniques in spruing, investing, and casting.                                                                                  |
| 11.06 | Finish all metal cast restorations.                                                                                                                |
| 11.07 | Demonstrate a proper diagnostic wax-up for single and multi-unit restorations.                                                                     |
| 11.08 | Demonstrate the fabrication of provisional restoration using thermoforming vacuum or putty matrix methods.                                         |
| 11.09 | Construct a single and multi-unit restoration.                                                                                                     |
| 11.10 | Finish provisional restoration in an acceptable manner.                                                                                            |
| 11.11 | Construct a post and core with a final restoration.                                                                                                |
| 12.0  | Perform basic occlusion, determinants of occlusal morphology and physiology of mandibular movements. The student will be able to:                  |
| 12.01 | Identify fundamental occlusion patterning associated with the basic mandibular positions.                                                          |
| 12.02 | Identify Dr. Angle's occlusal classifications.                                                                                                     |
| 12.03 | Identify cusp types from the functional point of view.                                                                                             |
| 12.04 | Identify the incisal edges and cusps tips of maxillary teeth to mandibular teeth in centric occlusion.                                             |
| 12.05 | Demonstrate the correlation between maxillary and mandibular cusps.                                                                                |
| 12.06 | Demonstrate an understanding of mandibular movements.                                                                                              |
| 12.07 | Demonstrate an understanding of functional occlusion.                                                                                              |
| 13.0  | Manufacture restorations in the student's specialty for patients who receive treatment at the dental research clinic. The student will be able to: |
| 13.01 | Complete denture set-up, wax-up, and finish.                                                                                                       |
| 13.02 | Perform basic complete denture relines.                                                                                                            |
| 13.03 | Demonstrate knowledge of denture repairs.                                                                                                          |
| 13.04 | Removable partial denture wax-up, casting and finish.                                                                                              |
| 13.05 | Manufacture a Hawley appliance.                                                                                                                    |
| 13.06 | Manufacture space maintainer.                                                                                                                      |
| 13.07 | Fabricate restorations to include: inlay, onlays, full crowns, bridges Porcelain Fused to Metal (PFM), and all ceramic restorations.               |

|                                                                                                                   |                                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.08                                                                                                             | Manufacture prostheses for patients currently under treatment or from actual casts or impressions and occlusal records from previously fabricated prosthesis. |
| <b>Course Number: DTE0461</b><br><b>Occupational Completion Point: E</b><br><b>Ceramic Technician – 285 Hours</b> |                                                                                                                                                               |
| 14.0                                                                                                              | Demonstrate knowledge of basic concepts of porcelain-fused-to-metal (PFM) techniques. The student will be able to:                                            |
| 14.01                                                                                                             | Describe the components of dental porcelain.                                                                                                                  |
| 14.02                                                                                                             | Describe the early porcelain-fused-to-metal systems.                                                                                                          |
| 14.03                                                                                                             | Identify various alloys used in the fabrication of PFM restorations.                                                                                          |
| 14.04                                                                                                             | Identify and explain the uses of opaque, body, incisal, modifier, glaze, and stain porcelains.                                                                |
| 14.05                                                                                                             | Demonstrate proper metal design for individual and multiple-unit PFM restorations.                                                                            |
| 14.06                                                                                                             | Demonstrate proper spruing, investing, burnout, casting and metal finishing techniques.                                                                       |
| 14.07                                                                                                             | Demonstrate proper and accurate pre-soldering skills.                                                                                                         |
| 14.08                                                                                                             | Demonstrate proper and accurate post-soldering skills.                                                                                                        |
| 14.09                                                                                                             | Describe the concept of degassing and metal porcelain bonding.                                                                                                |
| 14.10                                                                                                             | Demonstrate approved techniques for opaque, body and incisal porcelain application.                                                                           |
| 14.11                                                                                                             | Identify various porcelain firing cycles.                                                                                                                     |
| 14.12                                                                                                             | Demonstrate approved techniques for contouring and glazing porcelain.                                                                                         |
| 14.13                                                                                                             | Describe the basic concepts of staining, the color wheel and hue, chroma and value.                                                                           |
| 14.14                                                                                                             | Demonstrate and understanding of porcelain furnace calibration and maintenance.                                                                               |
| 15.0                                                                                                              | Demonstrate proper design and fabrication for individual and three-unit anterior bridge for pressable system restorations. The student will be able to:       |
| 15.01                                                                                                             | Demonstrate proper wax-up, spruing and investing.                                                                                                             |
| 15.02                                                                                                             | Demonstrate proper burnout and pressing.                                                                                                                      |
| 15.03                                                                                                             | Demonstrate proper recovery/divesting of a pressed crown and bridge.                                                                                          |

|                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                  |

| 21.01                                                                                                                              | Survey and design a maxillary and mandibular removable partial denture.                                                                |
| 21.02                                                                                                                              | Identify and explain the use of wax in a wide variety of clasps.                                                                       |
| 21.03                                                                                                                              | Duplicate master casts.                                                                                                                |
| 21.04                                                                                                                              | Sprue and invest waxed partial denture castings.                                                                                       |
| 21.05                                                                                                                              | Finish and polish a removable partial denture casting.                                                                                 |

|       |                                                                                                                            |
|-------|----------------------------------------------------------------------------------------------------------------------------|
| 22.0  | Perform select proficiency in fixed restorative techniques in chosen areas of specialization. The student will be able to: |
| 22.01 | Manufacture fixed restorations more quickly and with increased skill.                                                      |
| 22.02 | Demonstrate a thorough understanding of the procedures involved in the fabrication of fixed restorations.                  |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Laboratory activities are integrated with the didactic portion of this program. Students perform representative tasks in the manufacture of custom made dental devices and become involved in the dental health team through first hand observation in clinical procedures as they relate to laboratory techniques.

### **Special Notes**

Reinforcement of basic skills in English, mathematics and science appropriate for the job preparatory programs occurs through vocational classroom instruction and applied laboratory procedures or practice.

The program should meet the requirements of the Commission on Dental Accreditation of the American Dental Association. Students should be prepared to take the recognized graduate examination offered by the National Board for Certification in Dental Laboratory technology, Inc.

Dental Laboratory Technicians will complete the certificate program and be prepared to take the recognized graduate examination offered by the National Board of Certificate for Dental Laboratory Technicians.

The standard length of the program is 2040 clock hours.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

**Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Language and Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

**Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The content includes but is not limited to communication and interpersonal skills, legal and ethical responsibilities, renal health-illness concepts, hemodialysis skills, emergency procedures including CPR and first aid, safety and security procedures, medical terminology, anatomy and physiology, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of 2 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title            | Teacher Certification                              | Length    |
|-----|---------------|-------------------------|----------------------------------------------------|-----------|
| A   | HSC0003       | Basic Healthcare Worker | REG NURSE 7 G                                      | 90 hours  |
| B   | MLT0368       | Dialysis Technician 1   | HEMO TEC 7 G                                       | 255 hours |
|     | MLT0369       | Dialysis Technician 2   | PRAC NURSE @7 %7%G<br>(Must be a Registered Nurse) | 255 hours |

## CommonFlorida's Career Technical Core – Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

##### 01.01 Use reading skills.

##### 01.02 Use writing skills.

##### 01.03 Use mathematical strategies and procedures.

##### 01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate accepted professional, communication and interpersonal skills specific to the dialysis setting.
- 13.0 Identify normal and abnormal anatomic structure and function of body systems in relation to services performed by a Hemodialysis Technician.
- 14.0 Practice infection control following universal precautions.
- 15.0 Recognize and demonstrate knowledge of how to utilize equipment and supplies specific to dialysis.
- 16.0 Demonstrate skills and knowledge necessary to perform dialysis technician duties.
- 17.0 Practice accepted procedures of transporting specimens.
- 18.0 Practice quality assurance and safety.
- 19.0 Demonstrate emergency planning and response.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Hemodialysis Technician  
**Career Certificate Program Number:** H17207

The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Career Certificate Program health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**Course Number: HSC0003**  
**Occupational Completion Point: A**  
**Basic Healthcare Worker – 90 Hours**

To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

| 12.03                                                                                                                | Demonstrate knowledge of various professional organizations related to hemodialysis.                                                                                      |
| 12.04                                                                                                                | Recognize the importance of continuing education and renewal of certification.                                                                                            |
| 12.05                                                                                                                | Recognize and respond appropriately to request from or to other departments or health care team members.                                                                  |
| 12.06                                                                                                                | Describe the role of other health team members who interact with the dialysis team.                                                                                       |
| 13.0                                                                                                                 | Identify normal and abnormal anatomic structure and function of body systems in relation to services performed by a hemodialysis technician. The student will be able to: |
| 13.01                                                                                                                | Demonstrate knowledge of basic structure of the kidney.                                                                                                                   |

|                                                                                                                      |                                                                                                                                                                                                                 |
|----------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.02                                                                                                                | Demonstrate knowledge of basic physiology of the kidney including but not limited to filtration, diffusion, osmosis, and electrolyte interchange.                                                               |
| 13.03                                                                                                                | Recognize function of endocrine system as related to the kidney.                                                                                                                                                |
| 13.04                                                                                                                | Describe interaction of other body systems related to dialysis.                                                                                                                                                 |
| 13.05                                                                                                                | Discuss diseases, including diagnosis, treatment, and signs and symptoms, which may lead to kidney failure and need for dialysis.                                                                               |
| 14.0                                                                                                                 | Practice infection control following standard precautions. The student will be able to:                                                                                                                         |
| 14.01                                                                                                                | Demonstrate knowledge of how (when) to utilize personal protection equipment (PPE).                                                                                                                             |
| 14.02                                                                                                                | Demonstrate ability to recognize biohazardous waste storage and disposal, including, but not limited to isolation room waste.                                                                                   |
| 14.03                                                                                                                | Follow standard precautions, clean techniques and OSHA regulations appropriately                                                                                                                                |
| 14.04                                                                                                                | Label biohazardous waste correctly including date and location.                                                                                                                                                 |
| 15.0                                                                                                                 | Recognize and demonstrate knowledge of how to utilize equipment and supplies specific to dialysis. The student will be able to:                                                                                 |
| 15.01                                                                                                                | Demonstrate use of water quality instrumentation including, but not limited to pH meter, conductivity meter and chloramine meter.                                                                               |
| 15.02                                                                                                                | Recognize supplies needed to conduct the hemodialysis treatment.                                                                                                                                                |
| 15.03                                                                                                                | Demonstrate ability to conduct daily inventory of hemodialysis supplies including, but not limited to dialysis, blood lines, and sodium chloride.                                                               |
| 15.04                                                                                                                | Recognize necessity of keeping areas stocked for each staff.                                                                                                                                                    |
| <b>Course Number: MLT0369</b><br><b>Occupational Completion Point: B</b><br><b>Dialysis Technician 2 – 255 Hours</b> |                                                                                                                                                                                                                 |
| 16.0                                                                                                                 | Demonstrate skills and knowledge necessary to perform dialysis technician duties. The student will be able to:                                                                                                  |
| 16.01                                                                                                                | Demonstrate accurate documentation, machine troubleshooting, and follow-up of whole patient hemodialysis treatment.                                                                                             |
| 16.02                                                                                                                | Recognize any visual changes in patient's behavior, hemodialysis machines and water room.                                                                                                                       |
| 16.03                                                                                                                | Demonstrate knowledge of the purpose of water softeners, carbon tank, reverse osmosis, and deionization, follow the monitoring guidelines for water purification equipment, distribution Systems and dialysate. |
| 16.04                                                                                                                | Demonstrate ability to cannulate, assess and confirm blood flow direction in patient's access; including, but not limited to signs of infection and patency.                                                    |

|       |                                                                                                                                                                                                                   |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 17.0  | Practice accepted procedures of transporting specimens. The student will be able to:                                                                                                                              |
| 17.01 | Collect blood specimens utilizing correct drawing techniques, refrigeration, packing, and transportation.                                                                                                         |
| 17.02 | Follow laboratory's policy and procedures (P and P) from collection of specimens to separation of blood form elements.                                                                                            |
| 18.0  | Practice quality assurance and safety. The student will be able to:                                                                                                                                               |
| 18.01 | Demonstrate how to follow-up physician's medical orders, including, but not limited to treatment length, blood flow rates, dialysis type and concentration.                                                       |
| 18.02 | Assist with maintenance of appropriate aseptic techniques (clean and/or sterile) during cannulation.                                                                                                              |
| 18.03 | Recognize patient's target weight (TW) importance, and maximum ultra-filtration rate possible.                                                                                                                    |
| 18.04 | Describe patient's probable prognosis when dry weight is not reached.                                                                                                                                             |
| 18.05 | Demonstrate patient safety practices as related to permanent monitor patient - machine.                                                                                                                           |
| 18.06 | Identify appropriate procedures and protocols to manage and correct common complications, including but not limited to, intradialytic hypotension, air embolisms, exsanguination (mass blood loss) and hemolysis. |
| 19.0  | Demonstrate emergency planning and response. The students will be able to:                                                                                                                                        |
| 19.01 | Demonstrate ability to follow the steps of emergency preparedness, including regulations, oversights and threat levels.                                                                                           |
| 19.02 | Demonstrate the ability to perform rapid and safe patient disconnection in the event of an emergency situation.                                                                                                   |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Hands on clinical experience should be provided as part of the program of study. Refer to specific certification exam eligibility requirements in relation to clinical experience.

### **Special Notes**

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

State or Industry certification examinations are now part of the Centers of Medicare and Medicaid Services' (CMS) requirements and are available through several state and independent professional certification agencies:

Nephrology Nursing Certification Commission (NNCC) <http://www.nncc-exam.org>

The Board of Nephrology Examiners Nursing and Technology (BONENT) <https://bonent.org/exams-certifications/>

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as electrocardiograph aides, electrocardiograph technicians, EKG Technicians, cardiovascular technologists, and technicians, or to provide supplemental training for persons previously or currently employed in this occupation.

The content includes but is not limited to communication and interpersonal skills, overview of human anatomy and physiology with emphasis on cardiac and vascular systems, medical terminology and transcription, patient care techniques, medical instrumentation, cardiovascular drugs, interpretation of monitoring and testing results, medical ethics, cardiac wellness and rehabilitation, safe and efficient work practices, CPR, Basic Life Support (BLS) and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Program Structure**

This program is a planned sequence of instruction consisting of 3 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title            | Teacher Certification                                                                                                                                 | Length    |

## Common Florida's Career Technical Core—Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                       |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Describe the cardiovascular system.
- 13.0 Identify legal and ethical responsibilities of an EKG aide.
- 14.0 Demonstrate knowledge of, apply, and use medical instrumentation modalities.
- 15.0 Perform patient care techniques in the health care facility.
- 16.0 Recognize normal and abnormal monitoring and testing results.
- 17.0 Describe cardiovascular drugs, their actions, use, and adverse effects.
- 18.0 Demonstrate knowledge of other cardiovascular diagnostic modalities.

**Florida Department of Education  
Student Performance Standards**

**Program Title:**        **Electrocardiograph Technology**  
**Career Certificate Program Number:**        **H170208**

The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Career Certificate Program health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. -When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**Career Certificate Program Course Number: HSC0003**  
**Occupational Completion Point: A**  
**Basic Healthcare Worker – 90 Hours**

To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

| <del>14.10</del>              | <del>Verify accuracy of lead placement on the EKG.</del>                                                                                                                                                                                                                                             |
| 14.11                         | <del>Verify settings on the EKG machine such as paper speed, sensitivity (gain), and Hertz (Hz) prior to use.</del> <u>Use documentation skills to identify an electrocardiograph.</u>                                                                                                               |
| 15.0                          | Perform patient care techniques in the health care facility. -The student will be able to:                                                                                                                                                                                                           |
| 15.01                         | Describe the physical and mental preparation of the patient for EKG testing.                                                                                                                                                                                                                         |
| 15.02                         | Identify <u>the</u> patient and verify the requisition order.                                                                                                                                                                                                                                        |
| <del>15.03</del>              | <del>Prepare patient for cardiovascular diagnostic testing.</del>                                                                                                                                                                                                                                    |
| <del>15.04</del>              | <del>Obtain patient's vitals (temperature, pulse, respirations, blood pressure, and pulse oximetry) in preparation for cardiovascular diagnostic testing and report abnormalities.</del>                                                                                                             |

~~15.05~~15.03 State precautions required when performing cardiovascular diagnostic procedures.

15.06 ~~Convey the importance of maintaining a safe patient environment and evaluate potential hazards in the work environment.~~

**Course Number: MEA0541**  
**Occupational Completion Point: C**  
**EKG Technician – 300 Hours**

16.0 Recognize normal and abnormal monitoring and testing results. -The student will be able to:

16.01 Inspect and measure the various waveforms of a cardiac cycle, including segments, complexes, heart rates, and intervals.

16.02 Identify the electrical axis of the heart.

16.03 Recognize pacemaker spikes on the EKG and state the purpose of pacemakers.

~~16.04 Recognize normal and deviations from normal sinus rhythms.~~

~~16.05 Recognize all atrial rhythms.~~

~~16.06 Recognize all junctional rhythms.~~

~~16.07 Recognize all ventricular rhythms.~~

~~16.08 Recognize all types of heart blocks.~~

~~16.09~~16.04 Recognize normal and deviations from single chamber and dual chamber pacemakers, as well as all implantable cardioverter defibrillators.

~~16.10~~16.05 Identify myocardial ischemia, injury, and infarction on EKG tracing.

~~16.11~~16.06 Recognize atrial and ventricular hypertrophies.

~~16.12~~16.07 Recognize ectopic beats and any rare phenomena.

~~16.13 Recognize normal and deviations from normal 12 lead EKG results.~~

~~16.14~~16.08 Describe potential patient responses to all dysrhythmias and other EKG abnormalities.

~~16.15~~16.09 Recognize and respond promptly to life-threatening dysrhythmias during continuous monitoring such as telemetry.

17.0 Describe cardiovascular drugs, their actions, use, and adverse effects. -The student will be able to:

17.01 Describe the mechanisms by which common cardiovascular drugs work, including actions and adverse effects.

|                        |                                                                                                                                          |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| 17.02                  | Differentiate between normal and abnormal EKG changes potentially due to drugs.                                                          |
| 18.0                   | Demonstrate knowledge of other cardiovascular diagnostic modalities. -The student will be able to:                                       |
| <del>18.01</del>       | <del>Demonstrate knowledge of the application of a Holter Monitor and ambulatory monitor and provide patient education of its use.</del> |
| <del>18.02</del>       | <del>Demonstrate the procedures for stress testing/scanning exercise treatment and provide patient education.</del>                      |
| <del>18.03</del> 18.01 | Understand and demonstrate patient documentation for all types of monitoring.                                                            |
| <del>18.04</del> 18.02 | Describe other modalities of cardiovascular diagnosis and interpretation.                                                                |
| <del>18.05</del> 18.03 | Understand patient cardiac alarm policy per acceptable facility guidelines.                                                              |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

This cluster of programs focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.

Students must complete the core, or demonstrate the mastery of skills standards contained in the core, before advancing in the program. The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

A voluntary national certification is available through an exam offered by the National Health Career Association, 194 Rt. 46 East, Fairfield, NJ 07004 (973-244-0023). To be eligible students must:

1. Have a High School Diploma or equivalency and have completed an NHA approved training program.
- OR
2. Have a High School Diploma or equivalency and have worked in the field for a minimum of one year.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Florida Department of Education  
Curriculum Framework

No new students may be enrolled in this program starting 2026-27. The last year to report any enrollment is 2028-29. This program was replaced by Surgical Technology H700200 (0351090909).

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment as surgical technologists. Selected portions of this program may be utilized to provide additional skills to enable nursing graduates to become employable in operating rooms as surgical technologists.

The content includes but is not limited to communication and interpersonal skills, legal and ethical responsibilities, anatomy, physiology, pathophysiology, microbiology, aseptic techniques, patient care procedures, surgical technology procedures, patient safety, use and care of equipment and supplies, CPR, Heartsaver, employability skills, and basic computer literacy.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 3 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3)(b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title              | Teacher Certification                              | Length    |
|-----|---------------|---------------------------|----------------------------------------------------|-----------|
| A   | HSC0003       | Basic Healthcare Worker   | OPR RM TEC @7 7G                                   | 90 hours  |
| B   | STS0015       | Central Supply Technician | REG NURSE 7 G                                      | 210 hours |
| C   | STS0010       | Surgical Technologist 1   | OPR REG NURSE 7 G                                  | 343 hours |
|     | STS0011       | Surgical Technologist 2   | SURG TECH 7 G                                      | 343 hours |
|     | STS0012       | Surgical Technologist 3   | PRAC NURSE @7 %7%G<br>(Must be a Registered Nurse) | 344 hours |

## Common Florida's Career Technical Core—Career Ready Practices Readiness Skills for CTE Programs

~~Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.~~

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- ~~12. Work productively in teams while using cultural/global competence.~~

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                       |

| <a href="#"><u>11.0 Communicate personal competence, character and fit for a job opportunity.</u></a>                                       |
| <a href="#"><u>11.01 Develop a resume.</u></a>                                                                                              |
| <a href="#"><u>11.02 Write a cover letter.</u></a>                                                                                          |

|                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------|
| <u>11.03 Curate a professional portfolio that includes work products.</u>                                                    |
| <u>11.04 Prepare for and experience a mock job interview.</u>                                                                |
| <u>12.0 Cultivate and leverage relationships to professionally advance.</u>                                                  |
| <u>12.01 Request a signed reference letter, letter of recommendation and/or an online skill/professionalism endorsement.</u> |
| <u>12.02 Develop a plan to cultivate a professional digital footprint.</u>                                                   |
| <u>12.03 Develop a networking plan for a specific industry of interest.</u>                                                  |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate central supply skills.
- 13.0 Use communication and interpersonal skills as related to surgical technology.
- 14.0 Demonstrate an understanding of the basic sciences related to surgical technology.
- 15.0 Demonstrate knowledge of pharmacology and math calculation principles related to the surgical environment.
- 16.0 Describe and practice safety measures in the surgical environment.
- 17.0 Assist the RN circulator with patient care procedures related to the surgical environment and describe methods for meeting patient's needs.
- 18.0 Demonstrate knowledge of the skills necessary to function safely and effectively.
- 19.0 Demonstrate knowledge of and assist with surgical procedures.
- 20.0 Demonstrate an understanding of legal and ethical responsibilities specific to surgical technology.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Surgical Technology  
**Career Certificate Program Number:** H170211

The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Career Certificate Program health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**Course Number: HSC0003**  
**Occupational Completion Point: A**  
**Basic Healthcare Worker – 90 Hours**

To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

~~<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-psav-cc-2425.rtf>~~ <https://www.fldoe.org/file/20894/health-sci-core-psav-cc-2627.rtf>

**Course Number: STS0015**  
**Occupational Completion Point: B**  
**Central Supply Technician – 210 Hours**

12.0 Demonstrate central supply skills. The student will be able to:

- |       |                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.01 | Apply the principles of medical/surgical asepsis including attire, environmental control and traffic patterns to control and manage dirty, clean and sterile areas of the operating room and central supply. |
| 12.02 | Apply infection control techniques following Center for Disease Control (CDC) guidelines.                                                                                                                    |
| 12.03 | Inspect and send out for repair instruments, equipment and supplies regarding condition and quantity.                                                                                                        |
| 12.04 | Describe the methods of disinfection and sterilization.                                                                                                                                                      |
| 12.05 | Demonstrate the handling, inspection and notification process regarding package integrity.                                                                                                                   |
| 12.06 | Demonstrate correctly decontamination techniques for instruments, equipment, and the environment used for surgical procedures.                                                                               |
| 12.07 | Describe clean and sterile transportation, restocking, and storage principles for instruments, supplies and equipment.                                                                                       |
| 12.08 | Identify instruments, supplies and equipment for any surgical procedure.                                                                                                                                     |
| 12.09 | Describe various supply distribution and inventory control methods.                                                                                                                                          |

|       |                                                                                                         |
|-------|---------------------------------------------------------------------------------------------------------|
| 12.10 | Demonstrate ability to prepare and label items for high level disinfection and sterilization correctly. |
| 12.11 | Demonstrate the techniques of high level disinfection and sterilization for immediate use items.        |
| 12.12 | Demonstrate case cart preparation and management.                                                       |

**Course Number: STS0010**  
**Occupational Completion Point: C**  
**Surgical Technologist 1 – 343 Hours**

|       |                                                                                                                                                                                                   |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.0  | Use communication and interpersonal skills as related to surgical technology. The student will be able to:                                                                                        |
| 13.01 | Describe various forms of communication in the role of surgical technologist.                                                                                                                     |
| 13.02 | Analyze and select the appropriate behavioral response unique to the patient's needs.                                                                                                             |
| 13.03 | Describe the concepts of conflict resolution, assertive behavior and the principles of teamwork in the surgical environment.                                                                      |
| 14.0  | Demonstrate an understanding of the basic sciences related to surgical technology. The student will be able to:                                                                                   |
| 14.01 | Describe the concepts of microbiology and relate key principles to the surgical environment.                                                                                                      |
| 14.02 | Compare and contrast the structure and characteristics of microorganisms found in the surgical environment.                                                                                       |
| 14.03 | Relate medical terminology, medical abbreviations, and anatomy and physiology to surgical specialties and specific procedures.                                                                    |
| 14.04 | Analyze patient defense mechanisms, the chain of infection and the infectious process as related to surgical practice.                                                                            |
| 14.05 | Demonstrate infection and disease transmission control techniques following the Center for Disease Control (CDC) and Occupational Safety and Health Administration (OSHA) guidelines for surgery. |
| 14.06 | Correlate wound classifications and wound healing principles with wound management guidelines.                                                                                                    |
| 14.07 | Discuss the principles of information technology, electricity and robotics as they relate to surgery.                                                                                             |
| 15.0  | Demonstrate knowledge of pharmacology and math calculation principles related to the surgical environment. The student will be able to:                                                           |
| 15.01 | Describe the roles of the anesthesia provider and circulating nurse.                                                                                                                              |
| 15.02 | Analyze the administration of anesthesia including the methods, agents, and techniques.                                                                                                           |
| 15.03 | Describe the preoperative examination and preparation process for both surgery and anesthesia.                                                                                                    |
| 15.04 | Describe potential anesthesia and operative complications and interventions for each.                                                                                                             |

|       |                                                                                                                                                                                            |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15.05 | Define the terminology and describe the basic concepts of pharmacology including pharmacokinetics and pharmacodynamics.                                                                    |
| 15.06 | Identify the classifications, actions, effects and precautions for common drugs used at the sterile field and within the surgical environment.                                             |
| 15.07 | Demonstrate the application of the six rights of medication administration.                                                                                                                |
| 15.08 | Analyze and assemble correctly all medication supplies, for each drug to be used on the sterile field.                                                                                     |
| 15.09 | Demonstrate the appropriate methods of transferring and accepting medications onto the sterile field.                                                                                      |
| 15.10 | Prepare, manage and label sterile solutions and medications accurately within the sterile field.                                                                                           |
| 15.11 | Correctly calculate common medication conversions and dosages.                                                                                                                             |
| 15.12 | Demonstrate preparation and passing of medication mixtures using ratio and proportions correctly. .                                                                                        |
| 15.13 | Maintains an accurate account of the amount of each medication and/or solution used at the field and notifies circulator as appropriate to the situation to ensure accurate documentation. |
| 16.0  | Describe and practice safety measures in the surgical environment. The student will be able to:                                                                                            |
| 16.01 | Describe the role, job duties and responsibilities of the surgical technologist in the healthcare setting.                                                                                 |
| 16.02 | Inspect emergency equipment and supplies for condition and quantity.                                                                                                                       |
| 16.03 | Demonstrate appropriate safety measures to prevent operating room fires and electrical shock from equipment.                                                                               |
| 16.04 | Describe appropriate safety measures for laser and electrosurgical unit usage in surgery.                                                                                                  |
| 16.05 | Implement appropriate regulatory and accreditation agency patient safety guidelines.                                                                                                       |
| 16.06 | Describe the role of the surgical technologist in a disaster situation.                                                                                                                    |
| 16.07 | Describe the role of the surgical technologist in an emergency patient situation.                                                                                                          |
| 16.08 | Prepare the operative site.                                                                                                                                                                |
| 16.09 | Perform steps for Foley catheter insertion and connecting to drainage correctly.                                                                                                           |

**Course Number: STS0011**  
**Occupational Completion Point: C**  
**Surgical Technologist 2 – 343 Hours**

|       |                                                                                                                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 17.0  | Assist the RN circulator with patient care procedures related to the surgical environment and describe methods for meeting patient's needs. The student will be able to:                                         |
| 17.01 | Perform patient transfer/transportation techniques used in the operating room.                                                                                                                                   |
| 17.02 | Assist with positioning and apply safety devices to the patient for surgery.                                                                                                                                     |
| 17.03 | Ground patient and connect electrosurgical cautery unit.                                                                                                                                                         |
| 17.04 | Describe the roles of anesthetist and circulating nurse during induction.                                                                                                                                        |
| 17.05 | Prepare the operative site.                                                                                                                                                                                      |
| 17.06 | Perform steps for Foley catheter insertion and connecting to drainage.                                                                                                                                           |
| 17.07 | Apply sterile dressing and bandage.                                                                                                                                                                              |
| 18.0  | Demonstrate knowledge of the skills necessary to function safely and effectively. The student will be able to:                                                                                                   |
| 18.01 | Select and verify instruments, equipment and supplies, including any implants needed for surgical procedures using surgeon preference/procedure cards including those identified as “have available/hold items”. |
| 18.02 | Measure and pour sterile solutions.                                                                                                                                                                              |
| 18.03 | Perform surgical scrub.                                                                                                                                                                                          |
| 18.04 | Put on sterile gown and gloves.                                                                                                                                                                                  |
| 18.05 | Drape tables and solution stands.                                                                                                                                                                                |
| 18.06 | Set up sterile mayo stand and instrument table.                                                                                                                                                                  |
| 18.07 | Prepare sutures, ligatures, and ties.                                                                                                                                                                            |
| 18.08 | Prepare, pass, and monitor amount given for medications used on the sterile field.                                                                                                                               |
| 18.09 | Assist surgeon in gowning and gloving.                                                                                                                                                                           |
| 18.10 | Assist in draping patient, pass instruments, monitor field.                                                                                                                                                      |
| 18.11 | Identify/correct and/or report breaks in aseptic technique.                                                                                                                                                      |
| 18.12 | Monitor body fluids, e.g., blood loss, ascites.                                                                                                                                                                  |

|       |                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------|
| 18.13 | Perform complete counts with R.N.                                                                                                 |
| 18.14 | Identify principles and demonstrate techniques of disinfection and sterilization.                                                 |
| 18.15 | Assist in removing/applying cast.                                                                                                 |
| 18.16 | Assist in maintaining retraction, cutting suture and holding instruments as directed by the surgeon in the second assistant role. |
| 18.17 | Prepare specimen for laboratory analysis.                                                                                         |
| 18.18 | Decontaminate instruments equipment and environment.                                                                              |
| 18.19 | Replenish supplies and equipment.                                                                                                 |
| 18.20 | Describe how to update procedure/preference cards.                                                                                |
| 18.21 | Apply electrical knowledge to safe patient care practices in surgery.                                                             |

**Course Number: STS0012**  
**Occupational Completion Point: C**  
**Surgical Technologist 3 – 344 Hours**

|       |                                                                                                                                                                       |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.0  | Demonstrate knowledge of and assist with surgical procedures. The student will be able to:                                                                            |
| 19.01 | Identify preoperative diagnosis, common complications, and operative pathology relating to specific surgical procedures.                                              |
| 19.02 | List and describe types of incisions and wound closures.                                                                                                              |
| 19.03 | Describe the usual sequence of a common surgical procedure (i.e., incision into the anatomy, dissection of the anatomy and closing of the anatomy).                   |
| 19.04 | Demonstrates the ability to select the appropriate instrument, equipment, or supply for each step of the procedure.                                                   |
| 19.05 | Demonstrates proper cost-effective methods including the ability to identify “have available/hold items”.                                                             |
| 20.0  | Demonstrate an understanding of legal and ethical responsibilities specific to surgical technology. The student will be able to:                                      |
| 20.01 | State methods, standards, and aids that assist a surgical technologist with interpreting and following legal responsibilities.                                        |
| 20.02 | Describe the role of the surgical technologist in the healthcare setting. Provide health care within the ethical/legal framework of the surgical technologist’s role. |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Clinical learning experiences in an operating room and related areas are an integral part of this program. It is strongly recommended that a teacher to student ratio of 1:6 be held in the laboratory setting.

### Special Notes

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

The program should meet the requirements of the Commission on Accreditation of Allied Health Education Programs (CAAHEP) or Accrediting Bureau of Health Education Schools (ABHES).

After successful completion of a Commission on Accreditation of Allied Health Education Programs (CAAHEP) or Accrediting Bureau of Health Education Schools (ABHES) accredited program, students are eligible to take the National Board of Surgical Technologist and Surgical Assisting (NBSTSA), Certified Surgical Technologist exam.

**Please contact NBSTSA for more information on this exam:** National Board of Surgical Technologist and Surgical Assisting (NBSTSA) <http://nbstsa.org/>, 6 West Dry Creek Circle, Suite 100 Littleton, Colorado 80120, Toll-free: (800) 707-0057

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as supervisors, central supply, central supply workers, ambulatory surgery processors, surgical instrument processors, gastrointestinal (GI) flexible endoscope reprocessors, case cart technicians, inventory technicians, processing technicians, stock clerks: stock room or warehouse, sterilizers, central service technicians (medical equipment preparers).

The content includes but is not limited to central services departmental organization and function; basic anatomy, physiology, microbiology and chemistry related to central service activities; quality assurance; infection control and isolation techniques, principles of safety; principles, methods and controls of sterilization processes; cleaning, processing, packaging, distributing, storing, and inventory control of sterile goods, instruments, trays, and equipment; medical terminology; surgical instrumentation; basic computer skills, interpersonal and job seeking skills, fundamentals of

communication, case cart management, laparoscopic specialty, orthopedic specialty, flexible scope processing, shift supervisory skills and procurement of supplies and equipment.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 2 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3)(b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title                                    | Teacher Certification | Length    |
|-----|---------------|-------------------------------------------------|-----------------------|-----------|
| A   | HSC0003       | Basic Healthcare Worker                         | CENT SERV TECH 7 G    | 90 hours  |
| B   | STS0019       | Central Sterile Service Materials Management    | OPR REG NURSE 7 G     | 150 hours |
| C   | STS0013       | Central Sterile Processing Technician Practicum | SURG TECH 7 G         | 410 hours |

## CommonFlorida's Career Technical Core – Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

##### 01.01 Use reading skills.

##### 01.02 Use writing skills.

##### 01.03 Use mathematical strategies and procedures.

##### 01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                |
|----------------------------------------------------------------------------------------------------------------|

| <a href="#"><u>12.03 Develop a networking plan for a specific industry of interest.</u></a>                                                  |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Describe supply distribution systems and the principles of inventory control.
- 13.0 Describe the processes for loaner instrumentation and equipment.
- 14.0 Demonstrate the methods of case cart preparation and the utilization of preference cards.
- 15.0 Demonstrate the ability to recall and dispose of or reprocess sterile supplies.
- 16.0 Demonstrate language arts knowledge and skills.
- 17.0 Solve problems using critical thinking skills, creativity, and innovation.
- 18.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment.
- 19.0 Demonstrate the roles and responsibilities of the central supply worker.
- 20.0 Describes the function and workflow of the sterile processing department.
- 21.0 Recognize basic principles of microbiology.
- 22.0 Interpret and apply medical terminology and anatomical terms as they relate to equipment and supplies issued by central service personnel.
- 23.0 Describe how central service is involved in controlling infections in hospitals.
- 24.0 Explain the purpose of Occupational Safety and Health Act (OSHA).
- 25.0 Translate how to receive, decontaminate, clean, prepare, disinfect and sterilize reusable items.
- 26.0 Demonstrate flexible endoscopic leak testing, decontamination, and reprocessing.
- 27.0 Demonstrate the use of sterilization process monitors, including temperature and frequency of appropriate chemical indicators and bacterial spore tests for all sterilizers.
- 28.0 Demonstrate the ability to identify and select appropriate instrumentation or equipment that meets the needs of the surgical specialty.
- 29.0 Define the use of Robotics in Central Sterile Processing Technology.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** \_\_\_\_\_ **Central Sterile Processing Technology**  
**Career Certificate Program Number:** \_\_\_\_\_ **H170222**

The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Career Certificate Program health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**Career Certificate Program Course Number: HSC0003**  
**Occupational Completion Point: A**  
**Basic Healthcare Worker – 90 Hours**

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

|---------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| 12.0                                                                                                                                        | Describe supply distribution systems and the principles of inventory control. The student will be able to:          |
| 12.01                                                                                                                                       | Define the benefits of inventory control.                                                                           |
| 12.02                                                                                                                                       | Describe the methods of inventory control.                                                                          |
| 12.03                                                                                                                                       | Compare the advantages and disadvantages of each distribution methods.                                              |
| 12.04                                                                                                                                       | Process a requisition marked "stat" - locate article, price, etc.                                                   |
| 12.05                                                                                                                                       | Demonstrate the process of stock rotation.                                                                          |
| 12.06                                                                                                                                       | Describe the process of supply chain management.                                                                    |
| 12.07                                                                                                                                       | Communicate with other hospitals, facilities, or company representatives for procurement of supplies and equipment. |
| 12.08                                                                                                                                       | Describe several different methods of procurement of supplies.                                                      |
| 12.09                                                                                                                                       | Describe basics of receiving items, including documentation of receiving and release to other facilities.           |

|                                        |                                                                                                                                                                 |
|----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.0                                   | Describe the processes for loaner instrumentation and equipment. The student will be able to:                                                                   |
| 13.01                                  | Describe how vendor trays enter the hospital.                                                                                                                   |
| 13.02                                  | Demonstrate how the new vendor trays begin to be processed.                                                                                                     |
| 13.03                                  | Demonstrate how the vendor trays are processed for sterilization.                                                                                               |
| 13.04                                  | Define the Rules and Regulations of transporting vendor trays in and out of the hospital Centra Sterile Processing Department.                                  |
| 14.0                                   | Demonstrate the methods of case cart preparation and the utilization of preference cards. The student will be able to:                                          |
| <a href="#">14.01</a> <del>14.01</del> | Describe the proper standards for case cart preparation                                                                                                         |
| <a href="#">14.02</a> <del>14.02</del> | Describe the method of preparing the cart for use.                                                                                                              |
| <a href="#">14.03</a> <del>14.03</del> | Demonstrate the use of the preference cards and pick list for utilization of case carts                                                                         |
| <a href="#">14.04</a> <del>14.04</del> | Describe the procedures for missing items during initial picking of case carts and how missing items are replenished from CS. ie turnover items or replacement. |
| 15.0                                   | Demonstrate the ability to recall and dispose of or reprocess sterile supplies. The student will be able to:                                                    |
| 15.01                                  | Explain the factors that affect how long a package can be considered safe for use.                                                                              |
| 15.02                                  | Explain the differences between event related, date related, and manufacturer recommendations.                                                                  |
| 15.03                                  | State the methods of determining expiration dates.                                                                                                              |
| 15.04                                  | List the steps in reprocessing outdated hospital packaged items.                                                                                                |
| 15.05                                  | List conditions that would make a product unsafe for use.                                                                                                       |
| 15.06                                  | Describe the use of tamper evident seals.                                                                                                                       |
| 15.07                                  | Describe the methods of reprocessing.                                                                                                                           |
| 15.08                                  | Identify standards and facility policies on reprocessing of single use items.                                                                                   |
| 15.09                                  | Describe the process of recall for medical/surgical supplies.                                                                                                   |

**Course Number: STS0013**  
**Occupational Completion Point: C**  
**Central Sterile Processing Technician Practicum – 410 Hours**

|       |                                                                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.0  | Demonstrate language arts knowledge and skills. The students will be able to:                                                                                    |
| 16.01 | Locate, comprehend and evaluate key elements of oral and written information.                                                                                    |
| 16.02 | Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary.                                                                     |
| 16.03 | Present information formally and informally for specific purposes and audiences.                                                                                 |
| 17.0  | Solve problems using critical thinking skills, creativity, and innovation. The students will be able to:                                                         |
| 17.01 | Employ critical thinking skills independently and in teams to solve problems and make decisions.                                                                 |
| 17.02 | Employ critical thinking and interpersonal skills to resolve conflicts.                                                                                          |
| 17.03 | Identify and document workplace performance goals and monitor progress toward those goals.                                                                       |
| 17.04 | Conduct technical research to gather information necessary for decision-making.                                                                                  |
| 18.0  | Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. The students will be able to: |
| 18.01 | Describe the nature and types of healthcare organizations.                                                                                                       |
| 18.02 | Explain the effect of key organizational systems on performance and quality.                                                                                     |
| 18.03 | List and describe quality control systems and/or practices common to the workplace.                                                                              |
| 18.04 | Explain the impact of the global economy on healthcare organizations.                                                                                            |
| 18.05 | Employ leadership skills to accomplish organizational goals and objectives.                                                                                      |
| 18.06 | Establish and maintain effective working relationships with others, in order to accomplish objectives and tasks.                                                 |
| 18.07 | Conduct and participate in meetings to accomplish work tasks.                                                                                                    |
| 18.08 | Employ mentoring skills to inspire and teach others.                                                                                                             |
| 18.09 | Analyze attributes and attitudes of an effective leader.                                                                                                         |
| 18.10 | Recognize factors and situations that may lead to conflict.                                                                                                      |
| 18.11 | Demonstrate effective techniques for managing team conflict.                                                                                                     |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| 21.07 | Describe how the body controls the growth of pathogenic microorganisms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 21.08 | Identify pathogenic microorganisms commonly found in central service departments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 22.0  | Interpret and apply medical terminology and anatomical terms as they relate to equipment and supplies issued by central service personnel. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 22.01 | Identify word elements for medical terms including the breakdown of medical specialties and anatomy that belongs in each category.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 22.02 | <p>Relate anatomical concepts to orthopedic devices and other supplies and equipment issued by the CS Department.</p> <ul style="list-style-type: none"> <li>• The student should be able to body plains and identify Laterality, as well as organ orientation.</li> <li>• Medical terminology breakdown for multiple surgical procedures and identify each of the organs in the specific specialty.</li> <li>• Describe the multiple surgical specialties and identify the related anatomy for the procedure related to each surgical procedure.</li> <li>• Identify the instruments that relate to each surgical specialty</li> </ul> |
| 23.0  | Describe how central service is involved in controlling infections in hospitals. The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 23.01 | Describe hospital acquired infections.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 23.02 | Describe the types of isolation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 23.03 | Describe the organization and functions of CS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 23.04 | <p>Describe the CS responsibilities for infection control and traffic patterns when in the operating room and other departments.</p> <ul style="list-style-type: none"> <li>• The student should be able to identify the proper temperature, humidity, and related conditions for each specific area of the department. <ul style="list-style-type: none"> <li>○ Decontamination</li> <li>○ Preparation and packing</li> <li>○ Sterile storage of instruments and soft goods.</li> </ul> </li> </ul>                                                                                                                                    |
| 23.05 | Identify proper storage and transportation standards for supplies in the facility (receivables, sterile, clean, or contaminated).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 23.06 | Describe the organizational patterns of health care facilities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 24.0  | Explain the purpose of Occupational Safety and Health Act (OSHA). The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 24.01 | Describe how employees are protected under OSHA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 24.02 | Describe potential workplace hazards in CS. (wet floors, chemicals, fumes, gases, steam, electrical outlets, body fluids, microorganisms, sharps, and medical wastes).                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 24.03 | Describe the role preventive maintenance plays in patient and personnel safety in the hospital.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 24.04 | Explain the purpose of Florida's "Right to Know" law and its provisions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|       |                                                                                                                                                                                                           |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 24.05 | -Describe the protocol for personal injury including the completion of incident/occupancy reports and follow up.                                                                                          |
| 24.06 | Implement appropriate regulatory and accreditation agency patient safety guidelines.                                                                                                                      |
| 25.0  | Receive, decontaminate, clean, prepare, disinfect and sterilize reusable items. The student will be able to:                                                                                              |
| 25.01 | Describe the importance of thorough cleaning to the overall objectives of making items safe for patient use.                                                                                              |
| 25.02 | Explain the importance of following manufacturers' instructions in cleaning each item for reprocessing.                                                                                                   |
| 25.03 | Describe the levels of disinfection, the cleaning process and methods of disinfection for the environment, instruments, syringes, needles, rubber goods and equipment.                                    |
| 25.04 | Describe the mechanisms of action for each disinfection method including ultrasonic machines and washer/sterilizers.                                                                                      |
| 25.05 | Describe the strategies for managing difficult to control microorganisms that require isolation techniques and specialized decontamination methods including Creutzfeldt - Jakob disease (CJD).           |
| 25.06 | Describe the factors affecting decontamination (water temperature, loading procedures, water impurities, opening and disassembling).                                                                      |
| 25.07 | Distinguish correct reprocessing policies related to single use, limited use, and reusable items.                                                                                                         |
| 25.08 | Describe decontamination methods for drill systems and batteries.                                                                                                                                         |
| 25.09 | Describe the function of case cart washers, and alternative methods of cleaning.                                                                                                                          |
| 25.10 | Describe the need for testing and monitoring all decontamination machines for proper function and cleaning agents.                                                                                        |
| 25.11 | Explain the importance of using correct chemicals for cleaning in regards to water quality, PH, filters, softeners, enzymes, lubricants.                                                                  |
| 25.12 | Describe the types, characteristics, and uses of chemicals, solutions, and gases utilized for decontamination (detergents, disinfectants, enzymatics, and germicides).                                    |
| 25.13 | Demonstrate the decontamination process for instruments, syringes, needles, rubber goods and equipment.                                                                                                   |
| 25.14 | Demonstrate flexible endoscopic leak testing, decontamination, and reprocessing.                                                                                                                          |
| 25.15 | Demonstrates decontamination and proper handling of rigid scopes.                                                                                                                                         |
| 25.16 | Describes the methods of high level disinfection including manual and automated endoscopic reprocessor (AER).                                                                                             |
| 25.17 | Describe the types of sterilizers and methods of sterilization to include: <ul style="list-style-type: none"> <li>• Prevac</li> <li>• Gravity Displacement</li> <li>• Gas Plasma</li> <li>• EQ</li> </ul> |

|                       |                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       | <ul style="list-style-type: none"> <li>• <u>H202</u></li> </ul>                                                                                                                                                                                                                                                                                    |
| 25.18                 | Describe the primary objectives in selecting the correct packaging materials for both the individual item and the sterilization method to be used.                                                                                                                                                                                                 |
| 25.19                 | Describe the principles of packaging.                                                                                                                                                                                                                                                                                                              |
| 25.20                 | Describe the characteristics of packaging materials in relationship to sterilization methods.                                                                                                                                                                                                                                                      |
| 25.21                 | Describe the principles of linen pack and tray construction/assembly.                                                                                                                                                                                                                                                                              |
| 25.22                 | Describe the recommended labeling methodologies.                                                                                                                                                                                                                                                                                                   |
| 25.23                 | Identify basic surgical procedure trays, instruments, supplies, and accessories.                                                                                                                                                                                                                                                                   |
| 25.24                 | Explain the principles utilized when loading different kinds of wrapped packs or packages into a sterilizer to be assured of sterilant penetration.                                                                                                                                                                                                |
| 25.25                 | Recognize equipment malfunction and list corrective actions.                                                                                                                                                                                                                                                                                       |
| 25.26                 | Demonstrate the ability to package, wrap and protect the instruments in each sterilizer by identifying the IFU from the manufacturer.                                                                                                                                                                                                              |
| 25.27                 | Demonstrate loading of different kinds of wrapped packs or packages into a sterilizer to be assured of sterilant penetration.                                                                                                                                                                                                                      |
| 25.28                 | Describe how sterile supplies should be handled.                                                                                                                                                                                                                                                                                                   |
| 25.29                 | Demonstrate handling, transportation and storage of clean, sterile and nonsterile supplies and equipment.                                                                                                                                                                                                                                          |
| 26.0                  | Demonstrate flexible endoscopic leak testing, decontamination, and reprocessing. The student will be able to:                                                                                                                                                                                                                                      |
| 26.01                 | Demonstrate the process of Leak testing and why this is microbiologically important.                                                                                                                                                                                                                                                               |
| 26.02                 | Demonstrate the process of using the AER and the use of IFU for Each type.                                                                                                                                                                                                                                                                         |
| 26.03                 | Describe the chemicals and solutions for HLD (High Level Disinfection chemicals). <ul style="list-style-type: none"> <li>• High-Level Disinfection chemicals and what their parameters are: OPA, and Glutaraldehyde.</li> <li>• The proper disposal and handling of HLD.</li> <li>• The MLE Minimal Level of Effectiveness for each HLD</li> </ul> |
| 27.0                  | Demonstrate the use of sterilization process monitors, including temperature and frequency of appropriate chemical indicators and bacterial spore tests for all sterilizers. The student will be able to:                                                                                                                                          |
| <a href="#">27.01</a> | <del>27.01</del> —Describe the types of sterilization, sterilization cycles, and parameters for each.                                                                                                                                                                                                                                              |
| <a href="#">27.02</a> | <del>27.02</del> —Describe the importance of the manufacturer's recommendations for the safe operation of each type of sterilizer.                                                                                                                                                                                                                 |
| <a href="#">27.03</a> | <del>27.03</del> —Describe the methods of sterilization monitoring.                                                                                                                                                                                                                                                                                |

|                       |                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">27.04</a> | <del>27.04</del> Demonstrate the process of preparing and documenting the sterilizer load contents for each sterilizer correctly according to the manufacturer's recommendations.                                                                                                                                                                                   |
| <a href="#">27.05</a> | <del>27.05</del> Demonstrate the operation, testing, and monitoring of sterilizers.                                                                                                                                                                                                                                                                                 |
| <a href="#">27.06</a> | <del>27.06</del> Demonstrate the ability to interpret and document monitoring devices, printouts, and charts accurately for each sterilization system utilized.                                                                                                                                                                                                     |
| <a href="#">27.07</a> | <del>27.07</del> Identify the standards for, and facility policy regarding, frequency of monitoring for all sterilizers.                                                                                                                                                                                                                                            |
| 28.0                  | Demonstrate the ability to identify and select appropriate instrumentation or equipment that meets the needs of the surgical specialty. The student will be able to:                                                                                                                                                                                                |
| 28.01                 | Describe instrument terminology and identify the anatomy of surgical instruments (jaws, shanks, box locks, rings, etc.).                                                                                                                                                                                                                                            |
| 28.02                 | Describe the types and functions of instruments.                                                                                                                                                                                                                                                                                                                    |
| 28.03                 | Describe the types of instrument construction.                                                                                                                                                                                                                                                                                                                      |
| 28.04                 | Demonstrate appropriate techniques for inspection and testing of instruments.                                                                                                                                                                                                                                                                                       |
| 28.05                 | Identify instrumentation and equipment by name and usage. <ul style="list-style-type: none"> <li>80 primary instruments for use in the majority of trays.</li> <li><del>le...</del> <u>i.e.</u>, hemostatic clamps, forceps, accessory clamps, dissection, needle holders, handheld retractors, self-retaining retractors, and table mounted retractors.</li> </ul> |
| 28.06                 | Correctly label instrumentation and equipment.                                                                                                                                                                                                                                                                                                                      |
| 28.07                 | Demonstrate the methods of instrument identification, marking, and tracking of use.                                                                                                                                                                                                                                                                                 |
| 28.08                 | Demonstrate the assembly of various instrument sets and surgical specialty equipment.                                                                                                                                                                                                                                                                               |
| 28.09                 | Demonstrate the process regarding the manufacturer's recommendations for instrument and equipment care including handling, operation, maintenance, and troubleshooting.                                                                                                                                                                                             |
| 29.0                  | Define the use of Robotics in Central Sterile Processing Technology. The student will be able to:                                                                                                                                                                                                                                                                   |
| 29.01                 | Explain the concept of Robotic surgery and how the equipment is used that requires processing by SPD.                                                                                                                                                                                                                                                               |
| 29.02                 | Demonstrate the care and handling of the scope and instrumentation for the robotic arms.                                                                                                                                                                                                                                                                            |
| 29.03                 | Explain the cleaning process for robotic instruments.                                                                                                                                                                                                                                                                                                               |
| 29.04                 | Explain the process for limited use instruments and the concepts of use and processing at end of life.                                                                                                                                                                                                                                                              |
| 29.05                 | Demonstrate the care, handling of the robotic scope and camera cleaning.                                                                                                                                                                                                                                                                                            |
| 29.06                 | Demonstrate the sterilization process for the robotic arm instruments.                                                                                                                                                                                                                                                                                              |

29.07 Demonstrate the sterilization process for the robotic camera and scope assembly.

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to [s. 456.0635, F.S.](#) for more information on disqualification for a license, certificate, or registration through the Department of Health.

### **Inquiries about a voluntary certification for sterile processing and distribution may be made to:**

Healthcare Sterile Processing Association (HSPA)/

International Association of Hospital Central Service Materiel Management (IAHCSMM)

<https://myhspa.org/certification/iahcsmm-certifications.html>

55 West Wacker Drive, Suite 501, Chicago, IL 60601

Toll Free: 800-962-8274

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### Cooperative Training – OJT

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Phlebotomy  
**Program Type:** Career Preparatory  
**Career Cluster:** Health Science

**Career Certificate Program**

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as phlebotomists.

The content includes but is not limited to communication, leadership, human relations, and employability skills; performance of safe and efficient work practices in obtaining adequate and correct blood specimens by capillary or venipuncture on adults, children and neonates; maintaining the integrity of the specimen in relation to the test to be performed; preparing blood smears; labeling specimens accurately and completely; collecting timed specimens; promoting the comfort and well-being of the patient while performing blood collecting duties; observing safety policies and procedures; medical terminology; emergency procedures including CPR (Heartsaver); delivering a variety of clinical specimens to the clinical

laboratory; sorting and recording specimens received in the laboratory; centrifuging specimens and preparing aliquots of samples according to the designated protocol; distributing samples to appropriate laboratory sections; and preparing collection trays for specimen procurement.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of 2 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title            | Teacher Certification                                                                                  | Length   |

## Common Florida's Career Technical Core—Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------|
| <a href="#"><u>02.01 Use critical thinking.</u></a>                                                                   |
| <a href="#"><u>02.02 Use creativity.</u></a>                                                                          |
| <a href="#"><u>02.03 Make sound decisions.</u></a>                                                                    |
| <a href="#"><u>02.04 Solve problems.</u></a>                                                                          |
| <a href="#"><u>02.05 Reason.</u></a>                                                                                  |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate accepted professional, communication, and interpersonal skills as related to phlebotomy.
- 13.0 Discuss phlebotomy in relation to the ~~health-care~~ healthcare setting.
- 14.0 Identify the anatomic structure and function of body systems in relation to services performed by the phlebotomist.
- 15.0 Recognize and identify collection reagents supplies, equipment, and interfering chemical substances.
- 16.0 Demonstrate skills and knowledge necessary to perform phlebotomy.
- 17.0 Practice infection control following standard precautions.
- 18.0 Practice accepted procedures of transporting, accessioning, and processing specimens.
- 19.0 Practice quality assurance and safety.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Phlebotomy  
**Career Certificate Program Number:** H170302

The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Career Certificate Program health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**Course Number: HSC0003**  
**Occupational Completion Point: A**  
**Basic Healthcare Worker – 90 Hours**

To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-psav-cc-2425.rtf>

<https://www.fldoe.org/file/20894/health-sci-core-psav-cc-2627.rtf>

**Course Number: MEA0520**  
**Occupational Completion Point: B**  
**Phlebotomist – 75 Hours**

|                               |                                                                                                                                                                                                                     |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.0                          | Demonstrate accepted professional, communication, and interpersonal skills: <u>as related to phlebotomy</u> . The student will be able to:                                                                          |
| 12.01                         | Demonstrate the appropriate professional behavior of a phlebotomist: <u>and describe the scope of practice (job skills and duties)</u> .                                                                            |
| 12.02                         | Explain to the patient the procedure to be used in specimen collection.                                                                                                                                             |
| 12.03                         | Explain in detail the importance of identifying patients correctly when drawing blood.                                                                                                                              |
| <del>12.04</del>              | <del>Describe the scope of practice (job skills and duties) for a phlebotomist.</del>                                                                                                                               |
| <del>12.05</del>              | <del>List and describe professional organizations that provide accreditation, certification, and licensure to phlebotomists and phlebotomy programs.</del>                                                          |
| <del>12.06</del> <u>12.04</u> | Explain the importance of continuing education in relation to certification to maintain competency and skills.                                                                                                      |
| 13.0                          | Discuss phlebotomy in relation to the <del>health-care</del> <u>healthcare</u> setting. -The student will be able to:                                                                                               |
| 13.01                         | List, classify, and discuss various departments and services within the <del>health-care</del> <u>healthcare</u> setting in which the phlebotomist must interact with to obtain laboratory specimens from patients. |

|                               |                                                                                                                                                                                               |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.02                         | Identify the major departments/sections <del>with</del> <u>within</u> the clinical laboratory, the major types of procedures run in each department/section, and their specimen requirements. |
| 13.03                         | Describe roles of the major classifications of clinical laboratory personnel (i.e., pathologist, chief/administrative technologist, CLS, MLS, MLT, MT, phlebotomist, lab assistant, etc.).    |
| 14.0                          | Identify the anatomic structure and function of body systems in relation to services performed by <u>the</u> phlebotomist. -The student will be able to:                                      |
| 14.01                         | Describe and define major body systems with emphasis on the circulatory system.                                                                                                               |
| 14.02                         | List and describe the main superficial veins used in performing venipuncture.                                                                                                                 |
| 14.03                         | -Locate the most appropriate <del>sites</del> <u>site</u> (s) for capillary and venipuncture.                                                                                                 |
| 14.04                         | Describe the function of the following blood components: erythrocytes, thrombocytes, leukocytes, and plasma.                                                                                  |
| 14.05                         | Compare and contrast <del>between</del> serum and plasma as <del>it relates</del> <u>they relate</u> to blood collection.                                                                     |
| 14.06                         | Discuss hemostasis, <u>hemolysis, and methods of prevention</u> as <del>it relates</del> <u>they relate</u> to blood collection.                                                              |
| 15.0                          | Recognize and identify collection reagents supplies, equipment, and interfering chemical substances. -The student will be able to:                                                            |
| 15.01                         | Identify and discuss <u>the</u> proper use of appropriate types of equipment needed to collect various clinical laboratory blood specimens by venipuncture.                                   |
| 15.02                         | Explain the special precautions and types of equipment needed to collect blood from the pediatric patient.                                                                                    |
| 15.03                         | Identify and discuss <u>the</u> proper use of supplies used in collecting short-draw specimens or difficult draws.                                                                            |
| 15.04                         | Identify and discuss the proper use of the various types of anticoagulants, preservatives, and gels used in blood collection, and the vacuum tube color-codes for these additives.            |
| 15.05                         | Describe the types of specimens that are analyzed in the clinical laboratory and the phlebotomist's role in collecting and/or transporting these specimens to the laboratory.                 |
| 15.06                         | Describe substances potentially encountered during phlebotomy <del>which</del> <u>that</u> can interfere in <u>the</u> analysis of blood constituents.                                        |
| 15.07                         | Define and utilize correct medical terminology and metric measurement needed for specimen collection.                                                                                         |
| 16.0                          | Demonstrate skills and knowledge necessary to perform phlebotomy. -The student will be able to:                                                                                               |
| 16.01                         | Follow approved procedure for completing a laboratory requisition form- <u>and recognize a properly completed form.</u>                                                                       |
| <del>16.02</del>              | <del>Recognize a properly completed requisition.</del>                                                                                                                                        |
| <del>16.03</del> <u>16.02</u> | Demonstrate knowledge of established protocol for patient and specimen identification.                                                                                                        |
| <del>16.04</del> <u>16.03</u> | Discuss appropriate methods for facilitating and preparing the patient for capillary and venipuncture collection.                                                                             |

|                        |                                                                                                                                                                                                         |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>16.05</del> 16.04 | List appropriate antiseptic agents useful in preparing sites for capillary and venipuncture <u>for adult and pediatric patients</u> .                                                                   |
| <del>16.06</del> 16.05 | Perform venipuncture by evacuated tube, butterfly, and syringe systems, demonstrating appropriate use of supplies, proper handling of equipment and specimens, and appropriate patient care.            |
| <del>16.07</del> 16.06 | Describe the correct order of draw.                                                                                                                                                                     |
| <del>16.08</del> 16.07 | Describe the use of barcoding systems used for specimen collection.                                                                                                                                     |
| <del>16.09</del> 16.08 | -Convey an understanding of capillary puncture using appropriate supplies and techniques for <del>both adults</del> <u>adult</u> and pediatric patients.                                                |
| <del>16.10</del> 16.09 | Describe the most common complications associated with capillary and venipuncture, their causes, prevention, and treatment.                                                                             |
| <del>16.11</del> 16.10 | Recognize and respond to possible adverse patient reactions such as allergies, convulsions, syncope, <del>light headedness</del> <u>lightheadedness</u> , vomiting, and nerve involvement.              |
| <del>16.12</del> 16.11 | Perform appropriate procedures for disposing of used or contaminated capillary and venipuncture supplies.                                                                                               |
| <del>16.13</del> 16.12 | Demonstrate the proper procedure for collecting blood cultures.                                                                                                                                         |
| <del>16.14</del>       | <del>Discuss the effects of hemolysis and methods of prevention.</del>                                                                                                                                  |
| <del>16.15</del> 16.13 | Demonstrate a working understanding of how <u>the</u> age and weight of patients <del>impacts</del> <u>impact</u> the maximum amount of blood that can be safely drawn.                                 |
| 17.0                   | Practice infection control following standard precautions. -The student will be able to:                                                                                                                |
| 17.01                  | Define the term “hospital- <u>acquired infection</u> ”.                                                                                                                                                 |
| 17.02                  | Describe and practice procedures for infection prevention, including hand washing skills.                                                                                                               |
| 17.03                  | Discuss transmission-based precautions.                                                                                                                                                                 |
| 17.04                  | Identify potential routes of infection and their complications.                                                                                                                                         |
| 18.0                   | Practice accepted procedures of transporting, accessioning, and processing specimens. -The student will be able to:                                                                                     |
| <del>18.01</del>       | <u>Instruct patients in the proper collection of urine (clean catch, mid-stream), sputum, and stool specimens.</u>                                                                                      |
| <del>18.01</del> 18.02 | Follow the approved procedure for preparation and processing (e.g., centrifugation, separation, aliquoting, labeling, and storage) of serum, plasma, urine, sputum, stool, and wound culture specimens. |
| <del>18.02</del>       | <del>Demonstrate knowledge of accessioning procedures.</del>                                                                                                                                            |
| 18.03                  | Describe the significance of time constraints for specimen collection, transporting, and delivery.                                                                                                      |
| 18.04                  | Describe routine procedures for transporting and processing specimens, including DOT packaging requirements.                                                                                            |

|       |                                                                                                                                                                                                |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.0  | Practice quality assurance and safety. -The student will be able to:                                                                                                                           |
| 19.01 | Distinguish and perform procedures <del>which</del> <u>that</u> ensure <u>the</u> reliability of test results when collecting blood specimens.                                                 |
| 19.02 | Practice appropriate patient safety.                                                                                                                                                           |
| 19.03 | Practice safety in accordance with OSHA (State & Federal guidelines) for chemical, biological, and PPE established procedures, including proper disposal of sharps and biohazardous materials. |
| 19.04 | Follow documentation procedures for work- <u>related</u> accidents.                                                                                                                            |
| 19.05 | Implement appropriate Joint Commission patient safety goals and other accrediting/regulatory agency guidelines.                                                                                |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error, and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

### **A voluntary national certification is available through an exam offered by:**

The National Health Career Association [www.nhanow.com](http://www.nhanow.com)  
 7500 West 160<sup>th</sup> Street, Stilwell, Kansas 66085  
 Phone: 800-499-9092 x8223, Fax: 973-644-4797

To be eligible, students must:

1. Have a High School Diploma or equivalency and have completed an NHA approved training program.
- OR**
2. Have a High School Diploma or equivalency and have worked in the field for a minimum of one year.

Although there is no state licensure required for phlebotomists, graduates with required amounts of work experience may obtain certification from national credentialing agencies such as the American Society of Clinical Pathologists (ASCP) and the American Society of Phlebotomy Technicians (ASPT), and [the](#) American Medical Technologists (AMT).

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Medical Laboratory Assisting \_\_\_\_\_  
**Program Type:** Career Preparatory  
**Career Cluster:** Health Science

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The purpose of this program is to prepare students for employment as medical laboratory aides, Medical and Clinical Laboratory Technicians.

The content includes, but is not limited to, communication, interpersonal, and professional skills, appropriate scientific principles of microbiology, chemistry, physics, anatomy, and physiology integrated into skill development and clinical learning.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Program Structure**

This program is a planned sequence of instruction consisting of 3 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. -Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title            | Teacher Certification                                                                                                                   | Length    |
|-----|---------------|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|-----------|

## Florida's Career Technical Core—Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------|

| <a href="#"><u>12.03 Develop a networking plan for a specific industry of interest.</u></a>                                                  |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate accepted professional, communication, and interpersonal skills.
- 13.0 Discuss phlebotomy in relation to the health care setting.
- 14.0 Identify the anatomic structure and function of body systems in relation to services performed by the phlebotomist.
- 15.0 Recognize and identify collection reagents, supplies, equipment, and interfering chemical substances.
- 16.0 Demonstrate skills and knowledge necessary to perform phlebotomy.
- 17.0 Practice infection control following standard precautions.
- 18.0 Practice accepted procedures of transporting, accessioning, and processing specimens.
- 19.0 Practice quality assurance and safety.
- 20.0 Identify the federal and state laws ~~which serve to~~that regulate the provision of laboratory services, including CLIA, Florida Statutes, and Florida Administrative Code.
- 21.0 Demonstrate basic knowledge of microbiology.
- 22.0 Demonstrate basic knowledge of urinalysis.
- 23.0 Demonstrate basic knowledge of clinical chemistry.
- 24.0 Demonstrate basic knowledge of hematology.
- 25.0 Demonstrate basic knowledge of Immunohematology.
- 26.0 Demonstrate the basic knowledge of and perform clinical laboratory Point of Care (POC) testing (Waived).
- 27.0 Successfully complete learning experiences in the clinical setting.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Medical Laboratory Assisting  
**Career Certificate Program Number:** H170306

The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Career Certificate Program health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**Course Number: HSC0003**  
**Occupational Completion Point: A**  
**Basic Healthcare Worker – 90 Hours**

To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-psav-cc-2425.rtf>

<https://www.fldoe.org/file/20894/health-sci-core-psav-cc-2627.rtf>

**Course Number: MEA0520**  
**Occupational Completion Point: B**  
**Phlebotomist – 75 Hours**

|                        |                                                                                                                                                                                        |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.0                   | Demonstrate accepted professional, communication, and interpersonal skills. -The student will be able to:                                                                              |
| 12.01                  | Demonstrate the appropriate professional behavior of a phlebotomist <a href="#">and describe the scope of practice (job skills and duties) for a phlebotomist.</a>                     |
| 12.02                  | Explain to the patient the procedure to be used in specimen collection.                                                                                                                |
| 12.03                  | Explain in detail the importance of identifying patients correctly when drawing blood.                                                                                                 |
| <del>12.04</del>       | <del>Describe the scope of practice (job skills and duties) for a phlebotomist.</del>                                                                                                  |
| <del>12.05</del>       | <del>List and describe professional organizations that provide accreditation, certification, and licensure to phlebotomists and phlebotomy programs.</del>                             |
| <del>12.06</del> 12.04 | Explain the importance of continuing education in relation to certification to maintain competency and skills.                                                                         |
| 13.0                   | Discuss phlebotomy in relation to the health care setting. -The student will be able to:                                                                                               |
| 13.01                  | List, classify, and discuss various departments and services within the health care setting in which the phlebotomist must interact with to obtain laboratory specimens from patients. |

|                               |                                                                                                                                                                                            |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.02                         | Identify the major departments/sections with the clinical laboratory, the major types of procedures run in each department/section, and their specimen requirements.                       |
| 13.03                         | Describe roles of the major classifications of clinical laboratory personnel (i.e., pathologist, chief/administrative technologist, CLS, MLS, MLT, MT, phlebotomist, lab assistant, etc.). |
| 14.0                          | Identify the anatomic structure and function of body systems in relation to services performed by <u>the</u> phlebotomist. -The student will be able to:                                   |
| 14.01                         | Describe and define major body systems with emphasis on the circulatory system.                                                                                                            |
| 14.02                         | List and describe the main superficial veins used in performing venipuncture.                                                                                                              |
| 14.03                         | -Locate the most appropriate sites(s) for capillary and venipuncture.                                                                                                                      |
| 14.04                         | Describe the function of the following blood components: erythrocytes, thrombocytes, leukocytes, and plasma.                                                                               |
| 14.05                         | Compare and contrast <del>between</del> serum and plasma as <del>it relates</del> <u>they relate</u> to blood collection.                                                                  |
| 14.06                         | Discuss hemostasis, <u>hemolysis, and methods of prevention</u> as <del>it relates</del> <u>they relate</u> to blood collection.                                                           |
| 15.0                          | Recognize and identify collection reagents supplies, equipment, and interfering chemical substances. -The student will be able to:                                                         |
| 15.01                         | Identify and discuss <u>the</u> proper use of appropriate types of equipment needed to collect various clinical laboratory blood specimens by venipuncture.                                |
| 15.02                         | Explain the special precautions and types of equipment needed to collect blood from the pediatric patient.                                                                                 |
| 15.03                         | Identify and discuss <u>the</u> proper use of supplies used in collecting short-draw specimens or difficult draws.                                                                         |
| 15.04                         | Identify and discuss the proper use of the various types of anticoagulants, preservatives, and gels used in blood collection, and the vacuum tube color-codes for these additives.         |
| 15.05                         | Describe the types of specimens that are analyzed in the clinical laboratory and the phlebotomist's role in collecting and/or transporting these specimens to the laboratory.              |
| 15.06                         | Describe substances potentially encountered during phlebotomy <del>which</del> <u>that</u> can interfere in <u>the</u> analysis of blood constituents.                                     |
| 15.07                         | Define and utilize correct medical terminology and metric measurement needed for specimen collection.                                                                                      |
| 16.0                          | Demonstrate skills and knowledge necessary to perform phlebotomy. -The student will be able to:                                                                                            |
| 16.01                         | Follow approved procedure for completing a laboratory requisition form; <u>and recognize a properly completed form.</u>                                                                    |
| <del>16.02</del>              | <del>Recognize a properly completed requisition.</del>                                                                                                                                     |
| <del>16.03</del> <u>16.02</u> | Demonstrate knowledge of established protocol for patient and specimen identification.                                                                                                     |
| <del>16.04</del> <u>16.03</u> | Discuss appropriate methods for facilitating and preparing the patient for capillary and venipuncture collection.                                                                          |

|                        |                                                                                                                                                                                                         |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>16.05</del> 16.04 | List appropriate antiseptic agents useful in preparing sites for capillary and venipuncture <a href="#">for adult and pediatric patients</a> .                                                          |
| <del>16.06</del> 16.05 | Perform venipuncture by evacuated tube, butterfly, and syringe systems, demonstrating appropriate use of supplies, proper handling of equipment and specimens, and appropriate patient care.            |
| <del>16.07</del> 16.06 | Describe the correct order of draw.                                                                                                                                                                     |
| <del>16.08</del> 16.07 | Describe the use of barcoding systems used for specimen collection.                                                                                                                                     |
| <del>16.09</del> 16.08 | -Convey an understanding of capillary puncture using appropriate supplies and techniques for both <del>adults</del> <a href="#">adult</a> and pediatric patients.                                       |
| <del>16.10</del> 16.09 | Describe the most common complications associated with capillary and venipuncture, their causes, prevention, and treatment.                                                                             |
| <del>16.11</del> 16.10 | Recognize and respond to possible adverse patient reactions such as allergies, convulsions, syncope, <del>light-headedness</del> <a href="#">lightheadedness</a> , vomiting, and nerve involvement.     |
| <del>16.12</del> 16.11 | Perform appropriate procedures for disposing of used or contaminated capillary and venipuncture supplies.                                                                                               |
| <del>16.13</del> 16.12 | Demonstrate the proper procedure for collecting blood cultures.                                                                                                                                         |
| <del>16.14</del>       | <del>Discuss the effects of hemolysis and methods of prevention.</del>                                                                                                                                  |
| <del>16.15</del> 16.13 | Demonstrate a working understanding of how <a href="#">the</a> age and weight of patients <del>impacts</del> <a href="#">impact</a> the maximum amount of blood that can be safely drawn.               |
| 17.0                   | Practice infection control following standard precautions. -The student will be able to:                                                                                                                |
| 17.01                  | Define the term <del>“hospital-acquired infection.”</del>                                                                                                                                               |
| 17.02                  | Describe and practice procedures for infection prevention, including hand washing skills.                                                                                                               |
| 17.03                  | Discuss transmission-based precautions.                                                                                                                                                                 |
| 17.04                  | Identify potential routes of infection and their complications.                                                                                                                                         |
| 18.0                   | Practice accepted procedures of transporting, accessioning, and processing specimens. -The student will be able to:                                                                                     |
| <del>18.01</del>       | <a href="#">Instruct patients in the proper collection of urine (clean catch, mid-stream), sputum, and stool specimens.</a>                                                                             |
| <del>18.01</del> 18.02 | Follow the approved procedure for preparation and processing (e.g., centrifugation, separation, aliquoting, labeling, and storage) of serum, plasma, urine, sputum, stool, and wound culture specimens. |
| <del>18.02</del>       | <del>Demonstrate knowledge of accessioning procedures.</del>                                                                                                                                            |
| 18.03                  | Describe the significance of time constraints for specimen collection, transporting, and delivery.                                                                                                      |
| 18.04                  | Describe routine procedures for transporting and processing specimens, including DOT packaging requirements.                                                                                            |

|       |                                                                                                                                                                                                |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19.0  | Practice quality assurance and safety. -The student will be able to:                                                                                                                           |
| 19.01 | Distinguish and perform procedures <del>which</del> <u>that</u> ensure <u>the</u> reliability of test results when collecting blood specimens.                                                 |
| 19.02 | Practice appropriate patient safety.                                                                                                                                                           |
| 19.03 | Practice safety in accordance with OSHA (State & Federal guidelines) for chemical, biological, and PPE established procedures, including proper disposal of sharps and biohazardous materials. |
| 19.04 | Follow documentation procedures for work- <u>related</u> accidents.                                                                                                                            |
| 19.05 | Implement appropriate Joint Commission patient safety goals and other accrediting/regulatory agency guidelines.                                                                                |

**Course Number: MEA0560**  
**Occupational Completion Point: C**  
**Medical Lab Assistant – 300 Hours**

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20.0  | Identify the federal and state laws, <del>which serve to</del> <u>that</u> regulate the provision of laboratory services, including CLIA, Florida Statutes, and Florida Administrative Code. -The student will be able to:                                                                                                                                                                                                                                                                                                            |
| 20.01 | Explain the CLIA test complexity model and describe the characteristics required for FDA classification of a test as waived.                                                                                                                                                                                                                                                                                                                                                                                                          |
| 20.02 | Understand the CLIA 88 classification of laboratory testing into waived, moderate, and highly complex, including the personnel qualified to perform each.                                                                                                                                                                                                                                                                                                                                                                             |
| 20.03 | Explain the categories of testing personnel established by both CLIA and Florida regulations and describe the basic educational and/or experiential qualifications for each category.                                                                                                                                                                                                                                                                                                                                                 |
| 20.04 | Explain the differences in requirements for a physician practice laboratory, a hospital laboratory, and an independent clinical laboratory.                                                                                                                                                                                                                                                                                                                                                                                           |
| 20.05 | Describe Alternate Site Testing requirements as they apply to hospitals in Florida, and compare and contrast these with the requirements of the Federal CLIA program and their four <del>typed</del> <u>types</u> of certificates: <ul style="list-style-type: none"> <li>• Certificate of Waiver</li> <li>• Certificate of Provider Performed Microscopy.</li> <li>• Certificate of Compliance</li> <li>• Certificate of Accreditation</li> </ul> Apply the concepts of Point-of-Care or Near Patient testing to these requirements. |
| 20.06 | Demonstrate an understanding of the concepts of “scope of practice”, “professional judgment”, and “duty/obligation to report”.                                                                                                                                                                                                                                                                                                                                                                                                        |
| 21.0  | Demonstrate basic knowledge of microbiology. -The student will be able to:                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 21.01 | Perform techniques of microbiology related to disinfection techniques.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 21.02 | Discuss techniques of microbiology related to isolation techniques.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|                        |                                                                                                                                                                                                                                                                                 |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21.03                  | Perform techniques of microbiology related to sterilization techniques.                                                                                                                                                                                                         |
| 21.04                  | Perform techniques of microbiology related to slide preparation.                                                                                                                                                                                                                |
| 21.05                  | Describe the basic operation and principles related to <u>the</u> usage of microscopes.                                                                                                                                                                                         |
| 21.06                  | Understand the staining and microscopic examination of <del>gram</del> <u>Gram</u> stains.                                                                                                                                                                                      |
| 21.07                  | Discuss <del>techniques</del> <u>the significance</u> of <del>microbiology related to selecting appropriate transport media and</del> primary <del>inoculation</del> <u>culture</u> media, <u>for a given</u> specimen <del>types, and transfer of cultures</del> <u>type</u> . |
| 21.08                  | Perform basic techniques of microbiology <del>in</del> <u>with</u> respect to routine and emergency specimen collection, including time constraints.                                                                                                                            |
| 21.09                  | <u>Perform basic techniques related to inoculation of primary culture media and transfer of cultures.</u>                                                                                                                                                                       |
| <del>21.09</del> 21.10 | Discuss classification, composition and preparation of culture media.                                                                                                                                                                                                           |
| 21.11                  | <u>Discuss how sample collection techniques can impact microbiological tests and the interpretation of cultures.</u>                                                                                                                                                            |
| 22.0                   | Demonstrate basic knowledge of urinalysis. -The student will be able to:                                                                                                                                                                                                        |
| 22.01                  | Understand urinalysis techniques related to normal and abnormal components of the urine.                                                                                                                                                                                        |
| 22.02                  | Perform urinalysis techniques related to <u>the</u> collection and preservation of specimens, including time constraints.                                                                                                                                                       |
| 22.03                  | Perform urinalysis techniques related to <u>the</u> physical properties of urine.                                                                                                                                                                                               |
| 22.04                  | Perform urinalysis techniques related to <del>dipstick</del> <u>chemical analysis of</u> urine <del>pH and describe clinical significance.</del>                                                                                                                                |
| 22.05                  | <del>Discuss urinalysis techniques related to urine specific gravity techniques.</del> <u>Describe the clinical significance of abnormal chemical analyses of urine.</u>                                                                                                        |
| 22.06                  | <del>Perform dipstick or tablet (non-automated)</del> <u>Discuss</u> urinalysis techniques related to <del>performance</del> <u>the determination</u> of <del>chemical tests</del> <u>urine specific gravity</u> .                                                              |
| 22.07                  | Discuss urinalysis techniques related to <u>the</u> microscopic identification of significant elements.                                                                                                                                                                         |
| 22.08                  | Perform urinalysis techniques related to principles and use of centrifuge.                                                                                                                                                                                                      |
| 23.0                   | Demonstrate basic knowledge of clinical chemistry. -The student will be able to:                                                                                                                                                                                                |
| 23.01                  | <del>Perform techniques of clinical chemistry related to metric measurement.</del>                                                                                                                                                                                              |
| 23.02                  | <del>23.01</del> Perform techniques of clinical chemistry related to <del>lab ware</del> <u>metric measurement</u> and <del>clinical equipment.</del> <u>use of labware,</u> including <u>reconstituting reagents and preparing dilutions.</u>                                  |
| 23.03                  | <del>23.02</del> Perform techniques of clinical chemistry related to reagent preparation, laboratory equipment, and laboratory techniques.                                                                                                                                      |

|       |       |                                                                                                                                                                                                                                                                      |
|-------|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 23.04 | 23.03 | Discuss techniques of clinical chemistry related to standardization of <del>procedure</del> <u>procedures</u> and use of standards, blanks, and controls.                                                                                                            |
| 23.05 | 23.04 | Discuss the importance of Quality Assurance as it relates to patient results.                                                                                                                                                                                        |
| 23.06 | 23.05 | Discuss <del>techniques</del> <u>principles</u> of <u>common</u> clinical chemistry <del>related to analyzers, including</del> visual colorimetry, <del>calibration</del> and <del>use of the spectrophotometers</del> <u>spectrophotometry</u> .                    |
| 23.07 | 23.06 | Demonstrate <del>an</del> <u>basic</u> understanding of the relationship between common clinical chemical tests and specific body systems and disorders.                                                                                                             |
| 24.0  |       | Demonstrate basic knowledge of hematology. -The student will be able to:                                                                                                                                                                                             |
| 24.01 |       | Discuss techniques of hematology related to counting formed elements of blood.                                                                                                                                                                                       |
| 24.02 |       | Perform techniques of hematology related to preparation and staining.                                                                                                                                                                                                |
| 24.03 |       | Discuss techniques of cell differential microscopic examination of blood films.                                                                                                                                                                                      |
| 24.04 |       | Perform appropriate techniques for making a peripheral blood smear for hematologic evaluation.                                                                                                                                                                       |
| 24.05 |       | Perform techniques of hematology related to spun hematocrit tests.                                                                                                                                                                                                   |
| 24.06 |       | Discuss techniques of hematology related to the use of platelet function analyzing instruments <del>in addition to performing bleeding times.</del>                                                                                                                  |
| 24.07 |       | Perform techniques of hematology related to hemoglobin tests.                                                                                                                                                                                                        |
| 24.08 |       | Understand the use of and importance of red blood cell indices.                                                                                                                                                                                                      |
| 24.09 |       | Discuss basic techniques of hematology related to normal and abnormal physiology.                                                                                                                                                                                    |
| 25.0  |       | Demonstrate basic knowledge of Immunohematology. -The student will be able to:                                                                                                                                                                                       |
| 25.01 |       | Discuss the functions of the Immunohematology department.                                                                                                                                                                                                            |
| 25.02 |       | Understand the <del>four blood groups in</del> <u>significance of</u> the ABO <u>blood group</u> system, <del>the inheritance of the</del> <u>and Rh</u> blood group <del>antigens, and their corresponding antibodies</del> <u>system in transfusion medicine</u> . |
| 25.03 |       | Discuss <del>techniques</del> <u>the significance</u> of forward <u>typing</u> and reverse <del>grouping</del> <u>typing in determination of a patient or donor ABO type</u> .                                                                                       |
| 25.04 |       | <del>Perform</del> <u>Discuss the performance and interpretation of</u> ABO <del>slide and tube grouping</del> and <del>interpret the results</del> <u>Rh typing tests</u> .                                                                                         |
| 25.05 |       | <del>Discuss the importance of the Rh blood groups system, the inheritance of the Rh antigen, and their corresponding antibodies.</del> <u>Define hemagglutination and describe antibody-antigen reactions as they relate to ABO/Rh typing tests.</u>                |
| 25.06 |       | <del>Perform</del> <u>Discuss</u> Rh <del>D-slide</del> typing and interpret the results.                                                                                                                                                                            |
| 25.07 |       | Explain the process of blood donation and the requirements necessary to donate blood.                                                                                                                                                                                |

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 25.08                  | Discuss tests performed on donated blood before it can be transfused                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 25.09                  | Explain the three blood components that can be obtained from a unit of donated <u>whole</u> blood and how these components would be beneficial to patients.                                                                                                                                                                                                                                                                                                                                                |
| <del>25.10</del>       | <del>Describe safety precautions that should be observed while performing ABO and Rh D typing.</del>                                                                                                                                                                                                                                                                                                                                                                                                       |
| <del>25.11</del>       | <del>Discuss quality assessment policies and procedures that must be followed to ensure reliable ABO and Rh typing results.</del>                                                                                                                                                                                                                                                                                                                                                                          |
| 26.0                   | Demonstrate the basic knowledge of and perform clinical laboratory Point of Care (POC) testing (Waived). -The student will be able to:                                                                                                                                                                                                                                                                                                                                                                     |
| 26.01                  | Demonstrate the ability to interpret instructions of point of care testing specific to microbiology, hematology, urinalysis, and clinical chemistry, including, but not limited to the following: <ul style="list-style-type: none"> <li>• Test principle</li> <li>• Storage and stability</li> <li>• Internal vs. external quality control</li> <li>• Specimen collection and preparation</li> <li>• Directions for use</li> <li>• Interpretation of results</li> <li>• Interfering substances</li> </ul> |
| <del>26.02</del>       | <del>Explain the purpose of performing lot-to-lot correlations.</del>                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <del>26.03</del> 26.02 | Identify normal limits and associate abnormal results with disease and disorders.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <del>26.04</del> 26.03 | Perform instrument maintenance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <del>26.05</del> 26.04 | Discuss the significance of reporting critical values as it applies to Point of Care testing.                                                                                                                                                                                                                                                                                                                                                                                                              |

| 27.02                  | Complete clinical rotations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state-designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster. [The program is designed to prepare students for employment as pharmacy technicians.](#)

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry: planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues, and health, safety, and environmental issues.

The content includes but is not limited to metric system, medical terminology, medicinal drugs, pharmaceutical compounding, USP 795 standards, sterile techniques, USP 797 and USP 800 standards, maintenance of inventory, IV preparation, receiving and handling of hazardous materials, preparing purchase orders, receiving and checking supplies purchased, printing labels, typing prescription labels, delivering medications, pricing

prescription drug orders and supplies, prepackaging unit dose packages, patient record systems, control records, data processing automation in pharmacy, computer application, employability skills, leadership and human relations skills, health and safety, including CPR.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 2 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title            | Teacher Certification | Length    |
|-----|---------------|-------------------------|-----------------------|-----------|
| A   | HSC0003       | Basic Healthcare Worker | PHARMACY 7G           | 90 hours  |
| B   | PTN0084       | Pharmacy Technician 1   |                       | 360 hours |
|     | PTN0085       | Pharmacy Technician 2   |                       | 300 hours |
|     | PTN0086       | Pharmacy Technician 3   |                       | 300 hours |

### **Regulated Programs**

**This program is regulated by the Department of Health, Florida Board of Pharmacy.**

This program must be approved by the Board of Pharmacy. Program completers who wish to work as Pharmacy Technicians in the State of Florida must register with the Board of Pharmacy (465.014, F.S.).

## CommonFlorida's Career Technical Core – Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

##### 01.01 Use reading skills.

##### 01.02 Use writing skills.

##### 01.03 Use mathematical strategies and procedures.

##### 01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                       |

- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Practice ~~personal relation~~ professional pharmacy relational skills.
- ~~13.0 Identify pharmaceutical abbreviations and terminology as related to Community Pharmacy Practice.~~
- ~~14.0~~ 13.0 Identify medical and legal considerations in various pharmacy settings.
- ~~15.0~~ 14.0 Perform clerical duties as related to Pharmacy Practice.
- ~~16.0~~ 15.0 Demonstrate knowledge of ~~basic pharmaceutical chemistry and drug classification.~~ medication safety and prevention of medication errors.
- ~~17.0~~ 16.0 Demonstrate knowledge of inventory management.
- ~~18.0~~ 17.0 Initiate measurement and calculating techniques as ~~it relates~~ they relate to United States Pharmacopeia (USP) 795 (non-sterile) compounding in pharmacy practice.
- ~~19.0~~ 18.0 Demonstrate ~~a~~ basic knowledge and skills in areas of ~~science~~ anatomy/ physiology, pharmacology, and drug classification relevant to pharmacy technicians ~~including anatomy/physiology and pharmacology.~~
- ~~20.0~~ 19.0 Prepare and deliver medications.
- ~~21.0~~ 20.0 Repackage unit-dose medications.
- ~~22.0~~ 21.0 Prepare United States Pharmacopeia (USP) 797 and USP 800 sterile products.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Pharmacy Technician  
**Career Certificate Program Number:** H170500

The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Career Certificate Program health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**Course Number: HSC0003**  
**Occupational Completion Point: A**  
**Basic Healthcare Worker – 90 Hours**

To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-psav-cc-2425.rtf>  
<https://www.fldoe.org/file/20894/health-sci-core-psav-cc-2627.rtf>

**Course Number: PTN0084**  
**Occupational Completion Point: B**  
**Pharmacy Technician 1 – 360 Hours**

12.0 Practice ~~personal relation~~[professional pharmacy relational](#) skills. -The student will be able to:

12.01 Explore the meaning, organizational flow, and duties of pharmacy personnel.

12.02 Identify pharmacy organizations and their role in the profession, to include student membership opportunities.

12.03 Identify the current trends and perspectives in the pharmacy practice.

12.04 Describe how team building can facilitate change within the pharmacy working environment.

12.05 Understand the importance of good interpersonal skills/soft skills in various pharmacy settings.

12.06 Explain ethical conduct in job-related activities.

12.07 Identify State of Florida requirements for obtaining and maintaining pharmacy technician registration, as well as continuing education requirements for renewal.

12.08 Explore the importance of national certification and the continuing education requirements for renewal.

| <del>14.05</del> 13.05 | Demonstrate an understanding of HIPAA in pharmacy practice pertaining to the ethical and legal considerations.                                                                                          |
| <del>14.06</del>       | <del>Convey an understanding of the patient's Bill of Rights as it relates to pharmacy practice.</del>                                                                                                  |
| <del>14.07</del> 13.06 | Convey an understanding of pertinent laws governing pharmacy practice, including but not limited to prescriptions, drug diversion, and use of E-FORCSE PDMP requirements.                               |
| <del>14.08</del> 13.07 | Differentiate between controlled substance schedules (CI-CV) and their applicable regulations.                                                                                                          |
| <del>14.09</del> 13.08 | Convey an understanding of the Florida Right to Know Act with respect to P-listed drugs in addition to hazardous materials, the utilization of safety data sheets, and hazardous communication symbols. |
| <del>14.10</del>       | <del>Identify and explain appropriate patient safety goals by applicable accrediting and regulatory organizations.</del>                                                                                |
| <del>14.11</del> 13.09 | Understand and explain activities that may be performed by pharmacy technicians and those that must be performed by licensed pharmacists, including final check.                                        |
| <del>14.12</del> 13.10 | Explain the importance of technology and its current use in various pharmacy settings.                                                                                                                  |
|                        | <a href="#">13.11 Utilize emerging technologies such as AI to cross-reference reports with dispense/administration history to address unaccounted medications.</a>                                      |
| <del>15.0</del> 14.0   | Perform clerical duties as related to <del>pharmacy practice.</del> <a href="#">Pharmacy Practice</a> . The student will be able to:                                                                    |
|                        | <a href="#">14.01 Utilize pharmaceutical medical terminology.</a>                                                                                                                                       |
|                        | <a href="#">14.02 Identify the major symbols and abbreviations used on prescriptions and state the meaning.</a>                                                                                         |

|                                                                                                                                                                                                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>14.03 Utilize pharmacy reference manuals or websites.</u>                                                                                                                                        |
| <del>15.01</del> <u>14.04</u> Demonstrate retail pharmacy dispensing processes.                                                                                                                     |
| <del>15.02 Identify potential errors that may result in Quality Related Events and explain specific ways they can be prevented.</del>                                                               |
| <del>15.03</del> <u>14.05</u> Utilize pharmacy software in processing pharmacy prescription data.                                                                                                   |
| <del>15.04</del> <u>14.06</u> Identify and discuss applications of E-Prescribing and facsimile.                                                                                                     |
| <del>15.05</del> <u>14.07</u> Utilize and apply interactive communication skills while gathering accurate information from patients and <del>from</del> other healthcare professionals.             |
| <del>15.06 Identify communication modalities that can result in the transmission of inaccurate information, and explain specific ways to make improvements.</del>                                   |
| <del>15.07</del> <u>14.08</u> Create, complete, and maintain patient profiles, including third-party billing information.                                                                           |
| <del>15.08</del> <u>14.09</u> Understand the processes of <u>PBMs and</u> third-party billing, resolving rejections, and obtaining <u>prior</u> authorizations.                                     |
| <del>15.09</del> <u>14.10</u> Demonstrate professional communication skills within the scope of practice for the pharmacy technician.                                                               |
| <del>15.10</del> <u>14.11</u> Demonstrate <del>the</del> knowledge of systems used in maintaining pharmacy records.                                                                                 |
| <u>15.0 Demonstrate knowledge of medication safety and prevention of medication errors. The student will be able to:</u>                                                                            |
| <u>15.01 Identify communication modalities that can result in the transmission of inaccurate information and explain specific ways to make improvements.</u>                                        |
| <u>15.02 Convey an understanding of the patient's Bill of Rights for medication administration as it relates to pharmacy practice.</u>                                                              |
| <u>15.03 Identify and explain appropriate patient safety goals by applicable accrediting and regulatory organizations.</u>                                                                          |
| <u>15.04 Identify potential errors that may result in quality-related events (QRE) and explain specific ways they can be prevented.</u>                                                             |
| <u>15.05 Describe safety strategies used to prevent medication errors due to pharmaceutical abbreviations and terminology.</u>                                                                      |
| <del>15.14</del> <u>15.06</u> Summarize, evaluate, and describe the <u>technician's</u> role <del>of the technician</del> in quality assurance activities as related to various pharmacy practices. |
| <del>16.0 Demonstrate knowledge of basic pharmaceutical chemistry and drug classification. The student will be able to:</del>                                                                       |
| <del>16.01 Define the major classifications of pharmaceuticals.</del>                                                                                                                               |
| <del>16.02 Identify at least one official compendia of standards for quality and purity of drug monograph.</del>                                                                                    |
| <del>16.03 Utilize pharmacy reference manuals or web sites.</del>                                                                                                                                   |

|                        |                                                                                                                                                                                                                                                                            |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>16.04</del>       | <del>Demonstrate knowledge of trade and generic name equivalents.</del>                                                                                                                                                                                                    |
| <del>17.0</del> 16.0   | Demonstrate knowledge of inventory management. -The student will be able to:                                                                                                                                                                                               |
| <del>17.04</del> 16.01 | Convey an understanding of industry standards in purchasing pharmaceutical supplies, <del>including the Florida Pedigree Law.</del>                                                                                                                                        |
| <del>17.02</del> 16.02 | <del>Explain</del> Demonstrate how to maintain a controlled substance inventory.                                                                                                                                                                                           |
| <del>17.03</del> 16.03 | <del>Apply knowledge of</del> Understand pharmacy business math <del>to</del> in prescription pricing systems.                                                                                                                                                             |
| <del>17.04</del> 16.04 | Maintain stock inventory, communicate shortages, and seek solutions to maintain continuity of patient care.                                                                                                                                                                |
| <del>17.05</del> 16.05 | Understand the process of how to create electronic purchase orders.                                                                                                                                                                                                        |
| <del>17.06</del> 16.06 | Accurately perform the process of purchasing, receiving, special handling, storing, distributing, and disposing of pharmaceutical supplies.                                                                                                                                |
| <del>17.07</del> 16.07 | Convey an understanding of <del>Investigational Drugs, Risk Evaluation</del> recall management and <del>Mitigation Strategies (REMS), off label indications,</del> know the differences between types of recalls and <del>emerging drug therapy</del> how to address them. |
| <del>17.08</del> 16.08 | Convey an understanding of the inventory control process implemented by Title II of the Drug Quality and Security Act.                                                                                                                                                     |
| <del>18.0</del> 17.0   | Initiate measurement and calculating techniques as <del>it relates</del> they relate to United States Pharmacopeia (USP) 795 (non-sterile) compounding in pharmacy practice. -The student will be able to:                                                                 |
| <del>18.04</del> 17.01 | Convey an understanding of United States Pharmacopeia (USP) 795 standards.                                                                                                                                                                                                 |
| <del>18.02</del> 17.02 | Convert measurements within the apothecary, avoirdupois, household, and metric systems.                                                                                                                                                                                    |
| <del>18.03</del> 17.03 | Perform common pharmaceutical calculations.                                                                                                                                                                                                                                |
| <del>18.04</del> 17.04 | Identify and utilize common pharmaceutical weighing equipment.                                                                                                                                                                                                             |
| <del>18.05</del> 17.05 | Identify and utilize common pharmaceutical volume measurement equipment.                                                                                                                                                                                                   |
| <del>18.06</del> 17.06 | Accurately demonstrate the technique of preparing common non-sterile pharmaceutical compounds.                                                                                                                                                                             |
| <del>18.07</del> 17.07 | Summarize, evaluate, and describe the <del>technician's</del> role-of the technician in quality assurance activities as related to the preparation of non-sterile products.                                                                                                |

Course Number: PTN0085  
Occupational Completion Point: B  
Pharmacy Technician 2 – 300 Hours

~~19.0~~18.0 Demonstrate basic knowledge and skills in areas of ~~science~~anatomy/ physiology, pharmacology, and drug classification relevant to pharmacy technicians ~~including anatomy/ physiology and pharmacology.~~ The student will be able to:

|                        |                                                                                                                                                                                                                                                                                                                                 |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>19.04</del> 18.01 | <del>Describe electrolyte balances and imbalances.</del> Evaluate and apply anatomical terminology to describe the location of parts or areas of the body and related disease processes.                                                                                                                                        |
| 18.02                  | Define the major classifications of pharmaceuticals and conditions treated.                                                                                                                                                                                                                                                     |
| 18.03                  | Demonstrate knowledge of trade and generic name equivalents.                                                                                                                                                                                                                                                                    |
| <del>19.02</del> 18.04 | <del>Relate</del> Evaluate the <del>general sources, classes, indications</del> pharmacy technician's understanding of pharmacology, including <u>drug classifications</u> , mechanisms of <del>actions, routes of administration,</del> <u>action, common</u> side effects, and <del>various types of drug</del> interactions. |
| 18.05                  | Identify at least one official compendium of standards for quality and purity of drug monographs.                                                                                                                                                                                                                               |
| 18.06                  | Convey an understanding of Investigational Drugs, Risk Evaluation and Mitigation Strategies (REMS), off-label indications, and emerging drug therapy.                                                                                                                                                                           |
| <del>19.03</del> 18.07 | Demonstrate an understanding of common adult doses of medications, duration of common drug therapies, and respective contraindications, including the BEERS Criteria.                                                                                                                                                           |
| <del>19.04</del> 18.08 | Identify potential interactions that require a pharmacist's intervention pertaining to food/alcohol, herbal, OTC, and/or prescription medications.                                                                                                                                                                              |
| 18.09                  | Identify allergy histories during the medication reconciliation process and discern "allergy" vs "side effect" in optimizing care.                                                                                                                                                                                              |
| <del>20.0</del> 19.0   | Prepare and deliver medications. -The student will be able to:                                                                                                                                                                                                                                                                  |
| <del>20.04</del> 19.01 | Read and prepare medication orders correctly.                                                                                                                                                                                                                                                                                   |
| <del>20.02</del> 19.02 | Demonstrate institutional pharmacy dispensing processes.                                                                                                                                                                                                                                                                        |
| <del>20.03</del> 19.03 | Compare all new orders with medications listed on profiles while noting any changes.                                                                                                                                                                                                                                            |
| <del>20.04</del> 19.04 | Utilize special precautions in the preparation of medications for pediatric patients.                                                                                                                                                                                                                                           |
| <del>20.05</del> 19.05 | Explain how to safely transport medications, being aware of hazards, theft, legal implications of accidental loss, and other consequences.                                                                                                                                                                                      |
| <del>20.06</del> 19.06 | Understand how to correctly fill and deliver medication.                                                                                                                                                                                                                                                                        |
| <del>20.07</del> 19.07 | Collect data from <u>the</u> medication administration record.                                                                                                                                                                                                                                                                  |
| <del>20.08</del> 19.08 | Describe the use of automated medication dispensing equipment.                                                                                                                                                                                                                                                                  |

Course Number: PTN0086  
Occupational Completion Point: B  
Pharmacy Technician 3 – 300-Hours

~~24.0~~20.0 Repackage unit-dose medications. -The student will be able to:

|                        |                                                                                                                                                                                               |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>21.01</del> 20.01 | Locate <u>the</u> correct stock container.                                                                                                                                                    |
| <del>21.02</del> 20.02 | <del>Operate</del> <u>Describe the use of</u> unit-dose packaging equipment.                                                                                                                  |
| <del>21.03</del> 20.03 | Measure, count, and place <u>the</u> individual dose in appropriate containers.                                                                                                               |
| <del>21.04</del> 20.04 | Understand precautions used when packaging unit-dose hazardous drugs.                                                                                                                         |
| <del>21.05</del> 20.05 | Record repackaged medication data correctly.                                                                                                                                                  |
| <del>21.06</del> 20.06 | Summarize, evaluate, and describe the <u>technician's</u> <del>role-of-the-technician</del> in quality assurance activities as related to repackaging unit-dose medication.                   |
| <del>22.0</del> 21.0   | Prepare United States Pharmacopeia (USP) 797 and USP 800 sterile products. -The student will be able to:                                                                                      |
| <del>22.01</del> 21.01 | Convey an understanding of United States Pharmacopeia (USP) 797 regulations.                                                                                                                  |
| <del>22.02</del> 21.02 | Convey an understanding of United States Pharmacopeia (USP) 800 regulations.                                                                                                                  |
| <del>22.03</del> 21.03 | Compare <u>the</u> medication order with <u>the</u> label on <u>the</u> vial and check <u>the</u> expiration date of <u>the</u> product.                                                      |
| <del>22.04</del> 21.04 | Calculate drug dosage for parenteral use.                                                                                                                                                     |
| <del>22.05</del> 21.05 | Reconstitute parenteral medications.                                                                                                                                                          |
| <del>22.06</del> 21.06 | Demonstrate aseptic technique to withdraw medication from stock vial, measure correct quantity as instructed, select and insert it into IV solution without error.                            |
| <del>22.07</del> 21.07 | Demonstrate aseptic technique to withdraw medication from an ampule using <u>a</u> filter needle/straw.                                                                                       |
| <del>22.08</del> 21.08 | Prepare parenteral solutions using proper aseptic technique.                                                                                                                                  |
| <del>22.09</del> 21.09 | Understand the preparation of Total Parenteral Nutrition (TPN) solutions.                                                                                                                     |
| <del>22.10</del> 21.10 | Understand the preparation of chemotherapeutic agents using proper safety techniques.                                                                                                         |
| <del>22.11</del> 21.11 | Understand the appropriate technique while using specialized equipment such as: laminar flow hoods, filters, pumps, automated compounders, and barrier <del>isolator</del> <u>isolators</u> . |
| <del>22.12</del> 21.12 | Place label on IV solution container and record appropriately.                                                                                                                                |
| <del>22.13</del> 21.13 | Perform <u>a</u> quality control check of <u>the</u> completed product.                                                                                                                       |
| <del>22.14</del> 21.14 | Convey an understanding of the proper storage and disposal requirements of reconstituted and non-reconstituted IV solutions.                                                                  |
| <del>22.15</del> 21.15 | Convey an understanding of the proper storage and disposal of hazardous drugs.                                                                                                                |

~~22.16~~21.16 Summarize, evaluate, and describe the technician's role ~~of the technician~~ in quality assurance activities ~~as~~ related to the preparation of sterile products.

21.17 Understand the concept of Diversion Surveillance to assist in recognizing controlled substances.

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error, and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

Clinical practicum experiences are an integral part of this program.

### Special Notes

Due to the clinical experiences students are engaged in through the program, and to ensure the safety of both the students and the patients, the recommended student-to-instructor ratio in the classroom is 20:1 and in the lab is 4:1.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore, the instructor **may** provide a certificate for renewal purposes to the student, verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S., for more information on disqualification for a license, certificate, or registration through the Department of Health.

It is recommended that program completers take the national pharmacy technician certification exam offered by the Pharmacy Technician Certification Board, 2215 Constitution Ave. NW, Washington, DC 20037-2985, (202) 429-7576. This certification is offered all year round ~~on a~~ continual basis continually.

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Health Science career cluster.

This program is designed to prepare students for employment as medical assistants.

The content includes but is not limited to communication, transcultural communication in healthcare, interpersonal skills, legal and ethical responsibilities, health-illness concepts, administrative and clinical duties, emergency procedures including CPR and first aid, emergency preparedness, safety and security procedures, medical terminology, anatomy and physiology, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of ~~5~~6 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. -Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3)-(b), F.S.

To teach the ~~courses~~course(s) listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number   | Course Title                                                 | Teacher Certification                                                                                                                    | Length                  |

Common

## Florida's Career Technical Core – Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                |

## Standards

After successfully completing this program, the student will ~~be able to perform~~ have demonstrated mastery the following student learning outcomes:

- ~~01.0~~ — Demonstrate knowledge of the healthcare delivery system and health occupations.
- ~~02.0~~ — Demonstrate the ability to communicate and use interpersonal skills effectively.
- ~~03.0~~ — Demonstrate legal and ethical responsibilities.
- ~~04.0~~ — Demonstrate an understanding of and apply wellness and disease concepts.
- ~~05.0~~ — Recognize and practice safety and security procedures.
- ~~06.0~~ — Recognize and respond to emergency situations.
- ~~07.0~~ — Recognize and practice infection control procedures.
- ~~08.0~~ — Demonstrate an understanding of information technology applications in healthcare.
- ~~09.0~~ — Demonstrate employability skills.
- ~~10.0~~ — Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- ~~11.0~~ — Apply basic math and science skills.
  
- ~~12.0~~~~001.0~~ — Demonstrate proper use of medical terminology and identify
- ~~13.0~~ — ~~Demonstrate knowledge of legal and ethical responsibilities for medical assistants.~~
- ~~14.0~~~~001.0~~ — ~~Demonstrate an understanding of~~ anatomy and physiology concepts in both illness and wellness states.
- 02.0 — Demonstrate knowledge of pharmaceutical principles and administer medications.
- 03.0 — Demonstrate basic clerical/medical office duties including communication and interpersonal skills.
- 04.0 — Demonstrate knowledge of legal and ethical responsibilities for medical assistants.
- ~~15.0~~05.0 — Perform administrative office duties and employability skills.
- ~~16.0~~06.0 — Demonstrate accepted professional, communication, and interpersonal skills as related to phlebotomy.
- ~~17.0~~07.0 — Discuss phlebotomy in relation to the health care setting.
- ~~18.0~~08.0 — Identify the anatomic structure and function of body systems in relation to services performed by a phlebotomist.
- ~~19.0~~09.0 — Recognize and identify collection reagents supplies, equipment, and interfering chemical substances.
- ~~20.0~~10.0 — Demonstrate skills and knowledge necessary to perform phlebotomy.
- ~~21.0~~11.0 — Practice infection control following standard precautions.
- ~~22.0~~12.0 — Practice accepted procedures of transporting, accessioning, and processing specimens.
- ~~23.0~~ — Practice quality assurance and safety.
- ~~24.0~~13.0 — ~~Describe the role of a medical assistant with intravenous therapy in oncology and dialysis.~~
- ~~25.0~~14.0 — Describe the cardiovascular system.
- ~~26.0~~~~001.0~~ — Identify legal and ethical responsibilities of an EKG aide.
- ~~27.0~~15.0 — ~~Perform patient care techniques in the health care facility.~~
- 16.0 — Demonstrate knowledge of, apply, and use medical instrumentation modalities.
- ~~28.0~~17.0 — Perform patient care techniques in the health care facility.
- ~~29.0~~18.0 — Demonstrate basic office examination procedures.
- ~~30.0~~19.0 — Demonstrate knowledge of the fundamentals of microbial control and use aseptic techniques.
- ~~31.0~~20.0 — Demonstrate minor treatments.

~~32.0~~—Demonstrate knowledge of basic diagnostic medical assisting procedures.

~~33.0~~—~~Demonstrate basic radiology procedures.~~

~~34.0~~21.0 ~~Demonstrate knowledge of pharmaceutical principles and administer medications.~~

~~35.0~~22.0 Perform CLIA-waived diagnostic clinical laboratory procedures.

~~36.0~~—Demonstrate knowledge of emergency preparedness and protective practices.

~~37.0~~23.0 ~~Perform administrative office duties.~~

~~38.0~~24.0 Perform administrative and general skills.

~~39.0~~—~~Perform clinical and general skills.~~

~~40.0~~—~~Display professional work habits integral to medical assisting.~~

25.0 Dispose of bio-hazardous waste in appropriate containers.

26.0 Collaborate, communicate, and interact professionally with other health care professionals utilizing technology.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Medical Assisting

**Career Certificate Program Number:** ~~H170515~~[H700300](#)

~~The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Career Certificate Program health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.~~

**Course Number:** ~~HSC0003~~[MEA0003](#)

**Occupational Completion Point:** ~~A~~ [\(1 of 2\)](#)

~~Basic Healthcare Worker—90 Hours~~[Introduction to Medical Assisting and Pharmacology – 250 Hours](#)

| 05.02                  | Execute non-EMR data management, including, but not limited to, selecting appropriate procedure and diagnostic codes, and processing insurance claims.                                                                                                                                                                                                                       |
| <del>15.14</del> 05.03 | <del>Identify and maintain office security policies/procedures.</del> Perform various financial procedures, to include billing and collection procedures, payroll procedures, and checkbook procedures                                                                                                                                                                       |
| 05.04                  | Demonstrate knowledge of management in a medical office, including but not limited to personnel records, interviewing, various management styles, risk management, and conflict resolution.                                                                                                                                                                                  |
| 05.05                  | Discuss the laws governing harassment, labor, and employment.                                                                                                                                                                                                                                                                                                                |
| 05.06                  | Perform employability skills.                                                                                                                                                                                                                                                                                                                                                |
|                        |                                                                                                                                                                                                                                                                                                                                                                              |

Course Number: MEA0521

Occupational Completion Point: **CB**

Phlebotomist, MA – 75 Hours

|                        |                                                                                                                                                                                                       |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>46.0</del> 06.0   | Demonstrate accepted professional, communication, and interpersonal skills as related to phlebotomy. -The student will be able to:                                                                    |
| <del>46.04</del> 06.01 | Demonstrate the appropriate professional behavior of a phlebotomist: <u>and describe the scope of practice (job skills and duties) for a phlebotomist</u>                                             |
| <del>46.02</del> 06.02 | Explain to the patient the procedure to be used in specimen collection.                                                                                                                               |
| <del>46.03</del> 06.03 | Explain in detail the importance of identifying patients correctly when drawing blood.                                                                                                                |
| <del>46.04</del>       | <del>Describe the scope of practice for a phlebotomist.</del>                                                                                                                                         |
| <del>46.05</del>       | <del>List and describe professional organizations that provide accreditation, certification, and licensure to phlebotomists and phlebotomy programs.</del>                                            |
| <del>46.06</del> 06.04 | Explain the importance of continuing education in relation to certification to maintain competency and skills.                                                                                        |
| <del>47.0</del> 07.0   | Discuss phlebotomy in relation to the health care setting. -The student will be able to:                                                                                                              |
| <del>47.04</del> 07.01 | List, classify, and discuss various departments and services within the health care setting with which the phlebotomist must interact to obtain laboratory specimens from patients.                   |
| <del>47.02</del> 07.02 | Identify the major departments/sections within the clinical laboratory, the major types of procedures run in each department/section, and their specimen requirements.                                |
| <del>47.03</del> 07.03 | Describe <u>the</u> roles of the major classifications of clinical laboratory personnel (i.e., pathologist, chief/administrative technologist, CLS, MLS, MLT, MT, phlebotomist, lab assistant, etc.). |
| <del>48.0</del> 08.0   | Identify the anatomic structure and function of body systems in relation to services performed by a phlebotomist. -The student will be able to:                                                       |
| <del>48.04</del> 08.01 | Describe and define major body systems with emphasis on the circulatory system.                                                                                                                       |
| <del>48.02</del> 08.02 | List and describe the main superficial veins used in performing venipuncture.                                                                                                                         |
| <del>48.03</del> 08.03 | -Locate the most appropriate site(s) for both capillary and venipuncture.                                                                                                                             |
| <del>48.04</del> 08.04 | Describe the function of the following blood components: erythrocytes, thrombocytes, leukocytes, and plasma.                                                                                          |
| <del>48.05</del> 08.05 | Compare and contrast <del>between</del> serum and plasma as <del>it relates</del> <u>they relate</u> to blood collection.                                                                             |
| <del>48.06</del> 08.06 | Discuss hemostasis, <u>hemolysis, and methods of prevention</u> as <del>it relates</del> <u>they relate</u> to blood collection.                                                                      |
| <del>49.0</del> 09.0   | Recognize and identify collection reagents supplies, equipment, and interfering chemical substances. -The student will be able to:                                                                    |
| <del>49.04</del> 09.01 | Identify and discuss <u>the</u> proper use of appropriate types of equipment needed to collect various clinical laboratory blood specimens by venipuncture.                                           |

|                        |                                                                                                                                                                                               |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>19.02</del> 09.02 | Explain the special precautions and types of equipment needed to collect blood from a pediatric patient.                                                                                      |
| <del>19.03</del> 09.03 | Identify and discuss <u>the</u> proper use of supplies used in collecting short-draw specimens or difficult draws.                                                                            |
| <del>19.04</del> 09.04 | Identify and discuss the proper use of the various types of anticoagulants, preservatives, and gels used in blood collection and the vacuum tube color-codes for these additives.             |
| <del>19.05</del> 09.05 | Describe the types of specimens that are analyzed in the clinical laboratory and the phlebotomist's role in collecting and/or transporting these specimens to the laboratory.                 |
| <del>19.06</del> 09.06 | Describe substances potentially encountered during phlebotomy <del>which</del> <u>that</u> can interfere in <u>the</u> analysis of blood constituents.                                        |
| <del>19.07</del> 09.07 | Define and utilize correct medical terminology and metric measurement needed for specimen collection.                                                                                         |
| <del>20.0</del> 10.0   | Demonstrate skills and knowledge necessary to perform phlebotomy. -The student will be able to:                                                                                               |
| <del>20.01</del> 10.01 | Follow <u>the</u> approved procedure for completing a laboratory requisition form- <u>and recognize a properly completed form.</u>                                                            |
| <del>20.02</del>       | <del>Recognize a properly completed requisition.</del>                                                                                                                                        |
| <del>20.03</del> 10.02 | Demonstrate knowledge of established protocol for patient and specimen identification.                                                                                                        |
| <del>20.04</del> 10.03 | Discuss appropriate methods for facilitating and preparing the patient for capillary and venipuncture collection.                                                                             |
| <del>20.05</del> 10.04 | List appropriate antiseptic agents useful in preparing sites for capillary and venipuncture <u>for adult and pediatric patients.</u>                                                          |
| <del>20.06</del> 10.05 | Perform venipuncture by evacuated tube, butterfly, and syringe systems, demonstrating appropriate use of supplies, proper handling of equipment and specimens, and appropriate patient care-. |
| <del>20.07</del> 10.06 | Describe the correct order of draw.                                                                                                                                                           |
| <del>20.08</del> 10.07 | Describe the use of barcoding systems used for specimen collection-.                                                                                                                          |
| <del>20.09</del> 10.08 | <del>-Perform a</del> <u>Convey an understanding of</u> capillary puncture using appropriate supplies and techniques for both <del>adults</del> <u>adult</u> and pediatric patients.          |
| <del>20.10</del> 10.09 | Describe the most common complications associated with capillary and venipuncture, their causes, prevention, and treatment.                                                                   |
| <del>20.11</del> 10.10 | Recognize and respond to possible adverse patient reactions such as allergies, convulsions, syncope, <del>light headedness</del> <u>lightheadedness</u> , vomiting, and nerve involvement.    |
| <del>20.12</del> 10.11 | Perform appropriate procedures for disposing of used or contaminated capillary and venipuncture supplies.                                                                                     |
| <del>20.13</del>       | <del>Perform appropriate techniques for making a peripheral blood smear for hematologic evaluation.</del>                                                                                     |
| <del>20.14</del> 10.12 | Demonstrate the proper procedure for collecting blood cultures-.                                                                                                                              |
| <del>20.15</del>       | <del>Discuss the effects of hemolysis and methods of prevention.</del>                                                                                                                        |

|                                                                                                                     |                                                                                                                                                                                                                                                                |
|---------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>20.16</del> 10.13                                                                                              | Demonstrate a working understanding of how <u>the</u> age and weight of patients <del>impacts</del> <u>impact</u> the maximum amount of blood that can be safely drawn.                                                                                        |

| <del>23.04</del> 13.04                                                                                              | Follow documentation procedures for work-related accidents.                                                                                                                                                                                                    |
| <del>23.05</del> 13.05                                                                                              | Implement appropriate Joint Commission patient safety goals and other accrediting/regulatory agency guidelines.                                                                                                                                                |
| <b>Course Number: MEA0574</b><br><b>Occupational Completion Point: C</b><br><b>Laboratory Procedures – 80 Hours</b> |                                                                                                                                                                                                                                                                |

14.0 Perform CLIA-waived diagnostic clinical laboratory procedures. The student will be able to:

14.01 Comply with safety signs, symbols, labels, and SDS.

~~24.01~~14.02 ~~Describe the role of a medical assistant with intravenous therapy in oncology and dialysis. The student will be able to:~~Describe the criteria used by the Food and Drug Administration (FDA) to classify a test as “CLIA-waived” and the regulatory constraints on test performance.

~~24.01~~14.03 ~~Outline the principles of intravenous therapy.~~Explain the methods of quality control for CLIA-waived testing, identify acceptable and unacceptable control results, and describe specific corrective action required when results are unacceptable.

14.04 Demonstrate proper technique for the collection of specimens for laboratory testing.

14.05 Explain CLIA-waived testing, e.g., occult blood, urinalysis, hematology, chemistry, pregnancy, and infectious disease testing.

15.0 Demonstrate knowledge of emergency preparedness and protective practices. The student will be able to

~~24.02~~15.01 ~~Understand intravenous terminology, practices,~~Maintain and operate emergency equipment, and supplies.

~~24.03~~15.02 ~~Describe the dangers of intravenous treatment.~~Prepare a list of community resources for emergency preparedness, including domestic violence resources.

~~24.04~~15.03 ~~Describe the role of the medical assistant in assisting with intravenous therapy.~~Recognize and report abuse, including domestic violence, neglect, and suspected human trafficking.

15.04 Explain an evacuation plan for a physician’s office.

15.05 Obtain and maintain training for certification on cardiopulmonary resuscitation (CPR), automated external defibrillator (AED), foreign body airway obstruction (FBAO), and first aid.

**Course Number: MEA0543**  
**Occupational Completion Point: D**  
**EKG Aide, MA – 75 Hours**

~~25.0~~16.0 ~~Describe the cardiovascular system. -~~The student will be able to:

~~25.01~~16.01 ~~Locate the heart and surrounding structures.~~

~~25.02~~16.02 ~~Diagram~~Review the structure and ~~label the parts~~function of the heart ~~and list the functions of each labeled part.~~

~~25.03~~16.03 ~~Trace the flow of blood through the cardiopulmonary system.~~

16.04 Identify and describe the electrical conduction system

16.05 Describe signs and symptoms of a patient demonstrating poor perfusion or low cardiac output and state the importance of rapid reporting.

|                        |                                                                                                                                                                |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>26.0</del> 17.0   | Identify legal and ethical responsibilities of an EKG aide. -The student will be able to:                                                                      |
| <del>26.01</del> 17.01 | Recognize and practice legal and ethical responsibilities as they relate to an EKG aide.                                                                       |
| <del>26.02</del> 17.02 | Maintain a safe and efficient work environment.                                                                                                                |
| <del>26.03</del> 17.03 | Maintain EKG equipment <u>per the manufacturer's guidelines</u> so it will be safe and accurate.                                                               |
| 18.0                   | <u>Demonstrate knowledge of, apply, and use medical instrumentation modalities. The student will be able to:</u>                                               |
| 18.01                  | <u>Calibrate and maintain EKG equipment in the work environment and verify settings on the EKG machine</u>                                                     |
| 18.02                  | <u>Identify three types of lead systems (standard/limb, augmented, and precordial/chest).</u>                                                                  |
| 18.03                  | <u>Apply the concepts of Einthoven's triangle and Wilson's Central Terminal to EKG tracing</u>                                                                 |
| 18.04                  | <u>Prepare the patient and demonstrate proper lead placement, including lead placement with special consideration for various patients with special needs.</u> |
| 18.05                  | <u>Demonstrate knowledge of the application of a Holter Monitor, ambulatory monitoring, and provide patient education on its use.</u>                          |
| 18.06                  | <u>Identify artifacts and mechanical problems and actions to correct them.</u>                                                                                 |
| 18.07                  | <u>Perform a 3, 5, 12 lead EKG and perform a rhythm strip.</u>                                                                                                 |
| 18.08                  | <u>Recognize normal sinus rhythm.</u>                                                                                                                          |
| 18.09                  | <u>Recognize and report dysrhythmias that are not normal sinus rhythms.</u>                                                                                    |
| 18.10                  | <u>Recognize signs and symptoms of cardiac emergencies on the EKG tracing and understand the importance of rapid reporting.</u>                                |
| 18.11                  | <u>Use documentation skills to identify an electrocardiograph</u>                                                                                              |
| <del>27.0</del> 19.0   | Perform patient care techniques in the health care facility. The student will be able to:                                                                      |
| <del>27.01</del> 19.01 | Describe the physical <u>and mental</u> preparation of the patient for EKG testing.                                                                            |
| <del>27.02</del> 19.02 | Identify <u>the</u> patient and verify the requisition order.                                                                                                  |
| <del>27.03</del>       | <del>Prepare patient for EKG testing.</del>                                                                                                                    |
| <del>27.04</del> 19.03 | State precautions required when performing <del>an EKG</del> <u>cardiovascular diagnostic procedures</u> .                                                     |
| <del>28.0</del>        | <del>Demonstrate knowledge of, apply and use medical instrumentation modalities. The student will be able to:</del>                                            |
| <del>28.01</del>       | <del>Calibrate and maintain EKG equipment in the work environment.</del>                                                                                       |

|                                                                                                                                                 |
|-------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>28.02 Identify three types of lead systems (standard/limb, augmented, and precordial/chest).</del>                                         |
| <del>28.03 State Einthoven's triangle.</del>                                                                                                    |
| <del>28.04 Demonstrate proper lead placement including lead placement with special consideration for various patients with special needs.</del> |
| <del>28.05 Demonstrate knowledge of the application of a Holter Monitor and provide patient education of its use.</del>                         |
| <del>28.06 Identify artifacts and mechanical problems.</del>                                                                                    |
| <del>28.07 Perform a 12 lead EKG.</del>                                                                                                         |
| <del>28.08 Perform a rhythm strip.</del>                                                                                                        |
| <del>28.09 Recognize normal sinus rhythm.</del>                                                                                                 |
| <del>28.10 Report any dysrhythmias that are not normal sinus rhythm.</del>                                                                      |
| <del>28.11 Recognize a cardiac emergency as seen on the EKG.</del>                                                                              |
| <del>28.12 Use documentation skills to identify electrocardiographs.</del>                                                                      |

Course Number: ~~MEA0584~~ MEA0584

Occupational Completion Point: E

Clinical Assisting – ~~230~~ 130 Hours

~~29.0~~ 20.0 Demonstrate basic office examination procedures. -The student will be able to:

~~29.01~~ 20.01 Prepare patients for and assist the ~~physician~~ provider with physical examinations, including, but not limited to, pre- and post-natal, male and female reproductive, to include PAP and rectal, ~~and pediatric exams~~

~~29.02 Measure and record vital signs, recognizing abnormalities and danger signs.~~

~~29.03 Measure and record a pulse pressure~~

~~29.04 Measure and record an apical pulse.~~

~~29.05 Measure and record a orthostatic blood pressure~~

~~29.06 Record patient data.~~

~~29.07~~ 20.02 ~~Instruct~~ Educate the patient on breast and testicular self-examinations.

~~29.08~~ 20.03 Assist with pediatric procedures, ~~including, but not limited to,~~ to include weighing, measuring, and collecting specimens.

|                               |                                                                                                                                                                                                                                                                                                    |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>29.09</del>              | <del>Instruct patients regarding health care and wellness practices including but not limited to dietary guidelines necessary for common diseases.</del>                                                                                                                                           |
| <del>29.10</del>              | <del>Create a patient teaching plan which addresses dietary guidelines and special needs.</del>                                                                                                                                                                                                    |
| <del>29.11</del> <u>20.04</u> | <del>Explore and utilize</del> <u>Educate patient utilizing</u> the U.S. Department of <del>Agricultures</del> <u>Agriculture's</u> "My Plate" Food Guide ( <a href="https://www.myplate.gov/">https://www.myplate.gov/</a> ).                                                                     |
| <del>29.12</del> <u>20.05</u> | <del>Prepare</del> <u>Educate</u> patients <u>on preparations</u> for diagnostic procedures.                                                                                                                                                                                                       |
| <del>30.0</del> <u>21.0</u>   | <del>Demonstrate knowledge of the fundamentals of microbial control and use aseptic techniques. -The student will be able to:</del>                                                                                                                                                                |
| <del>30.01</del>              | <del>Demonstrate competence in sanitation, disinfection, and sterilization.</del>                                                                                                                                                                                                                  |
| <del>30.02</del>              | <del>Identify common instruments.</del>                                                                                                                                                                                                                                                            |
| <del>30.03</del> <u>21.01</u> | <del>Sterilize</del> <u>Identify</u> and maintain <u>common</u> instruments and <u>surgical</u> supplies.                                                                                                                                                                                          |
| <del>30.04</del>              | <del>Sanitize instruments.</del>                                                                                                                                                                                                                                                                   |
| <del>30.05</del> <u>21.02</u> | <del>Wrap</del> <u>and sterilize</u> articles for autoclave.                                                                                                                                                                                                                                       |
| <del>30.06</del>              | <del>Sterilize articles in autoclave.</del>                                                                                                                                                                                                                                                        |
| <del>30.07</del>              | <del>Chemically disinfect articles.</del>                                                                                                                                                                                                                                                          |
| <del>30.08</del>              | <del>Practice infection control and contamination prevention.</del>                                                                                                                                                                                                                                |
| <del>30.09</del>              | <del>Safely handle contaminated equipment and supplies.</del>                                                                                                                                                                                                                                      |
| <del>30.10</del> <u>21.03</u> | <del>Create and maintain sterile fields for dressings and minor surgery.</del>                                                                                                                                                                                                                     |
| <del>30.11</del> <u>21.04</u> | <del>Prepare for minor surgical procedures, including</del> <u>informed consent</u> , surgical hand wash, and applying sterile gloves.                                                                                                                                                             |
| <del>30.12</del> <u>21.05</u> | <del>Remove sutures and staples.</del>                                                                                                                                                                                                                                                             |
| <del>30.13</del>              | <del>Correctly dispose of contaminated materials.</del>                                                                                                                                                                                                                                            |
| <del>31.0</del> <u>22.0</u>   | <del>Demonstrate minor treatments. -The student will be able to:</del>                                                                                                                                                                                                                             |
| <del>31.01</del> <u>22.01</u> | <del>Perform minor treatments as directed by the</del> <u>physician provider</u> , including hot and cold therapy, (which <del>includes, but is not limited to</del> <u>may include</u> the following: -hot water bag, heating pad, hot soaks and compresses, ice bag, cold compresses and packs). |
| <del>31.02</del> <u>22.02</u> | <del>Assist the</del> <u>physician provider</u> with <del>examination, treatment, and/or</del> minor surgery.                                                                                                                                                                                      |
| <del>31.03</del>              | <del>Organize examination and treatment areas before, during, and after patient care.</del>                                                                                                                                                                                                        |

|                               |                                                                                                                                                                                |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>31.04</del> <u>22.03</u> | Perform orthopedic procedures, including but not limited to the following: crutch measurements and instruction in <u>the</u> use of canes, crutches, walkers, and wheelchairs. |
| <del>31.05</del> <u>22.04</u> | <del>Demonstrate the knowledge of</del> <u>Describe</u> casting procedures and supplies.                                                                                       |
| <del>31.06</del> <u>22.05</u> | Apply all types of roller bandages using turns as appropriate.                                                                                                                 |
| <del>31.07</del> <u>22.06</u> | <del>Perform</del> <u>Demonstrate</u> eye <u>and ear</u> irrigations <del>and instillations</del> .                                                                            |
| <del>31.08</del>              | <del>Perform ear irrigations and instillations.</del>                                                                                                                          |
| <del>32.0</del> <u>23.0</u>   | Demonstrate knowledge of basic diagnostic medical assisting procedures. -The student will be able to:                                                                          |
| <del>32.01</del> <u>23.01</u> | Perform visual and auditory screening.                                                                                                                                         |
| <del>32.02</del> <u>23.02</u> | Perform spirometry.                                                                                                                                                            |
| <del>32.03</del>              | <del>Perform oximetry.</del>                                                                                                                                                   |
| <del>32.04</del>              | <del>Assist in the performance of a pap and pelvic exam.</del>                                                                                                                 |
| <del>33.0</del>               | <del>Demonstrate basic radiologic procedures. The student will be able to:</del>                                                                                               |
| <del>33.01</del>              | <del>Describe the basic operation of radiology equipment and accessories.</del>                                                                                                |
| <del>33.02</del>              | <del>Describe how to maintain x-ray film files.</del>                                                                                                                          |
| <del>33.03</del>              | <del>Describe computed and digital radiography systems.</del>                                                                                                                  |
| <del>33.04</del>              | <del>Educate patients in preparation for radiological exams.</del>                                                                                                             |
| <del>33.05</del>              | <del>Demonstrate knowledge of ultrasound treatment.</del>                                                                                                                      |

**Occupational Completion Point: E**

**Pharmacology for Medical Assisting — 90 Hours**

|                  |                                                                                                                                                        |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>34.0</del>  | <del>Demonstrate knowledge of pharmaceutical principles and administer medications. The student will be able to:</del>                                 |
| <del>34.01</del> | <del>Identify commonly administered drugs, their uses, and effects.</del>                                                                              |
| <del>34.02</del> | <del>Identify the major classifications of medications for each body system including, indications for use, side effects, and adverse reactions.</del> |
| <del>34.03</del> | <del>Use correct pharmaceutical abbreviations and terminology.</del>                                                                                   |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>34.04 Identify various methods and routes of drug administration.</del>                                                                                                                                                                                                                                                                                                                                                                                          |
| <del>34.05 Instruct patients regarding self-administration of medications.</del>                                                                                                                                                                                                                                                                                                                                                                                      |
| <del>34.06 Calculate dosage and administer pharmaceuticals to correct anatomical sites, to correct patient, by correct route of administration, at the correct time, and document correctly.</del>                                                                                                                                                                                                                                                                    |
| <del>34.07 Demonstrate knowledge of the legal and ethical standards related to the administration and the dispensing of drugs in the office setting under the doctor's supervision.</del>                                                                                                                                                                                                                                                                             |
| <del>34.08 Demonstrate knowledge of emergency medications for first aid.</del>                                                                                                                                                                                                                                                                                                                                                                                        |
| <del>34.09 Identify the dangers and complications associated with drug administration</del>                                                                                                                                                                                                                                                                                                                                                                           |
| <del>34.10 Recognize and report medication errors.</del>                                                                                                                                                                                                                                                                                                                                                                                                              |
| <del>34.11 Demonstrate appropriate techniques to:</del> <ul style="list-style-type: none"> <li><del>• Prepare and administer non-parenteral medications (solid, liquids, and inhalers).</del></li> <li><del>• Prepare and administer parenteral medications.</del></li> <li><del>• Reconstitute powdered drugs.</del></li> <li><del>• Prepare injections from ampules and vials.</del></li> <li><del>• Apply the Seven Rights of Drug Administration</del></li> </ul> |

**Course Number: MEA0573**  
**Occupational Completion Point: E**  
**Laboratory Procedures — 125 Hours**

~~35.0 Perform CLIA-waived diagnostic clinical laboratory procedures.—The students will be able to:~~

|                                                                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>35.01 Comply with safety signs, symbols, and labels.</del>                                                                                                                                                        |
| <del>35.02 Recognize signs and symptoms that may indicate to the physician a need for laboratory testing.</del>                                                                                                        |
| <del>35.03 Describe the criteria used by Food and Drug Administration (FDA) to classify a test as “CLIA waived” and the regulatory constraints on test performance.</del>                                              |
| <del>35.04 Explain the methods of quality control for CLIA-waived testing, identify acceptable and unacceptable control results, and describe specific corrective action required when results are unacceptable.</del> |
| <del>35.05 Demonstrate proper technique for the collection of urine, capillary whole blood (finger/heel stick), culture material (throat/nasal swab) and other specimen types required for CLIA-waived tests.</del>    |
| <del>35.06 Instruct patients in the proper collection of urine (clean catch, mid-stream), sputum, and stool specimens.</del>                                                                                           |
| <del>35.07 Perform CLIA-waived occult blood tests.</del>                                                                                                                                                               |
| <del>35.08 Perform CLIA-waived urinalysis testing including color and turbidity assessment and reagent test strips.</del>                                                                                              |

|                                                                                                                        |

**Course Number:** MEA0506

**Occupational Completion Point:** E

**Administrative Office Procedures – 90 Hours**

~~37.0 Perform administrative office duties. The student will be able to:~~

~~37.01 Execute data management using Electronic Health Record (EHR) including, but not limited to, patient registration, appointment scheduling, charting, billing and insurance processing, procedure and diagnostic coding, ordering and monitoring patient testing, medication and prescription orders, keyboarding and correspondence, and performing an office inventory.~~

~~37.02 Execute non EHR data management including, but not limited to, selecting appropriate procedure and diagnostic codes, process insurance data and claims, develop and maintain billing and collection systems.~~

~~37.03 Perform various financial procedures, including, but not limited to, billing and collection procedures, payroll procedures, and checkbook procedures.~~

~~37.04 Demonstrate knowledge of management in a medical office including but not limited to personnel records, interviewing, various management styles, risk management, and conflict resolution.~~

**Course Number:** ~~MEA0942~~MEA0943

**Occupational Completion Point:** E

**Practicum Experience – ~~200~~190 Hours**

This “Practicum” experience is a supervised, unpaid activity of **a total of 200 hours**, of which 160 contact hours must be in an ambulatory health care setting and no more than 40 hours in a simulated laboratory setting performing administrative and clinical procedures, and must be

completed prior to graduation. Students ready for the Practicum experience have completed all other program requirements and are eligible for this final phase in the program.

The program should ensure that the experience and instruction of students are meaningful and parallel in content and concept with the material presented in lecture and laboratory sessions. Sites should be selected so that each student is afforded a variety of experiences, while at the same time, all students are provided consistent learning opportunities.

This experience provides an opportunity for students to utilize both administrative and clinical skills learned in the Medical Assistant classroom and clinical environment in a local clinic, ~~physician's~~ provider's office, or other health care facility.

The ~~students-Practicum~~ students' practicum should be performed in a professional environment under conditions of strict supervision and guidance of a licensed ~~physician~~ provider and clinical coordinator. An individual who has knowledge of the medical assisting profession must provide on-site supervision of the student. When performed in the stimulated laboratory, all activities must be under the supervision of the medical assisting program/practicum coordinator or faculty. The content for any simulated laboratory activity will be at the discretion of each ~~individual~~ learning institution to best meet the ~~need~~ needs of its students.

The actual hands-on experiences will tie ~~in~~ all the educational components based on theory and competency-based instruction that the student learned in the laboratory and classroom ~~setting~~.

settings. This course is set to assess the student in their ability to utilize all critical thinking applications learned during the program and to apply these critical thinking skills during the Practicum experience. -The healthcare facility and the learning college/institute will expect the student to utilize good work ethics, show excellent civic responsibilities, and further learn to both embrace and respect cultural diversity.

~~38.0~~ 24.0 Perform administrative and general skills. -The student will be able to:

~~38.01—Understand proper and professional telephone technique.~~

~~38.02~~ 24.01 Recognize and respond to verbal communication.

~~38.03—Recognize and respond to non-verbal communication.~~

~~38.04~~ 24.02 Maintain confidentiality and adhere to HIPAA regulations.

~~38.05~~ 24.03 Understand how to document manually and electronically appropriately.

~~38.06~~ 24.04 Understand how to schedule appointments manually and electronically accurately.

~~38.07~~ 24.05 Understand how to schedule inpatient and/or outpatient procedures accurately.

~~38.08~~ 24.06 Greet patients courteously and professionally.

~~38.09~~ 24.07 Demonstrate safety and quality assurance in the workplace.

|                        |                                                                                                                                                                           |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>39.0</del> 24.08  | Perform clinical and general skills. <del>The student will be able to:</del>                                                                                              |
| <del>39.01</del> 24.09 | Demonstrate aseptic hand washing technique.                                                                                                                               |

| <del>39.03</del> 25.01 | Adhere to sterilization techniques according to standards.                                                                                                                |
| <del>39.04</del> 25.02 | Practice standard precautions.                                                                                                                                            |
| <del>39.05</del> 25.03 | Stage patients and obtain vital signs.                                                                                                                                    |
| <del>39.06</del> 25.04 | Obtain patient histories.                                                                                                                                                 |
| <del>39.07</del> 25.05 | Prepare and maintain examination and treatment area(s).                                                                                                                   |
| <del>39.08</del> 25.06 | Prepare patient for examinations and/or minor office procedures.                                                                                                          |
| <del>39.09</del> 25.07 | Assist with examinations and/or minor office procedures.                                                                                                                  |
| <del>39.10</del> 25.08 | Provide and document patient education.                                                                                                                                   |
| <del>40.0</del> 25.09  | Display professional work habits integral to medical assisting. <del>The student will be able to:</del>                                                                   |
| <del>40.01</del> 25.10 | Communicate appropriately in healthcare settings by listening, writing, speaking, and presenting with a professional demeanor.                                            |
| <del>40.02</del> 26.0  | Collaborate, communicate, and interact professionally with other <del>healthcare</del> health care professionals utilizing technology. <u>The student will be able to</u> |
| <del>40.03</del> 26.01 | Contribute to team efforts by fulfilling responsibilities and valuing diversity.                                                                                          |
| <del>40.04</del> 26.02 | Exercise proper judgment and critical thinking skills in decision making.                                                                                                 |
| <del>40.05</del> 26.03 | Adapt to changing organizational environments with flexibility.                                                                                                           |
| <del>40.06</del> 26.04 | Report as expected, on time, appropriately dressed and groomed, and ready to work.                                                                                        |
| <del>40.07</del> 26.05 | Model acceptable work habits as defined by company policy.                                                                                                                |
| <del>40.08</del> 26.06 | Complete and follow through on tasks using time management skills and take initiative as warranted.                                                                       |
| <del>40.09</del> 26.07 | Respond appropriately and quickly to <del>patient's</del> patients' needs and concerns.                                                                                   |
| <del>40.10</del> 26.08 | Practice etiquette and social sensitivity in face-to-face interaction, on the telephone, and <del>the Internet</del> online.                                              |

~~40.11~~26.09 Actively adhere to policies and procedures that protect the patient's confidentiality and privacy.

~~40.12~~26.10 Understand resources related to patients' healthcare needs.

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

Although it is not required, it is strongly recommended that the programs meet the Standards and Guidelines of an Accredited Educational Program for the Medical Assistant adopted by the American Association of Medical Assistants and the Commission on Accreditation of Allied Health Education Programs (CAAHEP) or the American Medical Technologist and the Accrediting Bureau of Health Education Schools (ABHES). For further information, contact:

Commission on Accreditation of Allied Health Education Programs (CAAHEP) [www.caahep.org](http://www.caahep.org)/[www.caahep.org/](http://www.caahep.org/)  
1361 Park Street, Clearwater, FL 33756, Phone: 727-210-2350/ Fax: 727-210-2354

Accrediting Bureau of Health Education Schools (ABHES) [www.abhes.org](http://www.abhes.org)/[www.abhes.org/](http://www.abhes.org/)  
777 Leesburg Pike, Suite 312, North Falls, VA 22043, (703) 917-9503

This program will also be in accordance with Florida Statute, Medical Assistants, 458.3485, F.S.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

Program completers of a CAAHEP or ABHES-accredited program are eligible to take the American Association of Medical Assistants' Certification Examination (CMA) or the American Medical Technologists' Certification Examination (RMA). For further information, contact:

American Association of Medical Assistants (AAMA) [www.aama-ntl.org](http://www.aama-ntl.org)/[www.aama-ntl.org/](http://www.aama-ntl.org/)  
20 North Wacker Drive, Suite 1575, Chicago, Illinois 60606 (312-899-1500)

Or

American Medical Technologist (AMT) <https://americanmedtech.org/>  
10700 West Higgins Road, Suite 150, Rosemont, Illinois 60018 (800-275-1268)

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the **National Health Care Foundation Skill Standards Assessment** with instructor approval and the completion of a portfolio.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOSs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program.- Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: -Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Sections. 1004.02, ~~Florida Statutes~~, F.S., may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040)-, F.A.C.). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. -Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Sections. 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as medical assistants.

The content includes but is not limited to communication, transcultural communication in healthcare, interpersonal skills, legal and ethical responsibilities, health-illness concepts, administrative and clinical duties, emergency procedures including CPR and first aid, emergency preparedness, safety and security procedures, medical terminology, anatomy and physiology, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 5 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title                      | Teacher Certification                                                                                                                                       | Length    |

## Common Florida's Career Technical Core—Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

| <u>Employability Skills</u> |                                                      |
|-----------------------------|------------------------------------------------------|
| <u>01.0</u>                 | <u>Apply academic skills to workplace scenarios.</u> |
| <u>01.01</u>                | <u>Use reading skills.</u>                           |
| <u>01.02</u>                | <u>Use writing skills.</u>                           |
| <u>01.03</u>                | <u>Use mathematical strategies and procedures.</u>   |
| <u>01.04</u>                | <u>Use scientific principles and procedures.</u>     |

|                                                                                                       |
|-------------------------------------------------------------------------------------------------------|
| <u>02.0 Design a solution to an industry problem.</u>                                                 |
| <u>02.01 Use critical thinking.</u>                                                                   |
| <u>02.02 Use creativity.</u>                                                                          |
| <u>02.03 Make sound decisions.</u>                                                                    |
| <u>02.04 Solve problems.</u>                                                                          |
| <u>02.05 Reason.</u>                                                                                  |
| <u>02.06 Plan and organize.</u>                                                                       |
| <u>03.0 Manage resources within an industry project</u>                                               |
| <u>03.01 Manage time.</u>                                                                             |
| <u>03.02 Manage money or resources.</u>                                                               |
| <u>03.03 Manage materials.</u>                                                                        |
| <u>03.04 Manage personnel.</u>                                                                        |
| <u>04.0 Oversee the subcomponents, operations and output of a technical or organizational system.</u> |
| <u>04.01 Manage systems.</u>                                                                          |
| <u>04.02 Monitor systems.</u>                                                                         |
| <u>04.03 Improve systems.</u>                                                                         |
| <u>05.0 Use information for decision making.</u>                                                      |
| <u>05.01 Locate information.</u>                                                                      |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Demonstrate proper use of medical terminology.
- 13.0 Demonstrate knowledge of legal and ethical responsibilities for medical assistants.
- 14.0 Demonstrate an understanding of anatomy and physiology concepts in both illness and wellness states.
- 15.0 Demonstrate basic clerical/medical office duties.
- 16.0 Demonstrate accepted professional, communication, and interpersonal skills as related to phlebotomy.
- 17.0 Discuss phlebotomy in relation to the health care setting.
- 18.0 Identify the anatomic structure and function of body systems in relation to services performed by a phlebotomist.
- 19.0 Recognize and identify collection reagents supplies, equipment and interfering chemical substances.
- 20.0 Demonstrate skills and knowledge necessary to perform phlebotomy.
- 21.0 Practice infection control following standard precautions.
- 22.0 Practice accepted procedures of transporting, accessioning and processing specimens.
- 23.0 Practice quality assurance and safety.
- 24.0 Describe the role of a medical assistant with intravenous therapy in oncology and dialysis.
- 25.0 Describe the cardiovascular system.
- 26.0 Identify legal and ethical responsibilities of an EKG aide.
- 27.0 Perform patient care techniques in the health care facility.
- 28.0 Demonstrate knowledge of, apply and use medical instrumentation modalities.
- 29.0 Demonstrate basic office examination procedures.
- 30.0 Demonstrate knowledge of the fundamentals of microbial control and use aseptic techniques.
- 31.0 Demonstrate minor treatments.
- 32.0 Demonstrate knowledge of basic diagnostic medical assisting procedures.
- 33.0 Demonstrate basic radiology procedures.
- 34.0 Demonstrate knowledge of pharmaceutical principles and administer medications.
- 35.0 Perform CLIA-waived diagnostic clinical laboratory procedures.
- 36.0 Demonstrate knowledge of emergency preparedness and protective practices.

- 37.0 Perform administrative office duties.
- 38.0 Perform administrative and general skills.
- 39.0 Perform clinical and general skills.
- 40.0 Display professional work habits integral to medical assisting.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Medical Assisting  
**Career Certificate Program Number:** H170515

The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Career Certificate Program health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**Course Number: HSC0003**  
**Occupational Completion Point: A**  
**Basic Healthcare Worker – 90 Hours**

To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

<https://www.fldoe.org/core/fileparse.php/20706/urlt/health-sci-core-psav-cc-2425.rtf>

<https://www.fldoe.org/file/20894/health-sci-core-psav-cc-2627.rtf>

**Course Number: MEA0002**  
**Occupational Completion Point: B**  
**Introduction to Medical Assisting – 250 Hours**

12.0 Demonstrate proper use of medical terminology. The student will be able to:

12.01 Use medical terminology as appropriate for a medical assistant.

12.02 Identify medical terms labeling the word parts.

12.03 Define medical terms and abbreviations related to all body systems.

13.0 Demonstrate knowledge of legal and ethical responsibilities for medical assistants. The student will be able to:

13.01 Describe the role of the medical assistant.

13.02 Understand the importance of order entry as it relates to certification of the medical assistant.

13.03 Provide health care as set forth in 458.3485, Florida Statute (F.S.) for the medical assistant.

13.04 Distinguish between the liability of the physicians and staff members in the medical office.

13.05 Explain the principles for preventing medical liability.

|       |                                                                                                                                                                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.06 | List the principles in the Codes of Ethics for Medical Assistants as stated by the American Association of Medical Assistants.                                                                                                                                  |
| 14.0  | Demonstrate an understanding of anatomy and physiology concepts in both illness and wellness states. The student will be able to:                                                                                                                               |
| 14.01 | Define the terms Anatomy and Physiology                                                                                                                                                                                                                         |
| 14.02 | Define both medical terms and abbreviations related to all body systems.                                                                                                                                                                                        |
| 14.03 | Define the principle directional terms, planes, quadrants and cavities used in describing the body and the association of body parts to one another.                                                                                                            |
| 14.04 | Define the levels of organization of the body inclusive of, but not limited to, cells, organs and body systems.                                                                                                                                                 |
| 14.05 | Describe the function of the 11 major organ systems of the body (1) Integumentary, (2) skeletal, (3) muscular, (4) Nervous, (5) endocrine, (6) circulatory (cardiovascular) (7) lymphatic, (8) respiratory, (9) digestive, (10) urinary, and (11) reproductive. |
| 14.06 | Describe symptoms and common disease pathology related to each body system and the relationship of the disease process to other body systems.                                                                                                                   |
| 14.07 | Discuss diagnostic options to identify common disease pathology and corresponding basic treatment.                                                                                                                                                              |
| 14.08 | Compare structure and function of the body across the life span.                                                                                                                                                                                                |

**Course Number: MEA0501**  
**Occupational Completion Point: B**  
**Medical Office Procedures – 75 Hours**

|       |                                                                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15.0  | Demonstrate basic clerical/medical office duties. The student will be able to:                                                                                   |
| 15.01 | Perform effective communication skills essential to the medical office.                                                                                          |
| 15.02 | Maintain filing systems.                                                                                                                                         |
| 15.03 | Operate office equipment and perform clerical office procedures.                                                                                                 |
| 15.04 | Discuss principles of using electronic health record (EHR).                                                                                                      |
| 15.05 | Prepare and maintain medical records both manually and within the electronic health record (EHR).                                                                |
| 15.06 | Screen and process mail.                                                                                                                                         |
| 15.07 | Schedule routine appointments and patient admissions and/or procedures both manually and within the electronic health record (EHR).                              |
| 15.08 | Adhere to current government regulations, risk management and compliance within the scope of practice of a medical assistant practicing in the State of Florida. |

|       |                                                                                              |
|-------|----------------------------------------------------------------------------------------------|
| 15.09 | Maintain office inventory.                                                                   |
| 15.10 | Inform patients of office policies both verbally and written.                                |
| 15.11 | Perform general housekeeping duties.                                                         |
| 15.12 | Perform daily office activities both manually and within the electronic health record (EHR). |
| 15.13 | Receive patients and visitors.                                                               |
| 15.14 | Identify and maintain office security policies/procedures.                                   |

**Course Number: MEA0521**  
**Occupational Completion Point: C**  
**Phlebotomist, MA – 75 Hours**

|       |                                                                                                                                                                                            |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16.0  | Demonstrate accepted professional, communication, and interpersonal skills as related to phlebotomy. The student will be able to:                                                          |
| 16.01 | Demonstrate the appropriate professional behavior of a phlebotomist.                                                                                                                       |
| 16.02 | Explain to the patient the procedure to be used in specimen collection.                                                                                                                    |
| 16.03 | Explain in detail the importance of identifying patients correctly when drawing blood.                                                                                                     |
| 16.04 | Describe the scope of practice for a phlebotomist.                                                                                                                                         |
| 16.05 | List and describe professional organizations that provide accreditation, certification, and licensure to phlebotomists and phlebotomy programs.                                            |
| 16.06 | Explain the importance of continuing education in relation to certification to maintain competency and skills.                                                                             |
| 17.0  | Discuss phlebotomy in relation to the health care setting. The student will be able to:                                                                                                    |
| 17.01 | List, classify and discuss various departments and services within the health care setting with which the phlebotomist must interact to obtain laboratory specimens from patients.         |
| 17.02 | Identify the major departments/sections within the clinical laboratory, the major types of procedures run in each department/section, and their specimen requirements.                     |
| 17.03 | Describe roles of the major classifications of clinical laboratory personnel (i.e., pathologist, chief/administrative technologist, CLS, MLS, MLT, MT, phlebotomist, lab assistant, etc.). |
| 18.0  | Identify the anatomic structure and function of body systems in relation to services performed by a phlebotomist. The student will be able to:                                             |
| 18.01 | Describe and define major body systems with emphasis on the circulatory system.                                                                                                            |

|       |                                                                                                                                                                                              |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18.02 | List and describe the main superficial veins used in performing venipuncture.                                                                                                                |
| 18.03 | Locate the most appropriate site(s) for both capillary and venipuncture.                                                                                                                     |
| 18.04 | Describe the function of the following blood components: erythrocytes, thrombocytes, leukocytes and plasma.                                                                                  |
| 18.05 | Compare and contrast between serum and plasma as it relates to blood collection.                                                                                                             |
| 18.06 | Discuss hemostasis as it relates to blood collection.                                                                                                                                        |
| 19.0  | Recognize and identify collection reagents supplies, equipment and interfering chemical substances. The student will be able to:                                                             |
| 19.01 | Identify and discuss proper use of appropriate types of equipment needed to collect various clinical laboratory blood specimens by venipuncture.                                             |
| 19.02 | Explain the special precautions and types of equipment needed to collect blood from a pediatric patient.                                                                                     |
| 19.03 | Identify and discuss proper use of supplies used in collecting short-draw specimens or difficult draws.                                                                                      |
| 19.04 | Identify and discuss the proper use of the various types of anticoagulants, preservatives and gels used in blood collection and the vacuum tube color-codes for these additives.             |
| 19.05 | Describe the types of specimens that are analyzed in the clinical laboratory and the phlebotomist's role in collecting and/or transporting these specimens to the laboratory.                |
| 19.06 | Describe substances potentially encountered during phlebotomy which can interfere in analysis of blood constituents.                                                                         |
| 19.07 | Define and utilize correct medical terminology and metric measurement needed for specimen collection.                                                                                        |
| 20.0  | Demonstrate skills and knowledge necessary to perform phlebotomy. The student will be able to:                                                                                               |
| 20.01 | Follow approved procedure for completing a laboratory requisition form.                                                                                                                      |
| 20.02 | Recognize a properly completed requisition.                                                                                                                                                  |
| 20.03 | Demonstrate knowledge of established protocol for patient and specimen identification.                                                                                                       |
| 20.04 | Discuss appropriate methods for facilitating and preparing the patient for capillary and venipuncture collection.                                                                            |
| 20.05 | List appropriate antiseptic agents useful in preparing sites for capillary and venipuncture.                                                                                                 |
| 20.06 | Perform venipuncture by evacuated tube, butterfly, and syringe systems, demonstrating appropriate use of supplies, proper handling of equipment and specimens, and appropriate patient care. |
| 20.07 | Describe the correct order of draw.                                                                                                                                                          |
| 20.08 | Describe the use of barcoding systems used for specimen collection.                                                                                                                          |

|       |                                                                                                                                                                                                                |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20.09 | Perform a capillary puncture using appropriate supplies and techniques for both adults and pediatric patients.                                                                                                 |
| 20.10 | Describe the most common complications associated with capillary and venipuncture, their causes, prevention and treatment.                                                                                     |
| 20.11 | Recognize and respond to possible adverse patient reactions such as allergies, convulsions, syncope, light headedness, vomiting, and nerve involvement.                                                        |
| 20.12 | Perform appropriate procedures for disposing of used or contaminated capillary and venipuncture supplies.                                                                                                      |
| 20.13 | Perform appropriate techniques for making a peripheral blood smear for hematologic evaluation.                                                                                                                 |
| 20.14 | Demonstrate the proper procedure for collecting blood cultures.                                                                                                                                                |
| 20.15 | Discuss the effects of hemolysis and methods of prevention.                                                                                                                                                    |
| 20.16 | Demonstrate a working understanding of how age and weight of patients impacts the maximum amount of blood that can be safely drawn.                                                                            |
| 21.0  | Practice infection control following standard precautions. The student will be able to:                                                                                                                        |
| 21.01 | Define the term hospital acquired infection.                                                                                                                                                                   |
| 21.02 | Describe and practice procedures for infection prevention including hand washing skills.                                                                                                                       |
| 21.03 | Discuss transmission-based precautions.                                                                                                                                                                        |
| 21.04 | Identify potential routes of infection and their complications.                                                                                                                                                |
| 22.0  | Practice accepted procedures of transporting, accessioning and processing specimens. The student will be able to:                                                                                              |
| 22.01 | Demonstrate good laboratory practice for preparation and processing (e.g., centrifugation, separation, aliquoting, labeling, and storage) of serum, plasma, urine, sputum, stool, and wound culture specimens. |
| 22.02 | Demonstrate knowledge of accessioning procedures.                                                                                                                                                              |
| 22.03 | Describe the significance of time constraints for specimen collection and delivery.                                                                                                                            |
| 22.04 | Describe routine procedures for transporting and processing specimens including DOT packaging requirements.                                                                                                    |
| 22.05 | Follow protocol for accepting verbal test orders and explain procedure for obtaining signature or other form of authentication of verbal orders.                                                               |
| 23.0  | Practice quality assurance and safety. The student will be able to:                                                                                                                                            |
| 23.01 | Distinguish and perform procedures which ensure reliability of test results when collecting blood specimens.                                                                                                   |
| 23.02 | Practice appropriate patient safety.                                                                                                                                                                           |

|       |                                                                                                                                                                                               |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 23.03 | Practice safety in accordance with OSHA (state & federal guidelines) for chemical, biological, and PPE established procedures including proper disposal of sharps and biohazardous materials. |
| 23.04 | Follow documentation procedures for work related accidents.                                                                                                                                   |
| 23.05 | Implement appropriate Joint Commission patient safety goals and other accrediting/regulatory agency guidelines.                                                                               |
| 24.0  | Describe the role of a medical assistant with intravenous therapy in oncology and dialysis. The student will be able to:                                                                      |
| 24.01 | Outline the principles of intravenous therapy.                                                                                                                                                |
| 24.02 | Understand intravenous terminology, practices, and equipment.                                                                                                                                 |
| 24.03 | Describe the dangers of intravenous treatment.                                                                                                                                                |
| 24.04 | Describe the role of the medical assistant in assisting with intravenous therapy.                                                                                                             |

**Course Number: MEA0543**  
**Occupational Completion Point: D**  
**EKG Aide, MA – 75 Hours**

|       |                                                                                           |
|-------|-------------------------------------------------------------------------------------------|
| 25.0  | Describe the cardiovascular system. The student will be able to:                          |
| 25.01 | Locate the heart and surrounding structures.                                              |
| 25.02 | Diagram and label the parts of the heart and list the functions of each labeled part.     |
| 25.03 | Trace the flow of blood through the cardiopulmonary system.                               |
| 26.0  | Identify legal and ethical responsibilities of an EKG aide. The student will be able to:  |
| 26.01 | Recognize and practice legal and ethical responsibilities as they relate to an EKG aide.  |
| 26.02 | Maintain a safe and efficient work environment.                                           |
| 26.03 | Maintain EKG equipment so it will be safe and accurate.                                   |
| 27.0  | Perform patient care techniques in the health care facility. The student will be able to: |
| 27.01 | Describe the physical preparation of the patient for EKG testing.                         |
| 27.02 | Identify patient and verify the requisition order.                                        |
| 27.03 | Prepare patient for EKG testing.                                                          |

|       |                                                                                                                                |
|-------|--------------------------------------------------------------------------------------------------------------------------------|
| 27.04 | State precautions required when performing an EKG.                                                                             |
| 28.0  | Demonstrate knowledge of, apply and use medical instrumentation modalities. The student will be able to:                       |
| 28.01 | Calibrate and maintain EKG equipment in the work environment.                                                                  |
| 28.02 | Identify three types of lead systems (standard/limb, augmented, and precordial/chest).                                         |
| 28.03 | State Einthoven's triangle.                                                                                                    |
| 28.04 | Demonstrate proper lead placement including lead placement with special consideration for various patients with special needs. |
| 28.05 | Demonstrate knowledge of the application of a Holter Monitor and provide patient education of its use.                         |
| 28.06 | Identify artifacts and mechanical problems.                                                                                    |
| 28.07 | Perform a 12 lead EKG.                                                                                                         |
| 28.08 | Perform a rhythm strip.                                                                                                        |
| 28.09 | Recognize normal sinus rhythm.                                                                                                 |
| 28.10 | Report any dysrhythmias that are not normal sinus rhythm.                                                                      |
| 28.11 | Recognize a cardiac emergency as seen on the EKG.                                                                              |
| 28.12 | Use documentation skills to identify electrocardiographs.                                                                      |

**Course Number: MEA0581**  
**Occupational Completion Point: E**  
**Clinical Assisting – 230 Hours**

|       |                                                                                                                                                                                  |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 29.0  | Demonstrate basic office examination procedures. The student will be able to:                                                                                                    |
| 29.01 | Prepare patients for and assist the physician with physical examinations including, but not limited to, pre and post-natal, male and female reproductive, rectal, and pediatric. |
| 29.02 | Measure and record vital signs, recognizing abnormalities and danger signs.                                                                                                      |
| 29.03 | Measure and record a pulse pressure                                                                                                                                              |
| 29.04 | Measure and record an apical pulse.                                                                                                                                              |
| 29.05 | Measure and record a orthostatic blood pressure                                                                                                                                  |

|       |                                                                                                                                                     |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| 29.06 | Record patient data.                                                                                                                                |
| 29.07 | Instruct patient on breast and testicular self-examinations.                                                                                        |
| 29.08 | Assist with pediatric procedures, including, but not limited to, weighing, measuring, and collecting specimens.                                     |
| 29.09 | Instruct patients regarding health care and wellness practices including but not limited to dietary guidelines necessary for common diseases.       |
| 29.10 | Create a patient teaching plan which addresses dietary guidelines and special needs.                                                                |
| 29.11 | Explore and utilize the U.S. Department of Agriculture's "My Plate" Food Guide ( <a href="https://www.myplate.gov/">https://www.myplate.gov/</a> ). |
| 29.12 | Prepare patients for diagnostic procedures.                                                                                                         |
| 30.0  | Demonstrate knowledge of the fundamentals of microbial control and use aseptic techniques. The student will be able to:                             |
| 30.01 | Demonstrate competence in sanitation, disinfection, and sterilization.                                                                              |
| 30.02 | Identify common instruments.                                                                                                                        |
| 30.03 | Sterilize and maintain instruments and supplies.                                                                                                    |
| 30.04 | Sanitize instruments.                                                                                                                               |
| 30.05 | Wrap articles for autoclave.                                                                                                                        |
| 30.06 | Sterilize articles in autoclave.                                                                                                                    |
| 30.07 | Chemically disinfect articles.                                                                                                                      |
| 30.08 | Practice infection control and contamination prevention.                                                                                            |
| 30.09 | Safely handle contaminated equipment and supplies.                                                                                                  |
| 30.10 | Create and maintain sterile fields for dressings and minor surgery.                                                                                 |
| 30.11 | Prepare for minor surgical procedures including surgical hand wash and applying sterile gloves.                                                     |
| 30.12 | Remove sutures and staples.                                                                                                                         |
| 30.13 | Correctly dispose of contaminated materials.                                                                                                        |
| 31.0  | Demonstrate minor treatments. The student will be able to:                                                                                          |

|       |                                                                                                                                                                                                                                        |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 31.01 | Perform minor treatments as directed by the physician including hot and cold therapy, (which includes, but is not limited to the following: hot water bag, heating pad, hot soaks and compresses, ice bag, cold compresses and packs). |
| 31.02 | Assist the physician with examination, treatment, and/or minor surgery.                                                                                                                                                                |
| 31.03 | Organize examination and treatment areas before, during, and after patient care.                                                                                                                                                       |
| 31.04 | Perform orthopedic procedures, including but not limited to the following: crutch measurements and instruction in use of canes, crutches, walkers, and wheelchairs.                                                                    |
| 31.05 | Demonstrate the knowledge of casting procedures and supplies.                                                                                                                                                                          |
| 31.06 | Apply all types of roller bandages using turns as appropriate.                                                                                                                                                                         |
| 31.07 | Perform eye irrigations and instillations.                                                                                                                                                                                             |
| 31.08 | Perform ear irrigations and instillations.                                                                                                                                                                                             |
| 32.0  | Demonstrate knowledge of basic diagnostic medical assisting procedures. The student will be able to:                                                                                                                                   |
| 32.01 | Perform visual and auditory screening.                                                                                                                                                                                                 |
| 32.02 | Perform spirometry.                                                                                                                                                                                                                    |
| 32.03 | Perform oximetry.                                                                                                                                                                                                                      |
| 32.04 | Assist in the performance of a pap and pelvic exam.                                                                                                                                                                                    |
| 33.0  | Demonstrate basic radiologic procedures. The student will be able to:                                                                                                                                                                  |
| 33.01 | Describe the basic operation of radiology equipment and accessories.                                                                                                                                                                   |
| 33.02 | Describe how to maintain x-ray film files.                                                                                                                                                                                             |
| 33.03 | Describe computed and digital radiography systems.                                                                                                                                                                                     |
| 33.04 | Educate patients in preparation for radiological exams.                                                                                                                                                                                |
| 33.05 | Demonstrate knowledge of ultrasound treatment.                                                                                                                                                                                         |

**Course Number: MEA0530**  
**Occupational Completion Point: E**  
**Pharmacology for Medical Assisting – 90 Hours**

34.0 Demonstrate knowledge of pharmaceutical principles and administer medications. The student will be able to:

|       |                                                                                                                                                                                                                                                                                                                                                                                               |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 34.01 | Identify commonly administered drugs, their uses, and effects.                                                                                                                                                                                                                                                                                                                                |
| 34.02 | Identify the major classifications of medications for each body system including, indications for use, side effects, and adverse reactions.                                                                                                                                                                                                                                                   |
| 34.03 | Use correct pharmaceutical abbreviations and terminology.                                                                                                                                                                                                                                                                                                                                     |
| 34.04 | Identify various methods and routes of drug administration.                                                                                                                                                                                                                                                                                                                                   |
| 34.05 | Instruct patients regarding self-administration of medications.                                                                                                                                                                                                                                                                                                                               |
| 34.06 | Calculate dosage and administer pharmaceuticals to correct anatomical sites, to correct patient, by correct route of administration, at the correct time, and document correctly.                                                                                                                                                                                                             |
| 34.07 | Demonstrate knowledge of the legal and ethical standards related to the administration and the dispensing of drugs in the office setting under the doctor's supervision.                                                                                                                                                                                                                      |
| 34.08 | Demonstrate knowledge of emergency medications for first aid.                                                                                                                                                                                                                                                                                                                                 |
| 34.09 | Identify the dangers and complications associated with drug administration                                                                                                                                                                                                                                                                                                                    |
| 34.10 | Recognize and report medication errors.                                                                                                                                                                                                                                                                                                                                                       |
| 34.11 | Demonstrate appropriate techniques to: <ul style="list-style-type: none"> <li>• Prepare and administer non-parenteral medications (solid, liquids, and inhalers).</li> <li>• Prepare and administer parenteral medications.</li> <li>• Reconstitute powdered drugs.</li> <li>• Prepare injections from ampules and vials.</li> <li>• Apply the Seven Rights of Drug Administration</li> </ul> |

**Course Number: MEA0573**  
**Occupational Completion Point: E**  
**Laboratory Procedures – 125 Hours**

|       |                                                                                                                                                                                                       |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 35.0  | Perform CLIA-waived diagnostic clinical laboratory procedures. - The students will be able to:                                                                                                        |
| 35.01 | Comply with safety signs, symbols, and labels.                                                                                                                                                        |
| 35.02 | Recognize signs and symptoms that may indicate to the physician a need for laboratory testing.                                                                                                        |
| 35.03 | Describe the criteria used by Food and Drug Administration (FDA) to classify a test as “CLIA waived” and the regulatory constraints on test performance.                                              |
| 35.04 | Explain the methods of quality control for CLIA-waived testing, identify acceptable and unacceptable control results, and describe specific corrective action required when results are unacceptable. |

|       |                                                                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 35.05 | Demonstrate proper technique for the collection of urine, capillary whole blood (finger/heel stick), culture material (throat/nasal swab) and other specimen types required for CLIA-waived tests. |
| 35.06 | Instruct patients in the proper collection of urine (clean catch, mid-stream), sputum, and stool specimens.                                                                                        |
| 35.07 | Perform CLIA-waived occult blood tests.                                                                                                                                                            |
| 35.08 | Perform CLIA-waived urinalysis testing including color and turbidity assessment and reagent test strips.                                                                                           |
| 35.09 | Perform CLIA-waived hematology tests (e.g., hemoglobin, hematocrit).                                                                                                                               |
| 35.10 | Perform CLIA-waived chemistry tests (e.g., glucose, cholesterol).                                                                                                                                  |
| 35.11 | Perform CLIA-waived pregnancy tests.                                                                                                                                                               |
| 35.12 | Perform CLIA-waived infectious disease testing (e.g., strep screen, mono test, influenza A/B).                                                                                                     |
| 36.0  | Demonstrate knowledge of emergency preparedness and protective practices. The student will be able to:                                                                                             |
| 36.01 | Maintain and operate emergency equipment and supplies.                                                                                                                                             |
| 36.02 | Participate in a mock environmental exposure event and document steps taken.                                                                                                                       |
| 36.03 | Explain an evacuation plan for a physician's office.                                                                                                                                               |
| 36.04 | Maintain a current list of community resources for emergency preparedness.                                                                                                                         |

**Course Number: MEA0506**

**Occupational Completion Point: E**

**Administrative Office Procedures – 90 Hours**

|       |                                                                                                                                                                                                                                                                                                                                                                         |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 37.0  | Perform administrative office duties. The student will be able to:                                                                                                                                                                                                                                                                                                      |
| 37.01 | Execute data management using Electronic Health Record (EHR) including, but not limited to, patient registration, appointment scheduling, charting, billing and insurance processing, procedure and diagnostic coding, ordering and monitoring patient testing, medication and prescription orders, keyboarding and correspondence, and performing an office inventory. |
| 37.02 | Execute non EHR data management including, but not limited to, selecting appropriate procedure and diagnostic codes, process insurance data and claims, develop and maintain billing and collection systems.                                                                                                                                                            |
| 37.03 | Perform various financial procedures, including, but not limited to, billing and collection procedures, payroll procedures, and checkbook procedures.                                                                                                                                                                                                                   |
| 37.04 | Demonstrate knowledge of management in a medical office including but not limited to personnel records, interviewing, various management styles, risk management, and conflict resolution.                                                                                                                                                                              |

**Course Number: MEA0942**  
**Occupational Completion Point: E**  
**Practicum Experience – 200 Hours**

This “Practicum” experience is a supervised, unpaid activity of **a total of 200 hours** of which 160 contact hours must be in an ambulatory health care setting and no more than 40 hours in a simulated laboratory setting performing administrative and clinical procedures and must be completed prior to graduation. Students ready for the Practicum experience have completed all other program requirements and are eligible for this final phase in the program.

The program should ensure that the experience and instruction of students are meaningful and parallel in content and concept with the material presented in lecture and laboratory sessions. Sites should be selected so that each student is afforded a variety of experiences, while at the same time all students are provided consistent learning opportunities.

This experience provides an opportunity for students to utilize both administrative and clinical skills learned in the Medical Assistant classroom and clinical environment in a local clinic, physician’s office, or other health care facility.

The students Practicum should be performed in a professional environment under conditions of strict supervision and guidance of a licensed physician and clinical coordinator. An individual who has knowledge of the medical assisting profession must provide on-site supervision of the student. When performed in the stimulated laboratory all activities must be under the supervision of the medical assisting program/practicum coordinator or faculty. The content for any simulated laboratory activity will be at the discretion of each individual learning institution to best meet the need of its students.

The actual hands-on experiences will tie-in all the educational components based on theory and competency-based instruction that the student learned in the laboratory and classroom setting.

This course is set to assess the student in their ability to utilize all critical thinking applications learned during the program and to apply these critical thinking skills during the Practicum experience. The healthcare facility and the learning college/institute will expect the student to utilize good work ethics, show excellent civic responsibilities, and further learn to both embrace and respect cultural diversity.

38.0 Perform administrative and general skills. The student will be able to:

38.01 Understand proper and professional telephone technique.

38.02 Recognize and respond to verbal communication.

38.03 Recognize and respond to non-verbal communication.

38.04 Maintain confidentiality and adhere to HIPAA regulations.

38.05 Understand how to document manually and electronically appropriately.

|       |                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------|
| 38.06 | Understand how to schedule appointments manually and electronically accurately.                                             |
| 38.07 | Understand how to schedule inpatient and/or outpatient procedures accurately.                                               |
| 38.08 | Greet patients courteously and professionally.                                                                              |
| 38.09 | Demonstrate safety and quality assurance in the workplace.                                                                  |
| 39.0  | Perform clinical and general skills. The student will be able to:                                                           |
| 39.01 | Demonstrate aseptic hand washing technique.                                                                                 |
| 39.02 | Dispose of bio-hazardous waste in appropriate containers.                                                                   |
| 39.03 | Adhere to sterilization techniques according to standards.                                                                  |
| 39.04 | Practice standard precautions.                                                                                              |
| 39.05 | Stage patients and obtain vital signs.                                                                                      |
| 39.06 | Obtain patient histories.                                                                                                   |
| 39.07 | Prepare and maintain examination and treatment area(s).                                                                     |
| 39.08 | Prepare patient for examinations and/or minor office procedures.                                                            |
| 39.09 | Assist with examinations and/or minor office procedures.                                                                    |
| 39.10 | Provide and document patient education.                                                                                     |
| 40.0  | Display professional work habits integral to medical assisting. The student will be able to:                                |
| 40.01 | Communicate appropriately in healthcare settings by listening, writing, speaking and presenting with professional demeanor. |
| 40.02 | Collaborate, communicate and interact professionally with other healthcare professionals utilizing technology.              |
| 40.03 | Contribute to team efforts by fulfilling responsibilities and valuing diversity.                                            |
| 40.04 | Exercise proper judgment and critical thinking skills in decision making.                                                   |
| 40.05 | Adapt to changing organizational environments with flexibility.                                                             |
| 40.06 | Report as expected, on time, appropriately dressed and groomed and ready to work.                                           |
| 40.07 | Model acceptable work habits as defined by company policy.                                                                  |

|       |                                                                                                           |
|-------|-----------------------------------------------------------------------------------------------------------|
| 40.08 | Complete and follow through on tasks using time management skills and take initiative as warranted.       |
| 40.09 | Respond appropriately and quickly to patient's needs and concerns.                                        |
| 40.10 | Practice etiquette and social sensitivity in face to face interaction, on the telephone and the Internet. |
| 40.11 | Actively adhere to policies and procedures that protect the patient's confidentiality and privacy.        |
| 40.12 | Understand resources related to patients' healthcare needs.                                               |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

Although it is not required, it is strongly recommended that the programs meet the Standards and Guidelines of an Accredited Educational Program for the Medical Assistant adopted by the American Association of Medical Assistants and the Commission on Accreditation of Allied Health Education Programs (CAAHEP) or the American Medical Technologist and the Accrediting Bureau of Health Education Schools (ABHES). For further information contact:

Commission on Accreditation of Allied Health Education Programs (CAAHEP) [www.caahep.org/](http://www.caahep.org/)  
1361 Park Street, Clearwater, FL 33756, Phone: 727-210-2350/ Fax: 727-210-2354

Accrediting Bureau of Health Education Schools (ABHES) [www.abhes.org/](http://www.abhes.org/)  
777 Leesburg Pike, Suite 312, North Falls, VA 22043, (703) 917-9503

This program will also be in accordance with Florida Statute Medical Assistants, 458.3485, F.S.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

Program completers of a CAAHEP or ABHES accredited program are eligible to take the American Association of Medical Assistants' Certification Examination (CMA) or the American Medical Technologists' Certification Examination (RMA). For further information contact:

American Association of Medical Assistants (AAMA) [www.aama-ntl.org/](http://www.aama-ntl.org/)  
20 North Wacker Drive, Suite 1575, Chicago, Illinois 60606 (312-899-1500)

Or

American Medical Technologist (AMT) <https://americanmedtech.org/>  
10700 West Higgins Road, Suite 150, Rosemont, Illinois 60018 (800-275-1268)

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOSs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

The program is designed to prepare students for employment in a variety of health care settings as entry level coder, medical record coder, coding ~~technician~~ [technicians](#), or coding clerks, or medical coder/biller (Medical Records and Health Information Technicians).

The content includes but is not limited to medical terminology, anatomy and physiology, coding systems, fundamentals of disease process including pharmacology, health care delivery systems, basics of medical records services, ethical and legal responsibilities, safety/security procedures, basic data processing, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Program Structure**

This program is a planned sequence of instruction consisting of 2 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title                                  | Teacher Certification | Length    |
|-----|---------------|-----------------------------------------------|-----------------------|-----------|
| A   | HIM0009       | Introduction to Health Information Technology | CER COD SP 7 G        | 90 hours  |
| B   | HIM0091       | Medical Coder/Biller I                        | MED RECTEC 7G         | 350 hours |
|     | HIM0092       | Medical Coder/Biller II                       | MED ASST 7G           | 350 hours |
|     | HIM0093       | Medical Coder/Biller III                      | MED TRANS 7G          | 320 hours |

~~Common~~Florida's ~~Career~~ ~~Technical Core — Career Ready Practices~~Readiness Skills for CTE Programs

~~Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.~~

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- ~~12. Work productively in teams while using cultural/global competence.~~

| Employability Skills |                                                      |
|----------------------|------------------------------------------------------|
| 01.0                 | <u>Apply academic skills to workplace scenarios.</u> |
| 01.01                | <u>Use reading skills.</u>                           |
| 01.02                | <u>Use writing skills.</u>                           |
| 01.03                | <u>Use mathematical strategies and procedures.</u>   |
| 01.04                | <u>Use scientific principles and procedures.</u>     |

|              |                                                                                                  |
|--------------|--------------------------------------------------------------------------------------------------|
| <u>02.0</u>  | <u>Design a solution to an industry problem.</u>                                                 |
| <u>02.01</u> | <u>Use critical thinking.</u>                                                                    |
| <u>02.02</u> | <u>Use creativity.</u>                                                                           |
| <u>02.03</u> | <u>Make sound decisions.</u>                                                                     |
| <u>02.04</u> | <u>Solve problems.</u>                                                                           |
| <u>02.05</u> | <u>Reason.</u>                                                                                   |
| <u>02.06</u> | <u>Plan and organize.</u>                                                                        |
| <u>03.0</u>  | <u>Manage resources within an industry project</u>                                               |
| <u>03.01</u> | <u>Manage time.</u>                                                                              |
| <u>03.02</u> | <u>Manage money or resources.</u>                                                                |
| <u>03.03</u> | <u>Manage materials.</u>                                                                         |
| <u>03.04</u> | <u>Manage personnel.</u>                                                                         |
| <u>04.0</u>  | <u>Oversee the subcomponents, operations and output of a technical or organizational system.</u> |
| <u>04.01</u> | <u>Manage systems.</u>                                                                           |
| <u>04.02</u> | <u>Monitor systems.</u>                                                                          |
| <u>04.03</u> | <u>Improve systems.</u>                                                                          |
| <u>05.0</u>  | <u>Use information for decision making.</u>                                                      |
| <u>05.01</u> | <u>Locate information.</u>                                                                       |
| <u>05.02</u> | <u>Organize information.</u>                                                                     |
| <u>05.03</u> | <u>Use information.</u>                                                                          |
| <u>05.04</u> | <u>Analyze information.</u>                                                                      |
| <u>05.05</u> | <u>Communicate information.</u>                                                                  |
| <u>06.0</u>  | <u>Apply relevant technology to workplace scenarios to aid productivity.</u>                     |
| <u>06.01</u> | <u>Use technology.</u>                                                                           |
| <u>07.0</u>  | <u>Interpret and express interpersonal communication.</u>                                        |
| <u>07.01</u> | <u>Communicate verbally.</u>                                                                     |
| <u>07.02</u> | <u>Listen actively.</u>                                                                          |

|                                                                                                                                      |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate an understanding of healthcare organizations and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Explore health informatics as ~~an allied health profession~~ professional.
- 04.0 ~~Demonstrate an understanding~~ Apply Knowledge of health data concepts.
- 05.0 ~~Identify~~ Manage the ~~functions~~ adoption of ~~a multiple formats of~~ health record records and the function of digital applications.
- 06.0 ~~Demonstrate an understanding of~~ Apply Health Information Technology Principles.
- 07.0 ~~Discuss~~ Apply classification systems, clinical vocabularies and terminologies.
- 08.0 Evaluate ethical issues in Health Information ~~Professions~~ professions.
- 09.0 Demonstrate compliance with laws, regulations, and standards that impact healthcare.
- 10.0 Apply policies, regulations, and standards to the management of information associated with treatment, payment, and operations (TPO).
- 11.0 Demonstrate computer knowledge and skills.
- 12.0 Demonstrate employability skills.
- 13.0 Describe the anatomy and physiology of the human body.
- 14.0 Demonstrate proficiency in the application of medical terminology.
- 15.0 Demonstrate an understanding of the fundamentals of disease ~~process~~ processes in ~~relationship~~ relation to the human body, including pharmacology.
- 16.0 Demonstrate proficiency in ~~the use of ICD~~ current medical code set systems and ~~HCPGS/CPT~~ technology-assisted coding ~~systems, both manual and automated~~ solutions.
- ~~17.0 —Perform coding complexities proficiently.~~
- 17.0 Explain the significance of Demonstrate proficiency in complex coding scenarios and value-based care requirements.
- 18.0 Articulate health information services ~~as it relates~~ within modern healthcare delivery systems related to the medical coder/biller.
- 19.0 ~~Demonstrate~~ Ensure professional and ethical behavior of a medical coder/biller in an evolving digital healthcare environment.
- 20.0 ~~Perform~~ Participate in healthcare revenue cycle management processes.

Florida Department of Education  
Student Performance Standards

Program Title: Medical Coder/Biller  
Career Certificate Program Number: H170529

**Course Number: HIM0009**  
**Occupational Completion Point: A**  
**Introduction to Health Information Technology – 90 Hours**

|                               |                                                                                                                                                                                                                                                                     |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0                          | Demonstrate an understanding of <del>the</del> healthcare organizations and health occupations. The student will be able to:                                                                                                                                        |
| 01.01                         | Discuss the evolution of healthcare.                                                                                                                                                                                                                                |
| 01.02                         | Demonstrate an understanding of the infrastructure of healthcare in the United States.                                                                                                                                                                              |
| 01.03                         | Discuss healthcare regulatory agencies and organizations.                                                                                                                                                                                                           |
| 01.04                         | Recognize levels of education, credentialing requirements, employment opportunities, workplace environments, and career growth potential.                                                                                                                           |
| 01.05                         | Differentiate the roles of various providers and disciplines throughout the continuum of healthcare and respond to their information needs.                                                                                                                         |
| 02.0                          | Demonstrate the ability to communicate and use interpersonal skills effectively. The student will be able to:                                                                                                                                                       |
| 02.01                         | <del>Develop</del> <u>Apply</u> basic speaking and active listening skills with meaningful feedback.                                                                                                                                                                |
| <del>02.02</del>              | <del>Develop basic observational skills and related documentation strategies in written and oral form.</del>                                                                                                                                                        |
| <del>02.03</del> <u>02.02</u> | Identify characteristics of successful and unsuccessful communication including barriers.                                                                                                                                                                           |
| <del>02.04</del> <u>02.03</u> | <del>Respond to</del> <u>Demonstrate emotional intelligence (e.g., recognize</u> verbal and non-verbal cues <u>).</u>                                                                                                                                               |
| <del>02.05</del> <u>02.04</u> | <del>Compose written</del> <u>Demonstrate effective professional</u> communication <del>including emails</del> using correct spelling, grammar, formatting, and confidentiality.                                                                                    |
| <del>02.06</del>              | <del>Demonstrate ability to create professional correspondence using appropriate email practices and etiquette.</del>                                                                                                                                               |
| <del>02.07</del> <u>02.05</u> | <u>Use</u> appropriate medical terminology and abbreviations.                                                                                                                                                                                                       |
| <del>02.08</del>              | <del>Model the importance of courtesy and respect for patients and other healthcare workers and maintain good interpersonal relationships.</del>                                                                                                                    |
| <del>02.09</del> <u>02.06</u> | <del>Provide</del> <u>Promote</u> health information <del>education</del> <u>training and awareness</u> to internal/external stakeholders.                                                                                                                          |
| <del>02.10</del> <u>02.07</u> | <del>Adapt</del> <u>Model</u> communication skills to varied levels of understanding and cultural orientation including <del>diverse age</del> <u>generational differences</u> , cultural, <del>economic</del> <u>socioeconomic</u> , ethnic, and religious groups. |

|                        |                                                                                                                                                                                                                  |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>02.11</del> 02.08 | Distinguish between <del>and identify</del> subjective and objective information.                                                                                                                                |
| 03.0                   | Explore health <del>information</del> informatics as <del>an allied</del> health profession. The student will be able to:                                                                                        |
| 03.01                  | Discuss the <del>history</del> past, present, and future of health information <del>-management</del> .                                                                                                          |
| 03.02                  | <del>Discuss the</del> Examine professional opportunities <del>within the</del> related to health information <del>-professions</del> .                                                                          |
| 03.03                  | Demonstrate knowledge of <u>industry-recognized credentials and</u> professional associations applicable to the field of health information.                                                                     |
| 04.0                   | <del>Demonstrate an understanding</del> Apply knowledge of health data concepts. The student will be able to:                                                                                                    |
| 04.01                  | <del>Describe the</del> Examine various <del>uses of primary and secondary</del> health data <u>uses</u> and data sets.                                                                                          |
| 04.02                  | Identify various characteristics of health data quality and <u>emerging</u> standards.                                                                                                                           |
| 05.0                   | <del>Identify</del> Manage the <del>functions</del> adoption of <del>a multiple formats of</del> health <del>record</del> <u>records and the function of digital applications</u> . The student will be able to: |
| 05.01                  | <del>Demonstrate an understanding</del> Apply regulations and requirements of <u>health information to</u> the <del>various formats</del> continuum of the <del>health record</del> care.                        |
| 05.02                  | <del>Explain the various uses of a</del> Analyze health information as it relates to treatment, payment, and operations (TPO).                                                                                   |
| 06.0                   | <del>Demonstrate an understanding of</del> Apply Health Information Technology <u>- principles</u> . The student will be able to:                                                                                |
| 06.01                  | <del>Discuss</del> Explain how changing regulations and technology impact the health information field.                                                                                                          |
| 06.02                  | <del>Interpret</del> Validate the <u>accuracy, integrity, and reliability of</u> information from health information systems and applications in healthcare.                                                     |
| 06.03                  | Demonstrate <del>an</del> proficiency and understanding of creation, use, storage, retrieval, and exchange of health data.                                                                                       |
| 07.0                   | <del>Discuss</del> Apply classification systems, clinical vocabularies and terminologies. The student will be able to:                                                                                           |
| 07.01                  | <del>Explain</del> Demonstrate the use of classification systems, clinical vocabularies, <del>and</del> terminologies <del>as they relate to Health Information Management</del> and nomenclatures.              |
| 08.0                   | Evaluate ethical issues in Health Information <del>Professions</del> professions. The student will be able to:                                                                                                   |
| 08.01                  | <del>Describe</del> Interpret the <u>industry-recognized</u> code of ethics <del>consistent with</del> for healthcare <del>occupations</del> information practices.                                              |
| 08.02                  | Analyze ethical issues related to health information.                                                                                                                                                            |
| 08.03                  | Manage ethical issues related to <u>coding</u> treatment, payment, and <del>billing/ healthcare documentation</del> operations.                                                                                  |
| 09.0                   | Demonstrate compliance with laws, regulations, and standards that impact healthcare. The student will be able to:                                                                                                |

|       |                                                                                                                                                                                                                                                                                  |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 09.01 | <del>Promote</del> <u>Advocate</u> the importance of maintaining ethical and legal standards in <del>compilation</del> <u>gathering, managing,</u> and <del>usage</del> <u>of analyzing</u> health information.                                                                  |
| 09.02 | Identify all <u>regulations</u> , laws and standards that impact health information including the Health Insurance Portability and Accountability Act (HIPAA).                                                                                                                   |
| 09.03 | Explain the composition of the legal health record.                                                                                                                                                                                                                              |
| 09.04 | Apply health information policies and procedures for privacy, confidentiality, and security.                                                                                                                                                                                     |
| 09.05 | Articulate legal terms and processes that impact healthcare.                                                                                                                                                                                                                     |
| 10.0  | Apply policies, regulations, and standards to the management of information associated with treatment, payment, and operations (TPO). The student will be able to:                                                                                                               |
| 10.01 | Describe how <del>to adapt workflow necessitated by</del> regulatory change <u>impacts workflow</u> .                                                                                                                                                                            |
| 10.02 | Demonstrate knowledge of policies and procedures for access and disclosure of protected health information to authorized users.                                                                                                                                                  |
| 10.03 | Adhere to appropriate and applicable accrediting agency guidelines.                                                                                                                                                                                                              |
| 11.0  | Demonstrate computer knowledge and skills. The student will be able to:                                                                                                                                                                                                          |
| 11.01 | Demonstrate the ability to create, manage, organize, attach, and retrieve files.                                                                                                                                                                                                 |
| 11.02 | Demonstrate <u>the</u> ability to connect to and perform research <del>on the internet</del> <u>using search engines and</u> by identifying <del>reliable</del> -reputable websites.                                                                                             |
| 11.03 | Demonstrate proficiency in word processing, spreadsheets, and presentation software.                                                                                                                                                                                             |
| 11.04 | Demonstrate the ability to <del>install</del> <u>manage</u> software programs.                                                                                                                                                                                                   |
| 11.05 | Demonstrate knowledge of safe computer practices and security procedures <del>including but not limited to</del> <u>such as</u> encryption, passwords and biometrics.                                                                                                            |
| 12.0  | Demonstrate employability skills. The student will be able to:                                                                                                                                                                                                                   |
| 12.01 | Identify and exemplify <del>personal</del> <u>professional</u> traits <del>or attitudes</del> -desirable in a member of the healthcare team.                                                                                                                                     |
| 12.02 | <del>Model</del> <u>Demonstrate</u> professional standards of healthcare workers as they apply to hygiene, dress, language, <del>confidentiality</del> and behavior ( <del>i.e.,</del> <u>g., telephone and email etiquette, social media,</u> courtesy and self-introductions). |
| 12.03 | Identify <del>documents</del> <u>necessary documentation</u> that may be required when applying for a <del>job</del> <u>healthcare position</u> .                                                                                                                                |
| 12.04 | <del>Perform</del> <u>Model</u> the process to obtain employment: <u>, including, but not limited to,</u> job search, cover letter, resume, application, <u>interview,</u> and thank you letter.                                                                                 |

**Occupational Completion Point: B**  
**Medical Coder/Biller I – 350 Hours**

|       |                                                                                                                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.0  | Describe the anatomy and physiology of the human body. The student will be able to:                                                                                                                                |
| 13.01 | Describe the structure and function of the respiratory system.                                                                                                                                                     |
| 13.02 | Describe the structure and function of the circulatory system.                                                                                                                                                     |
| 13.03 | Describe the structure and function of the musculoskeletal and connective tissue <del>system</del> <u>systems</u> .                                                                                                |
| 13.04 | Describe the structure and function of nervous and sensory systems.                                                                                                                                                |
| 13.05 | Describe the structure and function of the reproductive system.                                                                                                                                                    |
| 13.06 | Describe the structure and function of the urinary system.                                                                                                                                                         |
| 13.07 | Describe the structure and function of the digestive system.                                                                                                                                                       |
| 13.08 | Describe the structure and function of the endocrine system.                                                                                                                                                       |
| 13.09 | Describe the structure and function of the integumentary system.                                                                                                                                                   |
| 13.10 | Describe major psychiatric disorders.                                                                                                                                                                              |
| 14.0  | Demonstrate proficiency in the application of medical terminology. The student will be able to:                                                                                                                    |
| 14.01 | Identify word parts of medical terminology in daily use.                                                                                                                                                           |
| 14.02 | Build, spell and pronounce correctly, appropriate terms from word parts <del>learned</del> and be able to <del>give the meaning of</del> <u>define</u> the word.                                                   |
| 14.03 | Identify word parts and be able to build, spell, and understand new words with those parts.                                                                                                                        |
| 14.04 | Spell and use medical abbreviations.                                                                                                                                                                               |
| 14.05 | Identify terminology specific to healthcare settings including surgical, medical, and therapeutic.                                                                                                                 |
| 14.06 | Apply medical reference sources.                                                                                                                                                                                   |
| 15.0  | Demonstrate an understanding of the fundamentals of disease <del>process</del> <u>processes</u> in <del>relationship</del> <u>relation</u> to the human body, including pharmacology. The student will be able to: |
| 15.01 | Demonstrate an understanding of the predisposing factors and direct causes of disease as they relate to the human body.                                                                                            |
| 15.02 | Demonstrate an understanding of the general pathogenesis and morphology of disease and its role in the disease process.                                                                                            |

15.03 Demonstrate an understanding of pharmacological agents, uses, treatments, and ~~utilizing~~utilize drug reference sources.

15.04 Identify and use diagnostic test terminology.

**Course Number: HIM0092**  
**Occupational Completion Point: B**  
**Medical Coder/Biller II – 350 Hours**

16.0 Demonstrate proficiency in ~~use of ICD~~current medical code set systems and ~~HCPGS/GPT~~technology-assisted coding ~~systems, both manual and automated.~~solutions. The student will be able to:

16.01 Apply ~~coding~~conventions and guidelines ~~used in coding~~when utilizing Computer-Assisted Coding (CAC) and Natural Language Processing (NLP) technologies.

16.02 ~~Describe the process to update~~Implement processes for maintaining and updating coding resources, ~~including automated updates and coding software maintenance.~~

16.03 ~~Assign~~Validate codes using both manual and ~~or verify~~ automated systems, including diagnosis, procedure, HCPCS level II codes, APCs, and applicable modifiers and groupings ~~in accordance with~~according to current official guidelines.

16.04 ~~Utilize~~Perform coding using current versions of ICD-10-CM, ICD-PCS, CPT ~~(all sections),~~ and ~~HCPSC~~HCPCS Level II ~~code sets to assign diagnosis in both traditional and procedure codes to intermediate and advanced case studies and authentic health records/abstracts~~virtual healthcare settings, including telehealth services.

16.05 ~~Describe components~~Analyze the impact of ~~Social Determinants of Health (SDoH) coding on~~ revenue cycle management and ~~clinical documentation improvement including quality indicators as it relates to coding in~~ Clinical Documentation Integrity (CDI) programs using modern technology solutions.

16.06 ~~Identify any discrepancies, incomplete information, and/or poor documentation practices in relation to coding while following appropriate departmental policies for correcting errors or improving documentation practices.~~Evaluate documentation compliance using automated auditing tools and Artificial Intelligence (AI)-assisted documentation improvement systems.

17.0 ~~Perform~~Demonstrate proficiency in complex coding ~~complexities proficiently~~scenarios and value-based care requirements. The student will be able to:

17.01 Apply ~~advanced~~coding concepts to complex ~~authentic~~cases, including post-acute care and virtual health ~~records/abstracts and/or case studies across the continuum of care~~encounters.

17.02 ~~Analyze case mix, severity of illness systems, and coding quality monitors and reporting.~~Utilize advanced analytics tools to assess case-mix index, hierarchical condition categories (HCCs), risk adjustment, and quality metrics for value-based reimbursement.

17.03 ~~Utilize a variety of simulated patient records from~~Analyze cases across the ~~contemporary healthcare~~continuum of care, interpret data, ~~including remote patient monitoring~~ and ~~assign and/or verify codes~~digital health services.

17.04 ~~Analyze the~~Apply various classification systems, ~~including ICD-O, DSM, ICF, and emerging code sets for precision medicine and genomics.~~

18.0 ~~Explain the significance of~~Articulate health information services ~~as it relates~~within modern healthcare delivery systems related to the medical /coder/biller. The student will be able to:

|                                                                                                                         |                                                                                                                                                                                                                                                                                                        |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

Students should be encouraged to become members and participate in the activities of the professional organizations: American Health Information Management Association and/or American Academy of Procedural Coders.

About AHIMA Credentials: Completers of the Medical Biller Coder program may take the Certified Coding Associate (CCA) credential exam as the first step in their coding career. The CCA is an entry-level credential that distinguishes new coders in the job market. Individuals with a CCA credential:

- Exhibit a level of commitment, competency, and professional capability usually absent in a newcomer to the field.
- Demonstrate a commitment to the coding profession.
- Distinguish themselves from non-credentialed coders and those holding credentials from other organizations less demanding of the higher level of expertise required to earn AHIMA certification.

The CCA should be viewed as the starting point for an individual entering a career as a coder. The AHIMA CCS and CCS-P exams demonstrate mastery level skills in coding. Most individuals challenge the CCS or CCS-P exams after two or more years of work experience in coding. American Health Information Management Association (AHIMA), 919 North Michigan Ave., Suite 2150, Chicago, IL. 60611-5519, (312) 233-1100

The American Academy of Professional Coders (AAPC) sponsors a certification exam for coders with expertise in physician-based settings which leads to the title of Certified Professional Coder (CPC) or Certified Professional Coder Hospital (CPC-H). American Academy of Professional Coders (AAPC), 309 West 700 South, Salt Lake City, UT 84101, 800-626-2633

**Or**

The National Healthcare Association also offers a national certification examination for a Certified Billing and Coding Specialist (CBCS). National Healthcare Association [www.nhanow.com](http://www.nhanow.com), 7500 West 160<sup>th</sup> Street, Stilwell, Kansas 66085, 800-499-9092

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02, Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Program Title:** Nursing Assistant (Long-Term Care)  
**Program Type:** Career Preparatory  
**Career Cluster:** Health Science

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster. [This program is designed to prepare students for employment as nursing assistants in long-term care facilities.](#)

~~This program is designed to prepare students for employment as nursing assistants, nursing aides, and orderlies, nurse aides in nursing homes or Nursing Assistants.~~

The content includes, but is not limited to, interpersonal skills, medical terminology, legal and ethical responsibilities, safe and efficient work, gerontology, nutrition, pet-facilitated therapy, health and safety, including Cardio-pulmonary Resuscitation (CPR) – heart saver level, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 1 occupational completion point.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title                                                                         | Teacher Certification                                                        | Length    |
|-----|---------------|--------------------------------------------------------------------------------------|------------------------------------------------------------------------------|-----------|
| A   | PRN0090       | <del>Nurse Aide and Orderly</del> <a href="#">Nursing Assistant (Long Term Care)</a> | REG NURSE 7 G<br>LPN 7 G*<br>PRAC NURSE @7 %7%G (Must be a Registered Nurse) | 120 hours |

**\* The LPN 7 G district issued certification is a practical nurse. A practical nurse can only be utilized as an instructor of the CNA training program when they are supervised by the program coordinator, which must be a registered nurse. Please refer to 64B9-15.005, F.A.C. for requirements.**

### **Regulated Programs**

Successful completion of this program from an approved school prepares the student for certification for employment as a Nursing Assistant in a nursing home, in accordance with Chapter 464.203, F.S. To be approved, this program must be supervised by a registered nurse and have follow the faculty qualifications set forth in 64B9-15.005(3)(a), F.A.C.

New programs must be approved by the Board of Nursing, Department of Health prior to enrolling students.

Those students who satisfactorily complete an approved course are eligible to apply to take the national nursing assistant examination being utilized in Florida, in accordance with Chapter 464.203, F.S. This program includes both Acute and Long Term Care.

**In accordance with 64B9-15.005(4)(c), F.A.C., students will perform nursing skills in the clinical and simulated laboratory settings under the supervision of a qualified instructor. The clinical instruction ratio for program instructor to student is 1 to 15 for students caring directly for residents or clients.**

In accordance with 64B9-15.006(2), F.A.C., ~~The~~the standardized curriculum shall require a minimum of 80 hours of classroom and 40 hours of clinical instruction. The clinical instruction shall include at least 20 hours of long-term care clinical instruction in a licensed nursing home

In accordance with 64B9-15.006(3), F.A.C., ~~Prior to~~Before any direct contact with a resident, a training program shall require that a student receive a minimum of 16 hours of classroom instruction in communication and interpersonal skills; infection control; safety/emergency procedures, including the Heimlich maneuver; promoting residents' independence; and respecting residents' rights.

According to Section 400.211, F.S., persons who are enrolled in, or have completed, a state-approved nursing assistant training program may be employed by a licensed nursing facility for ~~a period of~~ four months. However, the certification requirements must be met within four months of such initial employment.

## CommonFlorida's Career Technical Core — Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------|
| <a href="#"><u>02.01 Use critical thinking.</u></a>                                                                   |
| <a href="#"><u>02.02 Use creativity.</u></a>                                                                          |
| <a href="#"><u>02.03 Make sound decisions.</u></a>                                                                    |
| <a href="#"><u>02.04 Solve problems.</u></a>                                                                          |
| <a href="#"><u>02.05 Reason.</u></a>                                                                                  |

Career Certificate Program Number:        H170602

**Course Number: PRN0090**

**Occupational Completion Point: A**

**Nursing ~~Aides, Orderlies and Attendants~~ Assistant –120 hours**

|       |                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Demonstrate mathematics and science knowledge and skills. -The students will be able to:                                          |
| 01.01 | Draw, read, and report on graphs, charts, and tables.                                                                             |
| 01.02 | Measure time, temperature, distance, capacity, and mass/weight.                                                                   |
| 01.03 | Make, use, and convert using both traditional and metric units.                                                                   |
| 01.04 | Make estimations and approximations and judge the reasonableness of the result.                                                   |
| 01.05 | Convert from regular to 24-hour time.                                                                                             |
| 01.06 | Demonstrate ability to evaluate and draw conclusions.                                                                             |
| 01.07 | Organize and communicate the results obtained by observation and experimentation.                                                 |
| 01.08 | Ask appropriate scientific questions and recognize what is involved in experimental approaches to the solution of such questions. |
| 01.09 | Calculate ratios.                                                                                                                 |
| 02.0  | Demonstrate the ability to communicate and use interpersonal skills effectively. -The student will be able to:                    |
| 02.01 | Distinguish between factual reports and personal opinion.                                                                         |
| 02.02 | Identify barriers to communication.                                                                                               |
| 02.03 | Use basic medical terminology and approved abbreviations.                                                                         |
| 02.04 | Demonstrate effective interpersonal relationships.                                                                                |
| 02.05 | Receive and give oral reports of a patient's status.                                                                              |
| 02.06 | Report and record objective, pertinent observations, in written or oral form, observing legal guidelines.                         |
| 02.07 | Maintain current documentation.                                                                                                   |

|                                        |                                                                                                                                                                                                                                |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 02.08                                  | Obtain specified data from <a href="#">the</a> patient and family.                                                                                                                                                             |
| 02.09                                  | Utilize verbal and written information to assist with the patient's plan of care.                                                                                                                                              |
| 02.10                                  | Demonstrate use of the communication system.                                                                                                                                                                                   |
| 02.11                                  | Adapt communication skills to varied levels of understanding and cultural orientation, <a href="#">including, but not limited to, diverse age, cultural, economic, ethnic, and religious groups.</a>                           |
| 02.12                                  | Read and discuss technical material.                                                                                                                                                                                           |
| 03.0                                   | Demonstrate legal and ethical responsibilities specific to <a href="#">the</a> nurse <del>assisting-</del> <a href="#">assistant.</a> The student will be able to:                                                             |
| 03.01                                  | Discuss and demonstrate legal and ethical behavior within the nursing <del>assistant</del> <a href="#">assistant's</a> scope of practice, including role limitations in Florida.                                               |
| 03.02                                  | Describe the purpose of the chain of communication to resolve conflict.                                                                                                                                                        |
| 03.03                                  | Follow policies and procedures affecting the health, safety, and well-being of patients.                                                                                                                                       |
| 03.04                                  | Demonstrate safe standards of patient care, including prevention and quality of care.                                                                                                                                          |
| 03.05                                  | Exhibit behavior supporting and promoting patients' and/or residents' rights.                                                                                                                                                  |
| 03.06                                  | Recognize <a href="#">the</a> potential for and prevention of medical errors <a href="#">and practice the proper procedures to follow regarding medical errors.</a>                                                            |

|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 07.01 | Obtain and maintain training or certification in cardiopulmonary resuscitation (CPR), automated external defibrillator (AED), foreign body airway obstruction (FBAO), and first aid for infant, child, and adult.                                   |
| 07.02 | <del>Identify emergency</del> Recognize fire, safety, disaster, and evacuation procedures.                                                                                                                                                          |
| 08.0  | Describe the anatomy and physiology of the human body. -The student will be able to:                                                                                                                                                                |
| 08.01 | Describe the basic structure and function of body systems.                                                                                                                                                                                          |
| 08.02 | Describe the relationships of body systems in providing patient care.                                                                                                                                                                               |
| 08.03 | Recognize abnormal signs and symptoms of common diseases and <del>condition</del> conditions.                                                                                                                                                       |
| 09.0  | Perform physical comfort and safety functions specific to <u>the</u> nurse <del>assisting-</del> assistant. The student will be able to:                                                                                                            |
| 09.01 | Implement appropriate regulatory and accrediting agency patient safety guidelines.                                                                                                                                                                  |
| 09.02 | Maintain safe patient units, equipment, and a comfortable environment.                                                                                                                                                                              |
| 09.03 | Maintain service areas on the units, including supplies and equipment.                                                                                                                                                                              |
| 09.04 | Observe, report, and record changes in the patient's behavior as needed, including mental awareness.                                                                                                                                                |
| 09.05 | Demonstrate adjustment of bed and side- rails according to facility policy.                                                                                                                                                                         |
| 09.06 | Demonstrate and assist <u>the</u> patient <del>to dangle</del> in dangling.                                                                                                                                                                         |
| 09.07 | Demonstrate lifting, supporting, and transferring patients from bed to chair, bed to bed, and bed to stretcher, including the use of the various assistive devices and equipment while utilizing proper body mechanics and patient safety measures. |
| 09.08 | Demonstrate the proper use of a gait/transfer belt in both transfer and ambulation.                                                                                                                                                                 |
| 09.09 | Assist patient in ambulation, including the use of <u>a</u> crutch, cane, or walker.                                                                                                                                                                |
| 09.10 | Demonstrate the proper wheelchair safety techniques and assist <u>the</u> patient as needed with use.                                                                                                                                               |
| 09.11 | Apply supportive devices as directed (e.g., footboard, over-bed cradle, alternating pressure mattress).                                                                                                                                             |
| 09.12 | Assist patient with care and use of prosthetic/orthotic devices.                                                                                                                                                                                    |
| 09.13 | Describe emergency procedures utilized in the clinical area(s) and the role of the <del>nursing</del> nurse assistant in these procedures.                                                                                                          |
| 10.0  | Provide personal patient care. -The student will be able to:                                                                                                                                                                                        |
| 10.01 | Perform bed bath; observe and report changes in a patient, including skin and level of consciousness.                                                                                                                                               |

|       |                                                                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10.02 | Assist with shower or tub bath, including the use of specialty tubs or prepackaged disposable-bagged <del>bath</del> <u>baths</u> .                             |
| 10.03 | Administer back rub with bath and as needed.                                                                                                                    |
| 10.04 | Assist patient with hair care utilizing sink, tub, shower, bed, or shower cap.                                                                                  |
| 10.05 | Demonstrate the use of a safety and/or electric razor to shave the patient.                                                                                     |
| 10.06 | Demonstrate how to groom <u>a</u> patient, including hair, skin, foot, hand, and nail care.                                                                     |
| 10.07 | Assist with and/or administer oral hygiene, including denture care.                                                                                             |
| 10.08 | Assist <u>the</u> patient to dress.                                                                                                                             |
| 10.09 | Assist patient with toileting using various types of restorative and rehabilitative equipment.                                                                  |
| 10.10 | Assist patient with use of bedpan (standard and fracture). <u></u>                                                                                              |
| 10.11 | Assist with bowel and bladder training.                                                                                                                         |
| 10.12 | Assist and/ or provide perineal care.                                                                                                                           |
| 10.13 | Empty, measure, and record urinary output and/or drainage.                                                                                                      |
| 10.14 | Demonstrate application and use of a leg bag, leg strap, and dignity bag.                                                                                       |
| 10.15 | Monitor and assist with the drainage of urostomy bags and colostomy bags.                                                                                       |
| 10.16 | Assist <u>the</u> patient with both donning and doffing <u>the</u> prosthesis and brace.                                                                        |
| 10.17 | Assist patient with meals.                                                                                                                                      |
| 10.18 | Describe the relationships of body systems when providing patient care.                                                                                         |
| 10.19 | Recognize abnormal signs and symptoms of common diseases and conditions when providing patient care.                                                            |
| 11.0  | Perform patient care procedures. -The student will be able to:                                                                                                  |
| 11.01 | Demonstrate ability to accurately measure, record, and report vital signs.                                                                                      |
| 11.02 | <del>Assist with the admission of a patient and/or resident.</del> <u>Demonstrate ability to recognize and report vital signs outside of normal parameters.</u> |
| 11.03 | Assist with the admission, transfer, and discharge of a patient and/or resident.                                                                                |
| 11.04 | Maintain patient- <u></u> belongings list.                                                                                                                      |

|       |                                                                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11.05 | Make <a href="#">an</a> unoccupied <del>and</del> occupied bed.                                                                                                 |
| 11.06 | Provide passive range-of-motion exercises.                                                                                                                      |
| 11.07 | Apply anti-embolic hose and sequential compression devices.                                                                                                     |
| 11.08 | Understand and demonstrate proper collection of routine, timed urine, and clean catch urine specimens.                                                          |
| 11.09 | Record fluid intake and output (I&O).                                                                                                                           |
| 11.10 | Observe, record, and report <a href="#">the</a> patient's emesis.                                                                                               |
| 11.11 | Monitor and provide urinary catheter care and drainage systems.                                                                                                 |
| 11.12 | Assist with ostomy care, including emptying or changing ostomy bags that do not adhere to the skin.                                                             |
| 11.13 | Collect stool specimen.                                                                                                                                         |
| 11.14 | Assist with the collection of a sputum specimen.                                                                                                                |
| 11.15 | Assist the nurse with <a href="#">the</a> care of the patient with complex medical needs.                                                                       |
| 11.16 | Assist <a href="#">the</a> patient to apply binders.                                                                                                            |
| 11.17 | Care for <a href="#">the</a> patient in skin and skeletal traction.                                                                                             |
| 11.18 | Assist with pre-operative and post-operative patient care.                                                                                                      |
| 11.19 | -Reinforce dressings under the supervision of the RN/LPN.                                                                                                       |
| 11.20 | Obtain and record an apical pulse.                                                                                                                              |
| 11.21 | Provide cast care and/or pin care.                                                                                                                              |
| 11.22 | Provide care for <a href="#">visual devices, including but not limited to</a> eyeglasses, artificial eyes, and contact <del>lens</del> <a href="#">lenses</a> . |
| 11.23 | <a href="#">Provide care for hearing devices.</a>                                                                                                               |
| 12.0  | Apply principles of nutrition. -The student will be able to:                                                                                                    |
| 12.01 | Identify nutrients and food groups.                                                                                                                             |
| 12.02 | Develop a basic food plan.                                                                                                                                      |
| 12.03 | Describe special diets.                                                                                                                                         |

|       |                                                                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.04 | Check <u>the</u> patient's diet tray for accuracy.                                                                                                                                                                                               |
| 12.05 | Monitor and document <del>Nutritional</del> <u>nutritional</u> Intake.                                                                                                                                                                           |
| 12.06 | Identify and implement regional, cultural, and religious food guidelines/preferences.                                                                                                                                                            |
| 12.07 | Demonstrate knowledge of the need for thickened liquids and fluid consistency.                                                                                                                                                                   |
| 12.08 | Identify methods of maintaining fluid balance, including encouraging and restricting fluids.                                                                                                                                                     |
| 13.0  | Provide care for geriatric patients. -The student will be able to:                                                                                                                                                                               |
| 13.01 | Identify and assist with methods and procedures to prevent pressure ulcers.                                                                                                                                                                      |
| 13.02 | Identify and assist with methods to prevent falls in the elderly.                                                                                                                                                                                |
| 13.03 | Identify and assist with safety principles as related to the elderly.                                                                                                                                                                            |
| 13.04 | Describe general characteristics, particular needs, and age-related changes of the elderly.                                                                                                                                                      |
| 13.05 | Identify attitudes and living habits that promote positive mental and physical health for the elderly.                                                                                                                                           |
| 13.06 | Distinguish between fact and fallacy about the aging process.                                                                                                                                                                                    |
| 13.07 | Apply reality orientation techniques and validation therapy unless it is contraindicated by the <del>patient</del> <u>patient's</u> diagnosis.                                                                                                   |
| 13.08 | Recognize and respond appropriately to symptoms of common diseases, including dementia, depression/suicide, and Alzheimer's.                                                                                                                     |
| 13.09 | Provide and involve patients in diversional activities.                                                                                                                                                                                          |
| 13.10 | Identify common alterations in elderly patient behavior.                                                                                                                                                                                         |
| 13.11 | Provide care for patients with special needs <del>(e.g., impaired hearing, impaired vision, immobility, impaired body functions, cognitively impaired (dementia))</del> , <u>including but not limited to physical and cognitive impairments</u> |
| 13.12 | Demonstrate awareness of common behaviors in drug use and abuse in the elderly.                                                                                                                                                                  |
| 13.13 | Report concerns to the nurse and appropriate authorities related to drug use and abuse in the elderly patient.                                                                                                                                   |
| 13.14 | Identify the need for community resources and services available to the elderly and their caregiver.                                                                                                                                             |
| 13.15 | Identify components of the grief process.                                                                                                                                                                                                        |
| 13.16 | Demonstrate an understanding of end-of-life care, hospice, and palliative care.                                                                                                                                                                  |
| 14.0  | Apply the principles of infection control specific to <del>nursing assisting</del> <u>the nurse assistant</u> . The student will be able to:                                                                                                     |

|                        |                                                                                                                                                                                                                                  |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14.01                  | Discuss transmission-based precautions.                                                                                                                                                                                          |
| <del>14.02</del>       | <del>Explain and demonstrate proper hand hygiene.</del>                                                                                                                                                                          |
| <del>14.02</del> 14.03 | Identify the chain of infection.                                                                                                                                                                                                 |
| <del>14.03</del> 14.04 | Provide care for patients with infectious diseases applying the principles of " <del>Standard Precautions</del> " utilized with all patients as well as special procedures required standard and transmission-based precautions. |
| <del>14.04</del> 14.05 | Apply the proper use of personal protective equipment (PPE) for all types of isolation, including donning and removing PPE appropriately.                                                                                        |
| <del>14.05</del> 14.06 | Follow isolation procedure with food tray, PPE, and other supplies/equipment.                                                                                                                                                    |
| <del>14.06</del> 14.07 | Collect a specimen from a patient in isolation.                                                                                                                                                                                  |
| 15.0                   | Provide biological, psychological, and social support. -The student will be able to:                                                                                                                                             |
| 15.01                  | Discuss family roles and their significance to health.                                                                                                                                                                           |
| 15.02                  | Respond to patient and family emotional needs.                                                                                                                                                                                   |
| 16.0                   | Perform supervised-organizational functions, skills following the patient care plan. -The student will be able to:                                                                                                               |
| 16.01                  | Organize and prioritize patient-care assignments.                                                                                                                                                                                |
| 16.02                  | Complete assignments accurately and in a timely manner promptly.                                                                                                                                                                 |
| 17.0                   | Assist with restorative (rehabilitative) activities. -The student will be able to:                                                                                                                                               |
| 17.01                  | List the purposes of the restorative (rehabilitation) program.                                                                                                                                                                   |
| 17.02                  | Assist patient with specified restorative (rehabilitation) needs.                                                                                                                                                                |
| 17.03                  | Assist patients/residents to reach the optimum level of independence.                                                                                                                                                            |
| 18.0                   | Demonstrate knowledge of blood-borne diseases, including HIV/AIDS. -The student will be able to:                                                                                                                                 |
| 18.01                  | Distinguish between fact and fallacy about the transmission and treatment of diseases caused by blood-borne pathogens.                                                                                                           |
| 18.02                  | Identify community resources and services available to individuals with diseases caused by blood-borne pathogens.                                                                                                                |
| 18.03                  | Identify "at-risk" behaviors that promote the spread of aids HIV/AIDS and the public education needed to combat the spread of diseases caused by blood-borne pathogens.                                                          |
| 18.04                  | Apply infection control techniques designed to prevent the spread of diseases caused by blood-borne pathogens to the care of all patients following center the Centers for disease control Disease Control (CDC) guidelines.     |

18.05 Demonstrate knowledge of the legal aspects of ~~aids~~HIV/AIDS, including testing.

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error, and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry: planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues, and health, safety, and environmental issues.

The length of this program is 120 hours. Completion of this program should enable the postsecondary student to be given advanced standing in the Patient Care Technician program, but will require additional evaluation and competencies to enter at the level of OCP A.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S., for more information on disqualification for a license, certificate, or registration through the Department of Health.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOSs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as a home attendant, or home health aide or to provide supplemental training for persons previously or currently employed in these occupations.

The content includes, but is not limited to, instruction in those supportive services that are required to provide and maintain bodily and emotional comfort and to assist the patient toward independent living in a safe environment, as stated in Rules of the Department of Health - Minimum Standards for Home Health Agencies. Additional content areas to be included are: legal and ethical responsibilities; communication skills; basic

human needs; a safe, clean, and healthy home environment; the developmental process; nutritional needs; emergency care; personal care; special care and rehabilitation needs of the client; household management; record-keeping; pet facilitated therapy; and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### **Program Structure**

This program is a planned sequence of instruction consisting of 2 occupational completion points.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title            | Teacher Certification                                                  | Length   |
|-----|---------------|-------------------------|------------------------------------------------------------------------|----------|
| A   | HSC0003       | Basic Healthcare Worker | REG NURSE 7 G<br>PRAC NURSE @7<br>%7%G (Must be a<br>Registered Nurse) | 90 hours |
| B   | HCP0330       | Home Health Aide        |                                                                        | 75 hours |

### **Regulated Programs**

Basic infection control, first aid, cardio- pulmonary resuscitation (CPR) heart saver level, vital signs, home-care skills, and client care skills are integral parts of this program. Clinical experiences, where the student may practice, demonstrate and perform the procedures associated with bedside client care, are an appropriate part of this program.

Please refer to ~~42CFR§484~~42CFR§484 for the clinical requirements for the Home Health Aide program.

Section 59A-8.0095Home0095 Home Health Aide, Administrative Rules, Department of Health and Rehabilitative Services ~~contain~~contains much valuable information for program planning. These rules require that if the Home Health Aide receives training through a vocational school where professional standards have been established in accordance with the State Board of Education, a certificate of successful completion shall be on file with the employer.

## CommonFlorida's Career Technical Core — Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                |

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- 02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.
- 03.0 Demonstrate legal and ethical responsibilities.
- 04.0 Demonstrate an understanding of and apply wellness and disease concepts.
- 05.0 Recognize and practice safety and security procedures.
- 06.0 Recognize and respond to emergency situations.
- 07.0 Recognize and practice infection control procedures.
- 08.0 Demonstrate an understanding of information technology applications in healthcare.
- 09.0 Demonstrate employability skills.
- 10.0 Demonstrate knowledge of blood-borne diseases, including HIV/AIDS.
- 11.0 Apply basic math and science skills.
- 12.0 Use verbal and written communications specific to [the](#) Home Health Aide.
- 13.0 Demonstrate legal and ethical responsibilities specific to [the](#) Home Health Aide.
- 14.0 Perform physical comfort and safety functions specific to [the](#) Home Health Aide.
- 15.0 Provide personal patient care.
- 16.0 Perform patient care procedures.
- 17.0 Apply principles of nutrition.
- 18.0 Provide care for geriatric patients.
- 19.0 Apply the principles of infection control specific to [the](#) Home Health Aide.
- 20.0 Provide bio-psycho-social support.
- 21.0 Prioritize and perform functions following the patient care plan.
- 22.0 Assist with rehabilitative activities.
- 23.0 Perform home health-care services.

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Home Health Aide  
**Career Certificate Program Number:** H170404

The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Career Certificate Program health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.

**Course Number: HSC0003**  
**Occupational Completion Point: A**  
**Basic Healthcare Worker – 90 Hours**

To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:

**Course Number: HCP0330**  
**Occupational Completion Point: B**  
**Home Health Aide – 75 Hours**

|       |                                                                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.0  | Use verbal and written communications specific to <a href="#">the</a> Home Health Aide. -The student will be able to:                                    |
| 12.01 | Obtain specified data from <a href="#">the</a> patient and family.                                                                                       |
| 12.02 | Utilize verbal and written information to assist with the patient's care plan.                                                                           |
| 13.0  | Demonstrate legal and ethical responsibilities specific to <a href="#">the</a> Home Health Aide. -The student will be able to:                           |
| 13.01 | Demonstrate legal and ethical behavior within the role and scope of home health aide responsibilities.                                                   |
| 13.02 | Follow policies and procedures concerning care as directed by the employer affecting the health, safety, and well-being of patients in the home setting. |
| 13.03 | Recognize and report signs of abuse, physical, verbal, and substance.                                                                                    |
| 13.04 | Follow legal guidelines in documentation.                                                                                                                |
| 13.05 | Exhibit behavior supporting and promoting residents' rights.                                                                                             |

|       |                                                                                                                                                                                                                                                           |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13.06 | <del>Recognizes</del> Recognize and <del>follows</del> follow the scope of <del>proactive</del> practice and role limitations for a home health aide.                                                                                                     |
| 14.0  | Perform physical comfort and safety functions specific to the Home Health Aide. -The student will be able to:                                                                                                                                             |
| 14.01 | Maintain a clean and safe home environment for the patient.                                                                                                                                                                                               |
| 14.02 | Adjust bed and/or side-rails.                                                                                                                                                                                                                             |
| 14.03 | Transfer patient with mechanical lift using proper body mechanics and patient safety measures.                                                                                                                                                            |
| 14.04 | Demonstrate proper turning and positioning according to the care plan.                                                                                                                                                                                    |
| 14.05 | Implement fall prevention measures as directed, i.e., clutter-free pathways, locked wheelchair, etc.                                                                                                                                                      |
| 14.06 | Apply supportive comfort devices as directed (e.g., footboard, over-bed cradle, alternating pressure mattress).                                                                                                                                           |
| 14.07 | Demonstrate and assist the patient to dangle in dangling.                                                                                                                                                                                                 |
| 14.08 | Assist patient in ambulation, including the use of a crutch, cane, or walker.                                                                                                                                                                             |
| 14.09 | Demonstrate the proper wheelchair safety technique and assist the patient as needed with use.                                                                                                                                                             |
| 14.10 | Assist patient with care and use of prosthetic/orthotic devices.                                                                                                                                                                                          |
| 14.11 | Describe emergency evacuation procedures with adaptations to the home setting.                                                                                                                                                                            |
| 14.12 | Implement appropriate regulatory and accrediting agency patient safety guidelines.                                                                                                                                                                        |
| 15.0  | Provide personal patient care. -The student will be able to:                                                                                                                                                                                              |
| 15.01 | Perform bed bath; observe and report changes in a patient.                                                                                                                                                                                                |
| 15.02 | Perform a back rub.                                                                                                                                                                                                                                       |
| 15.03 | Demonstrate procedures for safety in the bathroom, including the use of adaptive shower equipment such as shower chairs, long-handled bath sponge, grab bars, extended shower hose, rubber mat in tub or shower, and rubber-based rug outside the shower. |
| 15.04 | Assist with shower or tub bath, including use of specialty tubs.                                                                                                                                                                                          |
| 15.05 | Assist patient with sink, tub, shower, shower cap, or bed shampoo.                                                                                                                                                                                        |
| 15.06 | Demonstrate the use of a safety and/or electric razor to shave the patient.                                                                                                                                                                               |
| 15.07 | Demonstrate how to groom a patient, including hair, skin, foot, and nail care.                                                                                                                                                                            |
| 15.08 | Assist with and/or administer oral hygiene, including denture care.                                                                                                                                                                                       |

|       |                                                                                                                        |
|-------|------------------------------------------------------------------------------------------------------------------------|
| 15.09 | Assist patient with toileting, using various types of restorative and rehabilitative equipment.                        |
| 15.10 | Assist <u>the</u> patient to dress.                                                                                    |
| 15.11 | Assist patient with meals.                                                                                             |
| 16.0  | Perform patient care procedures. -The student will be able to:                                                         |
| 16.01 | Make <u>an</u> unoccupied <del>/and</del> occupied bed.                                                                |
| 16.02 | Provide passive range-of-motion exercises.                                                                             |
| 16.03 | Apply anti-embolic hose and sequential compression devices.                                                            |
| 16.04 | Understand and demonstrate proper collection of urine, strained, timed urine, and/or routine urine specimen.           |
| 16.05 | Observe skin while bathing for allergic reaction to <u>a</u> catheter or any leaking.                                  |
| 16.06 | Monitor fluid intake and output (I&O), including encouraging and restricting fluids.                                   |
| 16.07 | Observe, record, and report <u>the</u> patient's emesis.                                                               |
| 16.08 | Assist with ostomy care and alert <u>the</u> nurse of any unusual observations while performing skin care.             |
| 16.09 | Collect stool specimen and alert nurse of unusual odors, colors, or <del>character</del> <u>characteristics</u> .      |
| 16.10 | Care for patients receiving oxygen therapy, making sure <u>the</u> patient receives <u>the</u> correct flow of oxygen. |
| 17.0  | Apply principles of nutrition. -The student will be able to:                                                           |
| 17.01 | Identify nutrients and food groups.                                                                                    |
| 17.02 | Identify and implement regional, cultural, and religious food guidelines/preferences.                                  |
| 17.03 | Describe special diets.                                                                                                |
| 17.04 | List factors that must be considered when purchasing food.                                                             |
| 17.05 | Follow the prescribed basic food plan.                                                                                 |
| 17.06 | List factors that must be considered when storing food.                                                                |
| 17.07 | Identify methods of maintaining fluid balance, including encouraging and restricting fluids.                           |
| 17.08 | Identify methods of food preparation.                                                                                  |

|       |                                                                                                                                                                            |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 17.09 | Discuss <a href="#">the</a> preparation and serving of trays in the home.                                                                                                  |
| 18.0  | Provide care for geriatric patients. -The student will be able to:                                                                                                         |
| 18.01 | Identify safety principles as related to the elderly.                                                                                                                      |
| 18.02 | Describe general characteristics, particular needs, and problems of the elderly.                                                                                           |
| 18.03 | Identify attitudes and living habits that promote positive mental and physical health for the elderly.                                                                     |
| 18.04 | Distinguish between fact and fallacy about the aging process.                                                                                                              |
| 18.05 | Identify community resources and services available to the elderly and their caregiver.                                                                                    |
| 18.06 | Apply reality orientation techniques and validation therapy.                                                                                                               |
| 18.07 | Provide and involve patients in diversional activities.                                                                                                                    |
| 18.08 | Identify common alterations in elderly patient behavior or health status and follow up within the home health <del>aide</del> <a href="#">aide's</a> scope of performance. |
| 18.09 | Provide care for patients with special needs (e.g., impaired hearing, impaired vision, immobility, impaired body functions).                                               |
| 19.0  | Apply the principles of infection control specific to <a href="#">the</a> Home Health Aide. -The student will be able to:                                                  |
| 19.01 | Provide care for patients with infectious diseases in the home.                                                                                                            |
| 19.02 | Follow isolation procedures with food tray, personal protective equipment (PPE), supplies/equipment, and other materials in the home.                                      |
| 19.03 | Utilize standard precautions in all home care.                                                                                                                             |
| 19.04 | Discuss transmission-based precautions.                                                                                                                                    |
| 20.0  | Provide bio-psycho-social support. -The student will be able to:                                                                                                           |
| 20.01 | Discuss family roles and their significance to health.                                                                                                                     |
| 20.02 | Respond to patient and family emotional needs.                                                                                                                             |
| 21.0  | Prioritize and perform functions following the patient care plan. -The student will be able to:                                                                            |
| 21.01 | Organize patient-care assignments.                                                                                                                                         |
| 21.02 | Complete assignments accurately and in a timely manner per <a href="#">the</a> care plan.                                                                                  |

|       |                                                                                                                                                                                                         |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22.0  | Assist with rehabilitative activities. -The student will be able to:                                                                                                                                    |
| 22.01 | List the purposes of restorative (rehabilitation) programs.                                                                                                                                             |
| 22.02 | Assist patient with specified restorative (rehabilitation) needs.                                                                                                                                       |
| 22.03 | Assist patients/residents to reach the optimum level of independence.                                                                                                                                   |
| 23.0  | Perform home health-care services. -The student will be able to:                                                                                                                                        |
| 23.01 | Establish and follow a collaborative care plan with <u>the</u> patient and family.                                                                                                                      |
| 23.02 | Perform patient-related cleaning tasks and laundry per care plan.                                                                                                                                       |
| 23.03 | Identify methods for medication storage.                                                                                                                                                                |
| 23.04 | Assist patient with taking self-administered prescribed medication in the home, and identify possible side effects and emergency procedures for adverse reactions in accordance with 59A-8.0095, F.A.C. |
| 23.05 | Demonstrate how to utilize equipment and supplies in the home.                                                                                                                                          |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

Reinforcement of basic skills in English, mathematics, and science appropriate for the job preparatory programs occurs through vocational classroom instruction and applied laboratory procedures or practice.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence, and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal; therefore, the instructor **may** provide a certificate for renewal purposes to the student, verifying these requirements have been met.

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as

instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: ~~postsecondary~~Postsecondary curriculum and regulated secondary programs cannot be modified.

Florida Department of Education  
Curriculum Framework

The standards and benchmarks for this program were updated for the 2026-27 academic year.

Program Title: Practical Nursing  
Program Type: Career Preparatory  
Career Cluster: Health Science

Career Certificate Program

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning ~~and~~, problem-solving skills, work attitudes, general employability skills, technical skills ~~and~~, occupation-specific skills, and knowledge of all aspects of [the](#) Health Science career cluster.

This program is designed to prepare students for employment as Licensed Practical Nurses. -The program must be approved by the Florida ~~State~~ Board of Nursing in order for graduates to apply to take the examination to practice as a Licensed Practical Nurse.

The content includes, but is not limited to, theoretical instruction and clinical experience [applying the clinical judgment measurement model](#) in medical, surgical, [psychiatric](#), obstetric, pediatric, and geriatric nursing; ~~theoretical instruction and clinical experience in~~, acute, care, long-term care, and community settings; ~~theoretical instruction and clinical application~~, [Application](#) of vocational role and function; personal, family, and community health concepts; nutrition; human growth and development over the ~~life span~~[lifespan](#); body structure and function; interpersonal

relationship skills, ~~mental health concepts~~; pharmacology and medication administration ~~of medications~~; legal and ethical aspects of practice; respect and civility, and ~~current issues in nursing~~ self-care for nurses.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

### Program Structure

This program is a planned sequence of instruction consisting of two (2) occupational completion points.

This program is comprised of courses ~~that which~~ have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section ~~(s.)~~ 1007.24 (1), ~~Florida Statutes (F.S.)~~. Career and Technical credit shall be awarded to the student on a transcript in accordance with ~~s.~~ Section 1001.44(3)(b), F.S.

To teach the ~~courses~~ course(s) listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP          | Course Number | Course Title                                                                                                 | Teacher Certification                                                                           | Length    |
|--------------|---------------|--------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|-----------|
| A            | PRN0098       | Practical Nursing <u>(PN)</u> Foundations 1                                                                  | REG NURSE 7 G<br><del>LPN 7 G *</del><br>PRAC NURSE @7<br>(Must be a Registered Nurse)          | 300 hours |
| <del>B</del> | PRN0099       | Practical Nursing <del>Foundation</del> <u>(PN) Foundations</u> 2                                            | <del>REG NURSE 7 G</del><br><del>PRAC NURSE @7</del><br><del>(Must be a Registered Nurse)</del> | 300 hours |
| <u>B</u>     | PRN0290       | <u>Practical Nursing (PN)</u> Medical Surgical <del>Nursing</del> 1                                          | <u>REG NURSE 7 G</u><br><u>PRAC NURSE @7</u><br><u>(Must be a Registered Nurse)</u>             | 300 hours |

|              | PRN0690       | <del>Comprehensive</del> <u>Practical</u> Nursing and <u>Transitional Skills (PN) Transition to Practice</u> |                                                                                                 | 150 hours |

~~\* The LPN 7 G district issued certification is a practical nurse. This certification can only be utilized in the PRN0098 course when the program is an approved nursing assistant program with the Florida Board of Nursing to teach concepts, skills and experiences solely at the Certified Nursing Assistant level and scope. A practical nurse can only be utilized as an instructor of the CNA training program when they are supervised by the program coordinator who must be a registered nurse. Please refer to 64B9-15.005, F.A.C., for requirements.~~

### Regulated Programs

Please refer to 464.019(1)(b), F.S., for faculty credential requirements to teach this program.

### National Standards (NS)

Students are eligible to apply to take the national licensing examination after satisfactory completion of an approved program. [The National Council Licensure Examination for Practical Nurses](#), ~~CAT~~ NCLEX-PN, is a computer-~~administered~~[adaptive](#) examination that the nursing graduate must take and pass in order to practice as a Licensed Practical Nurse.

[Programs identified as having Industry or National Standards have been cross-walked with the corresponding standards and/or benchmarks. Industry or National Standards for the Practical Nursing program can be found using the following links: <https://www.ncsbn.org/publications/2023-nclex-pn-test-plan> and <https://www.ncsbn.org/exams-research/report-of-findings-from-the-2021-lpvn-nursing-knowledge-survey>](#)

### Regulated Programs

[The Practical Nursing](#) Program must comply with the ~~State~~[Florida](#) Board of Nursing rules, including faculty qualifications. -For questions regarding this process, please contact: [Florida](#) Board of Nursing, 4052 Bald Cypress Way, Tallahassee, FL 32399-3752.

~~An approved licensed practical nurse supervisory education course can only be taken following completion of this program, and after licensure. The Graduate must have 6 months clinical experience before supervising as well as meeting all other criteria listed in 64B9-16.002, F.S.~~

~~A Licensed Practical Nurse working in a nursing home shall qualify to supervise by meeting all of the requirements in 64B9-16.002, F.S. The Supervisory course applicant must have no less than six months clinical nursing experience as an LPN. The supervisory course must be approved by the Board of Nursing and must be a minimum of 30 hours in length.~~

Clinical instruction of nursing students will meet the requirements of 464.019, F.S. Clinical experience must make up at least 50% of the total program. -Simulated practice and clinical experiences are included as an integral part of this program. **Clinical Simulation may be used for no more than 50% of the total clinical experience.**

## CommonFlorida's Career Technical Core — Career Ready Practices Readiness Skills for CTE Programs

Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

1. Act as a responsible and contributing citizen and employee.
2. Apply appropriate academic and technical skills.
3. Attend to personal health and financial well-being.
4. Communicate clearly, effectively and with reason.
5. Consider the environmental, social and economic impacts of decisions.
6. Demonstrate creativity and innovation.
7. Employ valid and reliable research strategies.
8. Utilize critical thinking to make sense of problems and persevere in solving them.
9. Model integrity, ethical leadership and effective management.
10. Plan education and career path aligned to personal goals.
11. Use technology to enhance productivity.
12. Work productively in teams while using cultural/global competence.

### Employability Skills

#### 01.0 Apply academic skills to workplace scenarios.

01.01 Use reading skills.

01.02 Use writing skills.

01.03 Use mathematical strategies and procedures.

01.04 Use scientific principles and procedures.

#### 02.0 Design a solution to an industry problem.

|                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------|
| <a href="#"><u>02.01 Use critical thinking.</u></a>                                                                   |
| <a href="#"><u>02.02 Use creativity.</u></a>                                                                          |
| <a href="#"><u>02.03 Make sound decisions.</u></a>                                                                    |
| <a href="#"><u>02.04 Solve problems.</u></a>                                                                          |

## Standards

After successfully completing this program, the student will ~~be able to perform~~ have demonstrated mastery of the following student learning outcomes:

~~01.0—Demonstrate knowledge of the healthcare delivery system and health occupations.~~

01.0 Integrated Processes – Apply the following fundamental integrated processes to the practice of practical nursing and integrate them throughout the Client Needs categories and subcategories in every course of the program (See Client Needs categories from NCSCN, 2023). This standard is part of EVERY course in the Practical Nursing program.

02.0 Demonstrate the ability to participate in teamwork and collaboration, using appropriate written and verbal therapeutic communication, interpersonal skills, and standard nursing terminology (Coordinated Care, Health Promotion, and Maintenance).

03.0 Demonstrate the ability to participate in teamwork and collaboration, using organizational functions, the plan of care, computer literacy, and electronic health record use (Coordinated Care, Health Promotion and Maintenance).

04.0 Demonstrate legal and ethical aspects of practice and responsibilities specific to the nursing profession (Coordinated Care).

~~02.0—Recognize and practice safety, and security and emergency procedures.~~

~~05.0 Demonstrate knowledge of blood borne diseases,~~ including ~~HIV/AIDS~~ environmental safety, client safety, and healthcare worker safety (Coordinated Care, Safety and Infection Control, Physiological Adaptation).

~~03.0~~ 06.0 Recognize and practice infection control principles and procedures and demonstrate maintenance of aseptic technique (Coordinated Care, Safety and Infection Control, Physiological Adaptation).

~~04.0~~ 07.0 Perform patient/client and personal care as it pertains to the practical nurse. (Safety and Infection Control, Basic Care and Comfort, Reduction of Risk Potential).

~~05.0—Provide patient-centered care for the geriatric population.~~

~~06.0—Assist with restorative (rehabilitative) activities.~~

~~07.0—Demonstrate organizational functions, following the patient plan of care.~~

~~08.0—Demonstrate computer literacy as related to nursing functions.~~

~~09.0—Use appropriate verbal and written communications in the performance of nursing functions.~~

~~10.0—Demonstrate legal and ethical responsibilities specific to the nursing profession.~~

~~11.0—Apply the principles of infection control, utilizing nursing principles.~~

~~12.0—Perform aseptic and sterile techniques.~~

~~08.0 Describe the~~ Select clinical judgment functions in geriatric care (Psychosocial Integrity).

~~13.0~~ 09.0 Explain foundational and evidence-based practice thinking that supports practical nursing care, describing the body structure and function of the healthy human body in relation, including but not limited to health and disease, the following body systems (Coordinated Care, Health Promotion and Maintenance).

~~14.0—Apply principles of nutrition as it relates to Practical Nursing Scope of Practice.~~

~~15.0~~ 10.0 Describe Explain foundational thinking that supports human growth and development across the lifespan. (Coordinated Care, Health Promotion and Maintenance).

~~16.0—Demonstrate the performance of nursing procedures.~~

~~17.0 Demonstrate how to administer medication.~~

- ~~11.0~~ Develop teamwork and collaboration through clinical judgment, the nursing process, clinical reasoning, critical thinking, the use of SBAR (situation, background, assessment, recommendation), and the nursing care plan (Coordinated Care).
- ~~12.0~~ Demonstrate nursing knowledge, skills, attitudes (KSAs), procedures, and the following skills (Coordinated Care, Safety and Infection Control, Health Promotion and Maintenance, Pharmacological Therapies, Reduction of Risk Potential, Physiological Adaptation).
- ~~13.0~~ Demonstrate the use of clinical judgment to provide competent psychiatric or mental health care that includes the following diseases and disorders: schizophrenia, mood disorders, personality disorders, anxiety disorders, substance abuse, substance use disorders, impulse control disorders, eating disorders, and neurodevelopmental disorders (Psychosocial Integrity).
- ~~14.0~~ Demonstrate nursing knowledge, skills, attitudes (KSAs), and procedures related to safe administration of medication that include the following skills (Coordinated Care, Safety and Infection Control, Health Promotion and Maintenance, Pharmacological Therapies, Reduction of Risk Potential, Physiological Adaptation).
- ~~15.0~~ Demonstrate nursing knowledge, skills, attitudes (KSAs), and procedures related to safe intravenous access and intravenous medication administration that include the following skills (Coordinated Care, Safety and Infection Control, Health Promotion and Maintenance, Pharmacological Therapies, Reduction of Risk Potential, Physiological Adaptation).
- ~~16.0~~ Interpret evidence-based practice to provide health awareness in community settings (Reduction of Risk Potential).
- ~~18.0~~ 17.0 Demonstrate how to provide bio-psycho-social support: the use of clinical judgment to care for pre-operative and post-operative clients (Reduction of Risk Potential, Physiological Adaptation).
- ~~19.0~~ 18.0 Demonstrate healthy lifestyle responsibility specific to personal health maintenance: the use of clinical judgment to care for a medical surgical client (MS1: cardiovascular/circulatory, respiratory, lymphatic/immune, musculoskeletal, endocrine, integumentary/sensory systems) (Reduction of Risk Potential, Physiological Adaptation).
- ~~20.0 Implement education and resources for family wellness.~~
- ~~21.0 Participate in Community Health Awareness Forums.~~
- ~~22.0~~ 19.0 Demonstrate how the use of clinical judgment to care for the a medical surgical patient with a Cardiovascular, Respiratory, Lymphatic, Musculoskeletal, Endocrine or Integumentary disease/disorder. client (MS2: gastrointestinal, neurological, urinary, reproductive, oncologic. (Reduction of Risk Potential, Physiological Adaptation).
- ~~23.0 Demonstrate how to care for pre-operative and post-operative patients, utilizing nursing principles.~~
- ~~24.0 Demonstrate how to care for the surgical patient with a Gastrointestinal, Neurological, Urinary, Reproductive or Oncologic disease/disorder.~~
- ~~20.0~~ Demonstrate the use of clinical judgment to care for an obstetric or maternal/newborn client needing intrapartum care (Health Promotion and Maintenance, Reduction of Risk Potential, Physiological Adaptation, Coordinated Care).
- ~~21.0~~ Demonstrate the use of clinical judgment to care for a pediatric client with the following diseases or disorders, including SIDS/SUIDS (Health Promotion and Maintenance, Reduction of Risk Potential, Physiological Adaptation, Coordinated Care).
- ~~25.0 Demonstrate how to care the use of evidence-based practice and readiness for maternal/newborn patients, utilizing nursing principles.~~
- ~~26.0 Demonstrate knowledge of SIDS/SUIDS as it relates to the practical nursing role.~~
- ~~27.0 Demonstrate how to care for pediatric patients, utilizing nursing principles.~~
- ~~28.0 Develop transitional skills.~~
- ~~29.0~~ 22.0 Demonstrate employability skills specific to practical safe transition to nursing practice.

~~**LPN/IV Therapy:** The following outcomes can only be taken by practical nurses who have graduated from their practical nursing program. The LPN/IV education must be sponsored by a provider of continuing education courses approved by the Board of Nursing pursuant to Rule 64B9, F.A.C. To be qualified to teach this module, the instructor must be a currently Florida licensed Registered Nurse with teaching experience and nursing experience which includes IV therapy. The provider will be responsible for issuing a certificate verifying the requisite number of hours and course content.~~

~~In accordance with Rule 64B9-12.005, F.A.C., the module cannot be less than 30 hours post-graduate level. These outcomes must be followed by supervised clinical practice as needed to demonstrate clinical competence. Verification of competence shall be the responsibility of each employing institution. Such verification shall be given through a signed statement from a Florida licensed registered nurse.~~

~~**LPN/IV Therapy:**~~

- ~~01.0 — Explain the legal aspects of IV administration by practical nurses to include the policies and procedures of the institution and appropriate documentation.~~
- ~~02.0 — Demonstrate knowledge of the peripheral veins used for venipuncture.~~
- ~~03.0 — Perform a venipuncture.~~
- ~~04.0 — Discuss the effect of IV therapy on the body.~~
- ~~05.0 — Recognize and respond to adverse reactions to IV therapy.~~
- ~~06.0 — Recognize and use various types of IV equipment.~~
- ~~07.0 — Administer drugs intravenously.~~
- ~~08.0 — Care for patients receiving IV drug therapy, blood and blood components and/or parenteral nutrition.~~
- ~~09.0 — Describe and utilize the principles of infection control in IV therapy.~~
- ~~10.0 — Manage special IV therapy procedures.~~
- ~~11.0 — Recognize terminology pertinent to IV therapy.~~
- ~~12.0 — Care for the patient receiving IV therapy via central lines.~~

|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | <u>Integrated Processes – Apply the following fundamental integrated processes to the practice of practical nursing and integrate them throughout the Client Needs categories and subcategories in every course of the program (See Client Needs categories from NCSBN, 2023). This standard is part of EVERY course in the Practical Nursing program. The student will be able to show:</u>                                                                                                           |
| 01.01 | <u>Caring – Interaction of the practical nurse and client in an atmosphere of mutual respect and trust. In this collaborative environment, the practical nurse provides support and compassion to help achieve desired therapeutic outcomes.</u>                                                                                                                                                                                                                                                       |
| 01.02 | <u>Clinical judgment – The observed outcome of critical thinking and decision-making. It is an iterative process that uses nursing knowledge to observe and assess presenting situations, identify a prioritized client concern, and generate the best possible evidence-based solutions to deliver safe client care. The six clinical judgment functions include: recognizing cues, analyzing cues, prioritizing and hypothesizing, generating solutions, taking action, and evaluating outcomes.</u> |
| 01.03 | <u>Client problem-solving process (nursing process) – A scientific approach to client care that includes data collection, planning, implementation, and evaluation.</u>                                                                                                                                                                                                                                                                                                                                |
| 01.04 | <u>Communication and documentation – Verbal and nonverbal interactions between the practical nurse and the client, as well as other members of the healthcare team. Events and activities associated with client care are validated in written and/or electronic records that reflect standards of practice and accountability in the provision of care.</u>                                                                                                                                           |
| 01.05 | <u>Culture and spirituality – Interaction of the nurse and the client (individual, family or group, including significant others, and population) that recognizes and considers the client-reported, self-identified, unique and individual preferences to client care, the applicable standard of care, and legal considerations.</u>                                                                                                                                                                 |
| 01.06 | <u>Teaching and learning – Facilitation of the acquisition of knowledge, skills, and attitudes (KSAs) to assist in promoting a change in behavior.</u>                                                                                                                                                                                                                                                                                                                                                 |
| 01.07 | <u>Professionalism, respect, and civility toward clients and colleagues in all educational and practice settings.</u>                                                                                                                                                                                                                                                                                                                                                                                  |
| 01.08 | <u>Application of a self-care plan, including the demonstration of healthy lifestyle choices and personal health maintenance.</u>                                                                                                                                                                                                                                                                                                                                                                      |
| 01.09 | <u>A demonstration of nursing care in clinical experiences, simulation, or skills lab of at least        hours.</u>                                                                                                                                                                                                                                                                                                                                                                                    |
| 02.0  | <u>Demonstrate the ability to participate in teamwork and collaboration, using appropriate written and verbal therapeutic communication, interpersonal skills, and standard nursing terminology (Coordinated Care, Health Promotion and Maintenance). The student will be able to:</u>                                                                                                                                                                                                                 |

**Course Number: PRN0099**

**Occupational Completion Point: A**

**Practical Nursing (PN) Foundations 2 – 300 Hours**

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | <u>Integrated Processes – Apply the following fundamental integrated processes to the practice of practical nursing and integrate them throughout the Client Needs categories and subcategories in every course of the program (See Client Needs categories from NCSBN, 2023). This standard is part of EVERY course in the Practical Nursing program. The student will be able to show:</u>                                                                                                                    |
| 01.01 | <u>Caring – Interaction of the practical nurse and client in an atmosphere of mutual respect and trust. In this collaborative environment, the practical nurse provides support and compassion to help achieve desired therapeutic outcomes.</u>                                                                                                                                                                                                                                                                |
| 01.02 | <u>Clinical judgment – The observed outcome of critical thinking and decision-making. It is an iterative process that uses nursing knowledge to observe and assess presenting situations, identify a prioritized client concern, and generate the best possible evidence-based solutions in order to deliver safe client care. The six clinical judgment functions include: recognizing cues, analyzing cues, prioritizing and hypothesizing, generating solutions, taking action, and evaluating outcomes.</u> |
| 01.03 | <u>Client problem-solving process (nursing process) – A scientific approach to client care that includes data collection, planning, implementation, and evaluation.</u>                                                                                                                                                                                                                                                                                                                                         |
| 01.04 | <u>Communication and documentation – Verbal and nonverbal interactions between the practical nurse and the client, as well as other members of the healthcare team. Events and activities associated with client care are validated in written and/or electronic records that reflect standards of practice and accountability in the provision of care.</u>                                                                                                                                                    |
| 01.05 | <u>Culture and spirituality – Interaction of the nurse and the client (individual, family or group, including significant others, and population) that recognizes and considers the client-reported, self-identified, unique and individual preferences to client care, the applicable standard of care, and legal considerations.</u>                                                                                                                                                                          |
| 01.06 | <u>Teaching and learning – Facilitation of the acquisition of knowledge, skills, and attitudes (KSAs) to assist in promoting a change in behavior.</u>                                                                                                                                                                                                                                                                                                                                                          |
| 01.07 | <u>Professionalism, respect, and civility toward clients and colleagues in all educational and practice settings.</u>                                                                                                                                                                                                                                                                                                                                                                                           |
| 01.08 | <u>Application of a self-care plan, including the demonstration of healthy lifestyle choices and personal health maintenance.</u>                                                                                                                                                                                                                                                                                                                                                                               |
| 01.09 | <u>A demonstration of nursing care in clinical experiences, simulation, or skills lab of at least _____ hours.</u>                                                                                                                                                                                                                                                                                                                                                                                              |
| 10.0  | <u>Explain foundational thinking that supports human growth and development across the lifespan (Coordinated Care, Health Promotion and Maintenance). The student will be able to:</u>                                                                                                                                                                                                                                                                                                                          |
| 10.01 | <u>Provide care that meets the needs of the newborn less than 1 month old through the infant or toddler client up through 2 years.</u>                                                                                                                                                                                                                                                                                                                                                                          |
| 10.02 | <u>Provide care that meets the needs of the preschool, school-age, and adolescent client ages 3 through 17 years.</u>                                                                                                                                                                                                                                                                                                                                                                                           |
| 10.03 | <u>Provide care that meets the needs of the adult client ages 18 through 64 years.</u>                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 10.04 | <u>Provide care that meets the needs of the adult client ages 65 and over.</u>                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 10.05 | <u>Compare the client to developmental milestones.</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 10.06 | <u>Assist the client with expected life transitions (attachment to newborn, parenting, retirement).</u>                                                                                                                                                                                                                                                                                                                                                                                                         |

|       |                                                                                                                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10.07 | Reinforce client teaching on expected client reactions to grief and loss (e.g., denial to fear).                                                                                                                                                                                                 |
| 11.0  | Develop teamwork and collaboration through clinical judgment, the nursing process, clinical reasoning, critical thinking, the use of SBAR (situation, background, assessment, recommendation), and the nursing care plan (Coordinated Care). The student will be able to:                        |
| 11.01 | Organize and prioritize care based on client needs.                                                                                                                                                                                                                                              |
| 11.02 | Participate in client data collection.                                                                                                                                                                                                                                                           |
| 11.03 | Collect data for health history (client medical history and family medical history).                                                                                                                                                                                                             |
| 11.04 | Collect baseline physical data (skin integrity, height, and weight).                                                                                                                                                                                                                             |
| 11.05 | Perform focused data collection based on the client's condition (neurological checks, circulatory checks).                                                                                                                                                                                       |
| 11.06 | Compare client laboratory values to normal laboratory values.                                                                                                                                                                                                                                    |
| 11.07 | Evaluate the appropriateness of the healthcare provider's order for the client.                                                                                                                                                                                                                  |
| 12.0  | Demonstrate nursing knowledge, skills, attitudes (KSAs), procedures, and the following skills (Coordinated Care, Safety and Infection Control, Health Promotion and Maintenance, Pharmacological Therapies, Reduction of Risk Potential, Physiological Adaptation). The student will be able to: |
| 12.01 | Provide cooling/warming measures to restore normal body temperature.                                                                                                                                                                                                                             |
| 12.02 | Perform wound care and/or a dressing change.                                                                                                                                                                                                                                                     |
| 12.03 | Provide care for the client with a drainage device (wound drain, chest tube).                                                                                                                                                                                                                    |
| 12.04 | Evaluate the client's oxygen (O <sub>2</sub> ) saturation.                                                                                                                                                                                                                                       |
| 12.05 | Intervene to improve the client's respiratory status (breathing treatment, suctioning, repositioning).                                                                                                                                                                                           |
| 12.06 | Perform blood glucose monitoring.                                                                                                                                                                                                                                                                |
| 12.07 | Collect a specimen for diagnostic testing (including blood, urine, stool, sputum).                                                                                                                                                                                                               |
| 12.08 | Monitor diagnostic or laboratory test results.                                                                                                                                                                                                                                                   |
| 12.09 | Use precautions to prevent injury and/or complications associated with a procedure or diagnosis.                                                                                                                                                                                                 |
| 12.10 | Assist with the performance of a diagnostic or invasive procedure.                                                                                                                                                                                                                               |
| 12.11 | Reinforce client education about procedures and treatments                                                                                                                                                                                                                                       |

| <a href="#">16.0 Interpret evidence-based practice to provide health awareness in community settings (Reduction of Risk Potential). The student will be able to:</a> |
| <a href="#">16.01 Participate in health screenings or health promotion programs.</a>                                                                                 |
| <a href="#">16.02 Identify community resources for clients.</a>                                                                                                      |

**~~Demonstrate knowledge of the healthcare delivery system and health occupations. The student will be able to:~~** **Course Number: PRN0290**

**Occupational Completion Point: B**

**01.0 Practical Nursing (PN) Medical Surgical 1 – 300 Hours**

~~01.01.0~~ **Identify the basic components of the healthcare delivery system including public, private, government and non-profit.** **Integrated Processes – Apply the following fundamental integrated processes to the practice of practical nursing and integrate them throughout the Client Needs categories and subcategories in every course of the program (See Client Needs categories from NCSBN, 2023). This standard is part of EVERY course in the Practical Nursing program. The student will be able to show:**

~~01.02~~ **01.01 Identify common methods of payment for healthcare services.** **Caring – Interaction of the practical nurse and client in an atmosphere of mutual respect and trust. In this collaborative environment, the practical nurse provides support and compassion to help achieve desired therapeutic outcomes.**

~~01.03~~ **01.02 Describe the various types of healthcare providers and the range of services available.** **Clinical judgment – The observed outcome of critical thinking and decision-making. It is an iterative process that uses nursing knowledge to observe and assess presenting situations, identify a prioritized client concern and generate the best possible evidence-based solutions in order to deliver safe client care. The six clinical judgment functions include: recognizing cues, analyzing cues, prioritizing and hypothesizing, generating solutions, taking action, and evaluating outcomes.**

~~01.04~~ **01.03 Describe the composition and functions of a healthcare team.** **Client problem-solving process (nursing process) – A scientific approach to client care that includes data collection, planning, implementation, and evaluation.**

~~01.05~~ **01.04 Identify the general roles and responsibilities of the individual members of the healthcare team.** **Communication and documentation – Verbal and nonverbal interactions between the practical nurse and the client, as well as other members of the healthcare team. Events and activities associated with client care are validated in written and/or electronic records that reflect standards of practice and accountability in the provision of care.**

| <del>05.08 Recognize and respect the variations of care, the increased complexity and the increased use of healthcare resources inherent in caring for older adults.</del>                                                                                                       |
| <del>05.09 Recognize the complex interaction of acute and chronic co-morbid physical and mental conditions and associated treatments common to older adults.</del>                                                                                                               |
| <del>05.10 Discuss models of care that promote safe, quality physical and mental health care for older adults such as PACE, NICHE, Guided Care, Culture Change and Transitional Care Models.</del>                                                                               |
| <del>05.11 Facilitate ethical, non-coercive decision making by older adults and/or families/caregivers for maintaining everyday living, receiving treatment, initiating advance directives and implementing end-of-life care.</del>                                              |
| <del>05.12 Assist registered nurse to promote adherence to the evidence-based practice of providing restraint-free care (both physical and chemical restraints).</del>                                                                                                           |
| <del>05.13 Demonstrate leadership and communication techniques that foster discussion and reflection on the extent to which diversity (among nurses, nurse assistive personnel, therapists, physicians and patients) has the potential to impact the care of older adults.</del> |
| <del>05.14 Facilitate safe and effective transitions across levels of care, including acute, community-based, and long-term care (e.g., home, assisted living, hospice, skilled nursing facility) for older adults and their families.</del>                                     |
| <del>05.15 Provide patient-centered care with consideration for mental and physical health and well-being of informal and formal caregivers of older adults.</del>                                                                                                               |
| <del>05.16 Advocate for timely and appropriate palliative and hospice care for older adults with physical and cognitive impairments.</del>                                                                                                                                       |
| <del>05.17 Implement and monitor strategies to prevent risk and promote quality and safety (e.g., falls, medication mismanagement, pressure ulcers) in the nursing care of older adults with physical and cognitive needs.</del>                                                 |
| <del>05.18 Utilize resources/programs to promote functional, physical and mental wellness in older adults.</del>                                                                                                                                                                 |

|                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>05.19 Identify relevant theories and concepts related to the delivery of patient-centered care for older adults.</del>                                                    |
| <del>05.20 Apply reality orientation techniques and validation therapy unless it is contraindicated by the patient diagnosis (Alzheimer's or dementia).</del>                  |
| <del>05.21 Recognize and respond appropriately to symptoms of common diseases, including dementia, depression/suicide and Alzheimer's.</del>                                   |
| <del>05.22 Provide care for patients with special needs (e.g., impaired hearing, impaired vision, immobility, impaired body functions, cognitively impaired (dementia)).</del> |
| <del>05.23 Demonstrate awareness of common behaviors in substance use and abuse in the elderly.</del>                                                                          |
| <del>05.24 Report concerns to the nurse related to substance use and abuse in the elderly patient.</del>                                                                       |
| <del>05.25 Identify components of the grief process as it relates the geriatric patient.</del>                                                                                 |
| <del>05.26 Identify factors predisposing aging adults for suicide.</del>                                                                                                       |
| <del>06.0 Assist with restorative (rehabilitative) activities. The student will be able to:</del>                                                                              |
| <del>06.01 List the purposes of restorative (rehabilitation) program.</del>                                                                                                    |
| <del>06.02 Assist patient with specified restorative (rehabilitation) needs.</del>                                                                                             |
| <del>06.03 Assist patients/residents to reach the optimum level of independence.</del>                                                                                         |
| <del>07.0 Demonstrate organizational functions, following the patient plan of care. The student will be able to:</del>                                                         |
| <del>07.01 Organize patient care assignments.</del>                                                                                                                            |
| <del>07.02 Complete assignments accurately and in a timely manner.</del>                                                                                                       |
| <del>08.0 Demonstrate computer literacy as related to nursing functions. The student will be able to:</del>                                                                    |
| <del>08.01 Demonstrate effective use of technology, including use of electronic medical records and email relevant to job requirements for a Licensed Practical Nurse.</del>   |
| <del>08.02 Identify computer skills utilized for each clinical rotation and apply, as appropriate.</del>                                                                       |
| <del>08.03 Identify methods of communication to access and distribute data such as fax, e-mail and internet as applicable to HIPAA.</del>                                      |
| <del>09.0 Use appropriate verbal and written communications in the performance of nursing functions. The student will be able to:</del>                                        |
| <del>09.01 Identify characteristics of successful and unsuccessful communication including communication styles and barriers.</del>                                            |
| <del>09.02 Respond to verbal and non-verbal cues.</del>                                                                                                                        |

|                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>09.03 Use approved medical terminology and abbreviations.</del>                                                                                       |
| <del>09.04 Recognize the importance of courtesy and respect for patients and other healthcare workers and maintain good interpersonal relationships.</del> |
| <del>09.05 Receive and give oral report using safe handoff of patient's status.</del>                                                                      |
| <del>09.06 Report and record objective and subjective pertinent observations.</del>                                                                        |
| <del>09.07 Maintain current documentation.</del>                                                                                                           |
| <del>09.08 Document changes in patient behavior and mental awareness in a timely manner.</del>                                                             |
| <del>09.09 Obtain specified data from patient and family.</del>                                                                                            |
| <del>09.10 Define and explain the steps in the nursing process and the role of the licensed practical nurse in that process.</del>                         |
| <del>09.11 Utilize nursing principles to assist with the patient's plan of care.</del>                                                                     |
| <del>10.0 Demonstrate legal and ethical responsibilities specific to the nursing profession. The student will be able to:</del>                            |
| <del>10.01 Explain the "Patient's Bill of Rights".</del>                                                                                                   |
| <del>10.02 Identify standards of the Health Insurance Portability and Accountability Act (HIPAA).</del>                                                    |
| <del>10.03 Describe advance directives.</del>                                                                                                              |
| <del>10.04 Describe informed consent.</del>                                                                                                                |
| <del>10.05 Recognize and report all forms of abuse to include domestic violence (physical &amp; verbal), neglect and human trafficking.</del>              |
| <del>10.06 Identify the components of the Nurse Practice Act.</del>                                                                                        |
| <del>10.07 Practice within the role and scope of the job description.</del>                                                                                |
| <del>10.08 Discuss medical errors related to the practical nurse.</del>                                                                                    |
| <del>10.09 Define legal aspects and code of ethics related to nursing.</del>                                                                               |
| <del>10.10 Describe the practical nurses' role in delegation of duties.</del>                                                                              |
| <del>10.11 Follow policies and procedures affecting the health, safety and well-being of patients.</del>                                                   |
| <del>10.12 Follow legal guidelines in charting, including use of electronic medical records</del>                                                          |
| <del>11.0 Apply the principles of infection control, utilizing nursing principles. The student will be able to:</del>                                      |

|                                                                                                                                                                                          |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>11.01 Provide care for patients with infectious diseases applying the principles of “standard precautions” utilized with all patients as well as special procedures required.</del> |
| <del>11.02 Perform and promote effective hand hygiene.</del>                                                                                                                             |
| <del>11.03 Set up isolation unit using proper personal protective equipment (PPE) for all types of isolation including donning and removing PPE appropriately.</del>                     |
| <del>11.04 Follow isolation procedure with food tray, garments, and other materials.</del>                                                                                               |
| <del>11.05 Collect specimen from patient in isolation.</del>                                                                                                                             |
| <del>11.06 Identify common hospital acquired infections and their prevention and treatment.</del>                                                                                        |
| <del>11.07 Identify emergent communicable diseases and their prevention and treatment.</del>                                                                                             |
| <del>11.08 Apply interventions to break each chain of infection.</del>                                                                                                                   |
| <del>11.09 Discuss immunity and the role of immunizations.</del>                                                                                                                         |
| <del>11.10 Discuss nursing responsibilities related to biological exposures.</del>                                                                                                       |
| <del>12.0 Perform aseptic and sterile techniques. The student will be able to:</del>                                                                                                     |
| <del>12.01 Apply principles of medical and surgical asepsis.</del>                                                                                                                       |
| <del>12.02 Apply and remove sterile glove.</del>                                                                                                                                         |
| <del>12.03 Apply sterile dressing.</del>                                                                                                                                                 |
| <del>12.04 Open sterile equipment and supplies.</del>                                                                                                                                    |
| <del>12.05 Maintain sterile field.</del>                                                                                                                                                 |
| <del>12.06 Clean and disinfect equipment.</del>                                                                                                                                          |
| <del>12.07 Apply and remove personal protective equipment (PPE).</del>                                                                                                                   |
| <del>13.0 Describe the structure and function of the human body in relation to health and disease. The student will be able to:</del>                                                    |
| <del>13.01 Describe the relationships of body systems to health and disease as it relates to patient care.</del>                                                                         |
| <del>13.02 Describe the structure and function of the respiratory system.</del>                                                                                                          |
| <del>13.03 Describe the structure and function of the cardio-vascular system including lymph and immune response.</del>                                                                  |

|                                                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>13.04 Describe the structure and function of the muscular-skeletal system.</del>                                                                           |
| <del>13.05 Describe the structure and function of the nervous, skin, and sensory systems.</del>                                                                 |
| <del>13.06 Describe the structure and function of the reproductive system.</del>                                                                                |
| <del>13.07 Describe the structure and function of the urinary system.</del>                                                                                     |
| <del>13.08 Describe the structure and function of the digestive system.</del>                                                                                   |
| <del>13.09 Describe the structure and function of the endocrine system.</del>                                                                                   |
| <del>14.0 Apply principles of nutrition as it relates to practical nursing scope of practice. The student will be able to:</del>                                |
| <del>14.01 Explore and utilize the U.S. Department of Agriculture's MyPlate food guide (<a href="https://www.myplate.gov/">https://www.myplate.gov/</a>).</del> |
| <del>14.02 Explain regional, cultural, and religious food references.</del>                                                                                     |
| <del>14.03 Prepare a basic food plan.</del>                                                                                                                     |
| <del>14.04 Demonstrate knowledge of the need for thickened liquids and fluid consistency.</del>                                                                 |
| <del>14.05 Identify methods of maintaining fluid balance including encouraging and restricting fluids.</del>                                                    |
| <del>14.06 Monitor and document nutritional intake.</del>                                                                                                       |
| <del>14.07 Assist patient with and maintain therapeutic diets.</del>                                                                                            |
| <del>14.08 Describe the nutrients, their sources and significance in promoting health.</del>                                                                    |
| <del>14.09 List factors which must be considered when purchasing food.</del>                                                                                    |
| <del>14.10 List factors which must be considered when storing food safely.</del>                                                                                |
| <del>14.11 Identify methods of safe food preparation.</del>                                                                                                     |

Course Number: ~~PRN0099~~PRN0291

Occupational Completion Point: ~~B~~

Practical Nursing ~~Foundations~~(PN) Medical Surgical 2 – 300 Hours

01.0 Integrated Processes – Apply the following fundamental integrated processes to the practice of practical nursing and integrate them throughout the Client Needs categories and subcategories in every course of the program (See Client Needs categories from NCSBN, 2023). This standard is part of EVERY course in the Practical Nursing program. The student will be able to show:

01.01 Caring – Interaction of the practical nurse and client in an atmosphere of mutual respect and trust. In this collaborative environment, the practical nurse provides support and compassion to help achieve desired therapeutic outcomes.

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.02 | <u>Clinical judgment – The observed outcome of critical thinking and decision-making. It is an iterative process that uses nursing knowledge to observe and assess presenting situations, identify a prioritized client concern and generate the best possible evidence-based solutions in order to deliver safe client care. The six clinical judgment functions include: recognizing cues, analyzing cues, prioritizing and hypothesizing, generating solutions, taking action, and evaluating outcomes.</u> |
| 01.03 | <u>Client problem-solving process (nursing process) – A scientific approach to client care that includes data collection, planning, implementation, and evaluation.</u>                                                                                                                                                                                                                                                                                                                                        |
| 01.04 | <u>Communication and documentation – Verbal and nonverbal interactions between the practical nurse and the client, as well as other members of the healthcare team. Events and activities associated with client care are validated in written and/or electronic records that reflect standards of practice and accountability in the provision of care.</u>                                                                                                                                                   |
| 01.05 | <u>Culture and spirituality – Interaction of the nurse and the client (individual, family or group, including significant others, and population) that recognizes and considers the client-reported, self-identified, unique and individual preferences to client care, the applicable standard of care, and legal considerations.</u>                                                                                                                                                                         |
| 01.06 | <u>Teaching and learning – Facilitation of the acquisition of knowledge, skills, and attitudes (KSAs) to assist in promoting a change in behavior.</u>                                                                                                                                                                                                                                                                                                                                                         |
| 01.07 | <u>Professionalism, respect, and civility toward clients and colleagues in all educational and practice settings.</u>                                                                                                                                                                                                                                                                                                                                                                                          |
| 01.08 | <u>Application of a self-care plan, including the demonstration of healthy lifestyle choices and personal health maintenance.</u>                                                                                                                                                                                                                                                                                                                                                                              |
| 01.09 | <u>A demonstration of nursing care in clinical experiences, simulation, or skills lab of at least        hours.</u>                                                                                                                                                                                                                                                                                                                                                                                            |
| 19.0  | <u>Demonstrate the use of clinical judgment to care for a medical surgical client (MS2: gastrointestinal, neurological, urinary, reproductive, oncologic) (Reduction of Risk Potential, Physiological Adaptation). The student will be able to:</u>                                                                                                                                                                                                                                                            |
| 19.01 | <u>Identify signs and symptoms related to acute or chronic diseases or disorders.</u>                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 19.02 | <u>Use data from various credible sources in making clinical decisions.</u>                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 19.03 | <u>Apply evidence-based practice when providing care.</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

other members of the healthcare team. Events and activities associated with client care are validated in written and/or electronic records that reflect standards of practice and accountability in the provision of care.

~~16.05 Apply bandage as appropriate.~~

~~16.06 Perform clean and sterile dressing changing procedures.~~

~~16.07 Insert straight/indwelling catheter.~~

~~16.08 Obtain specimen from patient with indwelling catheter.~~

~~16.09 Remove indwelling catheter.~~

~~16.10 Demonstrate how to assist with physical examination.~~

~~16.11 Assist patient with diagnostic procedures.~~

~~16.12 Irrigate wound.~~

~~16.13 Apply cervical collar.~~

~~16.14 Apply orthopedic devices including binders, braces and splints.~~

~~16.15 Apply anti-embolic hose and sequential compression devices.~~

~~16.16 Care for patient in skin, skeletal traction and external fixators.~~

~~16.17 Clean tong/pin site.~~

~~16.18 Describe and demonstrate how to monitor chest drainage system.~~

~~16.19 Perform naso-oral suction.~~

~~16.20 Perform tracheostomy care.~~

~~16.21 Demonstrate how to instruct patient in breathing exercises.~~

~~16.22 Set up vaporizer/humidifier.~~

~~16.23 Administer and maintain oxygen.~~

~~16.24 Collect timed urine specimen.~~

~~16.25 Collect clean catch (midstream voided) urine specimen.~~

~~16.26 Test urine using point-of-care testing procedures.~~

~~Course Number: PRN0290~~

~~Occupational Completion Point: B~~

~~Medical Surgical Nursing 1—300 Hours~~

~~22.0—Demonstrate how to care for the surgical patient with a cardiovascular, respiratory, lymphatic, musculoskeletal, endocrine or integumentary disease/disorder (which can be accomplished through a combination of simulation, laboratory and clinical settings in accordance with 464.019, F.S.). The student will be able to:~~

~~22.01—Identify signs and symptoms of disease/disorders of the body systems.~~

~~22.02—Identify diagnostic tests used to determine diseases/disorders of the body systems.~~

~~22.03—Identify medications used in the treatment of diseases/disorders of the body systems.~~

~~22.04—Identify nutritional needs of patients with diseases/disorders of the body systems.~~

~~22.05—Identify the symptoms of acute/chronic psychological distress.~~

~~22.06—Care for the patient with a:~~

- ~~• cardiovascular/circulatory disease/disorder~~
- ~~• respiratory disease/disorder~~
- ~~• lymphatic/immune disease/disorder~~
- ~~• musculoskeletal disease/disorder~~
- ~~• endocrine disease/disorder~~
- ~~• integumentary/sensory disease/disorder~~

~~23.0—Demonstrate how to care for pre-operative and post-operative patients, utilizing nursing principles (which can be accomplished through a combination of simulation, laboratory and clinical settings in accordance with 464.019, F.S.). The student will be able to:~~

~~23.01—Assist the RN with pre-operative and post-operative teaching.~~

~~23.02—Perform a surgical prep.~~

~~23.03 Prepare patient for operating room.~~

~~23.04 Provide post-operative care.~~

~~23.05 Reinforce post-operative discharge teaching provided by the nurse.~~

**Course Number: PRN0291**

**Occupational Completion Point: B**

**Medical Surgical Nursing 2— 300 Hours**

~~24.0 Demonstrate how to care for the surgical patient with a gastrointestinal, neurological, urinary, reproductive or oncologic disease/disorder. (Which can be accomplished through a combination of simulation, laboratory and clinical settings in accordance with 464.019, F.S.). The student will be able to:~~

~~24.01 Identify signs and symptoms of disease/disorders of the body systems.~~

~~24.02 Identify diagnostic tests used to determine diseases/disorders of the body systems.~~

~~24.03 Identify medications used in the treatment of diseases/disorders of the body systems.~~

~~24.04 Identify nutritional needs of patients with diseases/disorders of the body systems.~~

~~24.05 Identify the symptoms of acute/chronic psychological distress.~~

~~24.06 Care for the patient with a:~~

- ~~• gastrointestinal disease/disorder~~
- ~~• neurological disease/disorder~~
- ~~• urinary disease/disorder~~
- ~~• reproductive disease/disorder~~
- ~~• oncologic disease/disorder~~

**Course Number: PRN0690**

**Occupational Completion Point: B**

**Comprehensive Nursing and Transitional Skills — 150 Hours**

~~25.0 Demonstrate how to care for maternal/newborn patients, utilizing nursing principles (which can be accomplished through a combination of simulation, laboratory and clinical settings in accordance with 464.019, F.S.). The student will be able to:~~

~~25.01 Describe prenatal care and normal development of the fetus.~~

~~25.02 Identify complications and interventions during pregnancy.~~

~~25.03 Describe how to assist the RN with admitting the patient to labor and delivery.~~

~~25.04 Describe the stages of the labor process and nursing responsibilities.~~

|                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------|
| <del>25.05 Describe the importance of monitoring contractions.</del>                                                          |
| <del>25.06 Recognize the importance of monitoring fetal heart rate.</del>                                                     |
| <del>25.07 Recognize signs/symptoms of fetal distress.</del>                                                                  |
| <del>25.08 Describe signs of complications during labor and delivery and nursing interventions.</del>                         |
| <del>25.09 Demonstrate how to assist the RN with preparing the patient for caesarean.</del>                                   |
| <del>25.10 Describe and demonstrate care during delivery process.</del>                                                       |
| <del>25.11 Describe Apgar score.</del>                                                                                        |
| <del>25.12 Demonstrate how to suction infant's respiratory passage with bulb syringe.</del>                                   |
| <del>25.13 Demonstrate how to identify infant using mother's bracelet.</del>                                                  |
| <del>25.14 Demonstrate how to weigh and measure infant.</del>                                                                 |
| <del>25.15 Demonstrate how to bathe infant.</del>                                                                             |
| <del>25.16 Demonstrate how to carry infant.</del>                                                                             |
| <del>25.17 Demonstrate how to feed infant.</del>                                                                              |
| <del>25.18 Demonstrate how to collect urine specimen from infant.</del>                                                       |
| <del>25.19 Describe post-partum care.</del>                                                                                   |
| <del>25.20 Demonstrate perineal care.</del>                                                                                   |
| <del>25.21 Describe breast care for both breast feeding and bottle feeding mothers.</del>                                     |
| <del>25.22 Assist mother with infant care.</del>                                                                              |
| <del>25.23 Describe the care required for an infant with a circumcision.</del>                                                |
| <del>25.24 Demonstrate perineal care and diapering technique.</del>                                                           |
| <del>25.25 Describe the discharge process of the postpartum and infant patient.</del>                                         |
| <del>26.0 Demonstrate knowledge of SIDS/SUIDS as it relates to the practical nursing role. The student will be able to:</del> |
| <del>26.01 Define SIDS and Sudden Unexpected Infant Death (SUID).</del>                                                       |

|                                                                                                                                                                                                                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>26.02 Identify the critical SIDS/SUID risk reduction methods for parents and caregivers.</del>                                                                                                                                                           |
| <del>26.03 Demonstrate an understanding of the benefits of back sleeping for newborns and infants.</del>                                                                                                                                                      |
| <del>26.04 Describe the LPN's key role as educators to parents and caregivers about SIDS/SUID.</del>                                                                                                                                                          |
| <del>27.0 Demonstrate how to care for pediatric patients, utilizing nursing principles (which can be accomplished through a combination of simulation, laboratory and clinical settings in accordance with 464.019, F.S.). The student will be able to:</del> |
| <del>27.01 Describe how to adapt nursing care for the pediatric patient.</del>                                                                                                                                                                                |
| <del>27.02 Describe how to apply safety principles for the pediatric patient.</del>                                                                                                                                                                           |
| <del>27.03 Describe general characteristics, particular needs and problems of pediatric patients.</del>                                                                                                                                                       |
| <del>27.04 Demonstrate how to prepare patient and family for the hospital experience.</del>                                                                                                                                                                   |
| <del>27.05 Identify signs and symptoms of common disorders/diseases.</del>                                                                                                                                                                                    |
| <del>27.06 Describe the nutritional dietary requirement of various prescribed diets.</del>                                                                                                                                                                    |
| <del>27.07 Demonstrate how to provide diversion and recreational activities.</del>                                                                                                                                                                            |
| <del>28.0 Develop transitional skills. The student will be able to:</del>                                                                                                                                                                                     |
| <del>28.01 Organize complex patient care assignments with multiple clients.</del>                                                                                                                                                                             |
| <del>28.02 Discuss 464, F.S., and the corresponding Rules.</del>                                                                                                                                                                                              |
| <del>28.03 Discuss the scope of practice of a Licensed Practical Nurse in a leadership/supervisory role.</del>                                                                                                                                                |
| <del>28.04 Describe the role of the LPN in delegation to unlicensed personnel.</del>                                                                                                                                                                          |
| <del>28.05 Describe the Florida Board of Nursing requirements for licensure renewal including multi-state licensure.</del>                                                                                                                                    |
| <del>28.06 Demonstrate an understanding of licensure by examination and by endorsement.</del>                                                                                                                                                                 |
| <del>28.07 Complete application for licensure by examination.</del>                                                                                                                                                                                           |
| <del>28.08 Discuss current legislation pertinent to the Florida Board of Nursing and its effect on your nursing practice.</del>                                                                                                                               |
| <del>28.09 Determine how to apply for membership in a professional organization.</del>                                                                                                                                                                        |
| <del>28.10 Discuss benefits and responsibilities of the LPN in membership in a professional organization.</del>                                                                                                                                               |
| <del>29.0 Demonstrate employability skills specific to practical nursing. The student will be able to:</del>                                                                                                                                                  |

|                                                                                                                                                                                                                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>29.01 Identify personal traits or attitudes desirable in a member of the healthcare team.</del>                                                                                                                |
| <del>29.02 Exemplify basic professional standards of healthcare workers as they apply to hygiene, dress, language, confidentiality and behavior (i.e., telephone etiquette, courtesy and self introductions).</del> |
| <del>29.03 Recognize the potential for stress in the practice of nursing and develop methods of managing stress.</del>                                                                                              |
| <del>29.04 Recognize the potential for violence in the workplace and describe methods of reducing that potential.</del>                                                                                             |
| <del>29.05 Identify employment opportunities for licensed practical nurses.</del>                                                                                                                                   |
| <del>29.06 Participate in interview skill development activities.</del>                                                                                                                                             |
| <del>29.07 Complete letters of job application and resignation.</del>                                                                                                                                               |
| <del>29.08 Complete a professional portfolio, including a resume.</del>                                                                                                                                             |

|                                                                                                                                                                            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del><b>LPN/IV Therapy: The following intended outcomes 01-12 can ONLY be taken by graduate Practical Nurses who have completed their practical nursing program.</b></del> |
| <del>01.0 Explain the legal aspects of IV administration by practical nurses. The student will be able to:</del>                                                           |
| <del>01.01 Explain the Nurse Practice Act and the Florida Administrative Code as it relates to IV therapy by LPNs.</del>                                                   |
| <del>01.02 Describe the policies and procedures of employing agencies as they relate to IV therapy by LPNs.</del>                                                          |
| <del>01.03 Chart IV therapy including all principles of charting necessary for legal documentation.</del>                                                                  |
| <del>01.04 List the aspects of intravenous therapy that can only be given under the direct supervision of the registered professional nurse.</del>                         |
| <del>02.0 Demonstrate knowledge of the peripheral veins used for venipuncture. The student will be able to:</del>                                                          |
| <del>02.01 Locate and identify the peripheral veins used for venipuncture.</del>                                                                                           |
| <del>02.02 List preference of peripheral vein location used for venipuncture.</del>                                                                                        |
| <del>03.0 Perform a venipuncture. The student will be able to:</del>                                                                                                       |
| <del>03.01 Prepare and support the patient psychologically.</del>                                                                                                          |
| <del>03.02 Prepare and support the patient's family and/or visitors psychologically.</del>                                                                                 |
| <del>03.03 Prepare and support the patient physically.</del>                                                                                                               |

|                                                                                                                                                         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>03.04 Choose equipment appropriately.</del>                                                                                                        |
| <del>03.05 Choose and properly prepare appropriate site(s).</del>                                                                                       |
| <del>03.06 Palpate the vein(s) adequately.</del>                                                                                                        |
| <del>03.07 Insert equipment into the vein maintaining the safety of both the patient and the nurse.</del>                                               |
| <del>04.0 Discuss the effect of IV therapy on the body. The student will be able to:</del>                                                              |
| <del>04.01 Describe the relationship between intravenous therapy and the body's homeostatic and regulatory functions.</del>                             |
| <del>04.02 Discuss clinical manifestations of fluid and electrolyte imbalance.</del>                                                                    |
| <del>05.0 Recognize and respond to adverse reactions to IV therapy. The student will be able to:</del>                                                  |
| <del>05.01 Recognize the signs and symptoms of local complications to IV therapy.</del>                                                                 |
| <del>05.02 Recognize the signs and symptoms of systemic complications to IV therapy.</del>                                                              |
| <del>05.03 Discuss preventive measures for both local and systemic complications.</del>                                                                 |
| <del>05.04 Describe appropriate treatment measures for both local and systemic complications.</del>                                                     |
| <del>06.0 Recognize and use various types of IV equipment. The student will be able to:</del>                                                           |
| <del>06.01 Identify various types of equipment used in administering IV therapy.</del>                                                                  |
| <del>06.02 Discuss the criteria for the use of each type of equipment.</del>                                                                            |
| <del>06.03 Describe how to troubleshoot for malfunction of various types of equipment.</del>                                                            |
| <del>07.0 Administer drugs intravenously. The student will be able to:</del>                                                                            |
| <del>07.01 List formulas, calculate fluid and drug administration rate.</del>                                                                           |
| <del>07.02 List methods of administering drugs intravenously, including the advantages and disadvantages of each.</del>                                 |
| <del>07.03 Utilize the principles of compatibility and incompatibility of drugs and solutions in preparing for administration.</del>                    |
| <del>07.04 Administer IV drugs incorporating the "six rights" of medication administration.</del>                                                       |
| <del>08.0 Care for patients receiving IV drug therapy, blood and blood components and/or parenteral nutrition. The student will be able to:</del>       |
| <del>08.01 Utilize the principles of chemotherapy, including protocols, actions and side effects when caring for patients receiving drug therapy.</del> |

|                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>08.02—Manage the care of the patient receiving parenteral nutrition, including the principles of metabolism, potential complications, physical and psychological measures to ensure the desired therapeutic effect.</del> |
| <del>08.03—Manage the care of the patient receiving blood and blood components, following institutional protocols, including indications and contraindications for use and identification of adverse reactions.</del>          |
| <del>09.0—Describe and utilize the principles of infection control in IV therapy. The student will be able to:</del>                                                                                                           |
| <del>09.01—Use aseptic technique as related to IV therapy.</del>                                                                                                                                                               |
| <del>09.02—Describe ways to prevent iatrogenic infection.</del>                                                                                                                                                                |
| <del>09.03—Describe treatment for iatrogenic infections.</del>                                                                                                                                                                 |
| <del>10.0—Care for the patient receiving special IV therapy procedures. The student will be able to:</del>                                                                                                                     |
| <del>10.01—Describe and utilize the nursing management necessary for saline locks.</del>                                                                                                                                       |
| <del>10.02—Describe and utilize the nursing management necessary for central lines.</del>                                                                                                                                      |
| <del>11.0—Recognize terminology pertinent to IV therapy. The student will be able to:</del>                                                                                                                                    |
| <del>11.01—Define terms common to IV therapy.</del>                                                                                                                                                                            |
| <del>11.02—Interpret written IV terms correctly.</del>                                                                                                                                                                         |
| <del>11.03—Use correct IV terminology in all written and oral communications.</del>                                                                                                                                            |
| <del>12.0—Care for the patient receiving IV therapy via central lines. The student will be able to:</del>                                                                                                                      |
| <del>12.01—Describe the location of central lines and the purpose of this IV therapy.</del>                                                                                                                                    |
| <del>12.02—Administer fluids and medications via central lines.</del>                                                                                                                                                          |
| <del>12.03—List central line complications and interventions appropriate to correct them.</del>                                                                                                                                |
| <del>12.04—Describe and perform central line dressings, cap changes and flushing, noting the adverse effects and remediation.</del>                                                                                            |
| <del>12.05—Recognize signs and symptoms of sepsis.</del>                                                                                                                                                                       |
| <del>12.06—Identify Central Line Associated Blood Stream Infection (CLABSI) protocol.</del>                                                                                                                                    |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

This program meets the Department of Health's education requirements for ~~HIV/AIDS, Domestic Violence and Prevention of Medical Errors.~~ [Florida Board of Nursing licensure renewal requirements.](#) Although not a requirement for initial licensure, it is a requirement for renewal; therefore, the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry; planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues and health, safety, and environmental issues.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### Cooperative Training – OJT

On-the-job training is appropriate but not required for this program.- Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### Basic Skills

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: -Computation (Mathematics) [11](#) and Communications

(Reading and Language ~~and Reading 9~~ Arts) 11. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Sections 1004.02, ~~Florida Statutes~~ F.S., may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040) ~~-, F.A.C.~~. Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. -Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Sections 1004.91, F.S.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments ~~and~~ assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: ~~postsecondary~~ Postsecondary curriculum and regulated secondary programs cannot be modified.

**Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Health Science career cluster.

**This program is designed to prepare students who currently hold a valid, unencumbered Licensed Practical Nurse (LPN) license issued by the Florida Board of Nursing, for employment as Registered Nurses (RN).** The program must be approved by the Florida Board of Nursing in order for graduates to apply and take the examination to practice as Registered Nurses.

The content follows section (s.) 464.019, Florida Statutes (F.S.) and includes but is not limited to: the professional role of the registered nurse, the legal scope of practice both in theoretical instruction and clinical experience, instruction in body structure and function; acute, long-term care, and community settings in the areas of geriatric, psychiatric, medical, surgical, pediatric, obstetric, and professional nursing; pharmacology, administering medications; mental health, interpersonal and personal relationship skills, health teaching, counseling skills, human growth and development over the lifespan, nutrition, family, and professional nursing.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Program Structure**

This program is a planned sequence of instruction consisting of 900 clock hours taking 52 weeks and one occupational completion point.

This program is comprised of a newly designed integrated pathway of nursing education called the Professional Nursing (LPN-RN) program. It serves as a dedicated bridge for Licensed Practical Nurses (LPNs) transitioning to Registered Nurses (RNs) through an accelerated hybrid delivery method. The program is structured to meet the requirements of the Florida Board of Nursing and complies with statutory regulations.

The design incorporates various learning strategies, considering the Patricia Benner framework of "Novice to Expert," the American Nurses Association (ANA) Scope of Practice (2023), the Quality and Safety Education for Nurses (QSEN) Competencies (2017), and the National Council of State Boards of Nursing (NCSBN) RN Practice Analysis and Activity Statements (2021) and Test Plan (2023), which prepare students for the Next Generation NCLEX-RN test. Additionally, it aligns with the National League for Nursing (NLN) Competencies and the Hallmarks of Excellence in Nursing Education Model (2020). The program is also designed to meet the standards of accrediting agencies recognized by the Florida Board of Nursing, as specified in Section 464.019(11) of the Florida Statutes:

[http://www.leg.state.fl.us/statutes/index.cfm?App\\_mode=Display\\_Statute&Search\\_String=&URL=0400-0499/0464/Sections/0464.019.html](http://www.leg.state.fl.us/statutes/index.cfm?App_mode=Display_Statute&Search_String=&URL=0400-0499/0464/Sections/0464.019.html)).

Bloom’s Multiple Domains of Learning—cognitive, affective, and psychomotor—are also utilized within the curriculum.

The program facilitates the stacking of credentials from nursing assistant to practical nursing and ultimately to professional nursing. It employs scaffolded nursing education, promoting the development of higher-order thinking skills, particularly in clinical judgment, using the NCSBN’s Clinical Judgment Measurement Model (2019). This comprehensive program covers a wide range of content and concepts necessary for providing excellent nursing care at the level expected from a professional nurse.

This program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with section (s.) 1007.24(1), Florida Statutes (F.S.). They include curriculum and an organizational structure designed specifically for this fifty-two-week Professional Nursing (LPN-RN) program designed to bridge LPN to RN students in an accelerated hybrid format. Only nurses who hold a current, valid, unencumbered Licensed Practical Nurse (LPN) license issued by the Florida Board of Nursing may be accepted into the program. Career and Technical credit shall be awarded to the student on a transcript in accordance with s.1001.44(3)(b), F.S.

To teach the course(s) listed below, instructors must hold all of the teacher certifications indicated for that course. In addition, according to s. 464.019, F.S. at least 50% of the faculty must hold a Master in Nursing degree or higher.

The following table illustrates the postsecondary program structure:

| OCP | Course Number | Course Title                                       | Teacher Certification | Length    |
|-----|---------------|----------------------------------------------------|-----------------------|-----------|
|     | NSG0080       | Nursing Transitions                                | REG NURSE 7 G**       | 111 hours |
|     | NSG0081       | Concepts of Geriatrics and Pharmacology in Nursing |                       | 102 hours |
|     | NSG0082       | Psychiatric Nursing                                |                       | 102 hours |

| OCP | Course Number | Course Title               | Teacher Certification | Length    |
|-----|---------------|----------------------------|-----------------------|-----------|
|     | NSG0083       | Medical Nursing            |                       | 102 hours |
|     | NSG0084       | Surgical Nursing           |                       | 102 hours |
|     | NSG0085       | Pediatric Nursing          |                       | 102 hours |
|     | NSG0086       | Obstetric Nursing          |                       | 102 hours |
|     | NSG0087       | Professional Nursing       |                       | 91 hours  |
| A*  | NSG0089       | Senior Practicum Intensive |                       | 86 hours  |

\* OCP A is awarded after the student successfully completes all 9 courses in the program.

\*\* Registered Nurse who holds at least a BSN and an unencumbered RN license in the state of Florida or from an Enhanced Nursing Licensure Compact (eNLC) state.

### **National Standards (NS)**

Programs identified as having Industry or National Standards have been crosswalked with the corresponding standards and/or benchmarks. Industry or National Standards for the Professional Nursing (LPN-RN) program can be found using the following link for the National Council of State Boards of Nursing (NCSBN), which includes the current test plan:

[https://www.ncsbn.org/public-files/2023\\_RN\\_Test%20Plan\\_English\\_FINAL.pdf](https://www.ncsbn.org/public-files/2023_RN_Test%20Plan_English_FINAL.pdf)

### **Regulated Programs**

The Professional Nursing (LPN-RN) program is a program that is regulated by the Florida Board of Nursing requirements for the professional nurse under the Nurse Practice Act and the Administrative Code. Refer to s. 464.019(1)(b), F.S. for faculty credential requirements to teach this program. Programs must comply with the Florida Board of Nursing rules, including faculty qualifications. For questions regarding this process, contact the Florida Board of Nursing, at 4052 Bald Cypress Way, Tallahassee, FL 32399-3752.

According to the National Council of State Boards of Nursing (NCSBN), students are eligible to apply to take the National Council Licensure Examination for Registered Nurses (NCLEX) RN after satisfactory completion of an approved program. The NCLEX-RN uses computerized adaptive testing (CAT) that the nursing graduate must take and pass in order to practice as a Registered Nurse (RN). Once a program has been approved by the Florida Board of Nursing as a Professional Nursing (LPN-RN) program, an NCSBN NCLEX-RN code will be issued to the school. This code is used by students to apply for the NCLEX-RN.

Clinical instruction of nursing students will meet the requirements of s. 464.019, F.S. Clinical experience must make up at least 50% of the total program. Simulated practice and clinical experiences are included as an integral part of this program. Clinical simulation may be used for no more than 50% of the total clinical experience.

~~Common~~Florida's ~~Career~~ ~~Technical Core — Career Ready Practices~~Readiness Skills for CTE Programs

~~Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.~~

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- ~~12. Work productively in teams while using cultural/global competence.~~

| Employability Skills |                                               |
|----------------------|-----------------------------------------------|
| 01.0                 | Apply academic skills to workplace scenarios. |

## Standards

**Prerequisite Requirement:** Student must hold a current, valid, unencumbered LPN license issued by the Florida Board of Nursing to enter and remain in the Professional Nursing (LPN-RN) program.

After successfully completing this program, the student will be able to perform the following:

- 01.0 Thinking: Apply the clinical judgment measurement model thinking processes to all class content and clinical client situations, covering novice to advanced beginner health and illness concepts or content in preparation for meeting the Next Generation NCLEX-RN requirements starting in 2023. **(Note: Thinking is the first standard for each course or subject area.)**
- 02.0 Professional Behavior: Professional behavior will be demonstrated through communication, ethics, employability, safety, legal aspects, respectful and equitable practice, informatics, body structure and function review, assessment review, nursing process, electronic health record training, and orientation to the clinical facility.
- 03.0 Teamwork and Collaboration: Work well with a team including interprofessional collaboration, medication administration, pharmacology, human growth and development of the older adult, advocacy, evidence-based practice (EBP), client-centered care, and experiences in geriatrics, rehab, and/or long-term care.
- 04.0 Health Promotion: Promote well-being including mental health concepts, therapeutic communication, interpersonal and personal skills, relationship and counseling skills, as well as clinical opportunities in psychiatric inpatient and community health.
- 05.0 Coordination of Care: Provide appropriate planning skills to understand and apply principles of human growth and development for the adult, scholarly inquiry, and resource stewardship in the general medicine setting of clients.
- 06.0 Health Teaching: Demonstrate the use of teaching and learning principles for the education of the perioperative client and focus on the safe care of this client across the perioperative clinical setting.
- 07.0 Quality of Practice: Exhibit quality improvement (QI) principles, human growth and development of the child, and care for the client in a children's hospital setting or children's specialty area.
- 08.0 Environmental Health: Plan for a positive environment in the care of the family including proper nutrition, human growth and development of the perinatal clients, and clinical experiences in labor and delivery, OB OR, mom/baby units, and/or the outpatient family health clinic setting.
- 09.0 Professional Role: Function in the professional role of the nurse including licensure preparation and leadership roles including clinical care in specialty areas such as emergency rooms, intensive care units, and step-down areas.
- 10.0 Professional Practice: Create a pattern of professional practice through a senior practicum intensive with a 1:1 preceptor in the acute clinical setting for a minimum of seventy-two hours, as well as a reflection of clinical judgment opportunities, use of self-evaluation, and application of life-long learning principles to show preparation for the NCLEX-RN examination.

Florida Department of Education  
Student Performance Standards

Program Title: **Professional Nursing (LPN-RN)**  
Career Certificate Program Number: **H170608**

NOTE:- All courses must follow in the designated order after successful completion of the previous course in class and clinical with a passing grade. All standards and benchmarks are related to requirements for the professional nurse according to the Florida Board of Nursing and the Nurse Practice Act, s. 464.019, F.S., and other nursing entities.

| 01.0                                                                    | Thinking:- Apply the clinical judgment measurement model thinking processes to all class content and clinical client situations, covering novice to advanced beginner health and illness concepts or content in preparation for meeting the Next Generation NCLEX-RN requirements starting in 2023 (FBON, NCSBN). <b>(Note: -Thinking is the first standard for each course or subject area.)</b> |
| 02.0                                                                    | Professional Behavior: Professional behavior will be demonstrated through communication, ethics, employability, safety, legal aspects, respectful and equitable practice, informatics, body structure and function review, assessment review, nursing process, electronic health record training, and orientation to the clinical facility (ANA 1-6).                                             |
| 02.01                                                                   | Communication: Establish excellent communication skills with team members and clients, using technology and appropriate spoken and written English skills (APA 7th edition, 2020 update) to plan, implement, and manage client care (ANA 10).                                                                                                                                                     |
| 02.02                                                                   | Ethics:- List ethical principles to guide interpersonal relationships, professional behavior, and clinical decision-making and show evidence of implementing these principles (ANA 7).                                                                                                                                                                                                            |
| 02.03                                                                   | Employability:- Demonstrate competencies in professional behavior, good moral character, respect, and employability skills.                                                                                                                                                                                                                                                                       |
| 02.04                                                                   | Safety:- Apply safe use of information, equipment, supplies, ergonomics, and attention to detail while practicing and providing care (QSEN 5).                                                                                                                                                                                                                                                    |
| 02.05                                                                   | Legal Aspects:- Examine the legal scope and practice transitioning from the role of LPN to the professional nurse in theoretical instruction and clinical practice experience.                                                                                                                                                                                                                    |
| 02.06                                                                   | Respectful and Equitable Practice:- Implement consistent respectful and equitable practice, using principles of team civility to inspire a well-loved practice environment (ANA 9).                                                                                                                                                                                                               |
| 02.07                                                                   | Informatics: -Use collected data to direct practice decisions and document accurately (QSEN 6).                                                                                                                                                                                                                                                                                                   |
| 02.08                                                                   | Body Structure and Function (BSF) Review:- Adapt concepts of anatomy and physiology or body structure and function (BSF) as the foundational blocks of the professional nurse.                                                                                                                                                                                                                    |
| 02.09                                                                   | Assessment Review (clinical):- Demonstrate holistic assessment skills for head-to-toe assessments in order to plan, prioritize, implement, and evaluate care.                                                                                                                                                                                                                                     |
| 02.10                                                                   | Nursing Process (clinical): Improve higher-order thinking skills to apply the nursing process, critical thinking, clinical reasoning, and clinical judgment to foundational thinking and clinical applications.                                                                                                                                                                                   |

02.11 Clinical – Electronic Health Record (EHR) Training and Orientation [acute]: Integrate client assessments, nursing process, and technology to provide and document care that focuses on the professional behavior of the nursing student.

**Course Number: -NSG0081**

**Concepts of Geriatrics and Pharmacology in Nursing – 102 Hours**

Pharmacology, Geriatrics, and the Endocrine System.

- 01.0 Thinking:- Apply the clinical judgment measurement model thinking processes to all class content and clinical client situations, covering novice to advanced beginner health and illness concepts or content in preparation for meeting the Next Generation NCLEX-RN requirements starting in 2023 (FBON, NCSBN). **(Note: -Thinking is the first standard for each course or subject area.)**
- 03.0 Teamwork and Collaboration:- Work well with a team including interprofessional collaboration, medication administration, pharmacology, human growth and development of the older adult, advocacy, evidence-based practice (EBP), client-centered care, and experiences in geriatrics, rehab, and/or long-term care.
- 03.01 Collaboration:- Advocate for teamwork and collaboration in the classroom, online, and in the clinical setting (QSEN 2, ANA 11).
- 03.02 Medication Administration (clinical):- Administer ordered medication through various routes within the scope of practice using principles of safety (National Patient Safety Goals), infection control, accuracy in clinical calculations, and integrity.
- 03.03 Pharmacology:- Apply principles of pharmacology to evaluate the appropriateness of ordered medications and treatments for the current client's health status
- 03.04 Human Growth and Development for the Older Adult:- Compare human growth and development throughout the lifespan and its impact on nursing care with a focus on the older adult client.
- 03.05 Advocacy:- Identify client rights, diverse preferences, and choices, and provide care honoring and respecting the client with dignity (ANA 8).
- 03.06 Evidence-based Practice (EBP):- Prioritize statistics and research to choose evidence-based (EBP) and best practices in professional nursing (QSEN 3).
- 03.07 Client-Centered Care (clinical): Provide client-centered care recognizing diverse cultures and ethnic backgrounds in acute, long-term care, and community settings (QSEN 1 – modified).
- 03.08 Clinical – Geriatrics, Rehab, and/or Long-term Care Centers: Provide culturally competent client-centered care integrating the nursing process, clinical judgment, and safety at the beginning level of the novice student professional nurse who is focusing on teamwork and collaboration.

**Course Number: -NSG0082**

**Psychiatric Nursing – 102 Hours**

Mental Health and the Neurological System.

- 01.0 Thinking:- Apply the clinical judgment measurement model thinking processes to all class content and clinical client situations, covering novice to advanced beginner health and illness concepts or content in preparation for meeting the Next Generation NCLEX-RN requirements starting in 2023 (FBON, NCSBN). **(Note: -Thinking is the first standard for each course or subject area.)**
- 04.0 Health Promotion:- Promote well-being including mental health concepts, therapeutic communication, interpersonal and personal skills, relationship and counseling skills, as well as clinical opportunities in psychiatric inpatient and community health.

|       |                                                                                                                                                                                                                                                                              |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 04.01 | Mental Health Concepts: -Apply concepts of psychiatric nursing and the mental health and illness continuum.                                                                                                                                                                  |
| 04.02 | Therapeutic Communication (clinical): -Demonstrate the use of therapeutic communication with clients in simulated and practice settings.                                                                                                                                     |
| 04.03 | Interpersonal/Personal Skills: -Establish positive interpersonal skills and personal support systems (ANA 5B).                                                                                                                                                               |
| 04.04 | Relationship/Counseling Skills: -Improve relationship and counseling skills.                                                                                                                                                                                                 |
| 04.05 | Clinical – Psychiatric Inpatient and Community Health: Provide culturally competent client-centered care integrating the nursing process, clinical judgment, and safety at the beginning level of the novice student professional nurse who is focusing on health promotion. |

**Course Number: -NSG0083**  
**Medical Nursing – 102 Hours**

Pathophysiology, Diseases/Disorders, Complications, and the Cardiac and Hematologic Systems.

|       |                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Thinking:- Apply the clinical judgment measurement model thinking processes to all class content and clinical client situations, covering novice to advanced beginner health and illness concepts or content in preparation for meeting the Next Generation NCLEX-RN requirements starting in 2023 (FBON, NCSBN). <b>(Note: Thinking is the first standard for each course or subject area.)</b> |
| 05.0  | Coordination of Care:- Provide appropriate planning skills to understand and apply principles of human growth and development for the adult, scholarly inquiry, and resource stewardship in the general medicine setting of clients                                                                                                                                                              |
| 05.01 | Coordination of Care:- Create workflow patterns to provide efficiency in the care of multiple clients and use prioritizing frameworks to determine priorities of care.                                                                                                                                                                                                                           |
| 05.02 | Human Growth and Development for the Adult:- Apply principles of adult medical nursing focusing on growth and development, pathophysiology, diseases, disorders, complications, and management of care (ANA 5A).                                                                                                                                                                                 |
| 05.03 | Scholarly Inquiry: Analyze scholarly works to provide best practices for client care (ANA 14).                                                                                                                                                                                                                                                                                                   |
| 05.04 | Resource Stewardship: -Select resources being mindful of both exemplary care and cost containment (ANA 17).                                                                                                                                                                                                                                                                                      |
| 05.05 | Clinical – General Medicine: Provide culturally competent client-centered care integrating the nursing process, clinical judgment, and safety at the middle level of the novice student professional nurse who is focusing on coordination of care.                                                                                                                                              |

**Course Number: -NSG0084**  
**Surgical Nursing – 102 Hours**

Pre-op and Post-op, Fluid and Electrolytes, Acid-base Balance, Infection, and the Musculoskeletal and Integumentary Systems.

|       |                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Thinking:- Apply the clinical judgment measurement model thinking processes to all class content and clinical client situations, covering novice to advanced beginner health and illness concepts or content in preparation for meeting the Next Generation NCLEX-RN requirements starting in 2023 (FBON, NCSBN). <b>(Note: -Thinking is the first standard for each course or subject area.)</b> |
| 06.0  | Health Teaching:- Demonstrate the use of teaching and learning principles for the education of the perioperative client and focus on the safe care of this client across the perioperative clinical setting.                                                                                                                                                                                      |
| 06.01 | Health Teaching:- Evaluate barriers to client learning and plan support to assist in learning keeping in mind the principles of learning for the adult client.                                                                                                                                                                                                                                    |

|       |                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 06.02 | Education:- Apply principles of adult surgical nursing focusing on teaching and learning opportunities in the perioperative client with body imbalances and maintaining homeostasis. Also, promote life-long learning for the professional nurse (ANA 5A, 13).                                                                                                                                    |
| 06.03 | Clinical – OR, Pre-op, PACU, Post-op, Surgical Floor: Provide culturally competent client-centered care integrating the nursing process, clinical judgment, and safety at the middle level of the novice student professional nurse who is focusing on health teaching by organizing peri-operative nursing interventions with a priority mindset including awareness of potential complications. |

**Course Number: NSG0085**  
**Pediatric Nursing – 102 Hours**

Human Growth and Development, and the Immune, Lymph, and Gastrointestinal Systems.

|       |                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Thinking:- Apply the clinical judgment measurement model thinking processes to all class content and clinical client situations, covering novice to advanced beginner health and illness concepts or content in preparation for meeting the Next Generation NCLEX-RN requirements starting in 2023 (FBON, NCSBN). <b>(Note: -Thinking is the first standard for each course or subject area.)</b> |
| 07.0  | Quality of Practice:- Exhibit quality improvement (QI) principles, human growth and development of the child, and care for the client in a children's hospital setting or children's specialty area.                                                                                                                                                                                              |
| 07.01 | Quality of Practice: -Use self-evaluation and peer evaluation to complete a reality check for quality in practice.                                                                                                                                                                                                                                                                                |
| 07.02 | Quality Improvement (QI):- Investigate a potential area of concern in pediatric practices to provide safer care or improvement (ANA 15, QSEN 4).                                                                                                                                                                                                                                                  |
| 07.03 | Human Growth and Development of the Child:- Compare human growth and development throughout the lifespan and its impact on nursing care with a focus on the infant and child client.                                                                                                                                                                                                              |
| 07.04 | Clinical – Children's Hospital, NICU, Outpatient Pediatrics: Provide culturally competent client-centered care integrating the nursing process, clinical judgment, and safety at the middle level of the novice student professional nurse who is focusing on the quality of practice.                                                                                                            |

**Course Number: NSG0086**  
**Obstetric Nursing – 102 Hours**

Family and the Reproductive and Genitourinary Systems.

|       |                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Thinking:- Apply the clinical judgment measurement model thinking processes to all class content and clinical client situations, covering novice to advanced beginner health and illness concepts or content in preparation for meeting the Next Generation NCLEX-RN requirements starting in 2023 (FBON, NCSBN). <b>(Note: -Thinking is the first standard for each course or subject area.)</b> |
| 08.0  | Environmental Health:- Plan for a positive environment in the care of the family including proper nutrition, human growth and development of the perinatal clients, and clinical experiences in labor and delivery, OB OR, mom/baby units, and/or the outpatient family health clinic setting.                                                                                                    |
| 08.01 | Environmental Health:- Describe an environmental threat to human life and propose a realistic solution to decrease the threat or resolve the issue.                                                                                                                                                                                                                                               |
| 08.02 | Family:- Design ways to be active in environmental health that have a positive outcome on family health (ANA 18).                                                                                                                                                                                                                                                                                 |
| 08.03 | Nutrition: -Integrate concepts of nutrition and wellness over the lifespan.                                                                                                                                                                                                                                                                                                                       |

|       |                                                                                                                                                                                                                                                                                                                                            |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 08.04 | Human Growth and Development of the Perinatal Patient:- Compare human growth and development throughout the lifespan and its impact on nursing care with a focus on the perinatal and newborn clients.                                                                                                                                     |
| 08.05 | Clinical – Labor and Delivery, OB OR, Mom/Baby, and the Family Health Clinic Setting: Provide culturally competent client-centered care integrating the nursing process, clinical judgment, and safety at the advanced level of the novice student professional nurse who is focusing on environmental health and safety for mom and baby. |

**Course Number: NSG0087****Professional Nursing – 91 Hours**

Cancer, Emergencies, Leadership, and Licensure.

|       |                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Thinking:- Apply the clinical judgment measurement model thinking processes to all class content and clinical client situations, covering novice to advanced beginner health and illness concepts or content in preparation for meeting the Next Generation NCLEX-RN requirements starting in 2023 (FBON, NCSBN). <b>(Note: -Thinking is the first standard for each course or subject area.)</b> |
| 09.0  | Professional Role:- Function in the professional role of the nurse including licensure preparation and leadership roles including clinical care in specialty areas such as emergency rooms, intensive care units, and step-down areas.                                                                                                                                                            |
| 09.01 | Functioning in the Professional Role:- Demonstrate competencies in the core components of professional nursing including licensure preparation and continuing education requirements.                                                                                                                                                                                                             |
| 09.02 | Leadership (clinical): -Demonstrate leadership and delegation skills in care and current issues in nursing (ANA 12).                                                                                                                                                                                                                                                                              |
| 09.03 | Clinical – Specialty Areas Including Emergency Room, Intensive Care Unit, Step-Down Unit, Etc.: Provide culturally competent client-centered care integrating the nursing process, clinical judgment, and safety at the advanced level of the student professional nurse who is focusing on the professional role.                                                                                |

**Course Number: NSG0089****Occupational Completion Point: A****Senior Practicum Intensive – 86 Hours**

|       |                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01.0  | Thinking:- Apply the clinical judgment measurement model thinking processes to all class content and clinical client situations, covering novice to advanced beginner health and illness concepts or content in preparation for meeting the Next Generation NCLEX-RN requirements starting in 2023 (FBON, NCSBN). <b>(Note: -Thinking is the first standard for each course or subject area.)</b> |
| 10.0  | Professional Practice:- Create a pattern of professional practice through a senior practicum intensive with a 1:1 preceptor in the acute clinical setting for a minimum of seventy-two hours, as well as a reflection of clinical judgment opportunities, use of self-evaluation, and application of life-long learning principles to show preparation for the NCLEX-RN examination.              |
| 10.01 | Professional Practice Evaluation (clinical):- Examine professional nursing functions and compile reflections on clinical decision-making during senior practicum experiences in preparation for the NCLEX-RN examination and practice in real life (ANA 16).                                                                                                                                      |
| 10.02 | NCLEX-RN Preparation:- Provide documentation of a completed NLCEX-RN preparation course of at least eighteen hours and include an NCLEX-RN study journal.                                                                                                                                                                                                                                         |
| 10.03 | Clinical Practicum – 1:1 with a Preceptor in the Acute Care Setting: Provide and coordinate care in the acute setting under the direct supervision of a clinical facility-approved preceptor, using self-evaluation to improve practice. The preceptor will provide feedback to improve practice (minimum two weeks or seventy-two practice hours).                                               |

## Additional Information

### **Laboratory Activities**

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools and equipment, as well as, experimental, quality, and safety procedures are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate and troubleshoot equipment/tools used to make observations. Students understand measurement error; and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

Prerequisite Requirement: Student must hold a current, valid, unencumbered LPN license issued by the Florida Board of Nursing to enter and remain in the Professional Nursing (LPN-RN) program.

### **Career and Technical Student Organization (CTSO)**

~~HOSA: Future Health Professionals is the~~ [CTSOs are](#) co-curricular career and technical student ~~organization(s)~~ [organizations](#) providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. [Other CTSOs not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.](#)

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Basic Skills**

In Career Certificate programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Computation (Mathematics) and Communications (Reading and Language Arts). These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in s.1004.02, F.S., may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040, F.A.C.). Students served in exceptional student education (except gifted) as defined in s. 1003.01, F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College System Institution must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in s. 1004.91, F.S.

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Health Science career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of Health Science career cluster.

This program is designed to prepare students for employment as nursing assistants.

The content includes but is not limited to interpersonal skills, medical terminology, legal and ethical responsibilities, safe and efficient work, gerontology, nutrition, pet-facilitated therapy, health and safety including Cardio-pulmonary Resuscitation (CPR) – heart saver level, and employability skills.

**Additional Information** relevant to this Career and Technical Education (CTE) program is provided at the end of this document.

**Program Structure**

This program is a planned sequence of instruction consisting of ~~21~~ occupational completion ~~points~~point.

This program is comprised of ~~courses which have~~a course that has been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3) (b), F.S.

To teach the courses listed below, instructors must hold at least one of the teacher certifications indicated for that course.

The following table illustrates the postsecondary program structure:

| OCP | Course Number                     | Course Title                                                | Teacher Certification                                                           | Length                         |

*\* The LPN 7 G district issued certification is a practical nurse. A practical nurse can only be utilized as an instructor of the CNA training program when they are supervised by the program coordinator ~~which~~, who must be a registered nurse. Please refer to 64B9-15.005, F.A.C., for requirements.*

**Regulated Programs**

Successful completion of this program from an approved school prepares the student for certification for employment as a Nursing Assistant, in accordance with Chapter 464.203, Florida Statutes (F.S.). To be approved, this program must be supervised by a registered nurse and follow the faculty qualifications set forth in 64B9-15.005(3)(a), F.A.C.

New programs must be approved by the Board of Nursing, Department of Health prior to enrolling students.

Those students who satisfactorily complete an approved course are eligible to apply to take the national nursing assistant examination being utilized in Florida, in accordance with Chapter 464.203, F.S. This program includes both Acute and Long Term Care.

In accordance with 64B9-15.005(4)(c), F.A.C., students will perform nursing skills in the clinical and simulated laboratory settings under the supervision of a qualified instructor. The recommended teacher/student ratio in the clinical area is 1 to 12, but the maximum is 1 to 15 ~~for students caring directly for residents or clients.~~

In accordance with 64B9-15.006(2), F.A.C., The standardized curriculum shall require a minimum of 80 hours of classroom and 40 hours of clinical instruction. The clinical instruction shall include at least 20 hours of long-term care clinical instruction in a licensed nursing home.

In accordance with 64B9-15.006(3), F.A.C., Prior to any direct contact with a resident, a training program shall require that a student receive a minimum of 16 hours of classroom instruction in communication and interpersonal skills; infection control; safety/emergency procedures, including the Heimlich maneuver; promoting residents' independence; and respecting residents' rights.

According to Section 400.211, F.S., persons who are enrolled in, or have completed, a state-approved nursing assistant training program may be employed by a licensed nursing facility for a period of four months. However, the certification requirements must be met within four months of such initial employment.

~~Common~~Florida's ~~Career~~ ~~Technical Core — Career Ready Practices~~Readiness Skills for CTE Programs

~~Career Ready Practices describe the career-ready skills that educators should seek to develop in their students. These practices are not exclusive to a Career Pathway, program of study, discipline or level of education. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.~~

- ~~1. Act as a responsible and contributing citizen and employee.~~
- ~~2. Apply appropriate academic and technical skills.~~
- ~~3. Attend to personal health and financial well-being.~~
- ~~4. Communicate clearly, effectively and with reason.~~
- ~~5. Consider the environmental, social and economic impacts of decisions.~~
- ~~6. Demonstrate creativity and innovation.~~
- ~~7. Employ valid and reliable research strategies.~~
- ~~8. Utilize critical thinking to make sense of problems and persevere in solving them.~~
- ~~9. Model integrity, ethical leadership and effective management.~~
- ~~10. Plan education and career path aligned to personal goals.~~
- ~~11. Use technology to enhance productivity.~~
- ~~12. Work productively in teams while using cultural/global competence.~~

| Employability Skills |                                                      |

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge of the healthcare delivery system and health occupations.
- ~~02.0 Demonstrate the ability to communicate and use interpersonal skills effectively.~~
- ~~02.0 Use verbal, written, and/or electronic communications specific to the nurse assistant.~~
- ~~03.0 Demonstrate legal and ethical responsibilities specific to the nurse assistant.~~
- ~~04.0 Apply basic math and science skills specific to the nurse assistant.~~
- ~~03.0~~05.0 Describe the anatomy and physiology of the human body.
- ~~04.0~~06.0 Demonstrate an understanding of and apply wellness and disease concepts.
- ~~07.0 Recognize~~Perform physical comfort and ~~practice~~safety and ~~security procedures~~functions specific to the nurse assistant.
- ~~08.0 Apply the principles of infection control specific to the nurse assistant.~~
- ~~05.0~~09.0 Demonstrate knowledge of blood-borne diseases.
- ~~06.0~~10.0 Recognize and respond to emergency situations.
- ~~07.0 Recognize and practice infection control procedures.~~
- ~~08.0~~1.0 Demonstrate an understanding of information technology applications in healthcare.
- ~~09.0~~1.0 Demonstrate employability skills.
- ~~10.0 Demonstrate knowledge of blood borne diseases, including HIV/AIDS.~~
- ~~11.0 Apply basic math and science skills.~~
- ~~12.0 Use verbal and written communications specific to nurse assisting.~~
- ~~13.0 Demonstrate legal and ethical responsibilities specific to nurse assisting.~~
- ~~14.0~~11.0 Perform ~~physical comfort and safety~~supervised organizational functions ~~specific to nurse assisting~~following the patient care plan.
- ~~12.0 Provide biological, psychological, and social support.~~
- ~~15.0~~13.0 Provide personal patient care.
- ~~16.0~~14.0 Perform patient care procedures.
- ~~17.0~~15.0 Apply principles of nutrition.
- ~~18.0~~16.0 Provide care for geriatric patients.
- ~~19.0 Apply the principles of infection control specific to nursing assisting.~~
- ~~17.0 Assist with restorative (rehabilitative) activities.~~
- ~~18.0 Demonstrate an understanding of information technology applications in healthcare.~~
- ~~19.0 Demonstrate employability skills.~~
- ~~20.0~~1.0 Provide biological, psychological, and social support.
- ~~21.0 Perform supervised organizational functions, following the patient care plan.~~
- ~~22.0~~1.0 Assist with restorative (rehabilitative) activities.

Florida Department of Education  
Student Performance Standards

Program Title: Nursing Assistant (Articulated)  
Career Certificate Program Number: ~~H170690~~ H700400

~~The **Basic Health Care Worker (HSC0003)** is referred to as the **Health Science Core** and is the first OCP in the majority of the Career Certificate Program health science programs. Secondary and Postsecondary students completing the health science core will not have to repeat the core in any other health science program in which it is a part. When the recommended sequence is followed, the structure allows students to complete at specified points for employment or remain for advanced training or cross-training.~~

Course Number: ~~HSC0003~~HCP0124  
Occupational Completion Point: A  
~~Basic Healthcare Worker — 90~~Nursing Assistant -- 165 Hours

01.0 Demonstrate knowledge of the healthcare delivery system and health occupations. The student will be able to:

01.01 Identify the basic components of the healthcare delivery system, including public, private, government, and non-profit.

01.02 Describe the various types of healthcare providers and the range of services available, including resources to victims of domestic violence.

01.03 Describe the composition and functions of a healthcare team.

01.04 Identify the general roles and responsibilities of the individual members of the healthcare team.

01.05 Identify characteristics of effective teams.

01.06 Recognize methods for building positive team relationships.

01.07 Discuss attributes and attitudes of an effective leader.

01.08 Recognize factors and situations that may lead to conflict.

01.09 Recognize effective techniques for managing team conflict.

02.0 Use verbal, written, and/or electronic communications specific to the nurse assistant. The student will be able to:

02.01 Develop basic speaking and active listening skills.

02.02 Identify successful and unsuccessful communication characteristics, including communication styles and barriers.

02.03 Identify characteristics of verbal and non-verbal cues.

02.04 Describe the purpose of the chain of communication to resolve conflict.

[02.05 Use appropriate medical terminology and abbreviations.](#)

[02.06 Obtain specified data from the patient and family.](#)

**To ensure consistency whenever these courses are offered, the health science core standards (1-11) and benchmarks have been placed in a separate document. To access this document, visit this link:**

**Course Number: HCP0121  
Occupational Completion Point: B  
Nurse Aide and Orderly (Articulated)**

~~12.0~~—Use verbal and written communications specific to nurse assisting. The student will be able to:

~~12.01~~ Obtain specified data from patient and family.

~~12.02~~[02.07](#) Utilize verbal and written information to assist with the patient's plan of care.

[02.08 Distinguish between and report subjective and objective information.](#)

[02.09 Discuss the importance of patient/client education regarding healthcare.](#)

[02.10 Adapt communication skills to varied levels of understanding and cultural orientation, including, but not limited to, diverse age, cultural, economic, ethnic, and religious groups.](#)

~~12.03~~[02.11](#) Demonstrate [the](#) use of the communication ~~system~~[systems, including electronic health record systems.](#)

~~13.0~~[03.0](#) Demonstrate legal and ethical responsibilities specific to [the](#) nurse ~~assisting.~~[assistant.](#) The student will be able to:

~~13.04~~[03.01](#) Discuss and demonstrate legal and ethical behavior within the nursing ~~assistant~~[assistant's](#) scope of practice, including, ~~but not limited to,~~ role limitations in Florida.

~~13.02~~[03.02](#) Describe [a code of ethics consistent with](#) the ~~purpose of the chain of communication to resolve conflict~~[nursing assistant occupation.](#)

[03.03 Explain the laws governing harassment, labor, and employment.](#)

~~13.03~~[03.04](#) Follow policies and procedures affecting the health, safety, and well-being of patients.

~~13.04~~[03.05](#) Demonstrate safe standards of patient care, including prevention and quality of care.

~~13.05~~[03.06](#) Exhibit behavior supporting and promoting patients' and/or residents' rights.

[03.07 Describe advance directives.](#)

|                        |                                                                                                                                                                                                              |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>13.06</del> 03.08 | <del>Recognize potential for and prevention of medical errors.</del> <u>Explain the procedures for accurate documentation and record keeping.</u>                                                            |
| <del>13.07</del> 03.09 | <del>Practice</del> <u>Recognize the potential for and prevention of medical errors and practice</u> the proper procedures to follow regarding medical errors.                                               |
| <del>13.08</del> 03.10 | Follow policies and procedures affecting the health, safety, and well-being of patients.                                                                                                                     |
| <del>13.09</del> 03.11 | Recognize and report signs of substance abuse.                                                                                                                                                               |
| <del>13.10</del> 03.12 | Demonstrate the understanding of vulnerable population abuse and reporting procedures per agency.                                                                                                            |
| 03.13                  | <u>Recognize and report illegal and/or unethical practices of healthcare workers.</u>                                                                                                                        |
| 03.14                  | <u>Recognize and report abuse, including domestic violence, neglect, and suspected human trafficking.</u>                                                                                                    |
| <del>13.11</del> 03.15 | Recognize that a <del>C.N.A.</del> <u>CNA</u> must self-report any crimes they've been involved in within 30 days of the offense in accordance with <del>456.0727(1)(w), F.S.</del> <u>Florida Statutes.</u> |
| 03.16                  | <u>Explain practices that could result in malpractice, liability, negligence, abandonment, false imprisonment, and fraud.</u>                                                                                |
| <del>13.12</del> 03.17 | Define Omnibus Budget Reconciliation Act (OBRA).                                                                                                                                                             |
| <del>13.13</del> 03.18 | Define Minimum Data Set (MDS).                                                                                                                                                                               |
| 03.19                  | <u>Identify and explain the standards of the Health Insurance Portability and Accountability Act (HIPAA).</u>                                                                                                |
| 04.0                   | <u>Apply basic math and science skills specific to the nurse assistant. The student will be able to:</u>                                                                                                     |
| 04.01                  | <u>Demonstrate knowledge of Celsius and Fahrenheit temperature and the conversion of each.</u>                                                                                                               |
| 04.02                  | <u>Calculate ratios.</u>                                                                                                                                                                                     |
| 04.03                  | <u>Make, use, and convert data using traditional and metric units.</u>                                                                                                                                       |
| 04.04                  | <u>Make estimations and approximations; then judge the reasonableness of the results and demonstrate the ability to evaluate and draw conclusions.</u>                                                       |
| 04.05                  | <u>Convert from regular time to 24-hour time.</u>                                                                                                                                                            |
| 04.06                  | <u>Organize and communicate results obtained by observation.</u>                                                                                                                                             |
| 05.0                   | <u>Describe the anatomy and physiology of the human body. The student will be able to:</u>                                                                                                                   |
| 05.01                  | <u>Describe the basic structure and function of the human body.</u>                                                                                                                                          |
| 05.02                  | <u>Describe the relationships of body systems in providing patient care.</u>                                                                                                                                 |
| 05.03                  | <u>Recognize abnormal signs and symptoms of common diseases and conditions.</u>                                                                                                                              |

|                        |                                                                                                                                                                                                                                                     |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 06.0                   | Demonstrate an understanding of and apply wellness and disease concepts. The student will be able to:                                                                                                                                               |
| 06.01                  | Describe strategies for the prevention of diseases, including health screenings and examinations.                                                                                                                                                   |
| 06.02                  | Identify personal health practices and environmental factors that affect the optimal function of each of the major body systems.                                                                                                                    |
| 06.03                  | Identify psychological reactions to illnesses, including defense mechanisms.                                                                                                                                                                        |
| 06.04                  | Identify complementary and alternative health practices.                                                                                                                                                                                            |
| 06.05                  | Discuss the adverse effects of the use of alcohol, tobacco, and both legal and illegal drugs on the human body and apply safety practices related to these and other high-risk behaviors.                                                           |
| 06.06                  | Explain the basic concepts of positive self-image, wellness, and stress.                                                                                                                                                                            |
| 06.07                  | Develop a wellness and stress control plan that can be used in personal and professional life.                                                                                                                                                      |
| <del>14.0</del> 07.0   | Perform physical comfort and safety functions specific to <u>the</u> nurse <del>assisting-</del> assistant. The student will be able to:                                                                                                            |
| <del>14.04</del> 07.01 | Implement appropriate regulatory and accrediting agency patient safety guidelines—, <u>including but not limited to the Joint Commission.</u>                                                                                                       |
| 07.02                  | Explain personal safety procedures based on Occupational Safety and Health Administration (OSHA) and the Centers for Disease Control (CDC) regulations, including standard precautions.                                                             |
| 07.03                  | Recognize Safety Data Sheets and comply with safety signs, symbols, and labels.                                                                                                                                                                     |
| <del>14.02</del> 07.04 | Maintain safe patient units, equipment, and a comfortable environment.                                                                                                                                                                              |
| <del>14.03</del> 07.05 | Maintain service areas on the units, including supplies and equipment.                                                                                                                                                                              |
| 07.06                  | Explain the procedure for properly identifying patients.                                                                                                                                                                                            |
| <del>14.04</del> 07.07 | Observe, report, and record changes in the patient's behavior as needed, including mental awareness.                                                                                                                                                |
| <del>14.05</del> 07.08 | Demonstrate adjustment of bed and side- <del>_</del> rails according to facility policy.                                                                                                                                                            |
| <del>14.06</del> 07.09 | Demonstrate and assist <u>the</u> patient <del>to dangle</del> <u>in dangling</u> .                                                                                                                                                                 |
| 07.10                  | Explain and demonstrate proper body mechanics and ergonomics, and use assistive devices to safely transfer and support patients.                                                                                                                    |
| <del>14.07</del> 07.11 | Demonstrate lifting, supporting, and transferring patients from bed to chair, bed to bed, and bed to stretcher, including the use of the various assistive devices and equipment while utilizing proper body mechanics and patient safety measures. |
| <del>14.08</del> 07.12 | Demonstrate the proper use of a gait/transfer belt in <del>both</del> transfer and ambulation.                                                                                                                                                      |
| <del>14.09</del> 07.13 | Assist patient in ambulation, including the use of <u>a</u> crutch, cane, or walker.                                                                                                                                                                |

|                        |                                                                                                                                                                                     |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>14.10</del> 07.14 | Demonstrate the proper wheelchair safety techniques and assist <u>the</u> patient as needed with use.                                                                               |
| <del>14.11</del> 07.15 | Apply supportive devices as directed (e.g., footboard, over-bed cradle, alternating pressure mattress).                                                                             |
| <del>14.12</del> 07.16 | Assist patient with care and use of prosthetic/orthotic devices.                                                                                                                    |
| 08.0                   | <u>Apply the principles of infection control specific to the nurse assistant. The student will be able to:</u>                                                                      |
| 08.01                  | <u>Identify and implement transmission-based precautions and standard infection control procedures.</u>                                                                             |
| 08.02                  | <u>Recognize emerging diseases and disorders.</u>                                                                                                                                   |
| 08.03                  | <u>Explain medical and surgical asepsis.</u>                                                                                                                                        |
| 08.04                  | <u>Explain and demonstrate proper hand hygiene.</u>                                                                                                                                 |
| 08.05                  | <u>Identify the chain of infection.</u>                                                                                                                                             |
| 08.06                  | <u>Provide care for patients with infectious diseases while applying the principles of standard and transmission-based precautions.</u>                                             |
| 08.07                  | <u>Apply the proper use of personal protective equipment (PPE) for all types of isolation, including donning and removing PPE appropriately.</u>                                    |
| 08.08                  | <u>Describe how to correctly dispose of biohazardous materials according to appropriate government guidelines, such as OSHA.</u>                                                    |
| 08.09                  | <u>Follow isolation procedure with food trays, PPE, and other supplies/equipment.</u>                                                                                               |
| 08.10                  | <u>Collect a specimen from a patient in isolation.</u>                                                                                                                              |
| 09.0                   | <u>Demonstrate knowledge of blood-borne diseases. The student will be able to:</u>                                                                                                  |
| 09.01                  | <u>Describe blood-borne diseases.</u>                                                                                                                                               |
| 09.02                  | <u>Distinguish between fact and fallacy about the transmission and treatment of diseases caused by blood-borne pathogens.</u>                                                       |
| 09.03                  | <u>Identify community resources and services available to individuals with diseases caused by blood-borne pathogens.</u>                                                            |
| 09.04                  | <u>Identify “at-risk” behaviors which promote the spread of diseases caused by blood-borne pathogens and the public education necessary to combat the spread of these diseases.</u> |

| <del>21.01</del> <del>Organize and prioritize patient care assignments.</del>                                                                                                                                                      |
| <del>21.02</del> <del>Complete assignments accurately and in a timely manner.</del>                                                                                                                                                |
| <del>22.0</del> <u>17.0</u> Assist with restorative (rehabilitative) activities. -The student will be able to:                                                                                                                     |
| <del>22.04</del> <u>17.01</u> List the purposes of <u>a</u> restorative (rehabilitation) program.                                                                                                                                  |
| <del>22.02</del> <u>17.02</u> Assist patient with specified restorative (rehabilitation) needs.                                                                                                                                    |
| <del>22.03</del> <u>17.03</u> Assist patients/ <del>residents</del> to reach the optimum level of independence.                                                                                                                    |
| <u>18.0</u> <u>Demonstrate an understanding of information technology applications in healthcare. The student will be able to:</u>                                                                                                 |
| <u>18.01</u> <u>Define terms and demonstrate basic computer skills.</u>                                                                                                                                                            |
| <u>18.02</u> <u>Recognize and/or describe technology applications in healthcare that are specific to the nursing assistant occupation.</u>                                                                                         |
| <u>18.03</u> <u>Recognize new and emerging technology in healthcare.</u>                                                                                                                                                           |
| <u>19.0</u> <u>Demonstrate employability skills. The student will be able to:</u>                                                                                                                                                  |
| <u>19.01</u> <u>Identify personal traits or attitudes desirable in a nursing assistant.</u>                                                                                                                                        |
| <u>19.02</u> <u>Exemplify basic professional standards of a nursing assistant as they apply to hygiene, dress, language, confidentiality, and behavior, including but not limited to-phone, email, and social media etiquette.</u> |
| <u>19.03</u> <u>Identify documents that may be required when applying for a job.</u>                                                                                                                                               |
| <u>19.04</u> <u>Write an appropriate resume.</u>                                                                                                                                                                                   |
| <u>19.05</u> <u>Conduct a job search.</u>                                                                                                                                                                                          |
| <u>19.06</u> <u>Complete a job application form correctly.</u>                                                                                                                                                                     |
| <u>19.07</u> <u>Examine levels of education and credentialing requirements, including licensure and certification, employment opportunities, workplace environments, and career growth potential.</u>                              |
| <u>19.08</u> <u>Identify acceptable work habits.</u>                                                                                                                                                                               |
| <u>19.09</u> <u>Recognize appropriate, effective, and professional behavior.</u>                                                                                                                                                   |
| <u>19.10</u> <u>Compare careers within the health science career pathways.</u>                                                                                                                                                     |

## Additional Information

### Laboratory Activities

Laboratory investigations that include scientific inquiry, research, measurement, problem solving, emerging technologies, tools, and equipment, as well as experimental, quality, and safety procedures, are an integral part of this career and technical program/course. Laboratory investigations benefit all students by developing an understanding of the complexity and ambiguity of empirical work, as well as the skills required to manage, operate, calibrate, and troubleshoot equipment/tools used to make observations. Students understand measurement error and have the skills to aggregate, interpret, and present the resulting data. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

The program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the health care industry: planning, management, finance, technical and production skills, underlying principles of technology, labor issues, community issues, and health, safety, and environmental issues.

This program meets the Department of Health's education requirements for HIV/AIDS, Domestic Violence and Prevention of Medical Errors. Although not a requirement for initial licensure, it is a requirement for renewal, therefore the instructor **may** provide a certificate for renewal purposes to the student verifying these requirements have been met.

If students in this program are seeking a licensure, certificate, or registration through the Department of Health, please refer to 456.0635, F.S. for more information on disqualification for a license, certificate, or registration through the Department of Health.

The length of this program is 165 hours. Completion of this program should enable the postsecondary student to be given advanced standing in the Patient Care Technician and Patient Care Assistant programs.

The Core should be taken first in the program. Following the successful completion of the core, the student is eligible to take the National Health Care Foundation Skill Standards Assessment with instructor approval and the completion of a portfolio.

### Career and Technical Student Organization (CTSO)

~~HOSA: Future Health Professionals is the~~ CTSOs are co-curricular career and technical student ~~organization~~ organizations providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. Other CTOS not listed in this curriculum framework or recognized by the Florida Department of Education are permissible provided they support student mastery over the standards and benchmarks of this curriculum framework.

### Cooperative Training – OJT

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology, and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

Note: postsecondary curriculum and regulated secondary programs cannot be modified.

Florida Department of Education  
Curriculum Framework

No new students may be enrolled in this program starting 2026-27. The last year to report any enrollment is 2027-28. This program was replaced by Nursing Assistant H700400 (0351390206).

**Program Title:** Nursing Assistant (Articulated)  
**Program Type:** Career Preparatory  
**Career Cluster:** Health Science
